From time to time for more than twenty years I had made a hobby of New Zealand, studied its history, its laws, its geography, pored over statistics of its economy and its foreign trade. I knew how it was explored, how it was settled, the organization of its government; I had studied its Polynesian people from tattooed lips and cannibalism to their present status as political and social equals of the white English. So far as study will take one I felt that I knew New Zealand. Here was a country that had everything, physical wealth, an ample food supply, a people with high educational standards, civilized culture, democratic traditions, and homogeneity save for a colored minority with whom they had worked out the most decent *modus operandi* in the black history of the white race's relations with other races. Spurning communism, without resorting to socialism save on a purely pragmatic, non-doctrinal basis where needed, they had produced an economy with comfort and security for all, more entitled to the name "The Middle Way" than was that of Sweden. Their laws were ideal objectives for liberals all over the world, conceded to be at least fifty years ahead of any other nation.

Why, they had even solved the babysitter problem with graduate mother's-helpers!

I wanted to see this utopia, get to understand it. We had talked seriously of the possibility of renting a housekeeping flat in Auckland or Wellington and remaining for two or three months. I could pay for the stay by gathering material and doing a novel, with a New Zealand background while I was on the spot and could check my background facts. Ticky could keep house and resume her scientific study of subtropical plants, interrupted when we had moved from California to the high Rockies. The plan seemed particularly attractive to her since it seemed possible that we would have to wait that long to be sure of steamship passage back to the States, she being frantically opposed to flying the Pacific.

So we looked around eagerly, thinking this might be our temporary home.

The first impression was not too rosy, I had to admit. Where Brisbane reminded me of 1910, this looked more like a movie set for 1890. Still, I conceded, no city looks good when the weather is bad—the cyclone was still playing hop scotch around us—and very few cities are attractive near the wharfs.

But I was a little surprised when the taxi stopped almost at once without leaving the unattractive neighborhood. Nor did the Waverly Hotel seem very cheerful; it looked like the sort of beat-up job a drummer stays in when he finds it necessary to be very, very careful about his expense account. But a decent bed and a hot bath was all I asked; we got the bags in and I registered. There were many other passengers from the *Monowai* checking in at the same time; it was likely that this was a comfortable inn despite the unattractive exterior.

I learned, without much surprise, that private baths were not available. "That will be seventy-one shillings per day, including breakfast and dinner."

"I think we would prefer just bed and breakfast, please. We will probably be eating out most of the time."

"We don't do it that way. You are charged for dinner whether you eat it or not. Do I understand you are staying more than one night?"

"Probably." Up to the time I walked into the lobby I would have said, "Certainly," but I was beginning to have doubts. I had not yet seen our room but the lobby itself was grim.

"In that case it will be six shillings less after the first day."

"Eh?"

"Linen charge, you know."

I did not know, but I let it ride. Ticky had been sitting on our luggage, as there were few chairs in the lobby, all occupied. An elderly porter helped us up to our room and I helped him with the bags, as he hardly seemed fit for it. Our room was long and narrow, with two narrow iron bedsteads placed end to end on the left wall, an old wooden bureau and a wash stand (real marble!) on the righthand wall. There was a single window at the far end, a clothes closet near the door—no coat hangers, however. There was a single dropcord in the middle of the room and a light over the wash basin. There were no bedside tables nor bedlamps, but there was a wicker chair and a kitchen chair. The floor was covered with wall-to-wall carpeting which seemed to have been laid when the building was built; its pattern had vanished under successive geological layers of dirt.

I paid off the porter, dismissed him, and turned back. Ticky was standing and touching, with a gloved finger, the dirty, faded bedspread over one of the cots. She looked up and said meditatively, "I don't think Mr. Duncan Hines would stay here."

"It reminds me of that trailer camp we got stuck in once. You remember? Mud and no plumbing?"

"I've been trying to forget it for years—but I wish we were back there right now. At least our trailer was clean. Honey, I don't think I can take this."

"I don't intend that you should. Come on."

"Huh?"

"This is a fairly big city; there must be a hotel room in it somewhere better than this pig sty. Do you have that little guide they gave us aboard ship?"

She dug it out of her purse and we consulted it. Hotels in New Zealand are graded by the government from "five stars," the highest, on down. To my shocked surprise the Waverly had a rating of four stars, just under the best, but there were two five-star hotels, the Grand and the Trans-Tasman. I telephoned the Grand at once and asked for a double room and bath, and was told that they had no rooms of any sort. How about tomorrow, then? Anyone checking out? Sorry, everything booked.

I had some trouble getting through to the Trans-Tasman Hotel but the guide showed it to be nearby. "Let's go there. Sometimes you can accomplish things on the spot which can't by phone. You know—reservations not picked up, probable check-out that we might wait for."

We could not find a taxi, so we walked; it was not far. As we approached the number I said, "I don't see anything around here that looks like a hotel. Let me see that street guide again."

We were on the right street and the numbers indicated that the hotel should be almost on top of us. And so it was—there was a sign, THE TRANS-TASMAN BAR. It was a jerry-built frame structure which I would never have suspected of being a hotel, much less a "five star" hotel, but beyond the doors to the saloon was an inconspicuous second entrance which possibly might lead into a lobby.

We walked slowly past it, glancing inside, then walked back. Both of us were reluctant to go inside. "What do you think?" asked doubtfully.

"It looks even worse than the Waverly. A joint like that would not have private baths. It is a terrible firetrap, too. Look at it—it ought to be condemned."

"Well . . . we're here; I suppose I should inquire."

Ticky put a hand on my arm. "Don't. I don't want to move into there. Bad as the Waverly is, this looks worse to me."

"Well, what should we do?"

"What can we do, you mean. Let's put up with the Waverly, just for this one night. And right now let's go to Thomas Cook and see if they can route us out of here tomorrow."

We had planned on a sightseeing swing around North and South Islands, but with a few days in Auckland first to get our bearings and check on steamship possibilities and launder clothes. I reminded Ticky of that.

"Never mind those things," she said earnestly. "I just want to get out of that home for unfortunate fleas. Maybe Wellington will be better."

So we walked to Thomas Cook & Son. On the way I recalled something. "You remember that chap we had a letter to? Sir Ernest Something-or-other?"

"Yes. What about him?"

"Wasn't he supposed to own a string of hotels?"

"I believe so. Or was it breweries?"

"Both, I think." I studied the matter, frowning. Up to this time we had never used a personal connection to get us favors which would not otherwise have been coming to us. We had had many a fine favor done for us, but we had asked for nothing, certainly not on the basis of being a friend of a friend. We intended to look Sir Ernest up, surely . . . but we had not intended to put the bite on him for special favors.

But this was an emergency; I had to get Ticky out of that squalid, dirty room. "When we get back to the Waverly I want to look up his address and give him a ring. If he is a hotel owner, he is sure to have at least one decent room in reserve to take care of legacies like us. I'm going to cry on his shoulder and get that room."

"Mmm . . . maybe. You know how we feel when people look us up at home during the tourist season. Let's try Thomas Cook's first."

The office of the Thomas Cook agency was on Queen Street, the main street of Auckland, just down the way from the Waverly. There we unloaded our troubles on Mr. D. M. Gunning, who was competent, cheerful, and as helpful as circumstances permitted. "It will be difficult, probably impossible, to set up a tour for you starting tomorrow morning. Have you tried any other hotels? We do have a couple of good ones."

I told him that the Grand had turned us down and recounted our impression of the Trans-Tasman. "I can see why you would think so," he answered. "But it actually is quite a bit better hotel than the Waverly. While it does not look like much outside, they have spent a lot of money fixing it up inside. Let me try them for you."

"Okay, if you say so."

But the Trans-Tasman was filled up, too. We dropped the matter, since it could not be helped, and worked out with Mr. Gunning a tour which was to start with a flight to the far end of South Island, then bring us back by easy stages to Auckland via bus, train, and ferry across the channel, and would cause us to see every city and every major tourist attraction throughout New Zealand. It looked like a most attractive trip and we cheered up at the prospect of getting out of the Waverly and on the road.

"I'm going to work very hard on this," he assured us, "to get you started tomorrow, if possible. But I can't promise anything; there are too many hotel reservations and too many travel bookings involved in it to be sure. I'll set up the flight to Dunedin and your lodging there first, then we will see."

Ticky told him earnestly that if he could move us to Dunedin the next day, we would take a chance on the rest of it. He nodded. "Give me a ring at six o'clock, will you? I'm going to stay late and work on it."

We thanked him and left with a list of steamship agencies; the first two had nothing for us, but by the time we were through with them the others were closed. We spent an hour simply walking up and down Queen Street, then reluctantly returned to the Waverly.

I remembered to look up the address of the man who was supposed to own hotels. Or was it breweries? It turned out to be both: the Hancock Hotels and the Hancock Breweries. I was just looking up his telephone number when the phone rang.

It was Mr. Gunning of Thomas Cook & Son. "I'm terribly sorry but I can't get you away tomorrow. This cyclone is kicking things up south of here and all flights are canceled."

"Oh. Well, how about Sunday?"

"The airline does not operate on Sunday. I'll try to get you away early Monday."

"Well . . . thanks for trying."

We were downstairs and waiting outside the dining room before I recalled that I had intended to phone the boss of the Hancock Hotels. Oh, well, it was too late to do anything about it today and it would probably be best to call at his office anyway.

We quickly found out why guests were required to take, or at least to pay for, their dinners; no one having freedom of choice would have eaten there. We were soon to learn, too, that the compulsory boarding system used by all New Zealand hotels also resulted in independent restaurants being extremely scarce; a guest who was disgusted with hotel fodder found it extremely difficult to eat anywhere else even though willing to pay twice.

We started to walk into the dining room but were stopped by the manager-hostess—if "hostess" is the word. "You will have to wait a few minutes," she said bleakly. Since I could see empty tables I could not understand why, but wait we did. There were no chairs. Presently, although no one had come out, she signaled for us to come in and we were seated at a table for four. We had arrived at the beginning of the meal hour; the table had not been used by others.

The other two seats were not occupied. Another couple had arrived at the door right behind us, but had not been permitted to enter when we did. But after we had been at the table about ten minutes, they were let in and were seated at the same table with us.

I began to see the system by which the hostess worked and later observation confirmed it in detail. The dining room was open exactly one hour for each meal; this means that you must finish your meal before the sixty minutes has passed; it does *not* mean that you will be fed if you arrive at the door before the doors are closed. At the end of sixty minutes they stop serving and clear off the tables—and woe betide any guest who is still trying to finish his dinner. There were as many places at the tables in that dining room as there were sleeping accommodations in the hotel, but the "hostess" would not permit them to enter and sit down as they arrived. Instead she waited until she had a waitress free, which was why we and the other couple had had to stand in the corridor until she saw fit to let us come in and sit down.

We now experienced for the first time the delights of New Zealand cookery. The country is bulging with good food and it exports great quantities of the best. It should have been, like Argentina, a gourmet's paradise.

Australian cooking is not very good; hotel food in New Zealand is just barely short of inedible. Entrees are such things as boiled mutton, boiled bacon, and, if you are lucky, boiled beef. Clear soups are merely rain water; cream soups are sour paperhanger's paste. They have some means of vulcanizing potatoes. If by chance there is steak on the menu, you will find that they have cut it along the grain, cooked it grey, and the cut is one we would grind into hamburger. The difference between "lamb" and "mutton" appears to be that lamb is slaughtered whereas mutton apparently dies of old age. But they do not cook mutton with the wool left on. This is a canard, they sell the wool separately. But I have had many a piece of bacon served to me with the rind still on it and pig bristles, black and stiff, still sticking out of the rind. Under these circumstances it hardly matters that the bacon is only half cooked, cold, greasy, and undrained; you would not wish to eat it anyway.

Instead of a hot dinner roll there is a little square of stale, dry bread resting on the tines of your forks. No butter, of course. Toast is served cold in a toast rack and is much like building tile. For a sweet, or dessert, you will be offered stewed fruit, acidly sour, to which no sugar has been added.

This first night, following my custom of trying things which I did not recognize, I passed up the fruit and ordered "steamed sponge." So far as I could tell the thing they brought me was just that: steamed cellulose sponge. I tried a bite of it; it had no flavor and a coarse, resistant texture. I was toying with it with my spoon, wondering what to do with it, when the waitress leaned over my shoulder. "It helps a bit to soak it in milk," she advised.

But the milk was gone and she returned shortly from the kitchen to report that there was no more. I tipped her for her good will.

I might as well get this unsavory subject over with and not return to it. The food at the Waverly was typical of the food all through the country, consistently and amazingly bad—sloppily cooked, usually dirty, and often cold. Fly screens seemed to be unheard of and no attempt was made to check flies; cold buffet dishes such as salads and cold cuts were allowed to sit out on the sideboard for as much as an hour before meals, getting warm and stale, while flies wandered over them unmolested. Service varied from indifferent to rude. Once at the Waverly I asked the waitress to hand me a menu from a table at her elbow which was unoccupied, inasmuch as the menu at our table was in use (one menu in that case for ten people), but she refused to give it to me. I asked why not?—and she became quite angry about it.

As we left the dining room on that occasion, I told the hostess-manager about it. She looked at me as if I had lost my mind and told me the waitress was perfectly right—one menu to a table; that was the rule.

I answered, "Is that rule of your making? Or is it one laid down by the manager of the Waverly?"

"Why do you ask that?" she said sharply.

"Because I see no sense to it and intend to bring it to the manager's attention if the matter is beyond your control. So is it your rule? Or his?"

She looked disgusted. "Well, it isn't exactly a *rule* in that sense. But everybody knows it. One table, one menu—that's the way things are done."

I gave up and did not bother to speak to the manager. The notion that certain things "are done" and other things "aren't done" is the unanswerable argument of the provincial, to whom the customs of his tribe are laws of nature, as Shaw pointed out long ago. The odd rule about menus was not important anyway; I had spoken to the manageress simply because I disliked being bawled out in public by a person who was being paid to make me comfortable. But I did check as we went along to see if this oddly inefficient practice really was the uniform custom of the country.

It was, without any exception. Shortly before we left I tried to break it once more, simply as an experiment. We were eating alone in the dining room of another hotel, having been granted permission to eat lunch at twelve-thirty instead of one o'clock by special dispensation of the manager because we had a travel connection to make. There was one menu at our table, but about fifty menus in sight elsewhere in the room, so while Ticky was studying the one I turned to the waitress at my elbow and pointed at a menu less than four feet away. "Will you hand me that menu, please?"

She shook her head.

I had tried it on her because she looked good-natured. I now answered pleasantly. "Why not?"

"Huh? It's for *that* table."

"So it is. But it is not in use now and won't be until one o'clock. What harm is there in letting me see it for a moment? I won't damage it and I'll give it back in a moment or two."

She seemed to be undergoing some inner struggle. Finally she visibly braced herself, reached out and handed me the other menu. "Just this once!" she warned.

"Thank you."

She looked at us curiously. "You're Americans, aren't you?"

"Yes. Why? Our accent?"

"No, you talk all right. But Americans *always* want extra menus."

We tried to avoid the slops served at the Waverly by dining at public restaurants, but we found the cooking just as bad and the food even less attractively served. One large restaurant which looked all right from the outside served nothing but meat and potatoes, fish and chips—two sorts of potatoes on the same plate, both sorts rendered indigestible. We ate because we were very hungry, drank some tea (no coffee) and never went back. Coffee was served at the Waverly, since it "catered" to travelers, but not in the dining room, only in the lounge; coffee with your dinner cannot be obtained in New Zealand. Every hotel has a lounge, which always has some claim to posh swankness no matter how dreary and dirty the rest of the place may be, and here coffee is served in demi-tasse—which means that you have to wait up to forty-minutes or even longer to get it, that you can almost never get a second cup, and that cream is rarely available. All of which is of little importance as the stuff is usually not fit to drink. I don't know what they do to it. I've encountered bad coffee before, but it must take real talent to make New Zealand coffee. It tastes like a mixture of sorghum and used crankcase oil, but it surely cannot be that.

At last we spotted an ad for the Hi Diddle Griddle, which promised "that Heavenly American Food." We were suspicious as we had encountered "American" restaurants in other countries before, but we had nothing to lose, so we hurried there. It turned out to be a real, honest-to-God American hamburger joint, owned by a New Zealander who had lived many years in the States and only recently returned (through family necessity) and managed by a young Hollander freshly arrived in the country. It was *clean* and the coffee was wonderful, made fresh in Silex pots. They served rare, tender T-bone steaks, six versions of hamburgers, ham and eggs, chicken-in-a-basket, waffles, tender hot cakes, three-decker sandwiches, and homemade American pies. It was the sort of hole-in-the-wall restaurant which can be found two to the block in almost any side street in America but it was the only one of its sort in all New Zealand. We ate there every day we were in Auckland after that. It did not open until evening, so we made do in the daytime with fruit and biscuits that Ticky bought and fetched to our room.

But we did not find it until we had endured several Waverly meals. During the course of our first dinner there I happened to notice the inscription on the silverware, then asked for the menu again to confirm what I had found. There it was, across the top of the menu: *The Waverly, a Hancock Hotel.*

Silently I showed it to Ticky. When she had read it I whispered, "There goes our last chance." When we were back in our room, we sounded each other out, found we had the same point of view: not even to get out of this smelly squalor would we demean ourselves to ask favors of the man who was responsible for this squalor. "The only possible thing I could have to say to Sir Ernest," she said, her tones making the noble title a swear word, "is to tell him what I think of this room of his. But to do that properly I could not first meet him socially through a mutual friend. So we won't look him up."

Nor did we. We had another introduction to a former prime minister who was a warm friend of the United States. We intended to call on him, but, by the time it came to do so, we had had such a taste of New Zealand that we decided that it more polite not to do so, as we would either have had to drink his tea and lie to him, or drink his tea and tell him the harsh truth of our opinion of his country. Neither alternative was acceptable, so we stayed away from him. In all, we accepted no personal hospitality of any sort in the country, for which I am glad.

We went to bed soon after dinner, as the weather was still stormy and the room was cold. It was only early fall in New Zealand, nevertheless that weekend was cold. The hotel had no provision of any sort for heating the rooms, nor did any but one of the hotels we were in there—Auckland is of the latitude of Norfolk or San Francisco, with a similar ocean-moderated climate. But imagine a San Francisco hotel without heated rooms!

The plumbing was far down another hall, a pot for women, a pot for men, one each, and nearby were shower rooms—or I should say "room" for it was one room with two doors, divided into two shower stalls by a partition which missed going all the way to the ceiling by about four feet. I did not mind this and Ticky told me later that she had not realized that the men's bath connected so intimately—but I wonder how a single and timid woman would feel to realize that men could watch her bathing by the simple expedient of dragging a chair up to the partition and looking over? That he could even climb over and assault her? Unlikely, I suppose, and no skin off our noses, since we made a habit of showering at the same time.

No tubs, of course. No amenities of any sort—and the toilet tissue appeared to be ancient parchment. After the first day we supplied our own.

Ticky killed a couple of cockroaches and we went to bed. The beds were beds in name only and we could not read, the only light being high in the ceiling. Nevertheless we got to sleep at last.

I woke up covered with mosquito bites and some other bites I was not sure about. Or, rather, I was awakened, for at seven-fifteen there came a sharp knock on the door, it was opened before I could answer, and a Maori chambermaid shoved a mug of tea in my face. Ticky tried to tell her to go away, but the girl was not listening, so Ticky accepted it. She sat up, sipping it and looking at me. "You're wearing a fright wig, did you know?"

"You wouldn't take any beauty prizes yourself this morning, my sweet. But I love you even if you are old and ugly."

"And I love you even when you're horrid, which is pretty often. But I don't doubt I look awful. Honey, could we have breakfast sent up? I've had a terrible night and I'm just not up to facing people and being polite. So please?"

"Did you read the house rules over there on the bureau? No room service. No parking of automobiles. Rooms must be vacated by 10:30 A.M.—or they sock you for another day. And a big, boldface boast at the bottom 'The Comfort of Each Guest is the Objective of the Management.' "

"Only they failed to capture their objective. I had forgotten that quip about room service. Oh, dear!"

"They haven't, so pull yourself out of that sack. That dining room opens in exactly thirty-four minutes now and they slam it shut sixty minutes later. Get up and make yourself beautiful. Want me to draw you a nice hot tub with lots of bath salts?"

"Don't be nasty." She got up and started brushing her teeth. Presently she said, "They never did bring any face towels and this skimpy little bath towel is still wet—and I'm afraid I got it sort of dirty in the shower last night. There wasn't any place to hang it. May I use yours?"

"Go ahead. Where's my grey suit?"

"Still in one of your bags. There weren't any coat hangers and the maid would only bring me two, when I asked her. Your towel is wet, too."

"Don't fret about towels, the maid will bring some fresh ones when she makes up the room. And we'll buy some coat hangers this morning, if we have to."

But we did not buy coat hangers, as we discovered later that in New Zealand everything buttons up at five P.M. on Friday and remains closed until nine on Monday. The exceptions are negligible. Australian closing hours are inconvenient, but New Zealand closing hours are more in the nature of paralysis. We did not know it yet, but our weekend was to be a complete blank.

Nor did we get dry towels. The comment about the linen charge was an indirect way of telling us that, in a New Zealand hotel, you use the same towel (one, for all purposes), the same napkin, the same sheets and pillow case for the duration of your stay. There was no use to complain; these things are regulated by the government.

I wonder if a government that decides when to change the sheets really has time to take care of more usual government business?

After breakfast (let's not mention it!) I urged Ticky to start in and work on her clothes and mine. The cyclone seemed to have moved in on Auckland; it was rainy, very windy, and cold out. She agreed. "But be sure to try to find some American cigarettes."

"I'll try." I went first to Thomas Cook & Son. Every place I passed was closed and I was beginning to wonder, but I found it open and Mr. Gunning inside. He looked up, smiled ruefully, and shook his head. "Trouble?" I asked.

"Trouble. From the weather reports now I doubt if there will be any flights even on Monday. Besides that, I can't even get you out of here on Monday even if they do fly. Half the telephone lines are down and I can't begin to complete your reservations."

He showed me what he had planned and how little he had accomplished. Finally I said, "Mr. Gunning, what does South Island have that is unique? That can't be seen on North Island?"

"Mmmm—the Southern Alps. Fjords."

"Is that all?"

"Just about. The best hunting and fishing is there."

"Well, I don't hunt or fish, we live in the Rocky Mountains and much as I love mountains, I can get along without seeing another range of them. And I've seen plenty of fjords, too. If we limited this tour to North Island would it be easier?"

He looked happy. "Much easier."

"Then do it that way. Cut out all plane flights and keep us on this island—my wife will be pleased about that, anyway. She hates to fly, it frightens her. Can you get us out on Monday then?"

He shook his head. "I wish I could, but there is no use in giving you false hopes. This is a weekend. Half the places I'll have to reach will be closed—even if I can get a call through."

"Hotels? Transportation companies?"

"Hotels will be open, of course. Some of the transportation companies may be. Suppose I phone you later in the day? I'll do my best."

I agreed. Then I decided to turn over to him the matter of getting a ship back to the States. I was going to have very little time to haunt the steamship agencies and he probably stood more chance than I did, anyhow, since he knew the ropes. He was obviously able, and willing to try very hard—and the nicest person we had met yet. So I did so, then went out to look for American cigarettes. There were none, of course, but I was very lucky in that the sale of tobacco was permitted up until noon on Saturdays. I bought two or three brands that were recommended as "mild, much like American cigarettes," and went back to the room. I found Ticky swatting cockroaches again.

I do not remember too many details of the rest of that long weekend. I recall it just as the unvarying monotony of that filthy room, long treks down the corridors to try to find other toilets somewhere else in the hotel whenever the single facility reasonably near our room was in use, which seemed to be two times out of three, showers ended by smearing off with a towel that never did dry, a few sober drinks in the funeral-parlor splendor of the lounge, and watching the storm out the window.

I am not blaming New Zealand for that cyclone. Most of the weather while we were there was delightful; New Zealand has an almost ideal climate. We had encountered bad weather in every country we were in; given clean and cheerful indoor surroundings, bad weather is a very minor inconvenience or none at all. It is another matter when you are forced to hole up in filth.

We had tried to go out Saturday evening, but ran into one of New Zealand's most characteristic institutions, the six-o'clock drunk. Their saloons close at six P.M.; the customers spend the last fifteen minutes trying to get really plastered and most of them succeed. At 6:01 the drunks come pouring out on the sidewalks outside every hotel in New Zealand—in fact marriage of the hotel business to the liquor trade appears to be the cause of New Zealand's scandalous hotels.

Ticky and I were standing at the taxi rank at the Waverly, which is just outside the Waverly Bar. We were waiting for a taxi and minding our own business, when simultaneously an empty cab drove up and the drunks started pouring out of the bar. Before I knew what was going on I found myself faced with a fist fight simply because Ticky and I had started to get into the cab.

I avoided the fight simply by accepting insults, obscenity, and by surrendering the cab. I am no hero and I do not relish facing a judge on a street-fighting charge in a strange country, and I relish even less the broken nose, broken glasses, and so forth, that may be picked up in such a brawl—and still less the prospect of Ticky's getting involved in such a useless, silly, and dangerous business . . . which she would surely do if she saw me getting the worst of it. So I crawled.

Much later, after all the drunks were served, we got a taxi. I was still shaking with rage and so was Ticky. But it turned out that she had not realized what had almost happened—because the notion of grown men fighting on a sidewalk was foreign to her experience. In thinking it over I realized that the last time I had seen anyone really drunk—fighting, mean drunk and not just happy—was over twenty years earlier and in a Central American banana port at that. For all the liquor consumed in the United States, drunk and disorderly on the streets is something one reads about in the newspapers but hardly ever sees in the flesh.

In New Zealand they do not warrant a police-court news item. So far as I know they are never arrested, for they are common as lamp posts. Nor are they limited to six o'clock in the evening; that is simply the time when the sidewalks are literally crowded with them. But you can see them at any time of day on the streets of Auckland, staggering, too drunk to navigate. Nobody pays any attention, not even the bobbies.

On Monday the weather was much better, although still overcast with some rain. After breakfast I told Ticky I intended to go at once to see Mr. Gunning. "Better get out of this hole and come with me. And say—where is that Auckland guide? Not the little one, but the big one the Chamber of Commerce puts out."

"Over there under the wash stand. What do you want if for?"

"What's it doing on the floor? And—good grief, what have you been doing with it? It's all messy."

"Swatting cockroaches."

"But why use the Auckland City Guide?"

"I had to use something . . . and it seemed appropriate."

"Mmmm, maybe you have a point." I opened it gingerly. "I want to look up the American consul. It is just barely possible that he might be able to help us get a ship back home." Ticky had been standing at the window, looking down at the grim and antiquated buildings of Auckland. She did not say anything for a long moment, then she turned rather suddenly. "Bob—"

"Huh?"

"Don't bother."

"Eh? What do you mean?"

"Don't try any further to get us a ship back to the States. Let's go down right now and buy an airline ticket home."

"What?"

"Let's fly home."

I said slowly, "Honey, I thought you were the girl who would put up with anything rather than fly over the ocean? I thought the very idea frightened you?"

"I was. It does. It just scares me speechless. I'm almost sure we'll be killed. But—" She began to cry. "B-b-but I'm just so homesick and miserable that I'll do *anything* to get home. I just can't stand this filth and the dirty food and, and everything. So let's fly."

I put an arm around her. "Take it easy, honey. All right, if that's what you want. Let's go over and tell Mr. Gunning and have him cancel the tour. Then we'll make a reservation."

"Oh, let's!"

It turned out that we could not possibly fly for four more days at the earliest; Ticky decided that such being the case we might as well make the tour around North Island and leave immediately on returning, a week hence. The notion of the tour did not upset her nearly as much as the idea of four more idle days in Auckland. So we spent the rest of the day happily, in a holiday spirit, making preparations for the tour and buying our ticket to San Francisco. We had a party at the Hi Diddle Griddle that night and let the Waverly do what it liked with the dinners we had already paid for. What Ticky suggested that they do with them was more appropriate than eating them.

When we checked out the next morning we found that they had charged us for one extra day and two extra meals. I called it to their attention with a minimum of comment, waited while they corrected it, and returned my key—ten shillings deposit. But they had the last laugh anyhow, for they gave us less than the established exchange rate for our dollars and I was too much in a hurry to go out to a bank for the correct rate. As we climbed into a taxi I shook the dust of the place from my shoes and did not look back.

The trip around North Island was very pleasant, in spite of hotels almost as bad as the Waverly and food that was just as bad in most cases. We used the hotels just to sleep in and were on the move, out in the open country, all day long. New Zealand is truly a beautiful place; once away from the eyesores they use for towns and cities one could easily fall in love with it.

The first jump was to Waitomo, by bus. The bus had been described as a "luxury bus" to distinguish it from their ordinary cross-country buses, which are known as service cars. It was not bad, but the seats are so narrow and close together that they are really suited only to married couples still in love—so Ticky and I happily held hands the entire trip. Brazil could tell them something about luxury buses, however.

The first stop was at the Waitomo Hotel, by itself in beautiful country. There we had the only decent hotel accommodations in all our stay in New Zealand. It was just a simple room and bath, but good, clean, new, and comfortable—say an $8 room in a decent commercial hotel in America. But it looked like heaven to us.

The Waitomo was the only good hotel we found in New Zealand, and even it had oddities which would not be tolerated in America—the habit, for example, of paging a guest by loudspeaker: "Mr. Tompkins, room twenty-five, report to the desk!" We had run into this army-barracks procedure first in the steamship *Monowai;* if the purser wanted to see a passenger, he ordered him, by loudspeaker, to report to his office, instead of sending a messenger with the message couched as a request. This rude practice is common throughout New Zealand. The peremptory knock in the early morning, even on Sundays, the lack of room service, and the boarding-meal hours and style of serving are common to all hotels that we saw; New Zealanders apparently do not mind being strictly disciplined on their holidays. But, allowing for these customs of the country, the Waitomo was a good hotel. Even its cooking was markedly better than that of the Waverly—not good, but edible and usually clean. By contrast it seemed wonderful.

After dinner, during an unusually long wait for coffee in the lounge, we met the manager, Mr. W. F. Swift. I had remarked that the two pages serving coffee were doing it in such a backhanded, steps-retracing fashion that they seemed unlikely ever to finish, whereupon the gentleman next to me introduced himself as the manager. It became evident that he knew his job and wanted to run the best hotel possible—and his efforts showed.

He asked us what room we were in; Ticky answered, "Number three." He nodded and said, "Ah yes, the Royal Suite."

Ticky said, "Why do you call it that?"

"Eh? Because it is. The room you have was the Duke room; the one connecting with it, number four, was the one occupied by the Queen—let me see, uh, just four weeks ago today."

I looked at Ticky and she looked at me. We managed not to laugh until we were safe in the "Duke's room"—then we got slightly hysterical. Not that there was anything wrong with the room; it was in all respects comfortable, proper, and decently furnished. I am sure the Duke of Edinburgh was comfortable in it, even though you could have lost it and never missed the space in the incredible "room" we had enjoyed in the Raffles. But the notion that we had had to acquire the Royal Suite to enjoy accommodations adequate but less luxurious than those of any of thousands of motels in America hit us, in our weakened state, as riotously funny.

The bathtub in the Royal Suite was exceptionally long and I suspect it was specially installed in consideration for the Duke's height —certainly all the fixtures were new. I know I found it a luxury even though I am two inches shorter than the Duke. But it had one oddity which I learned presently was characteristic of New Zealand plumbing: they do not revent drain lines and consequently, when a drain is thirty-five feet or more above its discharge, the drain hole will show a full fifteen pounds per square inch of vacuum, enough to be startling and moderately dangerous. I found this out by stepping on the drain hole in the tub, to my great surprise and moderate pain. I wrote a story once about a man who sealed off a vacuum leak by sitting on it; I really should rewrite that story since I did not know at the time just how absorbing a trick it is.

I managed to pull my foot loose with nothing but a large strawberry mark to show for the mishap. I hope the Duke did not step on the drain.

Waitomo is a limestone-cave resort. There are three caves, all quite good, but I am not going to describe stalactites, stalagmites, and such. If you have seen limestone caves anywhere in the world you have seen much the same thing; if you have seen the Mammoth Cave or Carlsbad Caverns you have seen much more. I am not running down the Waitomo Caves; I love limestone caves anywhere, never miss a chance to go through them, and these are excellent examples. But if you have seen one, description is unnecessary; if you have not, description is almost worthless—it is time you treated yourself to the experience.

But there is one aspect of one cave there which is unique, to be seen nowhere else in the world: the GlowWorm Grotto. It is a surpassing emotional experience which may well be worth making a trip of thousands of miles to see and worth even the indignities of New Zealand hotels. The glow worm referred to in the name is the larva of a small fly, *Arachnocampa luminosa,* whereas our glow worm is the larva of a beetle—but the difference is important only to another glow worm or an entomologist; it is a worm that glows by the same biochemical process which makes our fireflies light up. The larvae, an inch to two inches long, live on the ceilings of Cave Waitomo, where they spin threads like spider webs to catch other insects.

We went through Cave Waitomo the evening of our arrival. The first part of the tour is the usual limestone-cave trip, beautiful and impressive but not unique. Then the guide explains that he is about to turn off the lights, as the glow worms shut off their light if disturbed by light or sound. We are enjoined to keep absolute quiet. In the darkness we are led down to a big boat in an underground river; each visitor is handed into the boat in darkness, seated, and given whispered orders to sit still, keep quiet, and show no light.

With no sound but breathings and the water lapping gently against the side of the boat we are pulled along in pitch darkness, the guide moving the boat by means of steel rope let into the rock walls. The boat makes a turn to the left, following the course of the underground stream.

There is a chorused gasp, muffled at once. The ceiling of the cavern we have just entered is covered with many, many thousands of tiny blue lights, so many and so bright that we can now see the awed faces of our companions in the boat, enough light to read newspaper headlines. The sight is most like that of the Galaxy spilling across a clear desert sky on a moonless night, the gasp from the boat like that one always hears whey the "stars" first come out in a planetarium show. It does not feel like a cave; it feels like open sky and glimmering stars.

The above is correct, as far as it goes. I am afraid I can not convey the eerie emotional experience of the silent walk through darkness down to an underground river, the spooky River-Styx feeling of that black and muffled voyage. It is good that the glow worms are shy, for a single gaggling word would blemish the awesome spell of that unearthly place.

We went from Waitomo to Wairakei by train and bus, stopping overnight at the Chateau, their best-known resort hotel in the middle of National Park. Their trains are good, but smaller than ours; their goods wagons look toylike compared with our freight cars. The Chateau would be comparable to the hotels in our own national parks if it were well run. It is not. Poor food, a sickening stench in the dining room, and more of the army-barracks spirit in handling the guests. We were bawled out for daring to sit down at an empty table in the dining room—cold, dirt, and tongue-lashings are routine for the visitor to New Zealand; you must harden yourself to it while there.

The bus ride from the Chateau to Wairakei was one of the most interesting parts of the tour, even though it was scheduled simply as a means of getting us from one tourist attraction to another, for the reason that it took us intimately into New Zealand farming country and let us see a little of how the New Zealand countryman lives. The bus traveled much more than twice the road distance, wandering around through small villages and up side streets, delivering newspapers, picking up mail, stopping at a hail to pick up a note from a farmer's wife and deliver it to some farm farther up the way. We could see clearly for the first time that the whites and the Maori actually did live intimately together in the country, with no apparent color line. The countryside is fertile and has a feminine beauty, the paddocks and fields being separated by hedge rows rather than fences, English style. The back roads are poor, the houses small and rather grim, the crossroads stores very poorly stocked; the much-vaunted high standard of living is not evident. In several places there were kennellike housing developments, with whole families living in cramped boxes that made the worst of company towns in America look like well-planned suburbs. Housing is New Zealand's most acute shortage, but it is hard to see what obstacles prevent solving it, other than those they have deliberately placed on themselves through legislation. But even the best houses are uniformly dreary, made more so by an all-prevalent use of drab yellow paint, and even new houses are built in the same nineteenth-century style which accounts in part for the 1890 overall impression the country gives one.

New Zealand seems to be a place where no one goes hungry, but where life is dreary and comfortless beyond belief, save for the pleasures of good climate and magnificent countryside.

The bus delivered us at last to Hotel Wairakei, having taken four hours to cover seventy miles. Wairakei is a thermal-activity neighborhood rather than a town; it has geysers, hot springs, boiling mud springs, and colored formations in abundance, and is also the center of the government's experiments in harnessing volcanic steam for heat and power, a project pictured last year in *Life* magazine. The geothermal bores are located near the hotel and the hotel is alleged to be heated by them; perhaps in time heat for hotels will become a common thing there. As yet, the experiments have not realized commercial results but there is every reason to expect that they will. The amount of dry steam underground here is illustrated by one thermal activity which is not duplicated or excelled in Yellowstone (grand as they are, all other thermal activities in New Zealand are no match for Yellowstone, a demonstrable fact no New Zealander will believe). This exception is the Karapiti Blow Hole, which incessantly blows dry steam at 180 lbs./sq. in. pressure and has been doing so without let-up at least since the Maori arrived there in the fourteenth century. The guide there referred to it as "New Zealand's Relief Valve" and suggested that the island might blow up if the blow hole were stopped up—Ticky was all for sneaking back at night and dumping rocks and cement into it, but she is a vandal at heart as well as an anarchist.

Speaking of vandals, our several visits to the geysers and so forth of Wairakei area were made less than pleasant by the New Zealander's own disregard for his country's natural wonders. Even the guides joined in the casual sport of tearing up the vegetation, roiling the lily pools, chucking refuse into hot springs and the like. After the firm discipline of our own National Park Rangers plus the unending and quite successful warnings to us all not to disfigure our parks it was shocking to see these people witlessly damaging their national treasures. Yet we never once heard a government guide protest or warn.

In fact, in the Waitomo Caves we saw one of the guides break off a stalactite (which took endless years to grow) just to show a party of twenty people its inner structure. In these caves the formations were covered with disfiguring chicken wire where they could be reached, just to stop such rape—but the formations in our Carlsbad Caverns have no such protection and need none, for each party that goes down is so indoctrinated before starting that, should a tourist be so reckless as to harm a formation, the Rangers would almost certainly have to intervene to save him from violence at the hands of the outraged majority. We have our vandals, certainly—and we regard them as vermin. Not so there.

This same guide at Waitomo mentioned something else that surprised us almost as much as the destruction of the stalactite. It turned out that Ticky had the only flashlight in the party, whereupon the guide mentioned that the week before the lights had failed and a guide had been forced to lead a party out in the pitch blackness, relying on his memory of the twists and turns underground. Despite this incident, our guide had no torch of any sort. One of the New Zealand tourists remarked that the government certainly should buy him a flashlight, whereupon all the rest of the party and the guide himself agreed solemnly that the government certainly should, as the present situation was dangerous. Ticky and I kept quiet. No one at all suggested that a professional cave guide, not supplied with a free flashlight, might consider investing ten shillings in a flashlight of his own rather than wait for a bureaucrat to think of it.

The Wairakei Hotel had the usual swank lounge and dining room, poor food and lack of service; it was exceptional only in having the smallest room we encountered around the world. It contained a double bed and there was barely room for one person to walk down one side and the end, with the bed jammed against two walls.

We went on from there to Rotorua, fifty miles away. Rotorua is a town built right on top of a thermal area; there are geysers, hot springs, and plumes of steam popping out at odd places in back yards, in parks, or by the roadside. The Wairakei area and Rotorua and its environs comprise most of the thermal area in New Zealand. One gets the impression that thermal activity in New Zealand covers a vast area, much larger than Yellowstone, but this is not true; a map of Yellowstone, to the same scale, placed over a map of New Zealand, will show that the area of thermal activity in Yellowstone is more widespread than the corresponding area in New Zealand. After trying this comparison I wondered why the New Zealand area seemed larger and concluded that it arose from one difference: the New Zealand thermal area is not a reserve, except for certain very small areas of intense activity; farms and houses and villages fill up the space between these very limited enclaves; on the other hand, in Yellowstone we have chosen to block off the entire space, all 3500 square miles of it, more than 2,000,000 acres.

This comparison is not a criticism of the New Zealand policy, as New Zealand simply could not possibly afford to block off an area the size of Yellowstone in the middle of North Island. Besides, while I would not change Yellowstone by one pine needle, nevertheless there is a quaint charm about a country town in which the houses and fruit trees and privies intermingle with geysers and hot springs.

The Hotel Geyser in Rotorua did nothing to sully New Zealand's unchallenged record for the worst in hotels. Our room was larger than the one at Wairakei, but, since it had twin beds, it was not roomier. Since we were going to be there longer than overnight I started to ask for a chair, there being none of any nature in the room, then refrained from doing so after I had considered every possibility and discovered that no jigsaw puzzle maneuvering could possibly make room for a chair in that lovely boudoir.

The mattress on my bed was such that I took it off the bed each night and placed it under the bed. In my opinion this improved things somewhat, as there was a hard boxlike structure under the mattress which seemed to me to make better sleeping than the alleged mattress. Ticky chose to sleep among the hills and valleys of her mattress; I don't know which one of us came out ahead, but we both resorted to sleeping pills every night that we were there. There was no danger of us sleeping through breakfast as a Maori maid came in at seven each morning to wake us with tannic acid solution and another Maori girl toured the corridors, banging on a Maori war gong—allee-samee lid of garbage can, with decorations—at seven-thirty to make sure no one failed to sit down on time. This clamor went on even on Sunday mornings.

We were unable to keep the maid out of the room at seven A.M. because we could not get a key to our room, nor could it be bolted from inside. Immediately after checking in I went back to the desk and made a fight talk for a key, somewhat exaggerating the value of my camera equipment and of Ticky's jewelry to justify the unusual (in New Zealand) request . . . in fact, between camera, binoculars, typewriter, engagement ring, and a few gewgaws, we did have items with us which it would have grieved us to lose.

The manageress told me somewhat frostily that we did not need a key since everyone around there was honest. Right at this point a bellman came up to her, stuck out his hand, and asked for the key to the linen locker; she reached under the desk and got it for him while still talking to me. I looked at him, looked back at her, and said, "I thought you just told me that keys were quite unnecessary around here because everyone was honest?"

This made her angry and she informed me quite huffily that the linen locker was another matter entirely. I did not get the key.

While we were there Ticky took her baths wearing all her jewelry, such as it was. Insurance compensation does not interest her.

Perhaps everyone around there was indeed honest; we did not miss anything. But New Zealand is the only country we visited where we were cheated in making change and it happened there so frequently as to justify fairing a curve and declaring a trend.

The hotel was standard in all other respects. The room had no coat hangers, of course; the food was bad and dirty; the coffee was one point worse than any other, for it was not drinkable at all—and I will happily drink very bad coffee rather than do without; I am a coffee addict. But the meals were rendered somewhat cheerful by Maori waitresses in old Maori costumes, very fancy indeed. The Maori are a handsome people and Maori girls are very pretty indeed, if you like them a little on the plump side. The girls were not only smiling and attractive but actually seemed to want to please the guests. They dressed in a skirt much like a hula skirt made of New Zealand flax, scraped, rolled and dried in such a fashion that the strands look like strings of beads. When they walk the strands make a cheerful clacking sound. Above the waist they wear fancy embroidered bodices, strapless, with arms and shoulders bare.

The Geyser Hotel is almost next door to the Maori village of Whakarewarewa, which sits right in a geyser basin with houses built on the crusts deposited by thermal action. We paid a guide fee and joined a party of four Englishmen who were being shown around by an old Maori woman. The houses in this village are of the same style as almost every other house in New Zealand; they are not Maori architecture. So far as I could find out no Maori lives as his ancestors lived; there seems to be nothing in New Zealand parallel to the pueblo cities and the Navajo hogans of our southwest. But nearby the occupied houses, the Maori have built a replica ancient Maori village for the benefit of tourists; the tour includes the modern village, the thermal activities, and a lecture on Maori culture illustrated by the replica empty village.

The modern village sits where it does because the Maori use the natural steam and hot water for cooking, for washing, and for all domestic purposes. Iron pipes run here and there above ground, carrying water and steam from natural source to houses, and there are boxes and Dutch-oven contrivances placed over steam holes and used as stoves. The heat is great enough for boiling or simmering, not great enough for broiling or frying. Laundering is done outside in natural basins and the children, at least, bathe outdoors. I had the impression that this method of living was continued primarily as a tourist exhibit even though the houses really are inhabited, but it is no more the normal way for Maori to live than it is for the whites. The overwhelming majority of Maori have no more opportunity to use natural steam than have the residents of Auckland. Nevertheless it was very interesting.

We left the village and were conducted around the rest of the geyser basin and over to the replica village. We had had the bad luck to draw a guide who was intensely racist; she was bent on proving that Maori were equal to white men in most ways and better in all others. While we could sympathize with her chip-on-the-shoulder attitude intellectually, it was nevertheless tediously annoying. I am not going to give this woman's name as she has had much too much publicity already, being conceded to be the leading guide there and the one always chosen to conduct V.I.P.s—you have probably seen her picture in American magazines several times.

When we joined her party she was busy baiting the four Englishmen, making invidious comparisons between Maori and English, criticizing the government of England, and so forth. The Englishmen endured it in dignified silence. When she found out that we were Americans she shifted her attention to us, but limited herself at first to boasting about how much the village had done for American service men during the War (which may well have been true) and how thoroughly impressed "Eleanor" was with what she had seen there.

A few minutes later I accidentally brought her wrath down on us. She had asked us if we had seen Yellowstone Park; we admitted that we had. She answered, "I'll show you things you don't have at Yellowstone." Shortly thereafter, during the geyser basin tour, she stopped and pointed around us. "Note," she said, "how the greenery, the trees and bushes, come right down to the edge of the geyser basin. There's nothing like that in Yellowstone."

This was a wonderful place for me to have kept my mouth shut in the interests of international amity. But I answered, "Excuse me, but somebody has misled you. The trees and greenery in Yellowstone come to the edge of the thermal basins just as they do here."

"What?" She stopped and glared at me. "But I know they don't! I've

seen pictures."

I realized almost at once how she could have gotten honestly mixed up from pictures. There are several geyser basins in Yellowstone so many acres in extent that one may take any number of pictures without having trees and shrubs in the background; nevertheless similar conditions produce similar results and where the burned-out thermal area stops the trees and shrubs begin at once.

The basin she was showing us was not on that vast scale; it could have been lost in one corner of the Norris Geyser Basin, for example. Consequently trees and shrubs were never far away. In the enormously bigger basins of Yellowstone the nearest greenery might be several hundred yards away, but the basic arrangement was precisely the same—in the smaller thermal areas of Yellowstone the spatial relationships were just like those around us.

There was no reason for us to quarrel. I did not design Yellowstone and she did not design the Whakarewarewa thermal area. So I tried to straighten the matter out. She was still boiling, shouting that every other American who had ever been there had told her that she was right and anyhow the pictures proved I was wrong. I said, "I think it is just a mix-up, a misunderstanding. You see—"

"You can't argue with photographs! I'll *show* them to you!"

The Englishmen were beginning to look at us oddly while I was growing embarrassed. "Let me explain how it is in Yellowstone. You see—"

"I've no time to listen to explanations now. Come on, we late!" She turned and stomped up the path.

I shut up, realizing that she did not want explanations. The superiority of "her" thermal area was a matter of dogma; it was emotionally, though illogically, related to the superiority of thy Maori race. Several times during the next hour she turned to me and said, in several different ways, that it was very funny that I was the only American who had not agreed and forth; she did not quite call me a liar but she made it clear that I must know that I was not telling the truth. But every effort to explain she brushed off; she had no time to listen to heresy.

Her attitude was not typically Maori but it was typically New Zealand. The New Zealanders know, beyond any argument, that they have the best thermal displays in the world. I certainly agree that the New Zealand displays are wonderful and beautiful. But let me quote the Encylopaedia Britannica, which states that the geysers of Yellowstone render those "—of New Zealand almost insignificant in comparison" (X, 319, 1954). This truth is self evident to anyone who has seen both—but few New Zealanders have; indeed, their government forbids them to travel to our country save under very special circumstances.

But neither Ticky nor I ever told any New Zealander that Yellowstone was better, and I gather from what I heard that other Americans had been equally forbearing. (Even when I incensed our guide I had not been claiming that Yellowstone was "better"; I had simply attempted to correct an explicit error—nor was I successful even in that.)

The party went on to the replica village where our guide lectured us and several other parties on the virtues and wisdom of the ancient Maori, directing most of her remarks at us. The Maori emigrated here from Tahiti about six centuries ago; every Maori of today traces his descent back to a particular canoe of that heroic migration. Maori social organization was based on blood relationships and each village was a super-family, communal inside the family village. Exogamy was not required but consanguinity closer than second cousins was "tapu" or taboo.

The lecture was very long, the day was hot, and we were packed into the stuffy, windowless "city hall" of the replica, village. Besides, the talk was compounded of boasting and of many statements which were, at least, imaginative and idealized rearrangements of history and anthropology. Ticky became faint and I happily excused ourselves and led her away.

A lot of nonsense has been peddled both about the modern Maori and their ancestors. Most modern Maori are fine people indeed, handsome, good-natured, civilized, and acceptably well-educated; they are a real pleasure to know.

But the notion that their ancestors were nature's noblemen is preposterous; the Maori, before the English fought them and tamed them, were the mad dog of Polynesian peoples. They were not simply barbarous, they were bloodthirsty savages, perhaps the worst this wicked planet has seen. Physical courage and family loyalty were their only virtues. They exterminated the unwarlike aboriginal inhabitants of New Zealand, then turned their attention to eating each other, a practice to which they were addicted as the present-day New Zealander is addicted to his beer. Compared with them the lowly Australian aborigine was a civilized gentleman.

All of which has nothing to do with the Maori today; all of us have savage ancestors. It is New Zealand's boast that the present Maori are political and social equals. This boast has a large and admirable measure of truth; the status of the Maori in New Zealand is, in most respects, better than the status of colored people of all sorts in the United States. But it is not literally true. Maori will usually be found in menial jobs and there is much unspoken, "Gentlemen's Agreement"-type discrimination. Politically the Maori may not be a second-class citizen but he is certainly a special-class citizen, for he does not cast a white man's ballot. Instead he votes only for legislative representatives of his own race. He is allowed four out of eighty, or five per cent. But his birth rate is nearly twice as high as that of the whites and his present proportion in the population is nearer ten per cent than five. Exponential growth curves being what they are, one may wonder what the white man will do when these proportions are more nearly equal; will he ever permit the Maori to outvote him, or will he hold him to five per cent and a separate ballot?

In the matter of schools, most of them are mixed; others are "Jim Crow" schools for Maori children.

We attended a concert given at the City Hall of Rotorua under the direction of our guide at the Maori village. She had apparently forgotten her anger at me, or perhaps our meekness under her abuse had mollified her, for she greeted us as old friends and insisted on seating us down front. (Ticky had almost refused to attend; she wanted to claw the woman—with a cannibal feast for the victor, I gathered.) The concert consisted of Maori war dances, story dances, and songs, among them the famous "Now Is the Hour"—which is Maori. The war dances were characterized mainly by sticking tongues out as far as possible, said to be a gesture of defiance. Possibly through years of practice, a Maori can stick his tongue out much farther than a white man, sufficient to cover his chin. The arts and crafts displayed were of the usual barbaric level found all over the globe in all early cultures and almost monotonously alike wherever found—garish colors, overelaboration of detail, and highly traditional, unindividual design. It is considered the proper thing these days to gush over peasant and native art, admire the "marvellous" designs and the patient workmanship. I cannot go along with this fad; most primitive art is obviously poor art, of kindergarten quality, if judged on its own merits without sentimentality about its origin. As for the patient workmanship, to spend pains on such fiddlin' stuff indicates a person with lots of time on his hands and lacking knowledge of anything better. These are simply stages that all of our ancestors went through; we should respect them for what they are but not gush over them for what they are not.

Maori story dances are much like other Polynesian dancing such as hula, but made more interesting to me by the addition of the poi. Poi are lightweight balls on strings, which are swung like Indian clubs with remarkable dexterity. It is a form of precision juggling worked into the choreography and is most pleasing and quite difficult. There are "short poi" with six-inch strings and "long poi" with the strings about as long as the girls' arms, and they produce varied rhythms and incidental slapping sounds. It is an art most graceful, unique with the

Maori, as traditional and stylized as classic ballet and (I suspect) almost as difficult.

During our stay at Rotorua we had signed up for one of the government tourist trips scheduled to leave at 2 P.M. from the bus station in town on Saturday afternoon. We showed up there, only to be told that the trip was canceled because nobody wanted to go that day. Nobody but us, that is. I am rather glad, now that it is over, that we were disappointed as it gave us a chance to enjoy a real New Zealand Saturday afternoon.

We asked the clerk at the bus station what else there might be to do in town that day? Nothing, so far as he knew. Now Rotorua is the center of their principal holiday area and it was the height of their tourist season, so I persisted: How about a cricket match? Where could we expect to find one? Ticky had never seen cricket and I thought it was time that she learned why cricket had never displaced baseball in spite of the obvious inanities of our own national sport.

No cricket match scheduled, sorry . . . nor any place he could suggest to look for a "sand lot" game. Well, how about a movie?

Ah yes, there was a cinema performance, starting in about fifteen minutes just down the street—but have you booked tickets?

It had not occurred to us. He shook his head dismally; nevertheless we tried the cinema. It was not a continuous showing, but one performance only, reserved seats only . . . and every seat sold. The one-performance-only rule was, like the sixty-minute meal hours, one of their multitudinous restrictions on working hours; we observe a forty-hour week just as closely as they do, but their approach to it is entirely different.

So we wandered the streets, trying to find something, any thing, open. Rotorua is not a large place, but it is more than a wide place in the road; it has more citizens than has Annapolis, Maryland, a few dozen less than Princeton, New Jersey, and in addition has droves of vacationers staying in it. It is also the shopping center of a large farming community, and this was Saturday afternoon when any such farm community in America would be bursting at the seams.

You could have sprayed a machine gun down its main street and never hurt a soul. We were the only people in sight.

We strolled the silent business district, stopping occasionally to peer into locked shops. A drug store had a notice in the window stating that it was the authorized emergency chemist shop for that weekend, prescriptions filled on certified emergency from nine to ten in the morning and from six to seven in the evening. I wondered what would happen if a heart patient had to have digitalis in the middle of the day; would they let him die? A closed filling station had a similar notice, giving the address of another station at which petrol might be purchased in a certified emergency.

At last we found a small restaurant and soda fountain open, one which we had patronized the day we arrived, so we went in, even though we were not really hungry, and ordered milk shakes and sandwiches.

"Ah no," said the waitress.

"No? Well, what can you serve us?"

"Tea."

"Tea? What else?"

"Just tea."

We had tea. There was no lack of food in the place; it was in sight all around us, entertaining the flies. But tea was all that might be legally sold then.

East of the business district we found a large and beautiful park; here there were people, reveling in sports—croquet and bowls. We watched a doubles match at croquet, played for blood, the sort where you take vicious delight in knocking your opponent's ball into the next county. We were beginning to take real interest, when someone rang a dinner bell and all the players on all the courts stopped at once, racked their balls and mallets, and stopped for tea. They did not even leave the balls in position to resume play. It seemed to me a perfect example of the New Zealander's willingness to accept regimentation even in his pleasures. I began to understand why girls' marching teams were a major sport in New Zealand; close order drill suits their temperament and, besides, there isn't much else to do.

After the break for tea, disgusted with the croquet players, we watched bowls. Bowls is not bowling; it is a game played with lopsided spheroids about the size and shape of a loaf of pumpernickel and the principles are those of pitching pennies for a line. But it is a game requiring high skill to play well, as the unbalanced bowl will not go in a straight line. However, as a spectator sport, it cannot compare with chess. It is played mainly by elderly men and I think I could learn to enjoy it in my declining years.

Having exhausted the resources of this holiday resort and ourselves as well we went back and waited for the bus. There was just one, as the movie let out, and it would not hold all the crowd. I don't know whether it went back and picked up the few left behind or not. But our own experience earlier with an unannounced cancellation of a scheduled bus trip made it seem doubtful.

New Zealand is a good place to hunt and fish.

The trip from Rotorua back to Auckland was longish, five hours and a half. Ticky relieved the tedium by singing endless verses of, "In eleven more months and ten more days I'll be out of the calaboose," while I pretended not to know her. The bus stopped for tea at

Hamilton; not wishing a mug of tea and ersatz, fly-tromped sandwiches, I inspected a magazine stand instead and bought one somewhat resembling our *Harper' s* magazine to read on the bus.

The lead article was "The Great American Hoax," which undertook to prove that the American standard of living was much lower than that of New Zealand. The author had figures to "prove" that most of us live in abject poverty, unable to buy necessities, much less enjoy any comforts, such as autos radios, decent clothes, *etc.*

But he did not mention that, per capita, we have more than twice as many automobiles as do New Zealanders, twice as many telephones, four times as many radios. But at the end of the article he advised us to use the legislative measures that had brought such great prosperity to New Zealand.

New Zealanders believe this sort of drivel. They know they have the world's highest standard of living; they have been told so repeatedly. Since they are not allowed to travel to the United States without very special permission (they can get a passport but they are not allowed to buy dollars to make the trip) and since our magazines and books are forbidden entrance to their country, they are not likely to change their opinions.

The embargos against American printed matter seem to me to be one of the most serious breaches between the United States and the Commonwealth nations. It is not a barrier to understanding as tight as the Iron Curtain but it is certainly no small fence. The excuse given, of conserving dollar exchange, is preposterous; the result has been to contribute, at least, to the potentially disastrous drawing apart between former allies which has been increasing since 1945. It is true that a trickle does get through. Some technical books printed in America are allowed under special import licenses—and I did find a dealer in Auckland who bootlegged American pocketbooks under the counter and another dealer who sold old, secondhand American magazines. But these driblets merely point up the tragic lack of communication.

The magazine of opinion and the opinions it inspired took me on into Auckland. It was raining when we arrived and we needed a taxi to take us to the Trans-Tasman Hotel. But the Union Bus Depot of New Zealand's largest city has no taxi stand, nor can one be called. So we carried our bags two blocks in the rain, stood in the rain for fortyfive minutes, and arrived soaked. Why the taxi rank should be two squares from the station on a dark, unsheltered corner instead of at the curb in front of the rain shelter immediately outside the station I do not know; it seems simply to be part of the New Zealand genius for doing things the hard way. It will never matter to us again, but it surely inconveniences thousands of local people each year . . . to *no* purpose.

Why do they put up with it? Yet I heard no lone complaint from those who got soaking wet with us.

The Trans-Tasman did turn out to be a better hotel than the Waverly, in that it was cleaner and our room was more cheerful. But it had the same boardinghouse & reform-school rules, the same paucity of plumbing, the same lack of central heating; on the scale under which it had won New Zealand's highest official rating of "five stars plus" the Muehibach in Kansas City would get about seventy-eight stars and a sunburst.

The next day was a very busy one. I had wanted very much to see a kiwi bird but chores incident to our departure the following day left no time for a visit to the zoo. First we had to pick up a suit left to be drycleaned and intended by Ticky for my use on the trip home—we found that they had broken three buttons on it and ripped one off. We neither argued nor complained, having learned that to do so was to invite a tongue-lashing. Since we were flying we wanted to ship back the excess over our air baggage allowance, but when we tried to do so, we found the red tape so appallingly complicated and the service so poor, that we gave up and I limited myself to mailing back as parcel post a suitcase full of books and papers. This required a trip to the customs house for export license before I could mail it. Once I had permission to send it out of the country I returned to the hotel, got the suitcase and went to Auckland's General Post Office, only to find that I could not mail it there. One could do many other things there—deposit money, place a long-distance phone call, send a cablegram overseas, pay insurance premiums, straighten out social security accounts, or even buy stamps—but the mailing of packages was not one of the functions of the General Post Office; that was done at an office several blocks away.

The trip was not entirely wasted, as I wanted to check on an expected cablegram from America and had found myself unable to do so by telephone. I found out why—the cable office in Auckland maintains no file of undelivered messages; they have no way to answer the question: "My name is J. H. Glutz—is there a message for me?" But a good-natured clerk took the trouble to check through every cablegram that had arrived in the country during the past two weeks (that being the only possible way to do it) in order to locate the one intended for me.

The suitcase being heavy I had taken a cab to the G.P.O., but had dismissed it on arrival. Now I had to lug the suitcase to the other office in order to mail it as I could get neither taxi nor tram. One of the first things Ticky and I had learned about Auckland was that the traffic cops simply were not interested in pedestrians, nor were the drivers; no quarter was given or expected, you were quick on your feet or you got hit. But in this case the heavy burden slowed me down. By the time I got that suitcase to the parcel-post office I was shaking with rage and adrenaline shock . . . most particularly because a bobby had looked right at me, then signaled a solid mass of cars to come on anyhow, stranding me in the middle of traffic, unable to run or jump. Latin Americans drive with courage, but the hazard thereby to pedestrians is as nothing to the cold ruthlessness of Auckland drivers. They give the impression that they seriously intend to hit you if possible, while their police seem to encourage the sport.

The suitcase mailed, it was necessary to obtain a different export license at still another office to take out of the country our remaining traveler's cheques. This required the usual questionnaires and declarations but did not take as long as it had taken in Australia; however, New Zealand charges a revenue fee for this gracious privilege.

We still had to arrange customs clearance for about half our suitcases and check them into the airline. Mr. Lees, of New Zealand National Airways Corporation, had pointed out that we could save quite a bit by classing our excess baggage as air cargo rather than as baggage—Mr. Lees was extremely helpful throughout—but this did entail one more chore the day before. But at the end of a long, hard day we were completely ready to go, stripped down to toothbrushes and a change of underwear. We celebrated by going to Hi Diddle Griddle for dinner.

But I still wanted to see a kiwi bird. The kiwi is not only the national symbol of New Zealand, the nickname of its soldiers, and the brand name of the world's best shoe polish, it is highly interesting in its own right. Most of the other flightless land birds are giants like the ostrich and the emu, able to compete through size, muscle, and speed; the kiwi is no bigger than a chicken. New Zealand had practically no animals before man introduced them; a flightless bird, even though small, was able to get along. Indeed, he made out better than his colossal cousin the fabulous moa, a bird that towered twelve feet in the air and which was relished by the Maori even more than they relished their neighbors—by the time the white man came it was extinct.

The kiwi hung on and still hangs on, wild in the bush. But the Auckland Zoo has a few. There was time enough the last morning, before we had to be ready to take the airport bus, to make a fast trip to the zoo provided we took a taxi and hung onto it, which we did—having the driver park and paying his way into the zoo with us.

While the Auckland Zoo cannot compare with the Sydney Zoo it is a remarkably good one for the size of the city. But I had just one thing on my mind—kiwis. So I stopped the first attendant I could find and asked where they were. He scratched his head, admitted that there were some, but he did not think we could see them. Why not? Well, they were night birds and they hid out in the brush in the daytime and were very hard to find. Ah no, he did not think we would see any, but we might try the director's office.

We tried the director's office but there seemed to be nobody at home. We walked away from there rather disconsolately, wondering whether we should sample a few caged tigers and such, or go at once back to town.

We heard someone running behind us, turned and found a slender, very pretty girl waving to us. "Hello! You wanted something at the office?"

We introduced ourselves and said what we wanted. She was Miss Margaret Wilson—"Pat" to her friends, who must be numerous—secretary to the director. She said, "You are visitors, aren't you? Not New Zealanders?"

"That's right. We're from the States."

"Then I think you ought to see a kiwi if that is what you want to see. Come along, I'll try to arrange it."

But we did several things else first. Miss Wilson was not a zoologist nor veterinarian herself, but she loved her zoo and was proud of it; we had to meet her friends, including a lioness who let Pat put her hand in her mouth, a Canadian timber wolf who fawned all over her and whined when she left, and a bale lion which Pat went into a cage to fetch, then brought out and let Ticky hold.

She showed us Komodo dragons, left over from an era eve rougher than this one. I remembered our ship passing their home island after we left Java and regretting that I had never seen one. She showed us blue penguins, native to the islands between New Zealand and the south pole and a variety rarely seen in captivity. These had just arrived and the birds were not used to pens; they had hidden. Pat got inside with them and started groping back in under rocks, almost standing on her head. "Come on out, please! Come, darlings"—she called them all "darling" and "dear" from lions to budgies. "Come on out, dear, please! I won't hurt you. Darn! You *bit* me. You shouldn't have done that. Now come on out and be nice."

She talked him into it and reappeared with a penguin that was unquestionably blue. He looked at us and did not seem impressed. Then he bit her again.

The kiwis are kept in a large, wild although enclosed, stretch of native bush. This suits the kiwi but it makes him a washout as a zoo exhibit as he simply hides and sleeps through the day. Miss Wilson had one of the keepers poke around until he found one, which he then fetched to her. She held him, petted him to sooth his nerves, and talked about him. "He eats worms and lizards and things like that. He can eat one hundred and sixty-eight worms before he gets sick," she told us solemnly—I quote verbatim.

The kiwi's feathers look and feel like coarse hair. Its bill is the size and shape of a lead pencil but curved. Its wings are useless, featherless little stubs, hidden under the body feathers and looking like a chicken wing just before frying. The kiwi takes a dim view of humans and presently we let him go, whereupon he hurried into nearby thicket and was soon lost to view.

I think Miss Wilson would pet a brontosaurus if she could find a rock to stand on. She would probably call him darling, too. All in all, she was just about the nicest thing that happened to us in New Zealand.

Our taxi driver had seemed to enjoy visiting the zoo on a paid basis and we had grown rather chummy. But when he got us back to the hotel he looked me in the eye and charged us just double what I knew the legal tariff to be for the mileage and the waiting time. I paid it without a quiver, not minding since we would be on our way in an hour or so. Our ship was a DC-6 sleeper of the British Commonwealth Pacific Airlines (since then merged with Qantas). The day was clear, the takeoff uneventful; we settled down for a long flight to the Fiji Islands. As we headed north we could see North Island stretched out under us and behind, its odd shape recognizable, just as on a map.

And I was determined to leave it on maps from then on. Australia had had its drawbacks but Australia was a place we wanted to return to and see what we had missed. But New Zealand— To get us back to New Zealand they would have to drag us, kicking and screaming all the way.

I had time to try to get my thoughts straight about New Zealand. Certainly poor hotels were not reason enough to detest a country. I myself had been born in a house without plumbing and had lived much of my life without much of the physical comforts. I was sure in my heart that I could have loved New Zealand, beautiful place that it is, had there been not a single flush toilet in the whole land.

I admitted that part of my reaction was disappointment. I had been sold on their propaganda about what a paradise the place was—no doubt it had seemed more dreadful in contrast to my expectations. But that alone was not it, either; every new place turns out to be quite different from anticipations. The reality quickly erases the preconception and causes one to forget it; it took a careful effort of memory to recall what my former concepts had been.

Perhaps I had placed too much emphasis on poor hotel food. But food is basic to life. It need not be fancy but it should be clean and reasonably well prepared. The plain fare of an American freighter had suited us well enough—but in New Zealand Ticky had lost eleven pounds in eleven days.

But it was not even bad cooking that had appalled us and taken our appetites. One can live a lifetime on tasteless food. It was hair in the coffee, flies in the sugar, dirt on the dishes, and an atmosphere of incivility that tightened up the stomach and made it impossible to eat. The last especially—Australian manners are rough but warm; New Zealand manners are often colder than the proverbially chilly English, with an icy and intentional rudeness not characteristic of the English.

"A guest should never complain." Ah, but we were not treated as guests; we were merely sources of revenue to be exploited, "suckers." It is their country and they are entitled to run it as they see fit, but they are not entitled to advertise for tourists, as they do, and then treat them as they do. They are obtaining money under false pretenses.

But, I reminded myself, not all New Zealanders are rude, or drunken, or dirty, or dishonest. Not at all! I remember at least three taxi drivers who were fine gentlemen, one who apologized on behalf of his country for the manner and speech of a drunk, another who returned half of a tip which he considered too large, another who did us a gracious service and refused pay. There was the manager of the Waitomo Hotel, a conscientious host, Mr. Gunning of Thomas Cook & Son, Mr. Lees of the government airlines, and the lovely and sweet little woman we had met at Rotorua who was so upset at the nastily anti-American talk we had been subjected to one night at dinner at the Hotel Geyser. There was Miss Pat Wilson, bless her warm heart, that very day.

I loved them all, every one of them, and was grateful for what each had done to make us feel happy in their land. But it does not take a very high percentage of boors to make a country dreadful for strangers. No doubt, even in New Zealand, the boors are in the minority . . . but nevertheless New Zealand has several times the minimum tolerable percentage; a visitor gets slapped around so frequently that he is in a constant state if shock.

But New Zealand unquestionably does have some of the finest hunting and fishing in the world. At Lake Taupo near Zotorua the trout, they say, average over five pounds. As for game, you may even shoot doe and be paid a bounty for shooting them. The game do not have to be stalked; just bang sway until your shoulder is sore. If that is what you are after and you can stand the hotels and the numerous and-so-forth, then New Zealand is for you.

But is that "sport"? Shooting cows in a pasture is actually more sporting; you have the farmer to worry about. As for fishing, it is a long way to go to catch a fish.

Plan your trip to avoid the place. This is not hard to do; only Tristan da Cunha is harder to reach, harder to leave. New Zealand claims to have the finest variety of natural wonders in the smallest area of any place in the world, but let me tell you how to plan a trip which will cover no more territory than all of New Zealand, involve no more mileage in the area described, and involve thousands of miles less to reach your starting point—and will provide everything New Zealand has to offer, including hunting and fishing, and excepting only the glorious GlowWorm Grotto:

Lay a map of New Zealand down on a map of the United States of the same scale so that the south end of South Island s at North Rim, Arizona, with the north end at Yellowstone. Place the toe of the shoe of North Island at Puget Sound and the heel at Glacier National Park; this will leave a space between the two islands roughly equivalent to Cook Strait at a point just above Arco, Idaho.

In the area of the United States covered by the outlines of the two New Zealand islands superposed on your map as described above you will find:

Several Indian reservations, in place of Maori villages

The thermal areas of Yellowstone Park

Many caverns including Lehman Caves National Monument

Mountains, glaciers, fjords (Puget Sound is not called "fjords" but the name is not important)

Yellowstone Lake instead of Taupo Lake

Freshwater and saltwater fishing of many sorts

Hunting—elk, deer, antelope, bear, game birds, even mountain lion—but you will have to hunt in most areas; it will not be shooting cows in a pasture.

In place of Auckland, you have a choice of several cities but let us name Salt Lake City which is the same size as Auckland, but much prettier and immeasurably cleaner, and possesses some of the finest hotels in the world, run by Mormons, a people who make almost a fetish of being polite and hospitable to "gentiles." They are wonderful cooks, too.

And (I almost forgot!) several hundred miles of beaches, ocean, freshwater, and salt lake

The above list equals or tops everything that New Zealand has to boast about in the way of scenery, natural wonders, and holiday advantages—except the GlowWorm Grotto. But as a bonus you will also get the following:

The Grand Canyon of the Colorado, unparalleled in the world

The Grand Canyon of the Yellowstone, smaller but incredible in its combination of canyon, thermal activity, waterfalls, and amazing colors

The Great Salt Lake and the Great Salt Desert
Sun Valley
The Craters of the Moon National Monument
Bryce Canyon
Zion Park
Kodachrome Flats
The Grand Coulee Dam
A choice of several petrified forests
The Arco Atomic Energy Plant

Several cities, a list too long to enter of lesser natural wonders, a few hundred miles of the great divide, mountains such as the Tetons and the Olympics having the spectacular beauty which distinguishes lordly mountains from "just another high one."

But there are two additional bonuses: first, you need not spend the time nor the money to make a fifteen-thousand-mile round trip to see this super-New-Zealand wonderland; and second, you can stop anywhere on the way and be sure of clean quarters, private bath, decent food, and no regimentation. If you care to tuck the Duncan Hines guides in your car, you can be sure of luxury and gourmet food. I can guarantee that you will *never* be offered boiled mutton! So bypass the smug, provincial, and conceited place called New Zealand. Leave them to their lotus eating. If you ever follow the route we took, turn north when you leave Australia and see the Philippines and Japan instead; thus you will not be wasting your money on things more readily available at home.

The flight was uneventful and as monotonous as over-water flying in good weather is bound to be. Just after dark we landed at Nandi on Viti Levu in the Fiji Islands, walked fifty yards to an excellent, modern hotel and had a simply wonderful dinner. But it could hardly be called a trip to the Fiji Islands, since all we saw of the Islands was that one hotel, all we saw of the Fiji Islanders were a dozen tall, grave, barefoot black men who were the waiters at dinner. We could tell we were back in the tropics by the heavy, smothering heat, and the glimpses of luxuriant gardens outside in the dark. But it was all hello-and-goodby.

They bedded us down when we took off from there, beds much like Pullman berths, but with safety belts. Ticky did not fasten hers, since the flight was smooth as a superhighway. But early in the morning we passed through some turbulence and she was awakened by finding herself two feet over her bunk, from which position she descended rather suddenly to her mattress. It solidified her opinion that we had placed our lives in forfeit to escape from dirt and rudeness, but she did not complain. However, it did upset her very much and when we landed on Canton Island I took her ashore for a stretch and a cup of coffee. Canton is an atoll just north of the equator, and a British-American condominium, which means that nobody quite knows who should do what. We could barely see the lagoon and could not make out the shape of the atoll ring—another hello-and-goodby.

We had the luxury of breakfast in bed, served by a pretty airline hostess. About noon we sighted lordly Diamond Head and at twelve-thirty, having crossed the date line in the night, we landed at Honolulu on the same date we had taken off from Auckland but three hours earlier than when we started. There was the Stars and Stripes flying over the port, we were *home,* back in the United States! My eyes filled up and my mouth began to tremble and I had to grope to get down the stairway without falling.

Only the fact that the runway was smeared with spilled oil at the spot where we deplaned kept me from falling on my knees and kissing my native land. I *wanted* to do it. I wanted to hug it and never let it go.

XIII

Paradise

WE ZIPPED THROUGH immigration in nothing flat and through customs in about five minutes, at least four of which were occupied by the customs officer chatting with us about where we had been and our own bubbling over about how happy we were to be *home.* He shook hands and welcomed us back.

Waiting at the door of the inspection room were Bob and Vi Markham, our chums in the *Gulf Shipper*—how many miles and months ago? They were loaded down with flower leis and grinning like pups. The leis were placed around our necks with kisses and warm aloha and again we could not see for tears. Home!

It had been years since I had last seen Honolulu. It seemed a bit bigger, a bit brighter, more automobiles and more curving, beautiful boulevards, but essentially unchanged. Aloha Tower still offered welcome, the royal palms still swayed in the warm and steady trade winds and the breakers still rolled in on Waikiki. But I had forgotten how splendidly beautiful it is.

There are those who complain that Honolulu is too artificial, not a South Seas sort of place at all. I am not one of them—I have seen Auckland! Honolulu is as shiny and up to date as a new car and it is that way because most people want it that way. It is impossible to take proper care of more than fifty thousand visitors a year with just a few grass shacks on a beach; fine big hotels are indispensable. For those who want untouched nature and solitude there is plenty of it on the Big Island, miles and miles of empty beach without a soul in sight. But one should not ask for silence and solitude at Waikiki any more than one would expect it at Rockefeller Center.

Bob and Vi drove us out to their home at Aina Haina, beyond Diamond Head. I stared and stared the whole trip. still in a state of shock at the sudden transition from grim and dreary Auckland to this chrome-plated Land of Oz—like being dumped from an icy tub of water into a warm bed. But I am not going to give a blow-by-blow account of our stay in Hawaii. Hawaii is home, just as New Jersey is home; neither one belongs in an account of a trip around the world told from an American viewpoint. So I will simply dust off the high spots just to get us back to Colorado, where the argument with Ticky had started a year earlier.

We did all the usual things—shopped, ate in restaurants where we could see hula dancing, drove around Oahu, saw the place of murdered ships and murdered men at Pearl Harbor, inspected the pineapple fields and went through the Dole pineapple cannery, of which Bob was an executive, attended a luau and ate poi and laulaus, having learned first how to prepare and tie a laulau, stood in the wind on the high Pali where King Kamehameha the Great sealed in blood the unification of the islands as one nation, and took a packaged commercial tour by air and automobile of Hawaii much as we had taken such a tour in New Zealand, a tour which had as its high spot a stay in Volcano House on the rim of the great, live crater Kilauea where the firegoddess Pele lives.

But you have probably been to all these places, too. If not, mark it down in your book. This is one of the fairest parts of the United States. You need no passport, you undergo no red tape, you don't have to worry about the drinking water; all you require is the price of a round trip ticket from the Mainland. $250 by aircoach, plus what you care to spend while there. Prices in Honolulu are higher than they are in San Francisco as almost everything has to be imported, but they are not much higher. What you spend depends mostly on how much liquor you drink, where you eat, and what you buy. An all-expense luxury tour (and I do mean "luxury") of the outer islands costs about $30 a day, but you need not spend that much if you do not wish to be spoonfed. On the other hand it is no trouble to spend a hundred dollars a day in shops and night clubs if you wish.

Whether you pinch pennies or spend it like water, you will be treated with courtesy. Much more than half of the population is of Chinese, Japanese, or Hawaiian descent, three cultures outstanding for politeness, and the Caucasians or haoles have absorbed and taken for their own the leisurely, informal, almost excessively courteous spirit of the islands. Besides that, the Chamber of Commerce and the territorial government have been pushing a Be-Kind-to-Mainlanders movement which is carried to such extremes that it is considered bad form to call us trippers "tourists"—we must be called "visitors" or "guests" and every resident has been reminded repeatedly that it is up to each one of them to make us feel welcome.

Of course this last point is not just altruism; tourists bring money into the islands and the purpose of the drive is to remind the islanders not to mistreat the goose that lays the golden eggs. But one real and important result is that here is a place where a tourist who thinks he has been cheated or mistreated need not swallow the matter and try to forget it; the Visitors' Bureau will take a warm personal interest in his complaints. Besides that, politeness feels good whatever the reason.

The visitor will want to be equally polite. Just as three words of Spanish are enough to go all around South America three simple rules are sufficient for visitors to get along smoothly in this variant of the basic American culture:

1. Honolulu is pronounced with the "o's" long and fully sounded, as in "Oh, no!"—not the way it is generally heard elsewhere; and Hawaii is pronounced "Hav-wah-ee," not "Hawah-yuh." The "vw" sound is a slurred labial not found in English and should be sounded as a single consonant; if you have trouble with it, make it a simple "w"—but *don't* let a "yuh" get into the ending. There is no "y" sound and it is either a prolonged "ee" or two distinct long-E sounds said very rapidly one after the other—Hawaiian Polynesian is filled with vowels unseparated by consonants.

2. Never, never, *never* speak of "going back to the United States." This *is* the United States. That bigger piece over then to the east is referred to as "The Mainland." People from it al ("Mainlanders" or "malihini" and the term "Americans" is used only inclusively and must never mean mainlanders as distinguished from islanders, no matter what their race or color.

3. And never forget that here there is no color line of any sort. The Mayor of Honolulu is of Japanese descent. One of the most distinguished of jurists here looks like Kamehamehu the First. A mistake on this score will convince you that even an islander can be impolite if you push him hard enough.

But if you follow these easy rules you find that when you leave you will join in the ancient toast *"Me ke aloha pan ole"* (May our friendship be everlasting)—and mean it with all your heart.

A word about the word "aloha"—its usual literal translation is "love" but it also means "friendship" or good feeling of any sort; therefore it is used as a toast, as a greeting, as a farewell-which tells more about the Hawaiian culture than anything else could; Hawaii is a place where "love" is the commonest word in daily use.

What this weary planet needs is a lot more aloha.

The islands affected Ticky the way catnip affects a cat; she decided that she wanted to stay there forever, raising orchids outdoors, a prospect that dazzled her after the short growing season of our Rocky Mountain home. Soon I was subjected to a well-organized campaign, led by Ticky and ably brain-trusted by Vi, to get me to agree before we left Hawaii that we would come back and build a home there.

I tried to combat it with logic; I should have known better. "Look," I said, "use that knot on the end of your spinal column. We've *got* a house; you've *got* a garden—back in Colorado Springs. Remember?"

"The deer eat all my tulips."

This was true. I don't know why mule deer prefer Dutch tulips to all other forms of salad, but they do. "I thought it pleased you to have deer wandering around our house?"

"It does. But they ruin my garden. And just look at the garden Vi has! I could never have flowers like those in Colorado no matter what I did."

This also was true. In Hawaii one does not need to encourage flowers; one needs a flamethrower to subdue them. "Ticky, you know perfectly well that, lovely as this place is, in six weeks you would be homesick for your mountains."

"Sure! But that's just the beauty of it—we'll commute. When the weather gets cold and nasty in Colorado, we'll come here. When we get tired of perfect weather and begin to long for mountains and flash floods, we'll go back to Colorado. About three months each way, maybe. Perfect!"

I winced, then took a deep breath and started the fatherly, facts-of-life approach. "Look, baby, my name is not Ford, nor Morgan, nor Rockefeller. You probably should have married that Philadelphia banker chap, assuming that you could have hooked him. As it is, I can't afford two households, neither the initial cost nor the overhead. I have to write like mad, an overworked hack, just to keep up with your whims and—"

"I didn't want to travel," she broke in. "I merely wanted to build a greenhouse. Traveling was *your* idea."

One simply cannot hold a woman to the point in a discussion. "Never mind that," I answered with dignity. "The point is that, after all, you can't have everything."

"Why not?" she wanted to know.

I have never been able to think of an answer to that one, not one which is emotionally convincing. "The cat won't like it," I said feebly and shut up, which I should have done much sooner. But the economic facts of life did soon slow Ticky down a bit; she started pricing building lots in suburban Honolulu and found out that too many people just like herself were very anxious to obtain the choice sites which were all too few. Choice home sites near the city were not for sale at any price; the best that was offered was long-term leasehold at a ground rent which seemed very high to people from the wide open spaces. Ticky did not stop trying but the difficulties subdued her and she quit lobbying at me about it.

But she had planted the germ in my mind. The idea really did have attractions . . . to be able to throw away my snow shovel, to be an upholstered beachcomber, yet able to return to our mountains whenever we began to yearn for the dry-wine air off the snow fields. We didn't have to compete for that expensive beach property near Honolulu; we could go clear to the other side of the island if we wanted to. Just a little grass shack of whitewashed cinder blocks and only one bathroom, nothing fancy or expensive—oh, a lanai, of course, and a barbecue. One I could build myself, naturally.

Maybe just a little one—

But the cat certainly would not like it and we hardly ever do anything without the advice and consent of the cat. I put it out of my mind . . . mostly. Ticky surprised me by not taking up one minor feature of Hawaii; she is probably the only white wahine ever to go there who did not attempt hula. All of the white female residents have studied hula at some time, as a graceful accomplishment and a delightful exercise, whereas the women visitors from the Mainland sign up in droves for about three lessons each, then go home and demonstrate to their friends that they have "learned" the hula—an accomplishment requiring ten years or more and for which study should start at about the age of five.

But, knowing that Ticky delighted in every form of dancing from rumba to waltzing on ice and including ballet and square dancing, I found out the name of the best teacher available to beginners and signed her up for a quickie course. But she never got there, not when she discovered that bare feet were obligatory. "I'll wear heelless sandals," she had said comfortably.

I looked shocked. "Would you take a swimming lesson in riding boots?" For once, Vi formed an alliance with me, instead of against me, and convinced Ticky that anything but bare feet for hula would be as ridiculous as a tail coat at a picnic.

Whereupon Ticky canceled the lessons and never did study hula. I had known that she disliked to go barefoot but I had not realized that she carried it to such extremes—I had had not too much difficulty in persuading her not to wear shoes to bed and she always takes them off while bathing. But it seems that some no-nonsense adults had forced her to go barefoot in the country during summer while a small child, which had offended her baby dignity. So no hula.

Now I am the one who demonstrates hula to defenseless guests. I don't do it any worse than most females who visit Hawaii.

I have promised not to take you step by step around the islands but I cannot refrain from listing some things which you must not miss when you go there. The first of these is Volcano House on the Island of Hawaii, a fine hotel which sits on the edge of a great live volcano in the middle of one of our National Parks. You will probably not have the luck (good or bad, depending on how you look at it) to see Kilauea in eruption but you will see steam rising and will be awed by looking down into the crater, and you will see the scientific demonstrations and documentary motion pictures prepared by the vulcanists who maintain a research station there. The last are in color and are at least as frightening as having a tomahawk thrown at you out of a 3-D screen.

Despite the continuous watch by scientists Kilauea last went into major eruption without any warning. It might do so while you are there, making of you either a victim or an extraordinarily favored observer; the possibility is one of the fascinations of the place. After all, you don't want to live forever. Or do you?

Orchids you cannot avoid seeing; they grow here as easily as dandelions on the Mainland, and the residents grow them in their back yards and in their living rooms. But while you are on the Big Island go see the commercial orchid nurseries in Hilo—if you are on a guided tour you are certain to be taken. The sight of tens of thousands of blooms in hundreds of species makes one a little drunk.

There are at least three thousand cultivated species of orchids, an estimated fifteen thousand species wild and tame, and nobody has ever tried to count the enormous number of varieties. I was amazed to learn that there were some forty native species in my own mountain area—I had not known there were any. The flavoring in vanilla ice cream comes from the seeds of the vanilla orchids. The common cattleya, the "orchid"-colored orchid used in the United States by wolves to break down the resistance of females and which costs from three to eight dollars a bloom on the Mainland, is so common in Hawaii that you are likely to be given one as a free sample.

Most temperate zone orchids grow on the ground but tropical orchids, as almost all cultivated orchids are, grow on trees, clinging to them and never touching the ground. They are air plants; the term is "epiphytic"—since "epidemic" means a disease raging among humans and "epizootic" means the same thing for animals, "epiphytic" sounds as if it should mean a pretty sad state of affairs for fish, but what it does mean is a plant that rests on another plant without deriving nourishment from it. Orchids sometimes are called parasites but this is an unfair slur; they use trees only for mechanical support. Just how they do make a living has me buffaloed—apparently by taking in each other's washing.

If you want to raise them yourself, go right ahead. Don't let Nero Wolfe fool you, it is not hard. A few years ago Philip Wylie had an article in *The Saturday Evening Post* telling how to do it and the periodical index in any public library will locate it for you.

You will want to attend a luau while in the islands. These feasts are a great treat socially, but the authentic Hawaiian foods do not especially appeal to me. Here "poi" are not little dancing spheres but is a sticky grey paste made from taro root, sort of an underprivileged tapioca eaten with the fingers. It was the staple of the natives until they encountered corn flakes and hamburgers and such, and a great deal of it is still eaten. You will be served it at luau; if you really like it, let me know. Laulau is a chunk of pork, a piece of fish, and a handful of taro leaf, all wrapped in ti leaf (the long leaves from which grass skirts are made) and baked. Laulau makes quite acceptable food but nothing to get excited about. The rest of the feast is likely to be fish, possibly raw, pig barbecued whole, fruit, and much aloha, some of it liquid. Pig is the authentic main dish as the Hawaiians never did have the vice of "long pig"—they were never cannibals. They fought among themselves until Kamehameha the Great put a stop to tribal war with one last big one, but they never ate the slain.

Sophisticated modern variations of primitive island cookery are delightful indeed. Honolulu is bulging with gourmet restaurants, some of them surprisingly reasonable. The Sky Chef at the airport terminal building is as good a restaurant as may be found in New York and New Orleans taken together, but I would hesitate to say that it is the best restaurant in Honolulu because there are so many fine ones. If you do not like poi, you need not lose weight. Ticky gained back the eleven pounds she lost in New Zealand and I gained weight I did not need. Oh well, the Hawaiians say it takes a big opu (belly) to hula properly.

I found myself wondering constantly why it was that Hawaii was such a paradise while New Zealand was such a grim washout. The two island groups are basically much more alike than they are unlike, except that New Zealand is much, much richer in resources, having far more usable land, much gold, much coal, oil and many other minerals, and unlimited water power. Hawaii has nothing but farm land, no commercial minerals of any sort. If there is any advantage in climate, it lies with New Zealand, not with Hawaii. Hawaii is much overpopulated for its resources, while New Zealand is underpopulated—an economic advantage unless the population is very small, but New

Zealand nevertheless has four times the population of Hawaii.

Hawaii does have an advantage in tourist trade in being more centrally located, but in all other ways New Zealand is more favored, being bigger and very much better endowed. Even in the tourist trade New Zealand is not too badly at a disadvantage, as she is much nearer the heavily populated east coast of Australia than Hawaii is to our west coast and also she draws on the entire pound-sterling area for tourists, a trade not available to Hawaii because of the money embargos placed against us.

Then *why?*

I was forced to conclude that the difference must lie in the people themselves. The New Zealanders have saddled themselves with endless laws and government regulations restricting competition, reducing production, discouraging incentive, and almost prohibiting initiative. The wage fixing, price fixing, licensing, and forbidding outright of many economic activities considered routine with us is almost beyond belief. New Zealanders themselves complain that their own people will not put in an honest day's work. Between fixed wages with no incentive to work harder on one hand and a social security system so pervasive that not working is almost as good as working on the other hand, the New Zealand employee has precious little reason to do a good job—and his employer has even less incentive to risk new capital in a game that is intentionally rigged against him. To a stranger, the result looks and feels like stagnation.

The economic environment in Hawaii is essentially like that in all the rest of the United States. We do have government regulations, certainly, enough of them to make some of our citizens apoplectic, but compared with New Zealand we live in economic anarchy. Whether we think we have too much or too little, or perhaps the wrong ones, nevertheless our rules are not such as to make ambition fruitless. Hard work and imagination still pay off, despite what the crepe-hangers say, and Hawaii is a showcase proof of the fact. The residents of Hawaii work like beavers in spite of the lazy climate and they get rewards for their efforts. Even unskilled labor receives the highest wages in the entire world. As for those higher up the ladder the material evidence of their rewards are everywhere around you in Hawaii.

But of course no one in Hawaii is satisfied with his share, any more than people are on the Mainland. Perhaps that is the real difference between the two sets of islanders: those in Hawaii are hustling to get more while those in New Zealand sit back content with the government-controlled minimums assigned to them. Why hustle when the prizes are predetermined?

We were having a wonderful time in Hawaii but I had to get Ticky out of there before she picked out a building site-and before I weakened and leased it. Leaving by air is not very ceremonious, thank goodness, for neither one of us was in emotional shape to stand at the rail of the *Lurline* and listen to "Aloha Oe" as the ship warped slowly away from the dock. A plane departure is mercifully swift. As it was, we were both weeping as the Markhams piled leis around our shoulders. I wonder if anyone ever leaves those glorious islands without promising himself through tears that he will return?

It was a short sleeper flight back to San Francisco. By the time we finished breakfast the Golden Gate bridge was in sight. Before eight o'clock we were standing on the soil of the Mainland and were home for a second time. I had caught cold on the flight, so I rested up in a hotel bed for a couple of days while Ticky shopped. Despite Singapore and Buenos Aires she considers San Francisco tops for shopping and complains that I never allow her enough time for it there; my indisposition was convenient. As soon as I was able to totter around we had a drink at the Top o' the Mark, then caught an evening flight to Denver—and we were home for a third time.

To us, softened up by summer in both hemispheres and months in the tropics, Denver was unbelievably cold. It was too late to catch a shuttle flight to Colorado Springs, so we hurried to the Brown Palace with our fingers numb and our teeth chattering while Ticky pointed out that we would be warm through had we stayed in Hawaii. I conceded the point but was interested then only in getting into a hot tub of water as quickly as possible. Our room turned out to have a nice big tub and all the hot water I could want; we got warm. The room was luxurious in every way and reminded me of New Zealand because it was so different. But I must admit that it cost twice as much as our room in the Waverly.

But it was worth at least six times as much. The next foreigner to make a disparaging remark about bathtub & plumbing as the vulgar criterion of culture in America in my presence is going to get a swift poke in the eye. Decent bathrooms do not constitute civilized living, but they are as necessary to high civilization as water is to a fish. Music festivals and such are necessary, too—but we have *both*.

The shuttle flight from Denver to our little town is only twenty-five minutes; one does not even unfasten seat belts.

For the last time I made sure that all the suitcases went with us, then breathed a sigh of relief, feeling that all worries were over.

Ten minutes after we took off that confounded daisy clipper caught fire. The pilot made a sharp U-turn and headed us back for an emergency landing while the hostess hurried up and down the aisle, assuring the passengers that there was no danger. Ticky leaned over to me and whispered bleakly, "If we walk away from this, I'm going the rest of the way by bus." I did not have an answer.

The plane filled up with smoke to the point where we could not see each other's faces and I began to wonder if we would smother even if we did not burn. But the hostess—gallant as airline hostesses have proved themselves to be in many an emergency—turned out to be right; the fire was not dangerous, being merely some excess oil in a cabin heating system and involving neither structure nor engine. We landed easily and walked away untouched.

I did not attempt to argue with Ticky's determination to go the rest of the way on the ground; I kept quiet while cursing silently the perversity of chance that took us forty thousand miles around and up and down a planet without a single mishap, not a missed connection, not a missing piece of luggage, not even a flat tire—then saddled me with a fire in the air when we were actually within sight of the mountain we lived on. I felt sure that I would never live it down, that I would never again persuade Ticky to risk her slender neck in one of those pesky flying machines.

So I did not argue; I simply guided her steps toward the cocktail bar and administered several doses of nerve tonic to her as rapidly as possible. I had one, too, to keep her company—and just a bit because I had been a touch nervy myself when the cabin filled up with smoke and the plane lost altitude rapidly. Nothing important, mind you, since I am a fatalist. But the first dose of medicine tasted so good I had a second one.

It took them an hour and a half to get that bucket of bolts ready to fly again, but by the time they did Ticky was no longer talking about catching a bus. With only a little effort she could have flapped her wings and flown down unassisted. The second try at getting to Colorado Springs was uneventful, though we were amazed to find that we had been away so long that they had had time to build a new airport terminal while we were gone. But we did not stop to admire it; friends were waiting there to meet us, with hugs and handshakes and more tearful kisses. Ticky, with great care, had managed to keep one orchid lei fresh; she wore it, and carried that ubiquitous and utterly unpackable big coolie hat she had bought in Java. Between the two she looked quite out of place in that bleak and cold mountain day. We were home.

Thirty minutes later we were home for a fifth time and truly home at last, in our own living room, with our friends around us and our cat bumping our legs and demanding to know where in the *hell* we had been?

XIV

Unpacking

THIS TRIP WAS taken for itself; I had not planned to do a book about it. I am a fiction writer by trade and it seemed to me that John Gunther and Robert Ruark and James Michener and their peers had the globe-trotting business pretty well sewed up. But I found it necessary to write one anyhow, just to get the jumble of impressions in my mind sorted out. A confirmed writing addict can't think clearly without a typer in front of him. (Writing is not a profession, it is a disease.) Since I was compelled to write about it anyhow, why not whip it into some sort of commercial form? It might possibly bring in a few royalties.

But now I reach the point where I must state what I learned from it, which is the hardest part. "Is this trip necessary?"—as those accusing placards used to read during the War. Was a trip around the world worth what it cost in money, in working time, in very considerable physical effort?

There is an old story about a gangling youth, back country, who saw a merry-go-round for the first time and just had to ride on it, to the disgust of his mammy. When he got off, his mammy looked at him sternly. "Sammy, you has spent your money, you has had your ride—but *where has you been?"*

Did he get anything out of it that made it worth the cost? A fair question.

For me, it has always been worth it. I have never sailed from a port in my life, any port anywhere, but what I was glad to do so. When I was a kid, on a Sunday we would climb on a street car and ride all the way out to the end of the line, then ride back again. It was almost as good as a John Bunny nickel show. Now I have been on the biggest merry-go-round of all, the street car with the longest run; I've paid my money and ridden all the way to the end of the line and back again. It was worth it, I don't regret the expense.

Even today in wealthy America the people who can manage a trip around the world are a very small handful of the population, which is another reason for writing about it. Those who can spare the time usually cannot afford such a trip; those who have the money to spare usually find it difficult to spare so much time from their business responsibilities—one does not become wealthy by trotting off on long junkets with no one to keep an eye on the business.

Now, Ticky and I are far from being wealthy—wealthy writers are as scarce as albino crows; I know of only one. Most freelance writers are just two jumps ahead of the installment collector and borrow money from their agents and importune their publishers for advances. But a freelance writer does have the advantage that he is not tied to the shop; he can usually arrange his time to do what he wants to do. Therefore, if he can scrape up the money, he can travel. To me, this is probably the greatest single advantage of an otherwise not-too-satisfactory trade. My colleagues seem to think so, too; freelance writers are, I am almost certain, the most tireless vagabonds in the whole population, not counting those people who are paid to travel.

We were able to make this trip because I found myself, for the first and only time in my life, with enough money not already committed elsewhere to permit us to make it. A prudent man would have taken such money and invested it in something solid; to spend your only nickel on the merry-go-round is not sensible economics . . . unless you believe in your heart (as I do) that a ride on the merry-go-round is worth more than cash in the bank. You must be able to laugh in Poor Richard's face. Now that the money is gone I'm saving my nickels again for a trip around the world northern hemisphere, and after that for a trip all the way across Asia come the day we get the communist apes civilized or liquidated. After that— Well, after that I will really have to save my nickels because I figure the first scheduled tourist trip to the moon will be pretty expensive.

But I rather think that, by the time I am ready to pay for tickets, Mrs. Feyock will be ready to sell them to me.

In the mean time, what did we learn on this trip? Not what we saw —we saw funny birds and people who ate bananas with knives and forks and lions in the bush. What did we learn? What was worth the effort?

In the first place, travel to see scenery is not worth the trouble. Scenery is everywhere. Hollywood has long since listed all the outdoor backgrounds in the world, right in California. The hypothetical trip I described whereby one could see everything New Zealand has in a few states of our west could be duplicated for any part of the globe, if not inside the fortyeight states, then certainly within North America. If your principal interest is in natural wonders, then the usual two-week vacation is long enough; we've got them all, right here at home.

Nevertheless I am certain that I got my money's worth and a big fat profit in the people we saw and encountered and the things we learned. I am going to split the list up into two parts: practical matters, and heavy punditing of the Walter Lippmann sort. The practical minutiae will give you something, at least, for this book; the wise conclusions you can read or ignore—I'm new at the pundit business.

Practical matters: Packing and preparing for a long trip of many weeks or months with many stops is different from packing for a fortnight's vacation. There are two approaches, to pack only for health and reasonable comfort, or to pack so that you are prepared to dress smartly for every occasion you are likely to encounter and to have with you every convenience you are likely to need.

I strongly favor the first approach and believe that luggage should be limited to two bags apiece, one for each hand, no matter how long the trip. But many wives (and some men) prefer Ticky's approach, which is more like that of the White Knight in *Alice Through the Looking-Glass.* You remember? The White Knight had never yet been troubled with mice on his horse but, if one ever should show up, there was a mouse trap waiting for it. Ticky would be happiest with a camel train.

But she did manage to have us smartly turned out under all possible circumstances for months on end, and we had with us typewriter, books, extensive camera equipment, binoculars, an electric iron, and a citizen other things, all within the limitations of ten suitcases and no trunks.

But first let's list items indispensable even when traveling light. I am not going to list clothing in detail, as that is personal choice and the requirements of destination. British Overseas Airways Corporation, 342 Madison Avenue, New York 17, has an advisory service on how to make the most of your international flight allowance of 66 pounds—which is just about two large suitcases. *Esquire* had an article on this same subject this past year and *Holiday* runs such advice from time to time. But I will not presume to pick out for you your clothes or toilet articles.

But I do want to make certain remarks. Make all possible use of the new synthetics such as Orlon, Dacron, and Nylon, the ones which do not wrinkle and which may be washed out in soap and water. Reliable drycleaning is not only hard to come by, but frequently there is not time for it, whereas you can always wash out a garment in a tub or hand basin, if it can stand soap and water. I had with me two pairs of slacks which looked like tropical-weight wool which I wore almost constantly. They have never been drycleaned, have repeatedly been sopped in hand basins, and have never been pressed. But the creases in them are as knife sharp as the day they were purchased; they simply do not wrinkle. I had a formal dark blue suit as well, which looks like blue serge—but it was washed in a bathtub with soap and water one time when we were long away from drycleaning. Without drycleaning and with the circumstances of travel, hot train compartments, planes, and buses, and such, wool clothes will soon begin to stink, even when they still look smart. Avoid them as much as possible.

I do not like the feel of most of the synthetics against my skin, so I used cotton shirts and underwear. But this is a personal idiosyncrasy.

We each carried just one all-purpose coat. Mine was a dark blue topcoat-raincoat; Ticky's was a long coat in an oatmeal shade which could be worn day or evening. This shade will show dirt but it was made of Orlon, which is the same plastic as Plexiglas and washes just as easily. It could be, and was, washed out in a bathtub, then allowed to drain dry, whereupon it was ready to wear without pressing. Besides this she carried a plastic raincoat and plastic boots of the sort that fold into an envelope and fit into a purse. Since my topcoat was a raincoat and since men's shoes are not the frivolities that women wear, I did not have this equipment—but it is worth considering.

The drugs we found indispensable are these: aspirin, laxative, the opposite of a laxative (even more important), vitamin pills (we started out without any; Ticky got both scurvy and pellagra), Dramamine (there is a new seasick remedy which your doctor can recommend which does not have some of Dramamine's side effects), iodine, Band-Aids, and a fungicide (I prefer Upjohn's Benzo-Salicylic Compound, plus Desenex foot powder, but be sure to take something; the fungus skin diseases and diarrhea are the two greatest physical hazards of travel abroad).

In addition to the above, which I regard as an irreducible minimum, if you are dependent on thyroid extract, insulin, nitroglycerine, or any other special drug, take along a bit more than necessary for the entire trip. Although chemist's shops are everywhere your prescription may not be honored, the local chemist may not have it, or you may not be able to get to one in time. If you are chained to spectacles, as I am, two pairs are an utter minimum—remember what happened to me in Africa, when I broke two pairs in twenty-four hours.

If you use an electric razor, take along the sort of blade razor you hate least; you will not be able to use your electric razor about half the time.

Some sort of a robe is indispensable whenever you have to share a bath. Pajamas are not utterly indispensable. Slippers are not indispensable but a pair of very lightweight ones are a desirable comfort. Extra shoe strings can be carried no matter what your weight allowance and not only are they needed in a hurry when you break one but they double as clothes lines most opportunely. A small flashlight is always a convenience and you can count on it saving your neck at least once. But I said "small." The ordinary household or automobile torch is too heavy and too big; get one of those which looks like a fountain pen and fits in a lady's purse or a man's vest pocket.

You can save weight and space by transferring medicines and toiletries to polyethylene bottles obtainable from any drug store. This also eliminates breakage—have you ever had a bottle of hand lotion spread itself through an entire suitcase of clean clothes?—and it also lets the bottles "breathe" at high altitude. In the latter connection, fountain pens and lighter fluid are not things to take in airplanes; use a ballpoint pen and refill your lighter in tobacco shops. Matches are hard to obtain the world round; you will probably want a lighter with you. If you are a steady smoker, you can resign yourself to smoking some odd mixtures, for, if you attempt to carry with you enough of your favorite brand of cigarettes, you will not only weigh yourself down to an impossible degree, but you will also find yourself paying around a hundred per cent duty over and over and over again. So relax to the inevitable, or ask a waiter to buy you American cigarettes on the black market—he will almost certainly be able to do so.

We have already been over the horrors of getting the numerous papers needed for foreign travel. Remember that the State Department puts out a pamphlet on passports, the Public Health Service puts out one on medical requirements, and the Treasury Department puts out one about customs requirements. Then when you are traveling be sure to *carry on your person* your passport and all other travel papers including spare photographs and traveler's cheques whenever you cross an international boundary. They are bulky but it is usually only for an hour or so, and the one they want to see is always the one you packed away.

Make up a small notebook, as small as possible, and list in it the number of your passport, the cable address of your bank, all the addresses you will need while out of the country and any that you might by any wild chance need, including the addresses of all those relatives, neighbors, and acquaintances you promised to send postcards to. Then write in this notebook all memoranda you need before you leave (such as prescriptions for spectacles, promises to buy things abroad for people, etc.). Then never use anything else for memoranda. If you don't follow this rule, you will never be able to find a piece of necessary information when you need it; you will be smothered in little pieces of paper. Most especially use this notebook to record foreign purchases since an exact record of such things will speed you through customs on your return and may save you quite a lot of money. We got through customs swiftly in Hawaii because we could present the inspector with an itemized list showing when, where, and how much, all prepared from our little notebook. The inspector glanced at it, congratulated us on having taken the trouble to comply with the law, asked us to open just one bag, and sent us on our way.

But make it hard for him and he may make it hard for you.

A medicine which you may need but which I did not list is a malaria preventive. This depends on where you are going. But there is no way today to vaccinate against malaria.

A deck of cards and a few items to read are not necessary to minimum-luggage travel, but I consider them worth their weight. I feel the same way about a small camera.

Barbiturates and Dexedrine are dangerous drugs, but used with care they can smooth over the inevitable disturbances of travel most wonderfully. I carry them—but use your own judgment.

Everything mentioned above is compatible with two suitcases per traveler. Now let's see what Ticky did to run it up to five each—with my help, I must admit. Typewriter—Corona puts out a seven-pound model these days called a Skywriter, but the cost is rather high unless a typewriter is a necessity. I carried one that weighed more than twice that much; it was a mistake. Ticky carried an "international" electric iron, which worked on any current and had plugs for any sort of socket. It was a mistake, too, as electric irons may be borrowed or rented for a few pennies almost anywhere there are facilities to use them. She hardly ever unpacked her own iron. But pressing cloths are hard to lay hands on; it is worthwhile to carry one. I carried lots more camera equipment than is necessary to "Kodak as you go" and camera equipment is always heavy. We carried binoculars, but they were featherweight; both the Germans and the Japanese make powerful binoculars which have been miniaturized remarkably. Unfortunately they are rather expensive. Between us we carried about fifty books. This is quite unnecessary unless carried for business reasons (which some of ours were)—buy pocketbooks and magazines, read them and throw them away, or mail them back if you want some of them.

Ticky carried capsules of detergent, much advertised these days for travel. She found them not worth the space. She carried some little dabs of spot remover called "Spotwix" and these, she feels, are worth having along, since cleaner fluid cannot be carried if one is to fly. She packed everything in polyethylene film freezer bags, which simplifies packing, keeps clothes in good condition, and adds little or nothing to weight—and most importantly makes it possible for a customs officer to examine baggage without actually handling or mussing a lady's fancy frillies. She carried shoeshine cloths but we never used them, not once.

Ticky strongly recommends carrying enough hangers for all your clothes, because hangers are scarce everywhere outside the States and nonexistent some places. I have strong doubts about this recommendation. Hangers are remarkably clumsy to pack. I favor putting up with one inconvenience rather than adding another.

We carried extensive maps, an atlas, and books about each country we visited—a luxury well worth while if you aren't trying to stay under the 66-pound limit. I wanted to carry a globe but could see no way to do so other than in my hot little hand.

But most of the additional space was taken up just by clothes. Ticky simply prepared us for any occasion, sports, informal, and formal. I had both a tuxedo and a white dinner coat, with shirts, pumps, ties, and accessories to match. She had plenty of evening dresses and dinner dresses. We had swimming suits and shorts and a wide variety of sports wear. She had handbags to match all outfits. We both had plenty of shoes. Men's shoes are very heavy and both men's and women's shoes use up a lot of space. None of the above is necessary; all of it makes life pleasanter—except for the maddening business of handling it when you are on the move and of keeping track of it.

The problem of keeping track of it she simplified by making a careful inventory of each bag and by having me paint large numerals on each bag. The latter enabled me to "call the roll" in a hurry and at least twice kept bags from being left behind; the former enabled her to go right to the proper bag to find something, without pawing through them all. The inventories were set down in the little notebook mentioned above. If you do travel abroad with lots of luggage I strongly recommend both expedients; they will save you many headaches.

I asked Ticky to list the variety items other than ordinary clothes which she had found useful. Here they are; some of them are quite light in weight and might be classed as indispensable: whisk broom, sun glasses, sun hats, run-proof nylon hose, sun tan oil, adhesive tape, fever thermometer, Aureomycin, sulfa pills, Scotch cellophane tape, Kleenex, a box of pins, paper clips, rubber bands, string, and needles and thread.

You will want phrase books, of course, but don't let foreign languages scare you; if you are patient, there is always a way to communicate. Our geographical isolation has made us Americans very poor linguists, of which I am an outstanding horrible example. But I had no trouble once I overcame shyness. In the first place a most amazingly large percentage of people have English as a second tongue. But in the second place, if you will write things out, using a phrase book, and have the other party do the same, you can get around the baffling hazards of pronunciation. In particular, numbers, addresses, dates, hours, and prices—anything numerical—can be written out in the figures common to all languages and often these items are the single barrier to understanding.

Don't be afraid to wave your hands around. We've been taught that talking with your hands is vulgar—and so it is, in the finest sense of the word. Gestures are the oldest, the noblest, and the most truly international form of communication. You can say almost anything in pantomime; just let yourself go and enjoy it.

Don't be embarrassed by the amusement created by your wild mistakes in grammar, syntax, and pronunciation. Your listener will feel tolerantly superior because of your ignorance; this will make him feel kindly toward you and he will go out of his way to help you.

Travel by ship is an invitation to stargazing. Simon & Schuster puts out a pocketbook called *Stars,* part of their Golden Nature Guide series, which will pay for its slight weight (four ounces) in pleasure. If you start stargazing, you may want to find out something about how the ship is navigated. Mr. S. Y. Tupper, our jovial companion in the *Gulf Shipper,* taught himself to navigate after a long, full life ashore, bought himself a sextant, and navigates right along with the mates wherever he goes. It is most unlikely that you will wish to emulate his gentle hobby (sextants are expensive and heavy) but there is usually a sociable and good-natured ship's officer who will teach you how to read a sextant and let you take a sight or two—it is no harder than aiming a rifle and much like it.

It has suited celestial navigators throughout history to pretend to laymen that the art is difficult and mysterious. This is a lot of guff. I have practiced and taught navigation and I will swear on a stack of Bowditches that the basic principle can be taught to any normally-intelligent grammar-school graduate in twenty minutes and that he can be given sufficient skill to enable him unassisted to establish the position of a ship accurately through star, and sun sights after only four hours instruction. Never mind those screams of rage from the old salts in the rear of the hall—it is *true.* Oh, he won't be a navigator; as with any art it requires study and practice to attain speed, accuracy, and self-confidence. But he will be able to get a decent "fix" by himself.

Let me give one illustration of the single, simple principle of *every* sextant sight. The mate uses the sextant to measure how high above the horizon the sun (or a star) is, in degrees and minutes; the sun is ninety degrees high if it is directly overhead, zero degrees if it is at the horizon, something in between for a typical sight. The process is no more mysterious than measuring an angle on a piece of paper with a protractor, but with a sextant an angle can be measured with great accuracy . . . with great ease, too, as the process is almost exactly like that of focusing a camera which has a split-image focusing arrangement. You simply look through a peephole and turn a little knob until the sun appears to touch the horizon line. It is easier than firing a gun or using a camera, because your accuracy does not depend on holding the sextant perfectly steady; you can sway around all you please as long as you can still see the sun through the peephole.

The rest of the job is the simplest sort of arithmetic not to be compared with balancing a check book. You compare the altitude of the sun as you just measured it with the altitude you thought it should be based on where you thought the ship was. Not very clear? Well, we're doing this without diagrams or pictures, so look at it this way: if you were down at the equator you would expect the sun to be overhead, wouldn't you? Contrariwise, if you were at the North Pole you would expect the sun to be near the horizon—above it, below it, or on it, depending on the time of year, but near it. All right, let's leave the North Pole and travel due south; for every degree of latitude the sun will get one degree higher in the sky. By the time you have traveled south ninety degrees of latitude the sun will have climbed ninety degrees high in the sky, be right overhead, i.e., the sun's altitude tells you at once and directly just what your latitude is.

That illustrates the one and only principle of celestial navigation: as you travel toward a star or the sun it climbs higher in the sky, as you travel away from it it sinks lower. If you compare the body's measured altitude with the altitude you thought it should have for where you thought you were, you get a correction, a difference between the two altitudes, which you can draw with a ruler on a map to correct your estimated ship's position and make it what the stars show it to be—simple addition or subtraction, nothing more.

It is true that there are hard parts, very difficult, but they are all done by astronomers and mathematicians ashore; a navigator does not have to bother with them. It used to be that a navigator, after he finished taking a sextant sight, had to solve a very tedious and fussy problem in spherical trigonometry—but not today. All that work is done for him now, by young females employed by the Naval Observatory; the answers are all arranged in tables for every possible combination of date, latitude, longitude, heavenly body, and time. All he has to do to impress the passengers is to look up the answer in a book.

To make it still easier, the nautical mile (6080 feet) has been made just the proper length to match in with these measurements of angular altitude of heavenly bodies. If you were to travel south a distance that made the sun one degree higher in the sky at noon, the distance traveled would be *by definition* sixty nautical miles. This is the only reason why miles at sea are longer than miles ashore; it makes the arithmetic easier in navigating.

Although celestial navigation is simple, piloting and shiphandling are very difficult; there is no easy gimmick, but there is endless pleasure to be derived from watching a master handle his ship in tight waters, such as going up channel, or docking. The beauties of it cannot be seen too easily from the parts of the ship where passengers are usually permitted, but there is a way to get around this. Do not ask the captain for permission to come onto the bridge at such times. Instead, ask him for permission to watch him handle his ship from the *flying* bridge, where you will not be in the way. Put this way, he is almost sure to grant permission—and there is at least one chance in three that he will invite you onto the conning bridge itself. He does not want you there, but captains are human and respond to sweettalk just like anybody else.

If he does invite you to the conning bridge, stay out of everybody's way and don't ask questions of him when he is busy. Then you will be invited back.

Almost immediately after our return to Colorado I had to go to New York, thus completing our journey around the world with a trip coast to coast in our own country. In the last thirty years I have made this crossing about twenty times but this time I looked at my own beloved native land with new eyes, trying to see it as I had seen the countries we had just visited. How did it stack up? What was good about it? And what was bad?

Jacques Barzun has just done a beautiful and sagacious book on this subject *God's Country and Mine,* so I won't try to say what he has already said so well—but read his book. The first thing that anyone is bound to notice is that prices in the United States seem terribly high compared with most prices elsewhere. But prices are relative. I for one will always feel emotionally that the "right" prices are the prices of my childhood, with grade-"A" milk five cents a quart and large eggs ten cents a dozen. This conviction is nonsense and I know it intellectually as well as you do. True prices depend on wages and salaries—how many minutes a journeyman carpenter has to work to earn a kilo loaf of standard bread. I tried to get answers to that question around the world, and the answers I was able to get, plus the statistics I have been able to dig up since, show clearly that a workman works a shorter time to earn the staff of life in the United States than is the case anywhere else in the world. Australia looked pretty good by this scale but even there it took him half again as long; New Zealand was far outclassed. All the other countries we visited were not even in the same league.

Of course everybody screams about high prices, but no matter how you work the above problem the answer always clearly shows that we, as a nation, are eating high on the hog, higher than ever before in our history, higher than any other nation on the globe, higher than any nation ever before in history. The consumption of luxury items makes the difference even more marked, whether it be telephones, automobiles, or soft drinks. (Not alcohol however, as we drink much less alcohol than we could afford; we are far from the drunkest nation.)

This is the only country in the world where a man will drive his own car down to pick up his unemployment compensation check.

How do our manners stack up with those of other countries? I had about decided that ours looked pretty good, on the whole, when I hit Pennsylvania Station, took a cab, and at once found myself an unwilling spectator to a screaming argument between my driver and one in another cab, followed by a wild ride which bruised my kidneys and gave me a headache . . . a type of ride, I am sorry to say, that I experienced almost every time I stepped into a cab while I was there.

On the other hand, manners in general in New York were about on a par with manners all through our country, except that everyone is always in a hurry. Our manners cannot match the courtly politeness of Latin America, but they are not bad; we have no reason to be ashamed on that score. Even New Yorkers, always hurrying nowhere, are almost all willing to listen, to help, to take friendly interest. The extreme rush that characterizes New York is a burden of its size; distances are so great and the channels are so choked that everyone must hurry or perforce waste most of the day simply getting from point to point.

New York is a very special case, both the most gigantic and wonderful mechanical toy the human race has ever built, fascinating in its incredible complexity, beautiful in its intricate, functional design—and a colossal slum by sheer weight of bodies too closely packed together. More conscientious cleaning goes on there than anywhere else; the city remains dirty, even the air is dirty. More genius has gone into its services and its transport than into any other city; it remains, the most uncomfortable place to live in the United States.

I am proud of New York and awed by it. I am glad we built it—and I hope we never build another one. Like the stegosaurus it has grown too huge for its functions; like the stegosaurus it is bound to become extinct. It is the biggest and juiciest H-bomb target on the globe . . . too big to decentralize, too big to evacuate, too big to escape being hit.

When we arrived in New York everybody seemed glued to television receivers, listening to hours of silly wrangling as to whether a certain Senator had or had not been rude to a certain general, and whether a certain private had or had not received more weekend passes than privates usually get. The interest in these rather trivial events was amazing. I don't think it has been equaled in any presidential campaign, even the 1940 election. The tragic events in Indo-China were then coming rapidly to their disastrous close—but nobody in New York seemed to be paying any attention; they were more interested in learning why a V.I.P. had let his picture be taken with a private.

We were out of the country when the McCarthy madness swept over the land; consequently we arrived home as detached observers, not as partisans of either side. I tried to maintain that Man-from-Mars attitude but found it difficult; people were almost violently on one side or the other. What color rose do you wear, man?—red or white? —for you are either for us or against us.

I still cannot manage to work up a fever; I seem to have been away during the infectious stage of the epidemic. Was it anything like the time the gunmen shot up the U.S. Congress? Oh no, nothing like that; this affair was conducted entirely with words. Had anyone been deprived of life, liberty, or property contrary to the Bill of Rights? No, but— Had anyone been *hurt?* Well, not physically. Financially perhaps? Well, yes and no, some persons had lost jobs after refusing to answer politically embarrassing questions.

But, my informants insisted, I simply did not understand the real danger, the real importance, how every single one of us was vitally endangered by the things that had happened in these committee rooms.

Well, I still don't see the overpowering importance. The McCarthy fit strikes me as the most astounding example of senseless hysteria since the Mississippi Bubble. Let me make it clear that I am neither supporter nor constituent of the Senator from Wisconsin; I just don't think anything that he has done is important, one way or the other. As a "fighter against communism" his efforts seem to have been rather futile; as a modem Torquemada the effect on his victims seems to have been public embarrassment only. In many of the cases, though not all, the embarrassment seems to derive from unwillingness to answer questions that vitally concern loyalty to the United States.

If anyone cares to assert that the central character in all this is a big, hairy, horse's rear end, I will not argue the point. But I will point out that we have had some choice examples of the genus oaf in the United States Senate at other times; somehow, the Republic weathered the strain.

But two things struck me very forcibly about the matter, coming as I did direct from months abroad. First, it has been asserted repeatedly by several prominent journals that the "real" danger of the McCarthy fit lay in the friends it lost us abroad and the prestige it cost us.

This is nonsense almost complete. No one abroad was hurt—among our friends. It is true that the dust-up received much attention abroad and was used to make propaganda against us. But it was simply seized on as a chance to kick the Fat Boy by our enemies, who will do so on any excuse or without any excuse (as in germ warfare). Slandering Uncle Sam has gone on for years; the McCarthy row did not start ,it. For another reason which I will go into presently we should ordinarily pay no attention to what the press of any other nation says about us, but make our own decisions quite irrespective of what the world will think.

We may have good reasons of our own to curb this Senator's activities, but to do so because our enemies or our putative friends dislike what is being done *inside the United States* would be to decide our national policies on an emasculating "Nervous Nelly" basis. To our dreadful cost in blood and treasure we have for years been making crucial decisions on just this unsound basis, worrying about what other people might think of us instead of worrying about what is right and what is wrong. If we find it proper for reasons of justice to clip the wings of the ubiquitous gentleman from Wisconsin, then by all means let us do so—but let us not act from fear of what the neighbors may think!

For, I assure you, they don't give a tinker's dam what *we* think about *their* actions. American criticism of events in other countries—most particularly of anything as intimately domestic as the McCarthy row—is *always* rejected with indignation. *Always* . . . if you can think of a single exception, please write and tell me.

Yet those selfsame citizens of second-rate powers, nations that have nothing standing between them and inundation by the communist flood but the strength of the United States, are almost unanimously ready to criticize Uncle Sugar on any score, ready to tell him what to do and how to do it, expecting him to foot the bill and most ready to vilify him if he fails to do just exactly what they advise. The most distressing truth that we learned in traveling around the world was how painfully few friends America has. We traveled entirely in territory and in ships of our allies in World War II, but only in Uruguay did we find a general feeling of friendliness toward the United States. Nowhere else!—not even in Australia.

Once or twice we heard kindly remarks about the United States when people learned that we were from the States, but dozens and endless times it was simply an opportunity to read us a lecture on the "sins" of our country. To be sure, the McCarthy uproar was often used as a weapon to lambast Uncle Sam, but any excuse was sufficient and it was usually something else. Baiting Uncle Sam is a favorite sport among our supposed friends.

For this reason I assert that it does not matter what others think of the McCarthy mess. It should not be a factor in our thinking about the matter.

The second thing that struck me forcibly about the McCarthy issue (on viewing it immediately after some months abroad) was how remarkably little McCarthy had been able to do even to those "victims" he had attacked most savagely and with least attention to fair play. No one seems to have noticed that our complicated system of safeguards to protect the innocent has, stood up under this test and worked amazingly well. No one has been jailed other than after trial and due process—McCarthy himself has jailed no one; he has not the power. In fact no damage to an individual has been alleged other than damage to reputation and even that usually followed refusal to answer questions. I am not trying to "try" the McCarthy case, but I want to point out that it is not an example of breakdown of civil liberties but, on the contrary, a most outstanding triumph of civil liberties, *one that probably could not happen anywhere else in the world!*

In the communist half of the world a man in McCarthy's shoes would *really* have power. He would be a "people's judge" and his victims would never live to complain. Their friends would not dare speak. In most of Latin America those politically out of favor hide out, or seek refuge in embassies, to avoid rotting incommunicado in jail. Even the British countries have no record of gentleness toward dissidents as gentle as that termed "McCarthyism"—oh, I admit that England has a very soft attitude toward communist treason at present but look at the whole record: Gandhi in jail repeatedly for passive resistance, the Black-and-Tans in Ireland, the present law in the Malay States making mere ownership of a gun a capital offense, the speed and harshness with which British courts act. I am not excusing any wrongful act that McCarthy may have committed; I do assert that we have failed to notice publicly the proudest aspect of the whole sorry business—that our safeguards for the individual stood up under pressure.

The third thing that I noticed about the matter, confronting it cold on my return, was the amazing amount of stew for such a skimpy little oyster. The true importance of the whole thing has been vastly overrated.

During our trip we were in the British Commonwealth about half way around the world. We had time to think about some facts well known but which we had not considered until we had our noses rubbed in them, i.e., the potentiality of the British Commonwealth for balanced economic self-containment. We, like most Americans, had sent food parcels to Britain during the years of drastic rationing following the War. Now I am beginning to wonder why it was necessary? South Africa, Australia, and New Zealand all have large surpluses of food; all of them need manufactured goods. England needed food badly and was only too anxious to barter manufactured goods in exchange. I do not regret a one of those food packages; they were badly needed by hungry people—but what went wrong? What happened? It looks like a set-up designed by a wise Providence for a balanced economy with plenty to eat and plenty of goods for all. But it did not work out that way and even now it creaks badly. Why, with over 120,000,000 sheep in Australia, should it be so hard for a man in London to enjoy a mutton chop? England manufactures Kleenex and sells it to New Zealand; why should a box that costs seventeen cents in America cost five shillings in Auckland? (Seventy cents by direct conversion, more nearly a dollar and a half in view of the overall price scale.) It can't be just a transportation differential, as eleven thousand miles by water is not as expensive as hauling goods across the North American continent by railroad.

The old, tired excuse of "We can't get the dollars" does not apply here; this is all pound area. Nor was it that we were dunning England for the repayment of war loans, quite the contrary; we were handing over billions of dollars as a free gift.

I have no degree in economics, nor do I have access to the statistics used by ministers of finance of the various Commonwealth countries to determine their policies. No doubt there are excellent reasons—but I suspect that the "excellent reasons" are of the same quality as those that have kept the little continent of Europe balkanized and pulling against itself. The longer I worried about this matter and tried to find out *why* the Commonwealth was in such sorry shape compared with what it seemed to be capable of achieving the more I kept finding the same facts—balkanization. The Commonwealth is not an integrated economic unit all operating under the same basic laws, as the United States is. On the contrary, every part of it is dragging its feet and trying to be one up on all the rest—precisely in the same fashion that our individual states have often attempted to do, only to be slapped down by our Supreme Court. But the Commonwealth has no supreme court, no overriding body of law; the once-great Free Trade area of the British Empire is now bogged down in local tariffs, taxes, import and export licenses, restrictions, and embargos, each intended to rig some advantage against the others and each player engaged in the same knife-in-the-back game.

Perhaps I don't see the Big Picture, but to me it looks like a hell of a way to run a railroad.

(I am aware that our own trade policies are criticized on somewhat similar grounds. But there is a big difference; we are very nearly economically self-sufficient and our tariffs and other laws have not been such as to ruin us in the respects in which we are not entirely self-sufficient. But none of the Commonwealth is self-sufficient; they need each other.)

Another question that fretted my mind was the contrast between Uruguay and New Zealand. The two countries are comparable in size, in population density, in stable democratic government, in basic industries, each being a rich primary producer not yet heavily industrialized. Each country has a sheaf of most remarkable social-welfare laws which superficially add up to about the same thing. Yet New Zealand is a phony utopia; its social measures are strangling it—while Uruguay appears to be a true utopia, as near perfect as our race has achieved.

I confess I do not know the answer to this one. I cannot see a basic difference in their laws and I have no evidence on which to attribute basic differences in the temperament of the two peoples. All I can see that it proves, if it proves anything, is that social security laws need not be destructive to high production and a high standard of living, if properly designed and wisely administered. My reservation weasels out of it, of course; I have not said anything. But I want to know why, for there is something to be learned here that could be of crucial importance to the United States. I intend to go back to Uruguay in the next year or two and stay until I think I have found the answer. But my temporary license as an apprentice pundit does not seem to warrant my answering now.

However I do have a hunch. New Zealanders are addicted to price-fixing as a permanent (not just wartime) policy. King Canute could give them a few tips on this subject.

The most important thing that I believe I have learned from a trip around our planet is that no progress whatsoever is being made on the prime problem facing the human race, that the problem is bigger than I had dreamed, and that, most tragically, it probably has no solution.

I don't mean communism and I don't mean the chilling probability of atomic war; I mean something much worse: too many people.

The basic problem was stated a century and a half ago by Dr. Malthus, then his depressing theory was "exploded" by new lands being opened, new farming methods, new advances in science—only it turned out not to have been exploded after all; his equations for starvation are working out to the last dismal decimal place. A modern discussion of it was published last year by Charles Darwin the Younger. There is no longer any way to get around it; this planet has too many mouths, too few acres.

We beat the game for a long time by opening up new frontiers, but now there are no new frontiers to open up. *The only place left for the billion people in China and the Indian subcontinent to spill over is into areas already occupied by the white Western nations.*

This fact is more explosive, more dangerous than H-bombs. I had known this—as who did not?—before this trip. We had certainly been told often enough, by flippant little paragraphs in *Time* magazine, by dry and rarely read handouts from UNESCO, through diagrams in atlases and geographies. But, for me, it took a personal look at the dreadful condition of Java to make the statistics about China and India and the other overpopulated areas come alive in my mind.

The worst of it is that the problem won't hold still; it gets worse every day. We have already passed the crisis point; we need two and a half acres of farm land for each human, but we now have about one and a half. But there were eighteen million more people on earth when my wife and I came back from this trip than there were when we left; since we got home fifteen million more have been added—a total four times the population of Australia.

Too little food, too many mouths. How will they be fed? Where will they sleep?

It is barely possible that you and I will be able to duck the issue; our children must solve it or be overwhelmed by it. Not our grandchildren, but our children, for the problem grows too rapidly. The crisis is with us, the catastrophic outcome cannot be more than one generation away. More probably we ourselves will face it, in the form of World War III.

Quite aside from the life-or-death practical matter of who will win the next war, when or if it comes, is the unavoidable moral problem: do we, with our acres to waste on golf courses and parks and tobacco fields, have the right to hang onto what we hold? Or are we, as our brothers' keepers, morally obligated to accept two or three million Asians as fast as they can be shipped to us?

Are the ten million Australians and New Zealanders required by good morals to let the eighty million Indonesians swarm over them? I can give one sort of answer to that one. Both of the Anzac nations are strongly humanitarian at home—but they will fight and die to the last digger, the last Kiwi, before they will let that happen.

But that does not solve the moral issue. My own ancestors came to this continent, pushed the Indians aside—or killed them—and made far better use of the land for far more people. I feel no special qualms about it now. But suppose the teeming crowds of Asia now give us the same treatment, seeing that we are making something less than maximum use of the land for maximum population. Have I any right to feel indignant?

I will not duck the issue. I have always believed that a man who accepts capital punishment should not be too squeamish to serve his term as hangman. The tail goes with the hide. I have not been able to find a moral answer which pleases me; nevertheless I know my answer—precisely that of the Australians. I'll fight before I'll let the spawning millions of Asia roll over Colorado and turn it into the sort of horizontal slum that Java is. Maybe this decision damns my soul; if so, so must it be. I don't see any solution to the problem of Asia at all, for they won't stop breeding . . . in fact, the psychological truth is almost certainly that they *can't.* But I am not willing to move over and give them room here to breed another hundred million—or half billion. We have here a pretty good nation, at least for the time being; I will not willingly see it turned into a slum.

Are we our brothers' keepers? Just what does our Western culture owe to the rest of mankind? Let us not be too humble about it. It may well be true that the potentialities of all parts of the human race are about the same. Nevertheless that minority of the human race called loosely the Western democratic peoples and consisting mostly of Caucasians even though not identical with the Caucasian race has added twenty, eighty, a hundred times as much to human wealth, human knowledge, human dignity and freedom, as all the rest of the human race put together. Sanitation, scientific farming, mass production, civil liberties—these are *our* inventions, not theirs. We have shared them, what they would accept, and that is good—but we *do not* owe the teeming rest of the world a living!

Lastly, this trip around the world cured me of One-Worldism; I have fully recovered and am as immune to it as I am to measles. The idea of one sovereign world nation, free forever of the peril of war, working together in peace and harmony, is an appealing one. I do wish we could afford it. But, the earth and the human race being what they are, we cannot . . . not unless we are willing to accept the logical and inevitable consequences. "One World" means a situation in which the United States is not sovereign, any more than one of our states is truly sovereign. That means that the United States would be outvoted . . . which just as certainly means that they would swarm over us immediately after counting the votes.

That which I am willing to fight for I am not willing to surrender as a result of counting noses in China and India. Therefore, no World State for me. It's a trap.

I could wish for a better world, but, as the stranger in the poker game told the sourdough who warned him, "Sure, sure, I *know* the game is crooked—but it is the *only* game in town."

I came back to the United States convinced that it was an even better country than I had thought it was. This our land is not perfect, but it looks just about perfect from even a short distance away. It is immeasurably a better place to live than anywhere else I have seen.

But I came back, too, convinced that our peril was very great and our friends very few. The extent and the viciousness of the propaganda campaign against us must be heard to be believed. Its prime source, of course, is Russia, but there are many ears willing to listen and many mouths willing to repeat. Envy and hate are the inevitable concomitants of wealth and power; we have been uneasily aware of this and have tried to curry favor wherever we could. But it *is* not possible; we are hated not for our behavior but for what we are —and they are not.

England, in the days of her strength, paid no attention to what other peoples thought of her; she acted in her own best interests as she conceived them to be and ignored world opinion. We should learn from our predecessor at least part of this lesson: never let a decision be swayed by what the neighbors will think, for they will gossip about us whatever we do. Let us be honest and brave—but not politic. We have tried to be politic for ten years now—and look at the mess we are in! We have bumbled around, an awkward giant, apologizing for our big feet and our bulging muscles, scared witless that the fortnightly French cabinet might fall or that the British foreign office might say "boo!" at us. We have had many, many chances to act forthrightly and call a halt to the world's rush toward disaster; instead, each time we have again been persuaded to pay Danegeld.

We know, as surely as we have ever known anything, that we may have but a short time more to live. The Soviet Union is determined either to nibble us to death or to smash us, whichever seems easier. On what can we depend?

Primarily on ourselves. Turkey has the resolute courage to fight, that seems certain. There are one or two others perhaps. But what of major allies? England? Suppose Bevan were prime minister, as may well be the case when the time comes. For that matter, can we reasonably expect England to risk a saturation attack of H-bombs to support us? But, in any case, will she? With Churchill, probably, with Atlee, maybe—with Bevan? The man hates us.

Will France support us? Let's not joke, this is serious.

So far as we can count on it . . . for all practical purposes .. . we already stand alone. Let us therefore get on with that "agonizing reappraisal"—but let us quit agonizing about it. We are not liked, we have few friends; therefore we should quit being afraid, stand up and assert ourselves. The only friends we will lose thereby are those we never had.

We might even gain a few. Courage is respected and admired where timidity is scorned.

If we are to die as a nation, let us die proudly, with neither head in sand nor led around by the nose, but calmly aware of our peril and fighting it with our utmost. There can be no safe course for us, but, if we deserve to win, we are more likely to win.

But let us not be afraid, not even of our friends.

SESTINA OF THE TRAMPROYAL

by Rudyard Kipling

Speakin' in general, I 'ave tried 'em all—
The 'appy roads that take you o'er the world.
Speakin' in general, I 'ave found them good
For such as cannot use one bed too long,
But must get 'ence, the same as I 'ave done,
An' go observin' matters till they die.

What do it matter where or 'ow we die,
So long as we've our 'ealth to watch it all—
The different ways that different things are done,
An' men an' women lovin' in this world;
Takin' our chances as they come along,
An' when they ain't, pretendin' they are good?

In cash or credit—no, it aren't no good;
You 'ave to 'ave the 'abit or you'd die,
Unless you lived your life but one day long,
Nor didn't prophesy nor fret at all,
But drew your tucker some'ow from the world,
An' never bothered what you might ha' done.

But, Gawd, what things are they I 'aven't done?
I've turned my 'and to most, an' turned it good,
In various situations round the world
For 'im that doth not work must surely die;
But that's no reason man should labour all
'Is life on one same shift—life's none so long.

Therefore, from job to job I've moved along.
Pay couldn't 'old me when my time was done,
For something in my 'ead upset it all,
Till I 'ad dropped whatever 'twas for good,
An', out at sea, be'eld the dock-lights die,
An' met my mate—the wind that tramps the world!

It's like a book, I think, this bloomin' world,
Which you can read and care for just so long,
But presently you feel that you will die
Unless you get the page you're readin' done,
An' turn another—likely not so good;
But what you're after is to turn 'em all.

Gawd, bless this world! Whatever she 'ath done
Excep' when awful long—I've found it good.
So write, before I die, "'E liked it all!"

INTRODUCTION

Jerry Pournelle

This is a book for every American who wants to reclaim the political process. Are you mad as Hell and not going to take it any more? Have you tried to participate in the traditional political process only to discover that the traditional political parties have no place for you, won't listen, and don't much matter anyway? Have you turned to the Perot movement as a remedy? Do you want to see a fundamental change in the American political system?

If so, you need this book.

If you have never thought about politics, and hate the whole idea, you really need this book. As Pericles of Athens was fond of observing, because you take no interest in politics is no guarantee that politics will not take an interest in you.

If you look to H. Ross Perot to lead the nation to salvation, you particularly need this book.

I say this in full knowledge that much of the book—indeed its very heart - seems to be badly out of date. Ironically, being "out of date" is one of the book's major values. This book was written in a very different era of American politics; in a time when ordinary people could and did participate effectively in the political scene. This was a manual to show them how to do that There were many such manuals. This one was unique m that Robert Heinlein both had practical experience in politics and was one of the dearest (and most entertaining) writers of the era. Reading this book will be good for you, but the good news is that it's fun.

Heinlein offers a number of timeless insights, but many of his details are seriously out of date. That, however, is not a defect but a feature: because in describing how to operate in a political world that vanished during the "reforms" of the '60s and '70s, Heinlein describes a working democracy: not as a dead world of the past, but as the dynamic living world he knew and lived in and loved.

It is a world we could reclaim. A world we must reclaim. The United States went a long way down the wrong road during the Cold War. It is time we return to more familiar territory. This book can be vital to that return.

Democracy, Robert Heinlein says, "is not an automatic condition resulting from laws and constitutions. It is a living, dynamic process which must be worked at by you yourself-or it ceases to be a democracy, even if the shell and form remain." That was written in 1946, at the close of World War II, before the Cold War; before the federalization of much of American life. When we look around at the disaster area that American politics has become, it is all too clear that

Robert was correct. The shell and form of American democracy remain, but much of what Robert understood about American democracy has vanished.

When Heinlein wrote, the typical professional politician was what was then known as a political boss. Most local, district, and county party leaders were unpaid volunteers. Professional political managers were distrusted. While some state legislators and congressmen were returned to office year after year, most were not, and those who were, though powerful through the seniority system, were often the butts of political jokes - and were quite aware that they could easily be turned out of office, either in a primary or a general election. It was a government by amateurs in a true sense, in that everyone had to live under the laws they passed. They worked hard, too. Heinlein could (and does) complain that members of Congress, and of the State Legislature, were underpaid and had too few perks of office; and offer the opinion that the main reason people went to their city council, or state capital, or Washington, and endured the hardships of public office, was patriotism.

It was all true in those days. Some politicians might have been motivated by greed, or a lust for power, but most thought of themselves as, and were seen by their constituents to be, public servants, sacrificing some of their productive years to the political process. Today things are different. However the professional politicians see themselves, poll after poll shows that the American people think they are a self-perpetuating elite motivated mostly by the desire to retain power.

Since Heinlein wrote this book, most states have changed from a parttime amateur legislature of citizens who approved laws they would have to live with and make a living under, to full-time paid professionals who spend most of their time in the state capital rather than in their home districts, exempt themselves from the laws and regulations they impose on others, and who, far from making a living under the laws they make, are paid by the state and sometimes prevented by conflict-of—interest laws from outside work. (A noted exception is, of course, lawyers, who have been allowed to retain their partnerships in law firms even if the firm does business with the government. They did that in Heinlein's day too.) Their idea of making a living is not yours.

It's doubly true of the Congress of the United States, which has multiplied its perks while invariably exempting itself from such laws as the Civil Rights Act, the Americans with Disabilities Act, the Wage/ Hours Act, most of the reporting laws, and nearly all federal regulations. Far from a largely citizen body, the Congress has become a governing elite with high job security. Since this book was written, Congress went from an assembly of the people to an institution with 98 percent incumbency-a lower turnover than Britain's hereditary House of Lords. While private industry loses jobs, Congress multiplies its staff: there are over 30,000 "Hill Rats," as congressional staff are called in Washington. They serve 535 senators and representatives. Do you have nearly 50 people to mind details and run errands for you? Each of your legislators in Washington does, all paid with your taxes. Think about that before you contemplate running for office. Each congressman commands a political patronage machine that the old ward bosses would have envied.

Other things have changed. The budget has grown enormously. Government (federal, state, and local) now spends nearly half the money generated in this country. The national debt went from an irritation to an impending disaster. The civil service at all levels has grown well beyond anyone's ability to predict in 1946. Government, in a word, has become very big business indeed, while what we used to fear as "the big business interest" has faded into the background. I could multiply examples endlessly, but surely the point is made. Somewhere between 1946 and the present the American democracy as Heinlein knew it disappeared, to be replaced with our present system in which our local affairs are governed by Washington - a city that can't govern itself, but has no qualms about telling the rest of us how we should live.

The Opportunity

We have a new situation in this year of grace 1992 and of the independence of these United States the 216th. To say that the American people have come to distrust their government is a silly understatement. The polls show that they hate our present political system. They're mad as Hell and they aren't going to take it any more. There is a movement to take back control, and it may work. For the first time in our lifetimes there is an alternative. Millions of Americans, disgusted with politics as usual, have turned to a man who, as I write this, is still legally only an "undeclared candidate for President" - but who, as I write this, is the likely winner of the Presidency. In the state of New Jersey both houses of the legislature went from a majority by one party to a veto-proof majority of the other. As I write this we can predict that there will be at least 100 new faces among the 435 members of the House of Representatives; and it is entirely possible that there will be many more, perhaps even a majority of new faces.

There will be equally profound changes at the state and local level. Everywhere there is an opportunity to, in the words of the old political rallying cry, Turn the Rascals Out. We can change the system. We very likely will.

With what, then, shall we replace the system of professional politicians? It's no good "reforming" the system only to abandon it to a new crew of professional politicians. That cure could easily be worse than the disease. We must Turn the Rascals Out, but we must rebuild our system of citizen-controlled government.

That, I submit, is the great value of this book. It's all in here. In this book, Robert Heinlein describes, lovingly and in great detail, the system of government which worked for this republic for nearly two hundred years. This isn't a blueprint, and it's not a treatise on political science. We will need those and they will come; but this is a love story.

Jerry Pournelle Hollywood, California July 1992

Preface

(In which the defendant pleads guilty to the charge of being a politician but offers a statement in his defense.)

This is intended to be a practical manual of instruction for the American layman who has taken no regular part in politics, has no personal political ambitions, and no desire to make money out of politics, but who, nevertheless, would like to do something to make his chosen form of government work better. If you have a gnawing, uneasy feeling that you should be doing something to preserve our freedoms and to protect and improve our way of life but have been held back by lack of time, lack of money, or the helpless feeling that you individually could not do enough to make the effort worthwhile, then this book was written for you.

The individual, unpaid and inexperienced volunteer citizen in politics, who is short on both time and money, can take this country away from the machine politicians and run it to suit himself—if he knows how to go about it.

This book is a discussion of how to go about it, with no reference to particular political issues. I have my own set of political opinions and some of them are almost bitter in their intensity, but, still more strongly, I have an abiding faith in the good sense and decency of the American people. Many are urging you daily as to what you should do politically; I hope only to show some of the details of how you can do it—the mechanics of the art.

There are thousands of books for the citizen interested in public affairs, books on city planning, economics, political history, civics, Washington gossip, foreign affairs, sociology, political science, and the like. There are many books by or about major figures in public life, such as James A. Parley's instructive and interesting autobiography, or that inspiring life of Mr. Justice Holmes, the Yankee from Olympus. I have even seen a clever, sardonic book about machine politicians called How to Take a Bribe. But I have never seen a book intended to show a private citizen, with limited time and money, how he can be a major force in politics.

This book is the result of my own mistakes and sad experiences and is written in the hope that you may thereby be saved some of them. If it accomplishes that purpose, I hope that you will be tolerant of its shortcomings. A decent respect for your opinions requires that I show my credentials for writing this book. A plumber has his license; a doctor hangs up his diploma; a politician can only cite his record—I have done the things I discuss.

I have been a precinct worker, punching doorbells for my ticket. I have organized political clubs, managed campaigns, run for office, been a county committeeman, a state committeeman, attended conventions including national conventions, been a county organizer, published political newspapers, made speeches, posted signs, raised campaign funds, licked stamps, dispensed patronage, run headquarters, cluttered up "smoke-filled rooms," and have had my telephone tapped.

I suppose that makes me a politician. I do know that it has proved to me that a single citizen, possessed of the right to speak and the right to vote, can make himself felt whenever he takes the trouble to exercise those twin rights.

- Robert A. Heinlein April, 1946

Chapter I

Why Touch the Dirty Business?

"He that toucheth pitch shall be defiled therewith - "
- Ecclesiastes XI11: l

And the Pharisees asked Jesus: "Why do you eat and drink with the publicans and sinners'?"
- Luke V: 30

This book is on the mechanics and techniques of practical politics, and is based on the idea that democracy is worth the trouble and can be made to work by ordinary people.

If you can go along with me on that I don't care what party you belong to. I am registered in one of the two major parties, so chances are at least fifty-fifty that you can guess my affiliation, but any party bias I let creep into this book will be an oversight. The techniques of politicking are not the property of any party.

From politics I have come to believe the following:

(1) Most people are basically honest, kind, and decent.

(2) The American people are wise enough to run their own affairs. They do not need Fuehrers, Strong Men, Technocrats, Commissars, Silver Shirts, Theocrats, or any other sort of dictator.

(3) Americans have a compatible community of ambitions. Most of them don't want to be rich but do want enough economic security to permit them to raise families in decent comfort without fear of the future.

They want the least government necessary to this purpose and don't greatly mind what the other fellow does as long as it does not interfere with them living their own lives. As a people we are neither money mad nor prying; we are easygoing and anarchistic. We may want to keep up with the Joneses—but not with the Vanderbilts. We don't like cops.

(4) Democracy is not an automatic condition resulting from laws and constitutions. It is a living, dynamic process which must be worked at by you yourself—or it ceases to be democracy, even if the shell and form remain.

(5) One way or another, any government which remains in power is a representative government. If your city government is a crooked machine, then it is because you and your neighbors prefer it that way—prefer it to the effort of running your own affairs. Hitler's government was a popular government; the vast majority of Germans

preferred the rule of gangsters to the effort of thinking and doing for themselves. They abdicated their franchise.

(6) Democracy is the most efficient form of government ever invented by the human race. On the record, it has worked better in peace and in war than fascism, communism, or any other form of dictatorship. As for the mythical yardstick of "benevolent" monarchy or dictatorship - there ain't no such animal!

(7) A single citizen, with no political connections and no money, can be extremely effective in politics.

I left the most important proposition to the last, on purpose. It is contrary to the beliefs of many but it happens to be true. You yourself can be a strong political force at less cost per evening spent in politics than spending that same evening at the movies and at less effort than it takes to be a scoutmaster, a good bridge player, or a radio hobbyist —about the effort it takes to be a Sunday School teacher, an active ETA member, or stamp collector.

You may possibly think me unrealistic in some of the opinions expressed above. I may be self-deluded but I got those opinions from active politics through many campaigns. If your own experience in politics is really extensive you are certainly entitled to contradict me —but I don't think you will!

If active politics is fairly new to you—if, let us say, you have taken part in no more than one or two campaigns and have been left disheartened thereby—I ask that you suspend judgment for the time being.

I am puzzled by persons who take exception to the first proposition and seem to believe that crookedness is commoner than honesty. I can see how a citizen too long exposed to a corrupt machine might come to think the whole world is dishonest, but I am afraid that when I hear a man complain that everybody is crooked it makes me suspect that he himself is dishonest, especially if he complains that an honest man can't make a living in his line of business. I have met crooks, of course, but for every dishonest man I have met dozens, scores, of men so honest it hurt, both in and out of politics.

Any banker can confirm this. Ask your banker how many good checks come into the bank for every bad check. The figures will give you a warm glow of pleasure.

However, the occasional crook will band together with his kind and take your government away from you if you let him. It is very soothing to the conscience to tell yourself that, after all, you can't do anything to change the sorry state of things. It is much easier to sit in your living room, skim the headlines, and then make bitter remarks about those no-good crooks in the city hall, or the state capital, or Washington, and to complain about how they pay no attention to the welfare of the ordinary citizen (meaning yourself) than it is to put on your hat, go out in your neighborhood, and round up a few votes.

What do you expect for free? Chimes? If you wanted to round up a big order of yard goods, you wouldn't expect to accomplish it with your feet on your desk. This is just as important. Or have you forgotten that income tax form you made out? And your nephew who died at Okinawa because you let some senile congressman stay in office rather than bother with politics?[1]

Why should the average citizen bother with politics? Why touch the dirty business? Isn't politics loaded up with crooks you wouldn't want to eat with and crackpots you wouldn't want to have in your house? "Loaded" is hardly the word, but you will find plenty of each and they will almost drive you nuts. Besides that, and worse, your respectable friends—people who wouldn't be caught dead in a political club—will assume that you are in it for what you can get out of it They will be very sure of it, for that is the only reason their peanut heads can imagine!

Then why bother? Why expose yourself to bad companions and snide remarks simply to make a singlehanded attempt to clean the Augean stables, to bail the ocean, to clear the forest?

Because you are needed. Because the task is not hopeless.

Democracy is normally in perpetual crisis. It requires the same constant, alert attention to keep it from going to pot that an automobile does when driven through downtown traffic. If you do not yourself pay attention to the driving, year in and year out, the crooks, or scoundrels, or nincompoops will take over the wheel and drive it in a direction you don't fancy, or wreck it completely.

When you pick yourself up out of the wreckage, you and your wife and your kids, don't talk about what "They" did to you. You did it, compatriot, because you preferred to sit in the back seat and snooze. Because you thought your taxes bought you a bus ticket and a guaranteed safe arrival, when all your taxes bought you was a part ownership in a joint enterprise, on a share-the-cost and share-the-driving plan.

But the crisis is more than usually acute this year, the traffic is thicker, the curves more blind, the traffic signals less reliable, and there are a lot of places where the pavement is out which have not been marked on any map. More than ever your own welfare demands that you be alert and responsible.

Do you favor peacetime conscriptions? How did your congressman vote on it? Have you got any sons under twenty-one? Should the budget be balanced on a pay-as-you-go plan? If so, are you willing to vote to raise your own taxes? Or would you rather cut the budget for the army, the navy, and for veterans' benefits? Is there some other way to do it?

Should coal miners be forbidden to strike? Can you mine coal with bayonets? What would your rent be in a free market? Or are you still sleeping on a borrowed couch? When will a home be built for you and your kids? Can you afford it when it is built, if ever? Does your town have a building code which prevents the use of new materials and new construction methods? How do you feel about a loan to Great Britain? To France? To Russia? Are you willing to go on rationing to keep Germans from starving? How long should the occupation of Japan continue? Why? How did your congressman vote on FEPC? Do you know what FEPC is? How does it affect you?

The Filipinos become independent this year—should we let Philippine sugar in duty free? Do you live in the Colorado sugar beet country? Is a Senate filibuster a legitimate defense of states' rights, or a piece of tyranny? Should an oil man be in charge of military and naval oil reserves? Was Secretary Fall an oil operator? Does it make any difference?

Should we insist that Russia give us free access and uncensored news reports so that we will know what she is up to? Is it worth fighting about? How about the Big Five Veto power? Does it make for peace or war?

Should Russia get out of Iran? Should Britain get out of Egypt? Should we get out of Korea? Are the three cases parallel? Or very different? Is a Manchurian communist the same thing as a Brooklyn communist? Why? Why not? Should a sharecropper be a Republican or a Democrat? Should a stockholder be a Democrat or a Republican? What is the American Way of Life? Does it mean the same thing on the Main Line as it does on Skid Row?

Are you sure about that last answer? Aren't we all in the same boat? Will an atomic bomb discriminate between bank account—or party labels?

Now we are getting down to cases. All the other problems were of the simple, easy sort that we have blundered our way through, not too badly, for the past hundred and seventy years.

We have a double-edged crisis this year, more acute on both its edges than any we have ever faced before, more acute, even, than Pearl Harbor, or the terrible War between the States.

The first crisis is political and economic. Our way of life is being challenged by a revolutionary upsurge in all corners of the globe. We can meet it with hysteria, persecution, and a new isolationism, or we can define our way of life in action and defend it by practical accomplishment. An American who is well housed, well fed, and holding a good job is poor pickings for an agitator. But let him miss seven meals—

The second crisis is amorphous but of even more deadly danger. We have entered the Atomic Era—but we are not yet used to the idea.

Have you read the Smyth Report?[3]

Do you know what the Smyth Report is? It is the War Department's report on the atom bomb and is titled Atomic Energy for Military Purposes by H.D. Smyth. It is available in any bookstore and most newsstands at $1.25. It is dull reading but quite understandable and is easily the most important document to the human race since the Sermon on the Mount.

I won't try to tell you what it should mean to you. That's up to you. You are a free American citizen, for a while yet, at least. With good luck you should live another five or ten years. Whether or not you and your kids live longer than that depends on how you interpret the Smyth Report. But you must interpret it for yourself—no guardian angel will help you.

Get it and read it. Then get a copy of your own precinct list and start investigating this year's crop of candidates. If your interpretation of the Smyth Report and the world events behind it is correct, there is still a chance that the Star-Spangled Banner will continue to wave o'er the land of the free and the home of the brave.

Just a chance—that's all. But get busy, neighbor. There's work to be done.

CHAPTER II

How to Start

"Put down your bucket where you are!" The late Booker T Washington,[4] in his lifelong attempts to advise his people on how to help themselves, had a favorite anecdote about a sailing ship, becalmed and out of fresh water off the coast of South America. After many days they sighted another ship, a steam ship, and signalled, "Bring us water. We are dying of thirst." The other ship sent back this message, "Put down your bucket where you are!"

They were in the broad mouth of the Amazon, afloat in millions of gallons of fresh water—and did not know it!

Here is how to start in politics:

Get your telephone book. Look up the party of your registration—or, if you are not registered in a party, the party which most nearly fits your views. I don't care what party it is, but let us suppose for illustration that it is the Republican Party. You will find a listing something like Republican County Committee, Associated Republican Clubs, Republican Assembly, or perhaps several such. Telephone one of them.

Say, "My name is Joseph Q. (or Josephine W.) Ivorytower. I am a registered voter at 903 Farflung Avenue. Can you put me in touch with my local club?"

The voice at the other end will say, 'Just a minute. Do you know what ward you are in?"

You say no. (It's at least even money that you don't know, if you are a normal American!)

The voice mutters, "Fairview, Farwest, Farflung—" The owner of the voice is checking a file or a map. Then you hear, in an aside, "Say, Marjorie, gimme the folder on the 13th ward."

"What do you want to know?" says Marjorie. She knows them by heart; she typed them. She is a political secretary and belongs to one of two extreme classes. Either she is a patriot and absolutely incorruptible, or she can be bought and sold like cattle. Either way she knows who the field worker in the 13th ward is.

After a couple of minutes of this backing and filling you are supplied with a name, an address, and a telephone number of a local politician who is probably the secretary of the local club. You may also be supplied with the address and times and dates of meetings of the local club, if it is strong enough to have permanent headquarters. The local club may vary anywhere from a dub in permanent possession of a store frontage on a busy street, with a full time secretary on the premises and a complete ward, precinct, and block organization, to a club which exists largely in the imagination of the secretary and which meets only during campaigns in the homes of the members.

Your next job is to telephone the secretary. This is probably not necessary. If the local organization is any good at all, the secretary of the local club will call you, probably the same day. Marjorie will have called him and said, "Get a pencil and paper, Jim. I've got a new sucker for you." Or, if she is not cynical, she may call you a new prospect.

She will have added you to a card file and set the wheels in motion to have your registration checked and to have you placed on several mailing lists. Presently you will start receiving one or more political newspapers—free, despite the subscription price posted on the masthead—and, in due course, you will receive campaign literature from candidates who have the proper connections at headquarters. Your political education will have begun, even if you never bother to become active.

Note that it has not cost you anything so far. The costs need never exceed nickels, dimes, and quarters, even if you become very active. The costs can run as high as you wish, of course. The citizen who is willing to reach for his checkbook to back up his beliefs is always welcome in politics. But such action is not necessary and is not as rare as the citizen who is willing to punch doorbells and lick stamps. Some of the most valuable and respected politicians I have ever known had to be provided with lunch money to permit them to do a full day's volunteer work in any area more than a few blocks from their respective homes.

I know of one case, a retired minister with a microscopic pension just sufficient to buy groceries for himself and his bedridden wife, who became county chairman and leader-in-fact of the party in power in a metropolitan area of more than three million people. He was so poor that he could not afford to attend political breakfasts or dinner. He could never afford to contribute to party funds, nor, on the other hand, was he ever on the party payroll—he never made a thin dime out of politics.

What he did have to contribute was honesty, patriotism, and a willingness to strive for what he thought was right It made him boss of a key county in a key state—when he was past seventy and broke.

I digress. This book will have many digressions; politics is like that, as informal as an old shoe, and the digressions may be the most important part. It is sometimes hard to tell what is important in the practical art of politics. Charles Evans Hughes failed to become president because his manager was on bad terms with a state leader and thereby failed to see to it that the candidate met the local leader on one particular occasion in one California city. The local campaign lost its steam because the local leader's nose was out of joint over the matter.

Mr. Hughes lost the state of California; with its electoral vote he would have become president.[5] A switch of less than nineteen hundred votes in the city in which the unfortunate incident occurred would have made Mr. Hughes the wartime president during World War I. The effect on world history is incalculable and enormous. It is entirely possible that we would have been in a League of Nations (not the League—that was Woodrow Wilson's League); it is possible that Hitler would never have come to power; it is possible that World War II would never have occurred and that your nephew who fell at Okinawa would be alive today.

We cannot calculate the consequences. But we do know that world history was enormously affected by a mere handful of votes, less than one percent of one percent—less than one ten-thousandth of the total vote cast.

An active political club[6] can expect to deliver to the polls on election day, through unpaid volunteers driving their own cars, as many votes as the number that swung the 1916 presidential election. It could be your club and an organization you helped to build.

Which is why you must now telephone the local club secretary. It may be your chance to prevent, by your own direct and individual action, World War III!

The club secretary, Jim Ballotbox, will not give you the brush off. Even if it is a tight machine organization, founded on graft and special privilege, an honest-to-goodness volunteer who is willing to work is more to be desired than fine gold, yeah, verily! If it is that sort of a club, presently you will be offered cash for your efforts, anywhere from five dollars per precinct per campaign on the west coast, through five dollars per day during the campaign in the middle west, to a sound and secure living month in and month out on the east coast.

(These figures do not refer to the Republican Party, as such, nor to the Democratic Party. They refer to the Machine, no matter what its label.)

Don't take the money. Remain a volunteer. You will be treated with startled response. Every time you turn down money you will automatically be boosted one rung in the party councils. And the progress is very fast.

But, no matter which sort of club it is, you will be welcomed with open arms. You have already caused a minor flurry at the downtown headquarters by volunteering during "peace time"—other than immediately before a campaign. It shocked them but they rose to the occasion and put you in touch with your local leader. They are used to volunteers during campaigns—and are aware that most of them are phonies who expect at least a postmaster's job in return for a promise to work one precinct plus a little handshaking at a few political meetings. If it should happen that you call up during a campaign, you will be treated a little more warily until you have established that you are in fact a volunteer and not a hopeful patronage hound, but you will be received pleasantly and given a chance to work. This applies to any political club anywhere at any time.

If Jim Ballotbox happens to be secretary of the other sort of club, the sort unconnected with a powerful, well-financed machine, he will be even happier to see you, although he may not be as schooled in the arts of graciousness as his full-time professional opposite number. His club will be in a chronic state of crisis financially, or even moribund; an enthusiastic new member is manna to him.

He will have plenty for you to do. You can be chairman next term if you want to be and share with him the worries about hall rent, postage, secretarial work, and how to get people out to meetings. At the very least he will place you in charge of one or more precincts (which will make you nervous as a bridegroom; it's too much responsibility too suddenly) and he will unburden his heart to you. You will learn.[7]

There remain two other possibilities which may result from your telephone call to the downtown headquarters. The first is that there may be no club in your district, in which case you will make your start directly at the downtown headquarters and will meet there the other active party members from your own area. You will join with them in organizing a local club before the next election. It is not hard to do; the process will be discussed in a later chapter.

The last remaining possibility is that your telephone book contains no listings for your political party. This will happen only in small towns or in the country. If you live in a small town or in the country, you already know at least one party leader in your own party—probably Judge Dewlap, who served one term in the state senate and has been throwing his weight around ever since.

Call him up. Tell him you want to work for the party. Perhaps you don't like the old windbag. No matter—he likes you. He likes all voters, especially ones who want to work for the party! He may suggest that you have lunch with him at the Elks' Club and talk over civic conditions. Or he may simply invite you to drop into his real estate office for a chat. But he won't brush you off. From now on you're his boy!—until he finds out he can't dictate to you. But by that time you are a politician in your own right and there is nothing he can do about it (That knife in your back has Judge Dewlap's finger prints on it.)

We have covered all the possibilities; you are now in politics. As a result of one telephone call you have started. Stay with the club or local organization for several months at least. Attend all the meetings. Help out with the routine work. Don't be afraid to lick stamps, serve on committees, check precinct lists, or distribute political literature. Count on devoting a couple of evenings a month to it for six months or a year. Your expenses during this training period need not exceed a dollar a month.

At the end of that time you are a politician.

I mean it. You will have become acquainted with your local officeholders and political leaders, you will have discovered where several of the bodies are buried, you will have taken part in one local or national campaign and received your first blooding in meeting the public. You will find that you are now reading the newspapers with insight as to the true story behind the published story. You will have grown up about ten years in your knowledge of what makes the world go 'round.

You will either have experienced the warm glow of solid accomplishment that comes from realizing that you performed a necessary part in a successful campaign for a man or an issue, or you will have taken part in the private post-mortem in which you and your colleagues analyze why you lost and what to do about it next time. (The answer is usually to start your precinct organization earlier, with special reference to getting your sure votes registered and to make sure they are dragged to the polls.)

You will feel that you can win next time and probably you will. Politics for the volunteer fireman is not one long succession of lost causes—far from it!

But the point at which you will realize that you are in fact a politician with a definite effect on public life is the time when your friends and neighbors start asking your advice about how to mark their ballots. And they will. Perhaps not about presidential nor gubernatorial candidates, but they will ask, and take your advice about lesser candidates and about the propositions on the ballot—

You may discover in the course of the first few months that you are in the wrong club, or even in the wrong party. This does not matter in the least insofar as your political education is concerned. In fact it is somewhat of an advantage to make a mistake in your first affiliation; you will learn things thereby which you could never possibly learn so well or so rapidly if you had found your own true lodge brothers on your first attempt. It does not matter by what door you enter politics. If you have belonged to the party wrong/or you, by habit or tradition, a few months of active politics will disclose the fact to you. You can then reregister and cross over, bringing with you experience and solid conviction you could hardly have acquired any other way.[8]

If the trouble lies in your having fallen first into the hands of a gang of unprincipled machine politicians, the mistake is still a valuable one, for you will discover presently that there is a reform element in your party, unaffiliated with the Machine. You can join them, taking with you a knowledge of the practical art of vote-getting which reformers frequently never acquire.

You will be invaluable to your new associates. Most of the techniques of vote-getting are neither dishonest nor honest in themselves, but the machines normally know vastly more about such techniques than do the reform organizations. The honest organizations can afford to copy at least 90% of the machine techniques. It is curiously and wonderfully true that a volunteer, reform organization can use the machine techniques much more effectively than the Machine does, with fewer workers and less money. It is like the difference between the ardor of unselfish love and the simulated passion of prostitution; the unorganized voting public can feel the difference.

Recapitulation-How to start: Take a telephone book. Look up your political party. Telephone, locate your local club. Join it, attend all the meetings, and do volunteer work for several months. At the end of that time, let your conscience be your guide. You will know enough to know where you belong and what you should do.

I might as well admit right now that the above paragraph is really all this book can tell you. The matter discussed in the later chapters are things which you will learn for yourself in any case, provided you do everything called for in the paragraph above.

If you have skimmed through this book to this point without, as yet, laying the purchase price on the counter, you can save the price of the book without loss to yourself simply by remembering that one paragraph—and doing it!

On the other hand you might buy the book anyhow and lend it to your loudmouthed brother-in-law. Aren't you pretty sick of the way he is forever flapping his jaw about the way the country is run? But when has he ever done anything about it except to go down and kill your vote on election day by voting the wrong way? Give him this book, then tell him to put up or shut up!

You can point out to him that he owes it to his three kids to take a responsible part in politics, instead of just beating his gums. If he won't get off his fat backside and get busy in politics but still refuses to stop being a Big Wind, you are then justified in indulging in the pleasure of being rude to him. After all, you have wanted to be for years, haven't you? This is your opportunity; you've got nothing to lose politically since he votes wrong anyhow, when he remembers to vote, and it will come as a relief to be rude for once, now that you are a politician and usually polite to all comers.

Tell him that he is so damned ignorant that he doesn't have any real opinions about politics and so lax in his civic duties that he wouldn't be entitled to opinions if he had any. Tell him to shut up and to quit holding up the bridge game.

The faint sound of cheering you will hear from the distance will be me. I don't like the jerk either, nor any of his tribe.

You may not believe that getting into politics is actually as simple as I have described it. Here is my own case: I returned to my own state after an extended absence. My profession had kept me travelling and it happened to be the first time I had ever been at home during a campaign. I walked into the local street headquarters of my party and said to a woman at a desk, "I have a telephone, an automobile, and a typewriter. What can I do?"

I was referred to another headquarters a couple of miles away—I was so ignorant that I did not know the district boundaries and had gotten into the wrong headquarters.

That very same day, to my utter amazement and confusion, I found myself in charge of seven precincts.

Six weeks later I was a director of the local club.

Six months later I was publishing, in my spare time, a political newspaper of two million circulation.

During the next campaign I was a county committeeman, a state committeeman, and a district chairman. Shortly after that campaign I was appointed county organizer for my party. And so on. It does not end. The scope and importance of the political work assigned to a volunteer fireman is limited only by his strength and his willingness to accept responsibility.

Nor is the work futile. The volunteer organization with which I presently became affiliated recalled a mayor, kicked out a district attorney, replaced the governor with one of our own choice, and completely changed the political complexion of one of the largest states—all within four years. I did not do it alone—naturally not, nothing is ever done alone in politics—but it was done by a comparatively small group of unpaid volunteers almost all of whom were as ignorant of politics at the start as I was.[9]

Or let me tell you about Susie. Susie is a wonderful girl. She and her husband volunteered about the same time I did. Susie had a small baby; she packed him into a market basket, stuck him into the back of the family car and went out and did field work.

In the following four years Susie replaced a national committeeman with a candidate of her own choice, elected a congressman, and managed the major portion of the campaign which gave us a new governor. She topped her career finally by being the indispensable key person in nominating a presidential candidate of one of the two major parties. I'll tell more about that later; it's quite a story.

All this time Susie was having babies about every third year. She never accepted a cent for herself, but it became customary, after the house filled up, for the party to see to it that Susie had a maid during a campaign. The rest of the time she kept house, did the cooking, and reared her kids unassisted.

During the war she added riveting on bombers during the night shift to her other activities.

We can't all be Susies. But remember this—all that Susie had to offer was honesty, willingness, and an abiding faith in democracy. She had no money and has none now ... and she had no political connections nor experience when she started.

I could fill a whole book with case histories of people like Susie. Most of them are people of very limited income who are quite busy all day earning that income. One of the commonest excuses from the person who knows that he should take part in civic business is: "I would like to but I am just so tarnation busy making a living for my wife and kids that I can't spare the time, the money, nor the energy."

The middle class in Germany felt the same way; it brought them Hitler, the liquidation of their class, and the destruction of their country. The next time you feel like emulating them, remember Susie and her four kids. Or Gus. Gus drove a truck from four a.m. to noon each day; he had a wife and two kids. By sleeping in the afternoons and catching a nap after midnight he managed to devote many of his evenings to politics. In less than three years he was state chairman of the young people's club of his party and one of the top policy makers in the state organization.

What did he get out of it? Nothing, but the satisfaction of knowing that he had made his state a better place for his kids to live.

The Guses and the Susies in this country are the people who have preserved and are preserving our democracy—not the big city bosses, not the Washington officeholders, and most emphatically not your loudmouthed and lazy brother-in-law.[10]

I have said that the rest of the book will tell only things that you will learn anyhow, through experience. They will be recounted in hopes of saving you much time, much bitter experience, and in the expectation that my own experiences may make you more effective more quickly than you otherwise might be. I also hope to brace you against the disappointment and sometimes disheartening disillusionments that are bound to come to anyone participating in this deadly serious game.

One warning I want to include right now, since you may not finish reading this book.

You are entering politics with the definite intention of treating it as a patriotic public service. You intend to pay your own way; you seek neither patronage nor cash. Almost at once you will be offered pay. You will turn it down. Again and again it will be offered and patronage as well.

There will come a day when you are offered pay to campaign for an issue or a man in whom you already believe and most heartily and to whom you are already committed. The offer will come from a man who is sincerely your friend and whom you know to be honest and patriotic. He will argue that the organization expects to pay for the work you are already doing and that you might as well be paid. He honestly prefers for you to be on the payroll; it makes the whole affair more orderly.

Everything he says is perfectly true; it is honest pay, from a clean source, for honest work in which you believe. It happens that just that moment a little extra money would come in mighty handy. What should you do?

Don't take it!

If you take it, it is almost certain to mark the end of your climb toward the top in the policy-making councils of your party. You are likely to remain a two-bit, or at best a four-bit, ward heeler the rest of your life. A volunteer fireman need not have money to be influential in public affairs, but he must not accept money, even when it is clean money, honestly earned. If you take it you are a hired man and hired men carry very little weight anywhere.[11]

There is a corny old story about a sugar daddy and a stylish and beautiful young society matron. The s.d. offered her five thousand dollars to spend a week at Atlantic City with him. After due consideration she accepted. He then offered her fifty dollars instead. In great indignation she said, "Sir, what kind of a woman do you think I am?"

"We settled that," he told her. "Now we're haggling over the price."

Don't make the mistake she did. There is however some sense in haggling over the conditions. If you reach the point where your party wants you to accept a state or national party post, for full-time work in a position of authority, or your government asks the same thing of you, under circumstances where it is evident that you must surrender your usual means of livelihood, go ahead and take it, if you honestly believe that your services are needed and that you can do the best job that could be done by any of the available candidates. It is well understood in political circles that public office or major party office is almost always badly underpaid for the talent and experience the jobs need. The salaries, therefore, are regarded simply as retainers to permit the holder to eat while serving the public.

But don't be a paid ward heeler!

On the other hand, it is not wise to hold the petty hired man in the party in contempt. You will have to work with many of them no matter what party you are in. The biggest reform movements in this country include areas where the Machine is dominant; the most perfectly oiled political machines include areas where all the work is volunteer and unpaid. You will find the paid precinct or headquarters worker as honest and as conscientious as employees usually are; almost invariably he or she will be sincerely loyal to the party employing him. They usually do more work than their wages justify. Remember this, and be careful what you say to them or about them. Most of them are as honest as you are and just as anxious for your man to win.

But don't become one of them if you expect to have any major effect on the future of this country.

Well, then, if you are never to accept pay, except under remote circumstances in which the job even with pay is likely to be a financial sacrifice, what can you expect to get out of it?

The rewards are intangible but very pleasing to an adult mind. The drawbacks are easier to see. You must expect to be regarded with amusement and even suspicion by some of your acquaintances. Most of the station-wagon crowd you used to run around with will be certain that you are in it for what you can get out of it, for that is the only reason their unmatured minds can imagine. They are the free riders in the body politic; despite the fact they do nothing to make our form of government work, they serenely believe that the wheels go around by their gracious consent and think that gives them the privilege of caustic and ignorant criticism of the laborers in the vineyard.

Moreover, you won't be seeing so much of them from now on. You will find that you are beginning to select your social contacts, your dinner guests and your golf partners from among your political acquaintances. You will do this because you find more intelligence, more brilliant conversation, and more worthwhile solid human values among your political acquaintances than you found among the free riders. You won't plan it that way, but it will work itself out.

You will play less bridge. Bridge is a good game, but it is dull and tasteless when compared with politics.

Your brother-in-law will shun your company. That's clear gain!

There will come to you the warm satisfaction of being in on the know every time you pick up your newspaper. News stories that once were dull will be filled with zest for you, because you will know what they mean.

From the stand point of sheer recreation you will have discovered the greatest sport in the world. Horse racing, gambling, football, the fights, all of these things are childish and trite compared with this greatest sport! Politics is a game where you always play for keeps, where the game is continuous, always fresh and full of surprises. It will take all of your intelligence and wit and all that you have ever learned or can learn to play it well. The stakes are the highest conceivable, the lives and the futures of every living creature on this planet. How well you play it can make the difference between freedom or a firing squad, civilization or atomic conflagration. For this is the day of decision, the hour of the knife, and none but yourself can choose for you the correct path in the maze.

Over and above the joy of playing for high stakes is the greatest and most adult joy of all, the continuous and sustaining knowledge that you have broken with childish ways and come at last into your full heritage as a free citizen, integrated into the life of the land of your birth or your choice, and carrying your share of adult responsibility for the future thereof!

CHAPTER III

"It Ain't Necessarily So!"

This chapter will be devoted to smearing a few cherished illusions.

I do not suppose that you are suffering from all of the misapprehensions listed herein; however, if you are typically American and have not had extensive political experience, it is likely that you are subject to one or more of them. Before we go ahead with detailed discussion of the practical art of politics it is well to correct the record with respect to many items in the Great American Credo—items which happen to be wrong and which have to do with politics. It will save your time and mine in later discussion.

With the possible exceptions of love and religion probably more guff is talked and believed about politics than about any other subject. I am going to discuss some of that guff and try to puncture it. Most of the items I have chosen because I myself have had to change my opinions through bitter experience in politics.

My present opinions are subject to human error. However, they are based on the scientific method of observation of facts; they are not armchair speculation. If you don't believe me, go take a look–several looks!—for yourself. But I suggest that you will save yourself a lot of the mistakes I made if you assume that what I say is true until through your own experience you reach a different opinion.

Warning! Every generalization I make about groups of people is subject to exceptions. You must meet each citizen with an open mind. For example, there is no natural law which prevents club women from being intelligent and quite a few of them are.

Now let's let our hair down and speak plainly. We are going to discuss a lot of sacred cows and then kick them in the slats. We are going to mention a lot of unmentionable subjects, using everything but Anglo-Saxon monosyllables. We are going to discuss Catholics and Communists and Jews and Negroes, women in politics, reformers, school teachers, the nobility of the Irish, civil service vs. patronage, and whether Father was right. I will try to tell the truth as I have seen it. I hope I won't splash any mud in your direction but I may.

"One should never consider a man's religion in connection with politics." This is a fine credo, based on the American ideal of freedom of religion. It happens to be cockeyed and results from mushy thinking. One should always consider a candidate's religious beliefs; it is one of the most important things about him. Whether a man is a Catholic, a Protestant, a Communist, a Mormon, or a Jew has a very strong bearing on how he will perform his duties in certain jobs.

(Communism is, of course, classed with the religions—more about that later.)[12] The important thing to remember is to consider a man's religion objectively, in relation to what you expect of him, and not in an attitude of blind prejudice.

There is nothing discriminatory nor unAmerican in scrutinizing a man's religious beliefs in connection with politics. A man's religion is a matter of free choice, even though most people remain in the faiths to which they were born. A Catholic can become a Jew; a Communist can become a Quaker.[13] A man's religious beliefs offer a strong clue to his attitudes, values, and prejudices and you are entitled to consider them when he is in public life.

For example—let us suppose that you live in a mythical community where the school board can, at its discretion, assign public funds to the support of private schools which are open to the public—parochial schools, of course. Let us suppose that you believe that public funds should be used only for state-controlled schools. Two tickets of candidates are before you, one Catholic, one non-Catholic, all equally well qualified, good men and true.

Should you vote for the ticket which will support your own opinion, or should you ignore what you know about the candidates and vote for the one with the pretty blue eyes?

Or let us suppose—same election; same town—that you are a non-Catholic who believes that tax money should support popular education but that the government should not be allowed to determine the nature of that education, except, perhaps, for the three R's. It is your belief that the individual parents should control the training received by their children; you fear state domination. Whom should you vote for?

Or suppose you are a Catholic but believe that public funds for support of Catholic schools would be the first step toward state control of those schools. Which way do you vote?

The problem can become still more complicated. Congress is considering subsidizing scientific research; many of the best colleges and universities in this country are controlled or dominated by members of a particular faith. Would you refuse a research subsidy to Notre Dame but allow it to some state-owned college in Tennessee, the state where biology is subject to the vote of the state legislature?[14] Or how about the great University of Southern California? It was a Methodist college once; there has been a divorce of sorts but the influence is still there. Can USC be trusted with a subsidy in mechanical engineering, or does nothing less than outright atheism meet your standards for freedom of thought?

In passing it might be added that private schools with church leanings were an indispensable factor in the scientific research that won World War II.

What bearing does all this have on the problem of tax funds for parochial schools? It obviously has some bearing and you yourself will have to consider the factors when you decide whether to campaign for the ticket made up of Catholics or the one made up of non-Catholics.

In my home state recently there were introduced in the legislature a group of bills concerning birth control and a group of bills concerning liquor licensing, local option, and prohibition. The governor received hundreds of letters about these two groups. Analysis showed that practically all of the letters about the birth control measures came from Catholic groups, whereas the letters about liquor measures came almost exclusively from Protestant church groups.

Is it not obvious, then, that you have a legitimate interest in the religious persuasion of your state legislator, your state senator, and your state governor?

Suppose you are a Christian Scientist; how do you feel about socialized medicine? Suppose instead that you are strong for socialized medicine; is it of interest to you that a candidate for the legislature is a Christian Scientist? Or should you ignore it?

Is a Jewish congressman more likely or less likely to vote to open the United States to any and all displaced persons in Europe? Who is the more likely to put a rider concerning Palestine on a bill to end money to Britain—a non-Zionist Jew or an Irish Catholic from Boston?

The ramifications of the political effect of a man's religious beliefs are endless. I do not intend to suggest answers to any of these questions; I simply mean to make it clear that to shut your eyes to this factor is to handicap yourself grossly in the analysis of men and issues. To vote always for a person of your own religious persuasion, or, at the other extreme, always to ignore a candidate's religious beliefs, is equally stupid and unrealistic. The first attitude is narrow and unAmerican; the second is custard-headed. Call 'em as you see 'em!

Now let us discuss church groups.

(Before shouts of dirty red, fascist, papist, Jew, atheist, or whatever, start coming in, let me put this on record: Like all my great grandparents, I am native born, an American mixture, principally Irish, with a dash of English and French and a pinch of German. My name is Bavarian Catholic in origin; I was brought up in the Methodist faith. I believe in democracy, personal liberty, and religious freedom.)

American church groups as a whole are frequent sources of corruption and confusion in politics. This is a regrettable but observable fact which runs counter to the strong credo that if only the church people would get together and assert their strength we could run all those dirty crooks out of town. In fact, the church members of any community, voting as a bloc, could swing any election, institute any reforms they wished, and make them stick.

It does not work out that way.

I do not question that we are more moral, more charitable and more civilized as a result of church instruction and the labors of priests, ministers, rabbis, and countless devout laymen. Nor do I question the political good intent of church groups. The evil consequences result from good intentions applied in too limited a field.

Only rarely do churches become interested in the way in which paving contracts are awarded, how the oral examinations for civil service are conducted, or the fashion in which real estate values are assessed for tax purposes. Towing fees for stolen cars, the allocation of gasoline tax monies between city, county, and state, or the awarding of public utility franchises are likely to be too "political" for discussion from the pulpit.

Instead church groups are likely to demand laws which prohibit practices contrary to various religious codes of morals. A crooked political machine is happy to oblige each church as such laws do not hamper the machine; they help it-first, by providing new fields of graft and corruption, second, by insuring the votes of the madams, bookies, etc., engaged in these fields, and third, by obtaining support from the very church groups which demanded the legislation.

If you believe that laws forbidding gambling, sale of liquor, sale of contraceptives, requiring definite closing hours, enforcing the Sabbath, or any such, are necessary to the welfare of your community, that is your right and I do not ask you to surrender your beliefs or give up your efforts to put over such laws. But remember that such laws are, at most, a preliminary step in doing away with the evils they indict. Moral evils can never be solved by anything as easy as passing laws alone. If you aid in passing such laws without bothering to follow through by digging in to the involved questions of sociology, economics, and psychology which underlie the causes of the evils you are gunning for, you will not only fail to correct the evils you sought to prohibit but will create a dozen new evils as well.

If your conscience requires that you support legislation of the type referred to above, then you must realize that your overall problem of keeping honest officials in office to enforce the laws is made much more difficult and that you must work several times as hard and be much more alert if you are to have an honest government.

As an amateur, unpaid, volunteer politician interested in certain reforms, don't expect any real help from the churches even in accomplishing the moral objectives of the churches, or you will be due for a terrible disappointment.

Women in Politics[16]

We were told, when Votes-for-Women was new, that women would bring higher moral standards and would eliminate the graft and corruption which the nasty old men had tolerated.

Women have had an effect—they caused the installation of a powder room in the Senate's sacred halls; they changed the atmosphere of conventions from that of a prize fight to something more like a college reunion, and they broadened the refreshments at political doings from a simple diet of beer and pigs knuckles to a point where the menu now includes ice cream and cake, little fancy sandwiches, coffee, and wine cooler. The change in refreshments is a distinct improvement; I don't like pigs knuckles.

They have also brought political corruption to a new low.

Whoops! Easy, girls—please! Quiet down. There are exceptions to all rules—you may be the exception to this one. That is for you to determine. Judge yourself.

A great many women are willing to go to hell in a wheel barrow. Their husbands may be politically just as dishonest but the gentle sex are usually willing to sell out at a lower price. They go in for cut-rate corruption. If you file for office, or become the manager of a candidate, you will quickly be besieged by telephone calls from women who want to help in your campaign. They sound like enthusiastic volunteers; you will find very quickly that they are political streetwalkers who will support any candidate and any issue, without compunction, for a very low price.

Brush them off, but politely—a practical politician should never go out of his way to make anyone sore; your purpose is to win elections, not arguments. Let the opposition hire them. They are hardly worth the low price they charge, even to him. Later on in the campaign you will find that he hired one of them a little sooner than you had expected; she worked as an unpaid volunteer all through the campaign in your office and turned in nightly reports to the opposition.

Don't let it throw you. As a politician you must learn to expect such little disappointments. And don't let it shake your faith in human nature. If you take the trouble to count up you will find that you know many more people who are certainly honest than the number who are just as certainly crooked. The crooks just seem more numerous because they get in your hair more.

I am inclined to believe, although I am not sure, that the average difference in political honesty between men as a group and women as a group in this country is actually considerable and not just a matter of a lower pay scale for corruption on the part of women. As a result of punching thousands of doorbells and talking with many, many men and women I am of the opinion that women usually know less about political issues than men and consequently are less inclined to realize that political issues are of moral consequence. This probably results in part from the fact that most women, in their daily occupations, are not thrown out into the world to the same extent as their men folk and consequently never really find out what makes the wheels go around.[17]

Furthermore, the husband is inclined to encourage the little woman to remain in ignorance; it gives him a chance to show off at home how much he knows without betraying just how little it is—since it is still more than she knows.

In any case, I have heard hundreds of times, in campaigning from door to door, this remark: "Oh, I leave everything of that sort up to my husband!" And she does, too—she doesn't know a filibuster from first base and she thinks an alderman is something to hang clothes on.

So, when somebody tips her off that she can pick up a few dollars in a campaign year by a little light work in her neighborhood, she is ripe for it, gullible, willing to work for low wages, and so naive she doesn't know that it's loaded. It won't even worry her to work for the candidate George is voting against, because she does not think it matters. She can work in a dozen campaigns and never find out anything about men nor issues; she just knows that State Senator Slotmachine is such a nice man and here is some literature about him and would you like to have a car sent around to take you to the polls?

Slotmachine is a nice man, too—he's an old hand in this business; his public personality is a work of art. You would enjoy having dinner with him.

After a while, if she is bright enough to mark a sample ballot, she does notice a few things, but it does not wise her up to what she is doing; it simply makes her utterly cynical about politics. She becomes convinced that the shoddy business she has been associated with is the only brand of politics in existence. Nothing will change her junior-size mind on the subject and she is forever lost to your side.

So don't hire her and don't bother to try to convert her. The women volunteers who work for you, free, can get ten votes to the one she can round up for Slotmachine.

All through it she remains a good wife and mother and a respected member of the P.T.A. You can't tell her from an authentic volunteer by sight nor, very quickly, by conversation. There is however one simple touchstone which works in nine cases out often. The sincere volunteers will look you up in person and offer their services; the political prostitutes will telephone, offer their services over the phone, and then ask you to come to see them. (I think they believe it improves their bargaining position.)

The rule is not infallible, but it will help you to be on your guard. It won't help you much when you encounter this particular bird of prey by chance, on ringing a doorbell, and it won't help you at all when the opposition hires her and then sends her to see you; nevertheless it will save you a lot of grief. After a while you will acquire a sense of smell concerning this sisterhood. In the meantime don't trust too far any volunteer previously unknown to you, who has great enthusiasm for unpaid work but does not seem to grasp the issues in the campaign. Don't put such a person to work in the headquarters; let her (or him) distribute literature—and then make a spot check on its distribution.

Still another breed of cat is the club woman politician. She organizes women's political clubs. She may not be dishonest; she is usually ambitious and stupid and she is almost never of any use in winning an election, although she may help you lose one and her enmity is to be dreaded. Look, ladies-don't be a woman politician, or a women's politician! Be a politician who happens to be female.[18] You are the equals of men-remember? It isn't necessary to go off and form little groups of your own; stay in the main event and start swinging.

After the above nasty cracks about women in politics I am very happy to be able to say that a sincere and enlightened female volunteer is the best political worker you will find. She is a pearl beyond price, but, thank Heaven, not too hard to find. She will average from twice to many times as useful as the general run of sincere male volunteers. She is not nearly as choosy as the men are about what kind of work she will do. She'll punch doorbells, and sweep the office, and type letters, and distribute newspapers, and watch the count, and drive a car on election day.

She doesn't expect anything out of it but the satisfaction of serving. Somebody told her once that a good citizen finds it a privilege to work for the betterment of her country. She believed it and she still believes.

Bless her heart—she is the backbone and sinew of every honest political organization in the country.

"Mother knows best, dear," or "Remember, Father is usually right." It is standard practice for the elder generation to harry the younger generation with saws about "older and wiser heads." The youngsters resent it, until they get old enough to pull it on the next crop.

There is just enough truth in it to keep the practice going. Wisdom mellowed by years is beautiful to see. In public life the occasional George Norris, Henry Stimson, or Justice Holmes are as breathtakingly inspiring as the Lincoln Memorial. However, in most cases, what passes for the wisdom of age is merely the sophistication of experience, knowledge of precedents, and familiarity with details.

In politics our senior citizens habitually assume that their years entitle them to respectful attention from their juniors on the assumption that they have mellowed, grown broader, and increased in patriotism and social responsibility through the years.

It ain't necessarily so! Although there are shining exceptions, the average run of our elder citizens are notably avaricious, self-centered, unpatriotic, and devoid of any notion of social responsibility, as compared with their sons and daughters.[19]

Before I am accused of personal bias let me state that I am no longer a youngster myself. I've reached the shady side of the street, short of wind, and fat in the middle. To my regret, young women now call me "sir" and stand when they speak to me.

And I do not speak primarily of political office holders. I do not refer to the congressional practice whereby senility is an asset rather than a liability in reaching key committee posts, nor am I repeating the arguments about "The Nine Old Men." As a matter of fact old men in politics seem to keep young better than their nonpolitical contemporaries. (Try shadowing a seventy-year-old congressman during a campaign; he'll wear you to a frazzle.)

In any case, the problem of superannuated officeholders is a political issue outside the scope of this book. I am speaking of the ordinary run of elder citizen, your neighbors, your parents, your grandparents. They may be kind to children and dogs and sweet to look upon in church and at family dinner, but politically speaking the average lot of them are the sorriest bunch of old vultures you will find.[20]

Remember that when you start punching doorbells.[21]

I am sorry to say these things. I like Great Aunt Mary's apple pies, her neat grey hair, and her wrinkled smile as well as you do. I had the opinion forced on me.

For example—several years ago I was covering a district which lay, half and half, on the right side and the wrong side of the tracks. I interviewed young and old, rich and poor, men and women. I expected and found certain trend differences in view point on the two sides of the tracks. But I was surprised to find an amazing and almost unanimous similarity in viewpoint on the part of the elderly rich and the elderly poor.

Mellowed and altruistic interest in the welfare and future of the whole community? Far from it! The elderly poor wanted $200 every month, or some other pension which would pay them more income than they had ever earned while working, and they didn't give a hoot what it did to the country! The elderly rich wanted the highest possible return from mortgages, rents, dividends, or other investment income, and they didn't give a hoot what it did to the country!

Naturally they tended to vote for different men and different issues —except when a candidate managed to kid both groups. But the motivation was identical and utterly shameless—blind and narrow selfishness, short range in nature and quite unconcerned with the welfare and future of their children and their country.

Nor were they driven to it by hunger. One can forgive the selfishness of hunger, but even on the wrong side of the tracks they were neither hungry nor cold, as it happened to be in a state with, possibly, the most favorable and generous welfare conditions in the country. No, it was the greed of old age.

There appears to come a change in most people somewhere around the age of fifty when they cease to think of the rest of the human race except in terms of what others may be induced to do for them. A divorce from the human race is not a good thing for a man's inner being; it reduces his spiritual life to its lowest common denominator—the animal level. It is absolutely imperative that a man care for something more than for himself for him to remain human. Most tragically, many people, when they have reached the age when their own children are no real responsibility and are thereby not forced to think in terms of the welfare and future of their children, find nothing to replace such interest. The more nearly truly human of us substitute, for a preoccupation with the needs of our own children, after they are grown, a wider interest in all children everywhere, and the future of the nation and the race.

An elder citizen who has come safely through this difficult transition is a joy to know and is likely to make your best political worker. He will labor until the day he dies for the public welfare as he sees it, without the slightest expectation of personal reward. He usually has enough free time to be very effective, his views are respected, and the physical labor of politics is within the limits, in most cases, of even the elderly and infirm.[22]

I remember in particular one old lady who was the mainstay in a dozen campaigns. She lived along on a pittance and was nearly seventy when I met her. Her first name was Laura. (I never dared call her by her first name.) Not only did she work her own precinct and campaign among her friends, she was usually headquarters manager and handled the field workers and the public with cheerful tact.

Laura wanted to know only whether it was a private fight or could she get in it, too? She was never indifferent to any public issue; she would study, decide what was right by her values, and start pitching. I recall with pleasure watching her shake her finger under the nose of the chairman of a school board while scolding them all. "You gentlemen should be ashamed of yourselves! To have the temerity to sit there and tell me, a citizen and taxpayer of this state, that you do not intend to carry out your sworn duty!"

The fight was none of hers; it involved discrimination against a group in which she had no remote interest. But Laura won the fight; the school board backed down.

(Incidentally, keep your eye on school boards; they tend to disregard the constitutional rights of the public even worse than do judges.)

Churches, women, and elderly people have come in for quite a lambasting in this chapter; it is gratifying to emphasize that from these very groups you will get your most effective and altruistic volunteer workers. Embattled grandparents, militant housewives, and crusading clergymen will be your best shock troops. The rank and file of your organization will be young people, usually less than thirty-five years old—a man under thirty-five who cannot be induced to take any action for the welfare of his community and nation is morally dead and blind to his own personal interests; it is usually easy to interest young people in volunteer political activity. They have not yet acquired the case-hardened selfishness of their elders; they are enthusiastic, energetic, and they believe in the future.

But of the four groups, the young, the old, women past girlhood, and the clergy, young people are the only ones to be approached with no particular caution. The others are guilty until proven innocent from a standpoint of usefulness in volunteer political work.

Clergymen, although usually worse than useless, make wonderful altruistic politicians when they happen to possess both love of humanity and hardheaded realism. Too often the ones that are bright aren't good and the ones that are good aren't bright. Catholic priests are usually both and you can work with them to limit the issues in which you both see eye to eye. If you happen to be Catholic yourself the problem is simple.

The same may be said of rabbis, to a lesser extent.

"Politicians are usually crooks." This statement is false; it is likely that no other canard has done more harm to the United States of America.

The statement is false even when it is limited to machine politicians and bosses. Political bosses are not more crooked than the average run of nonpolitical laymen; they are less crooked.

I know my statement runs contrary to popular prejudice. I am aware that graft, bribery, nepotism, special privilege, and outright official connivance in crime and racketeering have stained and continue to stain our public life. I still stand by the statement.

Consider how a political boss operates. His purpose is to stay in power not this term, but next term, and the term after that. To do that he has to have a majority of satisfied customers—the public—you! Despite all stuffing of ballot boxes, despite thuggery and intimidation at the polls, there is rarely (I am tempted to say "never") a time when aroused citizenry cannot throw him out of power and sometimes into jail as well. He cannot operate with the impunity of a Hitler. On the average he has to please you.

The successful political boss has to stay fairly honest. Just how honest that is depends on how honest the electorate is. His success depends on delivering to the public what the public really wants; not what you the public say you want when you are busy complaining, in private conversation, about those crooks in the city hall.

Have you ever had a traffic ticket fixed? Have you ever slipped an underpaid building inspector ten or twenty bucks not to report some violation of the building code? Have you ever patronized a prostitute? Have you ever taken a drink of bootleg liquor? Have you ever patronized a black, or even a light grey, market?

If you have done any of these things your own moral state is no higher than that of the Machine under which they exist. The man who believes in capital punishment cannot afford to turn up his nose at the hangman, nor can the man who offers a ten dollar bribe to a petty official afford to be righteously indignant when he finds that the scoundrels have stolen the city treasury. Nor can you expect a judge to fix a parking ticket for you on Monday but refuse to spring a known criminal on Tuesday. The difference is one of size, not of kind. Being a private citizen, your contact with graft and corruption is likely to be retail, but the man you deal with is a professional—necessarily! For him it is wholesale.

Your own record of civic virtue may be absolutely spotless; I have known many, many people who never violate public morals in any way. Nevertheless, even if you are such a person, you are aware that your friends and neighbors do such things as those listed above. Sometimes they give the excuse that the system forces such derelictions on them. This excuse is rarely if ever valid, but how often is it accompanied by an all-out effort to correct the conditions complained of? I have yet to find such a case.[23]

Very well-political dishonesty is a condition shared by the boss and the body politic. I have stated that the boss is more honest than the average of the lay public. I will attempt to prove it.

I am speaking here of the boss who stays in power, year after year, not of the man who suddenly climbs to power, overreaches himself, and gets promptly thrown out. The boss who stays in power is a businessman. Like all businessmen he deals daily in numerous transactions which are intended, over the long pull, to cause a profit to accrue to him. These transactions strongly resemble those of other businessmen, i.e., they are intended to benefit, one way or another, both parties to the transaction, and they must be, if not legal, at least not of such a nature as to cause the formation of vigilante societies by angry citizens. Most of them are mild in nature and stack up favorably when compared with the daily labors of the second hand automobile business, the cosmetics trade, the public relations profession, the undertaking business, the real estate business, and the "opportunity" schools.

But the business of the machine boss differs in an important respect from that of these respectable, legitimate occupations. His business is transacted orally, usually for future delivery on his part. And his word is better than the bond of most people!

Consider how it must be. (Later on you will find that I am right, through your own experience, but now let us tackle it by analysis.) This man deals in wind, in oral statements. Political commitments are not written down. These contracts are settled with such remarks as, "Okay, Joe, I'll see the commissioner next week and take care of it," or "All right, then, we'll support your man," or "That street will be repaved in six weeks." That's all.[24]

His word has got to be good—or he goes out of business.

It is good. Under circumstances where a written contract is necessary, and sometimes a law suit, to force a layman to carry out his solemn promises, a business politician will meet his commitments without a murmur, even though the situation may have changed so that it costs him immediate loss or embarrassment. His personal reliability is his stock in trade; he must not jeopardize it.

I can hear a snort of derision; everybody knows that broken political promises are common as flies around a garbage dump. Whose promises, citizen? The promises of a "reform" ticket? The promises of some office-happy candidate? Or the flat commitment of a successful boss of an entrenched machine? If you know personally of a broken promise of the last-named sort, I would appreciate it if you would write to me, care of the publisher, giving me the details.[25]

The commitments of a successful boss are made with a careful eye to what his experience has taught him the majority of the people really want. The Pendergast Machine, now moribund, of Kansas City, Missouri, was a perfect example of a machine which gave the people what they cared most about and stayed in power for more than a quarter of a century thereby. People want good pavements and aren't too interested in the cost; Kansas City had excellent streets all through the reign of the Machine. Parents want good schools; the Old Man saw to it that high-minded citizens sat on the school board and forbade the members of the organization to monkey with the school system.

People also want personal service from their government. The Old Man was in his office daily and the door was open. Any bindlestiff or solid citizen could walk in his office, make his complaint, and get a decision. The decision was backed up with action, and most of the decisions and actions would have met with your warm approval. The cop who had shoved around the bindlestiff was ordered to cut it out; the solid citizen got the chuck holes in front of his house repaired.

In addition, Widow Murphy got free coal and free food to help her and her kids through the cruel midwestern winter.

It is alleged that there was a Machine ruling which forbade shooting south of Twelfth Street. True or not, the respectable citizens worried very little about killings around the water front. Later on, when the Boss grew older and the Machine lost its careful attention to detail, it was certainly true that the sound of gunfire was not too uncommon in the "respectable" neighborhoods; the gangsters had moved south and set themselves up in fine apartments on Armour Boulevard, Linwood, the Paseo, and the Plaza.[26]

This was the beginning of the end; the Machine had overreached itself and permitted things which the citizens really disliked. Shortly thereafter the Old Man was so old and sick that he was unable to attend personally to one campaign. The "Boys" decided to make him a present, a really fine majority. Ghost votes were common in Kansas City, but this one reached a new high—or low. The Machine majorities were so enormous; the tallied opposition so microscopic, that it was easy for a federal grand jury to dig up proof of fraud from the persons who were willing to swear that they had voted against the Machine.

Does all of the above mean that I approve of political bosses and political machines? Decidedly not! The people of Kansas City paid a terrific price, both in money and intangibles, for their complacency, all through the reign of the Machine. Toward the last, as the Boss grew old and the invisible government became less well disciplined, the price became outrageous and intolerable. Bombings, shootings, and other crimes of violence became commonplace.

But the greatest loss was in their own attitude toward civic virtue. They had become—the "respectable" citizens—cynical about the possibility of honest and efficient government. They had lost faith in themselves. There were many times in the early decades of this century when a concerted effort could have cleaned up their city; they were too indifferent and too cynical to attempt it wholeheartedly. When the change came, it resulted from decay of the Machine and from organized efforts outside the city, not from the inhabitants thereof.

Something very like the disease of Kansas City caused the downfall of France.

If bosses were the utter villains the "respectable" citizens think they are, political reform would be easy. In addition to being no crookeder than the average of the public and notably more meticulous in their personal honesty in one respect, successful bosses and successful machine politicians have many other virtues.

No matter how twisted are their attitudes toward public money and private graft, successful machine bosses have these positive virtues: They are friendly. They are helpful. They are tolerant. They are good tempered. They are conciliatory. They are personally reliable. They give patient attention to the personal problems of people who ask them for help, without being stiff-necked about it.

In short they like people and they show it, in practical, warmhearted ways. If you expect to compete with them successfully you've got to emulate them in their virtue while shunning their vices. You can be as pure in heart and motive as Sir Galahad but it won't make your strength as the strength often unless you get down off your horse.

Roark Bradford has John Henry tell how to get along with a hog." First you got to be a friend to the hog. Then he Mend you back." John Henry knew his political onions.

Take a tip from the Salvation Army. Sal remains pure in heart by never failing to extend a hand to anyone who asks for help.

Possibly you don't like Jews. Perhaps you think the Negro should be kept "in his place." A foreign accent may annoy you. You may consider the poor to be loafers and bums. Or, vice versa, you may consider all the wealthy to be crooks. Perhaps Catholics come in for your special scorn. Whatever it is, if you hold any of these attitudes, you had better search your soul and change them, or you will never be a success in politics.

I don't mind in the least injecting discussion of racism and minorities into this book. There is no partisan bias here; both major parties are forthright in their official attitudes condemning these things, despite the mouthings of individuals or groups, despite filibusters by members of one party and the silent, guilty consent thereto by the other.

The bosses understand democracy better than many who turn up their noses at political machines. That is why you find the minorities supporting the Machines with such regularity.

You must meet the competition or you might as well go back to your ivory tower and wait for the dictatorship. It may suit you better, for dictators stand for no nonsense from people of the wrong race, or the wrong religion, or the wrong place of birth. Of course he is equally likely to liquidate you—stand you up against a ditch and shoot you.

Or take your business away from you and give it to a party member.

I am sorry to raise these issues but this book is intended to be truthful rather than diplomatic. If you expect to beat the machine politicians in the practical arts of democracy, you have got to be at least as democratic as they are. It is not necessary that you like any particular man nor group; it is necessary that you be friendly in manner and that you honestly treat all comers with fairness, tolerance, and decency. If you do have any strong prejudices against particular minorities you had better learn to guard most carefully against showing them, both in public and in private.

"A government should be run like a business." This is a common saying and it is rather silly. Look, citizen, a machine boss is a man who runs a government like a business. Is that what you want? A business is an organization run from the top down for the personal profit of the persons who run it. Businesses provide the public with something they want in return for money. Isn't that what a political machine does?

Our Constitution is quite explicit about the purposes for which we formed this government They are: "—to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty—" That's all. Nothing about making a profit, nothing about being "businesslike."

The methods of business are appropriate to the purpose of business; they are quite incompatible with the purposes of the Constitution. I do not mean to imply that a businessman cannot serve well in public office; I do mean that he had better not try to run things with the high hand with which he bossed his own business or the public will throw him out on his ear once they get wise to him.

It is quite true that some areas of government administration could stand more "businesslike" handling, but most attempts to tidy up government service to the public results in screams of anguish from any who are annoyed by the changes, without any compensating applause from those who are helped.

Take for example the new income tax form. It has been functionalized and made explicit, with all the turns clearly marked, to the point where a moron with a hangover can make out his own income tax return unless he is in the habit of keeping his business records in the bottom of his laundry bag. (Or unless he keeps two sets of books, one for tax purposes and one for his eyes alone!)

The thing that makes the new income tax form a marvel of bureaucratic genius is that the tax bill it defines with such graphic simplicity is a hodgepodge of second thoughts, blind guesses and compromises, resulting from the agonized efforts of officeholders of both parties to be reasonably fair to all hands while paying for the most expensive war in history.

Have you heard any applause for the result? Like fun! The mere mention of March 15 by a comedian produces sour laughter.[28] The effort of figuring out the form is regularly portrayed as being more difficult than understanding Dr. Einstein's relativity.

Forget that notion about running a government like a business. A government should not be run for profit and a democratic government can't be run by a boss. And as for "businesslike"—are you sure you want it yourself? Do you want your home confiscated if you fall behind on a tax payment with the same speed with which a mortgage holder will foreclose if you fail to pay up, or a landlord will kick you out if you fail to pay rent—or do you prefer the present practice in which the government will stall around for years before putting your place up for auction?

By the way, why do people kick so much at having to stand in line in the post office, or the recorder's office, but are docile as little lambs when queued up in a bank? Is it because they expect service rather than a businesslike attitude from the government they own? Could be, maybe?[29]

"Politicians are always compromising." This statement is quite true but the implication that the process is dishonest is so much balderdash. Compromise is the core of the democratic process. Without it there is no democracy and can be no freedom. Compromise is the process by which we meet the other fellow halfway and agree on a joint course of action not quite pleasing to either party. Every happily married couple is quite used to the system; if it is good at home, is it bad on Capitol Hill? The man who won't compromise is not a lily-white idealist; he is merely a conceited ass and undemocratic to boot.

We will discuss this further under techniques, particularly under "caucuses" and "primaries."

Civil Service versus Patronage. This subject is not nearly so much a matter of all black and all white as most people seem to think. Let us concede that civil service is a good idea in most public jobs below the policy-making level—if the regulations have been drawn with the intent of producing an honest, spoil-free service and if those regulations are honestly administered. Otherwise -and this applies to many cities, counties, and states—it is merely a dodge to entrench the henchmen of a machine in public jobs, beyond the reach of the electorate to "turn the rascals out!"[30]

The wrangle is generally managed through the device of an oral examination for applicants which counts as much, or nearly as much, as the written examination. If your local civil service makes use of an oral examination you are justified in assuming that it is crooked, a racket.

Nor is patronage, or the "spoils system," the benefit to practical politicians it is supposed to be. If a politician once gets started on the road of paying off political obligations with patronage, he quickly finds that there is never enough patronage to go around. Some of our senators meet this situation by becoming insatiable patronage hounds - one of them recently proposed a bill which would have made holding a job as a senior aeronautical engineer at Wright Field a matter of political faith! Others meet it by dropping the matter entirely, refusing to touch patronage, or by delegating it to the official local organization of their party.

Many officeholders have told me in private that the system of refusing to have anything to do with patronage is the only one which is free from headaches and unnecessary loss of votes.

The reason is very simple. For every patronage job there are at least a dozen candidates with good claims—in their own minds, at least—for appointment on the score of political services rendered. That means one man whose loyalty, such as it is, may have been purchased by the appointment—and eleven who are almost certainly antagonized.

After a few terms of this a congressman finds himself surrounded by a sea of disappointed postmaster candidates, each anxious to elect his opponent.

Still, if you are going to be in politics, you will have to face up to the problem of patronage. If you steadfastly refuse to accept it yourself, someday you will find that the job of dispensing it has been laid in your lap. What to do will be discussed under "techniques."

The federal civil service is almost entirely free from the dishonesty which is so prevalent in state and local civil service. It need not concern you too much as it is, by and large, well run and moderately efficient. It is not free from politics; federal civil servants maintain quite a lobby in Washington, but it is almost entirely free from partisan politics. Their efforts run mostly to pressure to obtain larger appropriations, higher salaries, and bigger organizations.[31]

Senator Byrd seems to feel that this is one of the most important problems facing the Republic. I don't happen to think so. You will have to decide for yourself.[32]

The worst thing wrong with the federal civil service is the fact that the salaries and working conditions are not sufficiently high to attract enough competent men in the more responsible administrative positions—a section head in agronomy, let us say, or a division supervisor in aerodynamics research, or a chief physicist for the Bureau of Standards.

This problem is not limited to federal civil service but extends all through government. We pay a congressman $10,000 a year for a job that costs him $15,000 a year to hold under present conditions, exclusive of his campaign expenses, and then wonder why things get fouled up in Washington.[33]

One of the commonest misconceptions has to do with "eating out of the public trough." By popular superstition, every officeholder, appointive or elective, is suspected of living by a process midway between cannibalism and vampirism, and classed with robbing the dead.

Truthfully, comrades, eating out of the public trough is mighty slim pickings. As we just mentioned, it is slow bankruptcy to become a congressman. The situation with state legislators is much worse. A hundred dollars a month is high pay for a legislator or state senator; most states pay less than that. None of them pay a living wage, yet carrying out the duties of the office properly in these complicated days is a full-time job at nearer sixty hours a week than forty.[34]

How do they live?

One of two ways: (a) honestly, through private income or private work done at the expense of public business—and the legislator's own health; it's too big a burden—or (b) by graft, either polite or shameless.

If the legislator is a lawyer, as too many of them are, polite graft is simple.[35] Get your own lawyer to explain the process. Shucks! We might as well be frank. In most states (all states, as far as I know) a legislator who is also a lawyer may practice his profession on the side. He may receive legal fees, size not limited by professional code, for legal services, nature undefined. These fees may be legitimate fees, honestly earned; they may be "clean" graft—fees that fall in his lap because of his prominence as a public official but with no definite strings attached (there is a lot of that and it tends to make a man a tame dog without buying his vote outright); or it may be outright bribery, done in such a manner that it can never be prosecuted.[36]

If you should happen to get interested in cleaning up this particular evil in your home state—it's there!—the method is simple: Pay your legislators about $10,000 a year, which is what they should be worth for what you expect of them; forbid them to earn money through outside business; and institute some type of required publicity of their financial conditions on entering and leaving office, each term.[37]

Simple to state, that is—you will find it hard to formulate in law and very hard to put over, not because of the opposition of the legislators but because of the blind and angry opposition of a great part of the population who hate to see a public official paid a living wage and hate still worse for him to be paid a salary commensurate with the responsibility of the office.[38]

Most strangely and wonderfully, in spite of the nominal salary and impossible working conditions, in spite of the feet that they are usually treated disgracefully by their constituents (who seem to feel that an elected legislator is something between a paroled convict and a chattel slave), a very large percentage of our legislators are earnest, honest, hardworking public servants doing their level best for their state and their constituents.

Why do they do it? Why would any man expose himself to such a fate? In England the profession of government is the highest and most respected occupation a gentleman can enter; in this country a man who dares to offer himself for the public service might as well kiss his reputation goodbye.

Then why do the honest men in public office (and their numbers are enormous compared with the crooks) ever chuck their hats in the ring? Or, once having had their fingers burned, why do they run for reelection? Is it a power complex? Are they publicity-mad exhibitionists? Is it some sort of a vice?

All of the above may enter into some cases to some degree, but I have a different theory as to the main reason. My theory is based on intimate knowledge of many legislators; it may be wrong but here it is, for what it's worth.

I think it's patriotism.[39]

There is a strong conceit held by a large part of the population that it is somehow a little declasse to be an active partisan, that all really nice people are non-partisan. You will hear, "I vote for the man, not the party," said in a smug tone of voice, as if expecting for that pious sentiment at least one more star in the heavenly crown. Among middle-aged and elderly women this attitude is almost universal.

With rare exceptions, I vote for the party, not the man.

Be partisan!

Be party regular. Vote the ticket in the fall of the party whose primary you voted in earlier in the year. Do all you can to enforce party discipline, not only among political workers, but, after election, on the part of your party office holders. Make 'em stick to the party's platform.[40]

Like all generalizations, this rule is subject to some exceptions, but the exceptions are very few, and you should spend several sleepless nights before deciding that a special circumstance merits an exception.

I can give you the thumb rule I use. I won't vote for a man whom I know to be an outright crook, or treasonable to our form of government, or, in my opinion, having some other moral defect so gross to make him a public menace in public office.

But I will vote for a dunderhead against a smart man of the party I am opposing.

After all, all I am asking of the poor devil is that he represent me; the dunderhead, if subject to party discipline, can do so; the smart man from the other party is already pledged to vote contrary to my wishes in the respects in which the two parties differ.

The belief that it is somehow more "idealistic" to ignore party lines arises from a failure to understand the nature of the democratic process. Democratic government is the art of reconciling the desire of every man to do just as he damn well pleases with the necessity of setting up rules and agreeing on programs for the general welfare of all and the protection of each individual.[41]

When there are 140,000,000 individuals concerned the procedure has to be more formalized and more complicated than it is when a single family decides what movie to attend. The process is necessarily as follows; no other system has ever been invented:

Individuals who are somewhat like-minded get together, discuss candidates and issues, iron out their differences, compromise, and agree on a program and a slate for the party primary. The primary they take part in is, of course, that of the party which, in their opinions, most nearly fits their needs. As a result of the primary they hope to make it still closer to what they want.

Other groups have been doing the same thing. After the party primary the groups, successful and unsuccessful, get together in larger groups and make further compromises. Many, perhaps most, of the concessions are made by the successful groups to the unsuccessful ones, for the successful groups are acutely aware that they cannot win in the final election singlehanded.

Somehow, a party platform is hammered out. It is a conglomeration of compromises, representing an average of the hopes and beliefs and needs of many people. No one is satisfied, but half a loaf, etc.—they pledge support.

A campaign organization is worked out. The campaign manager is not infrequently the strongest unsuccessful rival of the head of the ticket; all through the organization you will find disappointed candidates and their supporters pitching in to try and elect the man they opposed a few weeks before. Hypocrisy? Hell, no! It's brotherhood and civilized cooperation.

After the election the compromising process starts all over again, for the successful candidates of each party are now public officials. From unlimited considerations, out of strongly opposed needs, and violent differences in viewpoint they must arrange programs, pass laws, produce an administration.

From this endless and involved series of compromises comes the government of these United States, and of our states and counties and cities.

There is no other way-for a government of free men.

But the point is this: You can't take part in this process without being partisan. What is a political party? It is a large group of people who have agreed to compromise their differences to accomplish a program reasonably satisfactory to all but which none could accomplish alone.

The definition applies to all political organizations. In this country we call that group just below the level of government itself the political party. The groups which make up the national parties are little parties, no matter what they are called-clubs, groups, blocs, wings, leagues. I want to point out that a "non-partisan league" is a political party. So is an "independent women voters' league," or a "civic affairs committee." Mr. Lincoln made it clear a long time ago that calling a tail a leg did not make it a leg.

However, these parties without party labels are usually less responsible and more subject to dishonest manipulation than the parties which openly avow their party nature.

But why be partisan? Why not vote independently, after an earnest scrutiny of the candidates and issues, for the welfare of the people as a whole? It sounds good and it would be very nice if it would work. It would also be nice if pi were exactly 3.000 instead of a bothersome 3.14159 plus.

There are two reasons, one moral and one practical. The practical reason is this: You simply cannot be effective in politics unless you join in the process of compromise and conciliation whereby free men merge little groups into big groups until they accomplish a government. If you are not partisan you are on your own, everybody is out of step but Johnny, and the chances that you can have any effect on how this country is run are 140,000,000 to one against you.

If you write to your congressman about some issue that matters to you he will recognize you for what you are, a free rider, a political zombie, and he will give your opinion the casual attention it deserves.[42] But if he knows you to be an acting worker in the South Side (Democratic) (Republican) Club, he will write you a careful explanation of his own views in the matter and ask you to elaborate yours.

It does not matter whether or not your congressman is of the same political party as the club you belong to, just as long as he knows that you take regular part in the basic democratic process of partisan politics.

Now for the moral reason: Whenever you take part in the group processes of democracy there is an unwritten but morally binding contract between yourself and the other members of the group that you will abide by the will of the majority. If you know ahead of time that the will of the majority is likely to be something that you can't stomach, then you are in the wrong pew and should go find a group more to your liking.

But you have no right to take part in their proceedings, accepting from them a voice and a vote, unless you intend to abide by the outcome of the vote.

The issue can be quite crucial. You will one day find yourself engaged in the process and will see coming out of it a result which you had not anticipated but which you cannot support with a clear conscience. There is then only one answer—get out Resign. Retire.

But don't go over to the opposition! You've had your chance; through your own bad judgment you've muffed it Wait it out and choose your associates more carefully next time. Change clubs, change groups, change parties if necessary, and try again. But do not expect to run with the fox and hunt with the hounds, all in the same campaign.

Being partisan does not mean that you must stay in one party all your life. It is proper to change parties, or to help to form a third party, if you find that the party of your former affiliation no longer represents your views.[43] It is also proper to join a straddle-party, a group which announces its intentions of selecting and supporting candidates on the basis of some issue or program which they regard as paramount, irrespective of party labels. Such a venture although highly speculative is legitimate, but it automatically bars you from any moral right to take part in the regular party processes, including the primary.

It is not legitimate to vote in the Republican primary in the summer, turn around and vote for the Democratic ticket in the fall.

When you accepted a voice in the selection of a particular party's candidates you contracted with the other members of that party to abide by the outcome. Some state's recognize this principle; others are so lax that it is possible in such a state for a man to be registered in one patty, run for office in a second party, then support the ticket of a third party. The moral issue is the same anywhere.

The principle is formalized in a caucus. The caucus is a device used to bind a group to unanimous action and is used both for programs and for the selection of candidates. It works like this: A group of people with something in common get together for the purpose of a political action. Some member moves to caucus. This is a motion on procedure; no issue or candidate is as yet before the group. If the motion carries the group as a whole is bound to act unanimously to carry out the will of the majority.

Pretty rough on the minority? Wait a moment—anyone who at this point decides that he is not willing to bind himself gets up and walks out. He has been deprived of none of his rights as a free citizen, but he has decided of his own free will not to work with this group.

The doors are dosed and the remainder arrive at a majority decision which is binding on them all as the unanimous wishes of the caucus.

Simple, isn't it? You never have to join a caucus, but if you do you promise to five up to the contract. Yet I have met people so politically naive that they refused to bind themselves but demanded that they be allowed to remain and vote and debate. Others will break the caucus after the doors are opened. One "reformer" type is particularly prone to this sort of political dishonesty; he can always find reason why "the greatest good of all the peepul" demands that he go back on his word.[44] It marks him as dishonest, he is not invited to caucus the next time, and he never gets an opportunity to serve the people he claims to love so well.

I have tried to make it clear that it takes a nice sense of honor, personal self discipline, and meticulous respect for the obligations of contract to be partisan and party regular. It takes ideals and integrity, despite the common opinion to the contrary. The political freelance, who proclaims that he wears no man's collar and boasts of his independence, should not be admired, for he is merely irresponsible. He is the cuckoo of politics, who claims the privilege of laying eggs in a nest he refused to help to build.

You may still have misgivings. You may still feel, quite honestly, dial you want to be free to pick up your ballot in November with unlimited choices to split the ticket any way you like for the men you believe to be the most able. Well, no one will stop you. But an adult is never free in that sense. He is bound by his conscience, his sense of responsibility, and his commitments to other people. If you have taken an adult part in the preliminary democratic processes which led up to that ballot in your hand, then you already have obligations and are morally bound to carry them out.

Let us mention one more practical consequence of the evil of being "non-partisan." When you elect a man to office you expect him to make an honest effort to carry out his platform pledges. Very well—don't give a Democratic governor a Republican legislature and then expect him to rear back and pass a miracle. Remember the second half of Hoover's administration. The Executive and the Congress were headed in different directions and the processes of orderly government came to a stop. Mr. Hoover never had a chance. Neither did the Congress.[45]

CHAPTER IV

The Practical Art of Politics

Field and Club Organization

We could call this chapter the Art of Kissing Babies, or How to Win Friends and Influence Voters.

I will try to make this as objective as a book on automobile repairing and as non-partisan as a rain storm. I hope to keep moral issues out of it but will not consciously recommend any practice which is not honest and fair.

Politics is not a science but an art, an incomplete and unorganized art as untidy as the bottom of a closet. One can start anywhere and go anywhere. This chapter cannot be complete; I will content myself with sticking up a few sign posts in the maze and posting a few boggy places.

Your object as a politician is to win elections, not arguments. If you will always remember that, you can't go far wrong.

The second thing to remember is that elections are won with votes; those votes are out in the precincts, not down in the politico-financial district, not in political clubs, not at political rallies.

The third thing to remember is that a vote for your side never becomes a reality unless you see to it that the holder thereof gets down to the polls and casts it This should be printed in red ink and set off with flashing lights.

The fourth thing to remember is not to waste time arguing with a hard case. In the years I have spent in politics I cannot honestly say that I recall ever having persuaded anyone to change his mind about how he was going to vote on an issue or for a candidate if he had already made up his mind when I approached him. Yet I know that I have influenced and sometimes changed the outcome of elections through my own efforts.

How? By organized effort in applying the first three points-to-be-remembered while observing the injunction contained in the fourth. The first campaign I was in I thought that campaigning consisted of going around and trying to persuade people by sweet reason to vote for my side. I used up a lot of shoe leather, met a lot of interesting people, and learned a good deal. I don't suppose I did my candidate very much harm—oh, I may have lost him a dozen votes or so—but I certainly did him no good.

Long before you punch the doorbell: the person on the other side has usually made up his mind as what party and what head of the ticket to support. He has reached this decision through a process of rearranging his prejudices which he laughingly calls "making up his mind"—unless he is a very exceptional citizen. He now holds his opinion as an emotional conviction; if you try to attack it you probably succeed only in making him angry. This is a good way to insure that he will take the trouble to go to the polls, for the satisfaction of voting against you.

Some very successful campaigns have been run by the expedient of providing the opposition with the wrong sort of a "volunteer" precinct organization, who lose votes for the man they pretend to support by being belligerent nuisances. It is a dishonest practice but an amazing illustration of the old saw that the way to lead a pig is to pull its tail.

How to Punch a Doorbell: You are clean, you are neat, you have a smile on your face and a friendly attitude in your heart. Someplace about your person you have some campaign literature. You are facing a closed door; behind it, according to the precinct list, lives Mr. and Mrs. Seldom, both members of your party.

You punch the doorbell. After what seems an interminable time the door opens; you see Mrs. Seldom. Her face is flushed, a baby is squalling in the background, and your eyes and nose detect clear evidence of cooking in progress.

You look pained, you look embarrassed—it isn't hard to do; you are. And you get out of there fast!

You say, "Oh, I'm sorry, Mrs. Seldom—I sure picked a bad time to butt in, didn't I? Excuse me, please!" You start backing away.

If she's human she will at least say, "What do you want?"

Don't take this as a cue to hang around. No woman wants to be held up when the potatoes are about to burn. Say, "I'm Fred Glutz, representing the East Squamous Demican Club. We're making a survey and we wanted to get your opinions on the coming election. But I certainly did not mean to butt in and make a nuisance of myself. Here—may I leave this with you and get out?" You place appropriate literature in her hand. Keep on backing away.

There is a fair chance that she will apologize for being tied up and suggest that you come back some evening when her husband is at home.

If so, close the deal fast. Suggest that evening. If she demurs, suggest the following evening. If she still demurs, ask if you can telephone for an appointment. Then follow up without fail.

If she doesn't suggest some sort of follow up, leave at once and pray that you haven't annoyed her.

Let's try the next house. The precinct list gives it as the residence of the Squiffle family. You ring, the door opens. A small dog sails out and begins to circulate around your feet. You squat down and begin scratching his ear, then grin up at his mistress. "What's his name?" you ask.

"We call him Snuffy. Here, Snuffy, get back inside and quit bothering the man!"

"He's no bother. Had one myself that looked like him, but he got run over last year. Streetcar." (Make it true. There must be something you can say at this point that a dog owner would recognize as sincere shop talk.)

This goes on until she brings up the matter of why you are there. You tell her—same words as next door. It develops that her name is not Squiffle, but Bedrock. "I think there used to be some people here by that name, but they moved. I don't know where."

You've struck pay dirt, pal. Careful, now! Find out what party they are in. Use a direct question if she does not volunteer the information. If it is the wrong party, end the interview quickly. Leave some literature if she will take it, but don't argue and get out fast. Thank her for her time, reach down and pat Snuffy, and get out.

If it is the right party, tell her the Club is glad they moved into the neighborhood. Ask her whether or not she has registered at this new address. The chances are she has not. Offer to have a deputy registrar call to register them. Follow up on this.

Invite them to the club meeting, then see to it that an invitation comes by mail.

Ask her if she would like to have some one come to watch the kids while she goes to vote. Ask her if she would like to have an automobile sent to take her to the polls. Even if she says this isn't necessary, follow it up on election day. If she has not voted as yet a couple of hours before the polls close, send a car for her anyway. Continue the interview as long as she is interested.

Discuss issues if she wants to and listen respectfully to what she has to say. Don't argue with her views. Let the points of difference pass and bear down on the respects in which you agree with her. As soon as she shows signs of restlessness, after two minutes or thirty minutes, get out promptly.

Record everything you have learned on a 3x5 file card, noting the action to be taken, before you ring the next doorbell.

You have almost certainly obtained one, and probably two or three, brand-new votes for the whole ticket. If it is a primary campaign your chances of swelling the total for your favorite candidates are even better.

With good luck you may have added a member to your local club, a member who may later do some precinct work herself. That remains to be seen. Gold is where you find it. Her husband may turn out to be one of those commendable individuals who will reach down in his pocket for a five spot to help pay for printing or hall rent, even if he won't do precinct work. He may own a filling station, or be a barber, or be in any of the many trades or professions which lend themselves to political contact work.

All this remains to be determined. Probably all you've gotten is a pair of new votes, but that is not to be sneered at. The Great Wall of China was built of individual bricks. In any case all that you have learned is recorded on the file card—including the dog Snuffy's name. When you send her the invitation by mail, to attend a club meeting, write on the printed form or typed letter, in long hand: "Does Snuffy still speak to strangers?"

Here is another doorbell. Behind it (it says here on the precinct list) should be Mrs. Grassroots, her son and daughter-in-law.

And so they are. They own their own home and haven't moved. They are on your side already; the record shows that they habitually vote even in the primaries. Your job is too easy; you might as well not have bothered.

Don't be too sure. Out of three votes, even with conscientious citizens, at least one will probably fail to show up for the primaries unless you follow up and, possibly, provide transportation. Furthermore you have a chance to win new club members and find new precinct workers. New club members, new precinct workers, are behind those closed doors. You must ring the doorbells.

We have covered all the important types, though you will encounter infinite variety in the types. You will encounter crackpots, and lonely people who will talk to you endlessly, and serious people who welcome a chance to exchange views. You will find some who will sit you down and ply you with cake and coffee and others who are obviously suspicious of you. Once in a long, long time you will encounter outright rudeness and it will leave you shaken, sick at heart, and reluctant ever to risk another rebuff.

Don't let it drive you home. Smoke a cigarette. Walk up to the corner drug store, buy a malted milk, and look at some comic strips. Then go back and tackle the next doorbell. The chances are that the person behind it will be as friendly as a puppy. Most Americans are.

You will find out a lot about your fellow citizens and what you find out will usually increase your faith in democracy and make you proud to be an American and a member of the human race. It will warm you up inside and give you new confidence about the future.

Why is a political club? I have already stated that elections are won in the precincts, not in clubs. Political clubs are hard to keep alive and require constant attention; why should you bother?

The political dub is the organization of the doorbell pushers. It is the means by which you get them together and keep them together. It provides the necessary minimum of loose organization necessary to any cooperative enterprise.

But it does more than that. It is your principal means of keeping up morale among the volunteers. Field work in politics can be a lonely business; after a day or even an evening of punching doorbells you may feel that nobody cares but yourself, to hell with it, let the country go to the dogs, why should you knock yourself out—it isn't appreciated.

Then you need the company of other politicos, citizen. You need shop talk from others who have been through the same mill. You need to listen to how they are tackling things down in the twelfth ward and what the chances appear to be. You need to hear the ever hopeful comments of the old timers and the optimistic predictions of the campaign managers.

You'll listen to gossip about what the governor told Joe Shortterm in a secret conference last Wednesday and just what Joe thinks of the governor. You'll hear that Dr. Toplofty has decided to run for Congress in the third district and you will agree that that stuffed shirt doesn't stand a chance unless he quits spending all his time speaking in front of organizations made up of other stuffed shirts just like himself.

You'll stay up a little later than you should and drink a little more coffee than you should and you'll buy two tickets to the Fourth of July dance. Next day you will feel like punching some more doorbells. It doesn't look quite so hopeless. After all, your district has a more favorable registration than the twelfth ward and Jack Sidewalk seemed to be fairly confident that the party could carry the twelfth.

You'll go to the dance. You may not dance more than three or four dances, but it seems you had a swell time.

You picked up a couple of ideas from the chairman of the Westside Club and heard two wonderful pieces of scandal about, respectively, the street commission and Senator Shortchange.

In addition to building morale and acting as a clearing house for political information the club performs the serious function of acting as a school and a seminar in government. The candidates speak before the club and are there subjected to questioning and searching examination impossible at the public rallies. No candidate nor office holder, up to and including the level of governor, can afford to refuse a summons to appear before a club. If circumstances interfere, he will be apologetic about it and try to arrange another date.

This fact gives you a chance to know intimately the men who run our government. In a country as large as ours this is a most valuable opportunity and one of which most people appear to be unaware. If you avail yourself of it, the mysterious and remote processes of your government will become as familiar and personal as the ministrations of your family physician.

The club is also the work shop of democracy. It conducts much the same business and under much the same rules as does our Congress—with this difference: The club conducts such business frequently in advance of the Congress. Many a bill has been submitted, and passed, in the sacred halls of Congress because some private citizen, a tailor, or a grocery man, or a school teacher, first submitted that bill as a resolution before some small and amateurish political club.

The political club is in fact part of our government, although an unofficial part. New ideas are tried out in it, debated, referred to committee, modified, and made ready for the public arena, just as plays are sent to Atlantic City for a try out.

How to Form a Political Club: just one person is necessary to a successful political club. He (or she) is usually the secretary, though he may be the chairman, the treasurer, a member of the membership committee, chairman of the program committee, or not even an officeholder. Whatever the title this person is the de facto executive secretary through willingness and energy.

He sees to it that invitations and notices are mailed out. He is a day-in-and-day-out one-man membership drive. He sees to it that the hall rent and postage costs are collected from the membership. He arranges for speakers and plans for social events. He borrows chairs, promotes refreshments, dickers for halls, inserts notices in newspapers, and welcomes newcomers.

In a large club he may be twins, triplets, or even quintuplets. But no club is without him. He has the qualities of a Sunday School superintendent, a Scoutmaster, or an amateur orchestra leader. You have met him, or her, in lodge meetings, in the Rotary Club, in the Parent-Teachers' Association, or in the ladies' aid. All human organizations are dependent on such persons; it takes just one to make a political club.

When to Form a Club: Don't try to form a club unless you yourself are prepared to be this spark plug. I can recall at least two clubs, well and carefully planned by persons who had the temperamental qualifications, which never got further than a couple of meetings because the persons who planned them were tied up with other work and had assumed that they could start the ball rolling and then let the rank and file carry on.

It ain't so ... except by rare accident.

Don't start a club unless you are prepared to stay with it and nurse it along during its lifetime. You may plan to keep it alive during one campaign and then let it die if it can't walk alone. Such a club can be very useful. Or you may plan it as a permanent community organization in which case the job never ends. However, in the latter case, you will probably come across one or more foster parents who can be depended on to carry on the good work even if you move out of town.

It is a lot more trouble to found and run a club than it is simply to be an active member and a precinct worker. However, if you live in an area where one ought to be founded and are willing to put out the amount of effort it takes to run a scout troop, then go right ahead. It takes no special talent as long as you are willing and know the techniques.

It is not even necessary to be the sort of person who makes friends easily and is known as "popular." I have seen clubs, successful clubs, run by persons who were neither intelligent nor pleasing in manner, but who had the single virtue of industry. However, the ability to make friends is so useful in running a club, and is, in fact, so useful everywhere in politics, that we will digress again and discuss it before taking up the techniques of forming and running a club.

Remember what John Henry said about the hog? "You got to friend him first. Then he friend you back." It's as easy as that.

The secret of popularity is to let people know that you like them.

Find something to like about a person and say so. There is always something about a person you can approve of—if the devil showed up you could at least compliment him on his industry.

I am not suggesting that you be insincere; I do suggest that you avoid being reticent. If you like something, say so.

You are standing beside Mr. Brown at a club dance. Mrs. Brown is on the floor. You say, "My, but Mrs. Brown dances beautifully, doesn't she? Nobody would think she was the mother of three kids."

It will please him without making him jealous; it's a tribute to his good taste. Ask him if he's got any new pictures of the kids. He has, he hauls out his wallet.

If you can't find something pleasant to say about pictures of kids I can't help you. But you can. At the very least you can note that one of them looks like his old man. There is always some sincere small remark you can make which is pleasant for him to hear. You don't have to lay it on with a shovel. Don't gush. Just be on the alert to say the nice things that occur to you and keep your mouth shut when a nasty crack seems opportune.

You can even compliment women on their hats. All right, all right, I know that is painfully dose to outright dishonesty if you look at it from the stand point of scientific truth, but we are not now in a physics laboratory—we meet on a social occasion; the rules are more flexible.

When you compliment a woman on her new hat, you are not necessarily making an esthetic endorsement; you are taking notice of the fact that she has made an effort to make herself attractive, for her husband, for you, and for others. It matters not that the thing on her head looks like a battered bird cage. You are praising in her a commendable social effort.

So, when you see a woman in a hat you don't recall having seen before, remark on it. Say, "I like your new hat," or, if you can't carry that off with a straight face, say "I see you have another new hat!" in an enthusiastic tone of voice. The word "another" implies that she is the sort of stylish female who has a new hat every week; the tone of voice implies that it is always a pleasant event for her friends, nevertheless.

If she says, "Why, this old thing is two years old!" you need only answer,

"It looks like a new hat to me. It reminds me of one I saw in Life magazine last week." And it does, too. After all, there is a limit to the hideous shapes which can be devised using only three dimensions.

If she persists, "You saw me in this hat last week," then you can answer, "I don't remember seeing it. I must have been looking at your face," thereby winning trick, game, and rubber.

(If you are sure of your ground, very sure, you can say "legs" or "ankles," instead of "face." But keep your hands off the women. Don't mix your love life with your political work. Many politicians have—and it frequently lands them in retirement. Emulate the troubadour who sang the praises of his fair lady but never laid a finger on her.)

When a man deals with a man it is not necessary to compliment him on his clothes, but if you feel like it, go right ahead. They like it, too. But the easiest approach is to ask him about his business, then listen attentively. You surely will learn something—and you will impress him as a man of intelligence, well worth knowing.

I will not venture to tell women how to flatter men. The woman who does not know how to flatter a man and make him believe it is already embalmed.

There are many opportunities for legitimate praise in the course of a club's activities. Be liberal with such remarks as, "That was a fine suggestion. Will someone put it in the form of a motion?" or, "Good speech you made tonight, Charlie. You certainly told them," and, "Mrs. Macintosh contributed the cake you see over by the coffee cups. Homemade."

Possibly the most important thing you can do to make yourself liked, aside from the elementary necessity of speaking to people and telling them you are glad to see them, is to get their names right. A name may be an arbitrary symbol, but it does not feel that way to its owner.

I've heard many people say that they could never be in politics because they can't remember names. But you can look, compadres, you know about 50,000 English words, or more, all of them arbitrary symbols; you have memorized hundreds of mathematical relationships in order to get through eighth grade; you know street names and land marks without limit—is it impossible for you to associate a name with a human face?

It is possible and here is how it is done—here is how I do it and I have a memory like a pocket with a hole in it; I forget my own wedding anniversary.

When you are introduced, look the man in the eye and repeat his name and ask, "Is that the way you pronounce it, Mr. Lovell?"

He will either correct you, or agree. Then spell it and let him correct you. Respell it and pronounce it. (All this time you are looking at his face and listening to his voice.)

If possible, add, "I knew some people named Lovell in Grinell, Iowa. Cousins of yours, maybe?"

His remark will be something like, "Could be. There are Lovells all through the middle west. We're a big tribe."

You have pronounced his name four times and you have heard him pronounce it four times. You have spelled it. All through this the busy little workmen who throw the switches in your brain are, with no real effort to yourself, soldering tight connections on a new memory circuit. The next time you see that face you will hear that voice, in your mind, saying "Lovell," and another one of your silent servants will be spelling the name for you.

By this means I can learn to pronounce, spell, and remember in connection with a face even Turkish, Japanese, or Polish names—and I have no talent for languages.

In the next few minutes, try to find an opportunity to say something, anything to Mr. Lovell, and tack his name on the remark—such as "Have any trouble finding a place to park, Mr. Lovell?" This puts a coat of varnish on your new memory track.

He will have forgotten your name and it will embarrass him slightly. He will then get the man aside who introduced you and whisper, "Who is that guy you just introduced me to? The one with the red nose?"

The answer will be, "Him? Oh, that's Jack Doorbell. He's the king pin around here. Nice guy." It will all be perfectly true and Mr. Lovell will remember your name and face. You're in, pal!

All of this takes surprisingly little time and no effort, and it is a sure way to solid political influence. A man does not mind you mispronouncing or misspelling his name when you are meeting him, when it is evident that you are trying to get it correctly. Your minor effort is flattering; it shows that you want him to be an individual to you, not a blank face in a crowd. But thereafter you must have his name right, if you are not to offend him. The spelling is quite as important as the pronunciation, as you will want to write it on club invitations and political mail advertising. It annoys a man named MacGregor to have it spelled "McGregor" ... the same goes for Stinkfish.

If you emulate these few illustrations in spirit if not in detail you will be well liked, even with B.O., halitosis, and tattletale grey. Your infirmities will be forgiven you. Let me repeat the rule: Feel friendly in your heart and watch for opportunities to let people know that you like them, admire them, or approve of them.

One cold and dismal morning a young man waited outside the gates of a great walled city. He was a country lad, come to seek his fortune, but at the last moment he was overcome by cold feet, homesickness, stage fright. He inquired of the gate keeper, "What sort of people live in the City?"

The gate keeper considered. "What sort of people were there in your own village?" he asked.

The boy's eyes shone. He answered in a choked voice, "They were the most wonderful, the kindest, the finest people in the whole world!"

"Go on in, son," the gate keeper told him. "You'll find the people inside much the same."

It is an old story and I have forgotten who told it first, but it contains the whole key to success in politics. There is a possible sequel, though history is silent: With the gate keeper as his manager that boy could have been elected mayor of that city in three seasons.

Now back to our club. Invite everybody you know who is of your registration to the organization meeting. Hold it in a small hall if you can afford it, otherwise in a house, preferably not your own.

You will be lucky if eight people show up. Don't let that discourage you. A smaller meeting planned the American Revolution. You can probably get the central party organization to send some affable individual, full of enthusiasm and political anecdotes, to help you fill out the evening, not with a formal speech but with intimate talk, while you are all gathered in a circle.

Call the meeting to order yourself as chairman pro tem, and appoint some conscientious person, preferably female, as secretary pro tem. Elect a chairman. Have yourself elected executive secretary (or executive vice-chairman). If suitable, have the secretary pro tem elected permanent recording secretary. Have the club select a name and have a committee appointed to draft a constitution, with yourself as a member.

I speak as if all these matters were entirely a matter of your own volition; they are. You have programmed the matter ahead of time, deciding who should serve in what capacities and you have arranged for friends of yours to propose the various nominations and motions. There will probably be no opposition at this first meeting since you will have invited no one known to you to be a trouble maker. If you don't program ahead of time the club is likely to be stillborn. Your tactics should not be a steamroller; it is very likely that there will be no opposition to your program.

If you are surprised by unexpected initiative on the part of someone, don't let it worry you and don't try to freeze it out. It is likely that you have struck gold again by finding a person who will help make it a five, active organization. See to it that this person lands on some of the committees.

With respect to the selection of a chairman it is best to select some friendly, gregarious, extrovert who has served as a Rotary Club president, a lodge master, a veterans' organization commander, or as a Sunday School superintendent, but be sure it is someone you have seen preside in the past and whom you know to be capable of conducting a meeting, of keeping it alive, and who combines an adequate knowledge of parliamentary law with a sense of fairness. You will be able to discern these traits in a person only by seeing him, or her, in action. Don't try to form a club until you have one lined up.

You may decide to take the gavel yourself. In any case, in the course of your political life you will many times preside, at least at committee meetings. Presiding seems to frighten many people, but it is easier than driving a car. You can pick up a copy of Roberts' Rules of Order for two-bits at any secondhand book store. Read it, study it, but do not think that it is necessary to learn it by heart—it isn't.

Here is all you really need to know: Roberts' Rules are not law; every body of people is free to make its own rules of procedure. However the Rules are well nigh universal because they are practical. They are founded on the idea that each member shall have a fair chance to speak his piece and to have his ideas voted on by the other members. If you keep that in mind you won't go far wrong, even if parliamentary rules are a mystery to you.

There is one expedient which will get the man with the gavel out of a jam at any time: Somebody gets up and complains that you have made a mistake ("Point of order, Mr. Chairman!") and demands that you make some change, reopen nominations, refuse a late nomination, stop the debate, reopen the debate, change the order of business—it matters not. Let him have the floor; you must listen to him; a point of order takes precedence over everything else.

You have to listen to him but you don't have to do what he wants you to. You are the chairman! Review the situation quickly in your mind. If you can let him have his own way without gumming the works, do so. If not, come out with a ruling against him, quickly, and give him a chance to appeal. Do it like this, all in one breath, without punctuation:

"The Chair rules against you and the nominations are closed you have a right to appeal from the ruling of the Chair to the House do you wish to appeal?"

If he decides to take an appeal turn at once to the assembled group and say, "The ruling of the Chair has been appealed. The motion is not debatable and has priority. The chair has ruled that nominations are dosed (or whatever the ruling was). All those in favor of sustaining the Chair make it known by saying 'Aye.' " (Short pause) "Opposed - 'No.'"

If you have tried to be fair you are almost certain to be sustained by an overwhelming shout, but be sure to take the negative vote, if any, as well. Then turn to the objector and say, "I am sorry, Mr. Smith, but the house has overruled you." Bang your gavel. "Next order of business!"

If he does not subside (he may even shout "Steam-roller!"), you may use whatever means are necessary to bring him to order, even to the expedient of appointing several of the huskier male members as deputy sergeants-at-arms to assist the elected sergeant-at-arms in ejecting him from the hall. This is quite unlikely but I have had to do it, at least once. You will have the full support of the house, your own influence will gain, and the disorderly person will be discredited.

It is more likely, however, that a rap of your gavel and a reminder that he has been overruled by the house will shut him up. It is still more likely that he will hold no resentment, since you gave him his day in court.

If you are overruled, take it with a smile. Say, "You have been sustained, Mr. Smith. The floor is yours. Suppose you come up in front where we can hear you better." Let him swagger up and let him talk as long as he likes, while you relax. It's even money he'll dig his political grave with his tongue.

Either way you have increased your reputation for utter fair dealing, whether you know much parliamentary law or not.

There is another situation which comes up less often but is even more ticklish. Someone rises to a point of personal privilege. This means probably that he thinks his honor or integrity has been impugned; it is loaded with dynamite. It may result in a dog fight on the floor which will destroy your club.

You may have been warned that the matter was likely to come up, but, if you are caught flatfooted, allow the person to talk just long enough to establish what is eating him. If it will cause a fight among members of your own party, cut him off short. Announce, "By the customs of this body, all such matters must be investigated by the grievance committee and an attempt made to work out an amicable solution before they may be aired on the floor."

You may be setting a new precedent. The by-laws may not provide a grievance procedure. Go right ahead. Appoint a grievance committee, if one does not exist, at once, of the "old heads" and "steady horses," refer the matter to them and direct them to report back at the next meeting. Rule further discussion out of order.

As a matter of fact, you are out of order unless a grievance procedure is already on the books, and you may be forced to ask the house to sustain your ruling. Since your purpose is quite evidently conciliatory and in the interests of the body as a whole you are likely to be sustained. In any case—don't let Samson tear down the temple just to salve his ego!

Very frequently someone will want to bring up a matter out of the regular order of business. Rule firmly, but kindly, that the matter must be brought up under new business. If you know ahead of time it is a matter which is no proper business of a political dub, you may be able to avoid it entirely by the simple expedient of calling on the speaker of the evening before you transact business—this can be done as a courtesy to the speaker to permit him to leave the meeting before adjournment By the time new business comes around your audience is likely to be too tired to give much time to letting one person ride a pet hobby. A motion to adjourn will almost certainly intervene, once the proper business of the meeting is out of the way—and a motion to adjourn is always in order!

Tb be fair, remind the body as you submit the motion to adjourn that Mr. Doakes wanted to bring up the matter of pantaloons for Patagonians (or perhaps it was memorializing the board of aldermen to change the name of Swamp Street to Rosebud Avenue—Doakes owns vacant lots on Swamp Street). But do not let the matter be debated while a motion to adjourn is before the house. A successful motion to adjourn at this point, after such a reminder, is all the hearing he is entitled to. Free speech includes the right not to listen, if not interested.

I seem to have wandered into the subject of how to dominate a club by legitimate means, which was meant to be a separate subject. The two subjects are intermixed. Domination of a club is a legitimate, necessary practice. Democracy requires leaders quite as much as does fascism, if anything is to be accomplished. But you can dominate by methods which give everyone all of his democratic rights at all times. You will rule because you have the support and the approval of the club members. It is much easier to rule through popular support, gained in recognition of your fairness and common sense, than his to be a little tin dictator. Remember always to warn the man you overrule of his right to appeal and you will remain a popular leader.

Someone will protest that you are refusing to recognize him. Point to him; say, "You're next, after this speaker," then turn to the person you have already recognized and say, "Go ahead, Mrs. Blodgett. You have the floor." But don't give in.

If the person complaining has already spoken once on the subject before the house, tell him that he will be recognized just as soon as everyone wishing to speak first has had a chance. This will happen frequently; the loudmouths complain the worst.

Don't let anyone speak three times without permission of the house. Rule against them—unless your common sense says that here is a time to be lenient.

The cry of "question" from the floor for the purpose of stopping debate may be ignored; it is not in the rules. If somebody gains the floor and moves the previous question and the motion is seconded, you must vote at once, without debate, on that motion. The motion is to close debate on the previous question (the motion which has been under debate). State it as such, for many people do not understand this and may lose their right to speak if you do not make it clear. Say,

"The previous question has been moved and seconded. This is a motion to stop the discussion on the motion before the house, which is a motion to send a delegation to the intercity convention (or whatever the main question is, or the amendment to it which is under debate). If this motion carries, the debate will stop and we will then proceed immediately to vote on the main question, the question of sending a delegation." Then call for a vote.

This may seem unnecessarily wordy. I assure you it is not. If you do not explain this type of motion clearly and completely each time it comes up, you will gradually accumulate a group of people who don't like you and don't like the club simply because they do not understand what you are doing and feel that they have been tricked out of their equal rights. Use the whole elaborate explanation every time—it takes fifteen seconds only and it will keep your club from being dominated by the smart alecks.

And speaking of smart alecks—you will run into the Communist cell someday. How to cope with Communists will be treated in detail in the chapter "Some Footnotes on Democracy." In this connection let it suffice that you will have to depend on the body of the club to support you in your rulings. Don't argue with Communists. Cut them off short and rule them out of order (usually for not following the order of business). If you let them argue they will make a monkey out of you, for every Communist Party member has been carefully trained in parliamentary law and is skilled in parliamentary dodges—but he has only contempt for the democratic procedures; he uses them only to twist them to his purpose.

Get the body's support behind you, shut him up, and ignore his cries of "Free speech!" or "Fascist!" Your club hired the hall; let the Communist Party hire their own hall—and drag in their own audience.

I believe in the right to free speech for everyone, including Communists and fascists. I think that our constitutional guarantee in this case is wise and that the Founding Fathers knew what they were doing. But my own right to say what I think does not give me the right to barge into a Catholic church while the priest is saying mass, interrupt him, and make a speech for atheism. If I should happen to want to make such a speech (I don't) I should hire a hall of my own, or find a soap box. I have no right to interrupt others in the orderly pursuit of their business to spout my own views.

We have come a long way from our first organization meeting of a new political club to the rude manners of our pinko citizens, but all has been pertinent to the conduct of a club and was intended to show why it may be necessary to take the gavel yourself unless you can find an experienced and tactful presiding officer. You need no experience yourself if you follow these hints; later on you may be able to train someone to preside. It is not to your advantage to preside yourself if you can find another able person.

Two more hints and we will drop parliamentary procedure: Most motions come before the house improperly worded. If it is a matter you think should cool off, you can point out to the member that he has not formulated his proposal in such a fashion that it can be debated and voted on and then recommend to him that he consult the resolutions committee in order to whip it into shape. He may take your suggestion, or he may put it into motion anyhow. In the latter case this is a cue for your unofficial floor leader to move to refer to committee. If the matter is unclear, involved, or the facts are not all available (these are usually the reasons why you want the matter postponed), the body of the club will be happy to postpone the action.

On the other hand a member may make a suggestion from the floor which seems to you wise, but you can't handle it since it is not a motion. You may then put words in his mouth by rephrasing it as a motion, in the form that seems best to you, and ask him if that is what he meant He will gratefully agree, or perhaps suggest some change. You can then open it to debate as a motion.

A chairman can usually get a meeting adjourned or keep it from being adjourned, without violating any of the rights of any of the members, if he handles it carefully. A mere suggestion from the chair that the hour is late will produce the motion to adjourn, having priority and undebatable; a motion to adjourn almost always carries. On the other hand a spontaneous motion to adjourn usually comes from someone who is annoyed at the way things are going; this annoyance will usually lead him to shout his desires without waiting to be recognized—like this:

"Mr. Chairman, I move we adjourn!"

You can recognize him if it suits your purpose—after all, the house has to vote on it; it's not a "railroad." But if you think the business at hand must be finished, there is always someone standing behind him, out of his sight, who wants the floor. Tell him that he will be recognized in turn and recognize the other party.

Perhaps someday someone will invent an electronic device with all of Roberts' Rules of Order built into it which will be an automatic and infallible chairman—if so, politics will lose a lot of its zest. Until that day presiding will remain an art in which a sensible chairman may have a great deal to do with the outcome of any body's deliberations while retaining the respect of all—simply by remembering that the final arbiter is the assemblage itself. A word of caution—in the two cases in which I have recommended the maneuver of referring to committee, the intention must not be to bury or sidetrack. You have only thereby created an opportunity to have a word in private with the interested parties in order to clarify a confused issue or in order to smooth over a row. You can probably settle out of court—but if you can't, then you must permit a full and open hearing at the next meeting, come what may. That's democracy.

If you can't find a chairman for your club who can conduct meetings along the lines described above, then you must accept the gavel, but continue to search for such a person. You can do more from the floor where your latitude is greater. But let us suppose that you have managed to select a fair group of provisional officers at your first meeting. Your remaining business is to plan for your first public meeting.

CHAPTER V

The Practical Art of Politics (continued) Club Meetings and Speech Making

Pick a date for the first public meeting of your baby dub at least two or three weeks later than the organization meeting. This will give you time to insert notices in the local papers, send out postcard invitations, arrange for extensive telephone follow-up, and, if you can afford it, print and distribute handbills. You can do none of these things until you arrange for a hall; you'll need the time.

Make the hall small. Not only is it cheaper, but, more important, it is much, much better to have standing room only in a small hall than to rattle around in too large a hall. I know of nothing more dispiriting than to face a meeting in which more than half the seats are empty. Twenty people can have a rip-snorter of a meeting in a small room and build up to a fine campaign; a hundred people can be overcome by contagious melancholia in a hall which would seat five hundred.

Plan to get there early in order to fold up and hide most of the folding chairs, then don't get them out until you see that you need them. People always slip into the rearmost vacant seats at a political meeting (I don't know why—but I do it myself). This habit makes a half-filled hall still more gloomy. So if you must accept a hall with lots of floor space, go easy on the chairs and fill up some of the rear with refreshment tables, or card tables covered with literature, signs, or registration forms.

About chairs—the local undertaker usually owns several dozen folding chairs of the more comfortable and unnoisy variety and he can usually be persuaded to lend them, rent-free for good will, even if he is of a different political party, if you will pick them up after business hours and return them the same night or earlier than any scheduled funeral the next day. A couple of dozen make one automobile load.

The loan of chairs may solve your hall-rent problem for your first meeting as it will permit the use of space not ordinarily used as a hall, such as a retail store owned by one of the members (set up chairs between the counters).

In many states the use of school buildings is permitted for public meetings. I have used them fairly successfully but do not ordinarily recommend it. You are likely to have to choose between an auditorium much too large, or a classroom in which adults feel silly in the little seats and can't sit chummily together. Smoking is usually prohibited and you are likely to have to agree to get out by 10 p.m. Furthermore, regulations frequently prevent taking up collections and collections are necessary to a political club which is not to be a burden on a few. But many a fine meeting with worthwhile results has been held in a school building. It is your problem, with local factors.

A lodge hall is a best bet, with a small American Legion hall a close second. You will find if you poke around that there are many little halls concealed above store buildings and in back of restaurants which are available for surprisingly small fees - $3 to $10 per evening, heat and light thrown in, and even less on a permanent arrangement. Before you take a $10 hall remember that the hall rent should not run more than ten to fifteen cents per person per evening. How large will your crowd be and will they be good for more than two-bits a head in the collection?

Your problem depends on the average economic status of the constituency in which the club is formed—as will be almost all of your practical problems of mechanics, as opposed to techniques.

Publicity for the first public meeting. Don't depend on the persons at the organization meeting to supply the audience at the first public meeting. They will be full of enthusiasm and promises and some dunderhead will point out triumphantly that if each one of you brings ten friends to the next meeting the crowd will be one hundred (or two hundred, or a hundred and fifty). You will be justified in shooting him on the spot for this piece of asininity, but don't do it.

Agree heartily that that is just what we are looking for—and bear in mind that getting out a crowd is still up to you. Some of those present will in fact bring friends; Joe Pollyanna won't show up at all.

How to get a crowd—how indeed! This is a cause of grey hairs to all amateur politicians. The most important point you have already covered—don't let the hall seem empty. The next most important point is to see that you have an attraction. Get the central organization, through its secretary rather than through its speaker's bureau—the things that hide in speakers' bureaus should crawl back into the woodwork!—to provide a really good rip-snorter of a speaker, preferably with a name which is a public drawing card. Be firm about this. Point out that they want a club in that area, don't they? Threaten to throw up the sponge. Kick your heels and scream. But get a good speaker even if he has to fly down from the state capital.

Provide some entertainment. Tap dancers, even bad ones, go over well. There is probably a children's "talent" school in your town or neighborhood; the coach will display her proteges free of charge, but don't let her schedule more than fifteen minutes and make it all dancing. Be firm in refusing recitations, little plays, and singing. Never use singers—unless it's Paul Robeson, Bing Crosby, or Frank Sinatra.

A man or woman who plays popular piano well by ear and can lead singing in oldtime favorites is worth his weight in marked ballots.

There is one somewhere, of your party, within ten blocks of your house.

Okay, you've got your program. Now to haul them in off the sidewalk. If there is an editor-publisher—owner of a small town or local community paper of your party in your area, he should be at the organization meeting and you will see to it that he is appointed chairman of the publicity committee—not "publicity man"; you keep that open for the man who is going to do the work, when you find him; the editor won't. But he will give you a free half-column ad and he will write up a little story himself. He will probably donate some throw-away hand bills as well. Get volunteers to distribute them, or see what you can do with three boys and some small change.

More involved methods of publicity are covered in the ninth chapter; the same principles apply here. The daily papers will print (but just barely) your notices; announcements tacked to telephone posts are illegal some places but entirely practical in most cases; and bumper signs (see ninth chapter) are good. But direct mail coverage followed by telephone calls on the day of the meeting are your best bet. This will take a little money—not much but, if you can't afford it yourself, you must raise it at the organization meeting. (The hall rent can wait; it will be covered by the collection at the first public meeting.)

Passing the hat in a private home, if that is where your organization meeting is held, is probably in bad taste. I suggest that you approach two or three persons privately, selecting them for their ability to cough up, and nick each one for a share. A dollar buys a hundred postal cards, it need not be much.

Your editor victim may print the postal cards. Otherwise, borrow a mimeograph or pay for it.

The ladies present will address them for you and will make the telephone calls on the day of the meeting. This will give you a chance to locate your girl Friday, too—the woman who is as devoted to the cause as you are and is willing to do quantities of routine clerical work and telephoning, provided you tell her what to do. When you find her, you will wonder how the party struggled along without her.

You will have to supply the addresses. You have some; the others present have some; you can get quite a list, not very well weeded, from the central organization. Any lists available to any present, such as lists of customers, members of clubs, and church lists, are useful provided they are trimmed down to your party by checking for registration. Don't use a nonpolitical list without this trimming for direct mail advertising. It is wasteful and unnecessarily annoys American citizens who happen to differ with you politically.

As a last resort you can always use local precinct lists, but it is rather expensive and not too productive to work at this stage from precinct lists which have not been trimmed to live prospects.

The first organization meeting is over as soon as you have picked the provisional officers, discussed plans for the first open meeting, and got all available commitments for help in preparing for the meeting. Adjourn at once, serve refreshments, and encourage the man from headquarters to reminisce and everyone to gossip.

Refreshments should be coffee and cake, or something else simple. Make a rule from scratch that refreshments must be simple and that the treasury pays the bill, else the ladies will start competing, upping the ante, and the whole thing will get out of hand. Refreshments are a social lubricant in politics, not a meal.

Don't start the coffee until you see how many are to be served. Put out half a dozen tea bags and a pot of hot water for those who can't drink coffee at night. Doughnuts are the simplest food, but they are perishable; if you are in doubt as to numbers, get some boxes of soda crackers, a couple of those small packages of cream cheese and a quarter-pound of yellow cheese. Cheese, crackers, coffee, and tea bags will keep. Plan to take a loss on doughnuts. (Naturally the cost—and the loss—on this first small meeting is not much, but the rule will save quite a bit of money later. The economical use of money is one of the prime secrets in volunteer, self-supporting political activity.)

You may wonder at my repeated emphasis on the economical use of money in politics. You yourself may not have to pinch—you may be a millionaire. But bear in mind that the average income is less than a thousand dollars per person a year, and is considerably less than that for the great majority of people. Elections are won by majorities, not dollars. Some expenditure of money is necessary to any political work. In a popular, volunteer political movement, the costs must be paid by the small donations of the volunteers themselves. The cost of living being what it is, it is hard for the average run of volunteers to make even small donations, so cultivate the habit of mind of getting the very maximum possible in political results out of every dime spent.

Therefore, even if you are rich—save those unused tea bags!

You can never beat a political machine through the lavish expenditure of money. You would be meeting them on their own grounds and they will beat you—they would match and double, or triple, every dollar you spend. Your weapon is the enthusiasm and sincerity of the free citizen.

It is a shining feet that most votes in America can't be bought. There is an unpurchasable majority of votes in any community. You and other volunteers can round them up to beat the socks off any machine, no matter how rich, while taking care of unavoidable expense by passing the hat—provided you are a little more careful with the collection money than you are with your own.

The night of the first public meeting of your baby club can be almost as distressing as a first night performance for an actor. You get there early; the hall is empty and seems cold. People straggle in, stand around and look at you; there aren't enough of them to permit you to start at the hour set. (This is a minor vice of most political meetings; it can be beaten and is worth beating. It requires just the determination to bang the gavel and start anyway—you and the janitor and the cat. It will surprise and please everyone.)

Let's bust up that empty-hall feeling first. Bring along your own radio or radio-record-player, plug it in, and get some loud music into the joint. If some of the young people start to dance, so much the better. This is a private, nonprofit club; you don't need a license for dancing. (If somebody wants to make something of it, it's a fine chance to get some free newspaper publicity on a personal freedom issue.)

Later on you should be able to get some radio shop to supply a used radio-recorder-player for nothing more than a display, on the machine, of an advertisement. It is then worthwhile to buy a microphone to hook in through the speaker—and you are all set for the biggest hall in town. But the principal use of the gadget is to warm up the crowd—and to turn the conclusion of each meeting into an informal party and dance. This is especially useful in hanging on to the young people, who will be the bulk of your precinct workers.

The people are straggling in. Everyone who comes through the door must be greeted. You will do a lot of it but you will need help—provide for it ahead of time. You will want a careful record of every person present, name, address, and anything else at all that you find out about them, and that information must be recorded for each person on a 3" x 5" file card. Cards mimeographed or printed into a form are convenient but not necessary. The blank ones available at 10 cents a hundred in dime stores are all right.

Don't wait until the audience is seated and then expect to get this information by passing out cards, because many of them will leave the cards blank. If you buttonhole them at the door and ask them to fill out cards right then you will do better, since you have provided card tables, chairs, and pencils for the purpose, but the best way is to fill them out yourself—or have one of your alter egos do it—while asking them the necessary questions and keeping up a running fire of conversation. Don't say "Name? Address? Any other adults in family? Telephone? Occupation?" Such an approach acts like a cold shower. Say, "Glad to know you, Mr. Brewster. Half a minute and let me get that down in writing. My wife says I can't be trusted to buy a pound of butter unless she writes it down. I wouldn't want you to miss getting an invitation to the Spring Dance through my poor memory. That's James A. Brewster,' isn't it? Mrs. Brewster come with you tonight? So? My wife's doing the same thing—we've got two kids, both in grammar school, and they have to be in bed by nine. How old are your youngsters? Maybe some day we can arrange a sort of game room or nursery for the kids and get a lot of folks out who are otherwise chained down. Do you think it would help if we moved up the meeting time half an hour? Is that address right? That's your home address, isn't it? Business address you say? Oh, of course—that's the same block the Safeway Market is in. It's not the same address, is it? Oh—I think that's the same block of offices Dr. Boyer is in. Hey—Fred! Doc! Want you to meet a neighbor of yours—Dr. Boyer, Mr. James Brewster. You know each other already—fine. Doc, see that Mr. Brewster meets some of the folks, will you?"

Sounds corny? It is corny—but it works, and it's not hard to do. You have recorded:

Brewster, James A. June 8,1946-mtg. 1232OakSL,r.telBr4395 1010 Tenth Ave., b. tel Cl 8482 Insurance business, Bedlow Bldg.

married, 3 chil. 13 junior, 11 Alice, 2 (?) Masonic pin in lapel, and VFW. Heavy set, bald, well dressed, manner of a professional man. Assign to Doc Boyer? Follow up. Mr. S. Check registration.

Put the card in your pocket and make another, later, for the club files, minus the personal comments. That card, the file of your own it goes into, is your most valuable physical asset in politics. We will refer to it again and again, but first one example now of how you will use it:

Let your wife answer the telephone at home. Get her in the habit of getting the name and repeating it in a loud tone of voice. (Reverse this process when the wife is the active politician.) Pick out the card from the file, kept near the phone, and read it as you answer the phone. The delay can be held down to seconds. When you speak to Mr. Brewster you won't make a fool of yourself and lose a vote, or votes. Remember—he expects to be remembered.

If you are forced to answer the telephone yourself, you can always manage a few seconds delay by asking the caller to hold on while you answer the door, or turn off the radio, or something.

One of the card tables at the meeting will be occupied by a deputy registrar. In most states this is possible; in some states, unfortunately, the voter must go to a definite place, some states set a date as well, in order to register. This gready complicates the problem of picking up potential votes by getting unregistered persons to register, and may have to be met by a volunteer automobile service as complex as that for election day. But we will consider the more usual case.

From the roll of deputy registrars of voters you will have selected a member of your own party, conveniently near, and seen to it that he (or she) is at the meeting early. Provide transportation if needed. These persons are usually paid by the head; your best bet is an elderly female who needs the money. If you are on your toes she will pick up a dollar or two each meeting and you will pick up the votes.

Later on you may be able to get your club treasurer deputized, who will then contribute the fees to the club treasury. It is an honest way to help meet expenses while gaining votes.

You will have an announcement to make during the meeting. If you are shy, write it out and read it. It will go like this:

"This is the first public meeting of the Oak Center State Republodem Club—but it won't be the last. The party has needed a way to get together in this community for a long time. The boys on the other side of the fence have kinda gotten in the habit of taking things for granted around here, but we are going to show them a little action this year and this club will be right in the middle of it. We are going to get all the party candidates down here to talk to you for one thing and let you take 'em apart and see what makes them tick and ask them embarrassing questions. We'll get better candidates that way. Maybe we'll pick out one of our own people and send him to the capital so that we will get a little representation for a change. It can be done. If I had time I could show you some interesting figures about the registration and how this area that we're in can make the difference in any election for the whole district. We'll take that up another night, maybe.

"Besides looking over the candidates and getting ready for the struggle this fell, we're going to make this a public forum where we can discuss our problems and get some of the experts in to give us facts, so that we can make up our minds intelligently and not be dependent on that yellow journal—you know the one I mean—for distortions.

"But we're going to have some fun, too. There is no reason why serious public affairs have to be conducted in a funeral atmosphere. That reminds me—stick around for some coffee and cake after the meeting adjourns ... we have Mrs. Parker to thank for that. Stand up, Mrs. Parker. Take a bow.

"We've thrown together a provisional organization, just to get things started. We've got some working committees and we want to add to them tonight, but, unless there is objection, the provisional officers will putter along and make their own mistakes for about six weeks or two months while you folks get acquainted and decide who you want for permanent officers.

"One more thing, and I'll shut up and let the chairman get on with the program. There has been a lot of discussion as to how often we should meet. Just to start the ball rolling I want to offer a formal motion that we meet two weeks from tonight, same time and place—because I happen to know that we can get the lieutenant governor to come to speak to us that night. Will somebody second my motion—or propose another night?"

Corny again, eh? It will do, it will do. Eloquence is nice, but not necessary. You can revise that speech to meet your actual needs and it will serve every purpose you need to push at the first meeting. If you are not in the habit of public speaking type it out and hold it. You are likely to find that you will not have to refer to the text, but it will give you confidence.

Your first meeting is over, a success. You have only to do the same next time, with different speakers. There will always be business to transact and issues to discuss—politics is like that; you are not working in a vacuum. But since we have reached the subject of making speeches, let's kick it around a bit. It's not as hard as it seems. Here is a surefire formula which can be used over and over again:

This dodge is designed to permit you to speak before a small audience of unsympathetic people—the worst possible set up. A small group is much harder to face than a large; anybody can talk to a thousand people. You won't be asked to be principle speaker at a large meeting until you have acquired a reputation and public speaking has become second nature to you. Until that time, if you are called on to say something as a secondary speaker to a large audience you can say as little as a dozen words, speaking in praise of "good roads and good weather," complimenting the principal speaker, or the chairman, or the arrangements committee, or simply announcing your intention of voting the straight ticket. You can then say "I thank you" and sit down. The audience will appreciate your terseness and your stock will go up.

(I attended the dedication of Soldier's Field in Chicago in November 1926. The Vice-president of the United States spoke for three minutes, the Governor of Illinois spoke for seven minutes, the Mayor of Chicago spoke for ten minutes, and the city park official in charge of the field spoke for more than an hour. The audience was exposed to a driving snow and below-freezing temperature. Which speech was the most popular?)

As you become known as a politician you will be called to speak as principle speaker before small groups. The toughest assignment will be to make a non-partisan speech, not in support of a candidate nor an issue, before a non-partisan, nonpolitical group, such as a Kiwanis Club or a ladies' church group. At first glance this seems an impossible task. How can you make a political talk and not talk about politics? There is a limit to the time you can spend declaring for good government and praising honesty in public office. Besides—it ain't news!

Watch me closely and you can learn the trick. I don't have any cards up my sleeve but I do have two dozen sharpened pencils concealed on my person.

Stand up. Bow to the chairwoman. "Madam Chairman-ladies-the worst thing about invitations like this is what it does to my waist line." Glance down. "It's an imposition to ask a man to speak after such a good lunch. What I need is a siesta.

"Audience-participation programs seem to be all the rage these days; there is no reason why we shouldn't have them in politics. I got this idea last night while listening to the Guess Again program-we're going to have a little try at being Quiz Kids." Haul out the pencils.

"Just in case any of you don't happen to have a pencil with you, I've brought a few spares. Will you ladies nearest me pass them along to those who might need them? Now take a piece of paper, each of you - wait a minute. We {garbled in scan}ooawi tr\ r\f* en/wf* f\r r \oi"wan-l iawwifif*v it i//vitc c/^rrY^frart; f"^Y\ {end garbled text} help us out?" She can and does, and some of them turn up old grocery lists in those steamer trunks women carry. Don't provide paper yourself. Paper can always be found but there are never as many pencils in a crowd as there are people. The little flurry caused by the search for paper gives you a breathing spell and a chance to size up your audience. During this period individuals will catch your eye and smile. You grin back and they get the impression that you are good to your mother and kind to small children. Remember John Henry's hog.

"Everybody fixed up? Let's start the quiz. Write your name at the top of your paper. Go on-don't be afraid. I promise, cross my heart, that I'll keep the result confidential. Nobody, nobody ... will see the papers but me. But I want to be able to announce the winners and I can't do that if you insist on being anonymous. I ought to warn you that there won't be any prizes other than the pleasure of winning. Somehow I've never gotten acquainted with the sort of politics that pays off in cash. Okay? First question:

"Write down the name of the President of the United States.

(Pause)

"Write the name of the governor of our state.

"Write the names of our two United States senators."

Go on down the list. Ask for the names of the local congressman, the local state senator, the local legislator, the county commissioner, supervisor, agent, or "presiding judge" - the titles vary but you want the chief elective county executive or legislative officials. Than ask for the name of the mayor of your town or city and the name of their local city councilman, alderman, or selectman. Ask only for elected officials who represent directly the people you are questioning. You can't hold them responsible for appointed officials. Limit it to people they have voted for or against and are therefore presumed to know.

"Are you registered to vote?" and "Did you vote at the last primary election?" (Voting at a general election is no more indicative of civic virtue than is standing up when the band plays "The Star Spangled Banner.")

Then gather up the papers and look them over.

The results will amaze you and, if you are not braced for it, dishearten you. If you find one paper in which the respondent has answered more than half of the questions correctly you are justified in naming her as a praiseworthy, intelligent citizen, especially if she voted in the last primary.

But it is unlikely that you will find anyone to praise. Most of them will stop after naming the President and the governor. There will be scattered answers thereafter, very scattered and about half of them wrong. Mostly you will see blank paper.

I remember one respected matron who thought that Prime Minister Chamberlain (1938) was a United States senator and I have even found people who could not name the President of the United States - although I classed such latter cases as sheer feeblemindedness and threw them out of my calculations.

You will now extemporize for about ten minutes on the subject of civic virtue, holding them up to themselves as horrible examples. You will point out that they voted for or against, or failed to vote, for each of the persons you asked about. You will ask them how in the name of all that's holy they can expect anything but a gang of crooks in office, and thank the stars and the mercy of heaven that a number of these public officials are honest statesmen despite the fact that the ladies of the East Squamous Community Church obviously don't give a hoot what happens to the country their ancestors and sons died to protect.

You can point to the ghosts of the martyrs of women suffrage and ask if this is the equality between the sexes they fought so hard for. You can point out that more of their family income goes into taxes than goes into groceries and ask them if it would not therefore be wise to give almost as much thought to the selection of a congressman as they do to the selection of a good head of lettuce.

The results of the questionnaire will make you so tarnation mad, when you think about the weary effort you have put into trying to drag this community up out of the mud, that you will make what may be the first really good public speech of your career. You will be feeling emotional and you will know your facts; the combination automatically produces a good speech.

Don't lambaste them too hard - resist the temptation. There are brands to be snatched from the burning even here. Try to make it more in sorrow than in anger; rouse their shame rather than stir up anger against you personally.

Some forthright old gal may state that she never wanted the vote. Don't scold her; praise her as an honest women and point out, gently, that she is free to throw away her franchise, just as the voters in Germany did. She has only to refuse to register and she automatically returns to the status of a child, a slave, or a domestic animal. Point out that it is a fair comparison since women were classed as all three only a hundred years ago.

Most women don't like those classifications, no matter how lazy they may be as citizens. They like to think of themselves as free citizens and your audience honestly believed - until you held a mirror to their startled faces - that women were a force for good in politics, somewhat superior to men. When they think of a corruptionist, they visualize him as a man, not a woman.

Some serious-minded lady, honestly ashamed, may ask you what they can do to be better citizens, better informed. If no one asks, you can invite the question, or even state it as a rhetorical question. You are here to get votes, whatever the program chairman had in mind; this is your chance.

Don't invite her to join your club; you are obligated to be non-partisan before this group. Instead tell them all about the telephone book clue (see Chapter II, How to Start). But get her name, check her registration later, and follow up. It's a fifty-fifty chance you have a new worker.

Stick the papers in your pocket and take them home. At least you have a record of the persons in that group who claim to have voted in the primaries. Check to see which ones belong to your party and add those names to your card file. They are worth carrying on your mailing list and some may eventually join your club and become active precinct workers. These women aren't worthless; they are simply in a rut.

(Gather up your pencils. They cost money.)

The results of making this talk before any all-male organization will be quite a bit better and you will be able to praise several of them as being "good citizens" entitled to the vote. At any political gathering you will find many perfect scores.

This talk can be used over and over again, year after year, before any sort of a meeting; you need nothing else on your repertoire until you find other things you want to talk about—by then speaking will be easy for you. You can even use this questionnaire gag more than once to the same crowd under the pretext of finding out what progress has been made. It never fails to hold attention and it can always be used to stir out new votes.

I feel deep sympathy for persons who are terrified at being asked to speak in public. I did not attempt it until I had been in politics quite a while. My first venture was an impromptu comment offered at a luncheon meeting. I said about two dozen words then sat down, white and shaking, so nervous that I went away without my spectacles.

On my second attempt I was very full of my subject and managed to struggle through a twenty-minute talk, but my wife told me afterwards that I paced back and forth all the time I spoke like a caged tiger while shouting my words over my shoulder.

My own difficulties were greater than yours are likely to be; in addition to a very real shyness which I have to fight against, I have a speech handicap, partly controlled, which can leave me utterly speech-bound if I get rattled. I invented the questionnaire routine in order to give me time, while facing an audience, to regain control of my vocal chords without enduring one of those ghastly pauses. If it will work for me it will work for anybody.

Experience overcame my difficulties. There came a time, shortly before the war, when I was invited to be keynote speaker at a convention held in another state. (This is sheer boasting, under the guise of giving you courage.) The speech was electrically recorded; it is terrifying to think of that disc going around and around, recording inexorably your pauses, your errors in grammar, your word blunders. I prepared a written manuscript to fortify me.

I found I did not need it. I spoke for one hour and fortyfive minutes, extemporaneously, and kept the crowd with me. The recording was transcribed, printed, and bound, and the speech was sold (not by me) as a pamphlet which ran through two editions. I still get occasional fan mail about it.

I like to tell that story because it represents to me a major personal triumph. I should show, as well, that the hazards of speechifying are only mental hazards. Once you get over your fear, talking to a crowd is no more difficult than conversation around the dinner table.

What to say when punching a doorbell is more difficult—which is why I gave such specific examples at the first of this discussion.

Don't try to be humorous in making a political talk unless it comes naturally to you. A collection of funny stories, told to illustrate a point, is a useful asset but not necessary. Nor is eloquence necessary; sincerity is enough and it can do without eloquence. I once heard William Jennings Bryan speak back in the days of the spellbinders. As I recall it, it was not his rolling periods that moved the crowd; it was the evident fact that he believed what he said. His honesty was so compelling that I could not help being affected by his words, even when I strongly disagreed with him.

One of the most effective speakers today is Congressman Jerry

Voorhis-even his opponents are anxious to listen to him. Yet Mr. Voorhis has no eloquence in him and has a shy, diffident manner. But he speaks with such dead seriousness that each listener is convinced that the man is saying the exact truth as he sees it.

Can anyone forget the emotional power of the simple, uneloquent words of Edward VIII's abdication speech?

CHAPTER VI

The Practiced Art of Politics (continued) Political Influence, Its Sources, Uses, and Abuses

How to Have Votes in Your Pocket.

Many times we hear that So-and-So has such-and-such district "in his pocket." Usually it isn't true, except by default - when the local leader has no real opposition of any sort and has the only vote-getting organization in his district.

It is even less likely to be true when So-and-So shows up at headquarters, claims to have the West Heights district "eating out of his hand," and wants to know what sort of arrangements you want to make, ie., how much cash you will pay him personally for his support, such as it is.

You can disregard such fellows. Such a man usually controls his own vote, that of his wife (if she remembered to register), and, possibly, the votes of members of his own family living at home. I have yet to meet a man who claimed to control a district who actually did. Tell him you're sorry, congratulate him on his party loyalty, assume that he is so public-spirited that he is certain to support the cause anyhow, ask his opinions and his advice. Tell him you wish to high heaven that times were good and the cupboard wasn't bare. But never, never, never give him any money!

It isn't even worthwhile to give him a little money as a sop, to keep him from working against you. True, he will work against you, but you can get more votes for the money you have in more direct ways. Besides, it isn't fair to the hardworking volunteers, many of whom need money worse than he does.

There may be someone in his district who does in fact control it but you will have to scout around and dig him (more usually her) out, as he, or she, will be busy mending fences instead of trying to cadge money at headquarters. This person, when found, can be entrusted with campaign funds - they will not be wasted.

But there is a way whereby every "volunteer fireman" in politics can have, and does have, votes in his pocket, sure votes. As your acquaintances become aware that you are active in politics they will start to lean on you for political advice, as fast as they realize that you treat it as a "hobby" (from their point of view) and not as a moneymaking trade.

This influence even cuts across party lines, especially with respect to the so-called "minor" offices. Many of your acquaintances of the other party, because they know you, respect you, and consider you well informed, will let you vote the whole ballot for them, propositions and candidates, except for the head of the ticket. (Votes for the head of the ticket can't be influenced anyhow, enough times to matter, except by the process of seeing to it that the lazy voter registers and then hauling him to the polls.)

This slug of votes that you control will creep up on you, without your knowing it, and grow from year to year. There will even come a time when your public endorsement, for political advertising, is sought after. You will then realize, and even then it will surprise you, that you are a powerful politician.

The first election your influence will come from private conversation, on social occasions. Your advice will be taken because you quite evidently know something about the whole, confusing ballot.

You may not be aware, the first time, of the votes you have changed. But next year your telephone will ring steadily during the week before the election. "Say, Bill, tell me about these judge candidates. You know some of them, don't you?" You oblige. He adds, "How are you voting on the propositions?" You tell him.

You may have to explain in some detail your reasons for each vote during this second campaign. Such-and-such a judge is stupid, or plays games with the traffic patrol, or takes dirty campaign funds. Proposition #9 has a trick clause which makes it mean something different from what the tide says, or # 12 is a clever way to divert money from the school system. Thereafter you will make fewer explanations; all they want is the verdict—they have come to trust you.

These people are serious in their intent, mean to be independent voters, and have no intention of voting for a political machine. They welcome a chance to get any honest source of information other than the newspapers. Their votes cannot be purchased, they are not in politics themselves, and their name is legion, in any community.

You may find that fifty or sixty people make it a regular habit to call you up in the last day or two before an election and ask you how to mark their sample ballots. It is a "must" to place a typed list of your choices by the telephones a couple of weeks before the election so that even your twelve-year-old son can pass out the gospel in your absence. These people simply want your choice; they pay no attention to politics, but they do vote. You are a "find" to them—and their votes are in your pocket!

Not only their votes, but the votes of many of their families and of their friends. They become secondary centers of influence for you - dope from the horse's mouth is scarce; they are rather proud of knowing you and they pass the word along. You are safe in figuring about five votes for each person who looks you up or telephones you.

Fifty times five is two hundred and fifty—you have 250 votes "in your pocket," quite aside from all your regular campaigning activities.

Many an election is won by a smaller margin than that!

How to Mark a Ballot in a Hurry:

There will come a year when sickness, or an extended trip out of town, or something, causes you to be caught with your lines of communication down. This time you don't know the answers; most of the ballot is a mystery to you. But the people who have come to depend on you will still expect your advice in marking their sample ballots.

Here is an easy, foolproof way to get a satisfactory list in a hurry. Use it—but tell your clients that you are somewhat out of touch and may make some mistakes. The mistakes will never be important but you don't want to shake their confidence in your truthfulness and good sense. To some of them you can explain the process; to others, just give them the selections.

Here is the process: Get a copy of the newspaper you despise the most. (You have it—of course you have it. Don't you want to know what the opposition is doing?) Note their selections and vote against all of them. Make that your list

In some cases some candidates and some propositions will be so overwhelmingly popular that you will find out afterwards that you voted the wrong way—both parties, or factions, were in agreement. But it does not matter in the least, because those candidates and those propositions, you will find, will have won by overwhelming majorities. Your mistaken vote meant nothing.

You will be able to eliminate some such cases by casual inspection and correct them as you make out the list, thereby saving yourself some embarrassment—but that will be the only significance.

You may well ask why not use the newspaper you favor most and vote for its selections, rather than against the selections of that despised opposition rag. Well, I admit I am prejudiced on this point—but I have yet to see a newspaper which seemed to me entirely altruistic and public-spirited in its policies at all times. Even with the best of them, it seems to me that the Brass Check occasionally shows through. I think I have detected some terrific swindles on the trusting public in many a list of recommendations which was, on the whole, good.

I think it is more nearly foolproof, when you are in a hurry, to make a reversed use of recommendations which, in your opinion, come from unmitigated scoundrels.

How to Dispense Patronage: This is one of the touchiest problems in politics but one that you can't duck. No matter how anxious you may be to avoid all contact with a "spoils" system the matter is bound to come up and you will have to pass on it, as long as there are any public jobs which are filled by appointment rather than by honest competitive examination. There are still lots of such appointive jobs and there is no end in sight. Even, come the millennium, when all possible spoils are abolished, there will be appointive jobs on the policy-making level and the favor of politicians will be sought in the filling thereof.

On the policy-making level the touchstone of political belief and loyalty is both moral and a practical necessity. There has been a lot of starry-eyed guff talked about this; in my opinion the people who talk it are spiritual descendants of the mice who voted to bell the cat. Of course the policy-making administrators of the executive branch of the government should be active and loyal party members of the party in power since they will be called on to bring to life the party platform of the party in power. Any other arrangement is a swindle on the people. Would you hire a surgeon to give a Christian Science lecture? Or a Rabbi to say mass?

Under special circumstances a chief executive, state or national, may draft an elder statesman of the other party to do a difficult top-policy job for which such man is peculiarly fitted. Such statesmen, of both parties, can and usually do carry out their special assignments with high patriotism and without obstructing the program of the party elected to power. When such a case comes up, don't go overboard in being a partisan. Some pipsqueak in your county committee will pop up with a resolution condemning such a coalition action. Don't handicap your governor or president by supporting such a narrow view.

But the much more usual case is the one in which partisanship is appropriate. Your party has just won an election; there are numerous policy-level appointive jobs to fill. As an active party politician your support and endorsement will be sought; in such cases you are not only justified, you are obligated, to consider the politics of the candidates as well as their several abilities. Your governor (or mayor, or president) is entitled to assistants who are loyal and of the same political beliefs. A man can best demonstrate his devotion to the party principles by getting out and hustling for the party ticket. Such party support may not in itself prove anything, but the lack of it is does prove something—it proves either that the appointment seeker does not really believe in the party program he now asks to help carry out as a public official or it proves that he is too indolent and too selfish to make a good public servant. Thumbs down!

I want to elaborate this point because there is so much nonsense talked about it. It seems to be part of the Great American Credo that it is statesmanlike to forget all about party lines as soon as the election is over and pick the "best men" for the big jobs whether they helped in the campaign or not. It's pretty but it's not true to life. The "best men"—for this purpose –are not to be found among the spectators, nor on the other team; they are to be found among the men who were in there scrapping for what they believed in!

Although policy-making appointees should be party regular and active campaigners, there is no reason why typists, surveyors, truck drivers, or food inspectors should be selected for their political beliefs and many reasons why they should not be. Despite the prevalence of civil service, good and bad, many such jobs are purely appointive and you will be called on to help people get such jobs.

Patronage is not an easy matter and I know of no perfect solution. I suggest the following pragmatic rules for making the best of a bad situation:

(a) Accept the responsibility. When it comes to pass that you have the power, through influence or direct authority, to decide or help to decide who shall hold the myriad little jobs below policy-making level, meet it head on, make the decisions—and the mistakes—and take the consequences. To pass the buck is moral cowardice, similar to that of the person who can't bear the thought of killing but eats meat and wears fur, and it will result in someone else passing out the jobs in a fashion which may not please you and which may be contrary to public interest.

(b) Don't adopt a "spoils" attitude. Discuss qualifications for the job, not whether or not the candidate is politically "deserving." Make it quite plain that you think such jobs should be filled by civil service methods and that you are acting in trust for the public, not for your party. (This advice is contrary to that of many successful politicians, I must admit. Nevertheless I think my attitude is more practical in the long run. You will have to find out for yourself. But I submit that my advice is not only moral, it is practical—and that any other course leads to a long succession of headaches and loss of votes.)

(c) Be completely honest with the applicant If you don't intend to help him get the job, tell him so, bluntly—and take the consequences. There is no difference of opinion here on the part of any of the successful politicians, but the advice is hard to carry out. It is so much easier to promise to do "anything you can to help him," then fail to follow through. I must admit that I balked at this hurdle when I was new to the business. I did not have the courage to disappoint a man to his face. It takes guts and I did not have the requisite supply. I have learned better—I won't make that mistake again. But it still upsets me to have to say "no."

(d) Be warmhearted. Don't adopt a holier-than-thou attitude. Help the poor devil if honesty permits it. Err on the side of charity. After all, he has to eat—at least he thinks so. Job hunting isn't easy at best, and he, or she, wouldn't be there if the wages weren't a matter of consequence. Even if you have to say no, you can be friendly and give him the dignity that every human being wants quite as much as he wants a full belly. Sit him down, offer him a cigarette, a cup of coffee. Listen to his troubles. Perhaps, if you can't give him the job he wants, you will recall one in the course of the conversation which he is qualified to hold.

There is nothing unstatesmanlike in helping another fellow human being to find a job. It is as righteous as healing lepers or causing the lame to walk. Most of your applicants will be second-raters, but don't let that worry you; most of the world's work is done by second-raters. You won't be cheating the taxpayers in recommending a person who is merely adequately qualified instead of being an ideal candidate for the job. First-raters hardly ever seek these minor public jobs, as they can make more money in private industry.

Don't try to monkey with any job covered by federal civil service! Tell the applicant that the job he wants is beyond politics and that he should go straight to the civil service commission where he will be given, not one but many, fair competitive chances to get a job if one is available. The federal civil service commission comes as near to being above reproach as any public agency you will find.

There is one apparent exception to the above rule: Many agencies under federal civil service make seasonal, temporary appointments, without examination, to cover their peak load period. For example the railway mail service and the postal service need a lot of help around Christmas time and the Internal Revenue Service has other rush seasons. It is frequently impossible to get sufficient help from the certified civil service lists. This means jobs for clerks, typists, laborers, chauffeurs, *etc.* Most of the jobs require only minor skills and no experience.

Don't try to use political pressure to get these jobs for people—it's wrong and you don't need to. What you can do is make it your business to know when such jobs are available. You can pass along the tip to the unhappy creature you have had to turn down and let him go get the job on his own. Most people simply don't know the ropes; they are not too familiar with the world around them. You can often lend a helping hand just by knowing more than the applicant. He may even be grateful to you; at least you have not refused him help.

Such devices are necessary if you are to compete successfully with the Machine. Never forget that the strength of the Machine lies in giving help when it is asked. You can do likewise—and not attach strings to it. Bread cast on the water comes back of itself; you don't need to harry unfortunate people by insisting that they demonstrate loyalty to your political organization.

(Incidentally, the successful machine politicians know that fact. They will help anyone, not merely the "faithful." They count on a backlog of good will rather than on cracking the whip. The whip-cracking comes later, if at all.)

Appointments to Annapolis and West Point should be purely competitive but are not. The civil service commission will serve as an impartial referee in selecting candidates for appointment as the agent of any congressman or senator who asks for the service. You will be performing a patriotic service by urging your congressmen and senators to avail themselves of this service.

You will be approached frequently by parents of young hopefuls who want to go to one of the service academies. You can encourage such laudable ambition without mixing politics into it—but which will nevertheless redound to your political advantage! In the first place these persons usually do not know how to go about any phase of the matter; the kid has simply been struck by the bug. Full information may be obtained by anyone by addressing requests to the Adjutant General of the Army, concerning West Point, Deputy Chief of Naval Operations (Personnel) for Annapolis, or the Commandant of the Coast Guard, Treasury Department, for the Coast Guard Academy. They can get this information just as quickly from any public library or recruiting station, but they don't know that, and they will love you for your helpfulness. From the same sources you may, if you wish, obtain free pamphlets which set forth the requirements for each academy, along with typical entrance examinations. You can also obtain lists of prospective appointments and the names of the officeholders who control them.

If you have these items in your possession you will seem almost omniscient to the lad and his parents. You can also pass out some good, nonpolitical advice. All three schools are basically engineering schools. Therefore an applicant needs solid grounding in mathematics and physical science, plus one modern language. Make sure the kid knows this. All three schools have stringent physical requirements, and the applicant should find out at once whether or not he can meet them, or whether corrective measures will enable him to meet them. It is a sad thing to see a boy spend a couple of years trying for an appointment, then eat his heart out because some disqualifying disease in his past record prevents his accepting it when it comes along.

Don't use your political influence in connection with appointments to the service academies. It may not be dishonest, but it is certainly not in the public interest. Limit yourself to helpful advice and supplying information.

I have dwelt at length on these service appointments because, first, you will be faced with the problem with certainty every year, and second, because I am advising you not to give the political help asked for. Since you are to refuse to basic request (for political influence) you should know specifically what you can do to be helpful to all comers. The matter is touchier than most requests for political favor because of the emotions stirred up by the parent-child relationship. It is easier and safer to turn down the father in a request for a job for himself than it is to refuse him help for his boy.

How to Tell a Trojan Horse from a Political Party:

In any city or town in which a well-entrenched machine has been in power without interruption for many years, the party of the political label opposite to the label worn by the Machine will also have a public organization, somewhat smaller, which regularly puts a ticket on the ballot, opposing the Machine, and with equal regularity gets beaten.

One will be the "Democratic" organization; the other will be the "Republican" organization. One of them will be the party in power and will be known as the "Machine." But it is almost a foregone conclusion that they are both the Machine.

It's a partnership. They get along fine together—except in public. Each year they put on a whoop-t'-do campaign, a grunt and groan match for the cash customers. They exchange insults, demand investigations, and hold rallies-but the fight is fixed, the results certain, and the take split two ways by arrangement.

In addition to these official organizations there will be unofficial organizations of each party, reform in nature, and probably unrecognized by their respective national committee. That makes four parties—or, more truthfully, three. The latter two are honestly opposed to each other and to the Machine. More confusing than amusing, isn't it? Well, take a glance at the multiple parties of some other countries; it will make you feel better.

The question is: What should the honest citizen do when faced with this situation?

It is a very real problem, for the "reform" wings of each party usually suffer from pernicious anemia. As for the official organizations, they are not the Republican and Democratic halves of the American Eagle; they are the twin wings of a turkey buzzard. For these reasons, the honest citizen in a machine-ridden community usually stays out of politics, and limits his participation to voting for the national ticket of his choice in the general elections.

But we'll never get out of the mud that way!

If you live in a machine-dominated city and if you entered politics by the direct routes suggested in Chapter II, you probably landed first off in the Machine, either main tent or sideshow. It hasn't hurt you, but you have cut your teeth and now is the time to strike out on your own. The six months or so that you spent with the Machine has taught you more than anything else could in the same length of time.

Move in on one of the two reform organizations, take it over, and, through it, capture the party of its affiliation in the primaries. Operation time: Six months to three years.

Use the party organization you have captured to turn the Machine out of power at the following city final election. Then do your darnedest to get a satisfactory governor, state attorney general and county prosecuting attorney at the next general election in order to tie down your victory.

Does it sound too hard? Remember what was said of the people who crossed the plains: "The cowards never started and the weaklings died on the way." Don't despair; you will not be alone. There will be others marching beside you. It is not too likely that you yourself will be called on to be the generalissimo of this war; you may find yourself a non-com or a junior officer.

But it can be done. I know it can be done because I have been present when it happened. Many American cities have carried off such reforms successfully; it is not too hard to do. The hard part is to make the reform stick. The ordinary reform organization falls to pieces after the first successful campaign and the ordinary reform candidate turns out to be a sorrier specimen in office than the Machine politician he displaced. The anatomy and pathology of reformers and reform organizations will be discussed in the chapter Footnotes on Democracy. Choosing a candidate will come up in the next chapter.

Many machine politicians are so sure that a reform group will hang itself that a lost election does not worry them. They take an off-year philosophically as a chance to clean out the dead wood and strengthen the organization. Much of the organization is secure through a phony civil service; the rest can live on its fat

You, presumably, have learned already that politics is a process that continues. You will not fall into the error of thinking that you need to plan for only one election. Let us consider then how you will choose your field of operations and what you will do.

Pick your medium on principle, not expediency, or you will never be happy. If you are a Republican in your national politics, if

Republican party principles are what you believe in, then go into the Republican reform organization, even though the Democratic reform organization may seem to have the better chance of achieving your immediate purpose, defeat of a corrupt machine. Vice versa if you are a Democrat at heart

In some cities the local offices are "non-partisan" by law. This changes the labels but not the facts; a "non-partisan" city machine will always turn out to be owned by the leading politicians of one party, assisted by tame dogs who nominally carry the other party label. A "non-partisan" set up makes it a little easier to form a coalition to defeat a machine oncce—and makes it much harder to preserve a reform once instituted, because a lack of organizational responsibility and lack of basic community or interests and belief among the coalitionists.

"Non-partisan" in local affairs was a bill of goods sold to the people of this country early in this century by a bunch of starry-eyed political theorists who were not semantically oriented and thereby confused symbols with facts. They saw the corrupt city machines—party machines—and figured out that they could do away with all that by outlawing political parties in local affairs. It was a cinch for the machine boys; the labels were abolished, but not the Machine! (I wonder why that didn't occur to the theorists?) It enabled the same old corruptionists to get away with murder without leaving finger prints around the corpse.

If you still have party labels in your local affairs for goodness sake, hang on to them! Otherwise, when they steal the city hall, you'll never be able to pin it on anybody.

Let us assume a concrete case so that we can be specific. You will have to shift it around for other circumstances but the principles will not vary. We will assume partisan local offices and we will assume that your party is not in power. The only difference the latter assumption makes is that in such case it takes a primary election and a final election to gain power; in the other case, when the Machine proper wears your party label, the primary election is the only real struggle and the final election may be a pushover.

First, you and your friends take over the reform organization of your party. This is about as hard to do as beating up on a butterfly; you just join up and start running things by the techniques described elsewhere in this book. You get new members for the existing clubs and form new dubs where needed. For all practical purposes you behave as if the anemic older organization never existed; you form a new political organization and start getting ready for your first primary fight

That is your practical, factual behavior; your symbolic behavior is something quite different. The old, moribund reform organization has its officers and notables. You will find them to be, with few exceptions, a bunch of prima donnas and political masochists as well. They never really expected anything as strenuous as success-and they bleed easily.

You must avoid hurting their feelings. They may not be much use to you but they have the power to do you a great deal of harm.

Remember the old story about the new lodge member who was elected "Lord High Exalted Ruler of the Universe"? He was not the lodge master; his was the very lowest position in that lodge. There is your technique.

Flatter them. Defer to them. Ask their advice... in such terms that you get the advice you want! Never ignore them. Have them speak to new dubs. Put them on "dignity" committees (people who greet visiting notables, sit on platforms during programs, and have their names printed on political stationery). Never displace them from club or organization office unless they wish to retire. You can always create new offices- "executive" this and "executive" that—without disturbing them. If some old fuddy-duddy is now chairman and can't conduct a meeting properly you can always carry out basic business in a committee-of-the-whole, with your own choice as chairman of the committee-of-the-whole—or you can through an executive committee–or provide the office of parliamentarian—or even teach him some parliamentary law if you are subtle about it. You yourself will work as floor leader, in his good graces. Be sure never to surprise him with what you bring up on the floor. Tell him about it beforehand.

But don't replace him until he wants to retire, then create some equivalent of Lord High Exalted Ruler of the Universe for him - "critic," "senior adviser," "chairman of the reception committee."

I was present once when an elderly man, just the sort I have referred to, addressed a mass meeting for twenty minutes on how he had been ignored by the johnny-come-latelies in the campaign just completed. That was his whole plaint; the campaign had been successful - he could not deny that. It had turned out a bunch of vultures and had taken over an entire state organization. But he had not been consulted; he was the dean of the reformers in the party; his nose was out of joint.

His point was ridiculous, as a reformer he had been a consistent failure. But he was a powerful, persuasive orator; he managed to convince the crowd that he had been wronged. It started a crack in the organization which widened and destroyed it.

He is nationally known but I shall not name him - he is rich in years and honors and fought many a gallant fight in his youth. I cite him only as a warning.

Some few of the oldtimers will turn out to be good workers; if you are considerate of all you can salvage the useful ones as well as avoiding the dangerous pique of the dead wood.

Let us now suppose that you have won your first primary (see Chapter X) and thereby control the official party machinery. You are the Party, you and your friends, in the legal sense; this obligates the state and national committees to deal with you.

You have still to cope with the persons you have displaced. This will be a headache!

Here we are assuming that these persons are not sincerely members of your party at all; they are stooges of the Machine who wear your party label for the purpose of selling out your party. These jackals lack even the limited honesty of the ordinary successful machine politician; they are professional traitors. You cannot trust them under any circumstances.

(This case is very different from the normal post—primary situation described in Chapter X where your object would be to heal the wounds between factions all loyal to your party.)

You are likely to find it very difficult to throw these crooks out of the party. You can't keep them out of public meetings; in any case some of them will have been elected to your county committee. There is probably no method of unseating them, but this is not the time to compromise. Don't let them hold any office if you can possibly prevent it. If you let one have so much as an honorary vice-chairmanship in a subcommittee, he will go out, print up stationery with his title on it, and write letters of endorsement for the Machine which will appear to be, through judicious use of large and small type, official endorsements from your organization.

Another favorite trick, and one almost impossible to stop, is for them to incorporate a dummy political "club" under an official-sounding title, such as: The 12th District Official Republican Club or The Democratic Assembly of Gedunkus County. Sometimes you can stop this sort of thing with an injunction, but not often.

There is no sure cure here. All I can recommend is to keep them at arm's length, don't trust them, and don't give them anything. Some of this phony organization may be poor lost souls, honestly devoted to the party and happy at the change. Very well, let them prove it by a long, long, term of volunteer work at a low level. Keep them on parole until you are sure of them.

I have elaborated this point because, once you build an organization, these termites will try to dominate it, under the pretext that they are the "real" (Democrats) (Republicans), and you will be tempted to meet them halfway, particularly because pressure will almost certainly be brought to bear on you from the state capital or from Washington by senior party members who are interested in party harmony and may not understand the local situation. Don't do it. If you know, of your own knowledge, that the official party organization you replaced had unclean relationships with the Machine you are opposing, then this is one of the times not to compromise, even though the national chairman of your party gets you on long distance to plead with you!

You have built an organization; you have captured party machinery-now to win an election!

CHAPTER VII

How to Win an Election

The By-Election at Eatanswill

"There are twenty washed men at the street for you to shake hands with and six children in arms that you are to pat on the head and inquire the ages of. Be particular about the children, my dear sir; it always has a great effect, that sort of thing."

"I'll take care," said the Honorable Samuel Slumkey.

"And perhaps, my dear sir," said the cautious little man, "perhaps if you could-I don't mean to say it's indispensable - but if you could manage to kiss one of them, it would producea great impression on the crowd."

"Wouldn't it have as good an effect if the proposer or seconder did that?" said the Honorable Samuel Slumkey.

"Why, I am afraid it wouldn't," replied the agent. "If it were done by yourself, my dear sir, I think it would make you very popular."

"Very well," said the Honorable Samuel Slumkey with a resigned air, "then it must be done - that's all."

"Arrange the Procession!" cried the twenty committeemen.

- From The Posthumous Papers of the Pickwick Club,
Charles Dickens, 1837

"The place to learn to wash dishes is at the sink." The stuff in this book is predigested; to cut your teeth you must get out there in the field and try.

You are likely to lose your first election - let's discuss that first. With the aid of a few simple rules you can be absolutely certain of losing.

How to Lose an Election: The first thing to do to lose an election is to put out of your mind the basic rule of politics that elections are won with individual votes, each held by a separate human being who must first be convinced, then persuaded to go to the polls on election day to record his conviction so that it may be counted.

If you will neglect that rule you can lose extemporaneously. However, there are some other positive steps you may take to insure a good, rousing, landslide defeat.

Put the major portion of your time, energy and money into the indirect, superficial aspects of campaigning, and slight the direct, vote-by-vote methods, such as doorbell pushing. Accept all the speaking engagements you can manage to get, even if they take you miles out of your district and are before groups who will not permit an outright campaign speech. It gets your name in the paper, doesn't it? A candidate has to have publicity, doesn't he?

Get for your publicity man some kid who had a high school course in journalism, no experience, but plenty of enthusiasm. Then stifle his one asset - enthusiasm -by backseat driving on everything he tries to do.

Get a lot of expensive advertising literature, printed on expensive stock. Put your picture on it, using different cuts for each sort, and fill up the space with plenty of words in small type. Limit your precinct activity to having this junk distributed loose on the doorsteps. You have too few volunteers to ring all the doorbells; this gets you name all over the district, doesn't it?

Tie up a big chunk of your available funds in radio time. Hire fifteen minutes or half an hour and make a political speech, once or twice a week, or whatever you can pay for. (Radio stations like cash on the table.) Take the radio time at the nonpolitical rate; it does not permit you to mention the election but you get twice as much time for the same price. They will let you discuss issues as long as you don't campaign directly - and after all, your object is to educate the voters, isn't it? If they know what good things you stand for they will remember you on election day, won't they?

Plan some Big Events for the latter part of the campaign, a mass meeting, a dance, or a picnic. Have your volunteer workers concentrate on making this jamboree a success by selling tickets, and arranging a fine program. Make it the climax of your campaign.

Run for some good-sized office as your first try, such as congressman, or superior court judge. After all you are too big a man for those two-bit jobs like selectman or legislator.

Make some member of your family your campaign manager. This insures loyalty, on the part of the manager, at least.

Try to win the support of every possible sort of group by hedging your statements and carrying water on both shoulders. Chamber-of-Commerce meetings and funny-money rallies don't draw the same audience, do they? You can do a lot - a lot of something at least - by a wink and a nod. You are for the welfare of all the Peepul, and that is what matters-as for your methods, well, you have to fight fire with fire - it's a dirty business, isn't it?

(You're blinking well right it's a dirty business if you play it that way!)

Let each hopeful aspirant for patronage think that he has the inside track for your favor, but don't promise anything you can't weasel out of. (It doesn't really matter; you aren't going to be elected in any case.)

Don't sample your district to see how you are doing. Instead, surround yourself by your loyal supporters and listen to them. Kick out the pessimists; they are just trying to discourage your workers.

By running a campaign in the fashion described above you can enjoy every minute of it and have a wonderful time, right up to the announcement of the results. Even then, after your defeat, there are ways to turn a licking into outright political suicide.

You can skip the election party - the party after the polls are closed in which the workers either celebrate or console each other. This saves you the cost of the refreshments but doesn't cost you any votes, since the party would not take place until after the election is over, if you held it. It saves you embarrassment, too, since some of them are sure to get drunk.

Make yourself inaccessible the next day, too, and for several days thereafter; otherwise your supporters will swarm over you and cry on your shoulder. Don't they realize that you are nervously exhausted and have just been subjected to a shocking disappointment?

Of course you will have to thank them for their efforts. Just limit it to a mimeographed form letter. After all, it's impossible to write everybody a personal note; they ought to realize that.

Then bolt the party. This was a primary you just lost, naturally, since your methods would never take you to the finals. Neglect to support the member of your party who defeated you. You are morally justified; he had some of the worst elements in town around him-utterly shameless politicians. Not only did they tear down your signs, but they practically bought votes. And they dug up some things in your past and put them in the worst possible light-libel, really. You can never forgive him for that and no reasonable person would expect you to.

So take a walk. Do it literally - you can always be called out of town. If anybody ever needed a vacation, you need one now; it is a natural thing to do. So take a walk; hole up with kin folks, back in the sticks, until the finals are over.

The above routine entitles you to pose the rest of your life as a man who is disillusioned through bitter experience. You can hold forth on how democracy is a nice idea but won't work in practice, and how this country will some day have to feel the firm hand of authority - either the Best People will have to assert themselves and rule with no nonsense, or some rabble-rousing demagogue will ruin the Republic. You know - you've been through the mill!

(I'm sure you have all met this guy at some time or other.)

The above horrible example may seem too perfect to be true, but every wrong move depicted above occurs in every campaign, committed by some of the candidates, every year throughout the country. Many campaigns show the majority of the above errors. I recall one copy-book example which had all of the above mistakes - except that, wonderful to see, the candidate did not become disillusioned. He was bright enough to learn. After bolting the party he eventually came back, admitted his error, took off his coat, got to work, and rehabilitated himself.

How to Win a Campaign: Let us say it again: The key to success in politics is to remember at all times that votes are what you are after and that the votes are in the precincts.

They aren't downtown in the politico-financial district. They aren't at club meetings, not many of them. Of course you pick up odd votes wherever you find them, but the club meetings are primarily to arouse and hold together your volunteers; individually there aren't enough votes in political organizations to carry an election. Rallies are for morale building primarily and secondarily for publicity, but the persons who attend them have already made up their minds how to vote and can be counted on to vote, whether the rally is held or not.

The vote you need to win lies on the other side of a dosed door in a private home; you have to punch that doorbell to get it. There is no substitute.

Having lined it up, you have to be sure it reaches the polling place- and that calls for more individual action.

It isn't hard to get adherents to your cause. The vote you are looking for is either already on your side and needs simply to be located, or it is one which can be switched to your side (from a condition of "no opinion") just by stating your case and asking for support. The "hard cases" should be left alone; it's like butting your head into a stone wall.

Your real problem, then, is not selling your bill of goods, but finding your customers and getting them to the polls.

And that, compatriot, is some problem!

You are hardly ever licked by the opposition; you are licked by your own friends who did not vote. I once lost an election by less than 400 votes; in the post-mortem I was able to tabulate names of more people than that who were personal acquaintances of mine, had promised me support - but did not vote. The shortcoming was plainly one of the election day organization. Forty election-day volunteers could have swung the district.

Unfortunately the district had been conceded as hopeless by everyone but myself and a handful of stalwarts, and we could not manage to be enough places at once on election day.

Earlier in this book I have described how Charles Evans Hughes lost the presidency when a shift of less than one ten-thousandth of the vote could have elected him - if the effort had been applied in the key state. The 1944 election is much more typical - with respect to statistics, not issues.

Mr. Dewey received only 99 electoral votes out of a possible 432. Looks like a landslide-but let's analyze it.

In 1944 there were 87,000,000 American citizens over twenty-one; only 48,000,000 of them voted. That leaves 39,000,000 "sleepers" - persons who did not register, or just failed to vote. If the preferences for president ran in the same ratios among the "sleepers" as among those who voted, then Mr. Dewey lost 18,000,000 potential votes - but Mr. Roosevelt beat Mr. Dewey by considerably less than 4,000,000 in the popular vote.

It looks as if the persons who were against the Fourth Term weren't against it enough to bother to turn out to vote!

If the Republicans had carried California, Illinois, Michigan, New Jersey, New York, and Pennsylvania, Mr. Dewey would have been elected. These are key states, swing states. None of them can be counted as normally Democratic; in the last ten presidential elections the Democratic Party has lost each of these states either half, or more than half, the time. Furthermore, all six of them either had Republican governors in 1944 or elected a Republican governor in the 1944 election.

Mr. Roosevelt's majority in these six states, taken all together, was a gnat's whisker more than a million. But 7,200,000 of the Republican "sleepers" were in these six states! If the Republican organization had concentrated its efforts in these six states - everybody knew that they were uncertain states; ready to fall either way - Mr. Dewey would have won provided one in seven of the Republican "sleepers" were delivered to the polls.

Please draw no inferences about which side had my support; I am neither weeping nor cheering-this is a clinical examination. There is only one conclusion that need be drawn: In this election the Republican precinct organization wasn't worth a hoot, the high command muffed the strategy and the precinct captains muffed the tactics.

Now let us suppose that it is your home congressional district and that you have vowed to unseat Congressman Swivelchair - we'll assume that you have good reasons. What are your chances and what does it take?

You live in the mythical "average" district; it has therefore 320,000 human souls. 200,000 of them are over twenty-one; of these 140,000 are registered to vote. We will assume that the district is evenly divided between the two major parties, so that you have a chance to carry the district if you gain the nomination for your candidate but will not have the election handed to you on a platter.

There are, then, 70,000 members of your party. Of these about 25,000 will vote in the primary. You need 13,000 to win a clear majority in the primary - less, if there are more than two candidates and your state permits plurality nominations.

What does it take to get the 13,000 votes? Well, if your organizational activities - the clubs we talked about in preceding chapters - can show one hundred active volunteers who are not afraid to punch doorbells and will work on election day, I'll bet the rent money on the outcome.

Cost? Anything you want to make it. Volunteer campaigns should not cost much. Can you bank $1,000 before your candidate files his nominating petition? If so, you should never have to worry about unpaid bills - provided you have an absolute veto over commitments and expenditures. If the candidate's wife is permitted to order printing, you're sunk! The same goes if you have a campaign committee which can overrule you without digging down into their pockets personally to spend money in ways that you do not approve.

The campaign will cost more than $1,000 but the excess can be raised by passing the hat as you go along, and by nicking the very persons who want to make expenditures not included in your budget.

Still, a thousand dollars is a lot of potatoes to most people. Where are you going to get it? The answer lies between two extremes: A thousand men at a dollar each and one man with a thousand dollars. Of the two the first is by far the better; volunteer campaigns come to life when the workers themselves, and their friends, foot the bill.

Suppose your first tentative campaign meeting, long before the campaign, has twenty people at it. You ought to be able to clip them for an average of $10 a head (some at twenty-five, some at nothing), cash and checks, paid on the spot. Perhaps the candidate is sufficiently well-heeled that he can put in $300 (but don't let financial condition be any criterion in selecting a candidate-a rich man can lose an election for you just as fast as a poor one).

Your clubs should be able to raise a little for you. Then perhaps you know some people who will kick in once they see earnest money in the pot. But get the thousand before you make any announcements to the newspapers; you are going to have to have it and it is much easier to raise it first when you have time for such matters, than later, when time is everything.

The opposition may spend many thousands of dollars, but don't let that worry you. Elections are not won with dollars. The only reason you have to have any money is because printing and postage take cash. One thousand dollars is, of course, an arbitrary figure. More is convenient, if you can raise it; you may even get by for less if you have real talent for making good soup out of vegetable tops and leftover bones. Most of the things that cost big money in campaigning are almost useless for vote-getting purposes in the local campaign.

(And, come to think of it-what campaign is not a "local" campaign. Votes are in the precincts!)

After the primary, money - clean money - will be much easier to raise. In addition to local sources, the National Committee is always anxious to subsidize a local organization which shows unexpected signs of displacing one of the opposition, without help in the primary and with a live, volunteer organization. Each national organization has a fund to be used only on congressional districts "in the balance" - which is not to be spent on hopeless districts nor on sure districts, but on ones such as yours. There may be only a hundred such in the country, but the fund comes from all over. Present your figures.

Now let's tabulate the situation. We are assuming that the Honorable Horace Swivelchair is not of your party; you may want to displace an officeholder of your own party, but the circumstance is less usual and the task should not be attempted except for the most grave reasons. (Are you quite sure you know all about the voting record of your co-partisan whom you wish to displace? Have you tried all methods short of war? Don't get sucked into such a campaign simply because someone is ambitious to hold office. The minimum reasons should be nothing less grave than proved moral turpitude or a consistent refusal to support party measures.)

The Situation:

District population	320,000
Persons over twenty-one	200,000
Registered voters	140,000
Registered strength of your party	70,000
Number voting in your party primary	25,000
Required to cinch party nomination	3,000

Your assets are:

Volunteer workers	100
Cash on hand	$1,000

The problem is to turn the assets into 13,000 votes.

For simplicity we will assume that there are just two candidates out for your party nomination, Jack Hopeful and your own candidate, Jonathan Upright. If there are more, you are a cinch to win, but let's do it the hard way.

Thirteen thousand votes divided among 100 people means an average of 130 ballots in the box per worker. But it is not that bad; your candidate, in a two-man race, will get 10,000 votes just for having his name on the ballot. Your workers have to locate one hundred and thirty votes apiece, but one hundred of them will get to the polls in any case under their own steam and vote for your man. The precinct worker must sort out the other thirty votes and get them to the polls - perhaps half by phone calls and the other half by providing transportation.

It begins to look easier - one man to haul fifteen voters to the polls, in order to gain control of a district containing a third of a million people, in order to seat a congressman in a Congress where the draft law was extended, just before Pearl Harbor, by a majority of one vote.

It is easy - from that stand point, and that is the reason why the volunteer amateur can take over this country, or any part of it, and run it to suit himself. Your part is very easy if you are just one of the volunteer precinct workers-a noble ambition in itself!

But if you aspire to manage a congressional contest you will find, before you are through, that it requires all of your intelligence and diplomacy. While the job can be done - many have done it-it will call into use your highest human faculties.

Choosing a Candidate: All too often your choice is very narrow. In this country people who offer themselves for public service get a shameful kicking around. The pay is so niggardly that an honest man usually leaves the office poorer than when he accepted it, and the dead cats and rotten eggs far outnumber the pats on the back for work well done - to our collective shame!

The sober, able citizens whom we need in public office know these things; very few of them are willing to make the sacrifice that public service entails. We have indeed been blessed that enough able men have always been willing, thus far, to forego their own interests that the Republic might survive.

You will probably have to persuade the candidate of your choice to make the race. If he is bright enough for the job he won't be very anxious to have it.

If he is the man you need for the job he will be aware that some citizens have to give up their natural desire for privacy, peace of mind, and financial security in order to keep democracy alive. The motivation is the same which causes men to volunteer to meet their deaths in time of war; it exists in peace time, but is a little harder to stir up.

You can expect him to be reluctant but willing to be convinced - convinced that his personal sacrifice will not be in vain. You must convince by showing him that he can be elected, in terms of district statistics, local factors, availability of campaign funds, your proposed budget, and your organization - organization above all. Since he is neither a nincompoop nor politically naive he knows that organization is the controlling factor.

If you can show him a fighting chance, he will probably go.

On the other hand you will be beset by hopeful, potential candidates who are just waiting for the lightning to strike. They will come smirking around, digging one toe in the dust, and murmuring that "Barkis is willin'." These people are usually political lightweights whose only assets are consuming ambitions to hold public office and to receive a public salary.

They will look you up - of course they will look you up; you have an organization-and get in your hair.

They will be hard to handle. It is a hard thing to tell a man bluntly that you don't think he has the character, or the intelligence, as may be, to hold public office. Furthermore you might be mistaken; some unlikely people have served the public well. I suggest that you use a counterattack.

Ask him if he is willing to refrain from running if the organization chooses some other man to back. Press this point and press it hard. Insist that he must commit himself to support and campaign for the candidate chosen by the organization before his name goes into the hat. This commitment should be in writing.

His commitment probably isn't worth anything but it may keep him from doing what he can to sabotage your efforts.

Don't promise him anything at all except that he will be allowed to present his case before the organizational caucus which chooses the candidate - provided he binds himself to the caucus. This is the essence of caucusing, that no one shall participate in it who is not bound by it; it is an entirely fair, democratic procedure.

The pipsqueak will probably jump the caucus if he loses in it. You are then morally justified in sending several of the more influential members of the caucus to see him in order to coerce him back into line. If they are his business customers, so much the better. A caucus is a contract and should be enforceable, but the law gives no means. You are entitled to improvise means, as rude as necessary, as long as you don't step outside the law. ("Look, Joe - you signed that caucus. If you break your word to us between now and election day, your name is going to be mud in this community. We'll see to it that everybody and his brother knows just what kind of a heel you are when it comes to keeping your word. You won't be able to do anything about it, because every word of it will be true-in fact, we'd love a libel suit because that would spread it around to more people. If you don't toe the line as you promised, you are finished politically - and it's not going to do your business any good either. People don't like to do business with a man who isn't honest-starting with me!")

Your own candidate must agree to the caucus, and you yourself. This may be a little hard to take, but democracy is not a one-way proposition. Require from him also a written commitment that he will endorse, support, and make at least one public appearance on behalf of the straight party ticket and in particular on behalf of his successful opponent, in the event that he is defeated. If he won't do this he is not your man, no matter how well you thought of him. Don't waste your time on prima donnas.

A word of warning - when you bind yourself to the caucus, do not bind yourself to manage the campaign of the successful candidate. It is likely that you will be willing to undertake the grief of managing only for the candidate whom you handpicked. If another candidate is selected, it is all right for you to drop back to the status of a precinct worker, there to do honest work but considerably less of it, if, in your opinion, the candidate is not electable or not completely satisfactory to you.

But you must bind yourself to endorse and campaign for the candidate selected by the caucus, at least on the minimum level of canvassing and carrying your own precinct.

I can almost hear your doubts and misgivings about this. Isn't such a commitment likely to land you some day in the uncomfortable position of having to choose between breaking your word or supporting a candidate you know to be unworthy of public trust?

No—not if you know your procedure. In the first place, these are your friends and associates, aren't they? Can't you count on Tom and Art and Dr. Nugent and Alice and old Mrs. Krueger to back you up in keeping any real jerk from getting the nod? If not, you are probably in the wrong pew and should be more careful in picking your political associates.

But let us suppose, nevertheless, that there is a chance that a certain party will pop up as the choice of the caucus; you are among friends but, while you are convinced that this person is a moral leper, you can't prove it. However, he is a very personable chap and many of your staunch friends are still taken in by him. This can happen—it's happened to me.

You need only insist that all the potential candidates be listed before the caucus is bound and that the caucus be limited to consideration of the listed candidates. This gives you a chance to thresh it out before you are bound.

Let's run over a typical caucus-it is one of the least understood and most necessary of the democratic techniques. We'll make it the caucus to select the organizational candidate for congress for the party primary in your district. Caucuses can be used for any sort of joint action; this one will illustrate all the principles involved.

In the first place membership in a caucus is strictly by invitation. The man, or group of men, who call the caucus is the sole judge of the membership. No one has a natural right to be a member of a caucus. You are no more obligated to invite a man to caucus with you than you are obligated to invite him to be a guest in your home. It may be politically imprudent to exclude someone who wants in-he may form a rival caucus of his own-but you don't have to. A caucus has no existence until it votes to bind itself; up to that time, if you called it, you can exclude anyone merely because you don't like the way he parts his hair.

After the caucus comes into formal existence by voting to bind itself, it may add to its own membership any person who agrees to be bound by it by either of two methods, by majority vote (or greater majority vote, as may be required) provided the original terms of the caucus permitted it, or by unanimous vote of the entire membership - not just those present - if the original terms of the caucus failed to provide explicitly for increase of membership.

The original terms of the caucus constitute an inflexible contract among the members and may never be varied except by unanimous consent of all the membership. This is a striking difference between caucuses and all other parliamentary bodies. The essence of a caucus is its unanimity. That unanimity has been arrived at by each member binding himself to support the wishes of the majority under certain conditions all of which must be explicitly stated in the original agreement. This includes both membership of the caucus and the matters which the caucus may consider and how they may consider them.

A caucus which decides by less than unanimous consent to do anything at all not set forth in the original agreement is not extending its powers; it is committing suicide. At that moment it ceases to have any existence, for the contract which gave it birth is no longer binding on anyone.

From which we draw two rules: Be extremely careful what goes into the caucus agreement, and be still more careful that each member understands the exact nature of a caucus. Give a lecture on it each time - someone present is sure to be mixed up on the subject. But get it clear before action is taken.

At this point the Lone Rangers in politics will gallop away. There are many of them and they don't like to surrender "freedom of action." They will leave, noses in the air, protesting that their high ideals prevent them giving up their independence.

Good riddance! There is probably no easier way to avoid these political spoiled brats than by inviting them to caucus and explaining to them exactly what it means. You will thereby remain true to your own ideals of honest dealing and democratic consent.

Candidates are not members of the caucus which select them. This is not a law, but it is good sense. If you called the caucus you have also notified any candidate who has approached you earlier and to whom you have given a commitment for a hearing in exchange for his commitment not to run but to support the choice of the caucus, if not selected. You may also have invited other candidates, in order to make the base of your faction as broad as possible. Each person who has been invited to caucus is also free to bring along his favorite candidate.

The candidates are gathered in another room out of earshot. Among them are Mr. Pipsqueak, Judge Weathervane, and a Mr. Nemo who is acting on behalf of his law partner, Mr. Briefcase. Your own candidate, Jonathan Upright, is not there; you will present his case.

You would be willing to support any of these candidates, in a pinch, except Weathervane. You speak to the group: "Look, folks, I suggest that we listen to the candidates first, before we take any action to caucus. That way we will have more facts. I for one think that we should limit the caucus to a set list of candidates, determined before we caucus, so that no one can say he has been taken by surprise. How about it?"

Someone objects that the purpose of the meeting is party harmony and that the thing to do is to agree to accept the will of the group before we get into any rows over candidates. There is sense in what he says; therefore you must expose the rest of your hand.

"Judge Weathervane is sitting out there, by my invitation, but he is not my candidate. He called on me a while back and asked for my support. I didn't promise it to him. Instead I agreed to see to it that he got a hearing before any caucus I took part in provided he would agree to support the caucus if he wasn't picked. I am bound by that commitment; he's got to have his hearing or I can't caucus. On the other hand I can't agree to support him under any circumstances. If he is still eligible for consideration at the time we bind ourselves I'd have to drop out and leave the meeting. Can you help me out?"

Let us suppose that they turn you down. You have no choice then; you must leave the caucus. Don't get angry - wish them luck and withdraw. You can't even go to the candidates' waiting room and then present Upright's name before the caucus but not as a member of it, because you can't bind yourself and your candidate to support the result of the caucus as long as Weathervane is still in the running. But you hang around on the slight chance that the caucus, when it forms, will not decide to bind candidates to the outcome. Upright may still squeak through.

More probably they will agree to your point, since it is evident that you got into your predicament from an honest attempt to promote organizational discipline. The group holds a preliminary caucus and agrees (a) to a two-stage procedure to hear any candidate who is willing to sign a commitment to support the caucus (this is for outsiders, like Pipsqueak, Weathervane, and Briefcase, and has no effect on the favorite candidates of the members of the caucus), (b) after hearing them to include a list of candidates to be considered as a condition of the final agreement to caucus.

The candidates waiting outside are presented with a written commitment to sign (better write it yourself) and are then invited in, one at a time, to state their cases and be questioned. An agreement like this will be adequate: "We, the undersigned, candidates for congress in the umpteenth district, agree to abide by the outcome of the caucus held at (exact address) on (date) by withdrawing from the race if not selected and by endorsing and supporting the candidate chosen by the caucus. We do this in return for the opportunity to present our several cases in advance of any decision by the caucus."

The last clause is correct and is no swindle on Weathervane. You know your own mind, but the caucus has made no decision.

Weathervane looks at it, hems and haws, then signs it with a flourish. He is confident of his ability to sway any crowd. Pipsqueak looks it over, decides not to sign it, and stalks away in a medium-sized dudgeon. He has gotten cold feet while chinning with the other candidates and this gives him an easy out. You mark him down mentally as a man to call on and dose with soothing syrup.

Briefcase's law partner asks to use the telephone, then comes back and signs. The other candidates sign.

After they have each had their hearing before the group you get down to the business of caucusing. You, or one of your friends, propose that the caucus be limited to the persons now present, that adjournment be provided for if no decision is reached tonight, and that consideration be limited to candidates' names now to be nominated before the vote to caucus is taken. This last point is a repetition to avoid misunderstanding. You may add that the business of the caucus shall include setting up a campaign committee, or anything else which suits your purpose, and close by limiting the actions of the caucus to the points set forth explicitly, except by unanimous consent.

It may be modified, but you will get your agreement as long as you are careful to make everything clear. Nominations come first; when the list is complete Weathervane's name isn't on it. You are safe.

Or perhaps Weathervane's name is there. Unknown to you, Jim Swiftly has an agreement with Weathervane. Here is an impasse; you won't caucus with Weathervane on the list, Swiftly won't caucus unless he is on the list. A separation is the only answer. "Those who wish to caucus with me, come over and stand beside me; those who wish to caucus with Mr. Swiftly, go over and stand beside him."

If your political fences are in good enough repair to justify the enterprise you are undertaking, Swiftly will stand alone, or joined by one or two. Now he and his friends must leave. They will probably object; they will probably want to hang around as "observers" (kibitzers). They will point out that they were invited.

But you must insist. Caucuses don't have "observers"; only the bound members may be present. Tell them to take their caucus (that's what it is) elsewhere.

When they have left you can all sign the caucus - put it in writing - and get on with the selection of a candidate.

Let everybody talk all he wants to, without limit. Present the case of Mr. Upright yourself, carefully and thoroughly. When everybody is talked out you can start balloting. Secret ballot is not necessary; at this stage a man should show his colors-but don't object if it is asked for.

There may be several ballots, with candidates dropping out of the running and regrouping taking place. Someone may ask for an adjournment; if it passes you will be busy during the intervening days, gathering up support for your man. But eventually some ballot shows a majority for one candidate who is then the unanimous choice of the caucus.

It is Mr. Upright. You've started.

Weathervane bolts his agreement the next morning. Swiftly has gone straight to him after leaving the meeting; from the two of them come loud shouts of "Fraud! Frame up! Unprincipled chicanery! Never in my many years of public life, etc." Don't worry about it. Send Weathervane a photostat of the agreement he signed and suggest that he call on you before you send copies to the newspapers. He will probably come around and offer his services, after suitable shadow boxing, in exchange for patronage or a paid job on the committee. Don't give him anything. He won't run in any case.

Swiftly will probably go whole hog and work for the other party.

Of course you can always skip all this monkey business of caucusing -just gather together Upright's friends and form a campaign committee. You can lose, too. Caucusing is worth the trouble; it can either vastly enhance your candidate's chances, or it can keep you from attempting a race that should never start.

But why did you settle on Upright in the first place, before you ever persuaded a caucus to choose him? Your criteria should be suitability, availability, and electability, in that order.

Suitability: He should be a man with whom you see eye to eye on matters of public welfare. I refer to issues - states' rights, unions, foreign affairs, national defense, poll tax, atomic control, peacetime conscription, *etc.* His views in these matters should be generally in harmony with the established program of your party (as are yours) and, in your opinion, wiser on some important issues than your party has shown itself to be in the past, as it is your object to improve the Republic, not to embalm it.

He should be selected from the persons you know through politics in your district, as it is quite unlikely that a suitable public servant can be found in the ranks of those who never bother their heads with public matters, no matter how able or even brilliant they may be in other fields. (Unfortunately the "Congress bug" bites quite a few who have become eminent in other lines. I suggest that you eliminate at once those who wish to start in politics at the top. A suitable candidate must have a record of unpaid, devoted public service of some sort, even if not as a precinct worker. Perhaps he has made an outstanding record on the Grand Jury, in city planning, as a Boy Scout commissioner, or in the improvement of interracial relations. But beware of the Prominent Citizen who has stayed out of public life entirely, even if you find him in Who's Who and he is willing to foot the whole campaign bill.)

There should be no question in your mind as to his integrity or character in general. H.L. Mencken once remarked that, in order to judge a man, it was necessary only to know how he makes his living. I can't endorse that as a sufficient test but it is a very illuminating one. Look into how he gets his money. Does it turn your stomach? Investigate his business reputation among his competitors. He's a lawyer-what sort of cases does he take? He is a doctor-what charity work does he do and what is his practice like? He runs a restaurant-is the kitchen clean? What are his practices with respect to his waitresses' tips? Some occupations are so notoriously dishonest that his reputation will shine out like a halo if he is an honest member thereof. In any case-check up. (I made a terrible mistake once in not doing so, the details of which are so grisly that I decline to repeat them.)

In temperament he should be conciliatory and cooperative. Don't saddle yourself with a man who gets into rows, is stiff-necked, and unwilling to meet people halfway. Be sure that he understands the principle of the coordinate nature of authority and responsibility and that he has sufficient confidence in your ability to delegate the management of the campaign to you and then abide by your judgment. This will come up again under "electability."

In intelligence, education, and experience he should be of congressional caliber. Of the three intelligence is the most important.

Availability: This stumbling block, a serious one, can be dealt with in only the most general terms. In particular it means that he should be able to devote full time to the campaign for three months before the primary, another three months before the final election, and then be able to dose up his affairs and go co Washington. The economic difficulties here automatically eliminate at least 90% of our best prospective public servants. A family man working as an employee can hardly ever get over this hurdle. Available candidates usually are elderly retired people, housewives, young bachelors, persons of independent income, and persons in the freelance professions-actors, writers, lawyers, lecturers, *etc.* Sometimes a farmer, a school teacher, or an independent businessman can arrange his affairs to take the plunge, and once in a while an employer will cooperate by holding a job open. But you may expect to hear something like this rather frequently: "Old man, I'd like to and I appreciate the compliment-but I'm tied to a treadmill!"

This is one of the reasons why lawyers are so numerous in public office. Lawyers have law partners; they can usually arrange time off whenever the bank account can stand it. Lawyers, of course, tend to be poor lawmakers, but their "availability index" is high.

If you select a housewife, count on a maid for her household as a necessary campaign expense.

The remarks about availability of a candidate apply with equal strength to yourself, the manager. Since you are likely to be a woman your problem may be simpler. But I am unable to recommend trying to carry on a campaign part time, while continuing a regular occupation, to either you or your candidate, except in compelling and exceptional circumstances; it is too likely to result in fatigue-impaired judgment during the campaign and physical collapse before it is over. A campaign is pleasantly invigorating to the precinct workers and other volunteers; it is more like an endurance contest for the candidate and manager.

Electability: From a stand point of electability the ideal candidate is male, over thirty and under fifty-five, a veteran with a combat record, strong and healthy, pleasant in appearance without being outstandingly handsome, moderately tall, a good public speaker, a friendly but not an aggressive personality, married with at least one child, very well known and universally respected in his community, a church member, previous experience in public office, previous experience as a candidate (two different things-the office could have been appointive), long service in the party, and willing to let the manager run the campaign.

I have never met such a candidate.

In fact, one of the best candidates I have ever known was female, past seventy, ugly as an old horse, no children, a poor public speaker, and not very well known. What she had was integrity that surrounded her as an almost visible aura and an evident selflessness.

None of these aspects of electability is too important. St. Peter could be elected Mayor of Hell with proper precinct organization. As long as your candidate wears shoes habitually - in public, that is - and qualifies under "suitability" and "availability," it doesn't really matter if he eats with his knife. Usually the things that make a candidate truly not electable are things which have already disqualified him under suitability.

Each deviation from the synthetic "perfect candidate" increases your problems a little, but the opposition has the same sort of problems. You may reasonably hope that the opposition will worry so much about "electability" that they will neglect more fundamental attributes of a good candidate and give you a sitting duck to shoot at. That beautiful facade may conceal a hushed-up indictment for fraud.

The only item under "electability" that need keep you awake nights is the one about previous experience as a candidate. Being a candidate for the first time is like nothing else under the sun. "Nervous bride" is a common expression, but you have seen lots of brides who were not nervous. I'll wager you have never seen a first-time candidate who was not nervous.

Candidates are subject to a nervous disorder which I choose to term "Candidatitis." (New managers sometimes catch a milder form of it, if they have not come up the doorbell-pushing route and thereby gained immunity. Be warned.)

Candidatitis is something like measles; persons almost always catch it when first exposed, one seizure usually gives lifetime immunity, and it is best experienced early in life for the mildest symptoms and the least disastrous aftereffects.

The usual symptoms are these: Extreme nervousness and irritability, suspiciousness raised almost to the persecution-complex level and usually directed toward the wrong people, a tendency for the tongue to work independently of the brain especially in public where it can do the most harm, and a positively childish aversion to accepting advice and management.

Mr. Willkie (God rest his gallant soul!) was an almost perfect candidate in most respects and an able contender for the Champ. Take a look over the yardstick of the "ideal candidate" with respect to electability and see how well he measures up. In addition he had a well-financed campaign which had been organized and directed by some of the most able public-relations men in the country; his supporters had a crusading fervor and the opposing candidate labored under the very great handicap of bucking the anti-third-term tradition which more than off-set the advantage of incumbency. (Incumbency is a questionable asset for a presidential candidate in any case, no matter how important it may be in lesser offices.)

It is generally agreed by most observers that something catastrophic happened to Mr. Willkie's campaign during the man-killing swing around the country. Some of the reporters who went with him say that it appeared that the candidate hurt his own chances, unnecessarily, on almost every occasion.

Note that Mr. Willkie had never run for any office before. Note also that he steadied down right after the campaign and assumed the role of elder statesman, which fitted him well, and was a strong force for unity and coolheaded wisdom in a country at war. Does the diagnosis of "candidatitis" during the campaign seem to fit?

In any event, if you have picked a man you want to run for congress in a year or two, or for any major office, and this candidate has never run for office before, then it would be wise to run him at once for something like dogcatcher, in order to get him blooded for the fight.

Side remarkI find I have used as major examples three cases in which Republican candidates-for-president lost; this is not bias either way. The cases happened to display the illustrative features I needed.

CHAPTER VIII

How to Win an Election (continued)

The GrassRoots Campaign: From here on a bewildering variety of possible activities will press their claims on you. All of them will appear to be of use to the campaign; each will be eagerly supported by some member of your group as being 'Just the thing we need to do!" Unless you have some touchstone rule to go by you will waste your efforts and drive yourself nuts with meaningless activity.

Consider each move, no matter how small, in these terms:

(a) Will the action help to get a specific, individual vote (or votes) in your district and registered in your party?

(b) If the effect is general rather than specific, is the shotgun spread aimed at your own district? Can it be carried out at no cost? If the activity involves time or physical effort for you or the candidate, are the probable results in votes large enough to warrant it, or would it be better to use the time in sleep, going to the movies, playing cribbage, or trying to keep up with the endless study of political news and political issues?

If you start right out thinking in these terms you will soon apply the rules subconsciously and automatically. Let's consider some examples:

Effective Methods: Anything which brings your candidate, you, or your volunteer, into direct contact with a doorbell of a private home is the best possible campaigning. Nothing should be allowed to interfere with this activity-neither storm, nor sleet, nor dark of night, nor the bland insistence of Very Important Persons. I don't care how important he is; in this country he's only got one vote!

The best doorbell-pushing is done by the candidate himself. Consider a vacuum-cleaner salesman; he shows up at your door with vacuum cleaner, ready to give you a demonstration. Compare him with a mythical salesman who attempts to sell vacuum cleaners with nothing but a sales talk and some pretty pictures - no vacuum cleaner! Which salesman will sell the larger number of vacuum cleaners?

Your candidate is the product you are trying to sell; the easiest way to do this is to let the prospective buyer see the product.

In doing so you gain an enormous advantage over the usual opposition, since the GrassRoots Campaign has gone out of style in most parts of this country. Most of our citizens actually lay eyes on their officeholders and the hopefuls thereto about as often as they see circus elephants and with the same lack of intimate contact. A man behind the footlights on a platform is a little bit unreal; he might as well be a movie.

But the people, the individual Americans, are still interested in their candidates; to have one show up at the front door is as delightful a novelty to most of them as would be a chance to ride a circus elephant. That unreality, the candidate on the platform, on the billboard, or in the newspaper, suddenly becomes warmly human and a little more than life size.

In addition to being a novelty the presence of the candidate at the door of a private home is a flattering compliment, because it acknowledges the fact that, in this country, sovereignty is vested in the individual, not the state. (The voter may not think in those terms but the idea will be kicking around in the back of his mind. "Here is a man who really seems interested in us ordinary citizens-not like those downtown politicians.")

We can assume that your candidate has at least a moderately pleasing personality; the situation is a pushover. Most laymen will even cross party lines for anyone they have met and have no reason to dislike. The only way the opposition can off-set the advantage is by a personal call by the opposition candidate himself.

Since the ordinary opposition candidate won't do any significant amount of doorbell-pushing and since the extraordinary opposition candidate can only equal the efforts of your candidate here is a way to join a bat—de in which you need never be defeated. In general the properly organized GrassRoots Campaign cannot be beaten by any other sort of campaign-and it happens to be ideally suited to the volunteer organization with little or no money.

Have your candidate punch doorbells for three months on a forty-hour week basis. Ration his other campaigning to fall outside the forty-hour week of personal calls and don't let the other activities wear him out, no matter how important they may seem (they aren't!). Inspire your volunteers to the maximum of personal calls their free time and industry will permit. Everything else is incidental. You, as manager, will pick up the loose ends and attend to the unavoidable chores. You also will do some doorbell-pushing, less than the candidate, more than the average precinct worker. You must, or you lose touch with reality and your judgment goes sour.

It is frequently objected that congressional districts have become too large for the candidate to campaign from door to door. This is not true; the more physically difficult it is to cover a district the greater is the advantage to the candidate willing to make the effort of a GrassRoots Campaign. It is true that extremely large constituencies, such as for governor or president, cannot be covered effectively by the candidate, but in districts no larger than a congressional district the candidate can and should do personal canvassing, even if the district is spread through several counties. There are ways to save his time and make him more efficient, by concentrating on populous districts and by the use of selected lists-the latter is most important; the candidate must never go blindly from door to door. More about that later.

Even in the very largest constituency, the United States as a whole, the same principle applies, at second hand. The astute national chairman tries to know personally every one of his 3,000-odd county chairmen and shakes hands with as many thousands of the precinct workers as possible. When he takes his presidential candidate on a swing around the country he has the candidate do the same thing, so far as possible, even though the newspapers emphasize the speeches and rallies. Practical politics is an unending struggle to turn mass census figures into an endless series of individual, personal contacts.

Let's see what Jonathan Upright can be expected to do against Jack Hopeful. You have him scheduled to spend 500 hours punching doorbells. He should nail down a minimum of l ,000 votes, probably much more, but if he can't average two certain new votes per hour he had better retire to private life. The average paid, professional precinct worker will not deliver more than ten to fifty new votes (votes which would otherwise have stayed at home or voted the other way) no matter how good his ward leader thinks he is. The enthusiastic volunteer is good for at least fifty, if coached and supervised, but probably not more than a hundred and fifty because of time limitations on most amateurs.

The district has a population of more than 300,000 but in the breakdown given earlier it was shown that our real interest was in 3,000 selected votes. Thus your candidate will turn out by personal canvassing about one-third of the votes you are after, over and above what accrues from conventional campaigning. He is equal to about forty paid workers, or at least a dozen volunteers and he can get votes that cannot be gotten by any other method.

If this method of campaigning is used, the task of your precinct organization is only that of equalling the efforts of the rival precinct organization - quite a task in itself, but a volunteer can equal an opposing volunteer and exceed a professional. The candidate himself can tip the balance heavily and even make up for deficiencies in your field organization. He is a one-man gang, if you keep him punching doorbells. (Free bonus: Doorbells give immunity from candidates - and help to create statesmen!)

Ineffective Methods: In general they are shotgun methods; take another look at the touchstone rules.

An example-one of your warm supporters calls up, full of enthusiasm. There is, he says, a mammoth Elks Club ball Friday night at the Gigantic Auditorium. There are lots of Elks in the district-he knows, he is an Elk. And this is going to be a big affair, 4,000 tickets sold already. Now here is the angle: The program chairman is a member of our party and he can be persuaded to let the candidate pin the prize on the Queen of the Ball - not strictly political but you can get his name mentioned four or five times over the loudspeaker. The rest of the time the candidate and your eager beaver friend will circulate around meeting people and getting votes. No rule saying you can't talk politics in private conversation. Furthermore (this is the clincher) the rival candidate, Jack Hopeful, will be there-we can't let him get ahead of us, now can we? Your friend will supply the tickets and drive the candidate to and fro; it won't cost a dime and it's a wonderful opportunity to pile up votes. How about it? It's a natural, isn't it?

Your only problem here is how to turn it down without hurting the feelings of your loyal but unmathematical friend.

The meeting is worthless when compared with the effort it entails. Even if your candidate has no other scheduled date, it is better to let him go to bed early than for him to make an appearance. Here is why:

Four thousand persons present for a meeting held outside the district - Let's apply an arbitrary factor which you will vary to suit your own actual conditions; let's say that 1,000 live in your district. The ages will run from 18 on up; nevertheless the registered voters will not exceed 800 out of the thousand. Four hundred will be of your party (or apply your own registration ratio). That's ten percent of the crowd. If Mr. Upright stirs around all evening he can meet about fifty people - if he spreads himself any thinner he can't be effective. Five of them will be registered in your district and your party; two of them will vote in the primary; one of them would have voted for him in any case; the other is a new vote.

Let the poor fellow stay home and rest. His feet hurt now!

But how about the announcement over the loud speaker? Of the 400 at least half will not listen; of the remaining 200 most of them will either not catch the name or will forget it before the evening is over. The ones who will remember, associate it with a name on a ballot, and be affected thereby, can be counted on the fingers of one thumb.

Speeches made over the radio are usually ineffective except when made by very prominent persons on issues statewide or nationwide in importance. If you can get a popular local news commentator to plug your man, fine! If your organization has a regular program which has been established for some months and you have reliable figures to show that it has a sizable audience, then it is worthwhile to put your man on it.

But don't just buy a radio spot during the campaign and have him make speeches, for he will be talking to himself. Most political programs are simply turned off.

Most meetings held outside the district are useless to the campaign even if they are political rallies. If an appearance seems necessary for diplomatic reasons, send a stuffed shirt to represent your candidate.

Signs are not worth even the cost of printing unless displayed in the district. Again some enthusiastic supporter will urge the merits of display at beaches, race tracks, junctions, and other crowded spots outside the district but which do in fact draw crowds partly from your district. Agree in principle but let him operate on his own; insist that every dime and every piece of display printing is already rationed.

BorderLine Methods: Your district has hundreds of public and semipublic meetings in it during a campaign, most of them nonpolitical. All of them are a possible source of new votes - but an attempt to cover all of them will result only in physical collapse.

Businessmen's luncheon clubs are worth the trouble if they can be fitted into the program. Your man has to eat lunch somewhere; he might as well eat it with the local Kiwanis Club, Rotary Club, or Chamber-of-Commerce group, especially if the custom permits him to be introduced as a candidate, or if he can be permitted to speak for seven or eight minutes on a "nonpolitical" aspect of public affairs. He will pick up a vote or two and lay a foundation for the final campaign.

Women's groups are not worth the trouble during a campaign unless the candidate can make a frankly political appearance and can attend without neglecting more direct campaigning. Usually he can meet more housewives in less time by punching doorbells - and on a much more selective basis.

Some of the new veterans' groups are openly political and show an aggressive intention to do something.

The political directions of the veterans of World War II have not yet shaped up as this is written, but these groups must not be neglected. It appears likely that many of the most active political volunteer workers during the next decade will be young veterans.

I am sorry to note that there are many groups which are usually quite limited in outlook - some of the older veterans' organizations, labor groups, "taxpayers" groups, real estate groups, old-age pension groups, *etc.* Avoid appearing before such groups unless your candidate and you are honestly in sympathy with the particular special program of the group. I am neither endorsing nor condemning any of these groups, but it is impossible for a rational man to agree with all such groups since there is marked conflict between some of them. There is no need to waste your time going out of your way to make enemies, even if invitations are extended. Active support is only rarely forthcoming from such groups; instead your man will be asked to make flat commitments on a basis of "Whadda yuh going to do for us?"

A politician should make commitments; he should not be a mugwump, or a "know-nothing," but there is no ethical principle requiring him to drive across town for the purpose of refusing to make a commitment.

Many groups hold formal inquisitions for the purpose of examining all candidates to the end of preparing formal slates of endorsed candidates. In my opinion such a sober-minded procedure merits the respect of attendance even when you are reasonably certain of not receiving the endorsement of the group. This is quite different from being put on the spot in front of a crowd made up of a pressure group. The atmosphere of such an examination is usually judicial and urbane; your candidate has an opportunity to build respect for himself as a man even among those opposed to what he stands for, by making direct and honest answers to direct questions. If you ignore such groups as the German-American Bund (or its successors), the Communist Party, and the Ku Klux Klan, the residuum will probably merit your attention.

Many communities have non-partisan forums or study groups intended to increase popular knowledge of public affairs. They are not the source of many direct votes but are excellent places to meet and obtain the services of new volunteer workers among the serious, public-spirited persons who attend, as well as being worthy of support in principle.

Many political meetings are not worth much effort even when held in your own district Let the candidate attend such if his budgeted time and strength permit, otherwise attend them yourself or send a representative to speak briefly and to explain that the candidate can't be two places at one time. (It is not necessary to say that he is home in bed!) But your candidate should show up at as many political meetings as can be fitted into the more important direct campaigning. His appearance can be as short as ten minutes, then to another meeting, or home and early to bed.

The use of signs, the distribution of literature, and the place of newspapers will be discussed under "Publicity." These media are distinctly borderline; there are more ways to waste money using them than there are to get votes.

The Campaign Committee: You will have two campaign committees, the public or propaganda-purpose committee and the private or working committee; the first includes the second. The public committee will be as large as possible and will include everyone you can persuade to sign a card or a list which says, "I take pride in publicly endorsing the candidacy of Jonathan Upright for Congress," or some such, but does not say "and authorize the use of my name for advertising purposes" - or people won't sign it. You then use the list for advertising purposes anyhow for the suggested phrasing gives consent. The signers won't mind - it's just that the other phraseology looks too much like a contract Or you might say, "I take pleasure in serving on the campaign committee of- " with the explanation that the statement carries no explicit duties.

(Once in a while some person who carries water on both shoulders will sign the endorsements of two competing candidates. It eventually causes him embarrassment; he will call up and demand that you destroy, for example, your entire stock of stationery. He may threaten legal action. If you hold his signed endorsement, brush him off. "We can't do that, old man, unless you are willing to pay for printing the new lot No, really - tell you what - we'll draw a line through your name in red ink and mark it, 'Renegged.' How would that do?" Don't help him out of his hole and don't surrender his signed statement.)

This list of endorsers, the "committee," will be spread across the top, down the side, and eventually all over the back of your campaign stationery, and you may use it in display advertising. A personal endorsement from almost anyone is likely to drag in another vote or two. You may decide to suppress some names when you know that the persons concerned have numerous enemies and very few friends. This is legitimate; you have not contracted to use the names.

If caught out, I would take refuge in a social fib. "Your name isn't on the list? It must have been skipped when the list was copied for the printer. It's too late to add it, I'm afraid-that printing bill was $26. But I certainly will tell Mr. Upright that you wanted your name on his committee."

Follow your own conscience. My own will stand a few polite evasions when another person's feelings can be saved without damage to anyone.

The public committee will be headed by officers whose duties are nominal unless they serve in the same capacity on the working committee. These de facto honorary officers should be selected to be as broadly representative as possible and for maximum prestige. The following set-up would be ideal for the typical American community:

The Citizen's Committee for the Honorable Jonathan Upright, Candidate for Congress, Umpteenth District

Dr. Colin MacDonald, Chairman

Francis X. OToole, Secretary
Isadore Weinstein, Treasurer
Muriel T. Busybody, Field Director telephone Grant 0361

Mrs. Busybody (yourself) is the only working member of this list, although the others are all loyal supporters. The names have been selected by you as being conspicuously Protestant, Catholic, and Jewish. For maximum effect each gentleman should be very prominent, and highly respected in the community by all groups. If Dr. MacDonald is a prominent Presbyterian and Mason and a stylish physician noted for his charities, Mr. O'Toole a distinguished lawyer and an active Knight of Columbus, and Mr. Weinstein both a Scout commissioner and well known in B'nai B'rith, then your cup runneth over.

Special offices can be devised to permit other prestige names to stand out-chairman women's division, vice-chairman, director speakers' bureau, public relations, liaison, chairman finance committee, chairmen for various small communities in the district, director of research, chairman study groups, etc., without end.

It is advisable to list the rest of the committee in strict alphabetical order to avoid hurt feelings.

There is no reason why any of these prestige officers should not be active campaign executives. It is sometimes possible to get a busy, able person actively into the campaign by getting him first to agree to letting his name appear at the top of the letterhead, then calling him into war councils.

The working committee consists of the following- by any titles: Candidate, manager, money raiser, publicity person, office girl, field supervisors, and precinct workers. Some of these people will double in brass and all of them should do some precinct work, in order to keep their roots down. The office girl and publicity person may be paid professionals-they certainly must be professionally skilled and experienced whether they are paid or not. There is no need for anyone else in the campaign to be paid anything.

The best place for members of the candidate's family on the committee is the chairman of South America and the Eastern Hemisphere. The candidate may need and want a member of his family as a confidential secretary and this may be tolerated, but relatives of candidates are subject to an even more virulent form of candidatitis than are candidates - it is very discouraging to have to drop real campaigning in order to go around patching up gaps in your fences left by unpolitic relatives of your white hope.

Headquarters: It does not matter in the least whether you have swank offices or good equipment; the voting public will neither know nor care. A telephone call from a private phone in a modest home sounds just the same as one coming through a switchboard in a suite of fancy offices. You need a typewriter, file boxes for 3 x 5 cards (shoeboxes will do), a cheap letter file, a two-bit scrap book, the use (not the ownership) of a duplicating machine, a telephone which is not in reach of the casual dropper-in - and nothing else - nothing! Use furniture at hand, or improvise it out of scrap wood. Place the headquarters in any heated, rent-free space, your own spare bedroom, somebody's rumpus room, or a donated second-rate office over a store building.

Campaigns customarily have public offices fronting on commercial streets. The usefulness of such so-called headquarters is questionable; the vote-getting power is not better than border line. If you can get an empty store building, or space in an occupied store belonging to a supporter, and in either case absolutely rent-free and if you can get someone to remain in such donated space to answer questions and hand out literature on an unpaid but faithful basis and if such person is unable or totally unwilling to do precinct work instead, it is then worthwhile to invest in signs and printing to advertise the campaign by advertising the space as a "headquarters." Otherwise it is better to wait until the final campaign when such space is more readily available for the entire ticket

There are distinct advantages in not having public offices and in avoiding a swank, expensive appearance. Your campaign can be well advanced, almost unbeatable, before the opposition realizes that you are a serious threat. A GrassRoots Campaign can be as silently insidious as cancer, as long as it doesn't look like much in the early stages. And if your offices are not expensive and comfortable you will be less bothered by the chap with his hand out and by the Headquarters Hound. The latter is a practically harmless but ubiquitous lower life form which clutters up political offices, occupying chairs, taking up working time, sounding off, and absorbing anything that is free, from ice water to signs. He is related to Sunday morning quarterbacks and armchair generals.

If your headquarters is not in a private home, make sure that the only available telephone is a pay phone, or, if that cannot be obtained, put a lock on the telephone and take extreme precautions with the key, as well as establishing the practice of logging all outgoing calls and obtaining the charges, if a toll call, from the operator. (This will be regarded as outright tyranny by the Headquarters Hound, but it is utterly necessary if you are to avoid incredibly large deficits.)

The telephone bills that can be incurred by an open telephone in a political office must be experienced to be believed. They are not necessary; the legitimate outgoing calls which cannot be made over private, unlimited phones are very few. The best arrangement is the pay phone and a petty cash account, locked up with the stamps, and for which the office girl is responsible.

After taking such precautions, you may then, and should, make free use of the telephone. Your business will not bankrupt the committee.

An extension wired only for incoming calls may be added to a pay phone and placed on the desk of the office girl.

The campaign funds should be kept in a bank account as the funds of an unincorporated, nonprofit society. A respected group of three, none of whom have control over the funds, should be appointed to keep a running audit. The checks should require two signatures, that of the manager and either one of two others, let us say the campaign chairman and the chairman of the finance committee. The candidate should not sign checks, though he may reasonably insist on a veto as a condition of running-but let us hope not.

The following categories of expense cannot be avoided:

- Filing fee
- Printing
- Postage
- Telephone tolls
- Refreshments for the election night party for the workers

The following categories of expense are not indispensable but a strong campaign will include some and possibly all of them:

- Signboard rental
- Newspaper display advertising
- Professional distribution of literature
- Publicity person's salary
- Office girl's salary
- Lunch money and gasoline or carfare money for volunteers
- Radio spot plugs
- Candidate's extrapolitical expenses
- Manager's extrapolitical expenses.

Some of the expenses in the second list can be avoided by astute management, not by eliminating the type of campaigning indicated, but by getting what is needed free. An able, professional publicity person on at least a parttime basis is a sine qua non; if a volunteer supporter in this professional category cannot be found then one must be hired. If a volunteer typist, completely reliable and reasonably efficient, cannot be found, then she must be hired - but a volunteer is better.

The other conditional expenses depend on local conditions. Form the habit of being extremely tight-fisted about expenses in both lists of categories, necessary and conditional.

There are many other types of political expenditure; you are sure to have many well-meaning advisers who will assure you from experience that this or that must be done, which does not fall under one of the above headings. I believe that you will find in every case that the recommendation comes from experience with some other type of campaigning than the volunteer, GrassRoots Campaign. Thereon? other types of campaigning - I have expended more than thirty thousand dollars (not my own money!) on a single campaign issue in less than thirty days-but no type of campaigning is as effective as the type here described and this type is almost without expense. The expenses are all incidental to the campaigning and are not properly

This is literally a case of "The Best Things in Life Are Free." It is easy to run a campaign with lots of money, but an expensive campaign can always be beaten by a properly organized campaign which can barely pay for printing and postage.

In addition to a headquarters or intelligence center of some sort both the candidate and the manager need some sort of hideaway-two hideaways if the manager and candidate are of different sexes, to keep tongues from wagging. A spare room in the home of a friend is ideal, particularly if it is served by a phone through which messages can be left without waking the person who is resting. There will come times when an afternoon nap, or at least complete freedom from pressure, is necessary to preserve your balance, your judgment, or even your sanity.

A remote back room in the building which houses the office will do. Don't try to use your own home for this.

Precinct Organization-Training and Management: We assumed that the precinct organization had been built up through earlier club organization; that includes the assumption for a congressional campaign that the volunteer field organization is too numerous to be managed directly by the manager. Ten is about the highest number which can be managed directly; you want and need a hundred. Therefore you will have area managers.

Talent is where you find it. The neat divisions you draw up on a precinct map can never be realized in practice for you will never have enough competent leaders to whom you can delegate authority. Many of your area leaders will be no more than messenger boys between you and the precinct worker.

To make your contact with the precinct worker as direct as possible hold weekly get-togethers with all the organizations at a fixed time and a centrally located place. Serve coffee and doughnuts. See to it that the candidate has this as an all-evening "must" date; your purpose is not only to instruct and inform your workers - and to gain information from them - but to renew their enthusiasm by direct social contact with the man they are backing. Make it as informal as possible - no lined up chairs, no standing to speak-a family party.

Another fixed weekly date which can precede or follow this one, or be held on another night, is the meeting of the working committee, for strategy, tactics, and business. It is a must for you, but not necessarily for the candidate.

The volunteer precinct workers are by far the most valuable asset of your campaign and the one most difficult to get and keep. They are not merely the rosters of your clubs nor are they a list of people who have pledged themselves to "work one precinct." No such wooden approach creates a precinct organization.

You will have winnowed out, from hundreds of political contacts made during two to four years of apprenticeship, a list of people who will back their convictions by work rather than by talk alone. Each time you find one you will treasure him (or her) and train him and encourage him, with loving care.

Don't expect to find the majority of them after you decide to manage a campaign. Some candidates and some managers seem to think that precinct workers grow on trees! If you have not already built up a following of people who believe in you, look to you for political leadership, and will work, then you are not yet ready to tackle anything as difficult as the management of a congressional-sized campaign. You are still in the junior-officer stage of your political career.

Even if you never have the time or the circumstances which will permit you to undertake the management of a major campaign this chapter is still for you. The principles discussed apply to the minor leader in a campaign quite as much as to the manager, and, as a minor leader, you can help to keep the manager on the right track by your counsel. In so doing you can be the factor which turns defeat into victory, as many a manager is energetic and intelligent but inexperienced.

The volunteer precinct organization is never as perfect -on paper- as the paid organization of a political machine. But you can reasonably hope to have one good enough to swing an election.

"The moral is to the physical in war as three is to one." - Napoleon.

Napoleon was a piker. The principal advantage of the volunteer over the paid machine professional is his sincere enthusiasm. In politics the ratio expressed by Napoleon is nearer ten to one. The volunteer is campaigning twenty-four hours a day, not by intent, but because he can't help it. It gets in his blood. He is the guerilla warrior of politics, acting on his own initiative, harrying and demoralizing a force much larger, and arousing a despairing citizenry to new hope. Like the guerilla, he fights with the materials at hand and improvises what he lacks.

It is your object to inspire and direct this enthusiasm.

Leadership is not an esoteric matter. You don't need the whoop-t'do "enthusiasm" of a night dub master-of—ceremonies, a revivalist, or a radio announcer. You need two qualities only, sincerity and a willingness to work. The rest you will learn, in a fashion suited to your temperament. (A sort of leadership by default can come to those who lack sincerity but are energetic, since a group will accept any leadership in preference to none.)

As a leader of political volunteers there is just one paramount rule to keep in mind:

Men do not live by bread along.

The personal pat on the back, the public praise for work well done, a button to wear on the lapel, the testimonial dinner, the letter of thanks, the election night party, a personal word with the candidate - these things are worth much more than cash or patronage. Unless he is actually starving, a man-any man and all men - is motivated primarily by "face," by intangibles of some sort which have to do with behaving in that fashion which he feels does credit to his own conception of what he is, or what he would like to be.

You may not like the term "face" - if so, don't use it - but I think you will find that all human motivation other than the simplest animal aspects of belly hunger, sexual rut, and physical fear can be found in a need for intangibles which will satisfy the individual's ideal conception of himself-and even hunger, rut, and fear are feeble in comparison, else soldiers would not fight, rape would be as common as shaking hands, and dinner guests would fall on their food and rend it. Even the dollar is pursued more usually for this higher reason than for the simple reason of filling the belly - to do one's duty to the wife and kids, to provide for the education of children, to live in a finer house, or simply to feel successful because one's labors command a high price. These goals are all intangibles, no matter how concrete is the symbol for the goal.

In politics this strongest of all human forces is tapped most easily by the pat on the back, in its various forms. Most people in this country like to think of themselves as "good citizens"' they have been brought up to consider it one of the important intangibles. You can convert this yearning into doorbell-punching by public and private acknowledgement that precinct work is the highest expression of good citizenship. (It probably is!)

Let everyone know at all times that no other political work carries as much honor and prestige. Be emphatic that the precinct workers are the royalty of organization, the other types of workers - office workers, speakers, and such - only the nobility, and campaign contributors merely the gentry. Never let a mere contributor of money have a vote in policy; don't even pay as much attention to his advice as you do to that of the least of the precinct workers - the precinct worker knows what he is talking about, in his neighborhood; the cash contributor is merely theorizing.

You might organize your field workers into a Doorbell Club and call the weekly get-togethers its meetings. Make precinct work a mandatory qualification for membership. (You have a wheelchair cripple who should be a member; very well - let him work a precinct by telephone, but make him qualify.) Get off a few remarks at each meeting along this line: "This is a closed corporation and the only way in is by pushing doorbells. John D. Rockefeller himself can't come in that door, not with a ten thousand dollar contribution in hand, unless he can prove that he has worked in his precinct."

Your exclusion-act may antagonize some persons who are useful otherwise but who can't or won't do canvassing, but it is better to let them fall by the wayside in order to protect the morale and enhance the prestige of the field workers.

If you build up such a special club, you will not only win for Mr. Upright, you will make yourself the unquestioned boss of the district. The canny politicians will quickly recognize that you possess the only political power in the district; they will come to you for the yea-and-nay. You will not neglect the public clubs you have helped found or been active in, however; they then will become the feeder organizations for your campaign shock troops.

Mr. Upright is a member of the club, since you have him punching doorbells. Don't let him miss attendance at a meeting, or even part of a meeting, not even though the governor or the national chairman wants to see him that night, or your vote-getting will take a sudden slump. On the other hand, if he is home sick in bed you can use it to inspire more work.

The methods of precinct work have been indicated by examples in an earlier chapter. You will have to train them in it, since most people get stage flight at the idea. There are many right ways to do it and you will learn your own as well as the types I have given-but keep it simple!

The hardest hurdle is the opening remark when the occupant answers the door. The next hardest is the second remark in answer to the householder's reply, a reply which will follow one of about a dozen stock forms, if your worker can get past this point the rest is easy for any of us chattering simians. It is therefore worthwhile to type out and mimeo some stock phrases:

Opening Remarks

"How do you do-Mrs. Crotchet? I'm a neighbor of yours, Thomas (or Mabel) Friendly, and I'm calling on you to ask you to support Jonathan Upright in the primary next month."

"Good morning. I'm Tom Friendly, Mrs. Crotchet. We're supporting Mr. Upright for the party nomination and I'd like to tell you something about him and try to get your support, too."

"How do you do? Am I speaking to Mrs. Crotchet? Mrs. Crotchet, I am one of your neighbors, Mrs. Thomas Friendly. If you can spare me a moment I would like to tell you about a citizen's committee we have formed to try to improve the representation in Congress for this district."

Replies and Answers

("I'm for Jack Hopeful.") "So? Well, I understand he is a fine man. We're in the same party, at least-if your candidate wins the nomination, Mr. Upright is pledged to support him and campaign for him... and so will I." This is followed by a quick retreat, or an invitation to attend local dub party meetings, depending on the response.

("Those people have moved and we belong to the other party.") "Oh, I'm sorry to have bothered you! Well, be sure to vote in any case. Mr. Upright says that if we all turn out and vote our convictions it won't matter whether Upright is elected, or Upright is defeated - the country will be in safe hands." (Note the triple mention of Upright's name in a statement which urges her to vote the other way.)

("How much do you people get paid for this sort of thing?") "Oh, we don't get paid anything! This is entirely a spontaneous effort of some of the voters. We organized it and, instead of getting paid, we pay for our own printing and hall rent and so forth by passing the hat among ourselves. We think that's the only way we can have honest government."

("I'm too busy to talk to you.") "Oh, I am sorry that I bothered you! May I leave this with you and then come back at a more convenient time? We know you folks take the trouble to vote in the primaries so we would like a chance for you to get to know Mr. Upright - your opinion is worth something."

("Oh, I never vote except in the main election.") (Frankly, this idiot is hopeless - however) "Oh, if you wait till fall you don't get any real chance to make a choice. The primary is very important this year - if we sent a car around to pick you up, would you make an exception? We need you."

("I intend to vote for Mr. Upright.") "Fine. It cheers me up to hear a person say that. Here is some literature about him - maybe some of your friends would like to see it. By the way, Mr. Upright is speaking at our local club next Friday night. Could I drop by and take you with me?"

The field workers will teach each other, through shop talk; from that shop talk you will get better examples than I can give, examples tailored to your campaign and your community.

One of the easiest ways to train a precinct worker is to send him out with an experienced one for a single afternoon or evening. You can teach a group at a time by acting out the type cases, using two experienced workers in an amplified version of the type cases given herein. Do it two ways - the right way and the wrong way-and you have the basis for an amusing dub program. The wrong ways can be made very funny by persons of moderate dramatic talent-Joe Roughly arrives smoking a cigarette, knocks and rings alternately until he wakes the householder or drags her out of her bath, sticks a foot in the door, gets into an argument, and so forth without end.

I venture to predict that, with the recent enormous strides in visual-aid training, both major parties will soon have 16-mm. sound pictures available for the use of local dubs covering the above. If such pictures are supervised by persons intimately acquainted with the problems of the dosed door, then they should be very useful; otherwise - hmmm! Better taste before you serve.

Get them in the habit of using the 3x5 card. Have a supply at the meetings with a notice that invites them to place a dime in the saucer for each pack or to take them free if they wish. Show them your own files. Emphasize that the usefulness of their work depends almost entirely on whether or not they have records on election day of where the vote is.

Your area managers may show so much talent that they will crowd you and inspire you into better work yourself; however some of them will simply be message points, persons you can telephone and who in turn will telephone their several workers or whom you can call on to pick up campaign material from the headquarters for redistribution to the individual workers. In either case the area supervisor must be a person who works in at least one precinct. Otherwise he does not know the field problems and will botch things for you.

But there is another reason why everyone from the candidate up through the whole organization to the single precinct worker should do canvassing: The U.S. Army, shortly before World War II, added some 30% to its fire power by arming with rifles or carbines all of the noncoms and officers up to major. The same result is obtainable in a campaign organization - I have seen more than one campaign in which there were so many supervisory jobs, special jobs, and headquarters jobs that there were no doorbell pushers; then they wondered why they lost!

This is a complete reversal of opinion on my part, brought on by experience. In my first campaign I used to quote Poor Richard: "The overseer's eyes are worth more than his hands." In politics it should be rephrased, "The overseer's example is worth more than his precept-and it opens his eyes wider and gets votes in the bargain!"

Your publicity man should ring some doorbells in the district to sample the flavor - but he probably won't, whether he is paid or unpaid. Still... he can't shoot you for suggesting it.

If your office girl pushes a few doorbells in the evening she will understand the campaign better, but you will be happy enough if she has a civil tongue, a tight lip, and an ability to not lose track of the details.

How to Get a Selected List from which to Punch Doorbells: Your district has 320,000 residents lodged behind some 100,000 private doorways. It is most unlikely that you will have enough people to punch every doorbell. However there are only 70,000 members of our party in the district and only 25,000 of these may be expected to vote in the primary. They live in some 15,000 separate homes (this is based on statistical examination and is not a casual speculation). The problem is beginning to be cut down to your size; if you know which 15,000 doorbells in your district, 100 precinct workers plus one tireless candidate plus one manager could ring every doorbell.

Fortunately there are ways to determine with reasonable exactness which doorbells are worth ringing.

The adults in the United States fall into three groups, those who vote in primaries, those who vote in general elections, and those who don't vote at all. (The membership of the groups and the ratios between them vary slightly if city elections are considered rather than elections for state and national offices; this need not concern us at the moment as the principle is unchanged.)

The key to the matter is that these groups, though fuzzy around the edges, remain very largely the same from year to year, i.e., the citizens who vote in any one primary are almost certain to vote in every primary, circumstances permitting.

In many or most states it is customary to post outside the polls a roster of the registered voters with a check mark to show whether or not each person voted and to leave this record published for about a week after each primary or election. It is then possible to obtain the basic list you need by copying data from these lists. This is tedious and piecemeal; there is usually a better way. All states (I believe) require a voter to "sign the book." These books are returned to the registrar of voters, the city clerk, or other official charged with the custody of election records. There they remain for a period of time, depending on local law or custom, as they may be required as evidence.

You are probably entitled by your state laws to examine these records. Whether you are or not, the way to get the use of them is to find out where they are, who has the power to let you see them, and apply to that person, a smile on your face and friendliness in your voice, for permission to see them. Ask it as a favor, not a right

Two persons, one reading the signatures and the other making check marks on precinct lines, can get the basic list of the primary voters in a political party by this method for an entire congressional district in two to four days. The results are then transferred to alphabetical files, precinct files, and elsewhere as needed. This work needs to be done before the campaign opens and is one of the many reasons why campaigns are won between elections, not during the public campaign season.

You will need precinct lists of course. You need three or four sets of precinct lists for your entire district; such sets may be rather expensive. It is often possible to obtain free sets from the same official who let you see the election books. Otherwise you must purchase them from the contract printer.

Usually the simplest way to get anything is to find out who has it, then go directly to that person and ask him, in a pleasant tone of voice, to give it to you-free. This applies in all fields with all things, from a match to a milliondollar endowment, but it is unusually important in politics. If you use this rule you may miss on free precinct lists but you will make it up on free hall rent, free newspaper advertising, free printing, or free signboards.

When you have your basic list of persons who vote in your primary, the candidate and each precinct worker will work from it The candidate will use no other; the precinct workers will call first on the persons listed-about thirty evenings of work for each under our assumptions-and will call on others only if they have time for it.

The precinct worker is constantly revising his card file as he works, throwing away cards of persons who have moved and adding the newcomers, as he discovers them. In addition to newcomers discovered through his calls he should make an effort to find it out when persons move into the neighborhood. The postman could give him this information quite accurately but the postal regulations are a little stuffy about employees giving out data about people. Instead he can cultivate the neighborhood cop, the milkman, and the boys who deliver newspapers and groceries. Real estate offices and moving and storage concerns can be made sources of these vital statistics. A precinct worker who is on the job can, without very much effort at any one time, know quite accurately what vote is to be expected in his primary, how it may be expected to go, what individuals by name may be counted on to vote for your man, which ones of these will get to the polls under their own power, and what ones must be carried.

The handful of cards you hand him to start with, made up from the election books, make him the equal of almost any professional ward heeler, right from scratch. You have cut it down to the size a parttime volunteer can handle.

A volunteer organization is bound to be spotty; some precincts will have no volunteers. Don't try to transfer workers from other precincts, except on election day. Let the candidate work the precincts that have no workers, concentrating on the more densely populated. He will get more votes than a precinct worker could out of the same number of calls and he stands the best chance of turning up new workers. On election day regroup and bring in the votes he has cinched, even if it means spreading your forces very thin.

CHAPTER IX

How to Win an Election (continued) landmarks and Booby Traps

Don't expect a volunteer organization to make blanket distribution of political literature as the time used can be turned to better account making calls. If you decide that you can afford the shotgun method of blanket coverage, use paid professionals. Sometimes a tie-in can be made with some other distribution such as a community newspaper or an advertising throw-away at a very low cost.

You will have many marginal volunteer workers who won't or can't do precinct work. Put 'em to work! There is an endless amount of routine clerical work in a campaign, licking stamps, addressing envelopes, copying files, preparing telephone lists for election day, *etc.* Be a slave driver. If you blandly assume that they want to work and keep loading it on them, they will get to work, or get out and leave you alone.

Many people will telephone and ask that the candidate, or you if the candidate is not available, come to see them. No matter how sweet they talk most of them have their hands out for jobs or money. Be most pleasant but do not call on them and do not let the candidate call on them. Insist firmly that pressure of time does not permit and suggest instead that they come to see you. Most of them won't come; you gain thereby in, I believe, every case.

The Big Operator will show up. He is a Very Good Friend of Judge So-and-So and he knows Governor Whosis personally - practically elected him. The candidate has every confidence in him, he wants you to understand, and he is going to pitch in and Make Things Hum.

He wants a desk, he wants a secretary, he wants a telephone. He will be patronizing about your methods and your budget is Simply Out of the Question - if you are careless enough to let him see it.

Oh well - put him to work. Let him lick stamps, or something equally dull. He will leave presently and complain to the candidate. You may have your only real row with the candidate over this; the Big Operator may in fact be an old friend and one in whom the candidate has much confidence. But make it plain to the candidate that this guy must raise his own funds, hire his own offices, and locate his own workers if he is to be part of the campaign - otherwise you quit. You committed yourself to serve as manager, with full authority, and in no other capacity; the candidate agreed to that. If he does not have confidence in your judgment, your resignation is available.

You won't be fired. Later you will hear that this bargain-counter Boss Tweed is letting it be known all over town that poor old Upright is heading for a sad fall since he has chosen to trust his career to the amateurish hands of That Fool Woman. This is good; it lulls the opposition without interfering with your work.

There will be the crackpot, the confirmed trouble maker, and the tired liberal. The first two need no description - give them the bum's rush in any way you can. The last, like Mrs. Much-Married, has been there so often the thrill is gone. He knows the frailty of human nature - and that's all he knows. He would like to see you win-but you won't, you know. Anyhow does it make any real difference? Upright is a fine man and he is glad to do what he can for him, welcoming people at headquarters, and lending the benefit of his advice and experience - just to help out Old Pal Upright.

Use the stamp-licking routine on him. After a bit he will go back to his ivory tower and let the grownups get on with the work.

You are going to get sick of it. Not only will your patience be worn thin by the volunteer who will do anything except work, you will be driven to distraction by the arrogance of pressure groups, made heartsick by the outright sell-out, and astonished and hurt by dirty tricks ranging from torn-down signs to the complete lie, the planted scandal, and the falsified document.

But keep your temper and stay cheerful. The troubles will be more than off-set by the priceless privilege of close association with the loyal and untiring. Even if you lose, this alone will make it all worthwhile.

Publicity: You must have professional help if it can possibly be obtained. Publicity is an involved profession; even if I understood all about it, which I don't, this whole book could be devoted to it without considering all the angles.

If you are forced to work without a publicity man, a few rules of thumb may save you from some of the more gross errors.

Use just one picture of your candidate and make it a trademark. Don't let Mr. Upright nor his wife do the picking; get a group consensus on effectiveness, not beauty nor accuracy of likeness. Make one cut serve as far as possible. A 50-line sateen is about top for newsprint paper; slick paper can stand as high as 90 lines.

Small newspapers can use pulp mats from the cut. They are cheap.

All other things being equal, use the union bug on all your printing including your stationery and your candidate's cards. If non-union printing can be obtained as a donation, consider the probable effect in your district as well as the political beliefs of your candidate. If you believe in unionism the matter is settled automatically, of course.

The large, or 24-sheet, signboards are associated in the public mind with heavy campaign contributions and slush funds. In fact they are not very expensive but the overtone of graft is against them. Outdoor advertising companies also rent small boards, 6-sheet and 3-

sheet, which are less expensive and more effective. Even the most pinchpenny campaign can usually afford a good coverage of these smaller boards for the last month of the campaign. You don't need them earlier.

There is an optical illusion, which I do not understand, but which calls for using a much smaller proportional amount of blank area on a signboard than one uses on a printed page or ad. The lay-out which looks perfect when you prepare it in miniature looks strangely anemic on a signboard. Use larger letters and fill up more of the blank. Better yet, get it done professionally.

Don't try to say much on a sign. Make it brief, then make it briefer.

Never mention your opponent's name on signboards, in ads, nor in literature. Train your workers never to mention him by name - call him the opposition candidate if forced to refer to him at all. Don't let Mr. Upright speak his name, even when referring to him.

If your district is large and has a low-powered radio station with a good local following you may want to hire spot plugs, to be scattered through the day's programs. Make them short - five to ten seconds - and have several different wordings, all simple. Careful phrasing will permit you to use Mr. Upright's name three times in a ten-second plug. Here is a rather inane example:

"Attention, please - a message from Jonathan Upright. Mr. Upright urges you to vote in the primary next Tuesday - the Jonathan Upright for Congress Citizen's Committee."

Don't make them so frequent as to annoy.

The primary purpose of all political publicity is not to persuade but to fix the name and the office in the subconscious by repetition and, secondly, to let your friends know that they are not alone - to encourage them. The use of signboards and radio plugs does very little in direct vote-getting, but it does let your friends know that there is a campaign going on. They see the signs, they hear the plugs, and it warms their hearts. They say to themselves, whether they be workers or simply voters who are willing to support your man, "Well-this looks like action: Maybe we got a chance."

It isn't action, save for a few who will climb on anything that looks like a bandwagon, but enough display advertising to put on a brave front is necessary in the latter part of any campaign - to warm cold feet

The purchase of display advertising has a marked effect on what publicity stories a newspaper will run for your candidate, even with most of the large metropolitan dailies. With the small, local papers which publish once or twice a week the customary rule is an inch for an inch, advertising versus publicity story. A friendly editor of such a small paper may give you the ad free, provided you will keep it to yourself so as not to jeopardize his revenue from other candidates.

Editors and staff men will help you with layouts and with the wording of your publicity stories, even if they don't back your man, if you will ask for help and show that you don't think you know it all. "Frankly, it stinks," should be music to your ears; you are about to receive some practical professional advice, free.

People like and respect persons they have helped; it's more common than gratitude.

Large display ads in small newspapers may be a cheaper way of getting full coverage than the blanket distribution of literature. By "large" I mean up to two columns, half a page high. If you have more money, repeat the dose rather than increasing the size.

Try to split your advertising budget among all your district editors unless a paper is actively against you. Even then it may be wise to use it if it offers the only means of reaching some area.

Newspaper ads can eat you out of house and home. The political effect of newspapers is problematical and is much less than the newspapermen think. Remember that Mr. Roosevelt won four times with about 90% of the press against him. Remember that, even if you are a Republican, and don't be stampeded into building your campaign around newspapers. A strong newspaper campaign can make you think you are winning when you are actually taking a severe licking. (See Sampling a District below.) You can win with every paper in your district against you.

The automobile sticker is good because it constitutes a personal endorsement and is cheap. Even better, and still in the economy class, is the bumper strip sign for automobiles. They can be homemade - there is a silkscreen stencil process which you can learn from any sign maker. The printed ones are cheap, however, and come with tin strips to fasten them to the bumpers. Homemade ones may be attached with large rubber bands or with string. They make a brave display and are read by everyone who sees them-which is not true of stationary signs. Your precinct workers, at least, should carry such signs, fore and aft, on their automobiles.

One-sheets, half-cards, and quarter-cards can be tacked up all over the district by your precinct workers without slowing up their doorbell-pushing. There are frequently local post-no-bills ordinances but they are rarely enforced.

But get a publicity man if you can, even on a parttime basis, or a cash-for-results basis.

Liaison and Party Harmony: In the primary campaign your opposition is Jack Hopeful, a member of your own party. Never forget that you will need the support of all your party after the primary and never let your supporters forget it!

This is a very touchy, difficult matter, particularly in a volunteer organization. You are certain to have loyal supporters who are simple souls, unable to think in terms other than black and white. To them Jack Hopeful is the ENEMY-they will commit excesses through misguided zeal. So also will some of Mr. Hopeful's supporters. Bad blood breeds more bad blood; in short order you can have a situation which is completely out of hand, which splits the party wide open, and which will render it impossible for your man to win in the finals.

Since the nomination is valueless in itself, being merely a necessary means to an end, you must prevent this at all costs.

You can start out with the best of intentions, determined to run your own race, to keep it clean, and to ignore the Hopeful campaign. Then comes the day when some signs are torn down, or there is some bad-mannered heckling at a meeting, and your more hotheaded supporters will go galloping off the reservation, bent on triple revenge. They can ruin all your good work in twenty-four hours, in the sincere misapprehension that they are thereby campaigning for Mr. Upright.

Even if Jack Hopeful is a bit of a heel, even if he is personally responsible for the dirty tricks (which is most unlikely!), you must try to prevent retaliation in kind. As a matter of fact the signs may have been torn down by the opposition party, rather than Hopeful's crew. It is even possible that the opposition party has paid agents provocateurs in both your group and Hopeful's, with instructions to create party dissension by any means.

I know of two effective and sufficient methods - you will find others. Let Mr. Upright and yourself tell your supporters repeatedly that you intend to support Mr. Hopeful and the whole party ticket, if Mr. Hopeful is nominated. Base it on the idea that the whole democratic process consists in struggles for domination in which the majority decision is accepted amicably, the ranks are closed, and the new and larger groups move onto larger struggles. Therefore your opponents of today are your allies of tomorrow, against a common enemy. Mention that if Mr. Upright goes to Congress, he will have to work with congressmen of both parties for the welfare of the country as a whole.

Nothing is more destructive of democratic institutions than implacable hatred between factions.

The English have a good term; they speak of "His Majesty's Loyal Opposition," recognizing thereby that opposition has a constructive function and need not be ill tempered.

A more positive step can be taken under the safe rule that it is very hard to dislike any man you know well, unless he is that rare thing, an unmitigated scoundrel. The primary campaign period is a good time for party-wide social events.

Dances are good; breakfasts, luncheons, and dinners are even better and less trouble to arrange. In your district there will be restaurants with banquet halls of all sizes. The usual proprietor will be willing to serve groups meals without selling tickets ahead of time and with the understanding that he will collect from each just as he does with the run of customers, provided you can give him some idea of how many may be expected. Local knowledge should enable you to do this.

(Don't forget to see to it that a saucer is passed around for tips; otherwise the waitresses will be forgotten. To forget them is bad politics as well as bad morals.)

In a district in which I was once active we used to meet for breakfast Sunday morning at ten o'clock, monthly year in and year out, more frequently as elections approached. The county committeemen used to make the arrangements, though the custom was started by lay members who saw the need of party-wide liaison. (Party harmony makes a fine hobby for anyone. "Blessed is the peacemaker - " for he shall see his party triumph in November!)

We picked Sunday morning because that was the only date satisfactory to practically everyone-you will find it so. The Catholics went to mass before the breakfast; the Jews held their services on Friday evening in any case; the regular churchgoers among the Protestants missed one morning service per month which they could make up that evening if so minded. Nobody seemed to feel that the Sabbath was being broken; there is excellent precedent in any case. See Luke VI-9.

During primary campaign periods a clever chairman of such a gathering will see to it that those present do not gather in cliques. "The purpose of this meeting is to get acquainted, not to huddle up with your same old crowd. I seem to see the Shannon crowd all together down at the end and up here the whole Weiss campaign committee seems to be staked out. Break it up, boys and girls! Let's find out how the other half lives. Hey-you, Joe-swap places with Mrs. Ross. Take your plates and glasses with you. Bert-gimme a hand. Tag about every other one of your boys down there and make 'em move."

They'll move and they'll like it. It is very hard to stay mad at a man when you have eaten with him and swapped anecdotes.

My wife was once a necessary factor in electing a governor; her weapons were a cookie gun - one of those aluminum gadgets which make fancy, patterned tea cakes, an eighth of a pound of tea per week, and a supply of pseudo-engraved invitations to Sunday afternoon tea. The refreshments were just props; the guests averaged a little over a cup of tea apiece and two or three tiny cookies.

The effect on the gubernatorial election was an accidental dividend; our original purpose had been only to preserve harmony in our own rather small district. But the key personnel of the major rival gubernatorial candidates for the party nomination met socially in our living room several times - and found out that the other fellow wasn't so bad, after all.

It happened that the campaign we were directly interested in failed - but there was a serious breach statewide in the party over the fight for governor. The breach was patched up, because the key leaders on both sides had come to know and trust each other.

I don't mean to say we elected a governor with tea and cookies; we didn't. But we did furnish one indispensable condition, a finger in the dike at the right time and place. You can do likewise with Jack Hopeful and his friends, varying the details but not the principles.

Alcohol is not necessary as a political lubricant Quite aside from the moral issues it is fantastically expensive for the average volunteer. I remember a Democratic politician telling me about a time when his local county chairman had dined with Jim Farley, then left early and gone to bed, whereas another major local politico had made a night of it. "Which one," he said to me, "made the best impression on the national chairman, the pantywaist who went home or the guy who sat up drinking and smoking with him and swapping yarns?"

His own opinion was obvious but I am not sure I agree with it. Mr. Farley has a well-founded reputation, I am told, for being a teetotaler, a non-smoker, and a man who prefers a good night's sleep.

The vote that can be gotten over a cocktail but not over a cup of coffee is too scarce to merit your attention. I am not espousing prohibition; I am simply being practical. Too many politicians do too much drinking in the belief that it is necessary instead of admitting to themselves that the drinking is really for their own pleasure - to relieve their taut nerves, usually. I have seen many a promising career wrecked through the bad judgment which comes at about the third drink. Drink if you like-but don't kid yourself; it loses more votes than it gains, unless handled with real skill - a skill I can't teach you.

Scouting and Heckling: It is legitimate and useful to scout the public meetings of the opposition, if you can spare the personnel. Heckling should be used with caution as it has a habit of backfiring. You may want to heckle if the opposition is using the outright lie. Scouting is simple, it requires only a person with good hearing and a good memory; successful heckling is an art.

Always use women for heckling and pick them for quick wit, the ability to speak, and sound judgment under stress-there are probably several such in your organization. She should either be young and pretty, or should look like somebody's mother and a DAR to boot. By preference she should be as small as possible, but you may not have a choice.

Let her dress in her very best and smartest clothes, then seat herself about halfway down the hall. (Front rows and back rows are associated with heckling; she should try to look like a spontaneous case.) She will keep quiet until and unless the lie she plans to nail is used from the platform. Then she will stand: "Point of order, Mr. Chairman!" "Yes? What is it, Madam? State your point." "The statement the speaker has just made is incorrect. I am shocked to hear it associated with Mr. Hopeful's campaign. I am sure that it is without his knowledge." (If Mr. Hopeful himself is the speaker, make it, "I know that Mr. Hopeful would not sponsor any such misstatement if he knew the facts; I am sure someone must be deliberately taking advantage of him.")

Throughout the encounter your woman maintains the attitude that both the chairman and the candidate are pure and innocent and tries to avoid being asked whom she is supporting; she is just the Public-spirited Citizen, in love with the Truth.

It is to be hoped that the opposition chairman will get rattled and refuse her a hearing - in which case she rises and sweeps grandly out, and gets away from there fast her purpose is accomplished; any votes that are on the fence are by now convinced that Hopeful's crowd is up to something shady or they would have given the little lady a chance to speak. Even some of Hopeful's committee will have misgivings which will slow them down. Most people don't like lies and other dirty tricks.

Unfortunately, Hopeful's man may give her a chance to speak. She must be all sweetness and light, reserving her indignation for the lie itself and the unnamed person who planted this foul thing on poor Mr. Hopeful. She should know, as nearly as possible of her own knowledge, the true facts and state them briefly while asserting her claim to authority in some fashion which leaves the opposition only the two gruesome alternatives of accepting her version, or of calling a sweet and gentle representative of the fair sex a liar, net." I know because I was present when it happened," or "I have seen the court records," or "I was interested in this matter and looked up the vote in the Congressional Record, down in the Public Library."

From here on she is on her own, but she can't lose if she is bright enough to justify assigning her to heckling.

You must be prepared to deal with hecklers yourself. Most of them, unlike your own trained hatchet women, will be moderately stupid, bad tempered and arrogant - and probably self-appointed. Try this routine: "Just a moment please - will you kindly state your name and address so that the audience will know who you are?" Then interrupt before he can get unwound with, "We can't hear you very plainly. Will you kindly come forward to the platform and address the audience? We want free speech here - if you have anything new to add we certainly want everyone to hear it."

There is a good chance for the heckler to destroy himself with the crowd at this point; in any case it gives your speaker a good chance to organize his rebuttal, or - if the situation calls for it - retraction with a noble gesture, but conditioned on the tentative assumption that the heckler knows what he is talking about.

In any case your speaker makes no reply until the heckler has talked himself out and left the platform. Thank him courteously, insist that he reassure you that he is quite through (this is so you can get the crowd to back you in suppressing him half a minute later), then swing your own forces into action.

The key to the whole matter is to let him talk, always let him talk, and pray that he will be long-winded, boring, and displeasing to the crowd. Even if he turns out to be clever and persuasive you have cut your losses as best you can.

Hecklers from the opposition, or, more likely, representatives of pressure groups, particularly Communists, can create another type of crisis, not by the direct challenge of a statement, but by getting up and demanding an answer to a question of the Have-you-left-off-beating-your-wife? variety, such as "Do you or do you not condone the railroading of six innocent men to prison in the Midriff case?" Or "Do you think that the Veterans' Administration should be permitted to turn the attempt to house veterans into a farce by sponsoring the unreasonable practices of the building group?"

Frequently the question has nothing to do with the issues of the campaign - I have seen abstruse matters of foreign affairs thus injected into city elections, state matters forced into national elections, and vice versa, and judges queried about purely administrative or legislative questions. If the speaker is not the candidate and the candidate is not present, the best answer to an embarrassing and impertinent question is, "I have never discussed the matter with Mr. Upright and therefore cannot answer for him. If you will do me the courtesy of writing out your query, with your name and address, I will make it my personal business to bring it to his attention and will see to it that a full answer is made."

If appropriate, you should then add, "The question is not appropriate to the campaign, since the office Mr. Upright has consented to let us run him for is one which cannot possibly deal with the matter you have raised. However, Mr. Upright believes that the voters should be permitted to know all about him, even the brand of his tooth paste, if you are interested. Therefore I am sure that he will take time out, busy as he is, to look into the matter you are interested in and express an opinion."

If Mr. Upright is the speaker, he must answer, in some fashion. If it is pertinent to his candidacy, he should not straddle. Even if it's as hot as a baked potato, he should answer and a forthright answer will gain respect and lose no more votes than a straddle. If it is not pertinent it is quite likely that he does not know all the details; he may ask the speaker to meet with him, making a set date from the platform, for the purpose of digging into the matter. At the private meeting he may still insist on time for research and study, since he is not bound to accept the heckler's assertions as Gospel.

I want to make a subtle but, I believe, proper distinction between dishonest fence-straddling and reasonable prudence in avoiding unnecessary and irrelevant controversy.

There are so many different ways in which men may hold honest differences of opinion that it is possible to find reasons for like-minded, dose Mends to quarrel if an effort is made to determine the issues on which they differ. This truth is the basis of much shoddy politics- the injection of the extraneous and unnecessary issue. Do you think it is decent or indecent for the women of Bali to run around naked to the waist? Whatever your opinion, will it affect the fashion in which you perform the duties of county tax collector? Is it just to ask yourself to commit yourself in public on this issue?

On the other hand the matter may be very pertinent if you are seeking an appointment to the state board of motion picture censors.

There are many issues on which people are strongly divided in opinion, not necessarily along party lines, such things as prohibition, admittance of refugees, birth control, vivisection, capital punishment, public ownership, the UN, conscription, compulsory arbitration, legalized gambling, and so forth literally without end. It makes a lot of difference in these matters whether you are running for legislator, county clerk, congress, justice of the peace, supervisor of education, sheriff, or tax assessor, whether these matters are legitimate criteria of your qualifications.

Since a majority of one - yourself-holds all of your views, I think you may legitimately avoid any issue which is quite irrelevant to the duties you will be called on to perform. But don't kid yourself nor let any candidate of yours kid himself; the duties of any lawmaker, judge, or chief executive are extremely broad; the duties of some other offices are quite narrow.

How to Sample a District: Mr. Upright's campaign for the nomination has reached the last month. You have worked hard but how well, in fact, are you doing? Should you put on more steam, or fold up and quit the race?

You can't afford the services of the Gallup poll or other professionals; your volunteers can't spare the time from direct campaigning. To be sure, they are giving you a poll of sorts, at each meeting of the Doorbell Club, but what you want now is a check on their reports. You know from experience that the reports of the field workers are usually too rosy.

There is a technique which must be learned by experience but which you may start learning as soon as you enter politics; by the time you reach a place where it matters you can be quite skilled. It consists of making predictions for all candidates and issues on the ballot for each election, both before and after some direct sampling of your own, and keeping a record of the results, which you will then compare with the election returns.

From this you will learn whether you are too optimistic or too pessimistic; subconsciously you will improve your judgment until you reach a point where you can go out into a district and almost smell a victory or a defeat weeks ahead of the event. When you can do this you are in a position to turn a potential defeat into a victory.

Make your predictions at regular intervals, from filing date to the night before the election. File them away, then get them out during the post-mortem. The whole procedure is much more entertaining than crossword puzzles; addicts prefer it to trying to pick the horses, or to reading detective stories.

Statistical Sampling: Even if you could afford professional poll-taking, supervised by mathematical statisticians, the money is better spent on campaigning.

Does this mean you have to go it blind, perhaps to work your head off for a lost cause, or lose by a narrow margin when a small additional effort would have won—had you known it was necessary?

No, there is a fairly easy and inexpensive way to conduct a poll on a district of any size, even the largest, which will give you reliable data on which to judge how well your campaign is going and then to plan accordingly.

The secret of correct prophecy by statistical sampling of a large number of units lies first in the correctness of the methods by which you sample and second in not trying to get out of the figures more than there is in them.

The mathematical theories of probability, chance, and probable error are complicated and abstruse. Instead of trying to give a course in this subject I shall content myself with stating a thumb rule, giving some instructions on how to use the rule, and offering a few general comments on the mathematical methods whereby the rule was derived. Only the thumb rule need be remembered to apply the method successfully; the mathematical comments are for the mathematically-minded reader who may wish to check the derivation of the rule and, possibly, enter into a little stimulating controversy with the writer as to theory, or as to the possibility of formulating a better thumb rule for the purpose.

Rule: Poll your district at "random" (identified below) until you have fifty responsive answers - answers either for you or against you, disregarding those who refuse to answer or haven't made up their minds. Take the number of answers for your candidate and double it. Subtract eight. Mark your answer as a percentage. The chances are about four-to-one that your candidate would not receive less than this percentage of the vote cast if the election were held at once ... and there is a practical certainty that he would not fall very far under this figure. Use it as if it were a certainty. It is, in fact, a carefully calculated conservative estimate on the "better-be-safe-than-sorry" principle.

Example: You have taken a poll of 93 voters of your party, selected at random, before you attain 50 responses-14 declined to answer, 29 had made no choice. Of the 50, 28 were for Upright; 22 were for Hopeful. Doubling 28 gives you 56; subtracting 8 leaves 48: Upright may expect to get not less than 48% of the vote cast if the election were held at once. It is equally true that he might get as high as 56 plus eight or 64% of the vote, but you are not interested in the optimistic side of the picture; you want to know what you have to achieve to cinch the election - therefore you use 48% as your figure.

Fortyeight percent is not enough; if he loses by 2% he loses-it's an emergency.

Two percent of the expected vote of 25,000 is 500 votes; you must speed up the campaign to get at least 500 more votes than your present activity insures - so you shoot for about three times that number. You call an emergency meeting of the Doorbell Club and show them only the 48% figure and tell them that means that each one will have to dig out about six more new votes than he had counted on, by punching additional doorbells not on the selected list until he finds six more who can be wheedled into voting in the primary. You put Upright on a 60-hour week for the balance of the campaign and you decide to spend four afternoons a week at doorbell-pushing yourself, instead of two, even though it means doing your paperwork on midnight oil.

The spurt lasts three weeks but it wins for you - when you might have lost by a heartbreakingly small margin. Perhaps you win by a fat margin and perhaps the spurt was not really necessary - you will never know but it does not matter; you've won.

Suppose your poll shows a conservative estimate of more than

50%; you are then justified in continuing your present campaign plans, without an emergency spurt but without slackening off.

Suppose the poll had been the other way around, 22 for Upright; 28 for Hopeful - your conservative estimate is then 36%. Does this mean you should quit? No, for Hopeful's conservative estimate is still less than 50%. It means a tough fight with a possibility, but not much probability, of winning. Stick with it.

Suppose Hopeful got 30 votes in the poll, indicating that he will probably beat your man by at least 52% of the vote and that he might take as high as 68% of the total. Should you throw in the sponge?

Not on your own initiative - I recommend that you talk it over with your candidate, then call a closed meeting of all workers and all money contributors, tell them the sad news and ask them to express their wishes. From a cold-blooded standpoint you might as well cut your losses and quit... but I predict that they will vote to stick to the finish and turn the meeting into a rally. They may even win for you. Politics isn't dice, nor statistical physics; the Spirit of the Alamo may outweigh all measurable factors.

If they decide to stick, bow to their will and pitch in. It will be a treasured emotional experience at least - and many a "lost" campaign has planted the seed for an eventual political upheaval.

The Meaning of "Random": A "random" sample is one which is as truly representative of the district as you can make it. This is most easily done by trying to keep out the personal element in the selections. For example - you want 100 names from 200 precincts: Take the bottom name, of your party, from the second column of each-even numbered precinct list. Or make up any other rule which makes the selection mechanical, with no choice on the part of the operator, and which spreads the sample evenly through the district, according to population, not area.

Never take the sample all from one precinct or one area. If you are polling by telephone you will find that some of your choices do not have telephones. Do not substitute the next name having a telephone listing; the voters without telephones must be polled at their homes - otherwise you will introduce an economic factor which will falsify your answer.

Polling by telephone is best done in the evenings, in order to find both men and women at home. Do not accept the response of a spouse in place of the voter named by the random choice; it will change your results... there is a definite tendency for women to vote more conservatively, and in other ways differently, than do men.

Do not let the polling question suggest the answer desired. For example, here is a suitable phraseology for a telephone poll: "Good evening, is this Mrs. Mabel Smith? Mrs. Smith, this is the civic affairs research bureau speaking. Have you formed an opinion about the congressional candidates who will appear on your primary ballot a week from next Tuesday?"

It should be possible for one worker to prepare a list for a telephone poll in one evening and get fifty responsive answers in not more than three evenings. A reply-postal card poll should take about the same length of time to prepare and is about as accurate, but it takes longer to get the results and 250 should be the minimum sent out. It may be cheaper than telephoning in districts involving long-distance tolls. (These reply-type postal cards, at two cents apiece, are invaluable in penny-pinching political work.)

Don't attempt to make a straw-vote canvas door-to-door. Don't try it on the street. The names mud be preselected by some non-personal method. Mathematical Basis f or the Rule-of-Eight: (Skip this, if you like.) In any statistical sampling the larger the sample, the smaller the errors in the result, except for systematic errors - errors which are inherent in the thing being sampled. In the opinion of this writer, the systematic errors in any poll of political opinion conducted without expert actuarial help are so large that it is not worth while to use a sample larger than 100. On the other hand the "probable errors" - errors which depend on the laws of chance - are so large for samples less than 50 that trends will be masked by the inescapable "probable errors." For efficient use of time and money the smallest sample which will spot a trend is desired. For that reason, and because percentages may be obtained from a 50-sample simply by doubling (percentage problems are troublesome to some), a sample of 50 has been recommended.

Bessel's formula for probable error has been used in computing the rule-of-eight, assuming independent events of equal probability and assuming a "universe" of very large but limited numbers. The assumption of equal probability may be attacked; the pragmatic justification lies in the fact that probable errors are largest in a 50-50 division and the political situation is most critical in such a situation - a landslide either way will show in a sample of 50 without resort to probable error. The rule-of-eight is neither the "probable error" of the engineer, nor the three-standard-deviations-equals-standard-certainty of the professional statistician; the first was rejected as too esoteric in meaning for the layman, the second was rejected because trend-spotting with it requires samples too large for the volunteer political campaign. A selected error of 8% was chosen to produce a conservative probability of about four-to-one, which was considered accurate enough for the purpose and much more reliable than most data we plan our lives by - in choosing a wife, for example!

If greater accuracy can be afforded, use a sample of 100 and a rule-of-five. Or the mathematical reader may perform his own analysis, following Peters or Bessel or others; I can't recommend direct analysis using the binomial expansion without precomputation, even using Pascal's triangle - the figures are incredibly astronomical!

Sampling by "Smell": In addition to poll-taking and making predictions, try this-in time you will acquire skill in it: Prowl through your district Buy a Coke and chat with your druggist. Buy two gallons of gas-chin with the man at the pumps. Ask strangers for matches, then gossip. Get a haircut. Make a purchase in an uncrowded grocery. Ask passing strangers for information-then talk.

When you have done this you will combine it subconsciously with the doorbell punching you have done (which, for the manager, should be scattered through the district) and you will end up with a curious feeling way down inside. Drag it up and into the light, take a look at it, and see whether or not it tells you that your man is going to win.

The human mind, when trained, is capable of more rapid, more flexible, and more reliable evaluations of problems containing unlimited unknowns than any of the mechanisms as yet invented. In time you will acquire this talent; you will know it when your predictions are consistently correct, not only as to results but as to approximate majorities and size of vote cast.

The acquisition of the talent is painless and almost effortless.

While acquiring the talent don't let yourself be panicked by some phony figures. Amateurs are inclined to think that their strenuous efforts must be producing a tidal wave, then are disappointed when they go out on a "sniffing" tour and find hardly a ripple. That is normal; primary campaigns hardly ever stir the general public out of their sleep. All you need is a ripple, of the right size, and in the right place. You know it is in the right place for you have been using the direct vote-getting methods; now you want to know if it is the right size.

Your district has about 200,000 adults. You question only adults. Mr. Upright needs 15,000 votes. If one out of four of the people you meet casually has even heard of your man, he is a cinch for the nomination; but if it is late in the campaign and only one in ten seems to know that he is alive, you had better get a hustle on and see to it that your election day organization gets every certain and every probable vote to the polls-or you're licked! You can still squeeze through on the one-to-ten ratio by hard work just before and on election day, but it won't be easy no matter what the telephone poll said.

Chapter X

How to Win an Election (conclusion) The Final Sprint

Last Week Mail Coverage: Your candidate has called on more than 3,000 people, possibly as many as 5,000. (Fantastic? I once rang 8,000 doorbells under similar circumstances.) Your precinct workers and you yourself have worked on the rest of the 25,000 targets. (You did not have time, you yourself? My dear lady - or sir - you must have time. I suggest a firm date for Tuesday and Thursday afternoons, one to five. Accept no other engagements for those hours.)

The campaign has not been perfect, but 20,000 aimed shots have been fired, in addition to the shotgun spread of publicity and meetings. However many of these shots were fired weeks ago; you need to use last minute reminders.

I suggest the use of either penny postal cards or personal letters - nothing in between. The usual political advertising, sent third class in an unsealed envelope and addressed by stenciling, then stuffed till the envelope bulges with wordy printed matter, has a way of landing in waste baskets unread.

A post card will be read because it is short, and it stands a chance of being kept around for a few days as a reminder. A personal letter of any sort, sent first class, will be read and noticed.

Even for postal cards your postage alone will be $200, plus printing costs and the (volunteer) effort of addressing and signing-all cards should be signed by someone, even if with an "authorized" signature, not marked as such. The signing and addressing take many hours and the work will need to be done long before the mailing date.

The final mail coverage will be the largest single expense in your campaign and may be one-third of your total campaign expenses. You may be forced to use postals, rather than letters, to save time and expense, but I suggest that you consider personal letters for the persons the candidate called on, as these are your prize prospects.

("Five thousand personal notes? It would take a crack typist four months to do such a job!" So it would-)

A man named Hooven invented a sort of player-piano typewriter which types any given copy over and over again, using a standard typewriter. The pseudo-player-piano roll can have signals cut in it which stops the typing and permits a human typist to insert a name, a date, a phrase, or any other variation in the copy, without disturbing the set-up. There is no way to tell a Hooven-typed letter from one typed entirely by hand.

Hooven-typing service is available in most large cities; you can do business by mail if your community does not have it. It is much more expensive than printing and much cheaper than equivalent service by a typist. (Some day, he said dreamily, I hope to own one of these marvelous gadgets for the use of my own district organization.)

I suggest some such copy as this - make it short, both for economy and effectiveness:

(Letterhead)
(date)
Dear Mrs. Boggles,

I hope you will recall my visit to your home last April 3rd and our discussion of the primary election. The election is next Tuesday. Naturally, I would like to have you vote for me for the Demican nomination for Congress. I enclose a short memorandum of my qualifications and the issues I am committed to support

Whether you support me or not, I urge that you and your family turn out and vote next Tuesday. The privilege and the duty of voting are more important to the safety of our country than an individual's candidacy.

Faithfully yours,
Jonathan Upright
JU:htc

The name and the date of the visit are the only items which require the Hooven robot to stop for an insert If you use printed post cards you fall back on "Dear Fellow Demican" and "recent". Full coverage by post card of the persons called on is better than partial coverage by personal letter, but do not be tempted to cover the whole list of registered voters by mail-it won't pay its freight.

It is worth while for Mr. Upright to thumb through his cards and dictate as many postscripts as possible, which are to be handwritten by the person who signs his name. "ES. My regards to the chow puppy-JU" or "I'll be after Bobby's vote in 1960!" or "Will you write to me your opinions on that reclamation matter?" or "I hope your husband is completely well by now."

Some of your precinct workers may be able to afford Hooven service for their own precincts, or they may be industrious enough to tackle the job of writing or typing personal notes - a big job but manageable for single precincts. Otherwise you will supply them with printed postals with the "trademark" picture of Mr. Upright occupying a third of the space, and a short "Dear-Neighbor" note on the rest, following the general idea of Mr. Upright's note. Leave space for the precinct worker to sign, and use the type face which simulates typewriter type style.

You may be forced to ask those who can afford it to pay the postage. It comes to a couple of dollars per worker; it amounts to a couple of hundred dollars at least to the campaign fund. One of the inspiring things about volunteers is the way they will give till it hurts right before an election, whereas a paid worker expects everything furnished to him as well as his fee.

Special attention must be given to the unregistered potential voters turned up during the campaign by Mr. Upright and the precinct workers. You have been obtaining regular reports on these people, daily from Upright and weekly from your area supervisors, and you have been turning the names over to deputy registrars with whom you have friendly liaison. These votes are free for the asking and they may amount to a couple of thousand, enough to turn a bad defeat into a narrow victory. (These are the votes Mr. Dewey needed but didn't get in 1944-the "sleepers.") Special attention by mail and special attention on election day is indicated. You can vary your printing or your Hooven set up.

Your mail coverage should be delivered to the post office, tied in bundles by districts, on Friday afternoon before the election.

Election Day: The campaign is over, all but the final sprint. That sprint needs careful preparation.

An ideal election day organization has block workers on every street, a precinct captain and lieutenants, a squad of automobiles directed from each precinct headquarters, a trained telephone organization, workers at the polls, a flying squad to take care of physical opposition, and another squad of legal eagles to take care of more esoteric matters. The whole thing is organized like a war ship going into battle.

You won't have any such organization; you won't find it anywhere save in some large cities east of the Mississippi, and it won't be complete even in those cities.

Your ideal organization - which you won't achieve; 80% is a fine score - will consist of three workers in every precinct, one at the polls, one at the telephone, and one with an automobile, plus roving area leaders with a telephone contact for each, a telephone and a couple of helpers for you, and two lawyers on tap who will drive to any trouble spot in a hurry. You dispense with muscles in your flying squad and depend on the fact that no one, not even a bad cop, will break the peace in the presence of a lawyer who announces himself as such.

Mr. Upright spends the day circulating around among the workers, giving them that "appreciated" feeling.

To achieve such an organization you need several times as many workers as there are in your Doorbell Club. It is not really hard to manage-for one day-if your area supervisors are active and alert. Some of them won't be. Since your efforts must be incomplete work according to the following priorities:

(a) Cover every contact in the precincts canvassed by Mr. Upright even if it means persuading your best workers to leave their own precincts completely vacant.

(b) Try to cover every precinct which has been worked by anyone.

(c) Do not put workers in any precinct which has not previously been canvassed unless you are blessed with more workers than you know what to do with, in which case completely untrained workers may hand out literature at the polls in those precincts. Tell them about any local regulation which limits how dose to the polls they may work and caution them not to argue with anyone.

(d) If a precinct has but one worker he or she may accomplish almost as much as three people by working in this routine: Telephone as many as possible the night before and between eight and ten the next morning. Make dates to take people to the polls, where needed, between ten and noon - a full carload at a time. After lunch go to the polls and remove from the files all who have voted, then get to work on the telephone with the remainder, making more transportation dates for four to six o'clock. At six o'clock weed out the files further and make frenzied attempts to get a few more to the polls during the evening, giving quite as much attention to the inactive list as to the live contacts. As soon as the polls have dosed, grab a hasty supper and return to the polls for the count. Remain there, watching the count (inform the senior polling official of the intention). When the count for congress has been completed, telephone the result to headquarters, and then leave for the election night party.

It is a long day's work but it is a perfect picnic for any healthy, intelligent person.

(e) If two persons are available, the same work is split up, except that the polls are not left unguarded even for a moment from the time they are closed until the count is completed.

(f) If three persons are available one of them may try to glean a few votes just outside the polls at the required distance for campaigning. He is permitted, under most state laws, to double as a poll watcher, thus keeping a running record of who has voted for the automobile workers, provided he does no electioneering while inside the balk line. He sets up a "headquarters" - a parked car, a card table, or a packing case - and covers it with signs for your candidate, and then attempts to hand some small, simple printed reminder that Jonathan Upright is running to each person who approaches the polls. If the local administration is unfriendly and unscrupulous he may have trouble with cops. If this is anticipated, have your best lawyer have a talk with the chief of police ahead of time, explaining your intentions, going over the law, and reaching a full understanding as to just what will be allowed. If your police chief is recalcitrant, let him know that you intend to fall back on the federal authorities - there are pertinent Supreme Court rulings which can scare the boots off a local official if he knows that you know your rights.

A second poll worker is desirable, as there are usually two approaches in view of the no-electioneering balk line. Anyone who is old enough to walk can be an assistant, the younger the better.

(g) Telephone workers may be found among supporters or wives of workers who are tied down by small children or ill health but can use a telephone. They must be provided with lists, by the precinct worker, and mimeographed instructions, from you. Here is an adequate formula: "How do you do? Mrs. Duplex? Mrs. Duplex, this is the Jonathan Upright—for-Congress Citizen's Committee. Have you voted yet today? Would you like to have one of us call to take you to the polls by automobile? Oh, that's quite all right - you can take the baby with you; we will take care of him during the few minutes it takes you to vote. Is there any other member of your family who needs transportation? Very well then, suppose we pick you up sometime between ten a.m. and noon? No?

"How about between four and six? Three o'clock is better? Very well, then, we will make a special trip for you at three o'clock; I'll make a note of it. Not at all, we're glad to do it."

No direct attempt to campaign would be made in these phone calls; limit them to offering service and reminding the voter of the election, while mentioning the name of the candidate as often as possible by referring to the committee by its full name. The person who makes the pick-up limits his campaigning to signs on the car and to handing to each passenger as he gets in a copy of the same small printed item used at the polls.

Election day work is simply to turn your potential votes into real votes by seeing to it that all your supporters get to the polls. Many times your interest lies in a minor candidate or in a proposition on the ballot. Votes for these can frequently be obtained by the courtesy of supplying a ride to the polls. Many people vote only for candidates for president, governor, and senator. The votes of these people can be sewed up for Mr. Upright if one of Mr. Upright's friends supplies the transportation.

Watching the Count: These votes gained on election day can be lost on election night, in the count. One of the commonest pieces of chicanery in the counting is to take advantage of the feet that many people neglect to vote for any but the head of the ticket If the ballot is of the style in which the candidates are grouped by offices it is very easy to mark incomplete ballots after the polls are closed. Thus with 300 ballots cast for governor of which only 250 have been marked for a congressional choice, split 110 for Doubletalk and 140 for Trueblue, five minutes work behind closed doors can change the result to 160 for Doubletalk and 140 for Trueblue without leaving any provable evidence of fraud.

Ballots arranged by tickets rather than by offices are more usually faked by throwing out as improperly marked any split ticket ballot which does not suit the dishonest polling judge and by accepting such ballots when the split does suit him, no matter how many technical mistakes the voter may have made.

Actual stuffing of the ballot box is very rare and the cash-in-hand purchase of votes is still more rare, whereas the election which is actually changed in outcome by these methods is so seldom found that it may be regarded as a museum piece.

These crude methods of blatant dishonesty are not used by the more successful city machines, even when the Machine is corrupt to the core, because they are not as efficient nor as reliable as machine methods which are technically honest. If a Machine resorts to use them it is a symptom that it is on the skids. (Cf. Kansas City vote fraud trials.)

Your watcher will not be able to do much actually to check the count, because there is so much going on. But the presence of the watcher, announced as such to the official in charge, will be an almost airtight deterrent against fraud. In addition to purportedly watching the count the watcher keeps careful track of how many ballots are discarded as spoiled and for what reasons; this can strongly affect the outcome of a contested election.

Voting machines make the above routine unnecessary. It may be possible to inject fraud into an election conducted with a voting machine other than by the crude methods of coercion or bribery, since anything that one mechanical engineer can design another can modify to produce a different result, but there is nothing for you to do at this point. The detection of skullduggery with the innards of a voting machine would call for a type of investigation, probably by the FBI, beyond the scope of practical field politics.

The watcher telephones the outcome to headquarters, where you and Upright are keeping your own tally while chewing your nails down to the elbows. Then she, or he, goes to the election party.

The Election Night Party: When the polls closed you moved from the office headquarters to the space in which the Doorbell Club meets.

You expect three times the membership of the Club but that's all right - let 'em crowd in; it makes them happier.

You did not stop for dinner; your stomach isn't behaving quite as it should. A sandwich picked up "to go" is all you want. Upright shows up from the field about the time you get there and the two of you, alone for once, or with the office girl and one or two others, get ready for the party. You place someone at the telephone and arm her with a tally sheet. You turn on the radio to the best station for returns-the snap tallies on the major offices are already beginning to come in - and set up the big black board to post returns on the whole ballot. You place an excited, high schoolage adherent in charge of this, and turn your attention to the refreshments.

Three times the membership of your organization gives a figure of 300 - three hundred quarts of beer. That's a lot of beer; you have purchased it in kegs, if you could not get it donated, and made an arrangement to return untapped kegs for credit, so you display only one keg at a time and keep the rest under lock and key. You have five hundred paper cups, not of the largest size.

Coffee and soft drinks are available for those who do not drink. A very small amount of food, doughnuts, cheese and crackers, has been obtained, but you hide it away and will not display it until about one o'clock in the morning.

Don't try to serve hard liquor; it will bankrupt you. Some will bring their own and some will get tipsy. It's a free country.

A few people are beginning to show up and it breaks up the depression that you and Upright have been suffering from since the polls closed. They crowd around him, shaking his hand and slapping him on the back, and urging him to have a drink "right out of the bottle." Some of them also speak to you.

After that they pour in a steady stream; the place gets crowded and stays crowded. Most of them are your friends; some of them are the perennials who go to all the election parties every election night. You wedge yourself in back of a table to get away from the press and bend one ear to the telephone while trying to watch the telephone tally and eat your sandwich and drink some coffee. Judge Yardwide, according to the radio, has a safe lead over the field for the gubernatorial nomination. You nod knowingly and with pleasure - with Yardwide at the head of the ticket the final election should be easier to win.

The first telephone reports come in; they are simply awful! Your sandwich shows a tendency to want to come up again. Upright squeezes his way through the crowd, nodding and smiling and speaking to people, then bends over and glances at the figures.

His face is suddenly grave, but he pats your arm. "Never mind," he says. "It's all been worth it, even if we lose. If I ever run again I want you to manage me."

You feel like bursting into tears, but there are too many people present.

After a while it begins to swing. Upright is creeping up on Hopeful....

Upright-982; Hopeful-1,005.

Upright-2,107; Hopeful - 2,043. You're ahead!

Upright - 5,480; Hopeful - 5,106. You begin to breathe more easily.

Upright-9,817; Hopeful -8,166

Upright - 12,042; Hopeful-Wait a minute-you hear your district number mentioned on the radio, and the telephone is ringing at the same time. "Quiet! Keep quiet-please!"

You get some modicum of surcease, at least around the radio: " -minor contest seems to be settled," the announcer is saying cheerfully. "Jack Hopeful, through his manager, has just conceded the nomination in the Umpteenth District to the Honorable Jonathan Upright. The statement urges all voters to support the Demican ticket this fall. Mr. Hopeful could not be reached for a personal interview but it is understood that- "

You don't hear the rest. You've won.

The rest of the evening is pretty lighthearted. You break away from the radio and circulate around a bit even though your feet are killing you. You try a glass of beer but you let it go flat while you duck back to the radio. The attorney general fight has taken a very interesting twist; it's likely to cause some complications. About three a.m. you and the nominee and two other faithfuls squeeze into a booth in an all night restaurant and you eat the biggest meal you have eaten in over two weeks. You've got the first edition with the preliminary returns and you eat while one of you reads the figures aloud.

At four a.m. you fall into bed and die. Post-Mortem Upright-16,107 Hopeful-11,373

Figures from earlier contests, corrected for population and registration changes, show that a candidate in a two-man race will receive 10,000 votes in your district if he files and makes a superficial campaign. Comparison with other districts and previous years on a percentage basis shows that your district had 2,000 votes more than normal.

Therefore your campaign methods stirred out about 6,000 votes, of which some 2,000 were new votes not normally to be expected in a primary. This is the final proof of the correctness of your technique, since winning could have resulted from the deficiencies of Hopeful's campaign rather than the excellence of yours.

Detailed examination of the results by individual precincts shows that the candidate stirred out between a third and a quarter of the majority and that the precinct workers did the rest. The decision to have Upright go directly to the homes of the voters has been justified.

The cupboard is bare but the bills are paid - all but the beer; you pledged your own credit on that. You must remember to return the two kegs left over - that will help, and perhaps you can get one or two others to divvy up while they are still feeling good over the victory. Upright intends to reimburse you but you don't want to stick him for it - his personal expenses have been a little heavier than he had anticipated.

We Was Robbed! Or perhaps you did not win. Maybe there was a bad break at the last moment, or a schism in the Club, or something. Suppose the outcome was: Hopeful-12,785; Upright-12,009.

It is easy to cry fraud, easy to charge it up to a machine, to dirty campaigning, to stuffed ballot boxes. But you won't be right, not one time in a thousand. No, citizen, depend on it - if you lose it is almost certain that it was because not enough people wanted your man to win and most especially that not enough supporters worked hard enough or intelligently enough.

At the very least in every election there is a high percentage who just don't vote - in a primary more than 50%. You cannot blame those lost votes on chicanery. Perhaps you did the best you could and the outcome was indeed affected by some dirty tricks, at the polls or elsewhere, but the result still represents the will of the American people, at least by passive consent. Accept it.

Closing Ranks: You won't get anything out of your workers and you won't try to - you will wait till the next regular meeting of the Doorbell Club. In the meantime you are very busy.

There is the matter of gathering up records of the primary in order not to have to depend on the county clerk's records next time. Some of the precinct area supervisors may be disciplined enough to help you do this, but the letdown may continue until the posted voting record and results have been taken down. A 35-mm. camera furnishes a convenient way to get these records without stopping to copy the data, but it's too big a job to cover the entire district singlehanded even with a camera to help you. Do the best you can and pick up the rest from the official records next winter.

Your memo pad has a score of such jobs, loose ends to be picked up. You want to get them out of the way promptly so that both you and the nominee can get at least a week's rest, out of town, after the state convention and before starting the final campaign. A shorter holiday is needed before then, too, if you can manage it. But you have got to consolidate your victory by getting the party factions inside the district together before you dare leave town or make any campaign plans.

The entire slate of county committee candidates from the Doorbell Club have been elected, yourself among them-you now control the district delegation. The nominee is an ex-officio member of the state committee and is a delegate to the state convention. On your advice he has appointed state committeemen, yourself among them. You must plan to attend the state committee meeting at the capital but you may not have time to stay over to observe the convention - there is so much to be done.

(Your own state may provide for party organization somewhat different from that implied here, although this is typical. You must be familiar with it, whatever it is. Don't be caught with less representation on either the county committee or the state committee than your pro-rate necessary to control your district.) But your first job is to see Jack Hopeful. We have assumed that Mr. Hopeful is a regular member of your party and not a stooge of the other party. You want and need his support in the final election. Get hold of him or his manager and invite them both to your house for dinner. Mr. Upright will be there also. After dinner you will talk over the coming campaign.

Don't offer him anything. Don't assume that he wants anything. Treat it as a matter of course that he and his manager will support the straight party ticket, including Mr. Upright. Mr. Upright will ask him to serve as chairman of the district campaign committee for the ticket, while explaining to him that the work need not be any more strenuous than he wants to make it. The office will in fact be titular, since you will dominate the executive committee and the committee as a whole. You will remain personal manager for Mr. Upright, and, as chairman of your district's delegation of committeemen, you will be in authority on any official party matters.

You don't speak of these aspects to Hopeful; you offer him the top stuffed-shirt position in exchange for his nominal support. His manager is offered a vice-chairmanship and a place on the executive committee.

They may accept, pitch in, and be most valuable. Or they may hem and haw and leave, after asking for time to "think it over." Or they come right out and ask for money or appointments or both. They may have campaign debts to meet, or they may demand outrageous salaries to campaign. Hopeful may want help in landing a major piece of patronage for himself, or he may expect you to pay off his obligation to his manager by letting him have one of the congressional secretaryships if Upright wins. For some curious reason many unsuccessful candidates seem to feel that their successful rivals owe it to the defeated to pay off their campaign debts and commitments.

It's a form of blackmail; don't give in to it.

Upright should explain that he can't promise appointments to anyone since he has consistently refused to promise them inside his own committee. Appointments will be settled if and when - after the final election. As for money - there isn't any.

They may give in with bad grace, if they have no place to go and wish to stay in good standing in the party, or they may leave. If they do, they will be self-righteous as can be about the whole matter. For some reason your refusal to pay the bills they ran up trying to defeat you will seem like a clear case of moral turpitude to them.

Bring up your heavy artillery. Get some Big Names, preferably from the camp of the party's nominee for governor, to call on Hopeful and explain to him, sweetly but firmly, that if he ever intends to get anywhere inside the party he had better stay regular, lend his name, invite in his supporters, and, as a minimum, preside at one or two public meetings for Upright and the ticket.

The chances are you will get him. But don't buy his "support"; it isn't worth it.

In the mean time you will have seen to it that personal notes of thanks are prepared (Hooven-typed, perhaps) for every worker, endorser, and contributor in Upright's campaign. Make the ones to precinct workers different from and more emphatic than the others and let all of them be a call to arms for the final ticket in the final campaign. In addition, make the first meeting of the Doorbell Club a jubilation in which each worker is thanked individually and his majority is announced.

You will want to get everyone possible out to the first meeting of the party-wide breakfast group; here is where your spade work for party harmony will pay off. In addition to gathering in Hopeful there are at least twenty party factions in the district, one for each candidate for each office on the ballot. You will need all of them and will make personal appeals by telephone to the leaders in the campaigns that lost, in addition to the usual postal card notice. You have many different fights to straighten out here, dozens of sets of feathers to smooth, but your job is easier than it was with Hopeful, as you appear in the capacity of broker for everybody's interests.

Out of it all you try to whip together a campaign committee for the whole ticket, as that is the best way to elect your own man. You turn your thoughts to "face," everybody's face and you help to preserve it by offering them all a chance to do the noble thing in public by declaring for the whole ticket. Titular offices in the campaign are passed out to anybody who seems to want one, with great fanfare (the possibilities of the words "vice-chairman," "director," "secretary," "coordinator," and "committee" have never been exhausted).

From these other groups you get new members of the Doorbell Club, at least on a temporary basis. You may retitle it, if expedient, for the duration. You now need a membership about four times the best you could do in the primary.

There is money to be considered, all over again. It is easier to raise now, but you need more of it. Better put money raising in the hands of the gubernatorial nominee's local manager, for the campaign as a whole, and handle your own resources as a separate account for the congressional campaign. Don't forget to insist that the national committee kick in for the congressional district and be darn sure some bright boy down town doesn't beat you to it and get his hands on it through a more direct pipeline to the national committee.

Some county and state committees seem to be under the delusion that the way to raise money is to assess the candidates. This is all wrong; the committee should raise money and support the candidates. If assessed, don't pay it; their help isn't worth much if that is how they work.

From a proper state or county committee you may expect some money, a lot of active help, and much free or partly free printing. Your printing bills should be small in the second campaign as the stuff you will use will be for the whole ticket.

You may want a few items in which Upright's name is emphasized over that of the rest of the ticket, by lay out and type face.

We won't run through the final campaign in any detail. In general it is just like the primary campaign, except that everything is more complicated, the numbers are larger, the emotions are stronger, the amounts of money are larger, and you have the disadvantage, as it is usually figured, of running against an incumbent The Honorable Mr. Swivelchair has more friends and more acquaintances, but he has also accumulated a back log of enemies and mistakes. Still, incumbency is usually figured as an asset and that is the safe way for you to figure. If Swivelchair is the stooge of a tight and well-established machine, you will not only have to work harder but will have to count on some trouble of the dirty sort. The election night count in particular will have to be closer. Figure your trouble spots and make your watchers there your smallest women; they will be safe. Men might have their arms broken.

There will be more Big Operators in your hair, more blokes with votes-in-their-pockets, more people with their hands out, more hopeful patronage hounds, more of everything which makes politics complicated without adding to the vote.

There is just one thing to be remembered in the midst of all this hurly-burly and confusion: Keep your eye on the ball!

The votes are still in the precincts. Punching doorbells still remains the only way to get out the vote you need, despite anything you may hear from the Important Politicians from down town.

Maintain your own practice of spending two afternoons each week punching doorbells.

Schedule Mr. Upright for another 500 hours of canvassing and see to it that he keeps to his schedule.

Keep your campaign centered around the Doorbell Club and don't use them for anything but canvassing until election day.

Ignore the opposition as before.

The only real differences are these:

(a) You all campaign for the whole ticket and emphasize Mr. Upright only by getting in his name more frequently, principally through quoting him by name in support of the platform and the ticket.

(b) You canvass from a selected list as before, but this time you ignore, in your canvassing, all the members of your party who voted in the primary. With the exceptions of the ones who had to be carried co the polls (and will have Co be again) these people can all be depended on to get to the polls and to vote the straight party ticket. Instead you canvass all members of your party who failed to vote in the primary ... and all members of minor parties and all unaffiliated voters. The known members of the other party you ignore. You have nearly 40,000 people to reach; you haven't time enough nor people enough to do more. Your effort will be to turn out the largest possible vote of your own party... especially the voce of the "sleepers."

(c) Therefore you will put more effort than ever into organizing your election day forces. If additional help for election day can be obtained from the county or state committee you will want it, since it does not require local information, other than a prepared list, Co do election day work, and it does not even take that Co be a poll worker or a count watcher.

And that's all

Along toward the last of the campaign very heavy pressures will be brought against you to change the campaign, but one will come from an unexpected source. A senior member of the party, resident in your district, a nominal member from the beginning of the Upright committee and a fairly heavy contributor to it, is likely to call on you. He won't put it quite bluntly but the idea is that you should lie down and let Swivelchair win.

He will say you have made a good fight but that Upright does not have a chance. Upright isn't quite ready yet; maybe in two years, or four years, but not this year. On the other hand he happens to know that Swivelchair plans to go for Senator next time; on that occasion he could throw a lot of support to Upright if Upright did not cause Swivelchair too much expense this time. Why not be practical, take a long view, and get along?

You wouldn't even have to drop the rest of the ticket, naturally; just persuade Upright that there was no sense in throwing good money after bad-and get sick for a while.

As for you - well, what appointment would you like? Maybe it could be arranged.

There is no particular reason why you should not indulge in the rare luxury of losing your temper, although it won't help any. Send him about his business. Don't make it an issue - now. But don't let him sit in on any party conclave during the campaign, nor ever again, if you can keep him out. He's a Trojan horse.

Don't let it shake your faith in human nature. Instead, it should build up your faith. They would not try to buy you off if they were not frightened! It is a shining justification of your faith in the nature of the average citizen. Your methods and your beliefs are being vindicated in the most practical way possible - and the opposition knows it.

Some time later you will again find yourself seated behind a table with an election night party going on all around you. The radio will be blasting, the phone will be ringing, you will be trying to eat a sandwich and listen to the radio while thinking with half your mind about how to scrape up the postage for the eight or nine hundred-odd letters of thanks that Upright will have to send out in the next two weeks.

The early returns aren't going too badly; Upright is even running a little ahead of the ticket in some spots—but it's still touch-and-go. Swivelchair's organization is experienced and well trained; it can't be discounted.

You decide to put off worrying about the postage, and so forth, until about Thursday. You'll find the money; you always have.

There haven't been any returns on congressional districts for about an hour. You are getting jittery. The announcer is introducing candidates and notables - why don't those stuffed shirts get off the air?

Here come some figures-9th district, 10th district, 11th district, 12th district - the announcer stops. What's got into him?

'Just a minute, folks, some new figures just in ... any moment now. Here's one item of news anyway. The new figures clearly show that in the Umpteenth District, in a surprise upset, Jonathan Upright has unseated oldtimer Congressman Swivelchair. The incomplete returns show a lead of-" You have elected a congressman. You can't leave on that vacation the next day. In fact you can't leave for a couple of weeks. Besides the thankyou notes there are the post-election meetings of the Doorbell Club, the breakfast dub, and the state and county committees. Upright wants to discuss appointments with you, too, of his secretaries. You don't want to go to Washington with him; you don't even want to be on the payroll as his field secretary and stay in the district, as you don't want to be his employee - your position depends on your being your own boss. This attitude gives you at least a veto in the appointments he does make-and on his later appointments.

Your own plans have more to do with tying in the Doorbell Club to Washington through a weekly newsletter from Upright and a regular procedure whereby the Club will be kept informed as to what is going on, what it means, and votes their approval or disapproval for the information of Upright and the two senators.

It is nearly a year and a half later that you are sitting in your living room, thumbing through the current Congressional Record - the only tangible thing you got out of either campaign - when you notice a roll call vote on a measure you have been following. It's a good measure in your opinion, and important to the whole country. This is the last vote, the one that sends it to the President for signature. You note with approval that Upright voted for it-as you knew he would; you have corresponded about it.

It just squeaked through, by one vote. You suddenly realize the significance. One vote - Upright's vote, for Swivelchair had a definite record against this sort of measure.

One vote. Your vote!

Your own efforts have put a constructive measure into effect for the whole 140,000,000 Americans -you did it, with your bare hands and the unpaid help of people who believed you.

It's a good feeling!

CHAPTER XI

Footnotes on Democracy
"The target is who and what?
"The people, yes-
"sold and sold again
"for losses and regrets
"for gains, for slow advances,
"for a dignity of deepening wots."
- Carl Sandburg

"When you assemble a number of men to have the advantage of their joint wisdom, you inevitably assemble with those men all their prejudices, their passions, their errors of opinion, their local interests, and their selfish views. From such an assembly can perfection be expected? It therefore astonishes me to find this system approaching so near to perfection as it does...."

-Benjamin Franklin to the Constitutional Convention

The art of politics is as confused and unorganized as a plate of hash and as endless as a string of ciphers. Despite the numerous digressions many things pertinent to the art, as distinguished from the issues, have necessarily been ignored. Some of them are much too involved for available space and quite unnecessary to a basic book, as you will learn about them as you come across them, with little loss to you, if your grounding is firm.

We must pass by such matters as the workings of state and national conventions, the work of state legislatures - "cinch" bills, "must" bills, the effect the Speaker can have on producing a "do pass" committee vote, the rules committee, stopping the clock-and the inner workings of congress - seniority, cloture, the functions of floor leaders and whips, senatorial courtesy. Lobbying and lobbyists, proper and improper sources of campaign funds, blocs, the preferential ballot, the publication of political newspapers, the Hatch Act, the organization of national committees and national campaigns, the political interrelations of city, state, and county-all of these matters will face you with fresh political problems, but your answers will depend much more on how you look at issues; the techniques will turn out to be familiar to you. Only the names will be changed.

Nevertheless, whenever a large family makes a journey, no matter how many neat pieces of luggage they may own, there are always leftover items for which there is no assigned space but which must not be left behind. These are wrapped in brown paper and carried under the arm. This chapter is such a bundle.

The Personal Expenses of Volunteer Politics: Let's be specific. You can be quite active without spending a dime, but there are expenses which make your work much easier and more enjoyable. Here is minimum budget for comfort and freedom from embarrassment:

One extra meal out per week	$1.00
Pass-the-hat collections and dues, per wk.	.50
Transportation, per week	.40
Additional postage, political, per week	.25
Weekly total	$2.15

This budget permits much higher expenses during the most active weeks of campaigns because there will be many off-season weeks when the additional expense of being a politician is limited to a few postal cards and a phone call.

The budget ignores the fact that you aren't spending money on movies, bridge at a tenth, nor on other recreations or hobbies when busy with politics. Politics on the above budget is cheaper than most recreations, i.e., entering politics can save you money instead of costing you money, even though you pay your own way.

Political contributions and trips to conventions can run to any figure you care to spend. So also can any hobby. You will need the moral courage to say firmly, "I'm sorry but I don't have the money," when you can't afford it. You will be respected for it and it will cost you no political influence in the long run.

Coping with Communists: Communists are not very numerous but they get around; you will run into them everywhere. There is a popular belief that Communist infiltration is found only in the left wing of the Democratic Party; I have not found it so. A Communist cell can pop up wherever more than four people assemble. I have spotted them in organizations so reactionary that their presence, if known, would have caused deaths from apoplexy.

Communists are most easily understood if you think of them as a fanatical, evangelical religious sea. I speak here of American Communists; I have no knowledge of Russian Communists, having never met one to my knowledge and having never been to Russia.

From the standpoint of religion the peculiarities of communists form a recognizable pattern. They have an outrageously unscientific "bible" which they point to as being the last word in science. It appears in "authorized" and "forbidden" translations. They have a god - the idea of the "proletariat" - a major prophet, a minor prophet, and an apostate saint. They are absolutist in viewpoint and brook no argument. Anything is moral to them which serves to propagate the faith, no matter how offensive to the unbeliever. Theirs is a "higher" morality; what we have is a "decadent, bourgeois" morality. They are indefatigably zealous. They are usually sincerely and altruistically devoted to their cause. You will find other such characteristics.

Their favorite technique is to bore from within. The operators are usually clandestine Communists, hiding behind some other party label-this is not offensive to their own strict moral code. They will make use of democratic parliamentary procedure and the democratic concept of free speech to ends destructive of both. Their notion of free speech is one in which you hire the hall and they do all the talking, on a subject of their choice. It is strictly a one-way proposition - try it in their hall sometime!

A common technique is to operate in a cell of three -one to make a motion, one to second it, and the third to harangue. They generally spread around the hall to do this and may not even appear to be acquainted.

A chairman confronted with this triple play can find himself in a pickle. The subject picked by the cell is always one which can be made popular with the particular crowd and which is not overtly connected with Communism. A group of three can often stampede a crowd into some action disastrous to the objectives of the crowd but suited in some devious fashion to Communist purposes.

An able chairman can prevent this by means described earlier in this book if he spots the Communist cell.

Fortunately this can often be done in plenty of time. American Communists are hardly ever very intelligent although many display some aspects of brilliance. They tend to behave in regular patterns which they have been taught and by which they can be spotted, but they can most easily be spotted by their addiction to catch words and phrases.

These shibboleths change from season to season, but, if you are in politics, you will hear them, come to recognize them, and listen for them.

A few years back the word "activize" was such a touchstone. "People's" this and "People's" that has enjoyed a long popularity, as has "United Front." There is no way to tell you what these words will be at some time in the future. Listen for them and check the Daily Worker now and then to see what they are up to.

Some of them reveal themselves by calling themselves "Communist-sympathizers." This sort of person explains that he is not a Communist himself, but sympathetic to their social ideals. Consider, citizen - have you ever heard of a Democrat-sympathizer, or a Republican-sympathizer? There ain't no such animal.

Communists are merely irritating nuisances rather than dangerous.

Only the timid and the mendacious profess to fear a communist revolution in this country. Anyone acquainted with the mares and the culture of this country can see that ninetynine Americans out of a hundred, at the very least, don't want any part of Communism. It does not fit in with our individual ambitions.

Of what use, then, are the American Communists?

They serve one function extremely useful to you and to the country, so useful that, if there were no Communists, we would almost be forced to create some. They are a reliable litmus paper for detecting real sources of danger to the Republic.

Communism is so repugnant to almost all Americans, when they are getting along even tolerably well, that one may predict with certainty that any social field or group in which the Communists make real strides in gaining members or acceptance of their doctrines, any such spot is in such bad shape from real and not imaginary social ills that the rest of us should take emergency, drastic action to investigate and correct the trouble.

Unfortunately we are more prone to ignore the sick spot thus disclosed and content ourselves with calling out more cops.

Lawyers in Politics: Lawyers constitute around half of all our state legislators and congressmen. They hold other political offices way out of proportion to their numbers in the population. Many people take this as a matter of course and it is in fact a logical consequence of certain features of our social structure.

We have already mentioned the fact that a lawyer can run for office easier than most other people and that, in many offices, he can take a bribe in an undetectable manner. However these are not real objections to lawyers in public life; lawyers are certainly as patriotic and as honest as the average run of men and I believe that they average more intelligent than the general run.

Nevertheless it seems very unfortunate that lawyers should make laws. It may even be argued that lawyers should not be judges. The latter idea is certainly radical, but the profession of judging is by no means the same as the profession of the solicitor or the barrister. It could be a separate profession; the origin of the identification of the two professions seems to go back to Biblical times, when priest, teachers, judges, and lawyers were all one profession. Two of the professions separated out; the other two could be separated just as, in England, the two professions of solicitor and barrister are separate. There is now no legal requirement that the justices of our Supreme Court be lawyers.

But lawyers do their greatest damage in lawmaking. In the first place lawyers speak a language not known to the rest of us; they write laws in that language and then we must hire one of their guild to tell us what the law means. They assert that their special language is necessary, as ordinary speech is not sufficiently exact. One may doubt this; many semanticians have disputed the claim. A layman is surely entitled to doubt it, even without the special analytical skills of the semantician and without knowing the other language, since lawyers are forever disputing as to what a law means after they have written it.

I wonder what the result would be if one could attack the constitutionality of a law on the grounds that it could not be understood by the ordinary literate adult? The ordinary adult is required to obey the laws-which carries with it the implication that there must be some way of telling him what it is that he must do. How would it be to require that laws be expressed in such terms in the first place?

Even a lawyer cannot require me to rimpf unless he has some way to tell me, in English, what it is I have to do to rimpf.

A foreign language is a minor vice of the lawmaking lawyer, however. Foreign languages can be gotten around, more or less, through interpreters. The worst thing a lawyer brings to the task of lawmaking is a faulty orientation.

You have heard of the Fillyloo Bird? He flies backwards because he does not care where he is going but he likes to see where he has been. Lawyers as a group are strongly related to the Fillyloo Bird, by training, by lack of training, and by association. They look to the past

That's a helluva way to try to draw up a new law to cover a new situation!

We are now confronted with the disheartening spectacle of lawyers attempting to draw up laws on the subject of atomic physics. They look to the past for precedents; there are no precedents - and their own esoteric professional training does not require that they be exposed in any fashion to science nor the methods of science.

The dilemma is not new, it is just more acute. In a myriad ways we permit a group of men who know rather less about the real world than do farmers, engineers, mechanics, or grocers make for us our most important decisions, in accordance with dusty precedents of dead men of their own clique.

The real trouble with lawyers in public life is that most of them don't know anything that really matters.

A Third Party? The emphasis that has been placed herein on the two major parties and the necessity for party regularity and party discipline may lead some to think that I oppose any attempt to form new political parties. If so, I wish to correct the impression.

Party regularity and party discipline are pragmatically necessary and morally correct in any political party if that party is to carry out its responsibilities. This is especially true with respect to unsuccessful candidates in a party primary; no man should offer himself as a candidate in a party primary unless he is prepared to abide by the majority will of the political group he seeks as a sponsor. Running in a primary is a voluntary action, very similar to joining a caucus; it carries with it responsibilities as well as privileges. A candidate need not enter a primary at all; he is always free to run as an independent instead.

In some states the right of a person to participate in a primary may be challenged and he may then be called on to prove his right by taking an oath to support the ticket which results from such primary. Such a procedure is morally correct; if universal it might do much to put a stop to the present eat-your-cake-and-have-h-too attitude of some irresponsible politicians.

Special circumstances arise from time to time when two groups, strongly opposed on basic issues, struggle for the privilege of wearing a party label claimed by both. In such cases there is usually no pretense that the losing faction will support the winner and there should be none. Consequently no obligation to party regularity exists. But the more usual case is much more like that of the spoiled brat who insists on having his own way in every respect or he won't play.

All of which adds up to this: if you decide to bolt, go whole hog. Leave the party. Join the other party or join a third party. Don't expect either the Republicans or the Democrats to permit you to wield influence if you insist on flirting with the other party whenever the whim seizes you.

The issues involved in forming a third party at this or any time are beyond the scope of this discussion, although it is evident that both parties are now wracked with internal stresses over basic issues which bring each wing of each party closer to the corresponding wing of the other party than are the right and left wings of either party, within the same party. An ideological realignment would appear rational; a third party may be the convenient means to such end.

The practical aspects-our proper business here—depend on whether or not the risk is justified by the objectives. Forming a third party is a highly speculative venture; it fails much more often than it succeeds. But it has been done successfully many times in our history. Mr. Lincoln was elected by third parties for both terms, first by the Republican party and next by the Union party - the latter fact seems to be little known. In 1864 the so-called "Radical" or regular Republicans nominated John C. Fremont, who had been the Republican nominee in 1856. The Union party was a coalition of both Republicans and Democrats.

The Failure of "Reformers": It is a truism in political history that the only thing worse than an officeholder under a corrupt machine is the reformer who replaces him.

Why should this be? Surely most of these reform gentlemen are honestly devoted to the cause of good government and have the best of intentions when they take office. Within my experience practically all of them were, I believe, sincere.

The downfall of some of them can be charged to sheer naivete; they were quite unprepared to cope with the liquor and lady lobbyists, the pressure groups, and the stab in the back. Some of them were cold zealots who could not maintain power because they did not understand what people wanted as well as did the bosses. And some were tragic cases who found themselves unable to live on the miserly stipends which we so frequently offer as a reward for statesmanship and succumbed to opportunities for graft and bribes.

But the most numerous variety, it seems to me, fail through conceit, from a type of swelled head arising from self-righteousness. I am a "reform" politician myself; this phenomenon is of great interest to me. It surprised and worried me to find out that so many of my ilk were such frail reeds when we got the chance to carry out our intentions.

The life and death of a reformer often runs something like this: He starts out full of enthusiasm and moral indignation. He is determined to have nothing to do with anything resembling what he calls "playing politics." He won't make any promises; he will remain a free agent at all times, devoted to the best interests of all the people.

Presently he finds that he has to make some promises; a man who isn't committed to anything can't get anywhere in any field, since social living depends on contractual arrangements. Being ignorant he usually makes the wrong promises; they become inconvenient to keep.

Here is where his swelled head ruins him-

He is surrounded (always) by sycophants who tell him what a great guy he is, a new Savonarola no less, and that he is much too big to be bound by bad promises because he has obligations to the whole people which override commitments to individuals, particularly when he was trapped into them (which may be true).

A conscience which tells you that you can break your word for higher, more moral reasons is a very convenient thing to have around. You can get it trained so that it always gives you the answer you want that day. "Mirror, mirror, in my hand, who is the fairest in the land" - and sure enough, it's yourself!

After a succession of such incidents the Machine is back in office.

Political machines, both the fairly decent and the utterly corrupt, have accumulated a great deal of true information about politics. Reformers can't compete unless they know these facts and are prepared to offer all the Machine does and a little more. The two most important facts the reformer must learn from the Machine are these: (a) Promises must be kept, and (b) votes are in the precincts.

You can tear up the rest of the book. Are Democracies Efficient? This used to be a favorite subject for pessimistic pondering during the 'thirties; we seem to have answered it definitively between December 7, 1941, and August 6, 1945. I used to be worried about it myself; I was devoted to the democratic way of life but honestly wondered if it were destined to be engulfed in this "Wave of the Future" which then enjoyed a certain popularity.

My doubts were settled permanently by a refugee from Nazi Germany. A gentile and a very prosperous Berlin businessman, he had preferred ducking over the border and landing in New York penniless and with no prospects to toeing the Nazi line.

I expressed my misgivings to him. He answered, "Don't ever let anyone tell you that any form of dictatorship is more efficient than freedom. Being made up of human beings, both systems make mistakes. The difference is this: In a free country when the mistake begins to show, somebody sets up a howl and presently it is fixed; under a dictator nobody dares to criticize, and the mistake is perpetuated as a permanent, inflexible rule."

To be sure the touchstone he used was free speech, but democracy and free speech are Siamese twins; one can't stay alive without the other.

But Can I Be Effective? Notwithstanding the pretty picture in the last chapter of Muriel Busybody electing Mr. Upright, unseating Mr. Swivelchair, and eventually thereby effecting in at least one instance the whole course of national life you are still entitled to reasonable doubts as to whether or not the case is typical. After all, I wrote the plot; I may have phonied it.

Remember Susie? Susie, the one-woman army? Susie and her kids? (When her oldest was about nine Susie announced the intention of taking them all to the mountains for a week's vacation. The kid was not impressed. "Look here, Mother," she said, "is this really going to be a vacation - or just another convention?") The primary laws of the state in which Susie lives require that delegations to national conventions for the purpose of nominating candidates for president be elected by the people of the party and that the delegates be bound by law to support the candidate under whose name their names appear on the primary ballot, thus giving the people direct voice in the selection of presidential candidates. The law provides further that lists of such delegations may appear on the ballot only as a result of circulation of petitions among the party's voters and such petitions require a great many names to be valid.

Susie had volunteered to obtain for her candidate such a petition, but the Big Politicians downtown told her not to worry. 'Joe Whoosis up north has the whole thing under control," they told her. "He's got the money to take care of it and he is going to use experienced, professional, paid petition circulators." There was a strong implication that her casual volunteer methods were too sloppy for this Big Time Stuff.

So Susie shut up but she did not put it out of her mind. She watched the newspapers for announcement of the filing of the petition, but failed to find it. With the deadline one week away she telephoned the Big Politician. "How's the petition coming along?"

"Huh? Oh, that - Whoosis is taking care of that. I told you."

"No forms have been filed as yet with the registrar."

"Oh, he'll file 'em up north. Don't worry."

On Friday, still seeing no newspaper announcement, Susie decided she would have to find out for herself; she put in a long-distance call to Joe Whoosis. She got his office but not him. Whoosis was sick. The petition? Well, there had been some mix-up about the money, but the secretary thought that it was probably being taken care of, down south.

Susie knew durn well it wasn't being taken care of down south; Susie swung into action.

She had a bunch of old petition filing forms thriftily saved from another election; she had her file of 3 x 5 cards; she had a telephone. It was Friday afternoon, beautiful weather, and about half the city had gone away for the weekend - including half her contacts. Never mind.

First she dug up several volunteer typists and put them to work filling out the headings of the petitions. . . . There were more than a thousand such headings to type. This started, she began calling her district leaders, thirty of them, volunteers all, the Muriel Busybodys of the organization.

She located about half of them, told them the house was on fire - get busy! By midnight the last of them had picked up her (or his) petition forms and had left to marshall the forces. The next morning Susie spent digging out secondary leaders in the uncovered districts.

Saturday and Sunday was all the time there was, as all day Monday, Monday night, and Tuesday would be needed to check the forms against the Great Register, cast out the unqualified names (about 40% on any petition) and arrange by precincts the remainder - then file the petitions by four p.m.

A weekend is a poor time to try to circulate a petition at best, but picnics and ball parks and union meetings and crowds pouring out of churches provided places where circulators could make their pitches and fill a form fairly quickly. Susie needed - and got - fifteen thousand names by Monday morning.

The petition was filed with twenty minutes to spare and was eventually qualified as valid. The Big Politicians never got around to submitting a single name.

Now as to the significance of this amazing display of the efficiency of the volunteer fireman-Susie's state is large; it holds about fifty votes in a national convention. It also holds its preferential primary for president much earlier than the primaries or conventions of most other states.

If Susie's state had failed to support her candidate it is quite unlikely that his name would ever have been offered at the national convention ... and without Susie's intervention -barehanded, no money, no tools save some 3 x 5 file cards - it would have been impossible under the law for her candidate to receive the convention votes of her state. The situation was critical and could have been disastrous - in a fashion directly parallel to what happened to Mr. Willkie's chances in 1944 when the Wisconsin primary went against him.

Since it is not desirable to tie this example to a particular party we will omit the matter of whether or not Susie's candidate was nominated and subsequently elected president-but I will say this: On one weekend Susie, middle-class housewife and mother of three, working from her living room telephone, drastically changed the course of state and national politics and left her mark on world affairs and on world history for some generations to come.

Many have done so on a much larger scale and much more prominently - I don't recall ever having seen Susie's picture in the papers. But at dial point she was one of the indispensable factors in the present course of history, like the boy with his finger in the dike.

There are hundreds of utterly essential moving parts in every automobile, which are never noticed unless they fail. The volunteer in politics is most conspicuous when he is absent.

Still, you probably won't try to nominate a president. The wearying prospect of managing a candidate may be more than you will ever want to undertake. Is operating at a lower level worth the trouble?

The answer is emphatically "yes" - for many reasons; I will mention three.

Volunteers are trusted. This results in them being called on when the party needs a person of certain integrity in a pinch - which happens rather frequently. I remember one campaign organization which was almost entirely salaried; there were only half a dozen unpaid volunteers in the whole outfit. It was necessary at one point to disburse some fifteen thousand dollars for poll workers on election day; there were entirely proper tactical reasons, involving in part the known presence of spies in the organization, for keeping it quiet and for doing it at the last possible minute. The money had to be in dollar bills to permit small individual payments.

As a matter of course two female volunteers were selected to do the job - two because fifteen thousand one-dollar bills are bulky: I can see them now, two young and pretty housewives, each with handbag bulging with three thousand dollars and one with a shoe box under her arm, stuffed with nine thousand more pieces of lettuce. Off they went to disburse it, looking as if they had been shopping. And back they came the next day and returned four thousand dollars-which they could have snitched and no one the wiser.

No one worried about the possibility that they might head for Mexico - they were volunteers with established reputations - and it was much better than hiring an armored car with bonded messengers.

Volunteers are upgraded with great speed, while a mercenary stays in the ranks. There was the case of-we'll call her Helen. Helen had no personal political ambitions but she was always willing to get in and work. Two years after she started we had an appointment to the state committee to place and we were quite choosy about it; we wanted to be sure of point of view on issues of the person who got it

Helen's name was not thought of at first because she had not been around much at the time; she was very busy having a baby. When she was thought of, she was at once selected. I called her up and asked her to serve. She was not anxious and pointed out that she was tied down and unable to be active. But she finally consented.

Two years later some of the female volunteers decided to get rid of the current national committeewoman; they wanted a new one and they did not want the usual Mrs. J. Huffington Puff clubwoman. Helen's election was assured before she was consulted - much to her surprise!

Two years later than that her congressman decided to retire; she was not even resident in the district (a congressman need not be) but the congressman and his manager tapped her to be his successor.

She became one of the best known and one of the most useful members of Congress, as statesmanlike as she was sweet and beautiful.

Yet in her whole political career she had never sought anything for herself. Her distinguishing characteristic was just a willingness to work, free, for what she believed in.

But the most important reason you can be effective has to do with the relative importance of various offices and of the several types of elections. The common belief about these matters is just the reverse of the true situation; most people seem to regard the office of president as the only one of importance and the presidential election every four years as the "main" election. Nothing could be further from the truth. The most important office in a democracy is the city councilman or selectman; the most important election is the local caucus-and so on up to the "major" offices and the "major" elections.

This is not news and it is no slur on the office of president. Most presidents have said the same thing repeatedly. It is axiomatic that the smaller the office the more closely it usually affects the citizen in his daily life. For example, the pavement out in front of my house was paid for by a city street bond lien laid directly against my home and the bonds were reputed to include eight cents per square foot of pavement of "honest" graft - "honest" graft is a name given to the condition that results when specifications are so drawn that one bidder on a public contract holds a favored position and need not hold down his price. It is done by describing, in the language of the lawyers, a particular patented product to the exclusion of all others.

("Why didn't I stop it if I know so durn much about politics?" Ouch! I did not move into this house until after this street received its present payment; I came in from out of town.)

However that is not sufficient to prove the point We can stand a lot of graft in our local affairs - we always have! - and still muddle along. But can we stand another world war? Foreign affairs are directly in the hands of the President; from this point of view the office of president is surely the most important, even of overwhelming importance, with the character of the Congress almost as important.

True. But congresses don't grow on trees, nor are they brought by the stork. Nor do presidents spring full grown from the brow of Jove. Elections are won m the precincts! These "minor" elections are the major part of the process which produces a president each four years; the "main" election in November is only the last link in a long concatenation of events. The organization which is capable of electing a town selectman is the identical organization which joins with others like it to pick a president. The citizen who fails to participate in the contests for these "minor" offices is offered only a choice between Mr. Harding and Mr. Cox, or their successors. You can't be effective in politics if you limit yourself to presidential candidates. It is not possible.

Furthermore, these "minor" candidates have a way of becoming presidents. Fourteen of our presidents started in the state legislature, from John Adams to F.D. Roosevelt. Hayes was a solicitor; Cleveland and Taft were assistant prosecutors; Lincoln a village postmaster, Coolidge was a city councilman, President Truman a county judge, Benjamin Harrison a court reporter, and Johnson started as a town alderman. Nor is the time from "minor" office to presidency very long;

par for the course seems to be about twenty-six years - some made it in less than twenty. (These figures do not include cases like Wilson, Hoover, or Grant, where the candidate entered public life late in his career-these figures tell how long it takes to go the whole route from "minor" office to the White House.)

The President for twenty years from now may be in your district; you may urge him to run for his first public office. In any case the chances are better than two to one that any future president will make his start in one of the minor, local offices which the politically naive hold in contempt.

If you want to affect the destiny of this your country, take over your own precinct; with your friends, take over your own small district and elect the local officials.

There is no other route.

"Qui Qustodiet Ipsos Custodes?" - which, freely translated, means "Who keeps an eye on the watchman?" and shows that the ancient Romans were no dummies when it came to figuring out the political facts of life.

In the Roman Republic the answer was "Nobody"; the republic folded up and the bosses started calling themselves Caesar.

"Qui custodiet - ?" There is no point in grousing about that "machine" unless you are willing to help form a machine of your own. "Machine" is simply an American word meaning an efficient political organization, one that lines up the vote and turns it out on election day - the Doorbell Club of the last chapter. The term has been used habitually with scorn, as if there were something dishonorable per se about efficient political activity.

A "corrupt" political machine is merely one which has been taken over by thieves while the citizens slept. Many of our city machines are not corrupt, unless you insist that patronage and a mild amount of favoritism are the same thing as bribery, racketeering, and gangsterism. Many machines, called so with contempt, are serving the public a good deal better than the public deserves.

But it is needful to guard the guardians.

Consider Philadelphia, city of William Penn, Ben Franklin, and brotherly love. The water is such that one prefers to buy bottled spring water; the Delaware is so contaminated that it eats the skin off battleships even above the water line. The subway runs occasionally; two major subway lines have been excavated but never finished for traffic, because somebody mislaid the money. Taxes? The place has a city income tax as well as all the usual taxes.

A private citizen attempted to take a picture of the Liberty Bell; he was arrested - it seems that pix of the Liberty Bell are a concession farmed out from city hall. The King of Hoboes complained that Philadelphia's skid row was the worst in the country.

A survey appeared to show a 30% incidence of active tuberculosis in crowded neighborhoods, a figure so high that I have trouble believing it-but the Philadelphia slums make the New York "Old Law" houses seem like choice residences. In Philadelphia a row house is described and pictured in the newspapers, with dead seriousness, as a "model home."

They licked the problem of mosquitoes in the jungles of Panama, and New York City is so free from flies that screens are hardly necessary. Both pests should be allowed to vote in Philadelphia; they own the place. Food of every sort is exposed on delicatessen counters, exposed not only to flies, but to the coughing and sneezing and fingering of the shoppers. Maybe the streets were once cleaned; there is no evidence of it.

One might expect the inhabitants of such a city to be aroused and indignant, anxious to throw the rascals out. Are they? I give you my word of honor, most of them are proud of it.

Many times I have asked a Philadelphian who complained about this or that specific symptom of his sick city what he was doing about it, to be met with a look of amazement, followed by. "Do anything? Don't be silly - you can't crack that machine. Why, I haven't voted in years!"

I remember seeing - not once but often - a stylish and beautiful woman, furred and smartly gowned, walk her dog in the Rittenhouse Square neighborhood. Presently she would wait, leash in hand, smug content on her face, while her doggie dirtied the sidewalk.

She looked to me like the Spirit of Philadelphia.

Let George Do It. Heinrich Hauser, in that amazing attack on the land that sheltered him, The German Talks Back, describes his notion of the typical American as an irresponsible, technically trained ignoramus, and predicts the downfall of this country because, he says, we lack social responsibility. He cites a case in which he claims to have been riding as a passenger in an automobile when his driver, a well-bred young American woman, passed by the injured victim of a hit-and-run driver-this, he says, is typical.

It is no defense to state that the German peasant is even less socially responsible than the American, nor is there much point in asserting that there is a difference between the callous behavior of an individual and the organized, government-directed brutalities of Nazi Germany. The indictment, if true, can destroy us anyhow. Personally, I'll bet ten-to-one on the Good Samaritan behavior of any member of the Doorbell Club, but honesty demands that we admit that there is a measure of truth in what this angry German says.

I know a man who seems to me a case in point. He is native born, well and expensively educated, possessed of a good job, married, and a father. He has both ample time and ample money with which to take an interest in politics-and he takes intense interest.

But interest is all he takes! His activity is limited to an occasional vote.

He is anti-Jew, antiNegro, anti-immigrant. He thinks that the public schools should be segregated not only by racial groups but by economic classes, so that his children would not have to brush shoulders with the "lower classes." He is in business but he does not believe in free enterprise; he wants the rules rigged to favor his particular enterprise against free competition from other businessmen. The government to him is "They" and "They" are always doing something he does not like.

"They" have worried him so much that he has at last figured out an answer which pleases him. He believes that the trouble with government is government itself; we should abolish it. Then would come the millenium when men like himself would make their own rules and everybody would live happily ever after, free from the oppression of "They."

I would like to think that he and his kind do not exist in dangerous numbers, but I am not sure. If the people who hold to the "They" theory are too numerous and the volunteers too few then Heinrich Hauser was right. What the Axis failed to accomplish we will do to ourselves.

Rough Stuff:

I would be less than honest if I did not admit that it is sometimes physically dangerous to be a volunteer in politics, even in your own neighborhood.

During my first campaign I took hasty refuge in a polling place until a lawyer from our side came to rescue me, because of a car filled with six thugs who did not like my count-watching activities. I did not feel bold and heroic about the incident; I am somewhat timid. It scared the daylights out of me.

It also surprised and shocked me. The polling place was in a prosperous, super-respectable residential neighborhood; it had never occurred to me that there could be any danger - that sort of thing happened only down near the river. And not to me in any case! I was a respectable citizen!

As a matter of fact it does not happen very often, but it is a hazard you must count on. Later the same day I found that another poll watcher had been less fortunate than myself-beaten about the face and head, left lying on the sidewalk. I myself have never been hurt, but I have had some bad moments, and I have seen permanent scars on more than a few of my colleagues who stood up for their rights. My own city has experienced political bombings at least twice in recent years; there is a former police officer serving time now for one of them.

Even though the danger is comparatively slight, is not this a good enough reason for a decent citizen to stay away from the dirty business?

It all depends on the way you look at it. If it was worthwhile for your son, or your husband, or you yourself, to fight in a foxhole, on the high seas, or in the air, then it is worthwhile to protect the victory by a moderate additional risk. This can be the "moral equivalent of war" the philosophers talk about.

Politicians and Political "Scientists": There is actually no reason why political scientists should not know something about politics and some of them do. I am sorry to say that most of them whom I have met did not; they made sorry fools of themselves the first time they stepped from the classroom into the vulgar hurly-burly. Some of them had basic horse sense, learned from their mistakes, buckled down and became real political scientists. Others did not.

This is not an attack on the late Brain Trust, nor on educated men getting into politics. If there was ever a crying need in any field for trained, intelligent men, imbued with the scientific spirit, that field is government.

Unfortunately many of the men who describe themselves as political scientists are neither political nor scientific.

Politics is a tag for the way we get things done, socially; many of them have only an academic knowledge of how we, the American citizens, conduct our affairs.

"Science" is a word with a definite meaning. It refers to a body of organized knowledge derived by a particular method. In brief that method consists of observing specific, individual facts, trying to find relations between them, setting up hypotheses, then checking those hypotheses by observing more pertinent facts. Under this method of investigation all scientific knowledge is founded on field work and laboratory work.

In some fields the basic facts can be observed on the campus, as in physics or chemistry. In others the scientist must regularly go to where his phenomena exist, because they can't be carried to the campus, as in geology and stratospheric research - if he is to learn anything new about his subject and not simply chew over what other men have said.

Is it not obvious that in order to study politics scientifically it is necessary to spend a lot of time where politics is going on?

I have at hand a letter from a friend of mine who is a professional political scientist, with all that years of postgraduate training in one of the most famous schools can give him. However he has had no experience in active politics. He writes:

"Do you think experience or practice in politics essential to an improvement in political interaction? I am a believer in empiricism in most things but believe that much more can be accomplished by scientific methods than by experience in government. That is, I feel that a man might be an effective partisan all his life, but end it with no greater ability to accomplish desirable political changes than in the beginning."

The above paragraph exhibits such complex confusion that I hardly know where to start. Let us begin by conceding that a man may be a very effective field worker in politics and still not do any good in the long run if his work is not enlightened by information and understanding in current affairs, history, economics, sociology, and many other things. Politics is the broadest of human subjects and we have dealt only with one narrow field of it herein.

But how can a man hope to "accomplish desirable political changes" if he is not experienced in the mechanisms by which political changes are brought about? For that matter will he know a desirable political change when he sees one, unless he has rubbed shoulders with the crowded millions off campus?

But note the orientation, note how he contrasts "empiricism" and "experience" as being the opposite of "scientific methods." The sad fact is that all of his degrees and training have not exposed him to the basic idea of the scientific method. All scientific knowledge comes from experience, experience as concrete as careful observation, careful measurements, and careful experimentation can make it. "Empiricism" is a word with several related meanings; in scientific methodology it is usually used to refer to an early stage in an investigation when the observer has too few facts too inaccurately observed to permit him to make more than rough generalizations as his hypothesis. Politics is largely at the empirical stage because of its extreme complexity. Empiricism is appropriate to politics; no other scientific approach is possible.

Unfortunately, other approaches are possible; one is the method of armchair speculation of the philosopher. It is the classic method in this field, used by Plato, Aristotle, Spencer, and Marx - and the work of each is vitiated by it. They might as well have spent their time debating how many angels can dance on the point of a needle. But the method is still popular!

Is it too much to hope that some day someone will found a school of government which will include as one of its required laboratory courses active field work in at least one campaign? And then perhaps to require something as strenuous and unacademic as serving a term in a county committee, or running for office, or managing a campaign, or undertaking to lobby a bill through a state legislature, before awarding graduate degrees which entitle a man to refer to himself as a political scientist?

I feel wistful about it. Honest-to-goodness trained men could do so much good in public life if only we had a few more of them.

Afterthoughts and Minutiae:

Don't put campaign literature in mailboxes other than through the mails. Postal regulations forbid it.

There is a small duplicating set available suitable for postal cards, which costs about a dollar. Sears Roebuck used to have them and probably does now. It uses mimeograph ink and a hand roller. Gelatine duplicators, hectograph-type process, and looking like a child's slate, may be had for three or four dollars in sizes which will take either postal cards or standard business stationery.

Unpredictable coincidences can play hob with a carefully planned campaign, leaving you nothing to do but laugh it off and forget it. I happened to pick the year to run for office that found the Nazi Sudetenland Fuehrer in the headlines; his name differs in spelling from mine by one letter!

In making a committee report it is diplomatic to say "your committee" instead of "the committee."

The difference between a caucus and an ordinary majority action is parallel to the difference between the Constitution and the laws which are made under it. A constitution is an agreement-to-agreein-thefuture, along certain lines and to serve certain known ends. So is a caucus. This may make it easier for you to explain it to the uninitiated.

Anti-handbill ordinances, anti-bill posting ordinances, and ordinances which forbid street-speaking and park-speaking without a permit should be opposed by all persons and parties devoted to democracy and freedom, as the avenues these ordinances close off are historically the only ones available at times to the poor and unpowerful. I am aware that it is a nuisance to have your doorstep littered with throw-away pamphlets, but it is still more of a nuisance to be thrown into a concentration camp. Democracy is worth a few nuisances.

Clubs should never have nominating committees; it is subversive of democracy. A motion to close nominations is never in order and should not be entertained. The proper procedure is to let a period of dead silence intervene, after inviting further nominations, then announce that they have closed. Be lenient in allowing laggards to slide home. Let them appeal to the floor if they wish.

Are you over thirty-five? Or under thirty-five? This is a touchy matter in volunteer politics for the old frequently work for the young, and vice versa. The power to keep things friendly lies with the leadership and the key to it rests in "face." When you are in a position of leadership to persons out of your own age group, whether younger or older, you will have no trouble if you go way out of your way to treat them with much more respect than you do persons of your own age.

Take a complete rest from people every now and then. Go away if you can. Being polite all the time is wearing.

On keeping oneself informed - of course you read a newspaper. But do you read the opposition newspaper as well? It is more informative in many ways. Both your state organization and that of the other party probably put out a little political newspaper; both are valuable to you. A free subscription to the Congressional Record may often be had for the asking; it is too long to read but it is well worth thumbing through for key votes and certain speeches. Keeping track of voting records is essential to an enlightened politico; once, to my shame, I supported the wrong man all through a primary because I had taken another man's word as to the voting record of the incumbent. There are convenient summaries of all significant votes for both congress and state legislatures from several different sources-major daily papers, taxpayers groups, labor unions, the New Republic. It is not necessary to agree with the opinions of the source for these compendia to be useful to you. Keep them on file rather than trying to memorize them. File every copy of a platform, or a candidate's promise on issues. It is common credo that election promises are never kept and that platforms are mere bait; in my limited experience this cynical belief has been false somewhat oftener than it has been true. It is well to know the facts on individual cases.

My wife and I have found a delightful way to celebrate the Fourth of July; you might enjoy it. We read aloud the Declaration of Independence and the Constitution. They are grand poetry of the Biblical style and it is well to refresh the memory.

Speaking of poetry, I wish that I had the capacity to write something like The People,Yes -, which I quoted from at the head of this chapter. I commend it to your attention. But there is music of the same sort in the sound of a thousand doorbells-

Ben Franklin pointed out to the benefit of all politicians that the easiest way to get a man to like you is to get him to do you a favor.

A lot of people want to get into politics but they want to operate on the "higher levels." I think of these high-minded but impractical people as "ballet" liberals because of an incident which took place in New York in 1942. A group representing all of the arts had met to see what the creative artist could do to help win the war. It developed that there was a strong bloc present which thought that the correct course of action was to demand that Congress subsidize a national ballet! I like ballet as well as the next but it seems a curious "secret weapon." If you want to enter politics don't expect to do so through organizations which are ordinarily nonpolitical, women's clubs, church groups, fraternal organizations, professional groups, and the like. Or, at least, do not expect to be effective in bringing pressure on an officeholder by representing yourself as being influential in such groups. A man who has been elected to office is not likely to be a fool on the subject of votes. He knows the political feebleness of such organizations-that they do not vote as a bloc no matter how their leaders may bluster. Your petition will be discounted accordingly. If you represent a precinct organization you won't have to tell him so.

Amateur pressure groups, such as neighborhood indignation committees, all too frequently go to see councilmen and such and adopt a belligerent tone which suggests the officeholder is a crook and that he can be frightened easily. Both assumptions are likely to be mistaken.

Let us now praise bureaucrats. Bureaucrats come in for a kicking around from anybody at any time. As a matter of fact they are a pretty good lot Try to imagine what a strike of "bureaucrats" would do to the country. No, don't-it's unthinkable, frightening.

And lastly-I would like to put this in box car letters-even if you become state or national chairman of your party, try to remain your own precinct captain, or some sort of a doorbell pusher. It will keep your roots to the ground. Even the Caliph of Baghdad made a practice of disguising himself and going out to talk intimately to his people.

CHAPTERXII

The American Dream

"It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced...."

-A. Lincoln, Nov. 19,1863

What of the issues?

We have piled up a whole book discussing the mechanical details of field politics, as if it were an automobile to be taken apart and repaired, put back together and made to run. Some of the details must have seemed very fiddling and far removed from the clean heights of statesmanship. It has been a worm's eye view of politics.

The activities described in this book would be bare bones indeed if they were ends in themselves. If we are to win elections for the competitive pleasure of winning, it would be better to play golf or bridge. So what of the issues?

It is not necessary that I speak here of specific issues. Even if you have no clear-cut political opinions on entering politics you are bound to form evaluations about issues. Whatever evaluations you had before you entered politics are bound to change and you will wonder how you could have held them.

But if you enter politics with honesty, ordinary sense, and a hope in your heart that you can help out, I am willing to trust my own future and the future of our children to the evaluations you will form and the actions you will take. Whenever the American people take their affairs in their own hands, instead of letting them go by default, I have no fear of the outcome.

We need never be afraid of the vote of informed Americans. It is only the ignorant voter we have to fear, ignorant politically, no matter how fine his house or how expensive his schooling. Such people have never experienced democracy; they have merely enjoyed its benefits. It is hard to explain what democracy is; it is necessary to participate in it to understand it.

The former Berlin businessman I referred to earlier told me that he blamed his own group, people with the time and the money and the opportunity to know better, for what happened to Germany. "We ignored Hitler," he said. "We considered him an unimportant fellow, not quite a gentleman, not of our own class. We considered it just a little bit vulgar to bother with him, to bother with politics at all."

They thought of the government as "They." The only possible route to a clear conscience in politics is to accept political responsibility, either as an active member of the party in power or as an equally active member of the loyal opposition.

An adult is a person who no longer depends on his parents. By the same token a person who refers to or thinks of the government as "They" is not yet grown up. There are many such in America, too many, but not too many I think to prevent the adults from taking care of our joint welfare. I'm a believer and a hoper.

There is more cynicism in this country than there are things to be cynical about. The debunking exceeds the phoniness. There is more skepticism than mendacity. Dr. Alexander Graham Bell was sued for fraud because he claimed he could talk over the wires. The Wright brothers had to plead with people to please come look - we can fly! And none of the "smart people" believed that the pipsqueak "nation" of thirteen rebel colonies could ever hold together and form a living union. The spawn of the skeptics are still with us. "You can't fool me cause I'm too durn sly!" They are around us, busy belittling and sneering and grinning at every effort to make of this country what it can be. What it will be.

For you there is the joy of being in the know, of understanding the political life of your country, the greater joy of striving for the things you believe in, and the greatest joy of all, the joy of public service freely given, service to your fellow men without pay and without thought of pay. If you have not as yet experienced this joy, then there are no words with which to describe nor any way to convince you of its superiority to other joys; it is possible only to assure that it is so.

"War is an extension of politics by other means." - Von Clausewitz. And politics is an extension of war. The war did not end in August 1945; it goes on around you, around the world, in difficult guises. We are in more danger now than ever before in our history, dissension within, our ideas for which we fought subjected to many forms of attack, the peace we won whittled away, and over it all the menace of another war, a war that could strike in the night, defeat and utterly destroy America and the American Dream.

If we prevent that war it will not be by force of might, for we cannot expect time enough to bring that might into play. If we are to escape it, it must be by political action more enlightened and more nearly unanimous than any we have ever shown.

The "decadent" democracies showed on a hundred battered beach heads that free men could think, could lead themselves when their leaders fell, and could improvise with the means at hand. We face the new beach heads, we must face them with individual responsibility, improvise and fight with the means at hand.

I can hear the strange express-train roar of the jet planes passing overhead from the fields in the valley to the north. Soon it will be the blast of the great rockets. It is the end of an era.

If we can tighten up democracy to meet the challenge of the supersonic speeds of the fast new world we may yet be spared the silent death from the sky. If notIt's up to you, Mrs. Blodgett and Mr. Harrison and Mr. Weinstein and Mrs. Cleary. You, too, Mrs. Johnson and Mr. Berzowski and Mr. Lorenzo - Mr. Smith and Mrs. Jones and Miss Kelly-and up to me. I'll see you in the caucus and at the polls.

Good luck to you! Good luck to all of us.

The End

SUMMARY OF OPERATIONAL CHAPTERS

CHAPTER II

How to Start

Look up your party in the telephone book. Join your local organization. Stick with it for several months, doing any volunteer work that is offered. Then let your conscience be your guide-but don't accept pay!

CHAPTER III

Wheat & Chaff

A man's religion is an important political fact about him which you are entitled to consider.

Church groups are frequently a cause of corruption and confusion in politics. Don't expect any real help from them.

Women, as a group, are less politically enlightened and less politically honest than men. Test them before you trust them.

Elderly people, as a group, are politically selfish and socially irresponsible. Avoid organized groups of the old folks.

Reliable volunteer political workers are found most frequently among young people. However, the very best political volunteers are found in the three groups mentioned above.

Machine politicians are about as honest as the general run of people, and more honest about oral promises.

Machine politicians are friendly, warmhearted, and will take pains to help people. An amateur who expects to compete must emulate these virtues.

A government should not be run like a business; a business should not be run like a government. They are very different

Compromising is an honest process indispensable to free men governing themselves.

"Civil Service" is frequently a mask for a shameless spoils system. Patronage is a political liability to the politician who has to dispense k.

Public Office is usually scandalously underpaid; this is the fault of the public and a frequent cause of corruption in public life. Nevertheless, most officials are too honest and too patriotic to succumb to the temptations placed before them. For that reason we have better government than the people deserve.

It is both virtuous and efficient to be partisan and party regular, but it requires both moral courage and clear thinking to accomplish it

CHAPTER IV

Field and Club Organization

Four Thumb Rules:

1. Your purpose is to win elections, not arguments.
2. Elections are won with votes and the votes are in the precincts.
3. You win by persuading your own voters to register and vote.
4. Don't waste time trying to convert a man who has already made up his mind.

The above four rules are applied successfully through organized field activity based on personal calls and begun long before the election.

Doorbell-busking: Always work from a list. Don't be aggressive. Cut the visit short. Record all information on a file case for follow-up.

Political clubs contain very few votes but they are indispensable (a) for organization and liaison of precinct workers (b) to keep up the morale of precinct workers by giving a "team" feeling. They also constitute seminars in democratic government.

How and When to Form a Club: Your party needs a club in any area that does not have one, but you should not found one unless you are prepared to do the working of leading it

Leadership comes to him who works - the tedious, routine work of organization is the only "secret."

The easiest way to make people like you is to like them-and say so!

To associate names with faces, ask the owner, on being introduced, to pronounce and spell the name - then use it immediately.

You don't have to be perfect in parliamentary law to handle the gavel successfully. A moderate knowledge of Roberts' Rules of Order, common sense, and fairness will get you by with the aid of this rule: The assembly itself is the final judge of the rules; make your rulings promptly and inform anyone you overrule of his right to appeal to the house. If he appeals, take a vote on the appeal without debate.

Use your power as chairman to divert matters of personal bitterness into committee where you can arbitrate them in private.

A motion to adjourn is always in order and is not debatable - but, as chairman, you may remind the house of any pertinent fact before calling for a vote.

Your new club must have a chairman who can keep the business moving without antagonizing people. It is better to be floor leader than chairman, but you may have to take the gavel if you can't find such a person.

Learn to be a penny-pincher with club funds. Votes, not dollars, win elections.

Note: The word "precinct" is used throughout to indicate an area which one person can campaign successfully, say from 100 to 400 registered voters depending on population density.

CHATTER V

Club Meetings and Speech Making

The First Meeting of a New Club:

(a) To get a crowd use personal invitations primarily, plus cheap methods of local publicity.

(b) Use a small hall and fill it with loud music, card tables, not too many chairs. Start with group singing. Have a dynamic speaker and some entertainment. Limit business to plans for next meeting and discussion of purpose of club. Serve simple refreshments afterwards and let the kids dance.

(c) Record on file cards all possible information about all persons present-then follow up. This file is your basic political weapon.

Speaking in Public:

Be brief. Don't worry about eloquence. Funny stories are not necessary.

You can get past your first appearance as a principal speaker by using an audience-participation quiz. This gag can be used over and over again until you gain confidence.

CHAPTER VI

Political Influence, Its Sources, Uses, and Abuses

Claims of "controlling a district" are usually nonsense. There are two major ways in which a politician controls votes (a) by being the active leader of a live precinct organization (b) by the gradual and unconscious acquisition of a following who depend on him for reliable political information and advice.

Be prepared to furnish advice to your acquaintances by doing your studying of candidates and propositions early. Thus you may expect to influence the votes of about 250 people.

A foolproof method of marking a sample ballot without previous study is to mark it against the choices of the newspaper you despise most.

Patronage: Policy positions, except under extraordinary conditions, should go only to active partisans, but non-policy jobs should be filled without respect to partisanship.

When Called on to Dispense Patronage:

(a) Accept the responsibility.

(b) Refuse to countenance a "spoils" attitude.

(c) Be frank with the applicant.

(d) Be warmhearted and helpful. Remember his human dignity.

(e) Don't try shenanigans with the federal civil service.

(f) There are many temporary non-certified federal jobs. Know the details about them so that you can advise people how to apply for them.

(g) Keep party politics out of Annapolis, West Point, and Coast Guard Academy recommendations. Instead be prepared to help applicants with accurate information and advice.

Moving in on a Party Organization: In cities where a corrupt machine is well entrenched the "official" opposition party organization is usually a clandestine part of the Machine. (Warning: Do not assume that a "machine" is necessarily a "corrupt machine.") Tb take over your own party machinery when it is owned by such a false-front group you must first take over the "reform" wing of your party and then win a primary for control of the official party machinery.

In taking over the reform group be extremely careful to preserve the prestige of its titular leaders. The process of taking over consists merely in joining and being more active than the titular leaders.

After winning control of party machinery in the primary make no compromises nor concessions of any sort under any circumstances at all to the group you have displaced, if you have certain knowledge that they have been in the business of selling out to the other side -but be sure of your facts!

CHAPTER VII

District Spadework, Choosing a Candidate, Caucusing

Even an excellent candidate can lose by neglecting the basic rule that elections are won with votes and votes are in the precincts. Don't attempt to elect a candidate until you have built up a precinct organization.

Selecting a Candidate:

1. Suitability - "sound" on issues from the viewpoint of you and your party; unquestionable character and integrity; record of unselfish public service; intelligence, education and experience.
2. Availability - able and willing to devote enough time and hard work to the campaign and able to afford the financial sacrifice of holding office.
3. Electability - if suitable and available a candidate is usually electable provided he has acquired immunity to "candidatitis" - a form of buck fever peculiar to inexperienced candidates, their managers, and their families - and provided he is willing to be managed in all respects save his stand on public issues. The superficial aspects of electability are usually quite unimportant. A suitable, available, and electable man is unlikely to want the job - you must seek him out and convince him that his sacrifice could be worth while, through the reasonableness of your plans and budget, by your analysis of the district, and by the strength of your precinct organization.

Budgets should be prepared and funds raised before your candidate announces.

Caucusing: Caucusing is a democratic process whereby like-minded individuals agree to work unanimously to a common end; it is a usual method for getting political associates behind one candidate. Unanimity is the essence of caucusing. The original terms by which the caucus is bound cannot be changed other than by unanimous consent - these terms must be clear to everyone before the caucus is signed.

There are no circumstances under which a man may honorably break a caucus. Be sure what you are signing - then don't kid yourself later!

You are justified in using any available legal means to enforce a caucus once bound.

If you cannot get a strong caucus behind your favorite candidate then he is not yet ready to run nor you to manage. Drop back and be a precinct worker for another candidate.

CHAPTER VIII

The GrassRoots Campaign

Two Rules f or Effective Campaigning:

(a) Is the action directed at specific, individual votes?

(b) If not, is it directed at your own district? Can it be done without sacrificing anything under (a)? Can it be done with minimum effort and at no cost? If it costs anything at all is it covered by your original plans and budget?

Effective Methods: Anything which goes after an individual vote, especially:

(a) canvassing by the candidate

(b) canvassing by precinct workers

(c) canvassing by the manager Put the candidate on a 40-hour week of doorbell-pushing for three months; the manager should canvass two afternoons per week.

Ineffective Methods: Meeting outside the district, signs outside the district, radio speeches.

Borderline Methods: Meetings inside the district, publicity by signs, newspapers, and radio spot plugs.

The Campaign Committee: Use a large "public committee" for advertising purposes, the officers of which have nominal duties and have been selected to represent the community - Catholic, Protestant, Jewish, and minority groups. The working committee is the candidate, manager, money raiser, publicity man, field supervisors, and precinct workers.

Headquarters: Public, swank headquarters are a waste of money. You need nothing but floor space, chairs and tables, a typewriter and a telephone. Take drastic measures to keep the telephone from being used for toll calls except by specific authority of the manager.

Campaign Funds: Handle by check, require two signatures out of three, provide an audit.

Unavoidable Types of Expense: Filing fee, printing, postage, telephone bills, election night party refreshments.

Conditional Types of Expense: Signboard rental, newspaper display advertising, handbill distribution, salaries of publicity director and office person, lunch money and car fare for volunteers, radio spot plugs, extra personal political expenses of candidate and manager. No other types of expense should be tolerated in a volunteer grassroots campaign.

Training and Management of Precinct Workers: Form a club with membership limited absolutely to doorbell—pushers; build its morale in every possible way. Be lavish in praise. Require the candidate to spend all evening at the weekly meeting of this club without fail.

Split your workers into area squads often or less using the best leader talent available. Train them at dub meetings, in the field by sending freshmen out with old hands, and by means of photocopied instructions.

Emphasize recording and filing all doorbell data for election day follow-up.

Never canvas "blind"-use lists. A fairly accurate list of members of your party who vote in primaries may be prepared from official records of voters "signing the book." Don't tackle a primary campaign until you have prepared such a list.

CHAPTER IX

Landmarks and Booby Traps

Don't waste volunteers on the blanket distribution of political literature.

"Volunteers" who won't or can't punch doorbells should be worked hard at office work. Don't let them lounge in headquarters - especially the Big Operator.

Make people come to see you - unless it's your idea.

Insist that the candidate conform to your discipline.

Lay it on the line!

Brace yourself for phonies, sell-outs, and other disappointments.

Publicity: If humanly possible, get a professional publicity man.

Never mention your opponent by name, neither in printing, signs, meetings, nor in doorbell pushing. Don't budget too much money to newspaper ads and publicity.

Short radio spot plugs during the last week may be worth the money.

Prefer 6-sheets to 24-sheets. One-sheets, half-sheets, quarter-cards, and bumper strips are cheap and useful.

The prime purpose of publicity is to strengthen the morale of your workers and supporters by creating a bandwagon atmosphere. Publicity gets very few votes but it keeps the campaign from dropping out of sight. Pinch the pennies - publicity can bankrupt you.

Party Harmony: A successful primary fight is worthless if it splits open your party. Keep it clean!

A party-wide Sunday breakfast club is a cheap and easy way to keep the party factions friendly during the primary.

Scouting and Heckling: Scout opponent's public meetings for information; heckle only to nail a lie. For heckling use well-dressed, well-mannered, small women who can keep their tempers and their wits under stress. Train them to attack the lie and not the liar.

In coping with a heckler, treat him with great politeness and insist that he talk himself out. Then refute him after he has returned to his seat.

If possible, give direct unequivocal answers to questions from the floor. If the question is irrelevant, impertinent, or loaded, counterattack by demanding details from the questioner and publicly set a date for a (private) meeting with the questioner to permit detailed investigation.

Don't use the above device to duck a proper issue, even though embarrassing.

Sampling a District: Cultivate skill in predicting election results by making and recording all possible predictions, then examine your results in the postmortem. Try to analyze your mistakes.

Check the progress of campaigning by a statistical poll. Make up a random list by taking, for example, the last name from the middle column of every third precinct list, then poll them by telephone or post card, using a question form which does not suggest the desired answer. When fifty responsive replies are in, double the number of favorable replies, subtract eight, and treat the answer as a percentage which indicates what per cent of the vote you could be reasonably sure of if the election were held at once.

Supplement this by prowling through your district, looking for chances to gossip about politics. In a primary, if one in four of the people you meet in your excursion know who your candidate is, his chances are excellent; if only one in ten have heard of him his chances are poor.

Don't expect the majority of the population even to notice a primary.

CHAPTER X

The Final Sprint

Final Mail Coverage: Send signed post cards or personal letters to all persons called on. Don't use third class mail.

Election Day: Regroup to cover the precincts covered by the candidate. The purpose of election day work is to get every certain and every probable vote, as determined by canvassing, to the polls. Telephoning the night before and election morning is used to separate the certain voters from those who must be coaxed or carried. Election afternoon is used to round up stragglers. Work from lists. Use any leftover time to carry any members of your party to the polls and thereby pick up a few stray votes in return for the courtesy of a ride.

Use poll workers if available-conform to local law.

Election Night: Have the count watched and the results telephoned in. Give a headquarters party with refreshments for workers and friends.

Post-Primary Troubles:

Don't forget:

- Personal notes to all who have helped.
- Get-together and rally meeting of Doorbell Club
- Heal-the-wounds meeting of the Breakfast Club
- County committee meeting
- State committee meeting
- State convention
- Official report of campaign expenditures.
- Vacations for you and for the candidate.

But your principal effort will be to bring candidates you have defeated into line at once.

Final Campaign: Organize a district campaign for the entire ticket and have your candidate beat his own drum by campaigning for the entire ticket.

Keep your candidate's campaign funds separate from the district funds.

In congressional contests attempt to get national committee funds allotted to your district

Conduct the final campaign in the same fashion as the primary campaign, with the same emphasis on doorbell-pushing-despite any and all advice or pressure. Your list of selected targets now comprises the members of your own party who failed to vote in the primary plus members of minor parties plus unaffiliated voters. Ignore the other party.

Continue strenuous efforts to register potential voters.

Put special effort into election day organization and get workers in from outside the district impossible.

Guiding Principle: If you are licked, it means your friends stayed home. Your object is to stir out the largest possible percentage of your own "sleeper" by registering them and dragging them to the polls.

Post-Election Chores: Same as for primary, minus the convention and plus between-election plans for the organization... elections are won in the off-years!

CHAPTER XI

Footnotes on Democracy

Political Expenses: Volunteer work can be effective without costing you anything, but about $2.00 a week, on average, will make your work easier and pleasanter. This is usually offset by the money you don't spend for recreation as a consequence.

Coping with Communists: Communists pop up anywhere and make trouble-their objectives rarely if ever coincide with yours. You can spot them by their catch words and by occasionally checking to see what the current "party line" is. They will try to dominate your meetings under the pretense of "free speech." This is a false plea; free speech is not a license to interrupt others in their affairs; the group who pays the hall rent are entitled to set the agenda. Suppress them by parliamentary maneuver-usually by insisting on the order of the day.

Communists are nuisances rather than dangers, but they have one prime usefulness: Any real local success on their part is a sure sign that some group of Americans are in such dire straits as to need emergency help - not punitive action!

Lawyers in Politics: To a major extent lawyers control our economic and political life, partly through special advantages enjoyed by the legal profession but primarily by default of the laymen. Unfortunately they are not well fitted by training for such responsibilities; their training is too narrow and too impractical. They are especially ill fitted to make laws, because they speak a foreign language and look to the past rather than the future.

A Third Party? This is a practical matter. Granted that there are glaring strange-bedfellow conditions in our present party alignments there is still no point in starting up a new party just strong enough to lose. However, third parties have won more than once in the past; the enterprise is always speculative but it is not impossible.

The time to join a third party is before the primary; if you take part in the primary of a party you are honor-bound to stick with it through November.

Democracies are Efficient: As we demonstrated against the Axis dictatorships. Perhaps the controlling reason lies in the fact that the free speech of democracies results in criticism and correction, whereas in police states a mistake goes on indefinitely.

Can the Ordinary Political Volunteer Be Effective? Yes.

(a) Volunteers are trusted, (b) Volunteers are promoted rapidly, (c)

Most important, all our political action and all elections, including presidential elections, are based on small, local organizations and on the followings of minor candidates, i.e., the natural field of the parttime volunteer.

In a republic the local leader is the indispensable man, on whom the national political figures are utterly dependent.

Who Guards the Guardians? Every corrupt machine reflects a body of citizens indifferent to, or even secretly proud of, their public scandals. The citizens are never helpless; the evils arise from inexcusable ignorance, smugness, laziness, and lack of personal feeling of public responsibility.

Personal Danger in Politics: Occasionally a volunteer suffers bodily harm because of his activity. The danger can be minimized through using your head but cannot be disregarded. The question is this: How does the danger compare with the dangers experienced by men in combat, fighting for the same ends? Or, which is better, to be slugged at the polls, fighting for your rights, or to be liquidated by a firing squad because you failed to protect your freedoms?

Political Scientists: This country needs many more men, in government and in teaching, trained in governmental matters by the scientific method. Regrettably, many "political scientists" are neither political nor scientific, having neither experience in politics nor training in the scientific method.

On Keeping Informed: The techniques expounded herein can make you an effective vote-getter; to be statesmanlike as well, you need broad information in social and economic matters. In addition to books about such matters, the following might be a minimum for current happenings - your own favorite daily paper plus its political opposite, the tabloid political papers of both parties, a national news weekly, and one of the publications which list key votes in Congress - and its local counterpart for your state legislature. It's a chore-but without such background you are merely a skilled ward heeler.

Keep Your Roots Down! Even though you rise to national party chairmanship, remain a doorbell-pushing precinct worker in some precinct somewhere.

Notes

Jerry E. Pournelle, Ph.D. Introduction to the Notes

One attempts to improve the work of a master with some trepidation; but the job had to be done. Mr. Heinlein wrote this book in 1946. We had just ended a great war, and confidently expected things to go back to more or less what they had been before the War and the Great Depression. Much had changed, and no one knew that better than Robert Heinlein; but not even he knew just how profound the change had been, and what changes were to come.

In 1940, Washington, D.C., was a small Southern Border town. There was no air conditioning, and Washington was uninhabitable in the summer. That didn't matter, because what went on in Washington wasn't very important to the average citizen. The political decisions that really counted were made in state capitals and city halls. Federal taxes were quite low, as were federal expenditures.

The War changed all that. The United States emerged victorious from World War II, but we found ourselves saddled with what seemed to be enormous debts, and we faced a devastated world. Money was needed. The Marshal Plan saved Europe, but it cost us. We had built a tax-gathering machine to finance the War; the needs of others kept that machine in place after the war ended. The result was a great increase in federal power, coupled with new international responsibilities. In the Far East, MacArthur rebuilt Japan from an aggressive empire to an unarmed liberal democracy. In Europe, General Lucius Clay in cooperation with democratic elements built West Germany into an armed liberal democracy. NATO became a permanent "entangling alliance."

We were not done rebuilding our former enemies when we found we were in a new war. The Cold War wasn't as bloody as World War II, but after Korea it was clear that it was bloody enough. It was also quite expensive. Instead of dismantling the enormous war machine we had created to beat the Germans and Japanese, we had to augment it. This required management, and Washington, swollen from the wartime expansion of its functions and equipped with new tax-gathering machinery, swelled again and again.

The Cold War brought about genuine divisions among the American people. While most (including Mr. Heinlein) saw armed militant Soviet Communism as a direct threat not only to world peace and stability but to the United States, many intellectuals thought the only threat was anti-Communist hysteria. Meanwhile, we had what appeared to be politics as usual, but with this difference: politics became more important than business; more important than the churches; more important than anything else we did. The growing tendency of political decisions to affect our lives inevitably attracted more professional politicians: the long era of amateur government was coming to an end.

That end came in the Johnson era. The Great Society programs were intended to make fundamental changes in the power structure of the nation; and they did. The changes wrought were probably not those intended. Then came the Watergate scandals, and a perceived need for reform.

The reforms deliberately crippled the party structure. Power was fragmented, doled out among the 435 representatives and 100 senators, divided among endless committees and subcommittees - but never returned to the people.

By 1975 the world described in this book had ceased to exist.

These notes have two purposes. First, they explain terms no longer in use, or used differently two generations ago. They also provide the opportunity to show where Heinlein was exactly right, or, more rarely, where he is known to have changed his views. Robert Heinlein began his political career as a moderate Democrat. His attempts at electoral office ended when he was defeated for the Democratic nomination to the California State Assembly by an up and coming Los Angeles Irish politician named Sam Yorty, who went on to win the Assembly seat, and later to become mayor of the City of Angels. Years later, Mr. Heinlein visited me when I was campaign manager for Yorty's successful bid for a third term as mayor. By that time, Heinlein had made many changes in his political philosophy, moving closer to the Libertarian position.

Thus the notes: the world changed a lot after this book was written, and so did the philosophical views of the author. I have attempted here to deal with both changes. Since this is a work on practical politics, I have tried to keep political philosophy to a minimum; but since the practical value of this book is as a manual of operations for a political system that doesn't exist, but which can be reclaimed, clearly we can't avoid the question. At the least we have to decide whether the system can be restored, and if so should it be.

On that question I feel comfortable: Robert Heinlein loved the America of this book, and would have loved to see it come back.

However: since we can't just turn back the clock, there will inevitably be questions about which changes to the system are acceptable and which are not. In some cases we know, from other works, particularly Expanded Universe, some of what Mr. Heinlein might have said. In others I can only guess, and rather than do that, I give my own opinion. So far as I know Mr. Heinlein and I were in agreement about most basic philosophical issues - hardly surprising given his influence on my life-but not on all. As an example, we disagreed profoundly about conscription. Ironically, when Heinlein wrote this book, he supported peacetime conscription (while recognizing that there were legitimate contrary views) and had absolutely no doubts about the necessity for the wartime draft; positions which I hold now, but which he rejected in his later years.

Therefore, you must think of these notes as my commentaries. I speak as an unabashed admirer of Robert A. Heinlein; as one whose formative years were profoundly influenced by his writings, and whose later years were enriched by our friendship and his generous support of my career; but I speak for myself. I wouldn't dare try to speak for Robert.

Jerry Pournelle Hollywood, California July 1992

NOTES

1. (See page 6) Unfortunately, while some forgot the lessons of the past, others learned the wrong ones. In the rush to "reform" the political process after Watergate, changes were made that insured that the "senile congressman" would stay in office. So would all the others. By the 1980s the turnover rate in the House of Representatives was lower than that of the British House of Lords, or of the Politburo of the U.S.S.R. This was not the intended consequence of the "reforms" but it was a predictable effect.

It's important to note that the post-Watergate "reforms" took place largely because many good people became disgusted with the political process and turned away from it, leaving the reformation to be organized by zealots and incumbents. It probably should have surprised no one that given their heads, the incumbents made it nearly impossible to defeat them, but in fact most were surprised. The incumbents were shocked to discover that they could no longer be voted out of office.

Whether term limits are a good idea or not is legitimately debatable, but there's no question that term limits address what has become a very real problem.

2. (See page 8) Roosevelt had permitted Stalin to send Soviet forces into Iran as a safeguard against a Nazi presence there. When the war ended, Stalin didn't want to leave. President Truman insisted and went so far as to threaten war if the Soviets did not pull back behind their own borders. This prevented the Iranian oil fields from falling into Soviet hands, and had a profound effect on the future of the Middle East

The U.S. presence in Korea was tested a few years later, and we're still there. Britain left Egypt and, largely because of U.S. pressure, did not retain any rights to the Suez Canal. This led to the Suez crisis of 1956, which, coupled with the failed Hungarian uprising, convinced many people that the Communist system would eventually spread worldwide.

Heinlein has chosen as examples issues which turned out to be important throughout the century.

3. (See page 8) The Smythe Report on nuclear energy was an early study that concentrated on fission weapons, largely of the Hiroshima class. It has been replaced by The Effects of Nuclear Weapons, available from any Government Printing Office for about ten dollars.

One could conclude from the Smythe report that industrial civilization would be grievously harmed, but not destroyed, by a nuclear war. After fusion weapons - H-bombs - were developed, it was pretty clear that a postwar world would be a very devastated place.

Some, however, would survive. Civil defense could be important, and Heinlein built and stocked a fallout shelter at his home in Colorado Springs during the 1950s.

4. (See page 9) It was rather daring for Heinlein to quote Booker T. Washington in 1946, an era in which segregation was quite legal in a quarter of the nation. In those times racial prejudice was not only widely acceptable, but in many circles practically demanded. It's clear that Heinlein, who believed passionately that people weren't equal but race had nothing relevant to say about a person, quite deliberately chose to open this chapter with a quote from a black intellectual. I can only speculate on why, but my guess is that he hoped thereby to discourage the average bigot from reading any further....

Today, of course, it is extremely Politically Incorrect to quote Booker T. Washington, who is seen by the Politically Correct as an "Oreo cookie" or Uncle Tom. More fools they.

5. (See page 13) The world was smaller then, and precinct politics a very great deal more important As late as 1965 it was traditional in political science classes to point out that Hughes lost California by one vote per precinct.

In 1969 when I managed Sam Yorty's successful campaign for a third term, I would cheerfully have given this book to every one of my campaign workers as a practical manual for political operations. By 1973 campaign tactics had changed. Professional managers were much in vogue; and professional managers never did care much for precinct organizations. They would rather hire people. Volunteers tire; boiler room operatives are paid to stay energetic. Volunteers require persuasion; paid operatives can be given orders. Perhaps more to the point, most professional political managers own an advertising agency through which all campaign expenditures are tunneled. They collect a fee, generally 15 percent, of all that money; and of course there is no percentage fee involved with the recruitment and management of political volunteers.

This is not to negate Heinlein's point that your activity matters. It matters a lot. If we are to reclaim the republic from the professional politicians, it will require more, not less, effort by the citizens. The rewards will be correspondingly greater.

6. (See page 13) Political clubs hardly exist today. In the early part of dais century clubs like Tammany Hall were part of the governing fabric of American life. They could be again, but they will have to be rebuilt nearly from scratch.

Political clubs failed for two reasons. First, of course, movies, radio, and television provided alternate sources of entertainment: it was no longer necessary to go down to Tammany Hall or some other political clubhouse to meet people, play cards, and otherwise kill time. TV can absorb all the time one has and then some.

The second and more important reason for the decline of political clubs has been the centralization of politics. When the decisions important to you are made at a local level, it makes sense to have a place to discuss those decisions; but when everything is decided thousands of miles away by people you will never meet, the incentive to be part of politics through a political club tends to vanish.

The reconstruction of some equivalent to the political club - possibly through electronic networks or interactive television - is a matter of some importance if we are to reclaim the republic.

7. (See page 15) Local party officials no longer have much for volunteers to do. The success of the Perot movement may change that. Perot's campaign was completely built by volunteers, much as Heinlein describes here. It is likely that the other parties will pay attention to that lesson.

However, it is also likely that the professional politicians will make every effort to gain control of any such movement. You have been warned.

8. (See page 17) An important point. There's nothing magic about political parties, and little continuity about what they stand for. Prior to World War II, the Democratic Party regularly had a platform advocating "Tariff for revenue only," i.e., decrying protectionism. The Republicans, on the other hand, wanted tariff to protect American industry. Nowadays the Republicans tend to be for free trade, and the Democrats demand an "industrial policy."

Incidentally, this issue isn't as easily decided on ideological grounds as it used to be. As an example: is it protectionism if the U.S. places a tariff on imported goods which make use of technology developed in U.S. institutions from research subsidized by U.S. tax money? Trade relations will be extremely important over the next few years, and it is not at all clear what the optimum trade policy ought to be.

The Perot phenomenon illustrates another case in point. As I write this, there is no Perot party. It is pretty clear that if the Perot supporters hope to reorganize the national political process they will need a party: either to capture one of the existing parties, or, more likely, to form their own. The United States has historically had little use for parties organized around a single person. De Gaulle disliked parties and politics, and tried to govern France by forming his "rally" rather than a party; but today it looks much like any other French political party. It is likely that the Perot supporters will discover they have no choice but to form a permanent institution which will probably look a lot like a party. Clearly those who get in on that early using the techniques described in this book will have considerable influence over what that institution looks like.

9. (See page 20) This would have been impossible in the 1980s; but if we are to reclaim the Republic it must be again. The Perot movement may help.

In the 1960s I went through much the same process that Robert describes, moving from precinct worker to district leader. I then moved from Seattle to San Bernardino, California, where within weeks I became county chairman of a major party, largely because of the connections I had built in Washington state. In those days the position of county chairman carried, if not precisely influence, then certainly access to the influential.

10. (See page 21) It used to be said in political science classes that the true governing class in the United States consisted of about 200,000 self-selected political party officials; and it was quite true. Of course in those days government was not as important as now. Alexis de Tocquiville was astonished at how much of what would in Europe be done by government was in the United States done by volunteers in association. That too remained true until the professionalization of politics.

When politics changes the rules so that it becomes the only game in town, it should not be surprising that unscrupulous people will try to get control of the game: meaning that the citizens who want to retain the republic must work even harder.

Regaining control over our lives clearly will be incomparably easier if the centralization process done in wartime and continued during the Cold War is reversed. This not only means devolving as many issues as possible from Washington to the states, and from state capitals to local government, but also divesting government of many activities which aren't properly its business in the first place.

11. (See page 22) Again, this is how it used to be. Alas, nowadays the paid political professionals have very great influence, and often end up as appointed officials. It is precisely those who refuse to become professionals (and thus have to earn a living) who find themselves frozen out.

When Heinlein wrote this, most state legislators were underpaid and met only for a few weeks each year. The notion of a full-time paid City Council would have been ludicrous.

Yet Heinlein is right: those with real power don't much care for the hired help. However at the moment they can't do without them. If enough people take Heinlein's advice that could change.

12. (See page 27) Heinlein's views on Communism, both foreign and domestic, changed considerably from the time this book was written. Today Communism is no longer armed with ICBMs and H-bombs and thrives mostly in American universities.

13. (See page 27) And Whitaker Chambers went precisely from Communism to Quaker. His book Cold Friday remains one of the most readable accounts of just why Communism had to be taken seriously right up to the moment it fell. Chambers, incidentally, died

convinced that he had abandoned the winning side for the losing when he left the Communist Party of the United States.

14. (See page 28) As a native of Tennessee I have to say that while the restriction on teaching evolution was in full force all during my high school years there, it had no effect whatever on what was actually taught; we learned modern biology including evolution. Nowadays there may be no law against teaching evolution, but the schools are incomparably worse. Note, however, that most of this section is as valid in 1992 as in 1946; indeed given the proposed Voucher System and the utter failure of public education, that debate couldn't be more timely or important.

15. (See page 31) One could wish that the post-Watergate reformers had read this passage.

The fact is that most laws have unintended consequences. Milton Friedman has proposed as explanation an "Invisible Foot" that inevitably mucks up any great reform scheme. It's hard enough to knock down needless social mechanisms; it's hard enough for government to prevent harm. For it to positively do good may be possible, but experience shows it's not easy.

Probably the most important lesson here is that any proposed changes ought to have a builtin mechanism for its own destruction. Just in case.

16. (See page 32) Probably nothing dates this book more than Heinlein's remarks about women.

Heinlein was personally convinced that women were at least as smart as men, and suspected that they were smarter. This suspicion was reinforced by his association with his wife, Virginia, former research chemist and officer of the U.S. Navy, and demonstrably as good an engineer as he was.

His public views were colored by what he thought would be the readers' expectations. In any event most of this section is of historical interest only. The "political streetwalkers" he describes here may have been common in his day, but were rare in the 1960s, and have pretty well vanished today, doubtless due to the changed economic situation.

17. (See page 33) This too is hardly a modern view: but then the "daily occupations" of women are no longer what they were in 1946. See note 16 above.

18. (See page 35) The dub woman is still very much with us. The important point here, though, is the conclusion: "Be a politician who happens to be female." Hardly a startling conclusion today, but a fairly bold thing to say when written.

19. (See page 36) The United States is aging. Over the next twenty years there will be a 75 percent increase in the number of people 50 and older-and only a 2 percent increase in those younger than 50. This has never happened before, in the history of the U.S. or of any other country.

It's something to worry about. We can hope that Heinlein's assessment of older people in politics is exaggerated, or plain wrong. Alas, the politics of the American Association of Retired People doesn't contradict what Heinlein says here. Note also that since this was written the United States has spent our grandchildren's inheritance and saddled them with debt; but Social Security remains "untouchable."

20. (See page 37) Old vultures some may be, but we had better find a way to incorporate the elderly into the political process in a way that remains acceptable to those who are actually producing goods and earning money.

When Social Security began, some eight workers paid into the fund to support each one who took money out. That number is down to about three to one today, and will actually go the other way after the turn of the century: that is, more will be drawing from the fund than paying into it. Clearly this is a matter of great concern, since if the democratic process attempts to enslave the young to the old, soon thereafter the democratic process will be set aside in favor of something more realistic.

21. (See page 37) Punching doorbells used to be the most common form of political activity. One rang doorbells and offered to talk politics. If the people inside liked what you said, you tried to recruit them to go work on their neighbors. You also got a small donation, on the theory that anyone who gave a dollar to a political campaign would almost certainly vote for the candidate-a principle that remains valid today. Much of this book deals with how to do that, and everything said is spot on.

However, it has been about 20 years since any political worker came around my neighborhood. The professional politicians have found what they consider better ways. I'm not so sure of that, myself, and I suspect - indeed hope - that things will change so that punching doorbells is once again a common political activity for volunteers. It's part of the process of reclaiming citizen control of the republic.

22. (See page 39) I have managed five political campaigns (won four) and worked in countless others, and I want enthusiastically to second what Heinlein says here. The mainstay of three of my campaigns was a group of elderly men and women.

23. (See page 42) Another sign of the times: today's regulatory environment has become so complex that it's impossible even to know what the laws and regulations are, much less keep each unbroken. We all break some law every day; there's no help for it, since some of the laws are contradictory. The result is to give great discretionary power to the law enforcement officials, and to undermine the whole concept of the rule of law.

The remedy for this is obvious.

24. (See page 43) "An honest politician is one who stays bought," goes the old political maxim. I grew up in Memphis, Tennessee, when the city was dominated by E. H. "Boss" Crump, one of the last of the oldtime political bosses. I have to say that the city was well run, we were all pretty happy about city government, and most of my friends look nostalgically on those days before politics was "reformed."

Most "reform" movements dissipate power, on the theory that this will reduce corruption; the result, alas, is to dilute responsibility until it becomes impossible to know whom to blame. That's been my observation, anyway.

25. (See page 43) I completely agree with both the substance and the spirit of what Heinlein is saying here. Do note, though, that we all have seen one "successful" politician make a solemn promise and break it. "Read my lips. No new taxes." Of course as I write this his continued success is very much in doubt.

26. (See page 44) My partner is fond of pointing out that the Beverly Hills Police Department has no doubts about whom the police work for. That's not the case in Los Angeles and many other places. The result is that the police, afraid of prosecution for excessive violence, tend to avoid the violent criminal and concentrate their efforts on enforcing the law among the middle class who don't resist arrest and don't start shooting. That in turn adds to the disaffection of the middle class. It's all part of the problem mentioned in note 24 above.

Heinlein's contempt for political "reformers" knows no bounds. In formal political science courses these people are known as "goo-goo's" (from "good government"); and many a political mess can be traced to their efforts. Heinlein's point is that the only effective reform is constant citizen participation in government. In other words, eternal vigilance is the price of liberty....

27. (See page 45) Note that Heinlein refers to the crisis that left France vulnerable to the Nazi invasion. This book was written before the French defeat in Viet

Nam, the Suez Crisis, and the subsequent loss of the French Empire.

28. (See page 48) Signs of the times. Today it's April 15th. And the tax laws are far more complex and contradictory than when Heinlein wrote this.

The federal government takes in far more money than anyone other than an out and out Socialist would have dreamed possible in 1946; yet it's still broke, and the nation is in such a sea of debt that our grandchildren will not be able to pay it all. We tax capital gains as if they were ordinary income. Anyone want to bet that tax law won't be important 20 years from now?

29. (See page 48) In Heinlein's day the Post Office was a courteous and efficient place, not yet the butt of national jokes. Robert was fond of telling stories about that efficiency, including a time when they delivered a package that had been nearly destroyed in a rail accident; attached to the package was a bag of candies which had spilled when the package wrapping tore. Those were the days....

30. (See page 49) TURN THE RASCALS OUT! was long the traditional cry of voters who had had enough. Today the rascals are very thoroughly entrenched.

Heinlein's comments on civil service and patronage are as relevant today as when written, but I doubt he would today have as much faith in written (as opposed to oral) examinations. The problem is the entrenched nature of civil servants and their immunity to political responsibility: for my own part, I think I'd rather see a spoils system for the nontechnical work of government.

31. (See page 50) How far have we come. Since that was written we have built an enormous welfare bureaucracy which has a heavy financial interest in keeping up the supply of poor people as clients. NASA has become swollen with civil servants appointed on merit but entrenched in a system that produces little but paper. It is needless to multiply examples.

32. (See page 51) It's pretty clear that Senator Byrd was right and Heinlein wrong in this instance.

33. (See page 51) All that has been changed. Congresscritters get enormous perks as well as quite good pay, and have access to other sources of income and perks. State legislators are well paid, and often are full time.

The original notion of a legislature was that a group of citizens would go approve laws they then had to live and work under. That got lost, in part due to well meaning "reform" efforts. Heinlein argues that the laborer is worthy of his hire: the evidence is that in politics if you pay the legislator what he is in theory worth he will cease to be a representative, and become a professional politician. What happens is that when the salary is worth competing for, people will compete for the salary.

It's possible that what's needed is a legislature made up of one full-time paid professional house and one parttime amateur house.

In any event, one can hardly argue that legislators are underpaid today: or that paying them a lot more solved more problems than it raised.

34. (See page 51) The public trough used to be slim pickings, but things are very different now. An obvious reform is to go back to what Heinlein describes. Government today dispenses a much larger part of the Gross National Product than when this was written.

35. (See page 51) Nothing has changed here, of course. The lawyers dominate all the legislatures: which may or may not have a bearing on why the laws are always so complex as to require the citizens to hire lawyers in order to obey them.

36. (See page 52) Ed Crump used to distinguish between "honest graft" and "dishonest graft."

Dishonest graft was stealing from the public; making work that didn't need to be done in order to be paid for it; overcharging for services to the public; that sort of thing.

Honest graft was patronage: channeling money that had to be spent to one's friends or associates, or where it would do the most political good, always insisting that the work or services bought be honestly delivered. Although Crump probably wouldn't have cared for Affirmative Action (Memphis was legally segregated during his era), he would almost certainly have included Affirmative Action, Hire the Handicapped, etc., as "honest graft" since those programs involve transfer of public money to people selected by political means.

37. (See page 52) I don't know what Heinlein's views on this would be today. My own are that the experiment was tried, and now we need term-limit laws. See above: the problem is that if you pay people a living wage to be politicians, they will make a living as politicians: which removes government from the people and hands it to a political class.

38. (See page 52) The disgust of the public with officeholders is stronger today than when that was written, despite our having made most legislative offices full time and highly paid. See note 37.

39. (See page 53) I agree: moreover, I think it was a very good

thing that many of our political leaders were mostly motivated by patriotism. In fact, by professionalizing public office we made it more likely that office holding would be merely another job, not a patriotic act. Clearly I am in disagreement with what Heinlein says earlier in this book. I don't know what his views would be today. I doubt he'd have been much impressed by the current group of officeholders; I seem to recall him saying once that the California Legislature was the finest money could buy, but whether this was intended as jest or serious comment I can't say.

40. (See page 53) The heart of the matter. Be a party regular. That, however, presumes that the parties matter. Increasingly they don't.

The federal structure of the United States has always made life difficult for national political parties. The state parties were fer more important Members of Congress and senators were part of the state party system, generally drawn from the same pool and acting interchangeably with state legislative and executive officers. Periodically the state parties would get together to select a national standard bearer; that was usually as a result of discussion and debate and "power brokering."

Today it's far different. The parties have little role in selecting a president; that's done in a series of endurance contests called primaries. Primaries are supposed to be more democratic than a party caucus: this supposes that the ordinary voter, who generally knows no more about a candidate than has been reported in the newspapers and conveyed on TV in 30-second sound bites, will make a more intelligent selection than a party official who may know all the candidates fairly well. It's not a compelling theory, and the results could be imagined if they weren't all too clearly in front of us.

The Founding Fathers of the United States hated political parties, which they called "factions"; but they soon found they couldn't govern without them, and Madison, whose Federalist Papers essays denounce "factionalism" in ringing terms, had no choice but to participate in the building of a party system. For those familiar with the details behind Marbury vs. Madison, the case in which John Marshall asserted the right of the U.S. Supreme Court to strike down acts of Congress as unconstitutional, the irony is delicious: Madison as Secretary of State under Jefferson was acting as a party leader when he failed to deliver the judicial commission demanded by Marbury (who had been appointed by Adams in his outgoing hours).

Heinlein is saying here that parties, particularly local parties, are the most important part of citizen participation in politics; that parties are, and should be, worthy of your support and loyalty.

This is a view not much held any longer; but it is a view very much worth attention. In my judgment Heinlein has come to the heart of the matter: you cannot have citizen control of government without strong LOCAL political parties; and you cannot have strong parties without the kinds of activities he describes.

I wish every citizen concerned with reclaiming the republic would read this section carefully and reflect on it.

41. (See page 54) Exactly so. I've put a note here to draw attention to the text, not because I have anything to add.

42. (See page 56) Still true, although the Congresscritter will pretend to be impressed. The simple fact is that Congresscritters pay attention to PACs bringing money and not much else. There is a standard price for an hour of a Congresscritter's time, and every PAG leader knows it.

It used to be that Congresscritters paid a lot of attention to people who held party office; what we have to do is make that true again.

43. (See page 57) More of the heart of the matter. Some of Perot's support comes from people who never before took part in politics. Others are people disaffected with their parties.

If these people are to have any lasting effect on the American political scene, they must organize along regular party lines: either take over an existing party, or build their own.

The alternative is to chop away the "reforms" of the past 40 years and return the system to what it used to be: but in that case they will still have to join the regular parties to keep control.

There is nothing more temporary than the enthusiasm of a reform movement. Parties endure. Reform movements flare and vanish.

44. (See page 58) What Heinlein is saying here comes right out of old Boss Flynn's book You're The Boss, and it's spot on.

45. (See page 59) While most of us agree that divided government is not a good idea in theory, the Cold War produced some odd - we can hope unique - situations. The Left demanded a number of domestic political concessions, notably the Great Society, in return for allowing the Right to conduct the Cold War and continue building up defenses. The Carter presidency demonstrated that the Democrats were not optimum for handling the Cold War. By the time Reagan was elected, Congresscritters of both parties were the beneficiaries of such powerful incumbency advantages that it was impossible to bring in Republican control of the House. Whether having a Republican majority in both houses would have been a good thing is another matter, and one subject to legitimate disagreement.

However, Heinlein's principle is good. Divided government means no one is responsible.

46. (See page 60) Alas, most of this chapter, and the rest of this book, is obsolete. It doesn't have to remain so; but before we can return control to citizens in general, we must devolve many to most

government controls back to local areas. It is fer more difficult to get people involved in politics when the decisions are made thousands of miles away; if they're made dose by, it's another matter.

I've always called that the horsewhip theory: if the important decisions affecting my life are made by people we can get at with a horsewhip, we're probably in good shape.

This chapter and those following are wonderful introductions to the arts of political doorbell punching, dub organizing, and general local politicking, and with luck and a lot of work these will become the most relevant chapters of the book; for the moment parts are more of academic and nostalgic interest.

On the other hand, if enough people pay enough attention to organizing political dubs, the problems of the country just might solve themselves. Meanwhile, Heinlein, like Dale Carnegie, gives timeless advice on how to win friends and influence people. His final chapter exhorting people to political action is both eloquent and important.

One could only wish that his advice had been taken before we lost control of the political process.

AFTERWORD TO THE NOTES

All the above was written at blinding speed: I only got this assignment a couple of days ago, and the book has to be typeset three days from now. This is as far as I got before the deadlines were called.

That may be just as well. I began this hoping I'd make Heinlein's book more understandable. I may have done that. What I have certainly done is convince myself that we lost a lot when we lost the world Heinlein describes, and that getting it back may be the most important thing we can do for our children.

If we do recover control of our country, we'll need new books, new manuals of operation; but I suspect this work will never quite be obsolete.

Political organizations change rapidly. People change slowly. Politics is people, and whatever his other talents, Robert A. Heinlein understood - and liked - people.

I do hope he isn't too offended at having his book footnoted by a former professor of political science. Like him I've little use for the academic political theorist; in my defense I can say I've also seen the elephant.

Now let's go get our country back.

J.E.P.

July 4, 1992

WHERE TO?

A bloomin', foolish sparrow
Built his nest in a spout,
And along—

—came a building inspector, looked over the site, and the plans, and okayed them, after requiring the sparrow to buy eleven different licenses totalling 18% of the sparrow's building budget, plus something called special service, and along—

—the bleedin' rains came,
And washed the sparrow out.

Again the foolish sparrow,
Built his nest in the spout,
And again—

—came that building inspector, bawled out the sparrow for failing to get special licenses and permits covering typhoons, sun spots, and ice ages, required him to buy seventeen permits and/or licenses and appear before boards controlling zoning, economic impact, ecological protection, energy conservation, and community esthetics, plus something called "very special service"—and a second mortgage, and along—

—the bleedin' rains came,
And washed the sparrow out.
(Around again . . . and again . . . and—)

GRUMBLES FROM THE GRAVE

Robert A. Heinlein
Edited by Virginia Heinlein

For Heinlein's Children

FOREWORD

This book does not contain the polished prose one normally associates with the Heinlein stories and articles of later years. It has been taken from the day-to-day correspondence between the author and his agent, and from letters from several others, many of which have been excerpted.

Such cutting eliminates a great deal of tedious back-and-forth correspondence concerning details of contracts, discussions about royalty rates, and other items which would hold up the flow of information about the writing business (and other things). This book has been abstracted from enormous files, which run millions of words long, much of it boring to those not concerned with the daily business of writing and selling.

Many people have asked me to consider writing Robert's biography, or a joint one—his and mine—but I am not ready to do that yet. Perhaps, one day.

Meanwhile, this correspondence covers mostly the years from the time when Robert first began writing until the period 1969-1970, at which time he found that his writing time was effectively cut down to zero by the continuing details of his business and subsequently, grave illness . . . Over the years, I had taken over record keeping, information on sales, taxes, and some of the correspondence. In 1970, Robert was very sick for the entire year, and it was then essential that I keep the business running. It was fortunate that I had begun doing so the previous year.

In order to follow the various subjects, I have excerpted these letters to put together as many as possible of the remarks and ideas on those subjects. Each letter did have a number of topics in it, these have been separated where possible. Some of the topics are: juveniles, adult novels, publishers, travel, fan mail, time wasters, Robert's writing methods, and so forth.

Some names have been left out for legal reasons.

There are places where there are only notes on telephone conversations. It would be impossible to reconstruct those. They have been omitted.

There are a few sparse excerpts from letters which were written after I took over running the business end of Robert's writing . . . most of those letters written by Robert. He talked to Lurton Blassingame, his agent, now and then, but mostly he spent his time reading for his work, or writing. During the last eighteen years of his life, he had many illnesses. But, in between, he continued working.

I was his "first reader"—the person who read each work first and made suggestions for cutting, revisions, and so on. It was a great responsibility. When Robert came down with peritonitis in 1970, *I Will Fear No Evil* needed more cutting, but it was obvious that he was (and would be for a long time) in no condition to do that. And his publisher was calling for the manuscript, so I had it Xeroxed and sent it in. I take full responsibility for that. With further cutting, it might perhaps have been a better story. In spite of this, it has sold more than a million copies in U.S. paperback alone, and has been translated into more than half-a-dozen languages, and is still in print in all of those, including English.

At one time, Robert wrote to his agent about the possibility of writing a memoir-autobiography: *Grumbles From The Grave* by Robert A. Heinlein (deceased).

This is that book. It covers many years, many subjects, and some personal comments—taken mostly from letters between Robert and his agent, Lurton Blassingame.

Carmel, California 1988

A SHORT BIOGRAPHY OF ROBERT A. HEINLEIN BY VIRGINIA HEINLEIN

Robert Anson Heinlein was born July 7, 1907, the third of seven children of Bam Lyle Heinlein and Rex Ivar Heinlein, in Butler, Missouri. The growing family moved to Kansas City during his childhood.

When Robert learned to read, he read everything he could lay his hands on. He did, in fact, read on his way to school, going along the street, up and down curbs, up to the schoolhouse. He attended junior high school, Central High School in Kansas City, arid spent one year at a local junior college. His next older brother had gone before him to the United States Naval Academy, and Robert set his sights on going there. He collected manyletters of recommendation from people and gained the appointment from Senator James Reed to enter the Naval Academy in 1925.

Following his graduation and commissioning in 1929, he served aboard the *Lexington* under Captain E. J. King, who later became commander in chief of the U.S. Navy during World War II. When his tour of duty on the *Lexington* was about to end, Captain King asked that he beretained as a gunnery specialist. However, Robert was given duty as gunnery officer on the *Roper,* a destroyer.

Heinlein's birthplace in Butler, Missouri.

Robert A. Heinlein (lower right) with his sister Louise (lower left) and his brothers Lawrence Lyle (upper left) and Rex Ivar (upper right).

Heinlein at the time of his high school graduation.

Robert A. Heinlein 1929

Destroyer duty was difficult because of the rolling of the ship, and seasickness was a way of life for him. He lost weight and came down with tuberculosis. After he was cured, the Navy retired him from active duty.

At twenty-seven years of age, he found himself permanently ashore, with a small pension. It was necessary for him to find some way to augment that money. He tried silver mining, politics, selling real estate, and further study in engineering. One day, he found an ad in a science fiction magazine for a contest. So he sat down and wrote a story ("LifeLine"). He felt it was too good for the magazine he had written it for, so he sent it to the top magazine in the field—*Astounding Science Fiction.* John W. Campbell, Jr. bought the story,

The next several stories he wrote were less salable, and it was only on his fifth or sixth try that Campbell again purchased one. The second and following stories eventually sold, but Robert was hooked for life on writing. Originally, his purpose in writing was to pay off a mortgage on a house which he and his wife of a few years had purchased. After that mortgage was paid off, he found that when he tried to give up writing, he felt vaguely uncomfortable, and it was only when he returned to his typewriter that he felt fulfilled.

During World War II, Robert left his writing to do engineering work for the U.S. Navy. For three years he did such work in Philadelphia. The war over, he returned to his writing. By this time, he was looking for wider horizons. He was persuaded to begin the juvenile line, and he sold stories to the *Saturday Evening Post.* His second juvenile was picked up by television, in a series that ran for five years. He also wrote the classic film, *Destination Moon,* and he began to think about writing serious adult novels to open up that market to science fiction.

Robert thought that the possibilities of mankind going into space were sufficiently important and feasible that before he left Philadelphia, he wrote two letters urging that the Navy begin space exploration. One letter went through channels as far as the head of the Philadelphia Naval Air Experimental Station, who killed the proposal. The second went (also through channels), via a friend, through Naval Operations, and got as far as a Cabinet meeting. It was reported that then-President Truman took it seriously enough to ask whether such a rocket could be launched from the deck of a ship. No, the President was told. And that killed the project.

Heinlein gets the ball rolling, 1934.

The Soviet Union's May Day Rocket, 1960. The slogan reads "Earth-Mars-Earth—we will get there first."

In 1947 Robert was divorced from his wife, and when he received his decree nisi, he married me. During World War II, I had gone into the Navy, as a WAVE, and my second tour of duty was in Philadelphia, where I met Robert; we worked in the same section.

One day Robert spent hours searching for some tearsheets for an anthology. In an effort to help, I decided that his files needed to be organized. So I set about that, setting up a system which I still use today. This began my involvement in the literary business.

By the time Robert found himself too busy to do more than overhead work (keeping up correspondence with his agents, keeping records, answering fan mail, and all the other chores attendant on being a literary figure), I was well enough acquainted with his business that I could take over those chores for him. We worked together as a team, discussing what to do about offers, and I would answer the letters for him.

With the juvenile series well launched, and selling many copies primarily to libraries, Robert became the darling of librarians. He was asked to give endless speeches, and when his annual books for boys came out, he did a special program for general radio distribution on each new book.

But he still yearned to do serious writing for adults, rather than for the specialized science fiction market. So, in 1960, he finished writing *Stranger in a Strange Land.* That book became his best known work.

When the boys who originally read his juveniles grew up, they kept looking for more of the science fiction which Robert had made so popular. So he set out to write adult novels for them. For some years, he regularly wrote two books a year, one adult and one juvenile. In addition, there were always requests for other things in the way of nonfiction. Many of those requests had to be turned down for lack of time.

Between books, we did a good deal of foreign travel. We went around the world four times, spent time in Europe. One of the most interesting, but not to be repeated trips, was to the Soviet Union. In 1960, we saw the May Day parade, then took off for Kazakhstan. Soon after our arrival in Alma-Ata, we were told of the U-2 incident. Things turned frosty for us, but there was no way out, so we continued the trip, going on to Samarkand, which was the real reason we went all that way into the USSR. While we were in Vilno, just before a summit conference between Khrushchev and President Eisenhower, the Soviet Union sent up a rocket which to this day we cannot be certain was unmanned. On the way down from seeing some castle in Vilno, we encountered a group of Red Army cadets, who were extremely excited about it and had to tell us. We were heartsick about the development and returned to our hotel.

In 1970, there was a serious illness, from which it took him two years to recover his health. Then, he sat down at his typewriter and turned out *Time Enough for Love.*

Always a man of fragile health, illnesses became more frequent, and there was less time for writing. We both had a taste for travel, and we saw a good deal of the world; anywhere there was transportation, we went. We visited Antarctica and went through the Northwest Passage to Japan. When China opened up to travel, we went there, among other parts of the East. *To Sail Beyond the Sunset* was eventually published on Robert's 80th birthday. Questions began to come in—Was this to be the final book from his typewriter? (But by this time it was a computer.) He had intended to write more, but again illness intervened, and *To Sail* did become his final story.

I will leave it to others to evaluate the influence of Robert's work, but I have been told many times that he was the "Father of Modern Science Fiction." Those books have been published in many languages, in many lands, and some of them seem to have been landmark stories.

During his lifetime, Robert received many honors, including four Hugo awards for the best novel of the year. The books so honored were: *Double Star* (1956), *Starship Troopers* (1959), *Stranger in a Strange Land* (1962), and *The Moon Is a Harsh Mistress* (1966). He was also the recipient of the first Grand Master Nebula Award from the Science Fiction Writers of America. There were also many other awards: The Sequoyah Award, given by the Children of Oklahoma for the best children's novel of the year *(Have Space Suit—Will Travel);* many awards for the blood drives we did; *Tomorrow Starts Here,* given by Delta Vee, Inc.; Robert perennially won first rank among popular writers in the *Locus* inquiries. But the thing which pleased him most, it seemed, was being invited to be a Forrestal Lecturer at his alma mater in 1972.

Heinlein's Distinguished Public
Service Medal (awardedposthumously).

In October 1988, I was asked to come to Washington,D.C., to receive, on Robert's behalf, the Distinguished Public Service Medal. My greatest regret is that he could not have known of that.

CHAPTER I

IN THE BEGINNING

April 10, 1939: Robert A. Heinlein to John W. Campbell, Jr.

I am submitting the enclosed short story "LifeLine" for either *Astounding* or *Unknown,* because I am not sure which policy it fits the better.

EDITOR'S NOTE: Robert always told the following story when asked how he began writing. He had seen an ad in one of the pulp science fiction magazines, offering $50.00 for the best story by a beginning writer. He wrote "LifeLine" then decided that it was too good for that particular magazine. So he sent it to John W. Campbell, Jr., who had been editing Astounding *for approximately two years at that time. Campbell was always looking for new talent and apparently recognized it in Robert's first work. Robert claimed that he took a look at the check for "LifeLine" and said, "How long has this racket been going on?" His second story was also accepted, after some revisions. Thereafter it was some months before Campbell accepted another story.*

Robert was one of a group of writers whose work is now called "The Golden Age of Science Fiction. " John Campbell helped his writers along with suggestions and brought them along to make Astounding *the foremost science fiction pulp magazine of the time.*

April 19, 1939: John W. Campbell, Jr. to Robert A. Heinlein

.. . I like your story, "LifeLine," and plan to take it at our regular rate of 1 cent a word, or $70.00 for your manuscript.

August 25, 1939: John W. Campbell, Jr. to Robert A. Heinlein

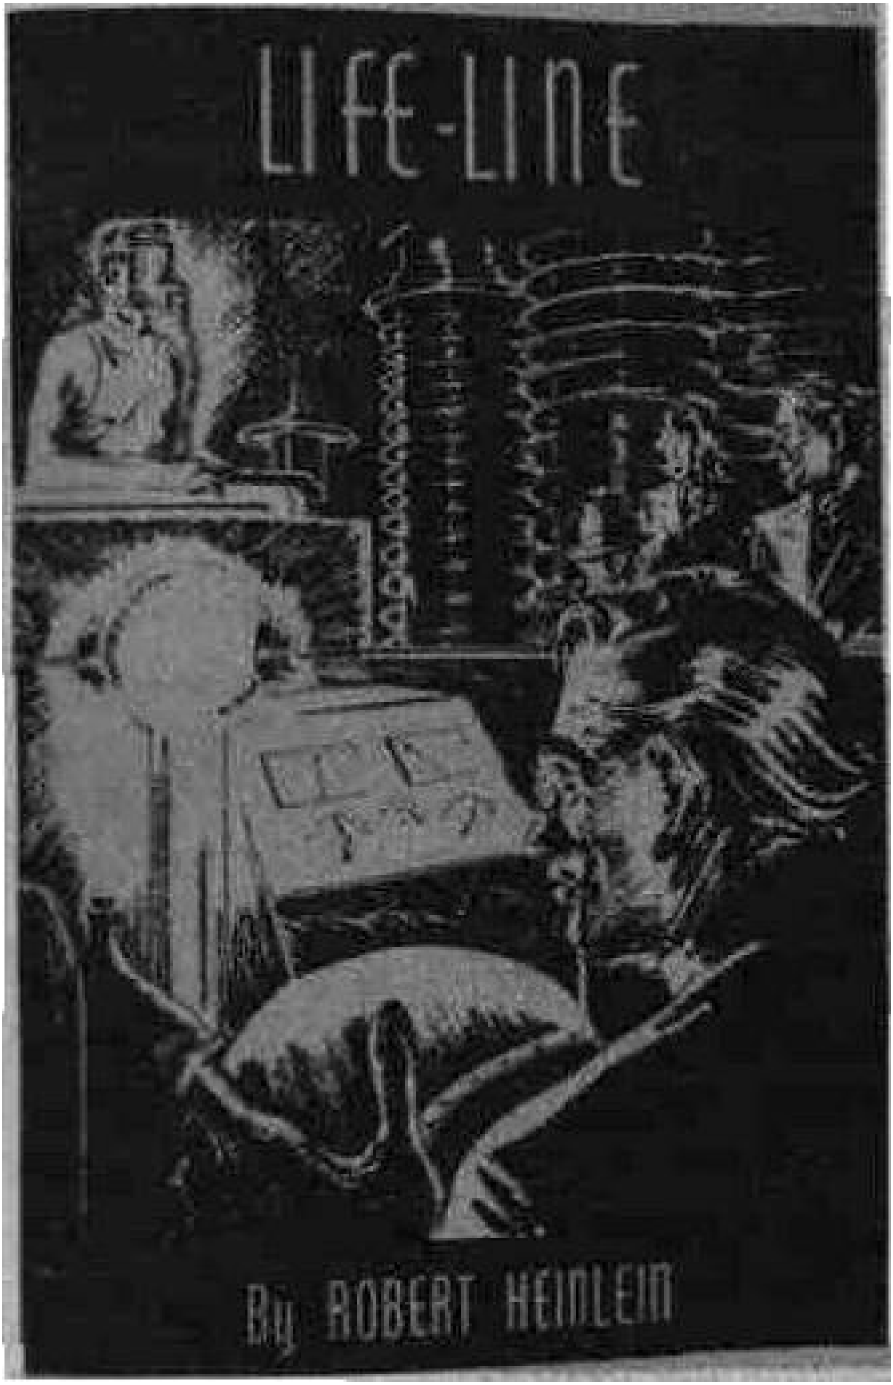
At about this time you should receive our check for $310.00 for "—Vine and Fig Tree—" ("If This Goes On—")—which title will have to be changed to give it more umph. The story, by practically all that's good and holy, deserves our usual unusually-good-story 25% bonus. It's a corking good yarn; may you send us many more as capably handled.

But—for the love of Heaven—*don't* send us any more on the theme of this one. The bonus misfires because this yarn is going to be a headache and a shaker-in-the-boots; it's going to take a lot of careful rewording and shifting of emphasis.

I genuinely got a great kick out of the consistency and logic of the piece. You can, and will, I'm sure, earn that 25 % bonus for unusually good stuff frequently. I 'm very much in the market for short stories and novelettes. This piece can't appear until after E. E. Smith's "Gray Lensman" finishes, so I'd like more stuff in between whiles.

December 15, 1939: John W. Campbell, Jr. to Robert A. Heinlein

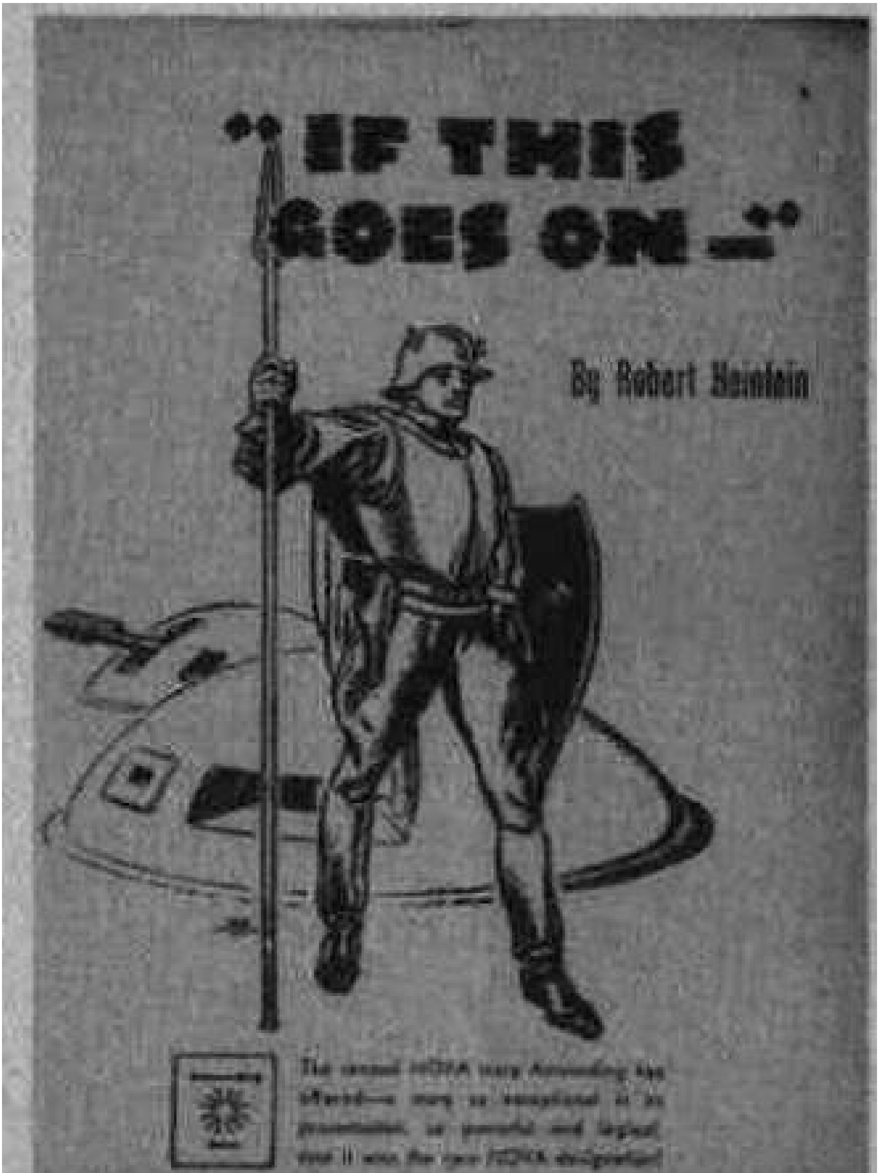
I was wrong, evidently, in believing you had difficulty working out "Lost Legacy" [published in *Super Science Stories* as "Lost Legion" by Lyle Monroe], but you are definitely wrong in suggesting that "If This Goes On—"is, or has any tendency to be, hack. It has flavor, a roundness of background that makes it lovely.



LIFE-LINE
By ROBERT HEINLEIN

Heinlein's first story, "LifeLine." John W. Campbell, Jr.'s *Astounding,* August 1939. Art by Isip.

EDITOR'S NOTE: John W. Campbell, Jr. started writing pulp science *fiction stories while still in college. He was a large, tall man who threw off ideas like a sparkler and was addicted to various hobbies and hospitality to authors. Some of his hobbies were photography, ham radio, and dianetics.*



"IF THIS GOES ON—"
By Robert Heinlein

"If This Goes On—," *Astounding,* February 1940.
Art by Hubert Rogers.

Robert did not admire his writing style and objected strenuously to the various changes JWC made in Robert's stories. Despite their differences in personality and style, the two men became good friends after Robert began writing for Astounding. *John turned down a number of Robert's stories after the first one had been published. Those were changed slightly and later sold to other pulp magazines. Whenever John considered a story particularly good, he was allowed by the higher-ups at Street and Smith to give the writer a bonus. Rates, in those days, were very low, and the bonus added nicely to the writer's income.*

Heinlein at his desk with plate from "If This Goes On—."

Each month Astounding *carried a reader poll, which rated the stories which had appeared in an earlier issue. Those stories vied against each other for placement in the "Analytical Laboratory." Robert's first story, "LifeLine, " was second in the reader poll three months following publication.*

During the three years Robert wrote mainly for Astounding, *he often placed first and second (using his own name and a pseudonym) with his stories. He quickly became John's leading writer.*

The stories which appeared in Astounding *had blurbs written by the editor, both on the contents page and at the beginning of the story. Robert complained that John often gave away the point of the story in these blurbs. However, Robert learned much about the art of writing from John.*

January 23, 1940: John W. Campbell, Jr. to Robert A. Heinlein

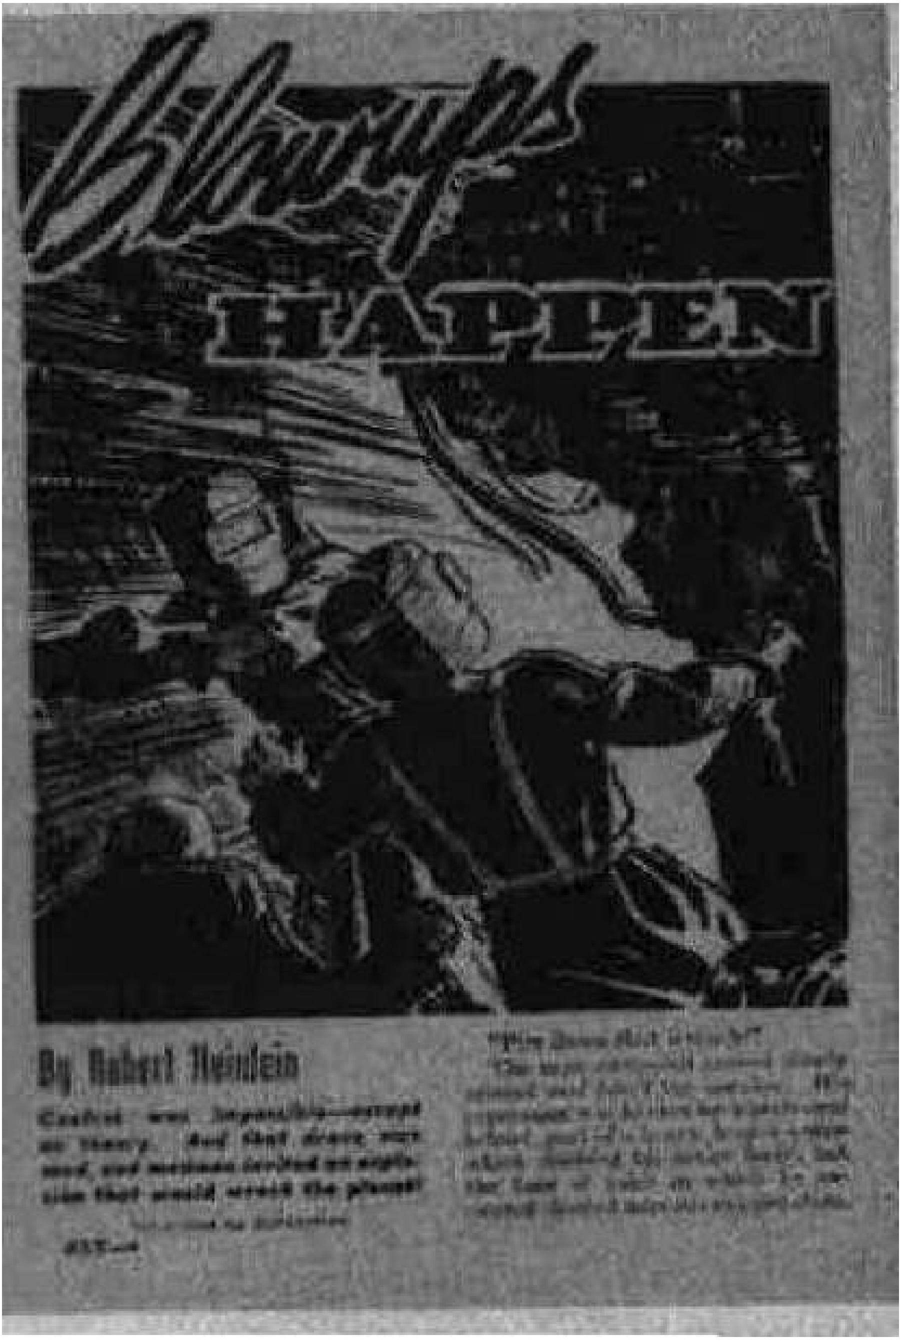
Now, the idea I'd like to have you mull over a while before giving me a definite answer. I think you're one of the writers who can work up someone else's ideas into alogical story with enthusiasm. Some can, you know, and some definitely can't. You are in a position to know, and that's why I'd like to have your own reaction to this.

February 23, 1940: Robert A. Heinlein to John W. Campbell, Jr.

Here is the story about the atomic engineers and the uranium power plant ["Blowups Happen"]. I had intended to send it to my friend in Lawrence's radiation laboratory at Berkeley for a final technical check-over, but decided to send it to you promptly instead. As you pointed out, things are happening fast in this field. The quicker a story laid in it sees print, the better the chance that some assumption in the story will not already have been invalidated.

I presume that this story herewith will give you some idea as to whether or not I can work out another man's ideas. If you decide that I can, then I would be interested in taking a crack at your idea of scientists going insane over the uncertainty of truth in the "sub-etheric" field. But not just at present, not before fall. It does not seem to me to be a good idea for me to do another story about scientists going crazy too soon— neither for me as a writer trying to build a commercial reputation, nor for the magazine.

Furthermore, it is a big idea; I would want to use not less than fifty thousand words. I have a serial on the stands now; I don't suppose that you want to publish another serial by me for a year, at least—or have I incorrectly estimated the commercial restrictions.



Blowups HAPPEN

By Robert Heinlein

"Blowups Happen," *Astounding,* September 1940. Art by Charles Schneeman.

EDITOR's NOTE: During the summer of 1940, Robert visited John Campbell in the east, the two became fast friends. Letters went back and forth, at great length.

November 2, 1940: Robert A. Heinlein to John W. Campbell, Jr.

.. . I turned it down, stating that the rate for my own name was higher than that. (I may let them publish "Lost Legacy" under a pseudonym, as it is one that I really want to see published. I am going to give a slight amount of rewriting to make it science fiction rather than fantasy, but still let it say the things I want it to say.)

Having touched on my personal policy to that extent, I feel obliged to be more specific, since it concerns you, too. I am going up, or out, in this business—never down. I don't want to write pulp bad enough to slip back into a lower word rate, and a hack attitude. As long as you are editing, at Street and Smith or elsewhere, you can have my stuff, if you want it, at a cent and a quarter a word, or more if you see fit and the business office permits. I won't use an agent in dealing with you, although I now have one. Neither my name nor the name of Anson MacDonald will be made available to any other book at the rate at which you buy from me, and, if I get an offer of a better rate, I will let you know and give you refusal, as it were, before switching. I write for money and will sell elsewhere for a materially higher word rate, but I feel a strong obligation to you. No other editor will get the two names you have advertised and built up at the rates you pay.

I seem to have drifted a long way from stating my own policy and intentions. I will probably go on writing, at least part time, indefinitely. If you someday find it necessary to start rejecting my stuff, I expect to take a crack at some other forms, slick perhaps, and book-form novels, and in particular a nonfiction book on finance and money theory which I have wanted to do for a long time, also some articles on various economic and social problems. I have an outlet for such things, but it would be largely a labor of love—maybe ten dollars for an article into which has gone a week of research, and slim royalties on books in that field. Howsomever, I might crack the high word rates on general fiction at the same time. One never knows—I never expected to be writing pulp, or fiction of any sort, but it has paid me well ... to my surprise!

Addendum to remarks about my own policy: You may possibly feel that my wish to get out of the field of science fiction and into something else smacks of ungratefulness, in view of the way you have treated me. That is the very reason why I am looking forward to another field. I dislike very much to have business relations with a close personal friend. The present condition in which you like and buy everything I write may go on for years. If so—fine! Everybody is happy. But it would be no pleasure to you to have to reject my stuff, and certainly no pleasure to me. And it can happen at any time—your editorial policy may change, or my style or approach may change, or I may simply go stale. When it does occur, I want to cut it off short without giving it a chance to place a strain on our friendship. I don't want it to reach a point where you would view the reception of one of my manuscripts with a feeling of, "For Christ's sake, why doesn't he peddle his tripe somewhere else. He *knows* I hate to turn him down." And I don't want to greet a series of returned manuscripts in my mailbox with a feeling of, "Good God, what does he *expect* for a cent and a quarter a word? The New Testament?" Nor do I want you taking borderline stories from me simply because you hate to bounce them. I suspected that might be the case with the tesseract story ["—And He Built a Crooked House"].

Right now I know I am a profit-making commercial property, because the cash customers keep saying so in the Analytical Laboratory, but I don't intend to hang on while slipping down into fourth or fifth place. No, when I quit, I'll quit at the top, in order to insure that our business relations will never become unpleasant or disappointing to either of us. Which is a long and verbose way of saying that I value your friendship very highly indeed and intend to keep it if I can.

February 13, 1941: John W. Campbell, Jr. to Robert A. Heinlein

. . . We'll pay you l 1/2 cents a word for your stories. Your guarantee that your *name* will not appear in other science fiction or fantasy magazines. And, naturally, your keeping the said arrangement strictly under the lid. Since "Anson MacDonald" is as much your name now as "Robert Heinlein," built up in and by *Astounding,* that goes, too. If you get an offer at 1 3/4 or 2 cents a word-grab it. It will promptly dispose of competition, or it will fade out very quickly. That's steeper than any modern scf. book can economically pay for anybody.

February 17, 1941: Robert A. Heinlein to John W. Campbell, Jr.

.. . One exception to the above that might amuse you—I have a phony name [Lyle Monroe] and a phony address, fully divorced from the RAH persona, under which and from which I am trying to peddle the three remaining stinkeroos which are left over from my earliest writing. For such purpose I *prefer* editors whom I do not like. It would tickle me to sell off the shoddy in that fashion. I don't think it is dishonest—they examine what they buy and get what they pay for—but I 'm damned if I'll let my own name even appear on one of their checks.

.. . I think my meaning is clear, and I will, as I believe you know, live up to it. Let me add this: If the going gets tough and the business office tells you to cut rates, I will go back to a cent and a quarter a word without murmur, *provided it is the highest rate you pay anyone.* As long as you pay anyone a cent and a half, I want it. If my stuff starts slipping and is no longer worth top rates, I prefer to quit rather than start the downgrade. Same thing I had to say once before with respect to rejections—I don't like 'em and will quit the racket when they start coming in. I know this can't go on forever but, so help me, having reached top, in one sense, I'll retire gracefully rather than slide downhill.

September 6, 1941: Robert A. Heinlein to John W. Campbell, Jr.

From your last two letters I am forced to conclude that you and I are talking somewhat at cross-purposes—you are apparently under the impression that I am still writing. To be sure, I did not drop you a card saying, "I retired today." I could not—under the circumstances it would have seemed like a childish piece of petulance. Nevertheless, I knew that I would retire and exactly when and why, and I sent a letter to you a number of months back in which I set forth my intention and my reasons. Surely you recall it? I know you received it, for you commented on it. The gist of the matter was that I intended to continue to make the writing of science fiction my principal occupation until I received a rejection slip, whereupon I would retire. I told you about it ahead of time so that you would know it was not pique, but a thought-out plan, which motivated me.

You will remember that in 1940 I was already looking forward to retiring in a few months. Well, the time came when I should have retired, but I couldn't—I couldn't afford to; you were buying everything I wrote at nice fat rates. A day's work paid me at least thirty dollars and usually more. I couldn't enjoy loafing; if I stayed away from the mill it had to be for some reason I could justify to my residual puritan bias. So I took myself to one side and said, "Look here, Robert, this has got to stop. You haven't any need for more money; the possession of more money simply leads you into expensive tastes which in no way increase your happiness. In the meantime you are getting fat, shortwinded, and soft, and ruining your digestion to boot." To which Robert replied, "Yeah, boss, I know. But look—it's the money machine. Just punch it, and the dollars fall out. Money, money, money, money!" So I had to speak to him sternly, "Money! Sure, money is nice stuff, but you don't need much of it. We settled that when we entered the navy, and we proved it the time you got stung buying that silver mine." To which he answered, "Yeah, but look—you could buy the GE Home Workshop. You could put it right over there—and it costs only $110." "Another gadget! You know what I think of gadgets. When would you use it, anyhow?" "Don't give me that stuff! You know you like gadgets." "Well, within moderation, but the lust for them is a vice." "It is, eh? You've got it pretty bad then." "I have not," I answered with dignity. "I can take them or leave them alone. Besides, I would rather make them than buy them." The argument went on and on. He pointed out to me that money did not have to be spent; it could be loaned or given away. (We were both agreed that it should never be saved, except for specific short-term purposes.) I said, "When did you ever give or loan money that the deal didn't turn sour?" He mentioned a couple of times, and I was forced to admit he was right; "—besides, we could be more careful about it," he added hopefully.

The upshot of the matter was a compromise. I agreed to let him continue to punch the alphabetical slot machine just as long as he hit the jackpot every time; the first time he failed to get his nickel back we would quit.

So—at long last came the envelope I had been looking for, a rejection instead of a check [for "Creation Took Eight Days," later published as "Goldfish Bowl"]. I had a quick pang of regret over the money I didn't get, which was washed away by the pleasant knowledge that school was out at last. I spent the whole day taking pictures. I spent the next day starting the excavation for a swimming pool, a project which I have had in mind for five years, which I have been ready to commence for some months, but which takes time, lots of it. I could hire it done by staying at the typewriter, but that was not the idea—I wanted the heavy physical exercise [that] a pick, shovel, and wheelbarrow provide.

Besides that, I have had a number of typewriter projects in mind which have been indefinitely postponed because I was busy with S-F. In particular a short book on monetary theory which should have been written eighteen months ago. That is a "must" and will probably be finished this winter. I expect it to be published but I probably won't make any money out of it. Besides that, I have been urged to tackle a primer of semantics and general semantics. I am moderately well prepared for the task, having had five seminars in the subject; nevertheless there is a lot of research to be done and a monumental task of devising lucid pedagogical methods in a most difficult field, involving as it does a very nearly complete reorientation in methods of thinking even for the "educated" reader. I estimate that it may take from two to five years to complete. Incidentally, if you are interested, I would be willing to do a popular article or two on the subject for *Astounding. I* offered to do so once before, you may recall, but you made no answer.

Besides the above, I am going to try to do at least one novel for book publication and will probably try a flyer in slicks, most likely through Virginia Perdue's agent. I haven't had much luck with agents up to now, and it seems to be agreed that a good agent is almost a *sine* *qua non* for such endeavor.

The above plans, although numerous and involved, are leisurely in their nature—which is what I have been wanting. I want to be able to stop, sit down, and "invite my soul" for an hour, a day, or a week, if I feel the need for it. I don't know yet what my principal task in this world is, if I have one, but I do know that I won't find it through too much hurrying and striving ...

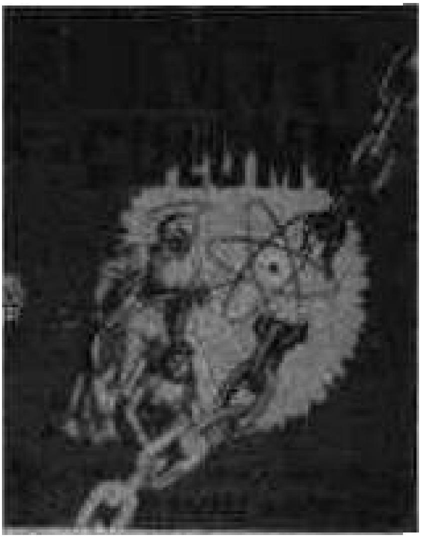
.. . I have gone on, wordily, because it is important to me that you should understand my motives—I want your approval. Let me pose a rhetorical question: What incentive is there for me to remain a full-time writer of science fiction? At the present time I am the most popular writer for the most popular magazine in the field and command (I believe) the highest word rate. Where is there for me to go but down? I can't go up in this field; there is no place to go ... Frankly, the strain is wearing on me. I can still write, but it is a terrific grind to try each week to be more clever than I was the week before. And if I do, to what purpose. First is the highest Ican stand; a cent and a half a word is the most I can hope to be paid.

I will not attempt to pep up my stories by introducing a greater degree of action-adventure. It is not my style. It seems to me that the popularity of my stuff has been based largely on the fact that I have continually enlarged the field of S-F and changed it from gadget motivation to stories more subtle in their themes and more realistically motivated in terms of human psychology. In particular I introduced the regular use of high tragedy and completely abandoned the hero-and-villain formula. My last story, the one you bounced ["Goldfish Bowl"], does not represent a change in the sort of thing I have been doing, but a logical and (for my taste) artistic extension of the theme. I don't blame you for bouncing it; if you did not see the point of the story, you have no reason to think that your customers would. Nevertheless, the story had a point, a most important point, a most powerful and tragic one. Apparently I expressed the point too subtly, but you and I have rather widely divergent views about the degree of subtlety a story can stand. For my money you have damaged a great many excellent stories you have printed by telegraphing the point of the story on the contents page, in the blurb under the title, and in the subtitles under the illustrations. And you damn near ruined "Requiem" by adding four lines to the end which led the reader up a blind alley, clear away from the real point of the story.

Anyhow—I'm not trying to sell you that last story; I'm just trying to say that it was not a pointless story, but one of the most daring themes I have ever tackled, and, so far as I know, never before attempted in science fiction.

Returning to our muttons: I am extremely grateful to you for the help you have been to me in every way during this two-year try at commercial writing. And I don't want you to feel that I have taken what I wanted and walked out. One of my reasons for the continual scouting I have done for *Astounding* and *Unknown* has been that I anticipated my own retirement and wanted to be able to say, "Okay, John, I'm quitting, but here are half a dozen other writers, my proteges, who take my place several times over." I expect to continue that scouting indefinitely.

SIXTH COLUMN

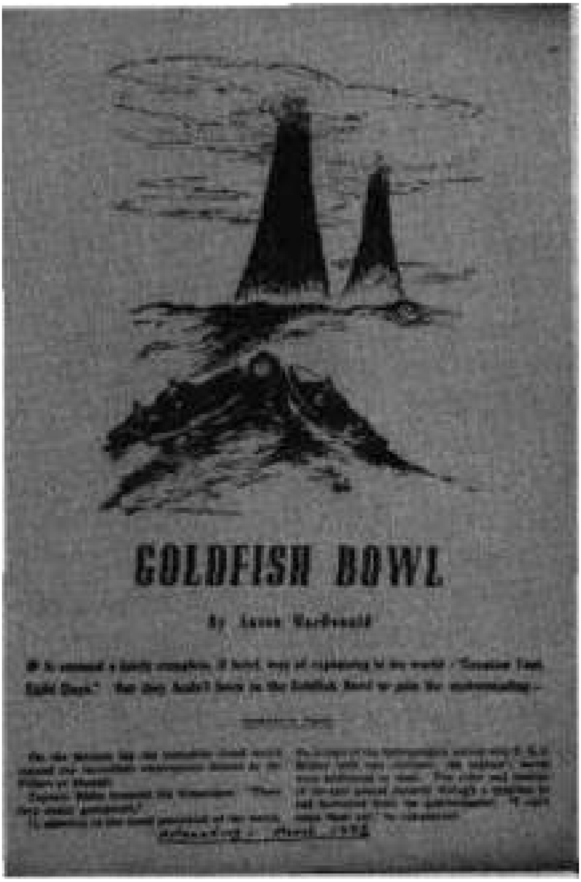


"Sixth Column" also ran as a serial in *Astounding* in 1941,

When Ardmore reached the secret, buried Citadel, only six men were alive there. PanAsia has just completed the total conquest of the United States, and the men are despondent. The scientists have just discovered and begun exploring three new spectra beyond the electromagnetic—the electrogravitic, the magnetogravitic and the electromagnetogravitic. These could create seeming miracles—levitation, simple transmutation, instant cure of any germ-or virus-caused disease, *etc.* No one knows what to do with them. But Ardmore, with an advertising man's imagination, suggests the start of a new "religion," since the PanAsians do not interfere with the religions of the "slaves."

And with the new science and enough mumbo jumbo, they go forth to bedazzle, frustrate, and drive the PanAsians back to their homelands. (This was Heinlein's first full novel.)

Besides that, I have laid down no hard and fast ultimatum to myself that I won't write science fiction at all. If I get an idea that really intrigues me, I'll write a story about it and submit it. Naturally, I don't expect you to maintain the former financial arrangement. I won't take a rate cut, but you are welcome to buy at a cent a word under the Lyle Monroe name, a cent and a quarter for Caleb Saunders, or, if you think a story merits it, a cent and a half for Heinlein or MacDonald. If one of the latter two makes the grade in slicks, it will be withdrawn from pulp entirely, but that is still a remote possibility.



GOLDFISH BOWL

By Anson MacDonald

"Goldfish Bowl," published in *Astounding,* March 1942 under pseudonym Anson MacDonald. Art by Kramer. "Goldfish Bowl" had originally been rejected by Campbell, but eventually Heinlein and Campbell agreed on revisions.

SIXTH COLUMN

September 16, 1941: Robert A. Heinlein to John W. Campbell, Jr.

My own work—I am taking you at your word that "Creation Took Eight Days" ["Goldfish Bowl"] can be fixed up to sell to you in either one of two ways, by changing the ending or by changing the earlier part to make the ending less of a surprise. Of the two I prefer to change the earlier part; otherwise it is a completely different story and not my kind of a story. I have never written a World-Saver story of the usual formula, because I don't believe in them. Even in "Sixth Column" I was careful to point out that the job was just started and never would be finished. This particular story was intended to give an entirely fresh angle on the invasion-by-alien-intelligence theme. So far as I know, every such story has alien intelligences which treat humans as approximate equals, either as friends or as foes. It is assumed that A-I will either be friends, anxious to communicate and trade, or enemies who will fight and kill, or possibly enslave, the human race. There is another and much more humiliating possibility—alien intelligences so superior to us and so indifferent to us as to be almost unaware of us. They do not even covet the surface of the planet where we live—they live in the stratosphere. We do not know whether they evolved here or elsewhere—will never know. Our mightiest engineering structures they regard as we regard coral formations, i.e., seldom noticed and considered of no importance. We aren't even nuisances to them. And they are no threat to us, except that their "engineering" might occasionally disturb our habitat, as the grading done for a highway disturbs gopher holes.

Some few of them might study us casually—or might not. Some odd duck among them might keep a few of us as pets. That was what happened to my hero. He got too nosy around one of their activities, was captured, and by pure luck was kept as a pet instead of being stepped on. In time he understood his predicament, except in one respect—he never did realize to its full bitterness that the human race could not even *fight* these creatures. He was simply a goldfish in a bowl—who cares about the opinions of a helpless goldfish? I have a fish pond in my patio. Perhaps those fish hate me bitterly and have sworn to destroy me. I won't even suspect it—I'll lose no sleepover it. And it seems to me that the most esoteric knowledge of science would not enable those fish to harm me. I am indifferent to them and invulnerable.

I used a working title of "Goldfish Bowl" but changed it because, in my opinion, it tipped the story. Now it appears that you want the story tipped more quickly. Perhaps the working title is almost the only change it needs. In any case, John, you habitually give the key idea of a story in the blurbs—sometimes, I think, to the detriment of the dramatic punch of a story. That was my reaction to the blurbing on "By His Bootstraps." (But you're the editor! I ain't complaining; I'm expressing an opinion.) I'll look the story over in a day or two and try to see where I can do some planting in the early part. If you have any specific ideas, please mention them right away; I am not quite sure what you want—the degree, at least. Maybe we'll have to ship this story back and forth a couple of times yet.

It will please me to sell this story for a reason that has developed since I last wrote to you. As you know, I have been gradually selling off the half-dozen stories you have rejected since I started writing. Last week I sold two in one day—the last two ["Pied Piper" and "My Object All Sublime," both under Lyle Monroe. Heinlein never permitted reprinting these]. Utter dogs they were, written in the spring of 1939. That leaves me with an absolutely clean sweep of having sold every word I have ever written from the first day I sat down to attempt commercial writing . . . So—a clean sweep right up to this last story. The opportunity to fix it up to sell is very pleasant.

September 17, 1941: John W. Campbell, Jr. to Robert A. Heinlein

I had forgotten that little point of yours. And now, of course, the thing sticks me at a wonderfully tender spot. Item: We went to large size, with about a 70% increase in consumption. Item: We have, novelettes, but are atrociously short of short stories. Item: We've had one good author who could really produce wordage. And now—now of all times!—that one wants to retire! Just when, it so happens, we haven't a single thing of yours on hand. Your proteges, helpful as they are, can, together, produce about as much, but not the quality, that you can. So—we launch the large-size, large-consumption book with the loss of the top one-third of our authors—the one man with three names.

Look—how about at least making it a new year's resolution, or something? By that time, maybe we can get shaken down into a better order.

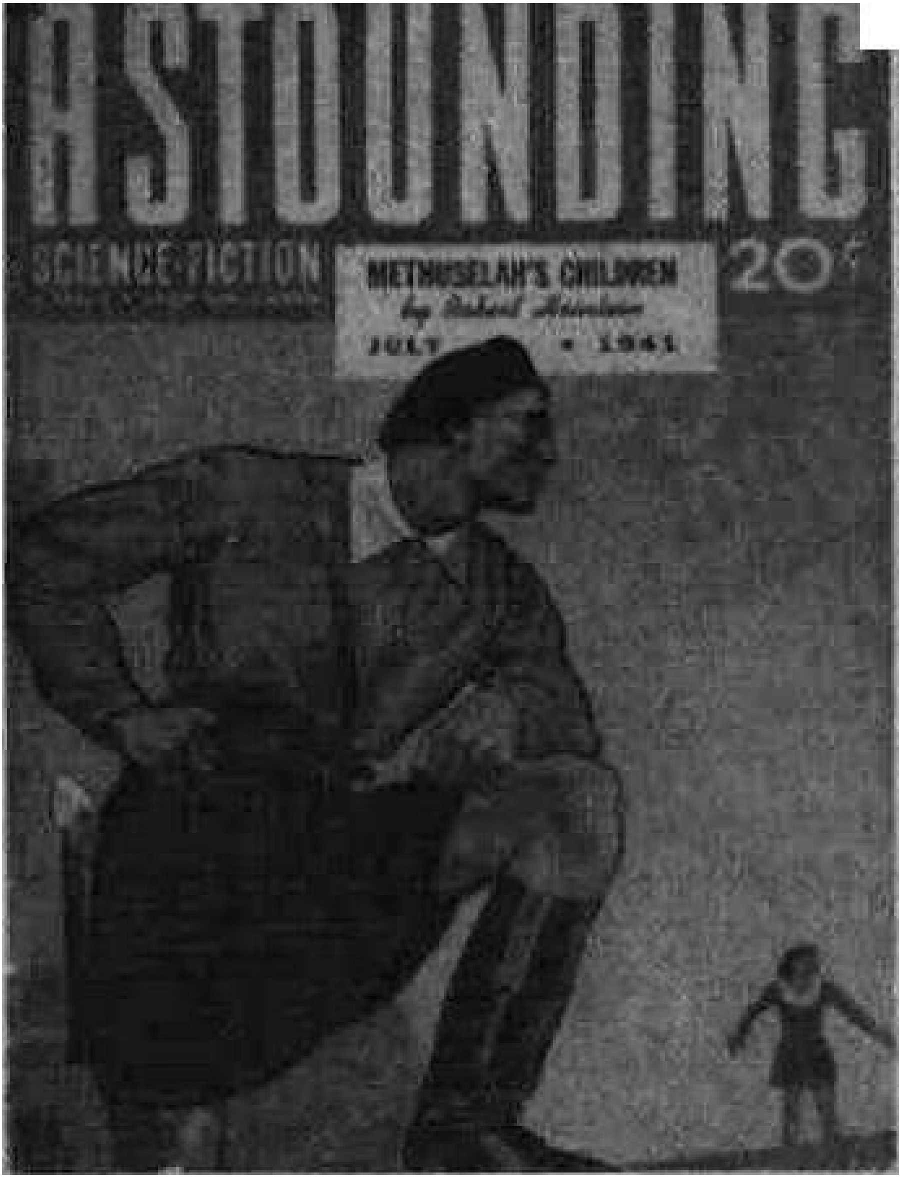
On that story-that-bounced: Science fiction is normally read as light, escape literature. The reader does not expect or seek heavy philosophy; particularly, he does not expect or prepare himself for heavy philosophy when he reads a story that shows every sign of being action-adventure. Bathyspheres—alien something-or-others—men vanishing and men killed—heavy menace, with Navy personnel called in to look into it—something powerful and active under way here, with violent action ending in a solution—

Or at least that seemed the setup. The answer you gave was utterly unexpected, the right answer to the wrong question, so to speak. Therein it was a seemingly pointless question-and-answer, and disappointing to the reader. At Heinlein-MacDonald l 1/2 cent rates, I can't disappoint; alteration of either the answer—so it fitted the question the reader was asked—or of the question into a form that more evidently called for the type of answer provided, would make it click. The answer provided did make a highly interesting point, but a point overwhelmed in the rush of unfulfilled expectation of action-adventure.

In general, if you retire abruptly at this particular moment, *Astounding* is going to feel it in much the way one's tongue feels a missing tooth just after it's been yanked.

So far as going up goes, I'll agree you can't very well. I can agree with your desire to retire, under your circumstances. But look—when you don't have to, writing's a lot of fun. When you have to fill magazines, as I do, good manuscripts are godsends. Be god for a little while more, and send more, willya?

I know one thing: I'm going to get some loud and angry howls from readers.



ASTOUNDING
SCIENCE-FICTION
METHUSELAH'S CHILDREN
by Robert Heinlein
JULY • 1941
20¢

"Methuselah's Children," Heinlein's tale of a super-race, *Astounding,* July through September 1941. Art by Hubert Rogers.

September 19, 1941: John W. Campbell, Jr. to Robert A. Heinlein

In re your own stories. Novelettes are your meat—those and short serials, which will be, under the new setup, short novels complete in an issue. You need elbow room to develop the civilization background against which your characters act. I know that, and have suggested shorts to you mainly when I was kinda desperate for short stories that couldn't be smelled before opening the book.

September 25, 1941: Robert A. Heinlein to John W. Campbell, Jr.

I think I've got it. Darned if I don't think so. The serial, I mean—the one I've been looking for ["Beyond This Horizon"].

Like this—for some time I've been wandering around in a blue fog, trying to get a theme, a major conflict suitable for a novel-length S-F story. I wanted it to be fully mature, adult, dramatic in its possibility—and not used before. Naturally, the last requirement was the sticker. Perhaps the possibilities in S-F have not been exhausted, but they have certainly been well picked over; for me, at least, it is hard to find a really fresh theme. But I started searching by elimination. First, I eliminated space travel. Old hat, and it tends to steal the scene from anything else. Then I assumed that the basic problems of economics and politics had been solved. Thus, in one sweep, I got rid of almost every type of story I have done up to this time.

Okay—in a world that is all peace-and-prosperity, what will men and women have left to struggle for? Problems of sex and marriage obviously, but I am not writing for *Ladies' Home Journal.* The basic problem of esthetics? Wide open for S-F treatment, and new, but the issues are subtle and it would be difficult to convince the readers that the problems of esthetics are susceptible to scientific analysis and manipulation. Same for metaphysical problems.

I seemed to be up against a dead end, when a possibility occurred to me which, while not new, has been futzed with rather than dealt with—the possibilities of genetics, and in particular, What Are We Going to Make of the Human Race? Mr. Tooker discussed it ably in the March '39 book, Stapledon has dealt with it on the grand scale in "Last and First Men," Taine-Bell suggested some possibilities in "The Time Stream," numerous superman stories have been written, and lots of stories of the mad-scientist-in-the-laboratory-creates-new-species type have been done. [Aldous] Huxley did a beautiful satire in *Brave New World,* and even Heinlein has brushed the edges of the subject in "Methuselah's Children," But it seems to me that there remains a different and in some ways better story yet to be written.

September 30, 1941: Robert A. Heinlein to John W. Campbell, Jr.

Herewith is a piece of utter hoke which you saw in its original form in 1939. I shortened it to fit an immediate market ready to buy it, but I am not obligated to sell it there. In its shortened form it seems somewhat improved and it occurred to me that, if you are still having trouble getting short stories "which can't be smelled before the book is opened," as you put it, this item might stand a chance. It isn't good, I know, but it may be no worse than the competition.

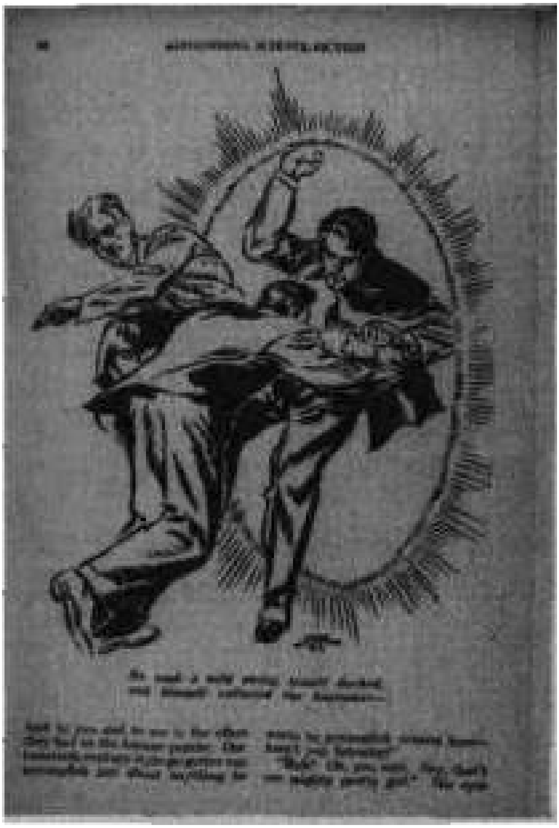
It is offered to you at one cent a word, under the Monroe name which appears on it, or under the name of Leslie Keith. God knows it is not worth a cent a word, but I believe that is your lowest rate. If you can't use it, place it carefully in the enclosed receptacle and bounce it back to me at once, so I can shoot it off to the low-pay, slow-pay market for which it is intended.

I suppose it is silly of me to waste time revising and selling these dogs, but this is the last of them, and it is a source of satisfaction to have disposed of all of them. And none of them took more than one rewriting, which isn't bad, since most writers do two drafts in any case.

Tomorrow I start revising "Creation Took Eight Days"["Goldfish Bowl"], which *won't* take me eight days and will leave two whole months for the serial. I've continued research every day and have a stack of notes *that* high. I'm going to like this serial, I think.

October 1, 1941: John W. Campbell, Jr. to Robert A. Heinlein

Re "By His Bootstraps." It's taking first place away from "Common Sense" . . . "Bootstraps" is not hack; it's the first all-out, frank attack on the circle-of-time story. It's a magnificent idea, and it's been worked out beautifully.



A scene from "By His Bootstraps,"*Astounding,* October 1941. Art by Hubert Rogers, an artist closely associated with *Astounding* and with Heinlein's works.

You've taken a minute, but highly intriguing point in the whole theory of time-travel, and built it up to the proportions it deserved. Reasons it's good, among others: you follow the thoughts of each of the several returns of Wilson, showing why he did, each time, say what he said, though he might well have tried to change from his remembered speech. You have a story in which, each time, the man from the future who knows more, says, "It's too long a story to explain," and brushing off the explanation, both intrigues and annoys the reader—and makes him like it.

October 4, 1941: Robert A. Heinlein to John W. Campbell, Jr.

I have been beset by insomnia while trying to get the serial started, and was forced last night to the expedient of twin beds and barbiturate. Under the influence of drugs I was awake only three times in the night, but got over eight hours sleep, by damn, and feel fine today. But serial still looks hopeless. The idea is grand, wonderful, and I see more interesting angles to it every day. But each day it looks a little more impossible to work out than the day before—for pulp. The events would take place with such geologic leisureliness. And there are other difficulties, which will be obvious to you. I don't know—I don't know.

... "By His Bootstraps" is still hack—a neat trick, sure, but no more than a neat trick. Cotton candy.

CHAPTER II

BEGINNINGS

October 16, 1941: Robert A. Heinlein to John W. Campbell, Jr.

I can write my own story with great speed when I start, but I am not yet satisfied as to the central conflict. I have several different central problems in my mind, any of which would make a story, but as yet do not have one which fully satisfies me. I want this story to be high tragedy rather than horse opera—full of gore and action as a Greek tragedy, but tragedy in the Greek sense. (Necessarily a tragedy, because wisdom required to control genetics wisely is superhuman, and I'm no superman.)

EDITOR'S NOTE: As the use of working titles was frequent, titles of stories are not always given. Now and then a final title to a story was affixed by the author, but, more often, the editor changed the title before the story saw print. It would only cause confusion here to show all the title changes some stories went through.

ASTOUNDING
Science-Fiction 25¢
BEYOND THIS HORIZON

"Beyond This Horizon," by "Anson MacDonald," *Astounding*

April and May 1942. Art by Hubert Rogers.

November 9, 1941: Robert A. Heinlein to John W. Campbell, Jr.

Here are the first ten thousand words of the current struggle ["Beyond This Horizon"]. Confidentially, it stinks. But I am and have been doing my goddamndest to turn out printable copy for you. My worst trouble is to get enough illustrative action into the story and to keep it from bogging down into endless talky-talk. I have stacks of notes on this story, more than twice as much as on any story I've ever done; the ideas it suggests really interest me—but I am finding it hard as hell to beat a *story* out of it.

But I am turning out copy and will continue to do so, at about two thousand words a day or more. Those spots on the right margin are my blood, a drop per line.

November 15, 1941: Robert A. Heinlein to John W. Campbell, Jr.

Here is another hunk of hack ["Beyond This Horizon"]. I think it well to let you see it in weekly chunks, as I am by no means confident of its quality and would like for you to look it over and comment on it as I turn it out. Then, if you get any brainstorms, I can incorporate them without delay. You appear to think better of this yarn than I do. I think it is going to require a *deus ex machina* to give the ending any real oomph—in my present sterile state of mind you may be elected *deus.*

December 2, 1941: Robert A. Heinlein to John W. Campbell, Jr.

I believe I am correct in assuming that required revisions and corrections can wait until I get to New York. Most of the changes, if any, would need to be made in the second installment. I think I have ducked around the taboos sufficiently; compare this story ["Beyond This Horizon"] with any issue *of Ladies' Home Journal—this* story is much more discreet than the stuff now printed in domestic magazines. I remember a story in Street and Smith's *National Magazine,* in which the hero scrubs the heroine's back—both raw. Me, I did not even suggest that sexual intercourse was an old human custom, and you can search the yarn from end to end without finding any reference to anatomical details.

I *did* include a scene involving telepathy with an unborn child—you suggested it. But I kept the mother off stage. I don't think there is a leer in the story. Lots of boy-meets-girl and some will object to that, but, dammit, there *had* to be—if the story was to be at all true to life.

December 8, 1941: John W. Campbell, Jr. to Robert A. Heinlein

I never meant to give you a feeling of extreme urgency.

Perhaps your interpretation—your personal emotional index—of "desire" comes closer to my intent than "need." Partly, that can be due to the situation best expressed this way: I need—in the sense of "must have without fail"—some tall stories. I need manuscripts. I desire some tall stories from you; I ardently desire manuscripts of the quality you produce.

(Curious—you and I each possess a vocabulary of perhaps 300,000 words, with a pretty fair ability to distinguish between the shades of meaning involved. And I can't quite adequately express the exact tone and intensity of value of the basic thought "I want you to write stories for *Astounding."*)

But for the future. I don't know what you'll be doing. I have no idea what pressure of work will be on you. I don't know whether you can ever write a story as a method of relaxation. (I can; it's as much fun as reading someone else's work.)

December 9, 1941: Robert A. Heinlein to John W. Campbell, Jr,

This is the first time in fortyeight hours that I have been able to tear myself away from the radio long enough to think about writing a letter. Naturally, our attention has been all in one direction up to now. We are still getting used to the radical change in conditions, but our morale is extremely good, as is, I am happy to report, that of everyone. For myself, the situation, tragic as it is, comes to me as an actual relief and a solution of my own emotional problems. For the past year and a half I have been torn between two opposing points of view—and the desire to retain as long as possible my own little creature comforts and my own snug little home with the constant company of my wife and the companionship of my friends and, opposed to that, the desire to volunteer. Now all that is over, I have volunteered and have thereby surrendered my conscience (like a good Catholic) to the keeping of others.

The matter has been quite acute to me. For the last eighteen months I have often been gay and frequently much interested in what I was doing, but I have not been happy. There has been with me, night and day, a gnawing doubt as to the course I was following. I felt that there was something that I ought to be doing. I rationalized it, not too successfully, by reminding myself that the navy knew where I was, knew my abilities, and had the legal power to call on me if they wanted me. But I felt like a heel. This country has been very good to me, and the taxpayers have supported me for many years. I knew when I was sworn in, sixteen years ago, that my services and if necessary my life were at the disposal of the country; no amount of rationalization, no amount of reassurance from my friends, could still my private belief that I ought to be up and doing at this time.

I logged in at the Commandant's office as soon as I heard that Pearl Harbor was attacked. Thereafter I telephoned you. The next day (yesterday) I presented myself at San Pedro and requested a physical examination. I am an old crock in many little respects—half a dozen little chronic ailments, all of which show up at once in physical examination but which I was able to argue them out of. Nevertheless, I was rejected on two counts, as a matter of routine—the fact that I am an old lunger and that I am nearsighted beyond the limits allowed even for the staff corps. They had no choice but to reject me—at the time. But my eyes are corrected to 20/20 and I am completely cured of T.B., probably more sound in that respect than a goodly percentage now on duty who never knew they had it. Sure, I've got scars in my lungs, but what are scars?

My feelings toward the Japs could be described as a cold fury. I not only want them to be defeated, I want them to be smashed. I want them to be punished at least a hundredfold, their cities burned, their industries smashed, their fleet destroyed, and finally, their sovereignty taken away from them. We have been forced into a course of imperialism. So let it be. Germany and Japan are not safe to have around; we are bigger and tougher than they are, I sincerely believe. Let's rule them. We did not want it that way—but if somebody has to be boss, I want it to be *us.* Disarm them and *don't turn them loose.* We can treat the individual persons decently in an economic sense, but take away their sovereignty.

Heinlein in his naval uniform, shortly after his graduation in June 1929. Contrary to his wishes, Heinlein did not see active military duty during World War II.

December 16, 1941: Robert A. Heinlein to John W. Campbell, Jr.

So far, I have not been able to peddle my valuable services. The letter in which I volunteered, accompanied by a certified copy of my physical exam report, is wending its way through the circuitous official channels. I stuck airmail postage with it with a memo to the Commandant's aide asking him to use same, and the letter asks for dispatch orders; nevertheless, it would not surprise me to be sitting here until January or so. In the meantime, I have been circulating around the offices of local naval activities, trying to find someone who wants me bad enough to send a dispatch asking for me. No luck so far. Damn it—I should have volunteered six months ago.

December 21, 1941: Robert A. Heinlein to John W. Campbell, Jr.

I was interested in your father's comment in re the navy, and in your further comments. Some of the comments he found fault with are real faults, some as you pointed out derive from a lack of knowledge of the true problems. Some of the real faults seem to me to be inherent in the nature of military organization and inescapable. The navy is an involved profession; it takes twenty-five years or so to make an admiral—and older men are not quite as mentally flexible as younger men. I see no easy way to avoid that. Is your father as receptive to new ideas as you are? Will he step down and let you tell him how to run AT&T? Is there any way of avoiding the dilemma? Nevertheless, the brass hats are not quite as opposed to new ideas as the news commentators would have us think. The present method of antiaircraft fire was invented by an ensign. Admiral King encouraged a warrant officer and myself to try to invent a new type of bomb (Note: We weren't successful.) You may remember that one of my story gags was picked up by a junior officer and made standard practice in the fleet before the next issue hit the stands. Nevertheless, there is something about military life which makes men conservative. I don't know how to beat it. Roosevelt has beaten it from the top to a certain extent by insisting on young men and/or men whose abilities he knew, but it is sheer luck that we have a president who has known the navy's problem and personnel since he was a young man. I know of no general solution.

I may get sea orders any day—along with a lot of other old crocks who would not have to go to sea if it had not been for that partisan opposition I spoke of ...

. . . Some of Hamilton Felix's point of view is autobiographical. [Hamilton Felix was the protagonist of "Beyond This Horizon."] I would like to have been a synthesist, but I am acutely aware that many of my characteristics are second-rate. I haven't quite got the memory, nor the integrating ability, nor the physical strength, nor the strength of character to do the job. I am not depressed about it, but I know my own shortcomings. I am sufficiently brilliant and sufficiently imaginative to realize acutely just how superficial my acquaintance with the world is and to know that I have not the health, ambition, nor years remaining to me to accomplish what I would like to accomplish. Don't discount this as false modesty . . .

I have just sufficient touch of genius to know that I am not a proper genius—and I am not much interested in second prize. In the meantime, I expect to have quite a lot of fun and do somewhat less constructive work than I might, if I tried as hard as I could. That last is not quite correct. I simply don't have the ambition to try as hard as I might, nor quite the health. But I do have fun!

In re mental-ostrichism and boycotting the war news: Along time ago I learned that it was necessary to my own mental health to insulate myself emotionally from everything I could not help and to restrict my worrying to things I could help. But wars have a tremendous emotional impact and I have a one-track mind. In 1939 and1940 I deliberately took the war news about a month late, via

Time magazine, in order to dilute the emotional impact. Otherwise I would not have been able to concentrate on fiction writing at all. Emotional detachment is rather hard for me to achieve, so I cultivate it by various dodges whenever the situation is one over which I have no control.

January 4, 1942: Robert A. Heinlein to John W. Campbell, Jr.

You suggest that my thinking about the navy I keep compartmented away from my thinking on other subjects. It is true that I have been oriented and indoctrinated by a naval education and naval experience. It is true that a man cannot escape his background—the best he can do is to try to evaluate it and discount it. But as to your "proof" (by, God save us, Aristotelian logic!) that I keep my mind compartmented—well, much more about that later; much, much more.

In the meantime, I shall "sound general quarters and return your fire." For a long time I have from time to time felt exasperated with you that you should be so able so completely to insulate your thinking in nonscientific fields from your excellent command of the scientific method in science fields. So far as I have observed you, you would no more think of going off halfcocked, within sufficient and unverified data, with respect to a matter of science than you would stroll down Broadway in your underwear. But when it comes to matters outside your specialties you are consistently and brilliantly stupid. You come out with some of the goddamndest flatfooted opinions with respect to matters which you haven't studied and have had no experience, basing your opinions on casual gossip, newspaper stories, unrelated individual data out of matrix, armchair extrapolation, and plain misinformation—unsuspected because you haven't attempted to verify it.

Of course, most people hold uncritical opinions in much the same fashion—my milkman, for example. (In his opinion, the navy can do no wrong!) But I don't expect such sloppy mental processes from you. Damn it! You've had the advantage of a rigorous training in scientific methodology. Why don't you apply it to everyday life? The scientific method will not enable you to hold exact opinions on matters in which you lack sufficient data, but it can keep you from being certain of your opinions and make you aware of the value of your data, and to reserve your judgment until you have amplified your data.

All I said with reference to the Pearl Harbor debacle was that the necessary data for an opinion was not yet in and that we should reserve judgment until the data was available. I added, in effect, that this was no time for the intelligent minority to be adding to the flood of rumors and armchair opinions flying through the country. I still say so. As an intelligent and educated man, you have a responsibility to your less gifted fellow citizens to be a steady and morale-building influence at this time. Your letters do not indicate that you are being such.

I am going to try to take up a number of points one at a time, some from your letters, some from related matters.

"Aid and comfort to the enemy, phui. Morale damage, hell." (From your letter) I am going to have to be rather directly personal about this. It may not have occurred to you that I am a member of the armed forces of the United States at the present moment awaiting orders, for sea duty I hope. Such comments as you have made to me might very well damage the morale of a member of the armed forces by shaking his confidence in his superior officers. There happens to be a federal law forbidding any talk in wartime to a member of the armed forces which *might tend* to destroy morale in just that fashion—a law passed by Congress, and not just a departmental regulation. It so happens that I am sufficiently hardheaded, toughminded, and conceited not to be much influenced by your opinions of the high command. I think I know more about the high command than you do. Nevertheless, you were not entitled to take the chance of shaking my confidence, my willingness to fight. And you should guard your talk in the future. It might, firsthand, secondhand, or third hand, influence some enlisted man who had not the armoring to his morale that years of indoctrination gives me.

Bear in mind that my advice to you is based on a law specifically intended by the Congress under the Constitution to restrict the freedom of speech of civilians in wartime in their relations with the military. If you don't like the law, write to your congressman about it. If you feel you must express yourself, write it down and save it until the war is over—but *don't* tell a member of the armed forces that his superiors are stupid and incompetent. Don't write to Ron [L. Ron Hubbard] in such a vein. He has not my indoctrination and he *is* in the battlefield. If you feel that the high command is incompetent, take it up with your congressman and your senators. Those of us in the service must work under the officers that are placed over us—it doesn't help to try to shake our confidence in them.

.. . I've dug down into my personal funds many times to entertain visiting congressmen, visiting notables, *etc.* There are no funds appropriated for such things; the commissioned officers pay for them themselves. Naval officers act as scout masters for sea scouts. They are always available to speak before any body of persons willing to listen—travel to and from at his own expense, or charged to ship's service *(a private* fund) by his C.O. We always have had public relations officers and we always have done everything we knew how to do to foster goodwill for the navy. In addition to that, the naval affairs committees of both houses are kept constantly informed in detail of the needs of the navy and the strategic reasons therefor.

Our efforts were pitifully inadequate. How could they be adequate? In the first place, we aren't advertising men and we don't know how. In the second place, even if we knew how, we had no appropriations to work with. All we could do was to talk, and that got us damned little newspaper space and no billboards. Of course, we could get an occasional scholarly article published—much good that did!

Heinlein in his white naval uniform, (early1930s)

Heinlein's Fencing Champion medal.

. . . You may consider my reaction as a type form professional reaction; it derives from my orientation and indoctrination. It is quite evident from the suggestion you made and your answer to my reaction that you have not the slightest understanding of the psychology of a professional military man. I don't know quite how to explain this. It is a heavily emotional matter and goes back to some basic evaluations. Let me put it this way: Take a young boy, before he has been out in the business world. Put him into the naval academy. Tell him year after year that his most valuable possession and practically his only one is his personal honor. Let him see classmates cashiered for telling a small and casual lie. Let him see another classmate cashiered for stealing a pair of white silk socks. Tell him that he will never be rich but that he stands a chance of having his name inscribed in Memorial Hall. Entrust him with secrets. Indoctrinate him so that he will consider himself locked up and unable to move simply because his sword has been taken away from him. Feed him on tales of heroism. Line the corridors of his recitation halls with captured flags. Shucks, why goon with it—I think you must see what I am driving at. That will produce a naval officer, a man you can depend on to be utterly courageous in the face of personal danger regardless of the sick feeling in his stomach, but it won't produce an advertising man.

Naval officers, as a group, are no more temperamentally capable of producing the kind of sensational publicity you suggest they produce than they are of sprouting wings and flying.

Furthermore, if they were, they would be no damn good as naval officers. A naval officer is much more than a man with a certain body of technical information. He is a man trained to respond in a certain behavior pattern in which "honor" and "service" have been substituted for economic motivation. I don't know whether I have convinced you or not, but I can assure you that it would be almost impossible to find an officer who has spent his entire adult life in the fleet who could put over the sensationalism you suggest. It is about like asking a priest to desecrate the sacrament.

Certainly the navy has specific secrets. In peacetime they are limited to such things as the details of weapons (and occasionally the existence of a weapon), codes and ciphers, the numerical details of gunnery scores, the insides of certain instruments, and similar details in which we are *trying* to keep a little ahead of the next. You spoke of "official spies" being shown things which are kept from the public. Who handed you that piece of guff? I know what you mean—foreign officers. Unless they are allies, they don't see anything that newsreel men don't see. I remember once being ordered to chaperone a British naval officer. I was admonished never to let him out of my sight and was given a list of things he must *not* see. I even went into the head with him. . . .

Of course, in wartime practically everything is secret—and a damned good thing! But the essential matters on which a civilian could make up his mind whether or not we need a big navy aren't secret, never have been secret, and by their nature can't be secret. Geographical strategy, for example, and the relative strengths of the fleets of various nations. *Jane's Fighting Ships* is not a particularly reticent book, and I know you have seen it. Navy yards aren't hard to get into. In normal times, naval vessels run boats for any visitor who wants to come aboard—and the ship's police has a weekly headache to make sure none get into the firecontrol stations and similar places.

I am completely bewildered as to what you mean by the "hush hush" attitude of the navy. I would certainly appreciate some facts.

Lots of civilians are necessarily entrusted with certain naval secrets. I've sailed with many a G.E., Westinghouse, and AT&T engineer. The gadget of mine that was taken over by the fleet was developed by one of your father's engineers. I doubt if he personally had any occasion to know about it, but don't ask him about it and don't try to conjecture what it might be. Don't mention it to anyone, lest they do a little guessing. By mentioning the *class* of engineer that developed it I have shown greater confidence in you than I have in any other civilian. Let it stand that it is a proper military secret and that we hope that we are the only navy using it.

It is quite possible that a request for a piece of information is turned down when the questioner can see no reason why it should not be told. To that I can say only that the officers refusing to part with the information are the only possible judges as to whether or not public welfare is involved. Being human, they can make errors of judgment, *but no one can judge for them.* Obviously—if you hold a secret, I have no way of judging whether or not you should share it with me. Consequently, the responsibility for the decision rests entirely with you. A perfectly innocent request for information can be met with what appears to be an arbitrary refusal. How can the questioner know?

But, having been in the navy, and having held both confidential and secret information, I can assure you that it is not the policy of the navy to go out of its way to be mysterious. Decidedly not! On the contrary, it usually seemed to me that we were too frank, aboveboard, and open. It was too easy to get too close to really hush-hush stuff, to such an extent that it used to worry me.

Item: You excuse the somewhat wild remarks of yourself, [Fletcher] Pratt, and company, on the basis that you are sore as hell, especially so as you are navy fans and love ships. (Incidentally, you don't seem to want to be classed as part of the general public, yet seem to resent being advised to act like professionals in the matter.) If you think you're sore and upset, how do you think I feel? Pearl Harbor isn't a point on a floor game to me—I've been there. The old *Okie* isn't a little wooden model six inches long; she's a person to me. I've sketched her fuel lines down in her bilges. I was turret captain of her number two turret. I have been in her main battery fire control party when her big guns were talking. Damn it, man, I've *lived* in her. And the casualty lists at Oahu are not names in a newspaper to me; they are my friends, my classmates. The thing hit me with such utter sickening grief as I have not experienced before in my life and has left me with a feeling of loss of personal honor such as I never expected to experience. For one reason and one only—because I found myself sitting on a hilltop, in civilian clothes, with no battle station and unable to fight, when it happened.

EDITOR 's NOTE: Robert wrote stories for John W. Campbell, Jr. for Astounding *and* Unknown *for close to three years. When Pearl Harbor was attacked in 1941, Robert tried to persuade the Navy to take him back on active duty. Failing in that, he went to work in Philadelphia doing engineering at the Naval Air Experimental Station.*

The war over, Robert looked around at the wider horizons for his writing career. Four short stories were sold to the Saturday Evening Post, *then the most important and highest paying market, and he sold his first juvenile novel to Charles Scribner's Sons. The next market he tackled was motion pictures, and the successful* Destination Moon *resulted.*

"Gulf" was the only story Robert wrote after World War II which was intended solely for the Astounding *market. Occasionally his agent, Lurton Blassingame, would send a novel to John W. Campbell, Jr. Some of those*

were rejected for various reasons with lengthy letters of explanation from John Campbell to Robert. Those stories were never intended for that market, but Campbell would explain why the writing and stories were terrible—from his viewpoint. When Podkayne [Podkayne of Mars] *was offered to him, he wrote Robert, asking what he knew about raising young girls in a few thousand carefully chosen words.*

The friendship dwindled, and was eventually completely gone. It was just another casualty, probably, of World War II.

CHAPTER III

THE SLICKS AND THE SCRIBNER'S JUVENILES

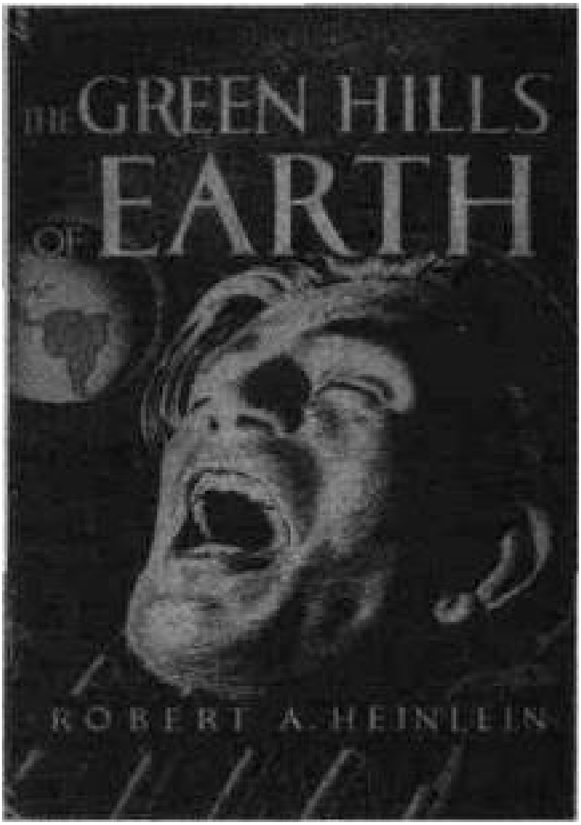
TRY AT SLICKS

October 25, 1946: Robert A. Heinlein to Lurton Blassingame

The news that you sold "The Green Hills of Earth" to the *Saturday Evening Post* is very gratifying for more reasons than the size of the check. I am happy that we have cracked the top slick market; I am particularly happy that it was done with this story, as it is a favorite of mine which has been growing in my mind for five years.

EDITOR'S NOTE In the 1930s and 1940s and farther back, the Saturday Evening Post *was the elite market of the short story writer. It paid the highest rates and carried the most prestige.*

The Post *was on every newsstand, and was widely read. In addition to short stories, and serialized novels, it also ran many articles. To be well-informed, one read the* Post. *It was sold everywhere; the covers by Norman Rockwell were-especially featured. Each issue contained some articles, short fiction, and usually a series of stories concerning much the same cast, and it was the ambition of every short story writer to have one of these series going. Bonus rates were paid for such series.*



The Green Hills of Earth book cover—a story first serialized in the *Saturday Evening Post* February 8, 1947.

Selling the Post *was a boy's job, and boys would go from door to door selling the* Post, *with two companion magazines,* The Ladies Home Journal, *and* Country Gentleman. *One of Robert's first jobs as a child was being a P-J-G boy.*

The Saturday Evening Post *carried a column about the authors who appeared in each issue. The column was called "Keeping Posted, "and Robert was asked for material about himself and a picture. Because it was his first appearance in the* Post *with "The Green Hills of Earth" he was included in that column.*

. . . sending you on Monday another interplanetary short, intended for slick (the *Post,* I hope)—the domestic troubles of a space pilot, titled either "For Men Must Work" or "Space Pilot" ["Space Jockey"]. It took me a week to write it and three weeks to cut it from 12,000 to 6,000 [words]—but I am beginning to understand the improvement in style that comes from economy in words.(I set it at 6,000 because a careful count of the stories in recent issues of the *Post* shows that the shorts average a little over 6,000 and are rarely as short as 5,000.)

EDITOR'S NOTE Robert's ambition to write for higher paying and wider markets than pulp magazines caused him to look around for an agent who had good connections with other markets. For this purpose, he consulted L. Ron Hubbard, who introduced him to Lurton Blassingame.

Lurton had come to New York ambitious to write, but discovered that he could not make the grade. So he remained in the publishing center and became one of the most highly respected agents there. His brother, Wyatt Blassingame, sold regularly, if infrequently, to the Saturday Evening Post.

Robert became, eventually, Lurton's star client, but he was preoccupied with "world saving" after the atomic bombs were dropped. The articles he wrote did not sell. He then began the juvenile series of books—with Scribner's—starting with Rocket Ship Galileo *(working title:* Young Atomic Engineers). *For some years, he wrote one juvenile per year.*

The two men met on one of our trips to New York, and Robert urged Lurton to come to visit us in Colorado. Robert would accompany Lurton on a hunting trip, for elk and antelope and other game. I was asked to join them on fishing trips.

Although Robert neither hunted nor fished, he went on such trips with Lurton. During their trip to Gunnison, Colorado, where they went after elk, Robert "kept camp" while Lurton halted through the mountains, along with a group of other hunters. Lurton bagged an enormous elk, and we were left with a freezer full of elk meat. It was my impression that Robert went along on such trips for Lurton's company.

Heinlein choosing a magazine in Ojai (north of Ventura) around 1947.

Robert's next conquest, assisted by Lurton, was the Saturday Evening Post, *with "The Green Hills of Earth," followed by three other stories for that magazine.*

The friendship flourished, despite Robert's distaste fordoing business with friends. It lasted until Lurton in the late l970s, thinking of retirement, took on some younger associates. Robert's books are still handled by the Blassingame-Spectrum Agency in New York.

November 12, 1946: Robert A. Heinlein to Lurton Blassingame

. . . and I shall get back to work, probably on a story called "It's Great to Be Back!" A couple living in Luna City are about to return to Earth, their contracts completed after three years. They have been homesick the whole time and are always talking about it. They return to Earth and discover that they had forgotten the disadvantages of living on Earth—uncontrolled weather, dirt, colds-in-thehead, provincial attitudes, stupid and ignorant people (the residents of Luna City are of course exceptionally intelligent and civilized because of selection for those qualities—only persons of high IQs and social compatibility would pay the cost of sending them to the Moon and keeping them there), etc., *etc.* At the end of the story they are more homesick than ever—for Luna City!—and are straining a gut to get back there. The story will be used also to give a picture of Luna City and the conditions of life on the Moon, social and economic, for background and color.

EDITOR 's NOTE: Between 1947 and 1949, at least ten of Robert A. Heinlein's ' 'slicks" were published; four appeared in the Post *and two in* Argosy. *This was a remarkable achievement, but it was soon eclipsed by the success of his juvenile novels.*

ROCKET SHIP GALILEO

Rocket Ship Galileo

Rocket Ship Gallileo, in 1947, was Heinlein's entrance to the "big-name" publisher, Scribner's.

Ross, Art, and Morrie plan to start college in the fall, but meantime they are experimenting with model rockets. Then Art's uncle, atomic engineer and Nobel Laureate, Dr. Cargraves, seeing the quality of their work, offers them a chance to work with him. He's going to build the first rocket ship to the moon, atomic powered!

They are soon at work in an abandoned testing site, adapting an old commercial freight rocket, sold at scrap prices, for the new power. And soon they are able to take off and make their landing on the moon. But then their ship is suddenly bombed by another craft. They have landed within a few miles of a base of unreconstructed Nazis, who plan to still win the war by bombing Earth from the moon!

Overcoming the Nazis and getting their ship is quite a problem!

February 19, 1946: Robert A. Heinlein to Lurton Blassingame

I am going to write the juvenile outlined in my last [letter], starting two days hence. You will receive takes and a synopsis, and the finished manuscript should be in your hands about 15 March. [Two friends] convinced me that my own propaganda purposes will be served best by writing a series of boys' books in addition to the adult items previously described. I have purchased several of the popular boys' series novels and feel confident that I can produce salable copy —copy which can be sold to one of these markets: Westminster, Grosset and Dunlap, Crown, or Random House.

March 16, 1946: Robert A. Heinlein to Lurton Blassingame

I think his [the editor who turned down *Young Atomic Engineers*] conception of a story of the atomic era is inappropriate. We have entered a period of extreme change. I see two major possibilities— either a disastrous atomic war which will destroy for a long time the present technological structure, followed by a renaissance, the nature of which I am unable to predict, or a period of peace in which technical progress will be so enormously accelerated that only short range predictions can hope to be reasonably accurate. *Young Atomic Engineers* \ *[Rocket Ship Galileo]* is based on the latter of the two assumptions, i.e., a period of peace and unchecked technical progress.

In doing fiction about the future, I regard myself as a professional prophet—a man who makes an honest attempt to evaluate the probabilities and to write stories setting forth patterns inherent in those probabilities. If I am to be honest, I must prophesy what *think will (or could) happen, not what someone else thinks will happen. If Mr.* ——— *does not see my concept of the possibilities, he had better write it* *himself or get a hack writer who is willing to write another man's plot. That should be easy for him to do and I do not disapprove of such hack work—but it is almost impossible for me to do it, and I won't do it unless I'm hungry, which I'm not.p>*

(Young Atomic Engineers contains two conventional deviations from what I believe to be reasonably possible; I have condensed the preparation time for the trip and I have assumed that four people can do work which should require more nearly forty. Otherwise, I regard the techniques used in the story, and even the incidents, to be possible, albeit romantic and in some respects not too likely in detail. But I *do* expect space travel and I expect it soon. The counterplot is more than a possibility, it is a distinct menace—though it may not turn out to hinge on a base located on the Moon.)

.. . I suppose you are used to the method of having a writer send in a few chapters and a synopsis. I will do that when requested to, but, unfortunately, once I have gone that far with a novel, that novel will be finished about ten days later, or at least with such speed that only the fastest possible response from the publisher can affect the outcome very much. I am sorry, but it is a concomitant of how I work. I work slowly on a novel for the first few chapters only. As soon as I can hear the characters talk, it then becomes a race to see whether I put down their actions fast enough not to miss any of them. It is more economical in time and money and it results in a better story for me to work straight through to a conclusion, rather than wait for an editor to make up his mind whether or not he likes it. Editors are not likely to like my advance synopses in any case, for it is simply impossible for me to give the flavor of a story not yet written in a synopsis.

[(The additional books proposed for this series are: *The Young Atomic Engineers on Mars,* or *Secret of the Moon Corridors The Young Atomic Engineers in the Asteroids,* or *The Mystery of the Broken Planet, The Young Atomic Engineers in Business,* or *The Solar System Mining Corporation* and at least two more.)]

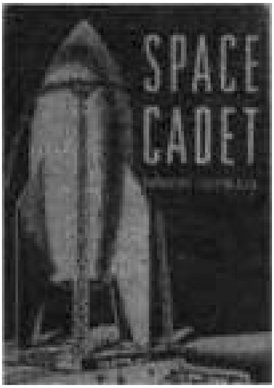
EDITOR's NOTE: September 24, 1946. Letter of this date says that editor at Scribner's liked Young Atomic Engineers.

September 27, 1946: Robert A. Heinlein to Lurton Blassingame

Young Atomic Engineers—I am delighted to hear that Alice Dalgliesh [editor at Scribner's] likes this ms. In my letter of 16 March 46 you will find a list of titles for a proposed series of sequels and considerable discussion of what I would like to do in re juveniles, as well as what I think might be done further to exploit this story. I expect to be guided by you in all those matters—my opinions are not final. I certainly would be willing to rewrite to editorial order and to plan stories to fit editorial desires in order to have my book brought out by so distinguished a house as Scribner's.

February 1, 1947: Robert A. Heinlein to Lurton Blassingame
I have signed the contract as you advised, but I am returning the contract to Scribner's through you in order that you may reconsider whether or not to ask them to make any changes in the contract . . . The manuscript has been revised and is now being retyped. It will be delivered to Scribner's by the tenth of February.

SPACE CADET



Space Cadet Scribner's, 1950. Cover art by Clifford N. Geary.

The training of cadets for the Interplanetary Patrol takes place in Colorado, in space, and on actual patrol. Following some violent physical tests to see whether an aspirant is able to undergo the rigorous environment of space, the cadets go to training in the school ship.

They learn how to handle themselves in free fall in addition to the required academic subjects. Senior cadets take the younger ones in hand to teach them the traditions of the Patrol.
As a part of their training, they go as very junior officers on a patrol ship, and Matt and Tex run into an adventure in Venus jungles . . .

July 18, 1947: Robert A. Heinlein to Lurton Blassingame
Miss Dalgliesh and I agree with you on *Space Cadet,* but I won't write it until later this year.

February 17, 1948: Lurton Blassingame to Robert A. Heinlein

No danger of Scribner's turning down *Space Cadet.*

August 1, 1949: Robert A. Heinlein to Lurton Blassingame
There is a correction to be made in *Space Cadet,* which I have already given Scribner's for the second edition; it occurs to me that it should be made in the Norwegian, Italian, and Dutch editions. Will you relay it for me? It is quite simple: on the very last page there is a line of dialog: "Never lead with your left." It should, of course, read, "Never lead with your right."

EDITOR 's NOTE: This mistake resulted from the manuscript's having been read by me, Lurton (who was lefthanded), and several editors at Scribner's (none of us knew anything about boxing).

January 5, 1951: Robert A. Heinlein to Lurton Blassingame
I have written Miss Dalgliesh about the TV scripts *[TomCorbett, Space Cadet].* Did you read them? If so, you know how bad they are; I don't want an air credit on that show (much as I appreciate the royalty checks!) and I am reasonably sure that a staid, dignified house like Scribner's will feel the same way. It has the high moral standards of soap opera.

RED PLANET

Red Planet, Heinlein's1949 juvenile for Scribner's, began the conflict between Heinlein and his editor Alice Dalgliesh.

Jim Marlowe, a teenaged Martian colonist, takes his pet Willis, a Martian bouncer, away to school with him. The headmaster impounds Willis, since pets are not allowed at school. Jim rescues the bouncer, and he and his friend Frank run away from school, taking Willis with them.

After a wild cross-country trek which includes a visit to a Martian building, the three are able to thwart a plot to prevent the colonists from making their annual migration. Thanks to Willis's ability to record exactly voices and words that he has heard, the colonists revolt against the plan, not wishing to live through an extremely cold Martian winter in high latitudes.

November 18, 1948: Robert A. Heinlein to Lurton Blassingame

Enclosed is a copy of notes for a new novel *[Red Planet]* for Miss Dalgliesh, plus a copy of the letter to her . . . Read the letters, read the notes as well, if you have time. Advice is welcomed.

The decision to postpone the ocean-rancher yarn *[Ocean Rancher* was supposed to be the third book in the Scribner's series, but it was never written.] called for a revision of my writing schedule. These are my present intentions: while Miss Dalgliesh is making up her mind, I intend to do one short story, 4,000 words, intended for adult, slick, general market, with *Post, Colliers, Town and Country, This Week,* and *Argosy* in mind. I should be able to show this to you by the middle of December.

If Miss Dalgliesh says yes, I will write the boys' novel next, planning to complete it before January 31. While she is looking it over, I expect to do another 4,000-word slick, following which I will revise the novel for Miss Dalgliesh. That should take me up to the end of February.

March 4, 1949: Robert A. Heinlein to Lurton Blassingame

There is actually no need for you to read this letter at all. It will not inform you on any important point, it will contain nothing calling for action on your part, and it probably will not even entertain you. I may not send it. I have a number of points to beef about, particularly Miss Dalgliesh; if Bill Corson [a friend who lived in Los Angeles] were here, I'd beef to him. He not being here, I take advantage of your good nature. I have come to think of you as a friend whom I know well enough to ask to listen to my gripes.

If Miss D. had said *Red Planet* was dull, I would have had no comeback. We clowns either make the audience laugh or we don't; if we entertain, we are successes; if we don't, we are failures. If she had said, "The book is entertaining but I want certain changes. Cut out the egg-laying and the disappearances. Change the explanation for the Old Martians," I would have kept my griping to myself and worked on the basis that the Customer Is Always Right.

She did neither. In effect she said, "The book is gripping, but for reasons I cannot or will not define I don't want to publish it."

I consider this situation very different from that with the publisher in Philadelphia who first instigated the writing *of Rocket Ship Galileo.* He and I parted amicably; he wanted a book of a clearly defined sort which I did not want to write. But, from my point of view, Miss Dalgliesh ordered this particular book; to wit, she had a standing arrangement for one book a year from me; she received a *very* detailed outline which she approved. She got a book to that outline, in my usual style. To my mind that constitutes an order and I know that other writers have been paid their advance under similar circumstances. I think Scribner's owes us, in equity, $500 even if they return the manuscript. A client can't take up the time of a doctor, a lawyer, or an architect, under similar circumstances without paying for it. If you call in an architect, discuss with him a proposed house, he works up a floor plan and a treatment; then you decide not to go further with him, he goes straight back to his office and bills you for professional services, whether you have signed a contract or not.

My case is parallel, save that Miss Dalgliesh let me go ahead and "build the house," so to speak.

I think I know why she bounced the book—I use "bounced" intentionally; I hope that you do not work out some sort of a revision scheme with her because I do not think she will take this book, no matter what is done to it.

I think she bounced the book from some ill-defined standards of literary snobbishness—it's not "Scribner's type" material!! I think that point sticks out all through her letter to me. I know that such an attitude has been shown by her all through my relationship with her. She has spoken frequently of "cheap" books, "cheap" magazines. "Cheap," used in reference to a story, is not a defined evaluation; it is merely a sneer—usually a sneer at the format from a snob.

ASTOUNDING
SCIENCE-FICTION
BY HIS BOOTSTRAPS
by Anson MacDonald
OCTOBER
1941
20¢

Dalgliesh's infamous example of Hubert Rogers' cover for the "cheap" magazine, John W. Campbell's *Astounding,* featuring "By His Bootstraps" by Heinlein's own alias, Anson MacDonald.

She asked me to suggest an artist for *Rocket Ship Galileo;* I suggested Hubert Rogers. She looked into the matter, then wrote me that Mr. Rogers' name "was too closely associated with a rather cheap magazine"— meaning John Campbell's *Astounding S-F.* To prove her point, she sent me tear sheets from the magazine. It so happened that the story she picked to send was one of my "Anson MacDonald" stories, "By His Bootstraps"—which at that time was again in print in Crown's *Best in Science Fiction]*

I chuckled and said nothing. If she could not spot my style and was impressed only by the fact that the stuff was printed on pulpwood paper, it was not my place to educate her. I wondered if she knew that my reputation had been gained in that same "cheap" magazine and concluded that she probably did not know and might not have been willing to publish my stuff had she known.

Rogers is a very fine artist. As an illustrator he did the trade editions of John Buchan's books. I am happy to have one of his paintings hanging in my home. In place of him she obtained someone else. Take a look at the copy of *Galileo* in your office—and don't confuse it in your mind with the fine work done by [Clifford N. Geary for *Space Cadet.* The man she picked is a fairly adequate draftsman, but with no ability to turn an illustration into an artistically satisfying composition. However, he had worked for Scribner's before; he was "respectable."

I think I know what is eating her about *Red Planet.* It is not any objection on her part to fantasy or fairy tales as such; she is very proud of having published *The Wind in the Willows.* Nor does she object to my pulp-trained style; she accepted it in two other books. No, it is this: She has fixed firmly in her mind a conception of what a "science fiction" book should be, though she can't define it and the notion is nebulous—she has neither the technical training nor the acquaintance with the body of literature in the field to have a clearly defined criterion. But it's there, just the same, and it reads something like this: "Science has to do with machines and machinery and laboratories. Science fiction consists of stories about the wonderful machines of the future which will go striding around the universe, as in Jules Verne."

Her definition is all right as far as it goes, but it fails to include most of the field and includes only that portion of the field which has been heavily overworked and now contains only low-grade ore. Speculative fiction (I prefer that term to science fiction) is also concerned with sociology, psychology, esoteric aspects of biology, impact of terrestrial culture on the other cultures we may encounter when we conquer space, etc., without end. However, speculative fiction is *not* fantasy fiction, as it rules out the use of anything as material which violates established scientific fact, laws of nature, call it what you will, i.e., it must [be] possible to the universe as we know it. Thus, *Wind in the Willows* is fantasy, but the much more incredible extravaganzas of Dr. Olaf Stapledon are speculative fiction—*science fiction.*

I gave Miss Dalgliesh a story which was strictly science fiction by all the accepted standards—but it did not fit into the narrow niche to which she has assigned the term, and it scared her—she was scared that some other person, critic, librarian, or whatever, a literary snob like herself—would think that she had published comic-book type of material. She is not sufficiently educated in science to distinguish between Mars as I portrayed it and the wonderful planet that Flash Gordon infests, nor would she be able to defend herself from the charge if brought.

As a piece of *science* fiction, *Red Planet* is a much more difficult and much more carefully handled job than either of the two books before it. Those books contained a little straightforward descriptive astronomy, junior high school level, and some faked-up mechanical engineering which I could make sound authoritative because I am a mechanical engineer and know the patter. This book, on the other hand, has a planetary matrix most carefully worked out from a dozen different sciences all more complicated and esoteric than descriptive astronomy and reaction engines. Take that one little point about how the desert cabbage stopped crowding in on the boys when Jim turned on the light. A heliotropic plant would do just that—but I'll bet she doesn't know heliotropism from second base. I did not attempt to rub the reader's nose in the mechanics of heliotropism or why it would develop on Mars because she had been so insistent on not being "too technical."

I worked out in figures the amount of chlorophyll surface necessary to permit those boys to live overnight in the heart of a plant and how much radiant energy would be required before I included the incident. But I'll bet she thought of that incident as being "fantasy."

I'll bet that, if she has ever heard of heliotropism at all, she thinks of it as a plant "reaching for the light." It's not; it's a plant spreading for light, a difference of ninety degrees in the mechanism and the point that makes the incident work.

Between ourselves there is one error deliberately introduced into the book, a too-low figure on the heat of crystallization of water. I needed it for dramatic reasons. I wrote around it, concealed it, I believe, from any but a trained physicist looking for discrepancies, and I'll bet ten bucks she never spotted it!—she hasn't the knowledge to spot it.

Enough of beating that dead horse! It's a better piece of *science* fiction than the other two, but she'll never know it and it's useless to try to tell her. Lurton, I'm fed up with trying to work for her. She keeps poking her nose into things she doesn't understand and which are my business, not hers. I'm tired of trying to spoonfeed her, I'm tired of trying to educate her diplomatically. From my point of view she should judge my work by these rules and these only: (a) will it amuse and hold the attention of *boys* (b) is it grammatical and as literate as my earlier stuff? (c) are the moral attitudes shown by the author and his protagonists—not his villains—such as to make it suitable to place in the hands of minors?

Actually, the first criterion is the only one she need worry about; I won't offend on the other two points—and she knows it. She shouldn't attempt to judge science-versus-fantasy; she's not qualified. Even if she were and even if my stuff were fantasy, why such a criterion anyhow? Has she withdrawn *Wind in the Willows* from the market? If she thinks *Red Planet* is a fairy tale, or a fantasy, but gripping (as she says) to read, either label it as such and peddle it as such. I don't give a damn. She should concern herself with whether or not boys will like it. As a matter of fact, I don't consider her any fit person to select books to suit the tastes of boys. I've had to fight like hell to keep her from gutting my first two books; the fact that boys *did* like them is a tribute to my taste, not to hers. I've read a couple of the books she wrote for girls—have you tried them? They're dull as ditch water. Maybe girls will hold still for that sort of things; boys *won't.*

I hope this works out so that we are through with her. I prefer pocketing the loss, at least for now, to coping with her further.

And I don't like her dirty-minded attitude over the Willis business. Willis is one of the closest of my imaginary friends; I loved that little tyke, and her raised eyebrows infuriate me.[Willis is the young Martian adopted as a pet by the hero; it's Willis who often gets him out of trouble.]

March 15, 1949: Robert A. Heinlein to Lurton Blassingame

First, your letter: the only part that needs comment is Miss D's remark about getting a good Freudian to interpret the Willis business. There is no point in answering her, but let me sputter a little. A "good Freudian" will find sexual connotations in *anything*—that's the basis of the theory. In answer I insist that without the aid of a "good Freudian" *boys* will see nothing in the scene but considerable humor. In *Space Cadet* a "good Freudian" would find the rockets "thrusting up against the sky" definite phallic symbols. Perhaps he would be right; the ways of the subconscious are obscure and not easily read. But I still make the point that *boys are not psychoanalysts*—nor will anyone with a normal healthy sex orientation make anything out of that scene. I think my wife, Ginny, summed it up when she said, "She's got a dirty mind!"

Somebody around this controversy does need a psychoanalyst—

and it ain't you and it ain't me and it ain't Willis.

March 18, 1949: Lurton Blassingame to Robert A. Heinlein
Book will have to be changed before it can go on the recommended library list. There is a certain amount of censorship in the juvenile field. Publishers must sign an affidavit when asking for books to be purchased by libraries, saying there is nothing in them which will offend either youngsters or parents. Dalgliesh is sending list of changes needed in *Red Planet.* Once those changes recommended by the juvenile librarian are made, Scribner's will take book. Scribner's is a respected house and excellent connection for RAH.

EDITOR'S NOTE Around this time, Robert was looking for an idea for the story ' 'Gulf," which he had promised to John W. Campbell, Jr. for the special November 1949 issue of Astounding. *We approached this task in a fashion today known as brainstorming. I would put up an idea and Robert would knock it down.*

The title, "Gulf," was the hitch. Eventually I suggested that it might be possible to do something like the Mowgli story—a human infant raised by a foreign race, kept apart from humans until he reached maturity. "Too big an idea for a short story," said Robert, but he made a note about it.

Further brainstorming resulted in the notion Robert wanted to do a superman story for ' 'Gulf." What did supermen do better than their peers ? ' 'They think better, " I replied. So another note was made.

Then Robert disappeared into his study and wrote eighteen pages, single spaced, of notes on ideas which the Mowgli suggestion had started rolling in his brain. He worked on those pages the whole night, and came out with a batch of papers titled The Man from Mars [Stranger in a Strange Land].

The Man from Mars *was then set aside, and "Gulf" was written to meet JWC's deadline, as it must be sent off to New York before we departed for Hollywood. We planned to drive to California at the end of May, and had no idea just when we would return to Colorado.*

March 24, 1949: Robert A. Heinlein to Lurton Blassingame
I agree to all changes [on *Red Planet*]. Let's go ahead with the contract. Please ask her to send me the original manuscript. Please ask her to make her instructions for revision as detailed and as specific as possible. She should bear in mind that, since these revisions are being made to suit her taste and her special knowledge of requirements of the market, *my* taste and *my* limited knowledge of them cannot be a guide to me in making revisions—else I would have submitted a manuscript satisfactory to her in the first place.

I note with wry amusement that she no longer speaks of the book as "fairy tale quality," "not *our* sort of science fiction," "lack of controlled imagination," "strange shaped Martians," *etc.* The only point she still makes which she originally made is about Willis and (pardon my blushes!) s-x. Okeh, s-x comes out; it was probably a mistake on the part of the Almighty to have invented s-x in the first place.

I capitulate, horse and foot. I'll bowdlerize the goddamn thing any way she says. But I hope you can keep needling her to be specific, however, and to follow up the plot changes when she demands the removal of a specific factor. I'm not just being difficult, Lurton; several of the things she objects to have strong plot significance ... if she takes them out, the story ceases to be. Removing the details objected to about Willis is a much simpler matter; it's offstage stuff and does not affect the story line until the last chapter.

If she forces me to it, I'll take out what she objects to and then let her look at the cadaver remaining—then perhaps she will revise her opinion that it "—doesn't affect the main body of the story—" (direct quote).

I concede your remarks about the respect given to the Scribner imprint, the respect in which she is held, and the fact that she is narrowly limited by a heavily censorship-ridden market. I still don't think she is a good editor; she can't read an outline or a manuscript with constructive imagination.

I expect this to be my last venture in this field; 'tain't worth the grief.

April 18, 1949: Robert A. Heinlein to Lurton Blassingame

The revised version *of Red Planet* will be in your hands by the end of the month and you may tell Miss Dalgliesh so. I am complying with *all* her instructions and suggestions.

April 19, 1949: Robert A. Heinlein to Alice Dalgliesh

The manuscript of *Red Planet* is being returned, through Mr. Blassingame. You will find that I have meticulously followed all of your directions, from your letter, from your written notes, and from your notations on the manuscript, whether I agreed with them or not. I have made a wholehearted attempt to make the changes smoothly and acceptably and thereby to make the story hang together. I am not satisfied with the result, but you are free to make any additional changes you wish wherever you see an opportunity to accomplish your purposes more smoothly than I have been able to do.

Most of the changes have been made by excising what you objected to, or by minor inclusions and variations in dialog. However, on the matter of guns, I have written in a subscene in which the matter of gun licensing is referred to in sufficient explanatory detail to satisfy you, I think.

The balance of this letter is side discussion and is in no sense an attempt to get you to change your mind about any of your decisions concerning the book. I simply want to state my point of view on one matter and to correct a couple of points.

At several different times you have made the point that this book was different from my earlier books, specifically with respect to colloquial language used by characters, with respect to firearms, and with respect to aggressiveness on the part of the boys. I have just checked through *Rocket Ship Galileo* and *Space Cadet*—as published—and I do not find any of these allegations substantiated. In both books I made free use of such expressions as "Yeah," "Nope," "Huh," "Stinker," and similar sloppy speech. In both books the boys are inclined to be aggressive in the typical, male-adolescent fashion. See pages8, 23, 42, 107, 200, and 241 *of Space Cadet* and all *of Rocket Ship Galileo* from page 160 to the end—not to mention a couple of minor brushes earlier. In re guns, *Space Cadet* cannot be compared with the other two books as all the characters are part of a military organization from one end to the other, but *Rocket Ship Galileo* can be compared with *Red Planet.* In *Rocket Ship Galileo* they are handling dangerous explosives in chapter one. From page 62 to the end they are all heavily armed at all times—*and no mention is ever made of licensing them.* On pages 165-6 Art and Ross each kill a man; a few pages later Morrie kills about eighty men. On page 167 dialog makes clear that they are long used to guns. I bring up these points to correct matters of fact; I do not like being accused of having switched the mixture on you.

Now, as to matters of opinion—You and I have strongly different evaluations as to the best way in which to handle the problem of deadly weapons in a society. We do not seem to disagree in any important fashion as to the legitimate ways in which deadly weapons may be used, but we disagree strongly as to socially useful regulations concerning deadly weapons. I will first cite two points which sharply illustrate the disagreement. I have one of my characters say that the right to bear arms is the basis of all human freedom. I strongly believe that, but you required me to bluepencil it. The second point concerns licensing guns. I had such licensing in the story, but I had one character strongly object to it as a piece of buttinsky bureaucracy, subversive of liberty—and I had no one defending it. You required me to remove the protest, then build up the licensing into a complicated ritual, involving codes, oaths, etc.—a complete reversal of evaluation. I have made great effort to remove my viewpoint from the book and to incorporate yours, convincingly—but in so doing I have been writing from reasons of economic necessity something that I do not believe. I do not like having to do that.

Let me say that your viewpoint and evaluation in this matter is quite orthodox; you will find many to agree with you. But there is another and older orthodoxy imbedded in the history of this country and to which I hold. I have no intention nor any expectation of changing your mind, but I do want to make you aware that there is another viewpoint that is held by a great many respectable people, and that it is quite old. It is summed up in the statement that I am opposed to all attempts to license or restrict the arming of individuals, such as the Sullivan Act of the State of New York. I consider such laws a violation of civil liberty, subversive of democratic political institutions, and self-defeating in their purpose. You will find that the American Rifle Association has the same policy and has had [it] for many years.

Heinlein's Expert Rifleman medal, from his naval days.

France had Sullivan-type laws. When the Nazis came, the invaders had only to consult the registration lists at the local gendarmerie in order to round up all the weapons in a district. Whether the authorities be invaders or merely local tyrants, the effect of such laws is to place the individual at the mercy of the state, unable to resist. In the story *Red Planet* it would be all too easy for the type of licensing you insist on to make the revolution of the colonists not simply unsuccessful, but impossible.

As to such laws being self-defeating, the avowed purpose of such laws as the Sullivan Act is to keep weapons out of the hands of potential criminals. You are surely aware that the Sullivan Act and similar acts have never accomplished anything of the sort? That gangsterism ruled New York while this act was already in force? That

"Murder, Inc." flourished under this act? Criminals are never materially handicapped by such rules; the only effect is to disarm the peaceful citizen and put him fully at the mercy of the lawless. Such rules look very pretty on paper; in practice they are as foolish and footless as the attempt of the mice to bell the cat.

Such is my thesis, that the licensing of weapons is subversive of liberty and self-defeating in its pious purpose. I could elaborate the arguments suggested above at great length, but my intention is not to convince, but merely to show that there is another viewpoint. I am aware, too, that even if I did by some chance convince you, there remains the unanswerable argument that you have to sell to librarians and schoolteachers who believe the contrary.

I am not inexperienced with guns. I have coached rifle and pistol teams and conducted the firing of millions of rounds from pistols to turret guns. I am aware of the dangers of guns, but I do not agree that those dangers can be eliminated nor even ameliorated by coercive legislation—and I think my experience entitles me to my opinion at least as much as schoolteachers and librarians are entitled to theirs.

I am sorry to say in answer to your inquiry that I do not expect to be able to come east soon. If Miss Fowler passes this way, we shall be very glad to see her and to show her some of the sights if she wishes.

May 9, 1949: Robert A. Heinlein to Lurton Blassingame

As to the name on *Red Planet* ms., no, I'm not adamant; I'll always listen to your advice and I'll lose a lot of sleep before I will go directly against your advice. But I feel rather sticky about this point, as I hate like the deuce to see anything go out under my own name, without even sharing responsibility with Miss Dalgliesh, when said item includes propositions in which I do not believe. The matter of style, plot, and the effect on my literary reputation, if any, I am not adamant about, even though I am not happy about the changes—if you say to shut up and forget it, I'll shut up. It's the "Sullivan-Act*-in-a-Martian-frontier-colony"* feature that I find hard to swallow; from my point of view I am being required to support publicly a doctrine which I believe to be subversive of human liberty and political freedom.

EDITOR 's NOTE Because of the necessity of editing Red Planet *to suit the sensibilities of librarians (who, at that time, were mostly elderly ladies), Robert seriously made the suggestion that Miss Dalgliesh's name be added to the book as an author. This suggestion might have been made over the telephone-the files are incomplete on this point.*

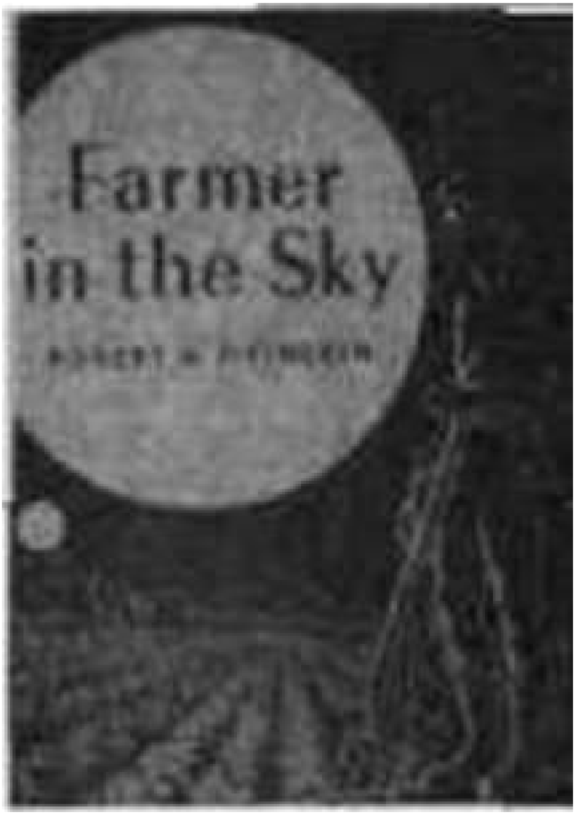
But the storm blew over, and Red Planet, *firearms or no, Willis' sex or no, became very popular. It was one of Robert's most popular books for juveniles.*

May 17, 1949: Robert A. Heinlein to Lurton Blassingame

I'll have to give some thought to the Scribner's beef over the name. I can't see why Alice Dalgliesh's name, tacked on, should be a handicap. Maybe they would like to send the script back for reworking to *my* ideas. It seems to me that if she insists on rewriting the story by remote control, then she should expect to share the blame.

On the other hand, it is fairly evident that you feel that the story is just about as good now as it was before. I am sorry to say that I don't think so; maybe it's good but it ain't a Heinlein story; it's been denaturized, had its teeth pulled. But I am very reluctant to go against your advice. *I* think it will damage my reputation and I *know* that it includes ideas of which I violently disapprove. What do you think, Lurton? Lay it on the line.

FARMER IN THE SKY



Heinlein wrote *Farmer in the Sky* for Scribner's in 1949 during the holdups of filming "Destination Moon."

Bill Lermer, a Boy Scout, and his widowed father decide to emigrate from Earth to Ganymede. In order to be eligible, the father must marry. This story tells about Bill's adjustment to his new stepmother and step-sister, their voyage to Ganymede, and how all four work to build a farm in an inhospitable environment.

The new home is built, a farm started amid the wonderful sight of Jupiter and its other moons, lo, Europa and Callisto. Bill finds that his scouting is universal—a troop is formed in the space ship *Mayflower,* continued on Ganymede, amid many adventures. Bill and his family learn survival.

September 8, 1949: Robert A. Heinlein to Lurton Blassingame

I am up to page 150 in the first draft of my current story ["Farmer in the Sky"], intended for *Boys' Life* and for juvenile book, and should have this draft finished in ten days. It will probably take another month to shape it up into a satisfactory serial version and book-length version.

September 24, 1949: Robert A. Heinlein to Lurton Blassingame

The first draft of the *Boys' Life* and juvenile trade book job is finished, but the motion picture *[Destination Moon]* has developed daily crises which will probably continue until the shooting is over, about the end of November. As there is a long, tedious job of cutting to do to turn the book into a 20,000 word serial, I don't know when I will be sending in the manuscript. You may tell Crump [editor of *Boys' Life]* if you like, that the story is finished, but it may be a month or six weeks until it is ready. My situation here is unclear; my contract is up next week, the movie not yet shot, and myself unwilling to extend the contract on its present terms.

We'll see.

EDITOR 's NOTE: *Robert had done the script for* Destination Moon *with Rip Van Ronkel in Hollywood in 1948.George Pal purchased the script, and Robert was to do technical direction on it.*

The normal delays ensued. We arrived in Hollywood in early June 1949—shooting was supposed to begin soon thereafter. However, with rewrites, preproduction, and all the things that go on in Hollywood, actual shooting did not start until around October or November.

While waiting for the film production to begin, Robert wrote Farmer in the Sky.

November 20, 1949: Robert A. Heinlein to Lurton Blassingame

.. . I'm working fifteen hours a day; the book-length version of *Farmer in the Sky* is now with the typist and the serial length for *Boys' Life* is being cut—slowly, because I have so little time. I've got it down under 40,000; there will be much tedious work before I can get it down to 20,000 and probably will not finish it until after the picture is finished. I'm working seven days a week and getting six hours of sleep, and I can't speed it up beyond that.

March 6, 1950: Lurton Blassingame to Robert A. Heinlein

Boys' Life found suspense problem. Scribner's very pleased with book.

April 24, 1950: Robert A. Heinlein to Lurton Blassingame

I am glad to hear that *[Boys' Life* editor] Crump is taking the serial [published in *Boy's Life* as "Satellite Scout"], since I need every cent I can scrape up for [house] building. Nevertheless, I would turn down his bid of $750 if I could afford to. It occurs to me, however, that, if he had me in a squeeze before, I have him in a squeeze now. He has scheduled it for the August issue; the makeup date must be staring him in the face, particularly as he is ordering a color painting for the cover from [Chesley] Bonestell.

And *please be sure to tell him* that I am certainly entitled to as much time to make up my mind whether or not I like his offer as he is to make up his mind whether or not he likes a story that he ordered from me in the first place. And tell him that I am proud, mean, stiff-necked, and that you doubt very much if you can get me to accept a lowered word rate, since I have been known in the past to pass up sales rather than take a cut.

Don't quite let the sale get away from you—but if you can get him on the hook and keep him there, we may be able to squeeze a couple of hundred dollars' worth of blood out of this stone. I don't care whether he gets sore or not; this is my swan song with Crump; sales to him are not worth the trouble and worry.

Don't get yourself in bad with him; blame it all on me. Even if you have cashed the check already, I hope you will call him up and twist his arm a bit.

April 21, 1951: Robert A. Heinlein to Lurton Blassingame

. . . The transformation from *Farmer in the Sky* to "Satellite Scout" [the *Boys' Life* version] took *five* drafts and consumed most of six weeks . . . whereupon I was left in suspense while [Crump] made up his mind whether or not he liked my condensation.

BETWEEN PLANETS

Between Planets was given a working title of *The Rolling Stones.* Heinlein soon after used *The Rolling Stones* as the title for another book. Art by Clifford Geary. Scribner's, 1951 .

Don's parents suddenly order him to join them on Mars, bringing with him an odd, plastic ring of no apparent value. He leaves his school on Earth for the space station where he's to catch his ship. He meets and befriends a Venus "dragon," Sir Isaac Newton. But his ship is intercepted by Venus, no longer willing to be a mere property of Earth. Willy nilly, Don is shipped to Venus.

There he finds work washing dishes. Several attempts are made to steal the ring. Then Earth armed forces land and ravage the town. Don joins the Venus army. Much later, he is ordered to report—to Sir Isaac. The dragon needs the ring, which contains the clue to a scientific discovery made secretly on Earth. With it, they can build an ultra fast ship and weapons to force Earth to relinquish control of the planets. Don gets to Mars on that ship—a hero!

BETWEEN PLANETS

January 18, 1951: Robert A. Heinlein to Lurton Blassingame

I am 14,000 words into the new boys' book *[Between Planets]* and the villains are way ahead. The first part always goes slowly; I have to get acquainted with the characters.

March 15, 1951: Robert A. Heinlein to Lurton Blassingame

I've just answered a nite letter from Miss Dalgliesh asking for a synopsis of *Between Planets* (formerly *The Rolling Stones). [The Rolling Stones* was a working title, later used for another book.] She wants the finished manuscript by the first—I can't make it, by at least a week, but I am pushing night and day.

March 17, 1951: Robert A. Heinlein to Lurton Blassingame

Between Planets is rolling nicely; I expect to finish it by a week from today, or even sooner. However, the necessity of smooth-typing it will keep me from sending it on earlier than about the first week in April. I have told Miss Dalgliesh.

April 1, 1951: Robert A. Heinlein to Lurton Blassingame

Herewith two copies of *Between Planets.* In this same mail I have sent Miss Dalgliesh an airmail postcard telling her that the ms. will arrive in New York at the same time she receives the card (or should). Since they are so anxious to have it at the earliest possible date, will you please send the original over to her at once?

May 31, 1951: Lurton Blassingame to Robert A. Heinlein

Word from *Blue Book* taking *Between Planets,* paying $1,000.Scribner will publish about 1 November, allowing *Blue Book* to schedule story for September or October issue.

June 3, 1951: Robert A. Heinlein to Lurton Blassingame

Good news indeed about the sale of *Between Planets* to *Blue Book.* Please tell Kennicott [Donald Kennicott, editor of *Blue Book,* who knew nothing of science fiction except H. G. Wells's title] that there is no resemblance at all between Wells's *War of the Worlds* and my *Between Planets*—also that he should read Wells's book; it's a dilly. The moveovers should resemble in appearance the mythological fauns or satyrs, the "goat-men," but should avoid too close a resemblance, i.e., avoid terrestrial musculature, articulation, and physiognomy, both of goats and men. Faunus veneris is a biped, horned, and smaller than a man, but its appearance merely suggests the faun of Greek mythology. It is not actually related to any earthian life form; there is plenty of elbow room for the artist to use his imagination.

June 28,1951: Lurton Blassingame to Robert A. Heinlein (telegram)

Scribner's proofs on their way airmail special delivery.

THE ROLLING STONES

THE ROLLING STONES

Heinlein tried to make *The Rolling Stones* wholesome, but Dalgliesh saw some Freudian connotations in Heinlein's creation of "Flat Cats."

Castor and Pollux Stone, seventeen-year-old twins, go into space with their unusual family in a secondhand spaceship, called *The Rolling Stone.* They take along a cargo of battered bicycles to trade to settlers on Mars.

Grandmother Hazel and their father, Roger Stone, support the project by writing episodes for *The Scourge of the Spaceways,* one of whose characters is the Galactic Overlord. Three episodes a week is their normal output.

The twins buy a Martian flat cat. Fuzzy Britches, a creature most people enjoy petting. In transit theyfind that flat cats multiply with extreme rapidity, given sufficient food. They are forced to put the creatures into deep freeze.

In the asteroid belt, the twins create a demand for the flat cats, now thawed, selling them to lonely miners.

December 1, 1951: Robert A. Heinlein to Lurton Blassingame

The boys' novel *Rolling Stones* is about a quarter finished, smooth draft—and an unsatisfactory story line thereafter. The trouble is that I am trying to do domestic comedy this time with nothing much in the way of revolutions and blood—and I find comedy harder to write. Oh, I can keep up wisecracking dialog all too easily, but the characters have to do something too, something important. With space warfare and intrigue ruled out by the nature of the story I find that a problem. Story centers around twin boys and their eccentric family. Family goes to asteroids in family spaceship, get into various sorts of trouble, get out again.

January 5, 1952: Robert A. Heinlein to Lurton Blassingame

The new boys' novel, *The Rolling Stones,* is rolling along. I am hard at work seven days a week.

January 15, 1952: Robert A. Heinlein to Lurton Blassingame

I heard from Miss Dalgliesh about *Rolling Stones;* she is enthusiastic.

March 8, 1952: Robert A. Heinlein to Lurton Blassingame

I am sorry to say that I am again having "sex" trouble with Miss Dalgliesh—she has decided (from her Olympian heights as an amateur Freudian) that *The Rolling Stones* contains some really dangerously evil connotations. Her letter was rather horrid and I was quite offended. I am not asking you to front for me this time; I answered her myself. Since the business matters are all completed, it is strictly an author-editor matter and you have troubles enough without being put in the middle on this. But enough is enough and I do not intend to tolerate any more of this sort of thing. *The Rolling Stones* maybe the last juvenile I will do, or, if I do another, perhaps we will offer it to ——— rather than to Miss Dalgliesh.

I consciously intend to write wholesome stories for boys and mean to leave out entirely the sophisticated matters which appear in my writings for adults. In addition, Mrs. Heinlein went over this one most carefully, trying to find things Miss Dalgliesh might object to. When we were both satisfied that it was as pure as Caesar's wife, we sent it off. I feel sure that you would have returned it to me for revision had you seen anything in it which could have been construed as dirty. So she liked it and signed a contract for it—and now decides that it is dirty. The anecdote about the Vermonter who made a pet of a cow, "—same as you might a good hunting dog—"Miss Dalgliesh says suggests "certain abnormal sex practices." Well, it doesn't suggest anything to me except that my wife has made a pet out of a horse next door, which was what it was based on—and I am dead certain it won't suggest anything horrid to my boys and girls. But I gave her a revision —because we decided that the anecdote was not dirty but *was* dull.

Her other objection was this: "Flat cats seem to me a trifle too Freudian in their pulsing love habits." Since I intentionally desexed them entirely, even to parthenogenesis, I found this a bit thick. I always called a flat cat "it" rather than "he" or "she" and gave the only named one a name with no sex connotation. These things I did because I knew she was hipped on the subject—but it was useless; she is capable of seeing phallic symbolism in Jack's beanstalk.

Another objection she made has nothing to do with sex, but I find it illustrative of how far afield she has gone to find trouble: she objected to my naming a prospector "Old Charlie" *because the first name of Mr. Scribner is Charles!* How silly can one get?

I don't expect you to do anything but wished to inform you because you may hear reverberations. I rapped her knuckles most sharply. There are types of behavior I won't tolerate for any amount of money. I retaliated in kind (which is why I left you out of it); I took one of her books for girls and subjected it to the sort of analysis she gave mine. I know quite as much Freudian, bogus "psychology" as she does; from the criteria she uses, her book was dirty as hell—and I told her so, citing passages. If she is going to leer and smirk at my perfectly nice kids' book, I can do the same to her girls' stories. Amateur psychoanalysts make me sick! That impressive charlatan, Dr. Freud, has done quite as much harm as Queen Victoria ever did.

March 7, 1952: Robert A. Heinlein to Alice Dalgliesh

1. If you are going to make changes, I prefer to see them in advance of proof.

2. "Old Charlie"—I happen to like the name Charlie better than the name Danny, but the issue raised strikes me as just plain silly. "Charlie" is a very common nickname; there is probably at least one character named Charles in over half of currently published novels. Are we to lay off the very common names "Bob" and "Alice" because

you and I happen to have them? In any case, nine-tenths of my readers are quite unaware of the name of the publisher; children very rarely pay attention to the name of the publishing house. It would be just as reasonable to place a taboo on "Harry" and on "George" and on "Joe" because of the names of the President, the late King, and the Russian dictator.

3. Flat cats and Freud—no, I most emphatically do not agree to any changes of any sort in the flat cats or anything about them. I am considerably irked by the phrase"—a bit too Freudian in their pulsing love habits." *What* love habits? I remember all too clearly the advice you gave me about Willis in *Red Planet* and how I should "consult a good Freudian"—in consequence, I most carefully desexed the creatures completely. I used the pronoun "it" throughout (if you find a "he" or "she," it is a fault of my proofing); the circumstances make it clear that the first one, and by implication, all the others, reproduce by parthenogenesis. Do you object to the fact that they like to be petted? Good heavens, that *can't* come out; the whole sequence depends on it—so don't tamper with it. In any case, I set up a symbiosis theory to account for them being such affectionate pets.

If you choose to class the human response to the flat cats (the desire on the part of humans, particularly lonely humans, for a pet which can be fondled and which will show affection)—if you class this tendency (on which the sequence turns) as a form of sex sublimation, I will not argue the classification. By definition "sex" and "libido" may be extended to almost any human behavior—but I do not agree that there is necessarily anything unhealthy, nor queasily symbolic, in such secondary (sex?) behavior.

Following your theory, I really must point out that the treatment of Rusty in *Along Janet's Way* [written by Miss Dalgliesh] is extremely significant (to a good Freudian) and highly symbolic, both in secondary sex behavior and in sublimation phenomena—in fact, not the sort of book to put into the hands of a young girl. That business with the nightgown, for example. From the standpoint of a good Freudian, every writer (you and I among others) unconsciously uses symbols which are simply reeking with the poisonous sexual jungles of our early lives and our ancestries. What would a half-baked analyst make of that triangular scene between the girl, the young man, and the male dog—and the nightgown? Of the phallic symbolism and the fetishism in the dialog that followed? And all this in a book intended for young girls?

Honest, Alice Dalgliesh, I don't think that you write dirty books. But neither do I—and lay off my flat cats, will yuh? Your books and your characters are just as vulnerable to the sort of pseudoscientific criticism you have given mine as are mine. So lay off—before I haul

Jinks into this argument.

About Freud: Look, Freud was not a scientist; he was simply a brilliant charlatan. He did not use scientific methodology, and his theories are largely unsubstantiated and are nowadays extremely suspect. From a practical standpoint the practitioners of his "psychoanalysis" have been notably unsuccessful in curing the mentally ill. Christian Science has done as well if not better—and is about as well grounded in scientific proof. I grant you that Freudian doctrine has had an aura of scientific respectability for the past generation, but that aura was unearned and more and more psychiatrists are turning away from Freud. I concede that, among other damages, Freud and his spectacular theories have helped to make the layman in our maladjusted culture extremely sensitive to sex symbols, real or false, and this situation must be taken into account by a writer. But we shouldn't go overboard in making concessions to this artificial situation, particularly because it is impossible to write any story in such a fashion that it will not bring a knowing leer to the face of a "good Freudian."(Let's look at another aspect of the problem; it is to be hoped, I suppose, that the readers of your list of books will presently graduate to Scribner's trade books for adults. Let us suppose that I manage to keep my readers sealed in cellophane, sterile in vitro—then comes the day when they start reading other Scribner's books. I'll mention a few: Hemingway—with his painful reiteration of the emasculation theme—*From Here to Eternity,* which needs a glossary of taboo words to explain its taboo situations, *Europa* and *Europa Revisited,* which combine communist propaganda with pornography in a most curious fashion. I am not panning Scribner's adult list; my point is that the gradient from one list to the other can be ridiculously steep.)

STARMAN JONES

STARMAN
JONES

With *Starman Jones* in 1953, Heinlein and Dalgliesh had fewer conflicts, though she still asked for changes.

When Max finds living with his new stepfather impossible, he leaves for Earthport, taking the books of navigation tables left by his uncle, a former officer on the interstellar ships, hoping to find work on the ships. But the board refuses, taking the books from him, but giving him the deposit money on them. Sam, a former spaceman, persuades him to use the money to get them false papers as crewmen.

Aboard the *Asgard,* his relationship to his uncle is discovered, and he is bumped to chartsman trainee. There he reveals that, with his trick memory, he's memorized all the tables. Then a mistake leaves the ship lost. The nearest planet has a dangerous life-form. All higher officers are dead and the navigation books are lost. Only Max's memory is able to bring the *Asgard* back to known space.

The future of Max as a spaceman and officer is assured.

March 24, 1953: Lurton Blassingame to Robert A. Heinlein

[Scribner's] wants some minor changes in the novel *[Starman Jones]* and hopes you won't mind making them. These are limited to the first chapter and the last. In the first chapter, [Dalgliesh] says the stepfather sounds like the conventional pulp-paper villain, since he comes in and wants to beat the boy the first night he is married to the boy's mother. .. .For the last chapter, she thinks that some of their readers wouldn't fully understand all that you are saying so briefly in the scene where the hero is back at the farm. How much time—earth time, that is—has elapsed? She also wants a bit more made of the fines, or whatever way the hero pays for the fact that he started out as a liar. It might help here if the powers that be keep the hero as an astrographer (sic) . . . because he had the moral fiber to admit his error and since then acted in every way as a man. These aren't serious and I hope you won't mind making them.

March 25, 1953: Robert A. Heinlein to Lurton Blassingame

Now, about the changes Miss Dalgliesh wants: I think that it is necessary that [she] write directly to me, explaining in detail what changes she wants and why and specifically what she wants done to accomplish those changes. Offhand, she certainly has not asked for much; nevertheless, on the basis of what you have relayed to me, I am not convinced that the changes are either necessary or desirable.

.. . I don't say that I *won't* make this change [i.e., the "stepfather" change], but I *do* say that I am going to need a helluva lot of convincing. . . In my opinion it would badly damage the dramatic timing of the story to make this change. What I have now accomplished in six pages would, with the proposed revision, require tacking on a couple of chapters, change the opening from fast to very slow, and in particular (this is what I hate most) change the crisis in the boy's life from a dramatic case of having the rug jerked out from under him in a matter of minutes into a situation in which he simply becomes increasingly annoyed with an unpleasant situation.

The suggested revisions in the ending are not difficult, and the last chapter as I wrote it is certainly open to criticism. But (as usual!) I have comments. I kept that last chapter short because the story actually ends with the next to the last chapter, i.e., the character change is complete.

THE STAR BEAST

The STAR BEAST
by ROBERT A. HEINLEIN

The *Library Journal* threatened to lambaste Heinlein if he didn't withdraw *The Star Beast* because of its suggestion that children could divorce their parents.

John Thomas Stuart XI has a pet—Lummox—brought back from a space trip by an ancestor. "Lummie" began as a tiny pet, but over the generations (by earth standards) has grown huge, and is everlastingly in trouble. Lummie's race locates him, and demands his return.

Mr. Kiku, UnderSecretary for Spatial Affairs, finds that Lummox has no wish to leave for his home without his "pet," John Thomas, to return to her ancestral home . . . she has been raising "John Thomases" for a long time, and wishes to continue doing so ...

August 27, 1953: Robert A. Heinlein to Lurton Blassingame

... the new boys' book *[The Star Beast]* is, for the present, going nicely. I've gotten no farther than the first chapter, but that puts me over the worst hump. I had a pretty well worked out story with a juicy new extraterrestrial character but, while I thought it could be written and sold, I was not satisfied with the plot line. Things were in too low key, not enough action and not enough conflict. Ginny came up with a new way to start the story, which I believe has fixed that difficulty. In any case, I am writing it.

December 21, 1953: Lurton Blassingame to Robert A. Heinlein (Sent to Sydney, Australia)

Scribner's wants new title for book, *Lummox* (original title) still on stands as title of another book. Or a subtitle. Hopes this won't interfere with elbow-bending.

March 11, 1954: Lurton Blassingame to Robert A. Heinlein (Sent to Honolulu, Hawaii)

In conference with [Scribner's] about new book. Idea that children can divorce parents horrifies her. It would be bad for book club sales. But she loved book, and this is only complaint.

EDITOR'S NOTE: Blassingame allowed changes (see letter of October 8, 1954).

October 8, 1954: Robert A. Heinlein to Lurton Blassingame

As soon as I can get the travel book *[Tramp Royal]* out of the way I will start on a novel. It should be my annual boys' novel, but I may make it an adult novel instead. I am finding the nonsense connected with juveniles increasingly irksome. The latest is a hoorah over *Star Beast* which has occupied much too much of my time lately. It was not a business matter, so I did not bother you with it while it was going on—but it has left an extremely bad taste in my mouth and made me quite reluctant to continue the series with Scribner's. I have a full file on it but a brief summary will be enough to show my viewpoint: A Mr. Learned T. Bulman, reviewing it for the *Library Journal,* wrote Miss Dalgliesh a letter saying that I had "destroyed" the book by including the notion that children might be "divorced" from unsatisfactory parents through court action and placed in the hands of guardians; Mr. Bulman in effect demanded that the book be withdrawn and revised, under pain of being lambasted in the *Library Journal.*

(The man did not even seem to realize that the procedure referred to in my story was a legal and accepted part of our own social structure; the *only* new element lay in calling such a court action a "divorce.")

You will remember that Miss Dalgliesh had qualms about this point and got permission from you to revise as she saw fit during my absence. The published version is as she revised it. But, instead of answering Mr. Bulman and standing up for the book as she edited and published it, she conceded his whole case and tossed it in my lap—this, from her point of view, constitutes "defending" me.

I concede that she is a nice person in many ways, that she is a good editor and highly respected, and that she sells books to libraries. I readily concede that I might be much worse off with another juveniles editor. But what irks me are the very conditions of writing for kids at the present time. My books do not cause juvenile delinquency; I consider it irrelevant that horror comics and crime television (may possibly) do so. Obviously, the juvenile delinquency in some New York City public schools is disgraceful and dangerous—but to tackle the matter by searching for minute flaws in teenage trade books strikes me as silly and as inappropriate as treating cancer with hair tonic. Yet this fluff-picking goes on with unhumorous zeal. Mr. Bulman wrote to me that he did not object to the idea of "divorce" for unfortunate children in itself, but that one of the characters was "flippant." This epitomizes the nature of the objections; these watchful guardians of youthful morals do not want live characters, they want plaster saints who never do anything naughty and who are always respectful toward all the shibboleths and taboos of our present-day, Heaven-ordained tribal customs. I could write such books, of course—but the kids would not read them. I feel that I am caught in a squeeze between the really difficult job of being more entertaining than a comic book or a TV show and the impossible task of doing the first while pleasing a bunch of carping elders whose whims and prejudices I am unable to anticipate. I realize that there is no way to get rid of these pipsqueak arbiters of morals and good taste—but I would prefer to think that I had the backing of my editor once said editor approved the final form of a book. I do not feel that I have it from Miss Dalgliesh. In the first place, she seems to me to be overpoweringly anxious to appease these knotheads, and for reasons pragmatic rather than moral, i.e., she has told me repeatedly that she did not herself do this and that [it was done] because of librarians and teachers. I always followed her advice, although often most reluctantly as it seemed to me that the censoring was often trivial and silly—like calling a leg a "limb" so as not to shock dear old Aunt Mamie. I *knew* that the changes meant nothing at all in re the protecting of the morals of children—but I went along with her in such matters because it was represented as pragmatic economic necessity. But when appeasement goes so far as to disavow me and my works instead of standing up for me, I get really burned up! This Bulman wrote to her, not to me. I think she should have told him politely to go to hell, i.e., that we were doing the best we could and that if he did not like it, it was unfortunate but we could not please everyone all the time. I think, too, that she could have told him that Scribner's published the book, believed in it, and stood behind it. I do not expect from her Olympian aloofness when the fight starts; I expect her to be partisan—on *my* side. She's my editor—and this attack comes from the outside directed at our joint production.

Instead she seems to follow the policy that "the customer is always right"—she promptly agreed with Bulman in his criticism and claimed (quite incorrectly) that the stuff he objected to had stayed in the book over her protests at my insistence. Then she "defended" me by making a mild plea for freedom of expression.

I do not know as yet whether I will do another juvenile book or not. If I decide to do another one, I do not know that I wish it to be submitted to Scribner's. I have taken great pride inbeing a Scribner's author, but that pride is all gone now that I have discovered that they are not proud of me.

I've had bids from other editors for my juveniles, one from a major house only two weeks ago. In the past I have given these overtures a polite no. Possibly I could now find an editor who takes a strong stand against this sort of nonsense ... or possibly not. Miss Dalgliesh tells me that I will find that she is more broadminded than most of the other juveniles editors, and she may well be right. This knuckling under to petty minds may be a common practice in the trade.

I've taken great pride in these juveniles. It seemed to me a worthwhile accomplishment to write wholesome stories which were able to compete with the lurid excitements of comic books. But I am really very weary of being required to wipe my feet and straighten my tie before being allowed in the house by those who stand between me and my juvenile readers. I am rather strongly inclined to let Mr. Bulman and his ilk write their own adventure stories for boys, since they know exactly how it should be done—and Miss Dalgliesh can edit them.

I have neglected adult writing in order never to miss getting my annual boys' books in on time . . . which has possibly been a mistake. But the response to the boys' series has been so warm that I have given them priority. But right now I am undecided whether to go ahead with them, or to drop them and concentrate on adult novels, where I can say what I think and treat any subject I please without being harassed by captious chaperones.

October 15, 1954: Lurton Blassingame to Robert A. Heinlein

You're not in as much of a squeeze as you think. We'll have to see whether the *Library Journal* lambastes you, and sales. If sales stay up, the squeeze wasn't tight enough to hurt.

TUNNEL IN THE SKY

Lurton Blassingame thought that *Tunnel in the Sky* had "slick" possibilities. Heinlein had cracked the tough slick market with "The Green Hills of Earth."

The class in "Advanced Survival" is taking their final exam, but Rod and his class fail to return to earth, as the "gate" through which they went for the test failed to work. This is the story of how the youngsters really survive on another planet, uninhabited except for strange life species.

Rod becomes the leader of the group, which sets up its own encampment. They meet strange beasts, odd vegetation, and see how pioneers live.

October 25, 1954: Robert A. Heinlein to Lurton Blassingame

I am starting a novel *[Tunnel in the Sky]* as soon as I finish this letter. That is to say, that I start walking up and down and swearing at the cat; I should start the first chapter any time between midnight tonight and two weeks from now.

Look, I *did* write to [Learned T.] Bulman just once and no more—I have not answered his answer and do not intend to. The thing that made writing to Bulman so extremely difficult and time wasting was that (Scribner's) had written to him also, *conceding all of his objections,* but telling him that she was writing to me and that I would explain where I stood. That is what made it so damn difficult—I have to write to him and refute his nonsense without calling her a prevaricator ... or worse.

So far as I am concerned I have dropped the matter, do not intend to write to him again, and have not answered her last letter about it. But it is not out of my mind, as I feel equally strongly impelled to write another boys' book and not to write one. I like that series, am proud of it, and it has paid well, but I have a very sour taste about my relations with Scribner's. I agree that Miss Dalgliesh must sell books and should stay on as good terms with librarians as possible, but it does not strike me as good business to kowtow to everything that any librarian wants.

December 11, 1954: Robert A. Heinlein to Lurton Blassingame

Just a quick report— I finished boys' book *Tunnel in the Sky* at 3 A.M. today. Must be cut and retyped; ms. should be in your hands by end of January.

December 31, 1954: Robert A. Heinlein to Lurton Blassingame

Schoolhouse in the Sky [Tunnel in the Sky] went out to be smooth-typed yesterday. I expect to have it in Miss Dalgliesh's hands by 26 January, as requested.

January 24, 1955: Robert A. Heinlein to Lurton Blassingame

Herewith are the table of contents and the word count on *Schoolhouse in the Sky [Tunnel in the Sky];* they were squeezed out yesterday in catching an air express dispatch in order to put the first copy in Miss Dalgliesh's hands as early as possible. .. . It is not exactly a juvenile, although I've kept it cleaned up so that it can pass as a juvenile. It is not the ordinary run of science fiction, either. I don't know what it is ... well, it's a story.

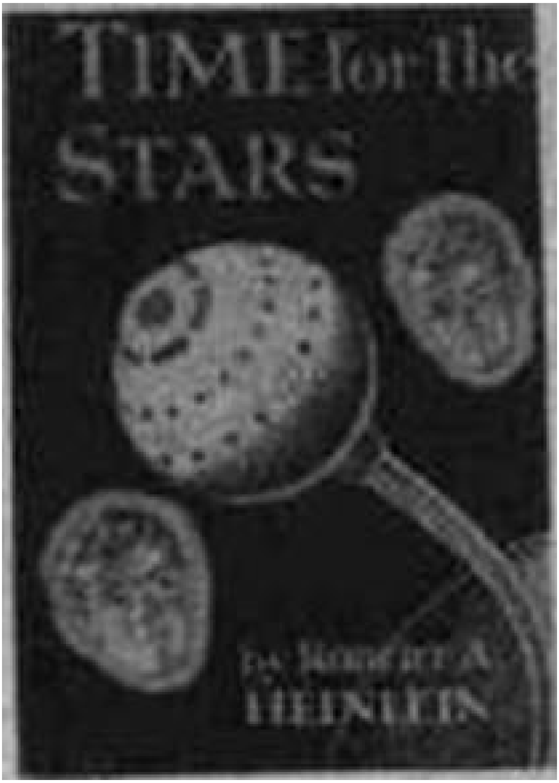
I hope this reaches you before you have read it, because I want your expert help on one feature. The story has quite a lot of hunting in it. As you know, I know very little about hunting—but I am strongly aware of how easily one can lose the reader through small mistakes that break empathy. If you find *anything* which you feel does not ring true, will you please point it out to me and I will rewrite as directed to correct the fault.

February 1, 1955: Robert A. Heinlein to Lurton Blassingame

I am surprised and pleased to hear that you think *Schoolhouse [Tunnel in the Sky]* may have slick possibilities. I am still more surprised that you passed the hunting scenes without suggesting changes. (I would be most happy to make such changes.) I did not use a central nonhuman character in this book because the book is filled with the killing of animals ... all perfectly legitimate, of course, but I was afraid of questionable empathy if I let this story shift at any point to a nonhuman viewpoint in view of the necessity of showing them killing for meat. In my next one I will no doubt have a successor to Willis, Lummox, *etc.*

In the meantime, I have been hung up for a solid week on the new adult novel. It is the Man-from-Mars idea that I first talked about several years ago. It is an idea as difficult as it is strong and one I have had trouble with twice before. If I don't break the logjam soon I'll put it aside and write a different novel. I am not especially distressed about it; if I don't whip it this time, I will some other time, and I expect to deliver an adult novel some time early this year, either this one or another one.

TIME FOR THE STARS



Time For the Stars. Scribner's, 1956. Cover art by Clifford N. Geary. Dalgliesh thought that the hero might be too old for a juvenile novel.

Tom and Pat are identical twins. When tested by the Long Range Foundation, they are found to be telepathically linked. Thus, eventually, Tom is chosen to go to the stars on a torch ship, reporting back to Pat, who remains on Earth (investing their combined incomes and building in time a financial empire). At almost light speed, time is slowed enormously—as Einstein showed—so Tom seems to stay young while Pat ages. Eventually, Tom can no longer contact his twin, but by then can contact Pat's daughter—and then granddaughter and finally, Vicki, Pat's great-granddaughter. The ship explores new worlds, but finally cannot go on. Then they are rescued by the first faster-than-light ship, made possible by what the ship has revealed of time. Back on Earth, Tom finds Pat is a very old man. But Vicki is just the right age!

December 13, 1955: Robert A. Heinlein to Lurton Blassingame

I have finished the new Scribner's book, *Time for the Stars,* and it is today being started by the typist. I expect to send you ms. in January, which should be plenty of time to try to sell serial rights.

Please do not tell Miss Dalgliesh I have finished it, or she will want to see it early—and I don't want her to have any more time to second-guess than her schedule requires. If she asks about it, please tell her that you understand I have it in process and that you are sure that I will be on time as usual ... all of which is the literal truth.

March 9, 1956: Robert A. Heinlein to Lurton Blassingame

Now, about *Time for the Stars.* I don't feel strongly about it at all. If [Dalgliesh] wants to cut some of the opening, she is welcome to do so. If she prefers to have me cut it, tell her to send the chapters she wants cut back to me *with specific instructions as to just what parts she wants eliminated and just how many words she wants taken out.* Or she can do it herself, if she prefers.

I don't understand the criticism about age group appeal. She complained that I had lost them the Armed Services market in *Rolling Stones* by making the twins two years under draft age when the story opened, even though they were eighteen when the story closed. So in this story I very carefully made the boy just graduating from high school with an implied age of eighteen—and he is too old, she tells me.

Is *Stover at Yale* no good for high school kids just because the hero is old enough to be in college? I can make my central character *any age she wants* at the opening of the story. But it can only be one age. If she will tell me what age she thinks is best for the market, I can tailor the central character of my next book to fit. But I can't make him simultaneously of draft age and of junior high school age. Nor can I keep him from growing up as the story progresses without limiting myself to a simple action story spanning not more than a few weeks. This is difficult to do in space-travel stories—but I can do it if she wants it.

CITIZEN OF THE GALAXY

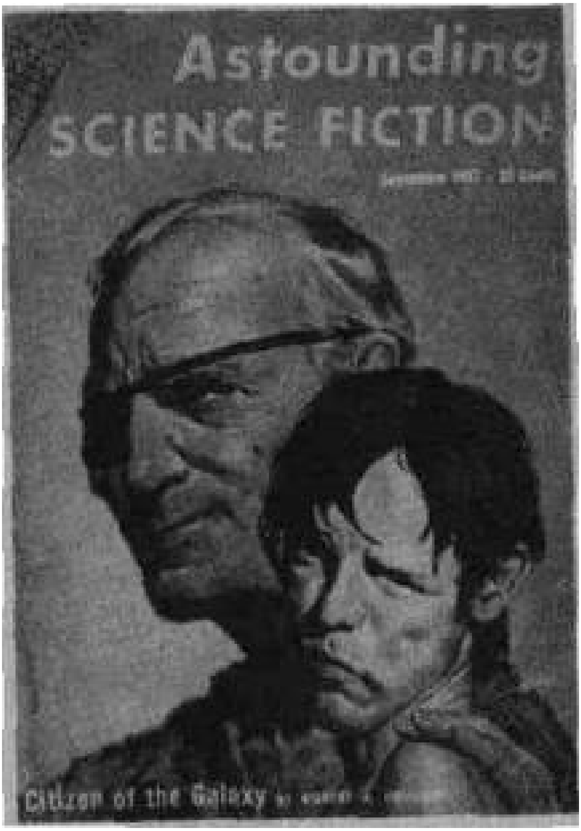
CITIZEN OF THE
GALAXY
ROBERT A. HEINLEIN

Alice Dalgliesh considered *Citizen of the Galaxy* to be Heinlein's best book.

Thorby is a slave, abducted as an infant and suffering all a slave's mistreatment for years. Now he is sold again, this time on Sargon to Baslim, a beggar. But Baslim treats him well, frees him, adopts him, and teaches him all a beggar's tricks. Baslim, he slowly realizes, is really an intelligence agent in a war against slavery. Then Baslim's work is discovered and he is eliminated.

Thorby finds safety for two years among the Free Traders and learns their ways. Then he is taken to the Guard and enlisted. But then he is identified as the lost heir of one of Earth's most powerful families—one secretly supplying the slavers!

It takes more time to learn new ways. Then he forces out the crooked managers and takes over— to use his wealth and life fighting the slave trade.



Citizen of the Galaxy was also serialized in *Astounding* from September to December 1957, but there were some differences from the Scribner's book edition. Here, cover art by Van Dohgen.

December 11, 1956: Robert A. Heinlein to Lurton Blassingame

I have completed a draft of the next novel *[Citizen of the Galaxy}* intended for Scribner's. The present title is *The Chains and the Stars.* It ran considerably too long, so I have two or three weeks of cutting to do on it. I hope to have the chewed-up copy in the hands of a typist by Christmas, which should enable me to place a copy of it for possible serial sale in your hands around the middle of January. The Scribner's copy will meet Miss Dalgliesh's deadline (what date this year?), but I will send it later, as I want to cut and slant the serial (adult) version slightly differently" from the Scribner's (juvenile) version. As usual, it is an ambivalent story, actually adult in nature but concerning a boy and with no sex in it that even Great Aunt Agatha could object to. But I am going to try this time to improve it a little for each market with some changes in emphasis.

February 8, 1957: Lurton Blassingame to Robert A. Heinlein

Alice Dalgliesh says *Citizen* Robert's best story to date.

February 28, 1957: Lurton Blassingame to Robert A. Heinlein

No more cutting on *Citizen*—it's a tight story, more can't be taken out. Miss Dalgliesh wants one very small cut, about organized religion.

May 17, 1957: Robert A. Heinlein to Lurton Blassingame

Thanks for the suggestion about submitting plots for approval to Miss Dalgliesh, but we tried that once or twice and it just caused trouble; she approved the plots in outline but not when she saw the story, even though I had stuck to the plotline. This caused the biggest hassles I've had with her, over *Red Planet* . . . which has merely turned out to be her biggest seller of the list, even though I refused all of the changes she wanted where they differed from the approved plot. No, if I ever submit to her another story, it will be sight unseen till then and take it or leave it. I know I have not made clear why two changes, admittedly easy and unimportant, threw me into a spin and lost me ten days working time, cum much anguish. I don't know that I *can* explain it, but it is true. Part of the reason lies in that Chicago lecture of mine you read recently: [Mark Reinsberg arranged this as a seminar of four lectures, which were published as The Science Fiction Novel by Advent Publishers]. I necessarily write science fiction by one theory, the theory of extrapolation and change—but once it reaches the editor (in this case) it is tested by an older theory, the notion that this our culture is essentially perfect and I *must not* tinker with any part of it which is dear to any possible critic who may see the story. These things have now added up to the point where I feel unable to continue. I *may* write another. I don't know yet. I can't until some of the depression wears off. But I don't know how to tell her that I probably won't deliver the story she is expecting—I've tried six or eight times, wasted many days, and all the ways I can express it either sound rude or inadequate. I know this sounds silly, but it is true.

HAVE SPACE SUIT WILL TRAVEL

ROBERT A. HEINLEIN
HAVE SPACE SUIT—
WILL TRAVEL

Have Spacesuit Will Travel, Scribner's, 1958, became a Heinlein classic.

While Kip Russell is trying out the repairs he has made on the space suit he won in a soap contest, he hears a voice over his radio: "PeeWee to Junebug!" And he is off on an adventure with PeeWee and the Mother Thing to the stars.

Set down on Pluto, the Mother Thing attempts to communicate with her people, but fails, and Kip must go outside in blistering cold to rescue her. They are then taken to the Lesser Magellanic Cloud where, together with a Roman centurion, Iunio, PeeWee and Kip are put on trial to defend the human race before a tribunal of a highly civilized race.

November 8, 1957: Robert A. Heinlein to Lurton Blassingame

Here are three copies of my new novel for Scribner's *Have Space Suit—Will Travel.* They are intended (I hope) for trade book, American serial, and British serial.

November 19, 1957: Lurton Blassingame to Robert A. Heinlein
Have Space Suit—Will Travel is a fine story ... enjoyed all of it.

December 6, 1957: Lurton Blassingame to Robert A. Heinlein
Scribner's enthusiastic about the book.

CHAPTER IV THE LAST OF THE JUVENILES

STARSHIP TROOPERS

Alice Dalgliesh and the entire Scribner's editorial board turned *Starship Troopers* down. Putnam's eagerly picked up the title and Heinlein moved his career.

In this culture, the franchise or right to vote must be earned by volunteering for Federal Service. It is not necessary that this service be in the military—quite the opposite. Johnny's decision to enter the military is opposed by his father, but upheld by his instructor in history and moral philosophy. So Johnny goes into the Mobile Infantry. We first see him in a drop.

Equipment and training has changed since the twentieth century, and each trooper is as well equipped as a modern army. Johnny makes several drops, and gains in experience and rating, and eventually becomes an officer candidate.

November 22, 1958: Robert A. Heinlein to Lurton Blassingame

I finished a draft of a novel, working title *Sky Soldier,* at 5:20 this morning; I will start patching its solecisms and such on Monday. It won't have to be cut other than for dramatic reasons, as the draft runs about 60,000 words—proving that I *can* write a novel without forcing the publisher either to jack up the price or use smaller type ... a point on which you may have entertained legitimate doubts.

You will receive the ms. some time after the first of the year; my typist will do it during her Christmas vacation. Miss Dalgliesh has inquired as to whether I intended to submit a book; I have admitted that I have-but I have *not* admitted that it has been written. I don't want her to see this until the last possible moment (I have given her only the title and theme: a boy serving his military service in the future). I want to give her the least possible time to have nervous-Nellie second thoughts about it ... because I am not going to change it to suit her.

January 10, 1959: Robert A. Heinlein to Lurton Blassingame

Earlier today we mailed you two copies of *Starship Soldier* . . . since I anticipate that [Dalgliesh] is not going to like parts of this book, I might as well get the row over with ... It is not a juvenile; it is an adult novel about an eighteen-year-old boy. I have so written it, omitting all cleavage and bed games, such that Miss Dalgliesh can offer it in the same list in which she has my other books, but nevertheless it is not a juvenile adventure story. Instead I have followed my own theory that intelligent youngsters are in fact more interested in weighty matters than their parents usually are.

January 21, 1959: Lurton Blassingame to Robert A. Heinlein

Star ship Soldier enjoyed. Except that there were places where action stopped and author went in for lecturing.

EDITOR'S NOTE Starship Soldier, *later* Starship Troopers, *was turned down by the entire Scribner's editorial board.*

Lurton called and advised me; Robert was still asleep. I had to tell him.

As a matter of fact, Lurton was certain that he could place the book with another publisher. Walter Minton, president of G. P. Putnam 's Sons, later said that one of his editors told him that there was a Heinlein juvenile available. Walter instructed the editor, ' 'Grab it.' '

Miss Dalgliesh made the following suggestions about the book:

use it only as an adult serial
sell it elsewhere
put it away for a while

The Scribner's connection had ended; with it, the annual quarrels over what was suitable for juvenile reading. After Starship Troopers *was published, Robert wrote only one more juvenile*—Podkayne of Mars.

February 19, 1959: Robert A. Heinlein to Lurton Blassingame

.. . I think I have handed you a less salable item than most in this ms. and I will be happy indeed to place it with Mills [Robert P., editor of *F&SF* magazine] and with any major trade book house—for which purpose I am willing to rewrite, revise, cut, or expand to *any* extent necessary. From a story standpoint, I am now convinced that this is not my best work; I intend to sweat and make it so. (But, privately to you, revision will be literary revision; I will not let even the ghost of Horace Greeley order me to revise my ideas to fit popular prejudice—I'll hike up the story but the ideas will remain intact.) *"Eppur si muove!"* I stand by my heresies. But I have no intention of saying this to an editor quite so bluntly; I'll simply improve the story as *story* until he will pass it.

March 23, 1959: Robert A. Heinlein to Lurton Blassingame

Now to the piece de resistance, the Putnam contract for *Starship Soldier:*

First, my very warmest thanks to you for your unsparing efforts on this ms. I know that you thought it was weak (and so do I .. . and I intend to try to repair the weaknesses); nevertheless, you sold the serial rights to the leading specialty magazine and trade book right to a major trade house. My morale is greatly bucked up thereby.

I've been rather "shook up" over this ms. . . . The book should be better than it is; I think I can improve it. I certainly will try to, working closely with an editor. Who will be my editor at Putnam?

September 19, 1960: Robert A. Heinlein to Lurton Blassingame

. . . However, the Scribner's angle is a special case. Yes, I do know that Miss Dalgliesh is no longer there. But my irk is not alone at her; it includes Mr. Scribner himself. I feel that I was treated in a very shabby fashion, and I regard him as in part responsible and do not wish to place any more stories with his firm. Scribner's had published twelve of my books and *every single one of them made a profit for them* and each one is *still* making money for them. At one time Miss Dalgliesh told me that my books had kept her department out of the red.

So I offer a thirteenth book . . . and it is turned down with a brisk little note which might as well have been a, printed rejection slip, for it was just as cold and just as informative.

Starship Troopers went on to win the Hugo Award as Best Novel of 1959,
given at the World Science Fiction Convention in Pittsburgh.

I then found it necessary to write to [George McC] to find out what the score was. He told me that it had been a joint action, in which several of the editors had read my ms—*including Mr. Scribner*—and that Scribner himself had joined in rejecting it.

Based on my royalty records I conjecture that my books have netted for Mr. Scribner something between $50,000 and $100,000 (and grossed a great deal more). They have been absolutely certain money-from-home for his firm . . . and still are. Yet after years and years of a highly profitable association, Mr. Scribner let me be "fired" with less ceremony than he would use in firing his office boy . . . not a word out of him, not even a hint that he gave a damn whether I stayed with them or not. I submit that this is rudeness, unpardonable in view of the long association.

Heinlein with his Hugo Award for *Starship Troopers* at the Pittsburgh World Science Fiction Convention.

Writers hear a lot of prattle about how speculative the trade book business is and how prestige houses (such as Scribner's) will publish a book which might lose money because the author should be encouraged—and hope to make it up on the rest of their list. Well, I seem to be part of the "rest of their list," the part that makes up their losses—for I certainly did not appear to be a writer they were willing to take even a *little* chance on, when it came to scratch. I was simply dumped.

Furthermore, the ms. couldn't have been bad enough to justify dumping me in view of the fact that three other editors bought it ... and then it went on to win the Hugo [Award] for [1959]. (Besides that, I notice that, despite ———'s earlier worries, the trade book sold 5,000 copies in the first two and a half months . . . and now he tells us that sales are picking up.)

It seems to me that, if the pious crap they hand out about "taking a chance" on authors actually meant anything, Mr. Scribner himself would have said to his editorial board: "Maybe this isn't the best book Mr. Heinlein has ever done—possibly it will even flop and we'll lose a little money on him this time. But his books have been steady sellers in the past and we'll have to give him the benefit of the doubt. Perhaps with a little revision it will be more acceptable; if you don't want to write to him about revisions, let me look over the ms. again and I will write to him . . . but we can't simply reject the book out of hand. Mr. Heinlein is part of the Scribner's family and has been for years."

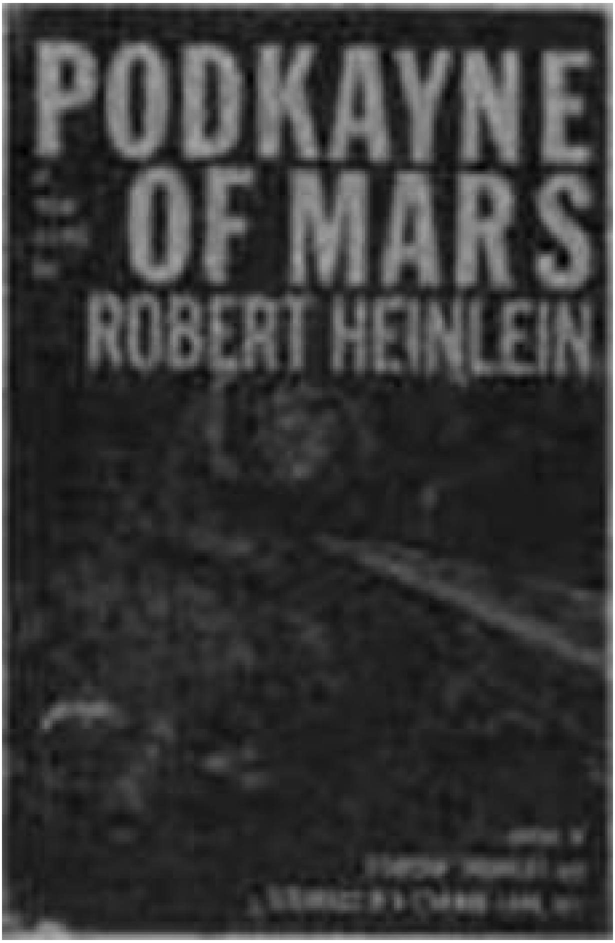
Too goddamned much to expect, I suppose. At least that was *not* the way he handled it.

Lurton, it seems to me that, with any other successful writer on their list, Scribner's would have published that book—perhaps with revisions and perhaps not as a juvenile—but they would have published it. But if Mr. Scribner felt that he simply could *not* publish it, I think the circumstances called for a note, a letter, a measure of polite discussion, from the boss to me . . . a minimum of formal politeness.

I did not receive that minimum. I think Mr. Scribner treated me with extreme rudeness ... so I don't want to work for him. Lurton, I have elaborated this matter because, in several letters lately, you have pointed out that the new juvenile editor at Scribner's is anxious ' 'to welcome me back." So I have explained why I am not going back. I have nothing against the lady who now has that department—but the firm is still Mr. Scribner's. If the action had been taken by Miss Dalgliesh alone— But it was *not;* when I got tossed out, Mr. Scribner in person had me by the scruff of the neck and took part in the tossing, without even a formal word of regret.

Under the circumstances I'll take my business farther up the street. Or across the street. But I won't be kicked twice.

PODKAYNE OF MARS



Podkayne of Mars, G.P. Putnam's Sons,1963, was Heinlein's last juvenile novel. The cover art is by Irv Doktor.

As originally written *Podkayne* depicted the tragedy of a mother who was too busy with her career to supervise her children's upbringing. Podkayne turns out well enough, although something of a dreamer; her brother is another story, an asocial monster.

Podkayne has as her ambition to be a starship captain, later in life, but when Uncle Tom invites her and brother Clark to go on a cruise to Earth and Venus, ambition is temporarily abandoned. As the result of a political intrigue, Podkayne and Clark find themselves in much trouble on Venus . . .

March 8, 1962: Lurton Blassingame to Robert A. Heinlein

Enjoyed all *of Podkayne Fries*—except ending. She was such a sweet kid that I hated for you to kill her. That is the Heinlein touch—tell Ginny to beware. It's a good story.

March 10, 1962: Robert A. Heinlein to Lurton Blassingame

Is *Poddy* a juvenile? I didn't think of it as such and I suggest that it violates numerous taboos for the juvenile market. It seems to me that it is what the Swedes call a "cadet" book—upper teenage, plus such adults and juveniles as may enjoy it—and the American trade book market does not recognize such a category. But possibly it might be well to let [Putnam] have this story at once and see what happens.

Lurton, for several years now I have been writing just stories, with no eye on the market, and have been writing them with no criterion save the fixed belief that a story which interests me, and the solution of which satisfies me, will interest and satisfy a sufficient percentage of readers to make the story commercially usable. Maybe I'm wrong about this—maybe I should study the market and try like hell to tailor something which fits the current styles. But it seems to me that, if I am to turn out work of (fairly) permanent value, my own taste (checked by yours and by Ginny's) is what I must follow. Of course, this may result in my losing the market entirely—but I hope that it will result in better stories than if I tried to compound the "mixture as before."

I know that the ending of *Poddy* comes as rather a shock. However, that is the ending that seemed to fit-to me. The story follows a definite progression: a girlchild with no worries at all and a preposterous ambition . . . then, step by step, she grows up and discovers that the real world is more complex and not nearly as sweet as she had thought . . . and that the only basic standard for an adult is the welfare of the young.

Oh, I could revise that last chapter to a "happy" ending in about two hours—let Poddy live through it, injured but promised a full recovery and with the implication that she will eventually marry this rich and handsome bloke who can take her with him to the stars . . . and still give her brat kid brother a comeuppance and his lumps (and it is possible that I will at least consider doing this if no editor will risk publishing it as it is). But I don't want to do this; I think it would ruin the story—something like revising *Romeo and Juliet* to let the young lovers "live happily ever after."

But it took the deaths of Romeo and Juliet to show the families Montague and Capulet what damned fools they were being. Poddy's death (it seems to me) is similarly indispensable to this story. The true tragedy in this story lies in the character of the mother, the highly successful career woman who wouldn't take time to raise her own kids—and thereby let her son grow up an infantile monster, no real part of the human race and indifferent to the wellbeing of others . . . until the death of his sister, under circumstances which lay on him a guilt he can never shake off, gives some prospect that he is now going to grow up.

I could state that the theme of the story is that death is the only destination for all of us and that the only long-range hope for any adult lies in the young—and that this double realization constitutes growing up, ceasing to be a child and putting away childish things. But I can't say it that baldly, not in fiction, and it seemed to me that I needed Poddy's death to say it at all. If Poddy gets to have her cake and eat it too (both marriage and star-roving), if that little monster, her brother, gets off unscathed to continue his clever but asocial career, if their mother gets away with neglecting her children's rearing without having it backfire on her—then the story is just a series of mildly adventurous incidents, strung together.

March 23, 1962: Robert A. Heinlein to Lurton Blassingame

I understand and appreciate, I think, your remarks about *Cezanne* and his black outlines—but this is an endless problem for me with no easy solution. If I preach overtly, I get complaints from Ginny, you, the editor, and in time the readers . . . and I'm all too prone to preach. In this book, *Poddy,* I'm limited by what Poddy herself would say—which is perhaps just as well!!!

May 9, 1962: Robert A. Heinlein to Lurton Blassingame

Please tell Peter Israel of Putnam's that I will tackle the revision he wants very shortly, say about the first of the week. I have one other job to finish first. I still have strong doubts about the artistic and dramatic necessity of a happy ending on this story—but I'll do my damndest.

May 20, 1962: Robert A. Heinlein to Lurton Blassingame

Neither editor liked my title and I did not [like] either of their suggestions. I have suggested to Pohl [Frederik Pohl, editor of *If] Podkayne of Mars,* which suits him. If it does not suit Mr. Israel I hope that he will suggest one which all three of us can agree on, as I prefer to have magazine, version and book carry the same title if possible.

The new kittens are two weeks old and fat and healthy. A hawk or an owl got Ginny's ducks.

May 25, 1962: Lurton Blassingame to Robert A. Heinlein

Beautiful job on the revision.

CHAPTER V THE BEST LAID PLANS

PUBLIC SPEAKING

August 15, 1968: Robert A. Heinlein to Lurton Blassingame

I have given both these bids considerable thought. As you know, I do not like speaking dates, but on the other hand, I realize that I must accept some of them, especially those from librarians. This time the matter is further complicated by the fact that both bids come via Scribner's (not my current publisher) and, while one group offers to pick up the tab, the other group asks Scribner's to do so—and Scribner's has agreed to do so.

I do not want Scribner's to pick up the tab. After long thought I have concluded that I do not want *any* publisher *ever* to pick up the tab when I make a trip to speak; I would much rather see a publisher spend money to advertise and distribute my books than to have promotion money spent on airfares and hotel bills for the author.

So I have finally arrived at this policy, which I now present to you for comment and (I hope) approval. From here on I will continue to avoid speaking dates when possible except speaking dates involving librarians. With respect to their bids, I will accept them if possible in such cases and *only* such cases as the group which wishes to have me appear wants me badly enough to pay my travel and hotel expenses plus a nominal fee of, let us say, fifty dollars.

WRITING PLANS

November 19, 1945: Robert A. Heinlein to Lurton Blassingame

.. . My particular talent is for the prophetic novel, i.e., the novel laid in the future, perhaps only a few years in the future but nevertheless in the future. I have no objection to doing contemporary fiction and am open to advice, but there is this one thing which I do especially well. There is a book market for it and at least a limited slick market for it. I believe that the slick market for it will be much greater than before the war, primarily because of atomics. I think people will want to be told what to expect in the coming atomic age. I have notes for many, many stories; do you want to discuss stories with me ahead of time, or shall I just go ahead and write?

I also write fantasy and would like to emulate Stephen Vincent Benet. The SEP *[Saturday Evening Post]* has been publishing quite a lot of fantasy since ——— took over; I would like to do the sort of thing they publish.

January 1, 1946: Robert A. Heinlein to Lurton Blassingame
I am quite used to being considered too spectacular. My own brother, a colonel of engineers, thought my prewar stories about the atomic bomb and atomic weapons to be sheer moonshine; he has since flown over Hiroshima and changed his mind.

April 20, 1947: Robert A. Heinlein to Lurton Blassingame
I am starting a short, Luna City series, slanted *for Post,* tomorrow. Like the hired man said, "We've had a lot of trouble around here," but you may expect regular copy for some time hence.

June 24, 1947: Robert A. Heinlein to Lurton Blassingame

To confirm my telegram of Tuesday, my new address is:

Suite 210,7904 Santa Monica Blvd.,
Hollywood 46, Cal.

Letters or telegrams sent there will reach me promptly. My telephone has been disconnected. We have closed our house and in a few days—as soon as I can get some chores cleaned up—I am going to light out for the desert and get back to work. Leslyn [Heinlein's first wife] is going to stay in town. . . .

EDITOR'S NOTE While Robert was working at the Naval Air Experimental Station in Philadelphia, I was reassigned to duty there by the Navy. At that time, I was a lieutenant (j.g.) in the WAVES. We worked together on some projects, chiefly on attachment of Plexiglas canopies. Both of us had other, separate projects. When World War II ended, Robert resigned his position as an engineer to return home to Los Angeles with his wife. As I had not accrued many points in the system that governed release from the service, I was required to remain on duty until March 1946. I had already decided to return to college for an advanced degree, and made arrangements for that. Robert suggested that I go to UCLA rather than Berkeley, as I had planned.

While the GI Bill paid for tuition and books, the stipend allowed was rather scanty, so I needed to work parttime, attending classes and studying in what free time I had. So my social life lapsed almost entirely. What I did retain was devoted to the symphony and figure skating. I saw very little of

Robert and his wife, Leslyn, although we lived not too far apart.

When finals were finished in 1947, I had a call from Robert—he asked my help in clearing his papers from his house. He was getting a divorce.

I took the summer off from my studies to work—my finances were in poor shape. Robert spent that summer in Ojai, writing. We were married in October 1948.

Robert and Virginia about the time of their engagement.

1948: Robert A. Heinlein to Lurton Blassingame

I'm back to work. The honeymoon is over, except for weekends. I hope, Lurton, to turn over to you more and better copy than you have seen yet. During my entire association with you, everything I have written has been turned out under difficult circumstances, most of them under most excruciatingly difficult circumstances. I have had to force myself to work, with the major portion of my mind and attention centered on the things that were happening around me and to me. I am not seeking sympathy, but I do want you to know that there is at least a fair chance that I will give you better material and more of it from now on.

November 6, 1948: Robert A. Heinlein to Lurton Blassingame

It isn't necessary to get Ginny to chain me to my typewriter four hours a day. I am frantically anxious to spend more hours than that at work every day. If I am spared more domestic upheavals for the next several months I should turn out a lot of copy. Right now I am racking my brain trying to cook up another subject for a boys' novel for Scribner's. I am not going to be able to go to Florida this winter to complete the diving and research I must do before I write *Ocean Rancher.* Therefore I have got to find another story for ———. It would be easy enough to cook up another space opera, but I shall do my darnedest to find something else to write about before falling back on that.

November 18, 1948: Robert A. Heinlein to Lurton Blassingame

Your remark that you were sure that I would do an (adult) novel within the next twelve months has caused me considerable thought. Do you really think so? I have long wanted to do book bound adult novels, preferably of the H. G. Wells sort, but have never tackled anything but pulp serials and these boys' books for Scribner's. Do you think I should take time off ... and make a real try at cracking the adult book market? If so, should I drop the speculative stuff and try a contemporary novel—or should I stick to my specialty?

January 28, 1949: Robert A. Heinlein to Lurton Blassingame

.. . In the meantime, I am collecting notes on (Forgive me!) the Great American Novel. Yup, Lurton, I have fallen ill of the desire to turn out a "literary" job. Specifically, I would like to do a job somewhat like Ayn Rand did in *The Fountainhead,* but with modern art, especially pictorial art, as my target. It may be a year or two before I feel ready to tackle it, but I am working on it.

The first draft of the boys' novel *[Red Planet]* for Scribner's was finished at 11 P.M. last Monday. I have taken three days off to attend to chores and correspondence and intend to start revising tomorrow. The finished manuscript should be in your hands within a fortnight.

October 1, 1949: Robert A. Heinlein to Lurton Blassingame

I have two short stories that I am very hot to do, one a bobby-sox for *Calling All Girls* and one a sci-fi short which will probably sell to slick and is a sure sale for pulp. The first is "Mother and the Balanced Diet," using the same characters as [in] "Poor Daddy," as the editors requested. The other is "The Year of the Jackpot" based on cycles theory—1952, the year that *everything* happens at once. But gosh knows when I will find time to do them. I probably will, as I *want* to do them. But I'm working myself nutty. (Oh, yes—I've got to prepare some stuff for ——— too; possible [motion picture]uses for my published stuff.

About the *Boys' Life* job, see above. You'll get both versions in about a month. We have to move this week; I'll send you a new address.

HOLLYWOOD WRITING

September 3, 1957: Robert A. Heinlein to Lurton Blassingame

I want to hold up for a little while in changing Hollywood agents. I still think that MCA is not the place for me to get personal attention but a recent incident makes it polite, at least, to delay: at 1200 26 August, Hal Flanders of Ned Brown's office phoned me and offered me a Hollywood writing job doing a screen treatment of Herman Wouk's *The Lomokome Papers.* I turned down the job—I don't really want to write screen stories of anyone's work but my own, and this particular story *cannot* be repaired into an honest science fiction story anyhow; it is a philosophical tract packaged as a fantasy. Furthermore, I hope my decision will not disappoint you when I point out that the source of the work is such that we could hardly expect MCA to split the fee—and I prefer to stay under your management and writing for the New York market rather than become a Hollywood trained seal. In any case, I could not finish the novel, do this job, and sail on 26 November. But I did find the offer pleasing. . . .

Robert and Virginia Heinlein on the set of "Destination Moon" 1949. Heinlein wrote the script based on his story in Short Stories magazine, September 1950.

November 16, 1961: Robert A. Heinlein to Lurton Blassingame

There will be a veritable spate of new Heinlein stories before this winter is over. Our bomb shelter is completed and stocked—and the durn thing was enormously more expensive than I had figured on when I started it. Now I have a couple of weeks of chores to clean up, including a big backlog of correspondence, filing, record keeping, etc.; then I shall apply the nose to this grindstone and keep it there all winter.

August 10, 1963: Robert A. Heinlein to Lurton Blassingame

This fall I might do about 10,000 words for *Boys' Life* (query them if you like), or write the last story of the Future History [see *The Past Through Tomorrow* in Chapter XI, "Adult Novels"], *Da Capo* (piles of notes on it but it has never quite jelled)—or possibly a new novel. Or perhaps all three in the order named. But that is a good many weeks away.

Re Scribner's: We might offer ——— something some day—but only if Putnam's turns down a book.

April 17, 1964: Robert A. Heinlein to Lurton Blassingame

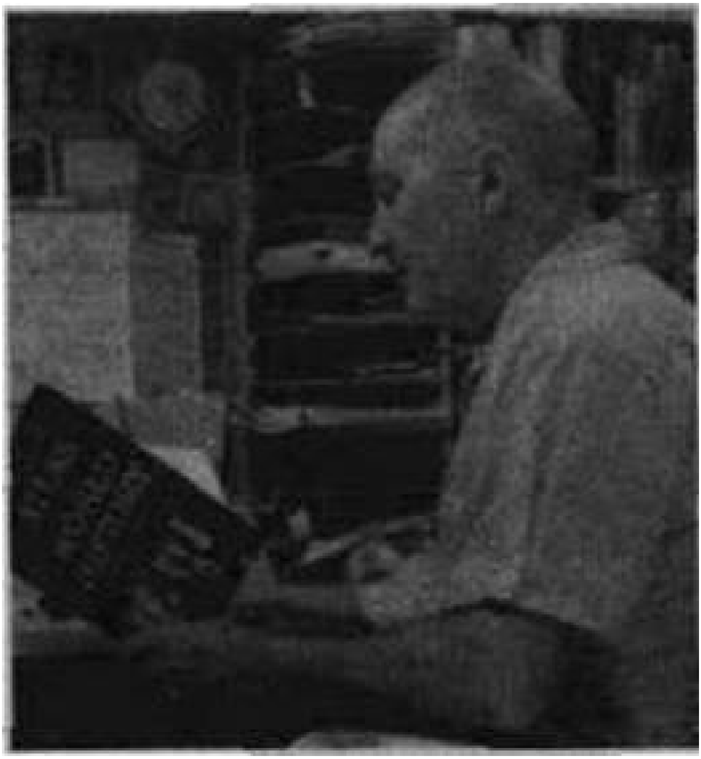
I have spent the past month on (a) flu, (b) reading several hundred pounds of accumulated magazines and technical reports, and (c) correspondence. The latter two are things I am endlessly behind on, always. There is no solution to the problem of trying to keep up with the ever-expanding frontier of science and technology, plus the world in general; I simply do the best I can, falling further behind each year, especially in electronics, biochemistry, and space travel technology. But I have made, implemented, and am keeping a good resolution concerning correspondence: I now answer almost all letters simply with postcards—a letter has to be really important *to me* to cause me to answer it by a real letter. The saving in time is very marked.

I will probably not write another story or book until after I learn whether or not I will have to go back to Hollywood this summer. And there is endless maintenance work to be done around this place. Today I got back to pick and shovel for the first time: cleaning some tons of silt out of my middle irrigation pool ... silt from a flood clear back in September or earlier. Monday I expect to start on concrete work, repairing the lowest dam, if the weather holds. This has been a cold, very late spring. Ginny has just started on her garden work; it has been too cold up to now. There is still some snow on the mountain above us and it snowed down here only eight days ago.

June 23, 1967: Robert A. Heinlein to Lurton Blassingame

I am very anxious to get back to writing, including new copy for the proposed boy scout book—and I've just had a very pleasant, long letter from ——— telling me that—— has again raised their rates . . . and that he would expect to pay me a still higher bonus rate if I'll ever come through with copy. But, Lurton, I've never worked any harder in my life than right now and it is utterly-impossible for me to turn out fiction until I get this [SantaCruz] house finished. Every time I turn my back something goes wrong. The cabinet and finish work is slowly (and very expensively) being finished. After that we still have the floors, ceilings, and fireplaces to do, plus the driveway, the front steps, and some exterior painting. It feels like an endless nightmare and the costs are utterly unbelievable. But there is no way to stop—short of being forced to stop by running out of money. Which is possible, despite the way you have been digging gold for us.

Sorry—I'm simply very tired tonight, up to midnight last night on the drawing board, on it again today under pressure so that the cabinetmakers could take a bunch of detail drawings home over the weekend . . . and now writing this under pressure so as not to miss the next mail dispatch. But we *are* getting a beautiful house just the way Ginny wants it.



Heinlein working at his desk, at "Bonny Doon," the Santa, Cruz house.

September 16, 1973: Robert A. Heinlein to Lurton Blassingame

.. . In the meantime, I am hotter than a $2 pistol on *three* books. One is fiction and will be a long time in writing, as I must do much research on the history and culture and manners of speech of several periods I do not as yet know enough about. It will be an episodic time-travel fantasy (with a new gimmick for time travel), each episode independent and available for sale as a short story as it is written, but the whole thing linked together by an overall plot which will make it a novel of book length—somewhat the way [Paul] Gallico's "Adventures of Hiram Holiday" make one book—but nothing at all like Gallico's fine job save in its episodic structure. (I am going to reread his in order to stay as far away from his ideas as possible in all ways.) I have several episodes well worked out but each needs careful research—probably after a draft on each, then a final form after research; this will take lots of work. (I may turn out a juvenile sci fi adventure of the sort I used to do long before this episodic fantasy is completed.)

The second book is a memoirs-autobiography job to be published posthumously—and left uncopyrighted till then (hence of zero cash value in probate)—as a little bonus to Ginny for all the years she has put up with my cantankerous ways. If published about a year after my death it should bring her some return . . . if I am still writing and my works are still known at the time of my death. If I get it in fair shape, you may possibly see a draft of it later—depends on events. I have been gathering notes for such a book for many years and have recently started shaping them up ... especially since 1969, which caused me to realize that I didn't have forever if it were to be a vendable property. Working title: *Grumbles from the Grave by Robert A. Heinlein (deceased).* (It's amazing how frank and how acidly funny one can be when one is certain it will never see print until the writer is safely out of reach. I'll name names—then Ginny will have to edit it with the advice of a good lawyer to insure that she is safe, too—then no doubt the publisher's lawyers will want some names deleted or changed, too. But I am going to write it as if with a Ouija board. It will be easy to write—lots of notes, lots of packrat saved souvenirs, more than fifty years of letters, many things I have never discussed—e.g., the frontline seat I had in the crisis many years back with Japan, before World War II—a crisis involving a war ultimatum that never got into the news. . . plus a Secret Life of (Walter Mitty) Heinlein, *etc.* I'm working on it.

But the third book will be written and finished for publication as soon as I am free of taking care of Ginny through this long, long siege of oral surgery. I have it in shape to start writing this very minute but will have many, many more card notes by that time—shortly after the first of the year. Working title: *Writing for a Living (and How to Live Through It)—Being the Ungarnished Facts about the Writing Racket for People Too Lazy to Dig Ditches.* The first part— *Writing for a Living*—is for the cover and the half-title page, the entire title being for the full-title page—although the book jacket might read *Writing for a Living* in large letters, plus *The Ungarnished Facts* in much smaller letters, plus my name in quite large letters—same size as the short title, or even larger, if publisher's judgment in dust jackets of my last several books is a guide. Besides that, for use on the inner flap and on the back of the dustjacket, and as title of the preface Ginny has suggested and is preparing a Latin fake quotation: "De Natura Scribendi etc.,"a free translation being "Concerning the Nature of the Writing Business and How Not to Get Screwed in It." Ginny's command of Latin grammar is good and she knows many Latin bawdy idioms . . . but she will write it, then enlist the help of a professor of Latin here at the campus to insure perfect grammar and exact idiom—and a choice of words as nearly self-translating as possible by selection of proper cognates of English. I'm [I'll] probably attribute it to Juvenal or Ovid, as interpreted by Lazarus Long.

(It could have a How to Write for Money title—but I think that "How to—" has been overworked of late years.)

A somewhat-laundered translation could be used in the dust jacket blurb (and possibly an exact translation supplied to reviewers), but the Latin itself must be idiomatically perfect. In truth it will be a most practical guide for inexperienced aspirants who are wild to do the—comparatively mild—and rather fun work that writing entails. I am going to make it extremely practical—more practical than Jack Woodford's *How to Write and Sell* (his only good book, his only bestseller, and the basis for90% + of his reputation)—but I intend to make it lively, hard to put down as a good novel by any of the millions of aspirant-writers-who-never-will-actually-write, plus the thousands who do write and could make a living at it if they knew certain rules of the game—rules that are not taught in so-called creative writing classes, nor in any book on how to write that I have ever seen.

I intend to lace it with illustrative true anecdotes, changing names and dates and places only when necessary to avoid being sued—and will say so. It will have many a chuckle init, plus a few belly laughs. I *know* I can do, it. This will be a timeless book and should make money for many years. It just might be a smash hit, like Helen Gurley's *Sex and the Single Girl*—as everyone wants to know how to make money with least effort and almost as many have at least a secret hope of seeing their names in print as "Authors' '—much like the great curiosity that most respectable women have about prostitution. . . and a secret wonder as to whether or not they could have made the grade in the Oldest Profession—only of course they never actually *would,* perish the thought! Almost as many feel that way about the Second Oldest Profession, the Teller of Tales—I know, from endless direct experience, that a person who actually *writes* for a living . . . and clearly does well financially at it ... is an object of curiosity to many—an exotic creature, not quite respectable, but very interesting. I'm buttonholed about it every time I appear in public—which used to be fun but has grown to be a nuisance. So I might as well turn this nuisance into cash.

EDITOR 's NOTE: None of the three books outlined here were ever written; some notes were collected, but nothing ever went on paper.

Lurton telephoned one day, saying that Robert had been asked to give one of the Forrestal Lectures at the NavalAcademy. Normally, Lurton would have regretted the invitation, but this was from Robert's alma mater. So it was accepted, and many months went into preparation for the talk.

Then along came a request from the Britannica *editors for Robert to do an article on Paul Dirac and antimatter for the* Compton Yearbook. *Robert viewed that as an opportunity to review the entire field of modern physics, and sciences in general. So, doing that article took one year. And it was followed by a request for another article on blood—another year consumed in the study of biological sciences, with one article to show for that year's work.*

Then came the invitation to be Guest of Honor at MidAmeriCon, which took up most of the year of 1976,what with all the arrangements to be made.

The year 1977 was passed in getting blood drives going among science fiction fans—and I must heartily recommend them for their cooperation in this project. Donors still send me copies of their ten-gallon certificates . . .

Thus did time pass, and those books Robert was so hot to do were never written. Robert never did tell me just what the crisis with Japan was, when his ship steamed full speed toward the Orient.

SLUMP

March 31, 1959: Robert A. Heinlein to Lurton Blassingame

If the market is in this bad shape, I had better do one of two things; either quit writing for the pulp SF magazines and concentrate on television and possible slick sales, or simply retire and do what I want to do with my time. I could retire very easily now, and Ginny and I could live very comfortably, simply by dispensing with foreign travel, emeralds, and similar unnecessary luxuries—and I certainly do not fancy knocking myself out, breeding insomnia, etc., for the privilege of receiving word rates that are actually less, after taxes, than those I got twenty years ago—and are effectively less than half that when I spend the money. It doesn't make sense.

July 28, 1959: Robert A. Heinlein to Lurton Blassingame
I am returning your clipping about the sad state of fiction. It is enough to drive a man back to engineering. However, I have always worked on the theory that there is always a market somewhere for a good story—a notion that Will Jenkins [the real name of sciencefiction writer Murray Leinster] pounded into my head many years ago. When I started writing there were lots of pulp magazines, many slick fiction magazines—no pocketbooks and no television. I think I'll just go on writing stories that I would like to read and assume that they can be sold somewhere to some medium.

MOTION PICTURE CONTRACT

November 8, 1968: Robert A. Heinlein to Lurton Blassingame
We have just finished a hard three days with the literary appraiser —hard but very pleasant; he turns out to be muy simpatico. Today I am trying to turn my notes into a long letter to Ned [Brown] re the *Glory Road* [fantasy novel, see ChapterXI, "Adult Novels"] contract. Darn it, I opened that contract determined to sign it unchanged if at all possible to live with it. Ginny says they let a second cousin write this contract when they should have used at least a first cousin.

TELEVISION SERIES

October 12, 1963: Robert A. Heinlein to Lurton Blassingame
Ned told me by phone that the contract is all set for the TV series and for me to do the pilot film shooting script. He gave me a lot of details, none of which I wrote down, as I don't believe a durn thing out of Hollywood until I see a signed contract and a check . . . Ned seems to have gotten from them simply everything he asked for .. . I simply told him to go ahead and get the best deal he could and I would sign it as long as it did not commit me to work in Hollywood.

But Ned said that I really must come out to Hollywood for at least one day's conference with Dozier, the boss. This I flatly refused to do until I have a signed contract in hand. I was not just being stubborn.

EDITOR'S NOTE: Robert was quite accustomed to receiving telephone calls from Hollywood producers; they would want him to do a script. Each time, the suggestion would be made, "Why don't you hop on a plane and come out here and discuss it?"

So, when in 1963, Robert received a telephone call from a Hollywood producer, Howie Horwitz, Robert was ready with an answer. Howie wanted Robert to do a pilot script for a science fiction TV series for Screen Gems. Then came the inevitable line: "Why don't you hop a plane and come out and discuss it?"

Robert replied, "Why don't you hop a plane to Colorado and we can discuss it here?"

To our amazement, Howie did just that.

Robert had sworn a mighty oath not to get involved in such an enterprise again. But Howie's presence disarmed him. Robert set to work after Howie left and produced a script. Then he found that trying to work between Colorado and Hollywood just wasn't possible. So in early 1964 we went out there for Robert to do rewrites under Howie's direction.

When the work was finished, we returned home. It was at just this point that the bankers went out to Hollywood from New York, and fired Howie and his boss. The script was shelved at Screen Gems, and Howie and his boss went across the street, and produced "Batman. "

For all practical purposes, the pilot script was dead, along with the series, "Century XXII. " There is a faint hope that it may be produced someday. As this is being written, someone recalled the script and is setting about the difficult task of undertaking to produce the film.

January 20, 1964: Robert A. Heinlein to Lurton Blassingame

Will you get me off the hook on several things? There has been a death in my family—no close emotional involvement for me, but some duty matters—so I am unexpectedly catching a plane in about an hour (Ginny remains here), then on my return Thursday will be leaving immediately to drive to Hollywood (Ginny accompanying me) and arriving there possibly late for Screen Gems story conference Monday 27 January. . . . The [TV] thing is sourer than ever and I see no hopes of saving it, but I must go out and try my best.

But today I 'm badly strapped for time and ask help on some unfinished business (this damned screenplay has put me behind on *everything)*—and this funeral puts the topper on it—despite the fact that I answered sixty-three letters in the last three days, trying to catch up.

April 8, 1964: Robert A. Heinlein to Lurton Blassingame

I have many other things to acknowledge. We have been home three weeks now, two of them eaten by illness, the rest of the time used futilely in attempting to cope with an avalanche of accumulated low-priority paperwork, several hundred periodicals, etc., piled up not only while we were away, but left undone clear back from last August when (TV producer) first entered my life. This last Hollywood experience has simply confirmed my earlier opinion that, while Hollywood rates are high, what a writer goes through to earn those rates makes it a losing game in the long run. I hope that you and I and Ned [Brown] make some money out of this—but if the series is never produced, I hope to have sense enough to stay home and write books in the future and leave the movie never-never land to those who enjoy that rat race.

CHAPTER VI ABOUT WRITING METHODS AND CUTTING

October 25,1946: Robert A. Heinlein to Lurton Blassingame

. . . then write another short. This one is tentatively titled "Homesickness" ["It's Great to Be Back"] and is another Luna City and so forth yarn. If possible, I want to build up a background, as I did in *Astounding,* for a series of interplanetary shorts, laid in the near future (the coming century, to about A.D. 2050). The series will follow the formula, somewhat modified, of the SEP *[Saturday Evening Post]* series such as Earthworm Tractor, Tugboat Annie, Gunsmith Pyne, Blue Chip Haggerty, etc.—stories laid against a particular occupation or industry. My series will be laid against the background of *commercial* (not exploration nor adventure) interplanetary travel. Continuity will be maintained by names of places—Luna City, Dry water, Venusburg, New Brisbane, New Chicago, How-Far?, Leyburg, Marsopolis, Supra-New York, etc., and by consistent use of techniques, cultural changes, and speech changes. Characters will shift for each story, but a major character in one story may show up in a bit part in another.

The science and engineering will be held to a minimum but will be authentic. An editor may be sure that I will respect facts of astronomy, atomics, ballistics, rocketry, *etc.* For example, the piloting in the story you are about to receive is as authentic as it can be at this date—if it is not as it *will* be, then it is at least as it *could* be; it is practical, with respect to time intervals, speeds, accelerations, and instruments used. When, in that story, I mention falling 700 feet on the Moon in forty seconds and thereby picking up speeds up to 140 miles per hour, and, thereafter, killing the speed with a one-second-plus blast at five-gravities, I know what I am talking about—I am a mechanical engineer, a ballistician, a student of reaction engines, and an amateur astronomer. I mention these things because they may help you sell my stuff—I won't give an editor any Buck Rogers nonsense. A great deal of study and research goes into the background of my stories.

May 16, 1947: Robert A. Heinlein to Lurton Blassingame

.. . As for formal coaching from Uzzell [a well-known "story doctor" and coach of the time] or anyone, I'm getting just the coaching I want from you . . .I'm afraid of coaching, of writers' classes, of writers' magazines, of books on how to write. They give me centipede trouble —you know the yarn about the centipede who was asked how he managed all his feet? He tried to answer, stopped to think about it, and was never able to walk another step. Articles and books on how to write have that effect on me. The author seems so persuasive, so sure that he knows what he is talking about, that I start having doubts about my own technique. It usually turns out that the author is urging the reader to do something quite unsuited to me—fine for him probably, but not my pidgin. If I try to imitate him, follow his directions, I usually fail to accomplish his methods and lose my own in the process . . .

Heinlein working at his desk, at "Bonny Doon," the Santa Cruz house.

I do get a great deal of help from studying other writers' stories, particularly in the respects in which I see that they have accomplished an effect that I do not as yet know how to accomplish. I find such study of what they have *done* more use to me than their discussions of *how* they do it.

Winslow says I don't understand plotting and probably I don't—I have been congratulated many times on the skill shown in my plotting when I knew damn well that the story in question had not been plotted in advance at all. My notion of a story is an interesting situation in which a human being has to cope with a problem, does so, and thereby changes his personality, character, or evaluations in some measure because the coping has forced him to revise his thinking. How he copes with it I can't plot in advance because that depends on his character, and I don't know what his character is until I get acquainted with him. When I can "hear the character talk" then I'm all right—he works out his own salvation.

January 31, 1948: Robert A. Heinlein to Lurton Blassingame

I certainly am sorry to have worried you and will try not to let it happen again—when I get into the final chapters of a novel it is sometimes almost impossible to attract my attention.

January 2, 1950: Robert A. Heinlein to Lurton Blassingame

My method of work is such that I always have a dozen or more stories being worked on.

March 20, 1953: Robert A. Heinlein to Peter Hamilton (editor of *Nebula Science Fiction)*

The problem of building up convincing background in a science fiction story becomes extremely difficult in the shorter lengths. In ordinary fiction, background may be assumed or most briefly indicated, but it is a most unusual science fiction idea which may safely be so treated. In all the years I have been writing science fiction I have done only one story under 2,500 words, that story being "Columbus Was a Dope" . . .

October 9, 1956: Robert A. Heinlein to Lurton Blassingame

. . . However, I have been fiddling with experimental methods of storytelling (none of which you have seen) and I am beginning to think that I may be developing anew method which might turn out to be important. It is a multiple first-person technique, but not the one used by John Masters in *Bowhani Junction.* Mine calls for using camera cuts and shifts as rapid as those in the movies; the idea is to give the speed of movies, the sense of immediacy of the legitimate stage, and the empathy obtained by stream of consciousness—a nice trick if I can bring it off! The greatest hitch seems to lie in the problem of shifting viewpoints, both without confusing the reader and without losing empathy through cumbersome devices. But I think I am learning how to do it.

I don't want to use this technique on commercial copy until I am sure I can force the reader to go along with a novel technique. James Joyce introduced into writing an important new technique, but he did it so clumsily that his so-called novels are virtually unreadable; if I do have here a usable new technique I want to polish it to the point where it can stand up in the open market in competition with the usual wares whose values are established and recognized.

Ginny suggests that I not use it in science fiction in any case, but save it for a lit'rary novel. She has a point, I think, as it would not be seriously reviewed in an S-F novel. We'll see.

ATTENTION

November 8, 1968: Robert A. Heinlein to Lurton Blassingame

Sure I signed the Gollancz [a British publisher] contract; and not in invisible ink, either. Then I stuck it into file and sent you the copy I had *not* signed—convinced that I had signed both of them. Ginny says that whenever she finds my shoes in the icebox, she knows I'm coming down with a story.

So here is the other copy—now signed.

WORKING HABITS

August 31, 1956: Robert A. Heinlein to Lurton Blassingame

.. . In the meantime, I have turned out no salable copy. Part of my trouble is that I have undertaken to do something which does not fit my working habits, i.e., agreed to produce a story outline. Outlines never have any reality to me, no vividness. Oh, I use what I call an outline but a sort that no editor would accept; it's actually simply musing on paper-then when the idea begins to take fire, I start at once to write the story itself and become acquainted with the problem and the characters as I go along. Sometimes this results in blind alleys and surplusage which has to be removed *(Door Into Summer* had Martians in it for half a day, then I chucked a few pages and got back on the track)—but by the time I am well into the story I am writing with sureness, hearing the characters, seeing their surroundings, and having the same trouble coping with their problems that they have. As you can see, this is not a method [that] lends itself to a formal outline, from which I can promise to derive an acceptable story. But it is the method I have taught myself and it works for me.

Trying to force myself into the more conventional method has not worked; it has simply resulted in my snapping at my wife for a couple of months and getting no other work done either. So I am going to devote the next week to an attempt to start a story suitable for *Boys' Life* on spec—no outline. Probably it will work and probably they will buy it. But if I can't click in about a week I shall have to tell them that I have nothing to offer them at this time—I shall have to cut my losses and get busy on something I can do.

September 13, 1956: Robert A. Heinlein to Lurton Blassingame

I've been wanting to write to you ever since I spoke with you on Sunday, but I have been busy on a draft of a novelette for *Boys' Life.* I finished it last night and will now try to clear my desk—starting with your letter.

I think I finally have a story that *Boys' Life* can use, provided I can now sweat it down to an acceptable length without bleeding it to death. The title is "Tenderfoot on Venus" and is about a Scout and his dog and his chum in a Boy Scout troop on Venus—no sex, no firearms, no fighting between the boys, knives used only for things that a Scout legitimately uses knives for, no villains other than the hazards of nature. I have no real doubts about the story; while it isn't immortal literature, it is a good, decent, adventure story. But I do want to use as much wordage as possible in the final draft because of the always present problem of building up a convincingly detailed background in a science fiction story laid in the future in a strange scene. Could you phone their editor and ask him for his absolute top word length? The more space I have, the better the story will be.

Final copy should be in New York about one month from now. They can count on that.

EMOTIONAL DISTURBANCES

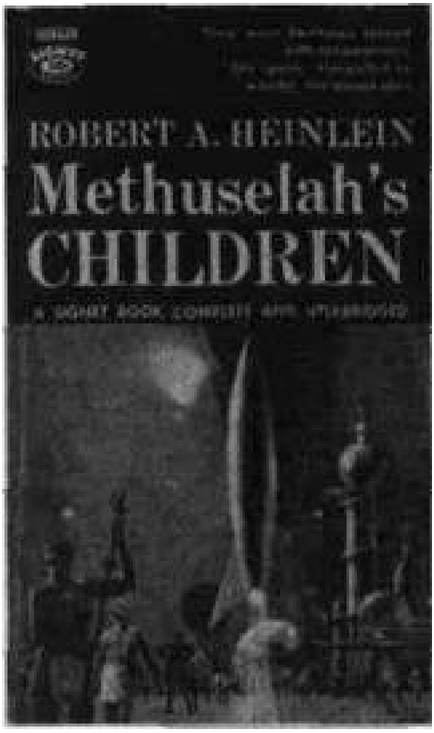
August 27, 1953: Robert A. Heinlein to Lurton Blassingame

I greatly sympathize with her [Peggy Blassingame] emotional difficulty, being subject to it myself, although from different causes. When I am working on a book, any commitment at all other than the book itself is almost unbearable. A dinner date four days away will get between me and the typewriter and make it very hard to work. . . . very hard to keep and hold that out-of-the-world reverie that seems (for me) to be almost indispensable to empathic fiction. This neurotic peculiarity of mine is quite inconvenient to Ginny, as I am quite reluctant to take part in any social activity arranged earlier than about 5 P.M. on the day it takes place—I don't mind socializing during a story as long as I don't know about it ahead of time, but that limitation is very awkward for a hostess.

STORY CHANGES

March 28, 1957: Robert A. Heinlein to Lurton Blassingame

. . . delay on *Methuselah's Children.* Both Ginny and I have been over it carefully since I last wrote. She thinks it needs a complete rewrite from beginning to end; I am certainly convinced that it should not go on the market until I have worked on it a bit and perhaps completely rewritten it. I greet this task with the delight with which I change a tire in the rain at night, but it has to be done, I am afraid. Worst of all, it uses time I had intended to put onto new copy. With luck I should forward it to you not too late in April . . .



Methuselah's Children, Signet (The New American Library), 1960. An earlier, shorter version of the book was published by *Astounding* in 1941.

. . . My strongest misgiving about a release through Doubleday is on other grounds, however: I am afraid that *Methuselah* simply does not stand up to the quality of *Puppet Masters* and *The Door into Summer;* I am afraid it would look like a slump. It was written sixteen years ago; I have learned something of story telling techniques in that time, I think.

EXCERPTS

February 16, 1968: Robert A. Heinlein to Lurton Blassingame

And I have another letter from ——— concerning that request to use an excerpt from "Logic of Empire." This time he tells me approximately (not exactly) what he wants to excerpt but says that he cannot tell me how much I would be paid. Well, from what I know of British prices, I doubt if he contemplates paying more than ten to twenty dollars for a thousand words. But I can't see why he expects me to sell for an unstated price. I'm tempted to tell him that short excerpts call for short-short story rates—say about a shilling a word.

But I'm going to tell him no again, (a) I don't like to see my stories chopped up, in any case; each is meant to be read as a whole, (b) I have a dirty suspicion that he wants my name on the dust jacket at a cost of about ten bucks, (c) The controlling point: I don't like his action in bypassing my agent. If he wanted a rehearing he should have submitted his second proposal to *you*—he certainly knows who you are and where you are.

Damn it, on second thought I am not going to answer him now; I'll enclose his letter instead. If you want to answer it, do so. If not, send it back and I will do so. But I certainly do not like his unprofessional behavior in intentionally trying to bypass my agent.

INTRODUCTION

January 14, 1963: Robert A. Heinlein to Robert Mills

Lurton tells me that you and he have reached an agreement on the use of "Zombies" ["All You Zombies"] and that you now want an introduction to the story from me, telling why it is "one of my favorites."

At that point it suddenly lost status with me. The prospect of writing a blurb for one of my own stories I find almost as filled with grue as is attending an autographing party or writing for a fanzine. Why don't you write it? You seemed to like this story better than I did and your blurb in FSF *[The Magazine of Fantasy and Science Fiction]* was okay.

But, if you must have it, how about this:

"Mark Twain invented the time travel story; six years later H.G. Wells perfected it and revealed its paradoxes. Between them they left little for latecomers to do. But they are still fun to write. Some stories are chores, some are fun—this is one I enjoyed writing."

But I would still prefer for you to blurb it. If an author writes his own blurb, he is caught between the horns of conceit and false modesty.

FREE OPTION

January 27, 1961: Robert A. Heintein to Lurton Blassingame

My whorish instincts protest the idea of a free option even for six months—but I'm willing to go along, pursuant to your advice. He [a would-be producer] would be a lot better off (safer) and I would be happier if there were some minor cash involved, with the deal spelled out. The option money needn't be much and it could have renewable dates by small payments. However, I suspect that he does not want to sign a formal option now because that necessitates spelling out the deal which is being optioned—and he probably hasn't any clear idea what the deal might be until he has a treatment to show financial backers.

CHAPTER VII BUILDING

COLORADO SPRINGS

EDITOR'S NOTE: When Robert and I were first married, we lived in Colorado Springs. After the motion picture script sold, it was necessary to move to Hollywood, as Robert was to be technical director for what became Destination Moon.

After the shooting on the film was completed, Robert's contract was up, so we returned to Colorado to build our house there. While we were building, the Korean War began—although it was called a "police action," it was a fullfledged war; the draft was still in place, and prices on everything began to soar. Robert might be called back to do engineering, and although I was on inactive duty, there was the everpresent possibility that I might be called back to active duty. Neither of those things happened, but we went through a period of not knowing whether we would have to leave our house half-built and go off to war.

1776 Colorado Springs Street. The Heinleins got to pick their own house number for their Colorado Springs house. They moved in in 1950.

In one of these letters there is mention of the quickly rising costs of lumber; Camp Carson nearby Colorado Springs had been renamed Fort Carson, and an enormous building program had begun there. We were caught by the rising prices on everything needed to complete the house.

Before Robert began writing, he had some interest in planning single-

family houses. He had several plans of his own. However, those were for a flat area, and the lot we purchased was on a hillside. Neither one of us was prepared, though, for the intricacies of the actual building of a house.

I was required to read Mr. Blandings Builds His Dream House. *We both avoided the mistakes in that story, but we made a brand new set of our own.*

July 9, 1950: Robert A. Heinlein to Lurton Blassingame

. . . We are going ahead with building and have the foundation in, the services in, and the septic tank built, but I shall have to shut down the job again and wait if monies do not come in. Yes, I know I could remedy that by giving you new copy and I wish to Heaven I could—but I am so fouled up with. . . handling payroll and purchases, and trying to be an architect that I can't write stories. I continue to have much trouble with the contractor.

August 13, 1950: Robert A. Heinlein to Lurton Blassingame

.. . I am sorry to get tough with him, but I 've got to have the money. The checks you sent me got me past this week's payroll—but I had a serious disappointment on another matter this week and I am more strapped than ever. In the meantime, the army is reactivating a base here with a million dollar construction program and all local lumberyards immediately boosted their prices. Lumber has gone up *60%* around here in the last six weeks. Nevertheless, the roof is being framed up now; we'll have it closed in by the end of this week—and we'll move in around Labor Day, if my nerves hold out. Then I intend to stop everything and start turning out new copy.

August 14, 1950: Robert A. Heinlein to Lurton Blassingame

Your letter of 11 August arrived today and caused us much jubilation .. . an advance check on the NAL contract twice the size we had expected, news that you had sold "Roads" ["The Roads Must Roll"] for TV, and news of the Kellogg show *[Tom Corbett, Space Cadet]* for *Space Cadet.* Ginny and I are agreed that you are the original miracle man. All this adds up to no more real money worries for Robert and assurance that we can finish our house in an orderly fashion without a mortgage.

EDITOR'S NOTE: We moved into the house Labor Day weekend. It was closed in, glazed, but the clerestory needed to have the glass bricks installed, so we spent the weekend pushing oakum into the spaces around the glass bricks, "floating" them. I obtained a large roll of brown paper and stapled it to the wall studs. At least we had a place to live in. The subfloor was laid, but it would be a long time before the house was finished. And

Robert sat down and wrote The Puppet Masters.

The Heinleins' house at Colorado Springs. They had the house built themselves and ran into many difficulties—not the least being a shortage of building materials due to the war in Korea!

September 13, 1950: Robert A. Heinlein to Lurton Blassingame

We finally managed to get moved into our new house. It is far from finished; while the outer shell is closed in solid, the interior is a forest of studs and butcher paper temporary partitions. We do have plumbing and we do have kitchen fixtures and we do have heating; we'll make out.

I am still much badgered by bills, mechanics, unavoidable chores, and such, but I have a place to write and should now be able to continue at it fairly steadily.

February 11, 1951: Robert A. Heinlein to Lurton Blassingame

. . . We managed to spend $6,000 in six days—which turns out to be awfully hard work. I have been trying to buy and get onto the job every bit of metal, every last stick of wood, needed to complete this house.

Incidentally, it just nicely cleaned us out again. The laughable price freeze [because of the wartime economy] came much too late to do a man who is building any good. But, with the material on hand, I now know that I can and will finish.

May 13, 1951: Robert A. Heinlein to Lurton Blassingame

We put up the ceiling this past week; tomorrow we paint it and start putting up wall paneling. The house looks like an Okie camp, Sunday is the only day I can do paperwork as I have mechanics working both days and evenings. I put in about a fourteen-hour day each day and am gradually losing my bay window. House building is most impractical, but we are slowly getting results.

June 10, 1951: Robert A. Heinlein to Lurton Blassingame

It is ten-thirty and I must be up around six. Today being Sunday I worked all day alone on the house. It continues to be an unending headache, but we are beginning to see the end—about another month if we don't run into more trouble. The biggest headache, now that the bank account is refreshed, is finding and keeping mechanics. This town is in a war building boom and every mechanic has his pick of many jobs. I should have four or five working; I have two, plus myself. I work at any trade which is missing at the moment. Fortunately, I can do most of the building trades myself, after a fashion. I have a stone mason doing cabinet work, which will give you some idea of the difficulties of getting help. Often I think of your comment, more than a year ago, that you hoped I would not have trouble but never knew of a case of a person building his own home who did not have lots of trouble. Well, we surely have had it, but the end is insight—if I don't go off my rocker first.

What am I saying? I *am* off my rocker!

April 17, 1961: Robert A. Heinlein to Lurton Blassingame

Actually, I am not studying Arabic very much nor am I writing; I am moving massive boulders with pick and shovel and crowbar and block and tackle, building an irrigation dam—a project slightly smaller than the Great Pyramid but equal to Stonehenge. I no longer have any fat on my tummy at all but have a fine new collection of aches, pains, bruises, and scratches.

"Project Stonehenge:" The creation of a decorative pool was undertaken by the Heinleins alone—and made them a two-wheelbarrow family.

May 15, 1961: Robert A. Heinlein to Lurton Blassingame

We are now a two-wheelbarrow family. That accounts for the delay.

Don't brush it off. Are *you* a two-wheelbarrow family? How many two-wheelbarrow families do you know? I mean to say: two-Cadillac families are common; there are at least twenty in our neighborhood, not counting Texans. But *we* are the only two-wheelbarrow family I know of.

It came about like this: I started building Ginny's irrigation dam. Simultaneously Ginny was spreading sheep manure, peat moss, gravel, etc., and it quickly appeared that every time she wanted the wheelbarrow I had it down in the arroyo—and vice versa. A crisis developed, which we resolved by going whole hog and phoning Sears for a second one. Now we are both happily round-shouldered all day long, each with his (her) own wheelbarrow.

(Live a little! Buy yourself a second one. You don't know what luxury is until you have a wheelbarrow all your own, not constantly being borrowed by your spouse.)

This dam thing (or damn' thing) I call (with justification) *Project Stonehenge;* it is the biggest civil engineering feat since the Great Pyramid. The basis of it is boulders, big ones, up to two or three tons each—and I move them into place with block and tackle, crowbar ,pick and shovel, sweat, and clean Boy Scout living. Put a manila sling around a big baby, put one tackle to a tree, another to another tree, take up hard and tight with all my weight on each and lock them—then pry at the beast with a ninety-pound crowbar of the sort used to move freight cars by hand, gaining an inch at a time.

Then, when at last you have it tilted up, balanced, and ready to fall forward, the sling slips and it falls back where it was. This has been very good for my soul.

(And my waist line—I am carrying no fat at all and am hard all over. Well, moderately hard.)

EDITOR 's NOTE: Robert enjoyed doing rock work, and the grounds were greatly improved by three decorative pools and revetments done with rocks.

SANTA CRUZ COUNTY

EDITOR 's NOTE: We loved our home in Colorado Springs-Robert had done so much in the way of rock work outside, and we had lavished our care on it for some years.

But there were two reasons why we had to leave. One was my health. For some years, it had become increasingly evident that I could not stand the altitude—I had "mountain sickness. " The other reason was that the house was too small for our files of papers and books. We left Colorado on the seventeenth anniversary of our marriage, to look on the West Coast for land for building. Three months were spent on this quest before we bought the land in Santa Cruz.

We remained in that house until 1987, at which time we found that it was too far from medical services, which Robert needed quickly at times. So we looked in Carmel, and found a suitable house, although it had all the drawbacks of the ones we had decided against in Santa Cruz.

February 1, 1966: Robert A. Heinlein to Lurton Blassingame

We moved into this house because it is twenty miles closer to the land we finally bought than is the apartment in Watsonville and is the closest rental we could find to our new land— not very close at that: nine miles in a straight line, fourteen by road, twenty-six minutes by car. But the house, besides being nearer, is a vast improvement on the apartment. It is all on one floor, has three bedrooms (which gives me a separate room for my study), two full baths, a dishwasher, a garbage grinder, a double garage, and a gas furnace with forced air instead of electric strip heaters. It is an atrocity in other respects—such as a large view window which has an enchanting view solely of a blank wall ten feet away—but we will be comfortable in it and reasonably efficient until we get our new house built.

The dismal saga of how we almost-not-quite bought another parcel of land is too complex to tell in detail.

Those forty-three acres of redwoods located spang on the San Andreas Fault—Ginny thought I had my heart set on them, I thought she had her heart set on them . . . and in fact both of us were much taken by them. It is an utterly grand piece of land—very mountainous, two rushing, gushing mountain streams with many waterfalls, thousands of redwoods up to two hundred feet tall. But in fact it was better suited to playing Gotterdammerung than it was to building a year-round home. Most of the acreage was so dense as to be of no possible use, and the forest was so dense that the one site for a house would receive sunlight perhaps three hours each day. Mail delivery would be a mile away . . .

I agreed but insisted that we shop first for houses ... as designing and building a house would cost me, at a minimum, the time to write at least one book as a hidden expense. So we did—but it took me only a couple of days to admit that it was impossible to buy a house ready built which would suit me, much less Ginny. Firetraps built for flash, with other people's uncorrectable mistakes built into them! (Such as a lovely free-form swimming pool so located as to be overlooked by neighbors' windows! Such as Romex wiring, good for only five years, concealed in the wooden walls of a house . . .)

The new property has none of the hazards of the property we backed away from buying. It is on a well-paved county road and has 220-volt power and telephone right at the property line. It does not have gas (we expect to use butane for cooking, fuel oil for heating), does not have sewer, does not have municipal water. So we'll use a septic tank and a spread field. It has its own spring, which delivers a steady flow at present of 6,000 gallons per day. We had a very heavy rainstorm over this last weekend, so I went up and checked the flow again and was pleased to find that it had not increased at all—i.e., it apparently comes from deep enough that one storm does not affect it. I'll keep on checking it during the coming dry season but we were assured by a neighbor (not the owner) that the spring had not failed in the past seventy-five years.

Heinlein surveying at Bonny Doon. The Heinleins moved to Santa Cruz in the mid-sixties.

I plan to try to develop it still farther and plan to install not only a swimming pool but two or three ornamental pools and ponds of large capacity against the chance that we might run short of water in the dry season. But I'm not worried about it; it is redwood country and where there are redwoods there is water. The land is a gentle, rolling slope, with the maximum pitch being around one in ten and the house site level and about forty feet higher than the road. The parcel is clear but it has on it some eight or nine clumps of redwoods, plus a few big, old live oaks which look like pygmies alongside the sequoias. These are sequoia sempervirens, the coastal redwood, and ours are second growth, about a hundred feet tall, up a yard thick, and around ninety years old. There are also a few other conifers, ponderosa, fir, cypress, etc., but they hardly show up among the redwoods. I have not yet conducted a tree census, but we seem to have something in excess of a hundred of the very big trees, plus younger ones of various sizes. Each redwood clump is associated with the cut stumps of the first growth, six or eight feet thick and eight or ten feet high. Since redwood does not decay, they are still there, great silvery free-form sculptures. Ginny is planning one garden designed around a group of them.

I am very busy designing the house. I am anxious to start building as soon as possible as I really can't expect to get any writing done, at least until this new house is designed and fully specified. Building becomes a compulsive fever with me; it drives everything else out of my mind.

April 6, 1966: Robert A. Heinlein to Lurton Blassingame

.. . I'm still bending over a hot drawing board—I'm very slow, for I am *not* an architect and have to look up almost every detail. But the end is in sight. As soon as I can get a water system hooked onto our spring and a driveway bulldozed, we will probably buy a third-hand trailer and move onto the place during building—Ginny is now willing to do this in order to move our cat here. There has been a rabies scare in Colorado Springs; all animals are under a quarantine and we are having to keep him in a kennel with our vet.

June 22, 1966: Virginia Heinlein to Lurton Blassingame

[Robert] is still relaxing, since when he spends too much time out of bed, he tires very easily . . .

Every once in a while I hear some sounds which seem to indicate that our cat is trying to despoil a bird's nest nearby ... He seems to like it here, hasn't started that hike back to Colorado which I predicted.

July 1, 1966: Robert A. Heinlein to Lurton Blassingame

I have received, but not yet read, *The Psychology of Sleep*—but will read it as soon as I can stay awake that long; I want to find out why I am so sleepy. I seem to be practically well now, save that I am sleepy all the time; I'm sleeping twelve and fourteen hours a day. I get up late, have breakfast, and can barely stay awake long enough to go back to bed—get up again, get a couple hours of paperwork done (with great effort), men take a nap. Resolve to get something done after dinner but find myself going to bed again. It is not unpleasant save that I am totally useless and the work piles up. The incision seems to have healed perfectly and my surgeon says that after the 15th of July I can do anything I wish—lift 200 lbs . . ,(which will be remarkable as I never could in the past.(Oh, off the floor, yes—but not a clean press up into the air.)

EDITOR 's NOTE: Robert's health was somewhat fragile. From time to time he would be required to have various major and minor surgery. Although he was able to do extremely heavy work at times, illnesses such as influenza hit him hard, and it might take weeks for him to recover.

These illnesses fell into major and minor groupings. In his early days he had TB; recovery took about a year. In 1970, he had a perforated diver ticulum, undiscovered for seventeen days; it took a long recovery period.

Because of the shock to his system, he followed that with herpes Zoster. Because the doctors were afraid to remove his gall bladder at the time they operated for peritonitis, that operation had to be deferred until 1971, when he had recovered from shingles.

In 1978 in Moorea, he had a TIA [Transient Ischemic Attack, a temporary interference of blood to the brain], which resulted in his undergoing a carotid-bypass operation.

August 15, 1966: Robert A. Heinlein to Lurton Blassingame

Ginny is fretted and frustrated because she does not yet have water at the building site—badly needed to stabilize a very dusty excavation and to permit her to start ground cover for great, raw cuts that will wash away if not planted before the heavy rains. Someone warned us when we came here that Santa Cruz was very much a manana place, with the leisurely attitude affecting even the gringos—and that person was so very right. We were promised a pumping system in two weeks; it has now been more than a month—if we don't have water in a few days, I am going to have to get very nasty with that subcontractor. Which I dread.

Heinlein with Elf of Bonny Doon.

We can't pour concrete for the house until we have [a building] permit, but there are lots of other things to be done. I still hope and expect that we will be closed in by the rains and able to move in, even though the interior will still have to be finished—if Ginny and I both don't wind up in straitjackets before then.

September 4, 1966: Robert A. Heinlein to Lurton Blassingame

We have (a) started the house, (b) acquired an unhousebroken kitten, and (c) had a houseguest on our hands for three days when we literally have no room nor facilities for an ill houseguest—so we are running in circles. . . .

The kitten is a fine little girl cat who buzzes all the time . . . and craps right under this typewriter with healthy regularity . . . and gets herself lost under the house . . . and insists on sleeping *under* Ginny's head . . . and throws our tomcat into a bad state of nerves most of the time. Apparently she isn't old enough to smell like a girl cat to him; she is simply a monster who has invaded his home and who takes up entirely too much of Mama's and Papa's time. But she is another lame duck; Ginny rescued her when she was about to be sent to the pound. Oh, me. Once we get her housebroken and once she comes into heat I think she will turn out to be a most welcome addition to the household—right now she's a burr under the saddle.

I finally fired our silly architect and took over the job myself ...

We have water now, on a temporary pump hookup from a temporary tank . . . The site is no longer the horrible dust desert that it was; [Ginny] has it watered down (endless shifting of the single sprinkler the temporary hookup will run) and little green shoots coming up to hold the soil against the coming rains. Between times she keeps coffee and lemonade and candy bars on the job and passes them around (very good for morale), and makes trips down to Santa Cruz as needed for almost anything—and keeps house and cooks and keeps books, and falls into bed dead beat each night. (But the extreme effort-is going to get us into our house by the rainy season—we can hardly wait.)

. . . asking me to lecture. The fee is satisfactory and I have in mind an outline for an appropriate lecture. Will you take over from here and accept subject to the following conditions? Mr. Heinlein's terribly busy schedule (i.e., mixing concrete, carrying block, and pushing a shovel, which is none of his business) will not permit him to accept a date to lecture earlier than the first of the year, and also I would expect transportation, to wit, round trip by air from San Francisco to Chicago.

.. . I guess that is about all, and I've still got to do some electrical work tonight—calculate the maximum working loads for the whole house and try to see if I can use a four-wire, three-phase cable underground . . . This is just one of the hairy little jobs the architect left undone.

The new cat is out again and again under the house—no way to get under, but she manages. Ginny has just gone out in the dark with a dish of cat food and a flashlight, to try to lure her out. Never a dull moment around here—

November 21, 1966: Robert A. Heinlein to Lurton Blassingame

I enclose a picture taken last week of the state of the job. As you can see, the masonry walls are almost complete. Four courses of "bond beam" now go around the top of what you see (looks like all the other courses but has buried in it four half-inch steel bars, poured in place—this building is for all practical purposes a steel-reinforced monolith; there are hundreds and hundreds of pounds of steel concealed in it).

But we are having trouble: (a) the winter rains have started; (b) our mason is being childishly temperamental. The contractor is quite disgusted with him, and I have refrained from telling him off simply because I did not wish to joggle the contractor's elbow—he being a number one conscientious and mature person.

December 4, 1966: Robert A. Heinlein to Lurton Blassingame

We are now building between raindrops, but thank God the masonry on the house is at last all finished. We still have two little masonry outbuildings to put up, a pump house and an electrical service housing, but these won't take long and are neither urgent nor difficult—even I could lay them up. We need about two weeks of dry weather to frame the roof and put on the roofing—but the winter rains have set in unusually early and unusually hard and it could very well be some time in January before we get the roof on. The contractor has decided that the job will work every dry day from now on, including Saturdays and Sundays. But dry days are scarce. There have been only two fairly dry days this week, it is storming right now and is supposed to rain even harder tomorrow. But I am not dismayed, as carpentry is not nearly as affected by weather as is masonry. Our worst problem is to get a long enough dry spell to permit us to put in the septic tank and to dig a 200foot ditch for the services, water, electricity, telephone, and low-voltage messenger lines. This soil is getting very soggy for backhoe operations.

Robert and Virginia tree planting at Bonny Doon.

February 3, 1967: Robert A. Heinlein to Lurton Blassingame

At the moment, [Ginny] is over at the house site swinging a paint brush . . . The job is still moving but very slowly; it looks from the outside much as it did in the last picture I sent you, but quite a lot has been accomplished inside. We are stalled by the glazing—still no firm date as to when our double-glazing units will arrive. It is not only a strain on us—Ginny in particular, since she has to put up with the primitive housekeeping and cooking facilities of this summer cabin—but also it has had a very bad effect on our general contractor; he's become moody and tempery, and unable to supervise other mechanics without chewing them out—which in my opinion is not the way to get the most out of a man.

February 17, 1967: Robert A. Heinlein to Lurton Blassingame

Building—we seem to be frozen in a nightmare. The glazing units still have not arrived—the manager won't even promise a firm date. The water closets and hand basins which were supposed to be in stock in San Jose (it now appears) do not even exist and we must wait until the factory again makes a run of that color. One of the soidisant "mechanics" who loused up our water system is now suing us for "wages"—trial on the 24th. We have developed a great big bog of quicksand in our driveway, so it must now be rebuilt at God knows what expense. In the meantime, the wiring progresses at painful slowness ...

But our house in Colorado is sold at last and at not too great a loss —not much immediate cash out of the deal after closing costs and commission, but nevertheless I am much relieved. Ginny continues to swing a paint brush daily while I am slowly getting back to the drawing board to finish the detailing of the cabinet work. We are in good health, we don't owe any bills we can't pay, and Ginny says we can stay out of the red despite all these problems. The weather is beautiful, the rainy season is almost over, and things don't look too bad.

June 27, 1967: Robert A. Heinlein to Lurton Blassingame

Nothing else of any real importance today. Ginny is working herself silly everyday on the woodwork finishing—bleaching and sanding and varnishing the mahogany; I'm still sweating over a hot drawing board on the last of the finish details; today I'm designing Ginny's office. The cabinetwork and paneling is about 80% finished now; then we have the floors, ceilings, fireplaces, permanent lighting fixtures, front steps, driveway, and some exterior painting to do—still lots but the end is a faint gleam in the distance.

Heinlein with the newly completed Bonny Doon.

July 10, 1967: Robert A. Heinlein to Lurton Blassingame

This should be the last letter I'll have to write on a card table; Ginny has almost finished the bleaching and varnishing in my study. And today about half the cabinetwork arrived for her office; soon we will both be properly equipped for the first time in almost two years. Hallelujah! We'll be able at last to get our files straight and get caught up on correspondence and paperwork . . . and I am itching to reach the point where I can start in on new fiction.

Our soil is black loam on top of sand on top of hardpan. I think we can control this driveway situation simply by treating it as a permanent watercourse, accepting that and installing a slaunchwise steel-reinforced concrete ditch alongside. But I dunno. Yesterday my brother Rex told me of a friend of his, a professional soil engineer, who has a similar driveway problem and has not been able to solve it. (But I don't think ours is that bad.)

We stayed home on the Fourth of July and worked—did not even get to fire our cannon—can't get at it until the cabinetwork is finished and I can unpack the dining room. But we did go away to Palo Alto this weekend-heard some good music and saw a football game on television, wild excitement for the life we have been leading. In truth we had ourselves an awfully nice time and enjoyed getting away from here. (All but the cat, who thinks it is utterly unfair to cats to put him in a cage and take him to a kennel. But he needed the rest, too; he has been losing fights. I wish I could teach him to fight only smaller cats, or else Arabs—as the general with the eyepatch says, it helps if you can arrange to fight Arabs.)

We are both in good health and in quite good spirits. It is still a long haul, but we can now see daylight at the end of the tunnel.

October 26, 1967: Robert A. Heinlein to Lurton Blassingame

. . . Then your check arrived and all was sunshine. That check almost exactly pays for the driveway—quite a complex and expensive structure because of underground drains for that quicksand problem—and leaves money on hand and November and December royalties for taxes, finish work inside (ceilings and recessed light fixtures),and this and that. No sweat. Utter solvency. Joy. So we declared a holiday, went downtown and bought Ginny anew dress, got hold of friends, and had dinner out, avec mucho alcohol and joviality. Today I have a mild hangover but my morale has never been better.

October 14, 1968: Robert A. Heinlein to Lurton Blassingame

After a delay of ca. 5,000 years I have formulated a basic natural law and named it, not for myself, but for the man who first noticed it: Cheops' Law—No building is ever finished on schedule. The guest house has been90% finished for the past month. It is now 91 % finished. I am working hard every day at my desk. Deus volent, I will yet get some fiction written.

Virginia Heinlein landscaping at Bonny Doon, late sixties.

CHAPTER VIII FAN MAIL AND OTHER TIME WASTERS

March 13, 1947: Robert A. Heinlein to *Saturday Evening Post*

"Green Hills of Earth" has brought me in such a flood of mail that it has almost ruined me as a writer—I don't have time to write. None of it appears to be from crackpots; about half of it comes from technical men. All of it shows that the United States is still made up of believers and hopers, for they echo the brave words I heard last summer, while standing in the shadow of a V-2 rocket: "—anything we want to do if we want to do it badly enough."

March 17, 1961: Robert A. Heinlein to Lurton Blassingame

. . . The rest of my time has been taken up playing scrabble (Ginny wins about 60-40: she has a better vocabulary than I have) and the endless load of correspondence. I've got about a dozen letters on hand from high school and college kids, asking me to help them on term papers—in recent years teachers all over the country have been giving kids assignments which result in me (and, I'm sure, many other writers) receiving letters accompanied by long lists of questions . . . which they want answered last Wednesday . . . and each letter, properly answered, takes a couple of hours of time. Hell, one college boy even phoned me from West Virginia, wanted to read me the questions over the phone and have me answer them airmail special—otherwise he was going to flunk his English course. This was while I was working sixteen hours a day to cut that ms. for Putnam's, so I told him to go right ahead and flunk his course because I was not going to stop work against a deadline to meet a commitment I had not assumed.

Robert A. Heinlein with his shelf of his own fiction and awards at Bonny Doon.

March 9, 1963: Robert A. Heinlein to Lurton Blassingame

.. . I am clearing my desk of mail (pounds of fan mail and I'm tempted to burn it!—they all want quick answers, and only one in fifty encloses a stamped and addressed reply envelope)—and when I have that out of the way I will cut this new book, *Grand Slam [Farnham's Freehold]* or whatever we call it, and try to be free about April Fool's Day.

February 4, 1969: Robert A. Heinlein to Lurton Blassingame

(Speaking of the time burned up by overhead work such as that—poor Ginny! Fan mail has gotten utterly out of hand, and about a month ago, in a frantic attempt to get back to writing ms., I dumped it all on her. This morning in came about the 500th letter from still another young man who had read *Stranger* and wanted to discuss his soul with me. He had been "meditating" and taking courses in "sensativity" (sic). So I passed it over to Ginny, my surrogate chela in the guru business. She read it, looked tired, and said wistfully, "You know, I wish I had all the time to meditate that these kids seem to have.")

June 4, 1969: Robert A. Heinlein to Lurton Blassingame

What would be your opinion if I simply stopped answering mail from strangers?

I ask because the fan mail situation has gotten out of hand. In the past five years the volume has tripled, or more. Unless I keep it answered each day, the accumulation gets out of hand and it takes me forever to catch up. Yet I cannot answer it daily—even if I were never to write another story, there are still interruptions: trips out of town, houseguests, illnesses, *etc.*

This may seem trivial; it is not—unsolicited letters from strangers, fan mail plus endless requests for me to go here, speak there, donate mss., advise a beginning writer, these things add up to the major reason why I have not been able to turn out any pay copy in the period since we finished building. Secretarial help does not seem to be the answer. I can't use a full-time secretary and I have never been able to find a satisfactory moonlighter—tried again just this past month and thought I had one, an ex-Navy yeoman. Result: It cost two dollars per letter in wages with the answers to those letters limited to postcards in most cases and never longer than one sheet of the small-size notepaper, plus postage and materials—and *did not save me one minute of time.* In fact, it took more of my time than it would had I simply answered them myself.

Form letters won't serve; there is simply too much variety in the incoming mail—I must either draft or dictate each answer. Either Ginny or I must write the answers. Ginny has offered to do all of it (and frequently has coped with a logjam). But I don't want Ginny to do it as it is not fair to her to tie her to a typewriter when she wants and needs to spend every possible minute on landscaping this place (and I want her to landscape—no point in having a lovely place if it is allowed to look moth-eaten).Besides, she cooks, cleans, does all the shopping, and does the not-inconsiderable record keeping and tax work and bill paying and money handling.

So it is either do it myself—or quit answering mail from strangers.

I have been thinking about the following expedient: A form printed on a U.S. postal card reading something like this—"Thank you for your letter, which Mr. Heinlein has read and appreciated. We have no secretary and the volume of mail makes it impossible for me to answer each letter as it deserves. If your letter requires an answer other than this acknowledgment, please send a stamped and self-addressed envelope and refer to file number . . . In the meantime your letter will be held for thirty days in the pending file.

"We regret having to use this expedient, but the alternative is for Mr. Heinlein to give up writing stories in favor of answering letters.

"Sincerely,
"Virginia Heinlein
"(Mrs. Robert A. Heinlein)."

The above, with the surplus words sweated out of it and printed in smaller type, would go on a postcard—and each letter could be acknowledged each day simply by cutting the address off the letter and scotch-taping it to a card. Plus using one of those automatic serial-number stampers.

But it strikes me as an almost certain way to lose friends and antagonize people. Despite the fact that well over half the letters contain the phrase "—while I know you are a very busy man—" the truth is that each writer-reader is so important in his own eyes that he feels sure that *his* letter is so different, so interesting, so important, that I will happily stop whatever I am doing and answer his letter in full. When he gets one of these printed forms, his reaction will be: "Why, that snotty son of a bitch!"

So what do you think I should do? Quit answering at all? Use this printed acknowledgment? Keep on trying to answer them all? Or some other course I haven't thought of?

June 13, 1969: Robert A. Heinlein to Lurton Blassingame

Thank you for your long and thoughtful comments about fan mail. I am glad to have your confirmation that the printed postcard method is a bad idea; I will not use it. But I am much afraid that there is no solution to the problem short of not answering it at all.

In the first place I am not "too conscientious" about it as I do *not* spend a couple of pages in answering silly questions; Ginny and I have long since cut it to the bone—the normal answer is done on a postcard. If an enclosure is required (such as a list of my books, the commonest enclosure request), we use the smallest note paper. True, I used to write careful answers to intelligent letters—but we gave that up over five years back; we had to.

Let's assume I could get a college student to answer letters satisfactorily at a dollar a letter (I can't, but let's stipulate it for the moment). That would still cost me a couple of thousand dollars a year —which I think is too much to pay for the questionable privilege of unsolicited mail from strangers. Most of my fan mail does not go through your office; the bulk of it is forwarded from publishers directly or has been addressed to Colorado Springs and forwarded from there (as every public library in the country has that C.S. address). Plus quite a chunk that is addressed to Santa Cruz. It adds up—it usually takes about a half hour each day just to *read* the fan mail. I can answer it usually, faster than I can read it, if a postcard will suffice. But Ginny is the *only* other person who can answer it quickly, as she is the only one sophisticated enough in what to answer and what to ignore to be able to do it.

But I do have to read it. Several times, when Ginny and I were especially busy, we have let what appeared to be fan mail pile up unread—and this is a mistake as again and again there has turned out to be one or more actual business letters buried in the fan mail simply because the external appearance (one or two forwardings, with nothing in the return address to tip me) led me to assume that it was fan mail.

As near as I can find out from inquiries made to other colleagues, I get far more mail than any of my colleagues—for none of the others seems to find fan mail any problem. (I recall a plaint published by James Blish asking readers to *pleas e*write to him—he needed feedback!)

This morning at breakfast we were reading the mail, which included your nice letter—and Ginny sez to me: "Send this one back to L. and let him *see* how difficult the stuff is to answer." Well, I'm not sending it back but it was from a man and wife in New York who wanted to come out here on his vacation to talk with me. I must turn it down as man who travels a long distance to talk is affronted (reasonably? unreasonably?—either way, his feelings are hurt) if asked to leave in twenty minutes. What he asked for was an "afternoon or evening"—and what he will expect is a full day and late that night. I know, it has happened too many times. For this sort of letter is not at all uncommon; I got one from two students at Oxford University, England, earlier this spring, who wanted to come here this summer and stay an indefinite time; I got one from six students at Temple University who wanted to drive here on their Christmas vacation, camp on the beach, and see me every day. And we told you about the young man from Arizona who drove first to C.S., then here just last week. . . . sweettalked his way past Ginny, then stayed until I chucked him out four hours later. Plus many others. So now we turn down *all* requests to come see us ... but such turndowns must be gentle.

. . . Surely, I could load all the answering onto Ginny; she would hold still for it. But as long as we aren't missing meals I see no reason why she should give up what she wants to do for this purpose—she's carrying her full load anyhow . . .

November 20, 1970: Virginia Heinlein to Lurton Blassingame

Yes, sir. We will be careful with graduate students. We answer all letters except those which go into the "screwball" file, the ones from people who are more or less obviously crazy.

EDITOR's NOTE: We went over to the use of form letters, a checkoff list. There were several different form letters. But I found myself adding handwritten P. S. 's to make them more personal, which consumed even more time. Arthur Clarke was shocked when we told him we were using form letters, but not too much later, he was using them, too.

EDITOR's NOTE: Lurton saw little of the fan mail, but occasionally a letter arrived addressed to him. In this case, he saw some merit, more than usual, in a letter from a graduate student in English. So he counseled caution in dealing with those.

There is no copy extant of the checkoff letters, but when letters were answered on computers, here is how they ran:

An ever-increasing flood of mail has forced Mr. Heinlein to choose between writing letters and writing fiction. I have taken over for him, but he reads each letter sent to him and checks the answer.

Four or five requests come in each week *for help in class assignments, term papers, theses, or dissertations .We can't cope with so many and have quit trying.*

Sincerely,
Virginia Heinlein
[Mrs. Robert A. Heinlein]

Even since Robert's death, fan mail still comes in asking me to answer questions about his work.

November 3, 1951: Robert A. Heinlein to Lurton Blassingame

.. . In addition to the above, I've let myself be roped into going to Denver to speak to the Colorado Authors' League. I find myself in a running fight to keep my time from being nibbled away by such secondary activities. I avoid such things as much as possible, but too often I get backed into a corner.

January 27, 1952: Robert A. Heinlein to Lurton Blassingame

I have been asked to be a guest speaker on Edward R.Murrow's CBS program, "This I Believe." I'm flattered but am thinking of turning it down; I don't relish getting on a national hookup and doing an emotional striptease. Furthermore, such things take me away from my regular work by distracting my mind, sometimes for days, from story. No mention was made of a fee and I think it's a sustaining program with the guest speakers appearing just for glory. I mention this because you may think the "glory" important enough that I should do it anyhow. I won't give them an answer until I hear from you.

August 21, 1952: Robert A. Heinlein to Lurton Blassingame

. . . This entire year of '52 I have found frustrating. Today I tried to figure out exactly where the time had gone, since I have no copy to show for it. I can account for every day and don't see how, in most cases, I could have done anything about it, but that fact writes no stories. Believe me, Lurton, I have not loafed this year, but my time has been eaten away. . . operation, convalescence . . . cutting *Rolling Stones,* skating nationals, mechanics in the house three times wasting a month and a half, two unpaid writing jobs, two unpaid radio appearances, some unpaid speaking engagements, Arthur C. Clarke—one week, the George O. Smiths—two weeks, other houseguests totaling perhaps a week, shopping for a new automobile . . . death of a close friend—one week, two weddings where I was involved and could not refuse my time without being a heel, innumerable visits from readers who were polite enough to write and ask to see me, a novel started and aborted, same for a short, the damned telephone ringing and ringing and ringing and myself the only person in the house . . . and finally a trip to Yellowstone and the Utah parks. That last I could have skipped but Ginny deserved a rest and I needed one, even if I hadn't been accomplishing anything. All of the above adds up to about time enough to answer mail and read proofs. Some of these things you may feel I could have avoided—well, close up to them, they could *not* have been avoided. The telephone situation we have finally licked by putting a bell in the garage where I can't hear it and a cutoff switch in the house, thereby evading the company's rules.

Most of my troubles seem to arise from the difficulty I have in refusing to give my time to other people. Should I refuse to entertain the chairman of the British Interplanetary Society? Can I refuse to see a classmate who shows up in town with an engineer from my hometown in tow? A physicist from Johns Hopkins who is a fan of mine shows up and wants to meet me—can I refuse? Same for an air force intelligence officer who writes politely? Or the head of the Flying Saucer project? Today I was invited to address the southwest division of the Rocket Society and attend a night firing of a V-2 rocket—that one I turned down as it involved flying to White Sands—but it was a highly desirable date and one that I would have kept had I had the time. I don't know the answer but I am beginning to see why so many writers hire hotel rooms—I am entirely too well known for comfort. Anyhow, I am about to try another story.

September 4, 1952: Robert A. Heinlein to Lurton Blassingame

Now, about writing time: since the war it has been one damn thing after another, poor health, domestic trouble, housebuilding, *et al.* I hope that the future will be quieter. If not, I will simply do the best I can under the circumstances. Getting an office away from the house is not a solution I want at "all—I've just finished a house with an office built into it. One minor new circumstance should be a help—we finally have a cutoff switch for the telephone, after long wrangling with the phone company. I wrote to you as extensively as I did simply to let you know that my lack of output this year has not been through laziness but through complications. One problem I have not yet found a satisfactory solution to is the demand on my time resulting from becoming better known. I answer all fan mail and it comes in stacks. That is almost necessary, isn't it? I limit the answers to postcards but it takes time. There are frequent requests for me to speak in public—one only last night. I have adopted a policy of refusing such invitations if possible—but what do I do when the Colorado *Librarians'* Association asks me? . . . Perhaps the greatest time waster is the person who reads my stuff, is coming to Colorado Springs, and wants to call on me—and an amazing number of them manage to find their way to Colorado Springs, remote as this place is. If they simply walk in on me I won't see them. . . . But if they write or telephone and are courteous, I find it hard to give them a cold brushoff. I see no good answer to this problem, but will have to handle it by expediency as I go along.

. . . This is probably the very last of the V-2s and it will be one of the very few unclassified firings for a longtime. There is nothing like watching one of the big ones climb for outer space—it will make a believer out of you, I warrant. I do not regard a trip to White Sands as lost time for me; it comes under the same head as research. Since I write about rockets, I need to know what they sound like, talk to rocket men. Besides that, I will have an opportunity to meet Clyde Tombaugh, the man who discovered the planet Pluto and, perhaps, to see the canals of Mars through his telescope. . . . This is almost a once-in-a-lifetime thing, as perfect seeing, the right telescope, and the right technique are a rare combination.

January 6, 1953: Lurton Blassingame to Robert A. Heinlein

The script for the "This I Believe" program just checked in. It is certainly splendid, the best I have come in contact with. I have been especially interested in this program because one of my boys [clients], Ed Morgan, has been associated with it since the beginning. I do think this material of yours was excellent, and I am very proud of you.

THIS I BELIEVE

I am not going to talk about religious beliefs but about matters so obvious that it has gone out of style to mention them. I believe in my neighbors. I know their faults, and I know that their virtues far outweigh their faults.

Take Father Michael down our road a piece. I'm not of his creed, but I know that goodness and charity and lovingkindness shine in his daily actions. I believe in Father Mike. If I'm in trouble, I'll go to him.

My nextdoor neighbor is a veterinary doctor. Doc will get out of bed after a hard day to help a stray cat. No fee—no prospect of a fee—I believe in Doc.

I believe in my townspeople. You can knock on any door in our town saying, "I'm hungry," and you will be fed. Our town is no exception. I've found the same ready charity everywhere. But for the one who says, "To heck with you—I got mine," there are a hundred, a thousand who will say, "Sure, pal, sit down."

I know that despite all warnings against hitchhikers I can step to the highway, thumb for a ride, and in a few minutes a car or a truck will stop and someone will say, "Climb in, Mac—how far you going?"

I believe in my fellow citizens. Our headlines are splashed with crime, yet for every criminal there are 10,000 honest, decent, kindly men. If it were not so, no child would live to grow up. Business could not goon from day to day. Decency is not news. It is buried in the obituaries, but it is a force stronger than crime. I believe in the patient gallantry of nurses and the tedious sacrifices of teachers. I believe in the unseen and unending fight against desperate odds that goes on quietly in almost every home in the land.

I believe in the honest craft of workmen. Take a look around you. There never were enough bosses to checkup on all that work. From Independence Hall to the Grand Coulee Dam, these things were built level and square by craftsmen who were honest in their bones.

I believe that almost all politicians are honest . . . there are hundreds of politicians, low paid or not paid at all, doing their level best without thanks or glory to make our system work. If this were not true we would never have gotten past the thirteen colonies.

I believe in Rodger Young. You and I are free today because of endless unnamed heroes from Valley Forgeto the Yalu River. I believe in—I am proud to belong to—the United States. Despite shortcomings from lynchings to bad faith in high places, our nation has had the most decent and kindly internal practices and foreign policies to be found anywhere in history.

And finally, I believe in my whole race. Yellow, white, black, red, brown. In the honesty, courage, intelligence, durability, and *goodness* of the overwhelming majority of my brothers and sisters everywhere on this planet. I am proud to be a human being. I believe that we have come this far by the skin of our teeth. That we *always* make it just by the skin of our teeth, but that we will always make it. Survive. Endure. I believe that this hairless embryo with the aching, oversize brain case and the opposable thumb, this animal barely up from the apes, will *endure.* Will *endure* longer than his home planet—will spread out to the stars and beyond, carrying with him his honesty and insatiable curiosity, his unlimited courage and his noble essential decency.

This I believe with all my heart.

June 6, 1962: Robert A. Heinlein to Lurton Blassingame

No other news save that the Silly Season has opened and we have many visitors; this will continue until fall. One of my plebes showed up this week—an admiral now and chief of research, a job I would like to have had (and might have achieved) if I hadn't gotten TB a long time ago. However, all in all, I like being a writer and don't really miss not being an admiral. (Dan Gallery managed to be both, but he is exceptional!)

August 10, 1963: Robert A. Heinlein to Lurton Blassingame

We have been badly slowed down, too, by visitors, a steady flood of them all summer long, friends, relatives, and readers, plus some of the organized science fiction fans—and none of them invited, not even the relatives nor any of the friends. . . . This place being a resort, people simply pour through here in the summer and if I shut off the phone, they ring the doorbell. I don't ever intend to try to write a story in Colorado Springs again between June 1st and September 1st; it is too much like trying to write directly under a busy three-holer. Even if my relatives had stayed home (and, damn it, they all traveled this year), friends, acquaintances, and strangers were enough to keep us in a hooraw. Had I not been interrupted so many, many times by visitors, the work I was doing would have been farther along and the flood damage would not have been nearly so severe.

May 6, 1964: Robert A. Heinlein to Lurton Blassingame

The letter you received from Kenneth Green (and so kindly answered) is much more typical of fan mail-pleasant but with the same old phrases over and over again, and I get as tired of answering them as an old whore gets of climbing those stairs. I'll drop young Green a card in this mail, however; I always answer them, all but the crackpot ones.

But I have instituted a New Public Relations Policy-one which makes me almost as hard-to-get as the mysterious Mr. B. Traven. Some years ago you sent to me a clipping of Art Buchwald's column with a long quotation from Thornton Wilder in which Wilder declared such a policy, one in which he resolved not to let strangers waste his time, not in *any* fashion. I have kept that clipping up over my typewriter ever since you sent it to me—but I have not emulated it very well.

But I am pushing sixty now myself and it gets harder and harder each year to turn out a decent amount of copy—largely because total strangers want such large chunks of my time. I am darn well going to quit it! In fact, I *have* quit it. The only concession I am making is that I will continue to answer politely worded fan mail-but only by postcards . . . and usually picture postcards which have no return address and room only for a sentence or two. Even that response costs me a dime for materials and postage, plus (much more important) about fifty cents' worth of my working, professional time that should be put on story-writing.

Someday I may be so browned off and bored with it that I will answer only such letters as are accompanied by stamped and self-addressed envelopes (about one in twenty). I was taught in school *always* to enclose such in writing to a stranger; my present mail shows that most teachers do not teach this courtesy today, as a lot of my mail starts out: "Dear Mr. Heinlein, Our English class is writing to their favorite author—" but a reply envelope rarely is enclosed, although the letter usually demands a reply and asks endless questions —often with a deadline stated.

Mr. Wilder says, in that clipping you sent me: "I hereby serve notice on the school children of America. . . that I am going to dump all their letters—" I'm not going to go quite that far just yet, Lurton— but I am now ignoring all requests for pictures and for anything which requires me to stir out of my chair to answer—or which requires me to use an envelope rather than a postcard when said envelope has not been supplied by the petitioner.

No doubt this will lose me a certain amount of goodwill. But it will greatly increase my working time—on pay copy—and the problem had grown way out of hand. To supplement this greatly reduced program on fan mail I am resolved not to do *anything* I don't want to do. No more public speeches, not even for librarians. No more interviews given to school kids—other than by telephone. No more "Library Week" appearances. No more breaking off my work (whether writing or mixing cement) to visit with strangers who "just happened to be passing through town and have always wanted to meet" me— unless it suits *me* and they manage to make themselves sound interesting enough to warrant the time. No more messing around with books I don't want to read sent tome, unsolicited, in the mails—and this includes books sent to me by Putnam and its associated companies, as the promotion department seems to feel that any Putnam published writer should be willing at any time to act as an unpaid reviewer and source of trained-seal favorable testimonials. (They put out a lot of good books, but they never send me those books; they send me little stinkers that should never have been published.)

No more acknowledgments of fan magazines sent tome—it simply results in more of them and requests for free copy.

In short, no more of *anything* unless it durn well suits me and adds to my own pleasure in life. More and more, over the years, strangers have been nibbling away at my time. It has reached the point where, if I would let them, *all* of my working time would be wasted on the demands of strangers. So I am lowering the boom on all of it—and if this makes me a rude son of a bitch, so be it. My present life expectancy is seventeen years; I'm damned if I will spend it answering silly questions about "Where do you get your ideas?" and "Why did you take up the writing of science fiction?" several thousand or more times. I hereby declare that an author has *no* responsibility of any sort to the public . . . other than the responsibility to write stories as well as he knows how.

If I can stick to this, I should get in quite a lot more writing, and quite a lot more healthy work with pick and shovel and trowel—and a judicious mixture of these two may enable me to stretch that life expectancy quite a bit. But I 'm not going to let those remaining years be nibbled away and wasted by the trivia that some thousands of faceless strangers seem to feel is their right to demand from anyone in a semipublic occupation.

July 10, 1967: Robert A. Heinlein to Lurton Blassingame

Herewith is a curious letter from an instructor, ———, at the U. of Oregon. I was about to tell him that I could not stop him, but not to let me see the result—but I decided that I had better let you see this and get your advice and/or veto. If Mr. ——— does this adaptation "just for fun," as he proposes, I suspect that he will then fall in love with his own efforts and get very itchy to produce it. Which could be embarrassing. Lurton, even though "Green Hills" is a short, I think it has possibilities—someday—as a musical motion picture. So I am hesitant to authorize anything which might cloud the MP or stage rights. What shall I tell him? Or do you prefer to write to him? (I'm not urging you to—not trying to shove it on you. But I do want your advice.)

October 12, 1967: Margo Fischer (secretary to) Lurton Blassingame to Robert A. Heinlein

A drunk began calling at 3:15 insisting on Heinlein's phone number . . . After telling him at least seven times that he would have to write a letter which would be forwarded airmail, he became sarcastic and went on and on. After 15 minutes I told him I was hanging up, and I did. He was incoherent and it was impossible to tell him he had to write a letter. He said he would wire. He wanted to know about "—We Also Walk Dogs." I told him it was in an anthology published by World. He'll probably call you and be abusive about me. Over and over he kept saying, "Mam, Mam"—long silence, then he'd say, "It's a hard world." Silence. Then, "We should all be courteous to one another." *Etc.*

February 28, 1968: Margo Fischer to Robert A. Heinlein

Here's a little ego boo for you.

The telephone just rang. A voice said, "I was told I could get some information from you. About one of your clients. About Robert Heinlein." Cagey Margo. "Who is this?" "I'm nobody—that is, nobody in the business," he said. "Just a Heinlein fan." Me again—"Well, what did you want to know?" .

He wanted to know when Heinlein was going to have another book. "He hasn't written anything for some time," was the complaint. "I have two favorite authors. Michener and Heinlein. Michener just came out with one and I was hoping I could make it a double red-letter day."

Then he added, "Heinlein is the one bright spot in this whole fantasy-science-fiction world." A pause. *"Moon* is the last one he's written, right?" Then I said, "Have you read *Stranger*[1]*?"* Answer: "Four times." Finally, ' 'Just one more thing—how long does it usually take him to write a book?"

HOW CAN YOU DEPRIVE YOUR FANS A MINUTE LONGER, BOB?

CHAPTER IX MISCELLANY

STUDY

April 10, 1961: Robert A. Heinlein to Lurton Blassingame

No, we are not contemplating any immediate ventures into Arabic-speaking lands; all of Africa and the Middle East are too unstable at the present time to be attractive—besides, we've been there a couple of times. Tackling Arabic is simply to keep my mind loosened up with something new. It could have been any language I don't know, but I picked it because it is one of the five "critical" languages as listed by the State Department—i.e., an important language which is known by too few Americans; they have plenty of people who know French, German, Spanish, and such. One of the five is Russian and I didn't want to duplicate what Ginny has already done (besides, Russian is *very* hard; Arabic is relatively simple, save for the odd alphabet) and two of the critical languages are tonal languages, and my ear for tones is not very good; I don't think I could learn them as an adult. But I must admit that I have made no real progress as yet; I've nothing to force me to a schedule and there are too many other things that demand attention.

But I would like to, in time, be able to be of some use to the country by knowing a language which is needed. But if it is never of any use that way, I find the study of strange languages rewarding per se; I always learn a lot about the people and the culture when I tackle one.

But I have a dozen subjects that I want to study. I would like to go back to school and take a formal course in electronics; it has changed so much since I studied it more than thirty years ago—and I may, some day soon. About twenty years ago I dropped out of a figure-drawing class because I needed to buckle down and pay off a mortgage—and that turned me into a writer and I haven't been back. But I want to go back, it is something I love doing—and I would like to add a wing to this house and get into sculpture again, too, but simply signing up for a figure sketching class is more likely. I am not a still-life artist. There are only five things really worth drawing; four of them are pretty girls and the fifth is cats.

PREDICTIONS

March 13, 1947: Robert A. Heinlein to *Saturday Evening Post*

.. . I could list many more variables—never mind. Swami Heinlein will now gaze into the crystal ball. First unmanned rocket to the Moon in five years. First manned rocket in ten years. Permanent base there in fifteen years. After that, anything! Several decades of exploring the solar system with everyone falling all over each other to do it first and stake out claims.

However, we may wake up some morning and find that the Russians have quietly beaten us to it, and that the Lunar S.S.R.—eight scientists and technicians, six men, two women—has petitioned the Kremlin for admission of the Moon to the USSR. That's another unknown variable.

Robert Heinlein with Teense in the dining room at Bonny Doon.

And keep your eyes on the British—the British Interplanetary Society is determined to get there first.

The worst thing about this business of predicting technical advance is that there is an almost insuperable tendency to be too conservative. In almost every case, correct prophecy of the Jules Verne type has failed in the one respect of putting the predicted advance too far in the future. Based on past record, if the figures I gave above are wrong, they are almost certainly wrong in being too timid. Space flight may come even sooner. I *know* that, yet I have trouble believing it.

November 7, 1949: Robert A. Heinlein to Lurton Blassingame

. . . My real claim to being a student of the future, if I have a claim, lies in noting things going on now and then in examining speculatively what those trends could mean—particularly with respect to atomics, space travel, geriatrics, genetics, propaganda techniques, and food supply. To evaluate my success in such it would be necessary for a person to have some familiarity with my published writings. But I don't intend to dig through my writings and say, *"Look,* here in *Beyond This Horizon* I predicted the robot-secretary recording telephone and now it has been patented!" I *did*—and it *has*—but that doesn't mean anything. The short-term prediction of gimmicks isn't prophecy; it is merely a parlor trick.

PROPHECY

September 24, 1949: Robert A. Heinlein to Lurton Blassingame

EDITOR'S NOTE: With the motion picture about to start shooting, and with Robert at work on the next juvenile for Scribner's, a request came in from Cosmopolitan *for an article about prediction of what the U. S. would belike in the year 2000. In this letter Robert was asking for information about what sort of article the editors would like—he made some suggestions about it.*

When the article was finished, Cosmopolitan *turned it down. It sold to* Galaxy *and was published as "Pandora's Box." The article was periodically updated, and the most recent version can be found in* Expanded Universe.

. . . Under "treatment" come a couple of other questions: This article is to be prophetic. Fine—that's my business; I make my living as a professional prophet of what science will bring to us. But such an article—nonfiction—must consider and to some extent report the *present* status in various fields before the author can go out into the wild blue yonder with predictions. Therefore, I inquire how much reporting do they *[Cosmopolitan]* want of the sort which one finds in *Scientific American, Science News Letter, Nature,* etc., and how much speculation or prediction do they want? The two things are closely related, but are not the same thing. Also, how far in the future shall I go? (For example, everybody knows that the cancer men, radiation men, and biochemists stand an excellent chance of perfecting selective radiation treatment of certain types of cancer in the very near future by finding ways to bond short half-life isotopes to some compound which a particular type of cancer will pick up selectively.)

Or should I go well into the future and consider the necessary statistical effect of food supply, geriatrics, life-span research, public health, etc., in forcing the development of a brand-new art, planetary engineering, as it affects the growth of colonies on the planet Mars?

The synthesizing prophet has another advantage over the specialist; he knows, from experience and by examining the efforts of other prophets *of his type* in the past that his ' 'wildest" predictions are more likely to come true than the ones in which he lost his nerve and was cautious. This statement is hard to believe but can be checked by comparing past predictions with present facts. (Show me the man who honestly believed in the atom bomb twenty years ago—but H. G. Wells predicted it in1911.) (The "wild fantasies" of Jules Verne turned out to be much too conservative.)

How can one spot a competent synthesizing prophet? Only by his batting average. If *Cosmopolitan* thinks my record of accomplished predictions is good enough to warrant it, then let's by all means go all out and I'll make some serious predictions that will make their hair stand on end. If they want to play safe, I'll do an Inquiring Reporter job and we'll limit it to what the specialists are willing to say. But I can tell them ahead of time that such an article will be more respectable today and quite unrespected ten years from now—for that is no way to whip up successful prophecy.

.. . I would proceed as follows:

First, I would cut down the field by limiting myself to (a) subjects in which the changes would matter to the readers personally and not too remotely. A new principle in electronics I would ignore unless I saw an important tie into the lives of ordinary people, (b) subjects which are dramatic and entertaining either in themselves or in their effects. Space travel is such a subject, both ways. So is life-span research. On the other hand, a cure for hoof-and-mouth disease, while urgently needed, is much harder to dramatize, (c) subjects which can be explained. The connection between parapsychology and nuclear engineering is dramatic potentially but impossible to explain convincingly.

Since the article is for popular consumption I would wish to hook it, if possible, with some startling piece of quoted dialog, use illustrative anecdote if possible, and end it with some dramatic prediction.

December 20, 1955: Robert A. Heinlein to Lurton Blassingame

Please tell Howard Browne [editor of *Amazing Stories* and *Fantastic]* that I accept his incredible offer and that ms. will arrive by 10 January—but that I expect a copy of that celebration issue, inscribed by him to me, or I shall go into the corner and stick pins in wax images.

I can't imagine what I could possibly say that would be worth $100 for two pages; that isn't even long enough for a horoscope. But if they want to throw away their money in my direction I will go along with the gag and do my damndest to entertain the cash customers. Fortunately, I shall be dead before my "prophecies" can be checked on.

January 5, 1956: Robert A. Heinlein to Lurton Blassingame

Here is the ms. for Howard Browne. I discovered that 500 words were too cramping for what I wanted to say, so I called him yesterday (I assumed that you were at Ilikite, it being Wednesday) and got his authorization to let it run to its present length. No increase in the fee, of course, as the added length was entirely for my convenience.

PUBLISHERS

July 5, 1963: Robert A. Heinlein to Lurton Blassingame

As to Scribner's and Doubleday, I intend to let each of them get away with it and not argue further. But my opinion has not changed. Each of them is deviating from the contract as written and in each case to my financial loss. They would not let *me* deviate from contract if it cost *them* sizable amounts of money. Doubleday talks as if the 50-50 split on pocketbook were a law of nature. Nuts and nonsense; it is merely an extortion that writers usually have to put up with. The entire history of the Authors' Guild and of divisible copyright is one of slowly getting rid of these grabs which publishers defend under the theory of "usual practice." If the "usual contract" did not contain these grabs, trade book publishers would have to work hard at selling the trade edition. Doubleday has never once done a decent job for me of selling the trade edition (take a look at your records)—no, not once. Instead they have signed a "sweetheart" contract with one of their own subsidiaries, printed a very cheap edition which they called a trade edition but which was in fact a book club edition—and the nominal royalty in the contract meant nothing; the extremely low royalty in the "sweetheart" contract was the one that counted. Then they had half of the NAL edition as well—except this one book and now they have grabbed that, too, without my consent. No, I do not like Doubleday. Okay, they get this few hundred dollars—but I will never sign another contract with them.

Scribner's is a different case; they have a real sales organization for selling the trade edition, they do sell it and make money on it, for themselves and for me—and I am sorry on that account that they ever dropped me. .. . But, nevertheless, their contract does not permit them to cut my royalty just because they choose to put out, under their own imprint, a softcover edition. Nor does it cut any ice with me that the percentage royalty is higher than it would be if they farmed it out to, say, NAL—because I am convinced that if they did farm it out to NAL, the dollar return would be much higher, even though the percentage was lower. I may be wrong and time will tell—but, so far, their venture into softcovers, at three times the price of an NAL softcover, seems to be going over like a lead balloon.

As may be—each of these publishers is rewriting a contract to suit himself and against my explicit objections . . . and I shall argue no further with them; life is too short. They can keep their grabs and be damned.

MAGAZINES

March 9, 1963: Robert A. Heinlein to Lurton Blassingame

I don't think *Fantasy and Science Fiction* is riding the edge; I think they are just stingy. They claim 56,000 paid circulation. In view of their rates and their cheap production, plus some revenue from France and Germany, they should be showing a clear profit each month. Back in December ——— told me that the publisher would happily pay me in advance. As it is, they got a bargain-copy for $1,500 that they normally pay $1,800 for, to any writer, known name or not. Still, it is pleasanter than offering copy to John Campbell, having it bounced (he bounced both of my last two Hugo Award winners)—and then have to wade through ten pages of his arrogant insults, explaining to me why my story is no good.

April 15, 1963: Robert A. Heinlein to Lurton Blassingame

Re *Playboy* article: I have the material well worked out and am prepared to deliver it by 10 May.

But I shall not deliver it on the basis of a phone call. The last time I accepted a job from them based on a firm agreement by phone call there was a lot of nonsense afterwards about whether or not I was being paid for the work, or paid for an option, and I had to do two rewrite jobs.

. . . Just refer him to my letter of 2 April (of which you have a copy): "Just address a letter to me, or preferably to Mr. Blassingame, offering me a firm assignment for so many thousands of words for so many dollars on such and such a subject to be delivered by such and such a date—and with the explicit condition that the manuscript will be paid for whether used or not and that any rewriting lies outside the agreement and must be negotiated at an additional fee."

I meant every word. The assignment must be in writing and the clause about rewriting must be spelled out, and all the terms must be explicit—and a phone call means *nothing!*

Otherwise I will not bother to come in out of my garden. It's nice out there and I'm sick of this machine. I don't need the money; I've already worked too much this year and will have too high a tax—and I am especially aware of it on income tax day.

Apparently ——— thinks I'm a nice accommodating guy. Please explain to him that I am a son of a bitch.

DEFAULT

January 27, 1961: Robert A. Heinlein to Lurton Blassingame

Please tell ——— that I am a kindly old gentleman and that the "A." in the middle of my name stands for ' 'Ebenezer Scrooge" and that I am buying a new freezer with my ill-gotten wealth to make room for him.

CHAPTER X SALES AND REJECTIONS

November 24, 1947: Robert A. Heinlein to Lurton Blassingame

The last couple of rejection letters you have sent me are rather disturbing. Miss Helen Grey of *Town and Country* is mistaken in thinking that my sales to the SEP *[Saturday Evening Post]* have gone to my head. It is simply that an idea as good as "The Green Hills of Earth" doesn't come to me every week. I have been in a slump and am afraid that I am still in it. I continue to work and to work very hard indeed, but a lot of the stuff I turn out doesn't seem too good to me. Stuart Rose's rejection of "Broken Wings" is decidedly a disappointment, for I had believed that "Broken Wings" was up to standard. Still more disappointing is his statement "These space ship stories didn't do too well, according to our readership surveys." I interpret this as meaning that the *Saturday Evening Post* is no longer interested in my interplanetary stories unless they are utterly terrific, superior in every way to a story with a customary contemporary down-to-earth background ... I may turn out quite a number of second-rate stories before I recover completely from the effects of my domestic breakup. For the past several months I have been able to continue writing only by the exercise of grim self-discipline. It occurs to me that you might find it desirable to sell or attempt to sell stories written during this period to secondary markets under a pen name. What do you think? Would it be good business to protect my reputation, such as it is, by keeping my own name off material which in your opinion is not as good as my best? . . . . . . From now on I must devote my time exclusively to preparing the second juvenile novel *[Space Cadet]* for Charles Scribner's Sons. I have been working on this boys' novel off and on for several months. I rather dread sitting down and turning out the first draft on it because I simply am not in the sanguine mood which should obtain in any book intended for the young. I could knockoff half a dozen tragedies right now easier than I could write one cheerful story.

March 4, 1949: Robert A. Heinlein to Lurton Blassingame

This has been a bad twelve months without very much real literary success. I wasted months on two collaborations which did not pay off. I wasted three months on *Red Planet* and it has not paid off. I've done three stories meant for slicks and they have not paid off. Aside from some reprint stuff and a sale to *Boys' Life* it has been a long string of failures.

I think I have analyzed in part what the trouble has been: I've been doing hack work, writing what some one else wanted me to write rather than what I wanted to write. In any case, the next year can't be any worse if I write what I *want* to write and have some fun out of it. It might even be better; acceptances might start coming in instead of rejections. So—I plan to write *my* stories instead of editor's stories. I don't intend to do any more juveniles unless I happen to have a juvenile story that I want to write. I am not going to promise Scribner's, nor anybody else, one book a year. I am not going to work against deadlines. I am not going to slant stories for slick—nor for pulp—I am going to write *my* stories, the very best stories I can, and then let them sell (or not sell) to whatever market fits them. I can't do any worse than I have been doing; I might do better. And I think you will see a lot more copy out of me. I'm a fast producer when I'm happy at it.

January 2, 1950: Robert A. Heinlein to Lurton Blassingame

I want to get home awfully badly and I am worn out, but I need the money for house building.

Thanks for the *SatRev of Lit—I* am now a lit'rary man, entitled to wear a pipe, a spaniel, and baggy tweeds.

EDITOR'S NOTE: Robert did a review o/The Conquest of Space *by Chesley Bonestell and Willy Ley for the* Saturday Review of Literature. *It was titled (by the editors)"A Baedecker of the Solar System, "and ran as the lead article for the issue in which it appeared.*

SALES

December 5, 1958: Robert A. Heinlein to Lurton Blassingame

I mailed the contract for "All You Zombies" to Bob Mills, unchanged. Certainly, I would have preferred *Playboy's* fancy rates, but it took me exactly one day to write it, so what the hell? ... I *hope* that I have written in that story the Farthest South in time paradoxes.

. . . She [a romance writer] writes very well, and rather than have her run out of material, I would be glad to volunteer my services. I'm not as energetic as I was in the Coolidge administration, but I've learned a lot since then and that's what a writer needs: ideas.

FOREIGN SALES

February 19, 1959: Robert A. Heinlein to Lurton Blassingame

.. . Is it really true that my foreign sales have been "fabulous"? You see, I have no experience whatever on which to form an opinion. I know that I take warm, special pride in these translations and we both enjoy the regularity with which the money rolls in. But are my foreign sales numerous in comparison with other writers of comparable domestic success? I just thought I had been damned lucky in being in the hands of an agent who had formed such excellent connections abroad and used them so well. I am sure that part of it is true.

February 26, 1959: Lurton Blassingame to Robert A. Heinlein

There are very few writers who sell in as many countries as you do. I try to line up with the agent in each country who is most respected for results and I check on this through visiting publishers to New York, and through them try to help our representatives in these publishers' countries; but in other countries, as here, the quality of the story is the deciding factor. It's the high quality of your stories that makes them so popular. Fortunately, you are writing about a subject that is of interest everywhere; we'd have great difficulty in selling your stories, even of this quality, if you were writing about baseball and football.

CHECKS

December 2, 1961: Robert A. Heinlein to Lurton Blassingame

It seems certain that Ginny gets more fun out of these checks than I do. She always grabs a letter from you first and you should see her eyes light up when she sees one of those long yellow pieces enclosed. Cash has the same effect on her that Elvis Presley has on teenagers—for the past hour she has been sitting in the tub, talking dreamily about how she is going to spend the money that came in today—a new ballgown, setting some emeralds she just happens to have sitting in the bank vault getting rusty, *etc.* I am sure she regards you as the source of all blessings.

December 5, 1961: Lurton Blassingame to Robert A. Heinlein

The Scribner royalties roll on and on. Here is another nice check to help with your Christmas shopping. And we have received a big batch of marks for you from Germany, and the check for this will go to you before the end of the week.

Boxing Day 1961: Robert A. Heinlein to Lurton Blassingame

. . . and also for a nice check from Germany to make our Christmas green. You will be pleased to hear that Ginny has already spent quite a chunk of it; she bought five dresses and a coat before I was out of bed this morning.

SHORT SHORT

May 9, 1962: Robert A. Heinlein to Lurton Blassingame

Carson Roberts, Inc., the advertising firm which has been preparing these short-short sciencefiction ads for Hofiiman Electronics (which you may have seen in *Fortune, Scientific American,* or elsewhere) have been bothering me for months to do a 1,200word story for them. I have not bothered you with this because it is my usual policy to refer to you *only* such business as is really business—and I had no intention of writing 1,200 words of SF for anybody at any price. Such length is poorly suited to the genre.

But they kept raising the price, from $250 to $500 and then to $750—and I tried to shut them up by outlining in one paragraph how feeble a SF story would have to be to be told in 1,200 words . . . whereupon they accepted the outline and asked me to go ahead. I may possibly do so. If I do, I will submit it through you. Otherwise this is just for your information. It's a silly business at best—sixty-two cents a word is more than it's worth, but 1,200words is a silly length for science fiction.

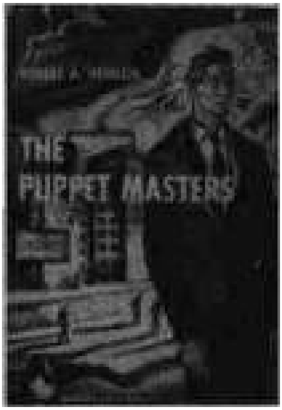
Few writers sold in as many countries as did Robert A. Heinlein. Here are a few examples of foreign editions, including the British edition of *Stranger in a Strange Land.*

CHAPTER XI ADULT NOVELS

THE PUPPET MASTERS



Doubleday published *The Puppet Masters. Galaxy* magazine had changed so much of it in the serialized version that Heinlein barely recognized his own style.

Aliens, in the form of slugs or parasites, suddenly appear on Earth and turn normal humans into zombies willing to do the invaders' will. A government agency sends agents to investigate, but those agents are lost. Two special agents, "Sam" and "Mary," are briefed and sent into the fray.

At different times, both "Sam" and "Mary" become the willing tools of the slugs, and there are horrifying scenes as they engage in war against their homeland. We see them completely committed to their masters. But as the U.S. comes close to being taken over by these aliens, fast action and all-out war eventually save the country.

November 4, 1950: Robert A. Heinlein to Lurton Blassingame

I have not written lately because I have been working seven days a week and far into the night on the new novel—75,000 words down on paper so far and all I need now is a smash ending. That is giving me trouble. I should be working on it at this moment (8:30 P.M., Sat. Eve.) but enough things have accumulated that I must write.

December 2, 1950: Robert A. Heinlein to Lurton Blassingame

Herewith the original and first carbon of *The Puppet Masters.*

As the story stands, it is a bit long (about 90,000 words) for serialization and much too long for a single-shot, but I would much rather cut to an editor's specific requirements than to cut blindly ahead of time. I append hereto something which you may or may not see fit to send along with the copy submitted for serialization: a list of possible breaks. I don't know whether this is good salesmanship or not, but I thought it might help if an editor could see at once that the story was very flexible, serialwise. As you know, I can cut, bridge, write around, etc., to shorten anything they want shortened to any extent they wish ...

I suspect, too, that a magazine editor will want the sex in this toned down; that's easy.

January 5, 1951: Robert A. Heinlein to Lurton Blassingame
Oh yes—Bradbury [Walter Bradbury, science fiction editor for Doubleday] wrote to me about *The Puppet Masters;* I wrote back agreeing to make all suggested cuts and changes, but nevertheless expressing some difference of opinion as to the advisability of the revisions. In my opinion a horror story—which this is—is not improved commercially by watering it down. Edgar Allan Poe wrote a great many things; I own and have read all his works—he is known for about 5% of his published writings, all sheer unadulterated horror, much of it *much* more grisly than mine. But I am going to do exactly what Bradbury says to do; he's paying for it and I need the money.

March 23, 1951: Lurton Blassingame to Robert A. Heinlein
Revision on *Puppet Masters* satisfied Doubleday. Sent word to Gold [H. L. Gold, editor of *Galaxy*].

April 3, 1951: Lurton Blassingame to Robert A. Heinlein
Talked with Gold today. The magazine is undergoing a policy change, and must wait before purchase. Controlled from abroad—France and Italy—will let LB know when there is definite word.

April 21, 1951: Robert A. Heinlein to Lurton Blassingame
You will recall that you advised me that Gold's original demands for revision for serial publication were outlandish in view of what he would pay—about $2,000.

June 3, 1951: Robert A. Heinlein to Lurton Blassingame
Galleys for *The Puppet Masters* have arrived; galleys for *Between Planets* are expected this week; Gold wants synopses for *The Puppet Masters.* I am still on a merry-go-round but will take care of these

items without undue delay. I learn from the grapevine (but not from ———) that "Green Hills" is about to be published.

August 20, 1951: Robert A. Heinlein to Lurton Blassingame

I have been sitting on my hands this past week to keep from writing a stiff letter to Gold. He sent me an advance copy of the September *Galaxy* with the first installment of *The Puppet Masters.* Gold turns out to be a copy messer-upper; there is hardly a paragraph which he has not "improved"—and I am fit to be tied.

Now *Galaxy* is an excellent market and I do not wish to make your task any harder by antagonizing an editor to whom you may be offering more of my copy—but if I were freelancing without an agent, I'd be quite willing to risk losing the market permanently in order to settle the matter. What I would like to say to him is: "Listen, you cheesehead, when we were both freelance writers I had a *much* higher reputation than you had—in fact you never wrote a number-one science fiction story in your life—so who in hell do you think you are to be 'improving' my copy!"

Well, I didn't and I won't—but that is how I feel and it is the literal truth; Gold is turning out a good magazine, but as a writer he was never anything but a run-of-the-mill hack. This whole matter no doubt sounds like a tempest in a teapot, particularly as Gold did not change the story line but merely monkeyed with dialog, rephrased sentences and such—in short, edited the style. Look, Lurton, my plots are never novel, I am not an originator of brand-new and wonderful ideas the way H. G. Wells was; my reputation rests almost solely *on how I tell a story* ... my individual style. It is almost my entire stock in trade.

Without changing the plot in the least, without changing the manuscript in any fashion that could be detected by someone else without side-by-side comparison, Gold has restyled the copy in hundreds of places from my style to his style. It would be very difficult to show how he has damaged the story, but in my opinion he has changed a story-with-a-moth-eaten-plot amusingly told into a story-with-a-moth-eaten-plot poorly told. This is my first serial appearance in a long time; his changes will not make it easier to get top rates for my next such appearance. The cash customers won't know what is wrong, but they will have the feeling of being let down —not quite "first-rate Heinlein."

I'll cite just one example out of hundreds: At one point I have a nurse say, "Eat it, or I'll rub it in your hair." Gold changes this to, "Eat it, or you'll get it through a tube."

See the difference? My phrasing is mildly (very mildly) humorous. It conjures up a picture of a nurse who maintains discipline by cajolery, by the light touch, the joking remark. Gold's phrasing is as flatfooted and unsmiling as an order from a hard-boiled top sergeant.

There are both sorts of nurses, admitted. But the entire characterization of this nurse (Doris Marden) had been consistent as the sort of a person who kidded her patients into cooperation (modeled after a nurse who attended me at Jefferson Medical); with one phrase Gold louses up the characterization and turns her into the top-sergeant type.

In another place I describe the heroine as "lean"; Gold changes it to "slender"—good Lord, heroines have always been "slender"; it's a cliche". I used "lean" on purpose, to give her some reality, make her a touch different.

You see? All little things, but hundreds of them. I can't prove that the story is spoiled. Maybe it isn't, but I know that it is filled with stylisms that never would have come out of my typewriter. You might try the magazine version yourself without checking for the changes, but simply checking to see if it tastes the way it did the first time you read it.

All this is spilt milk except (a) the last installment may not yet be set in type, (b) it may be possible to prevent it from happening in the future. On the first point, the reader's impression of the story depends largely on how he feels when he finishes the story; if Gold can be pushed into returning to the version he bought for the third installment, the louse-up of the first and second installments won't matter too much. Could you talk tough to him, point out that it has been repeatedly adjudicated that mere purchase of the right to publish does not give to him the right to change copy under my byline and that he must print as written, or run the risk of a lawsuit? Or could you kid him out of it, convince him that he should do it to cater to my prima-donna feelings? On point (b)you can either reach an understanding now, or take it up whenever we again submit copy to him, but he must clearly understand and (I think) agree in writing that *all* changes must be made before the sale is completed; once sold the entire ms. is "stet" and must remain so.

Hell's bells, I don't mind the few little changes that most editors make and I don't mind a reasonable amount of revising done by me to editorial order, but this guy has monkeyed with every page.

This is not artistic temperament talking, Lurton—had it been I would simply have blasted at him in person. I am seriously concerned with the business aspects—a strong belief that the property has been damaged commercially and that it will affect the market value of future properties.

I've started fiddling with a new story.

September 24, 1951: Lurton Blassingame to Robert A. Heinlein

Gold tells me that he has written you a letter of apology for his heavy hand on your story, and promises that, though he edits all material which comes his way, from now on yours will be inviolate.

THE DOOR INTO SUMMER

The Door into Summer
ROBERT A. HEINLEIN

Heinlein broke into Doubleday's adult market with *The Door Into Summer* in 1957. Cover art by Mel Hunter.

Dan is an inventor of a line of housekeeping robotlike devices. But his partners steal control of Hired Girl, Inc., from him, then place him in frozen sleep for thirty years into the future. There he learns that Hired Girl has a rival, Aladdin Corp. From the patents of Aladdin's devices, he discovers that the inventor is—himself!

Dan manages to use a discredited time machine to return several months before the time he was shanghaied. He now invents the devices of Aladdin Corp. He gives his shares of Hired Girl to an eleven-year-old girl, Ricky, who has a crush on him, telling her how to meet him when she is grown; then he and his cat, Pete, take frozen sleep for thirty years.

His partner in Aladdin Corp is honest, and Dan is now a rich man. When Ricky is awakened from the long sleep, he meets her. They go off together to be married.

February 2, 1956: Robert A. Heinlein to Lurton Blassingame

I am 104 ms. pp. into a new novel, hopefully intended for the so-called adult trade. It is giving me chronic headaches and chronic insomnia and I wonder why I ever entered the silly business—but if I hold up physically, *The Door into Summer* should be finished in draft this month and finished in smooth around the end of March. Maybe.

We have a foot of snow on the ground, pheasants allover the place, and Pixie hates it. He blames Ginny.

May 31, 1956: Robert A. Heinlein to Lurton Blassingame

Re synopses for *Door into Summer.* I write my own synopses only when the editor twists my arm and demands it—which is usually. If Boucher [the editor of *The Magazine of Fantasy and Science Fiction*] is willing to do them himself, I'll be delighted; he's more literate than I am anyhow.

DOUBLE STAR

DOUBLE STAR

Heinlein had considered selling *Double Star* elsewhere, as he disapproved of Doubleday's Book Club contracts.

Lorenzo Smythe is an actor—a good one, though now down on his luck. When a spaceman named Broadbent offers him a job, he is willing—until he learns it is to go to Mars. But Broadbent forces him by a secret way through Skyport and to the *Go for Broke.* Then he learns that he is to impersonate the great statesman Bonforte—who has been kidnapped and who is due to deliver a major policy speech. Lorenzo is given tapes and films—and begins to "put on Bonforte's head." But when Bonforte is found, he has been severely injured.

Lorenzo reluctantly carries on, meeting the press, entering a Martian "hive," even meeting Prince Willem, and learning more and more of Bonforte's manners and thoughts. Then Bonforte dies!

Broadbent and others finally persuade Lorenzo tocarry on. He does, successfully for the rest of his life.

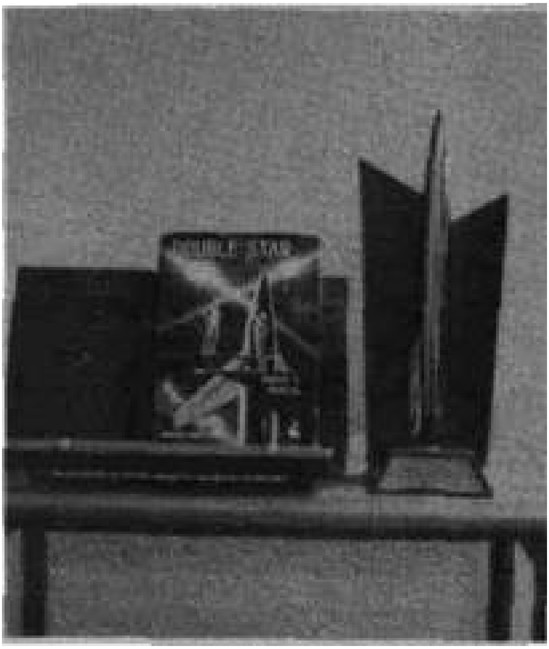
March 23, 1955: Robert A. Heinlein to Lurton Blassingame

I am aware that I should have written to you several days ago, but I trust you will forgive me when I say that I have completed the novel I was working on. Its present title is *Star Role [Double Star],* it runs about 55,000 words, and is intended for an adult audience. (No sexy scenes, however, and no taboo monosyllables—just an occasional damn or hell, and I may even take those out. The book should be suitable for the kids who will read it anyway.)

I held down the length in the belief that serial sale would be easier; I hope that this one will finally crack *Colliers,* the *Post,* or some other adult and not-SF specialized market. I figure that, costs being what they are, a short length will make it more attractive for both trade book and pocket books as well.

I don't know whether you should advise Doubleday or not. I like [Walter] Bradbury but I do not like the screwy "Science Fiction Book Club" aspect of their contract; they sold a lot of copies of my books with them and I got very little out of it—I do not regard two and a half cents per copy as a good royalty on a hardcover edition put close on the heels of the trade book. Since Bradbury turned down the travel book, we are no longer under option to Doubleday; perhaps this would be a good time to look into the Ballantine deal if it is still being offered.

In any case, I have an adult novel available for book and serial.



Double Star went on to win the Hugo Award for Best Novel of 1956 at the World Science Fiction Convention, New York, NY.

April 21, 1955: Lurton Blassingame to Robert A. Heinlein

Congratulations on a good novel. Enjoyed all *of Double Star;* wished it longer. No slow spots.

June 3, 1955: Lurton Blassingame to Robert A. Heinlein

The *Post* thought your novel was excellent and the only reason they did not buy it as a serial was that they do not want to devote that much space to science fiction. Campbell is buying it, to run in February, March, and April issues. Doubleday to bring it out in March.

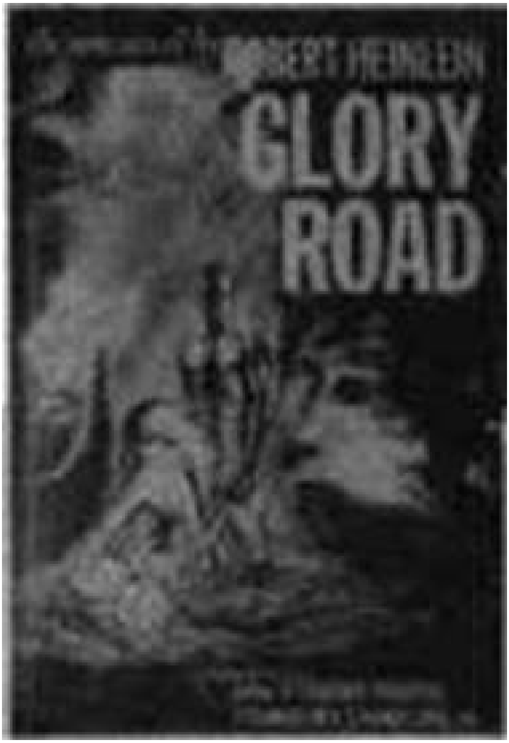
Heinlein had originally looked into a nonScience Fiction market for the serialized *Double Star* but eventually decided to publish in *Astounding* in three issues. Cover art by Kelly Freas.

GLORY ROAD



ROBERT HEINLEIN
GLORY
ROAD

Glory Road was a departure for Heinlein, being more fantasy than science fiction.

Oscar Gordon, a Vietnam veteran, is vacationing by the sea in the South of France when he is approached by a beautiful woman. She needs his help. He agrees, and she gives him a sword and takes him to another world, where many dangers beset them. He has to defeat dragons, an ogre, and other monsters. Between times, they make love.

She tells him she is Ishtar, Queen of Twenty Universes, but she is powerless without the Phoenix Egg, which he must recover. They reach the place where it is and Oscar now faces a series of truly horrible dangers. But he recovers the Egg.

She makes him her Prince and takes him to Center, her world. But he grows bored with all the privileges and protocol. He learns how to return to Earth and leaves.

May 9, 1962: Robert A. Heinlein to Lurton Blassingame

I have not written for some time because I have been writing that new novel, now completed: *Glory Road,* 409 ms. pages, about 105,000 words. I am now revising it for my typist and will cut it a little but not much. You will have it not sooner than two months from now as my typist does my work as "moonlighting," as she has a daytime job. This is an adult market story with enough sex in it to give heart failure to those who complained about *Stranger.* It is fantasy verging on SF.

June 6, 1962: Robert A. Heinlein to Lurton Blassingame

.. . We intend to stay quietly at home all summer and I expect to spend the time hauling rocks and weeding and such. I do not expect to write until fall—after all, two novels in one year by the 1st of May is considerable copy, and I find I am tired and uninspired after finishing *Glory Road.*

August 6, 1962: Lurton Blassingame to Robert A. Heinlein

Glory Road is a departure, even for you. It is more fantasy than science fiction. It is an excellent adventure story, seasoned with sage thoughts, spiced with interesting sex. There were a number of spots where I wanted to stop reading and find an audience to share your ideas with. I do hope this will have a real success. I find it delightful.

September 30, 1962: Robert A. Heinlein to Lurton Blassingame

.. . I am not interested in his offer. Not the amount of the fee—a ms. is worth what you can get for it ... sometimes zero. Nor do I object too much to the labor of cutting. What I do object to is that he wants me simply to chop off the last hundred pages.

If I do this, what is left is merely a sexed up fairy story, with no meaning and no explanations. I do not want this story published in such an amputated form. About thirty pages of that last hundred is indeed rather preachy, rather slow, and (if I were to cut) I would sweat that stretch down as much as possible—i.e., from the hero's arrival on the planet Center until his decision to leave—but I am quite unwilling simply to chop the story off at the point where they capture the Egg of the Phoenix. It leaves the story without meaning.

December 7, 1962: Lurton Blassingame to Robert A. Heinlein
Putnam likes *Glory Road.* There should be a little tightening in it, and "a few not very serious" suggestions for changes. Will mark ms. and send with detailed letter.

FARNHAM'S FREEHOLD

FARNHAM'S FREEHOLD

By 1964 and *Farnham's Freehold,* Heinlein was firmly entrenched with Putnam as his publisher.

Hugh Farnham and his family are caught in the blast of an atom bomb, but are not killed. Instead, they are dumped into the far future, to a world none had envisaged. They are soon taken captive. Here the people who call themselves a master race are black, and they consider all other humans little more than animals, to be made slaves, tortured, or killed at will. Farnham is a slave now.

But eventually he interests the masters enough to gain a very limited freedom. He learns of the existence of a "time machine." With it, he manages to get his group back to a little before the time of the blast.

They take refuge in a cave in an enclave in the hills and prepare. The war comes, the nuclear blasts occur, and then plague strikes. But they survive.

March 9, 1963: Robert A. Heinlein to Lurton Blassingame

The new novel *([Farnham's Freehold]* working title: *Grand Slam)* I did in 25 intense days, 503 pages. Ginny seems to like it better than *Glory Road,* says it moves fast and can't be cut much. However, I intend to cut it a lot and get it to my typist about the end of this month. I haven't read it yet, but enjoyed it as I wrote.

March 21, 1963: Lurton Blassingame to Robert A. Heinlein

I don't know how you manage to produce a novel of 500 pages in 25 days, even a first draft.

July 8, 1963: Lurton Blassingame to Robert A. Heinlein

Good story in *Farnham's Freehold,* with enough adventure for some of the men's magazines.

August 21, 1963: Lurton Blassingame to Robert A. Heinlein

Peter [Israel] said he was writing you about cutting and revision ideas, and you probably have his letter by now.

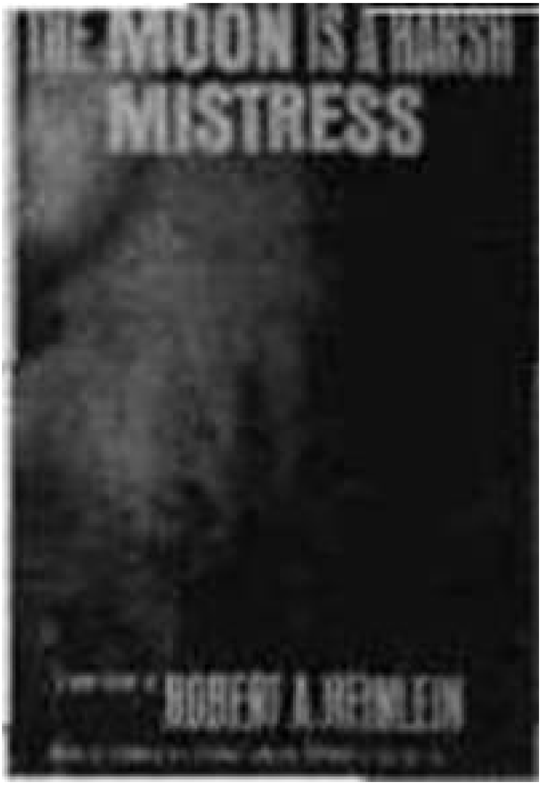
October 4, 1963: Lurton Blassingame to Robert A. Heinlein

Peter Israel says, "Bob Heinlein is the boss. I'll express my opinions, but I have enough respect for his skill and judgment so that if he says a thing can't be done, I'll go along with the way Bob feels it has to be done. If he says the story cannot be cut below 100,000 words without seriously hurting it, I'll publish it at 100,000."

October 12, 1963: Robert A. Heinlein to Lurton Blassingame

Farnham's Freehold contract with Putnam's: On page two I have changed the wordage to "100,000" and struck out the delivery date and made it "to be arranged." I need to know [their] absolute rockbottom deadline for fall '64 publication. I know that he does not need the finished ms. by New Year's Day, that being what I struck out —nor could I deliver it by then in a smooth, retyped form; I've got too much to do to it, and my typist will need at least two months after I have finished cutting it. When you ask him for his absolute deadline, please point out to him that in twenty-five years I have never missed a deadline by even one day. I am quite sure that most editors stick at least a month of cushion into a deadline date since most writers are notoriously unpunctual in such matters. I want to know what his *real* date is. I will meet it.

THE MOON IS A HARSH MISTRESS



The Moon Is a Harsh Mistress was originally titled *Brass Cannon* after the cannon the Heinleins bought on a trip to Louisiana.

While checking on "Mike," the computer that controls most functions on the Moon, Mannie finds that Mike has become conscious. Then Mannie finds himself heading the revolutionary movement with the Prof, the girl Wyoh, and Mike—who can assume many roles on the screen. The Moon was settled by convicts, but now enjoys a rich social life, though still badly exploited by Earth as master.

With the Prof's knowledge of history and Mike's powers, they plan a careful flight for freedom, using the catapults designed to sling their products to Earth to hurl rocks. Earth retaliates with nukes, but eventually surrenders. Mike, however, has been badly shaken by a nuclear strike. He still controls all electronics—but he no longer shows signs of consciousness.

June 21, 1965: Robert A. Heinlein to Lurton Blassingame

The original of this letter goes with the original ms. Of *The Brass Cannon [The Moon Is a Harsh Mistress],* the carbon goes with the carbon ms. Both will be sent to you tomorrow, original by airmail in the early morning, carbon by air express in the late afternoon, in an attempt to have them go by different airplanes. As you probably know from the news, we are isolated other than by air—and the last I heard they were borrowing 1916 Curtiss pushers in order to move all the passengers, freight, mail, and food that is moving in and out of our small airport. Anent ms.: Please send the original to Putnam; it has with it a form for their supercolossal prize contest. But would you please tell him that I really have no expectation of a science fiction novel winning. . . .

The Moon Is a Harsh Mistress won the Hugo Award for Best Novel of 1966
at the World Science Fiction Convention, New York.

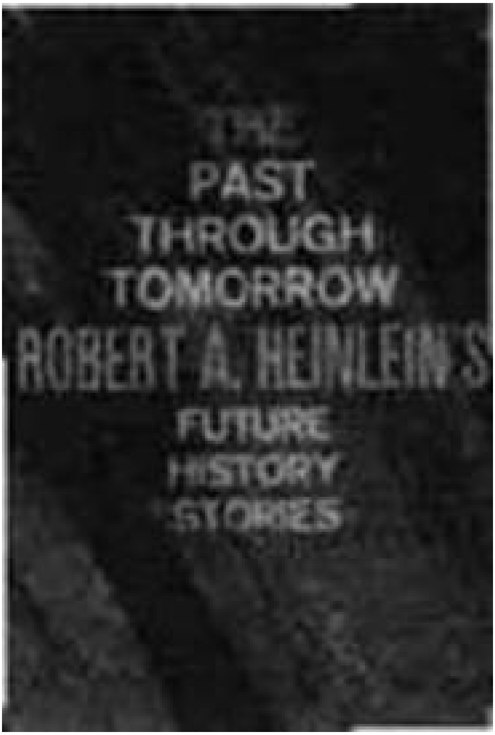
July 6, 1965: Lurton Blassingame to Robert A. Heinlein

Putnam's likes new book, same terms as last book. Don't like title; can you suggest another?

November 30, 1965: Robert A. Heinlein to Lurton Blassingame

You saw a copy of———'s letter to me; I phoned him today. He had thrown me a curve in his proposals to edit a ms. which——— had approved in toto—but I tossed him another curve back saying okay and how quickly could he ship me the edited ms. for my approval?—and pointed out to him that I had *never* signed a contract in the past with Putnam's, nor accepted any advance, until the ms. was fully approved down to the least word. I think he was taken aback by this, but he quickly agreed to go over the ms. himself, see what the copy editor had done, and then either okay it the way I had submitted it, removing the copy editor's changes, or send it to me for my approval.

THE PAST THROUGH TOMORROW

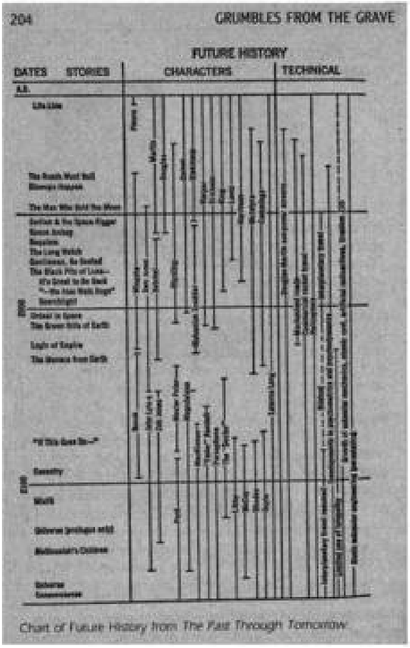


The Past Through Tomorrow collected Heinlein's "Future History" stories written for *Astounding* and the slicks.

This is a giant collection of the stories written for *Astounding* under the "Robert A. Heinlein" byline and many of the slicks. These stories all follow a consistent pattern of future history. When he began writing fiction, Heinlein laid out a big chart with the dates, major technical advances, political and sociological situation, and various remarks necessary for fuller understanding. There were also lines for the lifelines of major characters and for the beginning and duration of technical inventions. This came to be known as his "Future History" chart. The big chart was pinned to the wall, and stories, characters, and details were added to it as more stories were written or planned. It covered a period from about 1950 to the year 2200.

March 9, 1963: Robert A. Heinlein to Lurton Blassingame

I am returning herewith Peter Israel's letter concerning the *Future History.* I don't know just what he wants. I had had in mind an omnibus reprint book, using the first three books of the *Future History.* We hold all rights to these *and we own the plates.*



204 GRUMBLES FROM THE GRAVE

FUTURE HISTORY

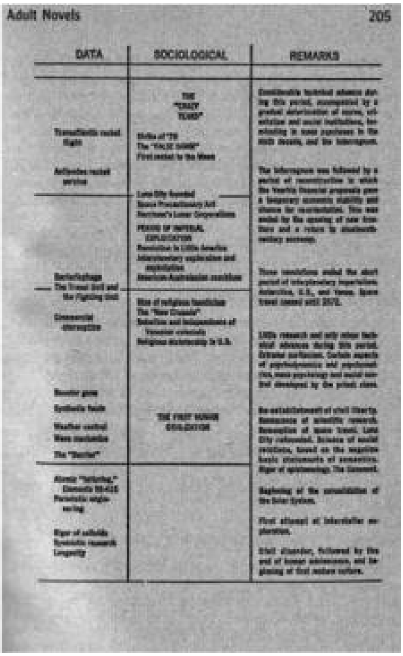
Chart of Future History from The Past Through Tomorrow

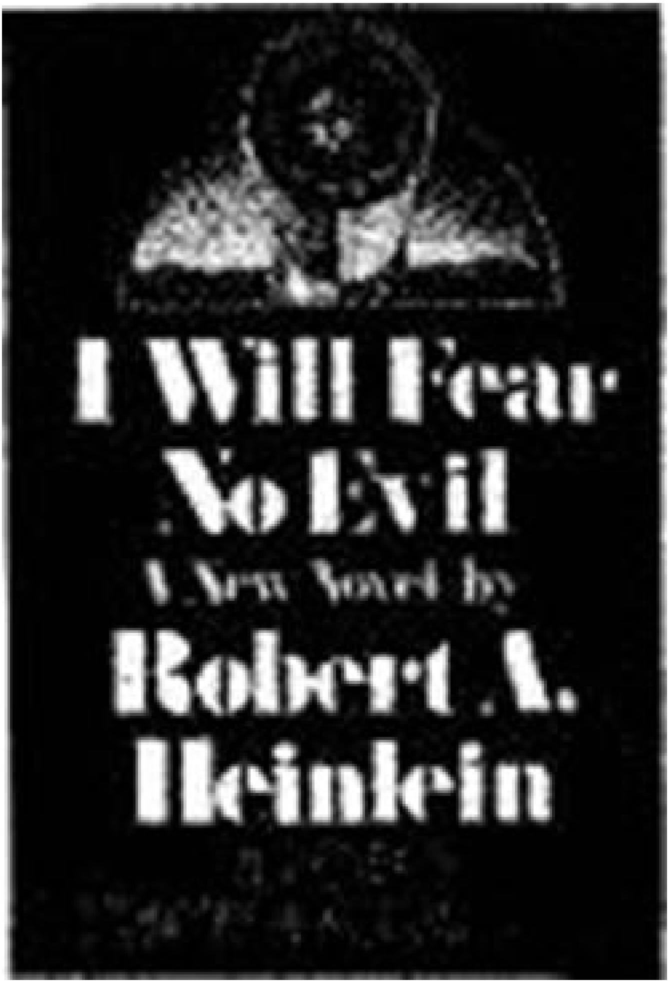


Adult Novels 205

DATA
SOCIOLOGICAL
REMARKS

I suggest that we tell Israel that what we are offering is the first three volumes, for reprint, separately or as one jumbo volume—with plates furnished by us—and that if he does not want them, please tell us so in order that we may offer same to Doubleday's Science Fiction Book Club. I feel quite sure that they would take a chance on such an offer, with the plates laid in their laps. These three books are very famous in the field and they have not been available in hardcovers in years—and never from the S-F book club.

I WILL FEAR NO EVIL



I Will Fear No Evil. Q.P. Putnam's Sons, 1970, was also serialized in *Galaxy.*

Johann Sebastian Bach Smith, an extremely wealthy man, is being kept alive through the use of life support systems, until a suitable body donor can be found, at which point his brain will be transplanted into the young body. The body turns out to be that of his very capable secretary, who was killed by a mugger.

The two personalities now inhabit the same body and talk to each other. And Johann Smith learns to look around him with new eyes, as a female. He/she has experiences unknown to anyone else, having been of both sexes.

Eventually, using semen deposited earlier by Johann Smith in a sperm bank, Johann/Joan Eunice bears a child. It is his own child on both sides.

August 21, 1969: Virginia Heinlein to Lurton Blassingame
Robert says that the new novel is as long as the Bible, but considering the number of authors of that, I doubt it. It is still in the process of completion. We'll send up a few rockets when it's done, and maybe you'll see one of them!

August 28, 1969: Virginia Heinlein to Lurton Blassingame
[Robert] left me a note saying, "Please tell him that I am anxious to learn what the new book is all about, too—especially the ending.

"I seem to be translating *Giles Goat Boy* into late Martian."

September 2, 1969: Virginia Heinlein to Lurton Blassingame
. Robert's up to what he says is the last chapter. Then he added thoughtfully, "I hope it isn't like the short story." But I think this time he means it. He spent last night killing off someone; must have been a sort of Rasputin, from the length of time it's taken.

October 1, 1969: Virginia Heinlein to Lurton Blassingame
What word do you want about the novel? It's in the cutting stages—I thought that it dragged in spots. Don't you want to be surprised? All I can tell you is that it is quite different from anything I've ever read before, by Heinlein or anyone else. It will go to the typist before we leave here for the class reunion . . .

October 7, 1969: Virginia Heinlein to Lurton Blassingame
Re the new book, Robert has his doubts about Mac [Truman MacDonald Talley of NAL] liking it, pointing out that he turned down *Stranger,* but says he's been publishing some far-out stuff lately. My comment was that he can't sell the public Elsie Dinsmore anymore.

October 13, 1969: Virginia Heinlein to Lurton Blassingame
The cutting goes along slowly . . .

November 12, 1969: Robert A. Heinlein to Lurton Blassingame
While I was writing *I Will Fear No Evil* and you and Ginny and Margo were handling everything else, a lot of non-frantic items accumulated in your box on my desk. It appears from the file that I have not acknowledged checks in writing since 22 June. I intend to acknowledge checks and books, so that you will have a written record.

December 4, 1969: Virginia Heinlein to Lurton Blassingame
I'm just afraid that I shall have to type *I Will Fear No Evil,* which

will completely spoil my winter! I think the first draft was 689 pages.

January 19, 1970: Lurton Blassingame to Robert A. Heinlein

I spent more time reading *I Will Fear No Evil* than I've spent on a manuscript in years. This is only partly because of the book's length—I've gone through longer ones faster—but the novel has so many good lines in it that I gave myself time enough to enjoy and chuckle over them.

January 31, 1970: Virginia Heinlein to Lurton Blassingame

Today Bob will probably sign his "X" on two powers of attorney. One for you, one for me. Yours will be for conducting business affairs, mine a general one . . . and I suggest that we both keep them, not limited in time, for emergency use.

Robert is in good spirits, but quite weak, with nurses around the clock. The incision looks huge to my inexperienced eyes, and it had a drain in it until yesterday : . .

February 12, 1970: Virginia Heinlein to Lurton Blassingame

This new novel is probably closer to mainstream than science fiction than any Robert has done ... he wants to have some sort of mass distribution on it, either by early paperback or serial, or perhaps both. The paperback business doesn't seem to cut much into the trade edition sales, whereas the Doubleday Book Club does. If we can't get serial or early paperback publication, we'll reluctantly let it go into a bookclub edition. The sales on *The Moon Is a Harsh Mistress* proved my point on that.

February 26, 1970: Virginia Heinlein to Lurton Blassingame

Just returned from the hospital, and Bob was trying to eat lunch ... he ate his whole egg for breakfast, and I don't know how much more, but he's still getting IV feeding, and is very unsteady on his feet. But at least we're away from the wheelchair, and he goes out into the corridors to walk. He'd refused to leave his room for about a month, and this is [a] considerable breakthrough. Also, I gave him *The Insult Dictionary,* and he started reading it, which is better than the detergent dramas and quiz shows, etc., he's been watching on TV.

I am also sending a letter from Lady Gollancz. Robert read this letter, and said firmly, "No bowdlerization." So will you please tell [her] politely to go to hell? The passage referred to is the one in which the hero feels sorry for the victim rather than the criminal. She wanted to take it out.

EDITOR'S NOTE: By this time, publishers in many countries were *putting out Robert's work, especially his juveniles.*

Several British publishers had contracts for books, among them Gollancz. The chief of that firm had been knighted by the crown—Sir Victor Gollancz. When Sir Victor died, his wife took over the firm.

When they were about to publish one of the juveniles (and I am not sure now just which one it was), LadyGollancz asked whether she might omit several sentences dealing with punishment of a character for a crime he had committed. The law on this point is firm, both here and in the UK: no publisher of a reprint edition may make changes in copy once the sale is made, without the written consent of the author.

So Robert refused her request to make the change.

Yesterday, over in Santa Cruz, I ran across a note Robert had made about the new book. Sorry I can't quote it in full, but he said, "This may be my last novel. I am not going to let some editor cut it when he doesn't understand it completely." He's always said that this story couldn't be cut because of its complexity . . . although I thought it should be. It is possible that he's right. In any case, this is something that will have to be done cautiously rather than trying to fit it into a Procrustean bed. He did do some cutting before the final typing and Xeroxing. I read it and proofed and made changes, where the typist had made mistakes. And the cut version is a lot faster than the first one was!

March 7, 1970: Virginia Heinlein to Lurton Blassingame

I know that [Robert] has definite ideas about what he wants in the new book contract, but he just says, "You and Lurton handle it," so we'll have to stall a while longer.

March 31, 1970: Virginia Heinlein to Lurton Blassingame

Robert is pleased with the serial sale [of *I Will Fear No Evil* to *If]*. He had every intention of having serial publication on it, if possible.

The doctors are very pleased with Bob's progress, but he still spends most of the time in bed, and is really not up to doing any work at all. Besides, sometimes his mind isn't as sharp as it usually is, and we hope that by the time this copy-editing is completed, he'll be up to looking at it ... And having had the close brush with eternity he recently had, he's going to make some changes in his way of living. Just what those changes will be remains to be seen. It will probably include such things as no speeches (he finds them quite disturbing), no interviews, *etc.*

April 8, 1970: Lurton Blassingame to Virginia Heinlein

Rush me Xerox of your power of attorney. We need to attach it to the new Putnam contract.

November 20, 1970: Virginia Heinlein to Lurton Blassingame

The reviewers seem to be complaining about the lack of explicit sex in *I Will Fear No Evil.* One said, "The Victorian Mr. Heinlein—" Does any book *ever* please reviewers?

January 14, 1971: Virginia Heinlein to Lurton Blassingame

Thank you very much for the article from the *New York Times.* I will salaam to the Boss every morning from now on. How does one person get to be the hero of the New Right, Women's lib, and the hippie culture all in the same breath? We must all be schizophrenic!

CHAPTER XII TRAVEL

August 6, 1952: Robert A. Heinlein to Lurton Blassingame

Back home to a bushel of mail and a constantly ringing phone—I wonder why we came back! But it was a fine trip—Jackson's Hole, Grand Tetons, Yellowstone Park, Craters of the Moon National Monument, Sun Valley, the "Days of '47" at Salt Lake City, Zion Park, North Rim of the Grand Canyon—where we rode mules down to the floor of the Canyon—then Bryce Canyon, thence through the main range to Aspen, and finally home.

AROUND THE WORLD I

August 17,1953: Lurton Blassingame to Robert A. Heinlein

. . . very excited to hear plans for the round-the-world trip.

Robert and Virginia in Sun Valley, during the 1952 tour of National Parks.

September 25, 1953: Robert A. Heinlein to Lurton Blassingame

We sail from New Orleans on 12 November and will leave here about 7 November. I am sorry to say that I will not be on the East Coast either coming or going, as we leave from the Gulf and return via San Francisco . . .

We have our trip about lined up, having each received permission from the Navy Department, having received passports, having booked passage for the two principal legs of the trip. We've been vaccinated, shot for cholera, typhoid and paratyphoid, tetanus; will be stuck for yellow fever on Wednesday. Ginny is down seeing about visas right now, but all the main hurdles are passed. I will supply exact times and places later but here is how it shapes up now: By freighter S.S. *Gulf Shipper* (U.S. registry) New Orleans, Panama Canal, half a dozen west S.A. ports to Valparaiso, fly over Andes to Buenos Aires, embark cargo-liner (swimming pool and such) M.S. *Ruys* (Dutch), then

Montevideo, Santos, and Rio de Janeiro, across South Atlantic to Cape Town, after which the ship hits half a dozen East African ports and Zanzibar, ending in Kenya before starting across Indian Ocean for Mauritius and Singapore. I want to leave the ship for a week at Cape Town to visit Kruger National Park, but Ginny insists that lions can open automobile doors—nevertheless, I want to make that motor trip and see lions, elephants, etc., in native habitat.

The Heinleins in Buenos Aires, a stop on their world tour of 1953.

We leave the ship in Singapore and have booked no farther. I plan to visit Java and Bali at least and wind up at Darwin, Australia—we are trying to arrange booking for an island freighter now; if that doesn't work, we will visit the islands by airline and end up at Darwin anyway. Then we fly to Sydney, stay as long as we like in Australia, go to New Zealand, where we intend to visit both North and South Islands (there is an N.Z. airline that has a circle route), and eventually back home via the Fiji and Hawaiian Islands and San Francisco.

October 24, 1953: Robert A. Heinlein to Lurton Blassingame

As you can see, this is my "strike-out" letter—even though I may write again. You will see, too, that I have (with fantastic ingenuity and smug planning) placed all the real dope on page two, which you can now stick upon your bulletin board, or something. We'll send you postcards of calabozos and hippos and things. If I don't return on time, just forward my personal effects to Tahiti, fourth beachcomber from the left.

Wups! I forgot something—money. Don't send me any checks after about 7 November; just hold for me whatever comes in. It is possible that, after I am cleaned out by a gang of international gamblers headed by a beautiful blonde in sable, that I may ask you to cable me some dough—but it seems most unlikely, as I am taking plenty.

April 3, 1954: Robert A. Heinlein to Lurton Blassingame

We got home late Wednesday and spent Thursday and Friday unpacking and reading mail. I have answered none of the latter as yet and still can't find the top of my desk—and about two dozen bread-and-butter notes to write consequent to the trip as well. We are both okay save for head colds picked up in New Zealand and still with us. The trip back was okay until we were within ten minutes of Colorado Springs, whereupon the damned plane caught fire in its heating system, filled the cabin with smoke, and caused the skipper to turn back and make an emergency landing. This when I had about softened up Ginny to the notion of traveling by air in the future —

TRAVEL BOOK

EDITOR 's NOTE: In 1953 and 1954, Robert and I took a six-month trip around the world. When we returned, I suggested that Robert write a book about the trip. He wrote half of the book and sent it off to Lurton, to see whether there was or was not a market for it.

It turned out that there was no market for it.

Everyone who read this book loved it, but no one wanted to publish it. Robert spent some months working on this book. It is too late to publish it now — it's considerably outdated.

August 30, 1954: Robert A. Heinlein to Lurton Blassingame

I think you had better send the travel book manuscript back and let me finish it. I have spent the whole summer expecting it back in the next mail, frustrated by its half-finished condition, and unable to get to work on anything else. I'll never send out an incomplete ms. again— it is, for me, like having someone read over my shoulder; it keeps me from concentrating on the work in the machine.

A long string of houseguests helped to wash out the summer, too. The last of them are out of the house now and I should be able to finish the travel book quickly. I want to start on my next novel in a couple of weeks. I plan to do the next boys' book first, then an adult serial novel.

EUROPE

January 24, 1955: Robert A. Heinlein to Lurton Blassingame

We have not yet been able to book our proposed trip, but we still hope to leave about the 1st of May. Don't worry about the trips I take cutting in on writing; in the long run they increase my output and enhance its quality. Anything I do always winds up in a story eventually— and it is most unlikely that we will ever make another trip six months long.

May 10, 1955: Robert A. Heinlein to Lurton Blassingame

We have luxurious quarters, the owner's cabin, about twice as big as the other passenger staterooms. I don't know how we got it as we did not ask for it, but it is very pleasant. For the first time in a ship I have room enough to write and a comfortable setup for it. I might even turn out a story . . . although this seems unlikely as my mind is comfortably blank.

July 16, 1955: Robert A. Heinlein to Lurton Blassingame

How are you? Me, I'm a little confused. I've been in ten countries so far this trip, used nine languages, and thirteen sorts of money including U.S. MFC "funny money" in which $10 bills are printed in bright red and a nickel scrip looks like a cigar coupon. I've just finished calculating a trip into the Arctic Circle (which we start tomorrow morning) which involves marks, guilders, Belgian francs, and three sorts of kroner, all at different rates. I came out within about 10 percent of the right answer, which is better than I expected.

Ginny has been spending money with joyful frenzy and everything costs six times what it should. I think I have money enough with us to cover everything, but I am no longer sure. Could you please send me a thousand dollars in American Express drafts (the only sort which is really easy to exchange everywhere) to the Heidelberg address above? Deus volent, I will still have them in my pocket when we reach New York, but I will feel easier if I have them. We will be back on the 6th of August; then we go to Bayreuth so that Ginny can sop up Wagner (the Ring Cycle) while I sop up beer—then home by easy stages. I estimate that we will be in New York about the 9th or 10th of September, but anything could happen between now and then.

LAS VEGAS

April 22, 1959: Robert A. Heinlein to Lurton Blassingame

We're back home and not quite broke—in fact, I didn't even manage to use up all of some traveller's cheques I bought in New York over a year ago, and now we have money running out of our ears, with all taxes paid. Ginny worked hard on the slot machines, did not manage to drop behind more than five dollars all week. I played the slots very little, craps one evening, and put a few chips on roulette *en passant* and broke about even—I wasn't there to gamble anyhow. One member of our party, a boy I went to Annapolis with, gambled all week, splurged on night clubs, etc., and returned to Colorado Springs with more money than he had started out with. I can't claim that, but I will say that they practically give you the joint free—provided you don't drop a lot of dough at the tables. Gourmet food is cheap, the most lavish night clubs in the entire world are very cheap, equivalent hotel rooms are about half what they would cost in New York. I understand that the taxis are expensive, but we hired a new Chevvie and never entered a taxi.

The Congress of Flight was almost the size of a World's Fair, with the most remarkable demonstrations and exhibits I have ever seen anywhere . . . The static exhibits included such things as the Atlas, ThorAble, X-15, manned reentry capsule for Project Mercury—and the 1911 Bleriot monoplane. The dynamic exhibits had everything, from several types of bombing to the most frightening precision flying I have ever seen—half a dozen nations each trying to bilge the others and the Chinese Nationalists stealing the show with a nine-plane diamond tight formation that did things I still don't believe. Nobody killed—although we in the audience almost had heart failure.

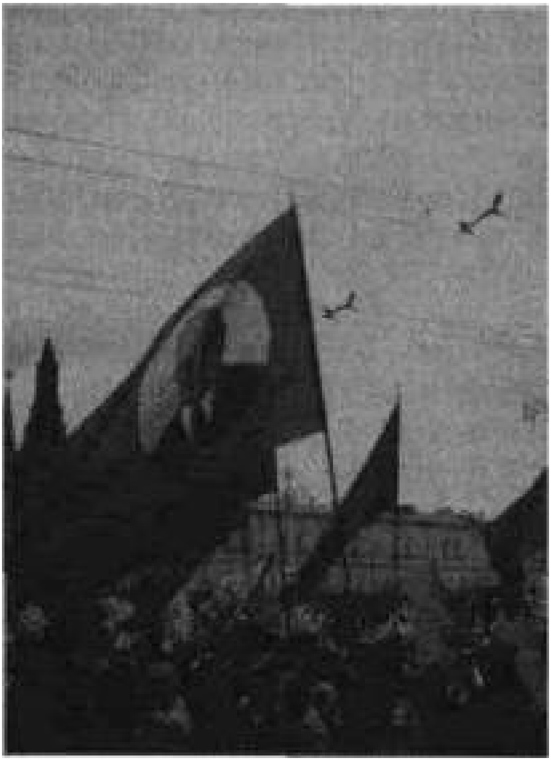
Las Vegas is sort of an organized nervous breakdown. We are exhausted, sunburned, and euphoric . . . But the three largest bookstores in town do not sell science fiction—I looked for some of my own to give to friends-no dice.

To my great delight my name tag was read and recognized every few minutes all week long—a large percentage of the delegates read science fiction.

SOUTHWEST TRIP

March 9, 1956: Robert A. Heinlein to Lurton Blassingame

We are just back from an eight-day swing of Albuquerque, Las Cruces, and Portales, a very enjoyable time which included seeing friends at Sandia Weapons Center, the AEC [Atomic Energy Commission], a rocket society do at White Sands, seeing ——— ———'s new baby, photographing the gypsum sands, a real dust-bowl storm with the sun blacked out and silt up to the fence tops, a visit on a cattle ranch, lecturing at the University of New Mexico, getting stuck in the mud, and encountering quite a bit of sunshine and warm weather after a very hard winter. I am now trying to clear my desk.



The start of the May Day Parade, Soviet Union, 1960.

USSR

August 15, 1960: Robert A. Heinlein to Lurton Blassingame

Well, I'm home and completely swamped by the volume of work in front of me. I've spent the past four days just trying to get enough stuff put away and thrown away so that I can get at my desk to write. As soon as I finish this letter I will get to work on an attempt to try to revise and extend the Intourist article along the lines you suggested—but, truthfully, trying to write humorously about the USSR won't be easy. Ginny and I laughed ourselves silly time and again, but it was hysterical laughter; there is not much that is really funny about the place.

EDITOR'S NOTE Robert wrote two articles about this trip—they can be found in Expanded Universe.

ALMA

May 15, 1961: Robert A. Heinlein to Lurton Blassingame

We went to Alma, Oklahoma, on April 29th, using a chartered airplane and getting it all done in one day. "The Sequoyah Book Award" turns out to be a handsome plaque. I addressed the State Library Association and they had a book-signing afterwards—and durn if they hadn't sold almost two hundred copies of *Have SpaceSuit—Will Travel.*

Scribner's offered to pay for the trip, but I preferred not to be under obligations to them while there is such continuous pressure on me to quit Putnam's and go back to Scribner's. Anyhow, it cost less than two round trip commercial tickets and considerably less than it would have cost to drive it—and it's deductible. Anyhow, arriving by private plane added to the show.

SAN DIEGO

July 12, 1962: Robert A. Heinlein to Lurton Blassingame

My short trip to San Diego and to sea was terrific. A day under the sea in the submarine *Raton,* spent with destroyers hunting us and trying to (simulate) depth bombing—which they do with grenades, which make a terrible racket but, at most, break a light bulb—then we flew aboard the carrier *Lexington,* spent the night watching night operations, then day operations the next day, then flew back to

Colorado Springs—elapsed time C.S. to C.S. fifty-four hours and almost no sleep. The night landings were made by supersonic fighters, Demons (F3H), and it was the most exciting—and the noisiest-thing I've ever seen. She's an angle-deck carrier and landings and catapulting go on simultaneously, one of each about every thirty seconds—and they hit at about 130 miles per hour and roar away if they miss the wire.

Besides that, I was recognized repeatedly, which boosts my morale. The icing on the cake was a birthday party in the air for me on the way home. Much fun!

LAS VEGAS AGAIN

September 30, 1962: Robert A. Heinlein to Lurton Blassingame

I've got to bathe, shave, dress, and run—the Houston trip was fast and frantic; the Las Vegas trip was long and delightful. Ginny hit several nickel jackpots, I did not gamble at all but saw all the shows . . . The space and aircraft exhibits were magnificent, there were many fine parties and three open bars, and a fine firepower show—bombing, Thunderbirds, refueling in the air, the new planes, and a joint AF and Army Strike demonstration. And we saw many old friends. The Folies Bergere was as always, and the Lido de Paris show better and more lavish than ever.

ANTARCTICA

December 28, 1963: Robert A. Heinlein to Lurton Blassingame

I think I told you by phone that *Popular Mechanics* wants me to do another article, or several. Since then we have tentatively agreed on a subject for the next one: the research going on at the South Pole. I had in mind going there next year, but Stimson's last letter spoke in terms of right away. Since summer has just started at the South Pole this is reasonable—save that I am up to my ears in this Hollywood deal with Screen Gems. The trip need not take long—ten days or two weeks—but if I am to go at all this [Southern Hemisphere] summer, it must be in the next few weeks, with conflict most probable with the Screen Gems deal. . . .

If it does work out that I go now instead of about a year from now (anytime after Labor Day 1964, that is), this would solve the problem of what to use for a *Boys' Life* serial: Lay it at the South Pole and make it a mixture of science and adventure. And that would also solve the problem of my next juvenile for Putnam's—three novellas totaling about 50,000 words, *Nothing Ever Happens on the Moon, Tenderfoot on Venus,* and *Polar Scout.* [Putnam] has written me, twisting my arm a little to turn out another juvenile; this would satisfy [Putnam] for the '65 spring list, I think. If you see fit, you might ask *Boys' Life* if they would like a serial about Antarctica, one written from personal observation.

I should add that I told *Popular Mechanics* that, having given them a first article, I reserved the right to do other articles and fiction based on the trip. They want to pay only what they paid before ... I could hitchhike the entire trip on military "space available," but I am more likely to go commercially to Auckland. But I can show a nice profit by writing other things on the same material.

EDITOR'S NOTE: This trip did not come off, but we did travel to Antarctica in 1983.

CARIBBEAN

December 11, 1964: Robert A. Heinlein to Lurton Blassingame

All the various checks sent registered in two mailings arrived, of course, and Ginny is again complaining that it is backing up on her. It is her own fault; spending is her province and she returned from this last trip with more than a thousand in cash—she didn't even really *try.* Her largest purchase was three "pans" (or drums) for a steel band, purchased in Trinidad, and they weren't expensive; they were simply hard to get home—one medium-sized, eighteenth-century brass cannon purchased in New Orleans (so now we are in business for ourselves). The cannon helped a little—$275—but when a guide offered to have a jewelry shop opened for her on a Sunday in Caracas she turned him down. We simply will have to buy some more stock after we pay the income tax; she has lost her touch.

Smorgasbord.

The 18th Century Brass Cannon was the inspiration for the original title of *The Moon Is a Harsh Mistress.*

Perhaps the most interesting part of the trip was visiting a Bush Negro village far up in the jungle in Suriname, formerly Dutch Guiana—descendants of escaped slaves who continue to live Congo-style deep in the rainforest, up a side river by launch. My principal reaction was that bare breasts aren't necessarily sexy; the Zulus are much better equipped in that region. We also visited an Amerindian settlement—the Indians were polite and dirty, the Negroes were pushy and very clean. As for other matters—well, a flying fish with a 12-inch finwing spread flew into the lounge one evening through a port dogged open only 4 inches without damaging the fin wings. I couldn't ask him how he did it; the landing killed him. We got a royal tour of the Boeing plant in Louisiana (guests of the chief engineer and chief counsel), and I beg to report that the Saturn is the most monstrous big brute imaginable and I do not believe that the Russians can do things on the scale of our Apollo project. I do believe we will have a man on the moon this decade; progress looks good. Ginny visited a Negro whorehouse in Jamaica, and behaved with such aplomb ands avoir faire that one would think she had spent her whole life in one. We arrived in Denver late at night to find our flight did not run that day, so I chartered a 2-engine Aero-Commander and we landed in a snowstorm in Colo. Spgs. by GCA. I watched it from the copilot's seat —much like a carrier landing. The ground is covered with white stuff but it is good to be home.

EDITOR's NOTE: That brass cannon still stands in the living room. It served as the working title for The Moon Is a Harsh Mistress; *of course, the title was changed as the editors did not think it was a suitable title for a science fiction novel.*

The cannon is a saluting gun from an eighteenth-century sailing vessel, but it still works. We used to fire it every Fourth of July.

December 28, 1964: Robert A. Heinlein to Lurton Blassingame

I behaved myself in Jamaica and all through the trip-first, because I was well chaperoned and, second, because I was never really tempted. The female passengers were all antiques and the chocolate items ashore were not tempting. No, I'm not racist about it—some of the Zulu gals I saw in South Africa were decidedly tempting, but not these. As for Ginny's savoir faire, here's how it came about: [someone from our ship] had a date with a mulatto gal, not bad looking but not too bright and quite notional. He . . . took Ginny and this gal and myself on a pub prowl through the lower depths of Kingston. About midnight this gal suddenly decided that we should all go to ——— and gave the address to a cabdriver—instead of a night club, it turned out to be a cathouse complete with red light, eight or ten colored gals in the parlor, and a bar and jukebox in a room behind the parlor, where the madam (somewhat annoyed but polite) received us. [The gal's date] was terribly embarrassed and explained behind his hand to me that he had not had the slightest idea where we were going. But Ginny was not embarrassed, spotted what the place was at once, and was delighted to have had a chance to see inside one. We bought a couple of rounds of drinks, played the jukebox, and left—much to the madam's relief. (I strongly suspect that [the woman] had worked in that house.)

CLASS REUNION AND RETURN

November 12, 1969: Robert A. Heinlein to Lurton Blassingame

It was a wonderful trip for us, all the way through. I'm sorry that I arrived in New York so beaten down by my class reunion [in Annapolis] (some day we'll make a trip in which the *first* stop will be New York and arrive in prime condition)—I'm especially sorry that I missed the ballet in which the gals (did) (did not) wear body stockings . . . Jack Waite took an afternoon off to give us a personal tour of the Manned Spaceflight Center [in Houston]—high points: a view of Moon rock (swelp me, it looks to me like hundreds of little shiny golden spheroids embedded in a tannish gray matrix), a visit inside the mission control room during a computer-simulation of *Apollo 12* mission (the LEM was just "landing" on the Moon and you could follow it on the displays), and a long, detailed lecture on the Moon suits (for us alone) by the chief engineer of life support systems—who turned out to be Ted Hayes, whom I [had] hired as an undergraduate at U of Pittsburgh twenty-seven years ago to work at the Naval Aircraft Factory—and I lured him into signing with me rather than General Electric by promising him that he could help develop pressure suits for fighter planes and I kept my promise and it led directly to him developing the first suit used on the Moon.

We stayed over an extra day in Houston at Patricia White's [the widow of Ed White, who died on Apollo I] request—"some people who wanted to meet us." Ginny told you a bit about that party by phone ... It was a big party in a big house and I don't know what all Ginny did—but I was followed around all evening by three tall beautiful blondes—Heinlein fans. (I managed to put up with it.) But the star of the evening was "the Honorable Jane." Jane is a BOAC hostess and looks just the way an airline stewardess should look—petite and pretty and shapely.

[She] was wearing an evening dress—but it was London mod. Micro skirt—and she had nice legs but nobody noticed because it was cut clear to the waistline in front. No question of a body stocking in this case. Un-possible! Nor any possibility of foam rubber. Silicone? A bare possibility, but I don't think so. Everyone got crosseyed, including me, and Jane clearly enjoyed the sensation she was creating. (I should add that styles in Houston are much more conservative than those in New York.)

From there we went to New Orleans, with reservations at the St. Charles—and I was asked for identification as we were checking in ... which I refused to give (this is not yet Russia) and we had our bags put back into a cab and went to the Pontchar train where we wound up in the Mary Martin suite without being asked to produce IDs. I can see why Mary Martin stays in that suite; the Aga Khan would be quite comfortable in it. It was late, we were exhausted, so we had a bite from room service (soft shell crabs Amandine, oysters and bacon en brochette, parfait praline), bathed, and so to bed.

The next morning there was a bowl of fruit waiting for us, compliments of the manager, and enclosed with it was a little carton of personalized matches with my name spelled correctly. This was followed by a phone call from the manager asking us to have a drink with him that afternoon. (Heinlein fan? Not at all. He asked me what sort of writing I did.) The moral of this is: Don't stay in hotels that demand IDs.

I must now explain that I had avoided the Pontchar train because Eberhard Deutsch [a New Orleans attorney] lives there and I had been trying to avoid moving into his place when I knew he was out of town. Having told his office that we would be at the St. Charles, I then had to phone again and tell them that we were at the Pontchar train. Eberhard was returning from Europe by a plane that got in at just past noon the next day—so shortly after noon I received a call: "Young man, what are you doing downstairs? My housekeeper is expecting you."

So we moved up to the penthouse. He was not there but his housekeeper was indeed expecting us, and settled us in. The penthouse makes the Mary Martin suite look like substandard housing —

—which I had known and which was a major reason why I was reluctant to stay in it with the owner away. Eberhard's little cabin in the pines occupies the entire roof of the hotel; that portion which is not house proper being terraces, gardens, "landscaping," and a spectacular (pump-driven) waterfall. It is, of course, surrounded on all sides by dazzling views of the city and of the Mississippi—and best of all, it is so high up it is quiet; we could sleep.

New Orleans was tiring fun and endless gourmet food . . . Bourbon Street in search of real Dixieland jazz, which we found.

ANTARCTICA

Virginia Heinlein—report 1983

This is an enormous continent, barely known, but actually inhabited by mammals and birds, on the coastline at least. There could be almost anything there and we went to learn something about it.

We were outfitted with thermal underwear to outermost layers of waterproof clothing. Recommended (by those who know) is the "layer theory" of dressing for the cold weather to be expected. And it is COLD. The worst day we encountered, including the wind chill factor, was 45 degrees *below* Fahrenheit. Otherwise, we managed to keep relatively warm.

A few words about the Zodiacs, which will, often be mentioned. They are rubber boats with outboard engines, very shallow in draft, drawing only inches, made of rubber-coated fabric glued together, descendants of the life rafts of WW II. They have lightweight wooden floors; seating space for passengers was on the float tubes, which were about fourteen to sixteen inches in diameter. One held onto ropes festooned along the sides of these craft. We could be taken into beaches with no jetties, where it was possible to mingle with the local wildlife. "Wet" landings meant that we had to step into a shallow surf onto rocky beaches.

Lindblad Explorer was a small ship, built with icebreaking prow. Once we toured through an ice pack, looking at the local fauna. Groups of seals lie around on the ice, soaking up the sun or just resting; sometimes they became a bit wary at our approach and slipped into the water, but many of them just looked up and stared at us.

We embarked in *Lindblad Explorer* in Punta Arenas on the Straits of Magellan. The first warning we had was about water conservation—the showers had "minutieres" on them, to time the flow of water, and we were warned about conservation, since the ship could not make up enough fresh water from salt water to keep up the supply, if we used too much. Water in the shower would run for only about a minute, then shut off. Eventually, we both found that about two minutes in a shower would cleanse, if we did it Japanese style, soaping down first, then washing off the soap.

The ship was a bit spartan, but after a period of adaptation, satisfactory.

View from the *Lindblad Explorer*, the ship the Heinleins took on their trip through Antarctica in 1983.

Heinlein on board the *Lindblad Explorer,* The ship was very small and
all resources were limited—and the temperature was 45 below!

Lindblad Explorer carried a number of lecturers. They are specialists in various disciplines and there are daily lectures about various aspects of the things which we were about to see, or had seen. Talks on the mechanics of glaciers, about sea mammals and birds, the history of Antarctica, from the first exploration to the latest are all parts of this tour.

Getting into all those pieces of clothing in a small space was quite interesting, but we learned. The boots were the most difficult, as they had to be donned after the trousers, and the waistline bulk made it difficult to lean over to lace them up. We looked like teddy bears.

The first beach we landed on had penguins galore, of the chinstrap variety. They have one marking which gives them their name, a black strap of feathers which goes under their bills. Think of a dark sandy beach with small surf breaking on it, rocks on each side, and several harems of seals lying around, and dozens, hundreds, thousands, hundreds of thousands of penguins and you have the picture. Penguins walking into the surf, penguins returning from their fishing expeditions, walking around and paying little or no attention to us as we walked up to see the rookery. If you got down to something approaching their level (about knee height) they might just walk right up to you, inspect you, turn their backs, and walk off. One inspected us, first with one eye, then with the other, turned his (her) back, waggled its tail, and stalked off.

(I got too close to one of the seals and was chased off by the master of the harem. It must have been quite a spectacle, me flying off in those heavy boots and clothing—very slowly, as it was impossible to move very fast—chased by a seal.)

The Antarctic was heavily populated by friendly penguins.

We hiked back into the rookery, through a small stream of very cold water, just barely melted, accompanied by penguins. Those poor little creatures walk about a mile to go fishing, for the purpose of feeding their young.

The penguin walk is quite clumsy, but they have another method of locomotion on snow. They flop down on their bellies and toboggan, which is relatively fast.

They sometimes cluster in groups on rocks at the water's edge, trying to decide whether to go into that water at all. When the cluster reaches a certain size, one brave individual will dive into the water, then most of the others follow. Then another group congregates, and they go through it all again. When returning, they get smashed against rocks, eventually mount them, and proceed awkwardly to their young.

Locomotion in water is by means of porpoising. Up and down, each time garnering some krill for their food, then presently they return to feed the young.

Their white fronts are often dirty with the pink color of the krill, but mostly the white is spotlessly clean. Penguin nests are built, of small stones, which they shamelessly steal from each other. One experimenter put a stack of small stones painted red in one corner of a colony, and when he returned, the red stones were scattered all over the colony. One mating habit is for the male to give his chosen a small stone. Another is for two birds to stretch their necks straight upward, making mating sounds.

Rookeries are quite noisy and rather dirty with guano. (And smelly, as well.) However, we found ourselves quite taken with those birds and their ways. After hatching from the egg, the baby penguin is covered with down, which it keeps for some time, shedding it in favor of the fancy dress. Some varieties leave the young with a nursemaid when they are off fishing, and you can see aggregations of those very young birds together. I watched one of the nurseries—the "nursemaid" kept after any stragglers, chivvying them back into the group, where they stayed until the parents returned.

Leopard seals eat penguins, when they catch them swimming. So one encounters orphaned baby birds. Skuas will eventually eat those. Rookeries can be vast; one we saw was estimated by experts to have about a million birds in it.

We looked on penguins as little people. They managed endear themselves to anyone who comes into contact with them. Perhaps it is their upright posture, perhaps it is their clumsy locomotion on their feet—or possibly the "academic processions" going to and from the shore.

There were many Adelies, chinstraps, gentoos, and someof the larger species, as there were royals and the emperors, which are about four feet tall when standing upright. They look for all the world like elderly professors.

We were taken on Zodiac cruises, which didn't land at all, but simply watched for wildlife from the boats. During one such, whales appeared on the water surface. Humpback whales, weighing thirty tons, we were told. They were playing around during and after feeding. What an amount of krill such creatures must eat. (Krill are tiny shrimplike things—pale pink and almost transparent, with great black eyes. One figure I recall is that it takes thirty krill to make a gram.) Those large whales take in a great gulp of sea water, full of krill, and strain it through the baleen. Their throats pouch out with each gulp, and the water comes cascading out as they strain out the krill.

Several whales came swimming over to the boat and swam under it. We could see their flippers in the water under the boat. Then one breached and we could see its back and finally the flukes, which had barnacles on it in a pattern. Everyone was a bit scared by these demonstrations . . . with those flimsy boats being so close to those huge animals.

Most Weddell seals have scars from contact with killer whales—we saw them. Seals slide into the water without any splash, swim away with a gliding motion. In the water, they sometimes allow their curiosity to overtake them, and they stick up their heads and watch.

Cormorants (skuas) nest on sheer cliffs—there were many nests clinging to those cliffs—all of them with young cormorants watching.

There was a barbecue dinner at the Argentine station in Paradise Bay. It was about to close for the winter, when the scientists would go home. Unfortunately for us, the ship had had a batch of hand-knitted watch caps for sale, each of us had one. Knitted into them was the motto "Falklands War, 1982." We had forgotten about that, and went in with those caps on our heads. I told Robert about it, and he turned his backwards, but hairpins anchored mine in place. I felt apologetic toward our hosts.

Leaving, our boat driver was a fanatic whale chaser, and we spent an hour and a half chasing some fin whales which we never got close to.

The ship stopped at Paulet Island in the Weddell Sea, Deception Island, which is supposed to have the only Antarctic swimming pool—water in that area is warm enough for people to swim in, because of some under ground heating (thermal activity). Antarctica has some working volcanoes, such as Mount Erebus, which is where there was a fatal New Zealand airline crash several years ago. Mount Erebus normally has a plume of smoke coming out of it.

Heinlein met a fan of his at Palmer Station, a U.S. base in Antarctica.

Summers, the U.S. has about 1,200 people down in Antarctica, most of them at McMurdo Sound, our chief base there. But we also have Palmer Station, which we visited, Siple Base, and bases at the South Pole.

Probably the visit to McMurdo was the coldest day we encountered—going ashore in the Zodiac, our cheeks almost froze. We struggled up the hill to the base, finding it necessary to sit down for a rest several times. Then I finally commandeered a bus to take us to headquarters.

Robert found many fans among the people in Antarctica. At Palmer Station, one man was sleeping at the time of the ship's visit. When he heard that Robert had been among the tourists, he phoned the ship, and they talked.

On one Zodiac cruise, there were sea lions which played games with our boat. Their heads would come up above water and they would watch us, but when we steered toward them they would go under and pop up in a different place. Sea lions differ from seals in their gait, being able to walk in a fashion with their hindquarters.

One cruise was among icebergs, to see the sculpturing done by the winds, freezing and thawing and melting. Some of the bergs might be as much as a hundred years old, they told us. Bergs come in various shapes—tabular (squared off—just calved from the Ross Ice Shelf), which, after some melting, became castles, medieval monsters and all sorts of imaginative shapes. One evening, while we were at dinner, the captain spotted two huge bergs, and toured the ship all around them. At one point, it was estimated that we were in a field which contained sixty of the monster bergs.

A champagne party was held on a glacier. Ice is a marvelous substance, ice sculpture beautiful, but it's difficult to describe.

There were albatrosses of various sorts, including the wandering albatross—probably the largest bird known. We also saw petrels, and could go up to the nests and look at the young.

On approach and departure, there is a sea area called the Antarctic Convergence, where the water is quite rough. Many of the passengers had to use seasickness remedies, but at most times during these passages, lifelines were rigged permanently around the ship.

EDITOR 's NOTE: Robert and I took one further trip in the Lindblad Explorer *through the Northwest Passage to the Orient. Although thirty-three other ships had managed to reach the Bering Strait, this was the first ship to go all the way to Japan, having navigated the Northwest Passage.*

CHAPTER XIII POTPOURRI

March 30, 1956: Robert A. Heinlein to Lurton Blassingame

I am acquiring sunburn and backaches putting in a completely new and very complicated irrigation system. When I get that and some [Colorado Springs] house repairs completed I'll tackle a new story. My intention is to try to turn out some short stories this summer and not start another novel until about Labor Day.

April 14, 1956: Robert A. Heinlein to Lurton Blassingame

We are still gardening like mad and I ache in every bone from days and days of pick, shovel, and wheelbarrow work. I've just finished an enormous irrigation project. Well, it felt enormous to me, but it does not look like much now that the pipes are covered up. Today we have rain, snow, sleet, hail, and gropple, and I am catching up on paperwork. I expect to resume writing two weeks from Monday and plan to turn out several shorts and short-shorts before tackling another novel.

Lurton Blassingarne, Heinlein's agent, was an expert hunter.

July 25, 1956: Robert A. Heinlein to Lurton Blassingame

Ginny has worked out a shenanigan with [a friend] to let you shoot on a resident permit if I don't get one . . .Ginny put in for a license, too—if you shoot on her license all that will be necessary is for you to convince the warden that you are female and redheaded.

P.S. I did my first pistol shooting (aside from one tomcat) in twentytwo years last Saturday. Three 10's and two 9's for a 48 on my first group. I should have stopped there, for I dropped as low as 42 for 5 shots later—averaging around 45.

August 20, 1956: Robert A. Heinlein to Lurton Blassingame

Take it easy on the stone masonry; it can make you old before your time. But I enjoy it more than any other form of mechanics, except that it half kills me.

October 3, 1958: Robert A. Heinlein to Lurton Blassingame

Thanks for the pic of Socrates, the super-giraffe. He is not here yet: he is still in quarantine in Hoboken and in the meantime they are trying to plan a route to Colorado Springs which will not involve bridges or tunnels too low for him—if it were up to me, I'd shoot him full of barbiturate, stretch him out flat, and fly him here in a Flying Boxcar. They'll kill him getting him here—if not from bridges, then from pneumonia. In the meantime, two widowed lady giraffes are awaiting him here; their deceased husband managed to hang himself —quite a trick for a giraffe. [This is in response to Lurton Blassingame's sending a picture of the giraffe that was to come to the zoo at Colorado Springs.]

July 14, 1961: Robert A. Heinlein to Lurton Blassingame

I'm in good health but Ginny is not. We've been having atrocious weather, which led to a set of cracked ribs for her. Like this—I've been building an irrigation dam for her garden and designed it to be a large ornamental pool as well as useful. We had been pointing towards a big fourth of July party and, since I had installed an electric pump for irrigation, I also rigged it to operate as a recirculating fountain—a jet thirty feet in the air with spotlights on the jet and floodlights on the sea green pool—very pretty and just right for a garden dinner party.

The rains came.

Golly, how the rains came! And on 2 July the pond silted up with brown slime. Ginny helped me clean it out—and slipped in the slime and fell against a boulder and cracked her ribs. Now she is strapped like a mummy and won't hold still and isn't getting well and everything hurts her—and I am finding out how really useful a wife is when she is well.

(But the party came off prettily anyway. We served sixty-four people—we now have enough picnic tables for a beer garden—Ginny had sewn about a hundred yards of bunting, I made an easel for a full-sized replica of the Declaration of Independence, we had martial and patriotic music over the outdoor sound system, and I set up a bar that could serve anything from a mint julep or a Sazerac cocktail to a Singapore sling. Fine time!—and Ginny ignored her wounds until the next day.

Shamrock is going to have kittens again.

PATRICK HENRY AD

EDITOR 's NOTE: One morning in early April, I fetched the newspaper down to read along with breakfast, in my usual fashion. Robert was still sleeping, and there were standing orders never to disturb him until he woke up. But this day was different.

There was a full page ad by the SANE people, signed by a number of local people we knew . . . I flew in the face of the standing orders, and woke Robert up. "What are we going to do about this?" I asked.

I fixed him breakfast and he read the ad while he ate.

There was no discussion about what we would do. Robert sat down at his typewriter and wrote an answer. When he was finished, I read the full-page answer and suggested that he rewrite it, using the same ideas he had used, but not mentioning the opposition. He did that, and the ad is reprinted in Expanded Universe.

Colorado Springs had two daily papers, one morning and one afternoon. We took the ad to the latter, paid for a full-page ad, and later went to the other and also took another full-page for our ad.

These ads caused a sensation. The telephone kept ringing, the mail was filled with a few pledges, and one or two contained checks to help the cause. We ordered extra copies of the page and sent them out to our mailing list, which was not very large at that time.

With the assistance of a wet paper copier, I made copies and sent the originals in to the President, registered, return receipt requested. I strung up a drying line in the kitchen and suspended the copies to dry. For weeks the kitchen was difficult to get around in. Some people took an ad in the San Francisco Chronicle *and sent us a copy. A few more pledges came in.*

I sat down and did some figuring. Not counting the time we both put into the project, it cost us $5 each to send those pledges to the President. Our backfire had failed, and we never heard a word from President Eisenhower.

The President then signed an executive order suspending all testing without requiring mutual inspection.

Robert had been working on The Man from Mars [Stranger in a Strange Land]. *He set that aside and started a new book—*Starship Troopers. *Both books were directly affected by this try at political action—*Starship Troopers *most directly, and* The Man from Mars *somewhat less* *directly. The two were written in succession; they are quite different stories from what Robert might have written otherwise.*

(Robert's version of this can be found on pages 386 to396 of Expanded Universe.)

April 26, 1958: Robert A. Heinlein to Lurton Blassingame

I don't know when I'll get any more fiction written—maybe never. This effort is taking up all of our time. On the other hand, we are spending money on it even faster than we spend money in traveling, so I may be flat broke soon and forced to go back to cash work.

But I refuse to worry about personal aspects of the future. I am convinced in my own mind that the United States is washed up and we will cease to exist inside of five to fifteen years—unless we quickly and drastically pull up our socks, both at home and in foreign policy. This opinion has been growing in my mind for years: I was simply triggered into doing something about it by this pacifist-internationalist-cum-clandestine Communist drive to have us treat atomics and disarmament in exactly the fashion the Kremlin has tried to get us to do for the past twelve years.

I wish some of those starry-eyed internationalists would go take a look at the illiterate, unwashed uncivilized billions whose noses they want to count in a "world state"! And also explain to me how you get a world state of "peace with justice" while dictators, both Red and garden variety, control the "votes" of a billion and a half out of two and a half. Somebody ought to tell them that "politics is the art of the practical." Me, maybe.

Enough, too much—but it is much on my mind. The Patrick Henry League has been getting more response than I expected, much less than is enough to be effective. But we shall persevere.

MISCELLANEOUS

May 15, 1963: Robert A. Heinlein to Lurton Blassingame

Thanks for that full house of checks. Ginny took 'em all. You will be pleased to hear that I bought her another emerald ring, a quite expensive one, which will insure that I go back to work again before too long.

Ginny is about the same and is so beat down from hand-watering her [Colorado Springs house] garden that she doesn't really know whether she is sick or exhausted. After every bath the bucket brigade starts, Ginny bailing, me toting. I have placed four barrels around the garden and there every bit of wash water goes—hands, baths, dishes—

and from these she waters with an old-fashioned watering can. In the meantime, I am digging a drainage ditch all around the house to carry all rainwater (if it ever rains!) from the driveway and the roof to my reservoir pond. I am lining it with concrete tile to keep silt out, so that it will not clog my pump. After that I am going to work out a (very expensive!) underground tank and immersion pump deal to use septic tank water for irrigation. This is no temporary emergency here; this county has doubled in population in ten years—and the area is semi-arid. (Remember matrange on which you hunted antelope.) Things will get worse, not better, and I intend to make us as nearly independent of the water company as possible. No other news. We don't do a damn thing but haul water.

July 5, 1963: Robert A. Heinlein to Lurton Blassingame

. . . and it has slowed up my letter writing; I owe letters to everybody and am just barely managing to answer urgent business mail and send off checks for bills. Yesterday I celebrated the Fourth of July by bringing Ginny home from the hospital. Nothing to do with the mysterious ailment which has plagued her for so very long (which is as bad or worse than ever); this was an operation on her right wrist, orthopedic surgery to correct damage she did to it by endless toting of a heavy watering can when she was trying to save her garden. Yes, she saved the garden and, sure, I have now built a water works which makes us independent of the water company and permits her to water with a pump and a hose—but the damage was done during the month when every drop of water was applied by hand. It got so bad that she could not even sign her name with that hand, so they opened up her wrist and corrected it.

Since she is righthanded to the point that she can hardly hold a fork with her left hand, since her right hand is useless until it heals, and since I am a slow and inefficient housewife, not too much is getting done around here that does not simply have to be done at once—especially as I continue to try to get in as many hours of mechanical work as possible. The Heinlein Water Works is finished to the point where it operates, but I still have endless masonry and carpentry jobs to do before it will be utterly safe from flash floods and landscaped so that it does not look like an abandoned slum-clearance project.

September 3, 1963: Robert A. Heinlein to Peggy Blassingame

I won't send him [Lurton] flowers; his doctor has almost certainly forbidden roughage. I would like to mail him a blonde, but there is some silly regulation about livestock. I suppose the best thing for him to do is to get out of that ulcer-making business. (I would go crazy in it.) But when Count does retire, I, and almost certainly a lot of others, will perforce retire, too.

It might do him some good to come out here and fish for a month—there aren't enough fish in Colorado streams to bother anybody.

In the meantime, he should avoid newspapers, authors, publishers, and editors.

August 23, 1964: Robert A. Heinlein to Lurton Blassingame

[Concerning the arrival of a letter addressed to ' 'Robert A. Heinlein, United States of America."]

The empty envelope herein is for your amusement . . . It was delivered with no delay at all, being postmarked the 9th and reaching me on the 11th, via surface mail. It need not be returned.

POLITICS

June 15, 1964: Robert A. Heinlein to Lurton Blassingame

I am still getting no professional writing done and our household continues to be stirred up night and day by politics. I had intended to take no real part in this campaign other than donation of money, while Ginny devoted practically full time to it. But I find myself in the situation of the old retired fire horse downgraded to pulling a milk wagon—a school bell rings . . . and milk gets scattered all over the street! Last week I found myself, for the first time in a quarter of a century, presiding at apolitical rally—co-opted without warning at the last minute. I must admit that I rather enjoyed it. And I find myself pulled in on many other political chores and devoting perhaps half as much time to it as Ginny does.

EDITOR'S NOTE The preceding fall I had become much taken with politics—a group of us had started a "Gold for Goldwater " campaign. We set up a Colorado Springs headquarters in a donated storefront, and gathered together campaign literature, buttons, and all the trappings.

Six of us agreed to take one day a week at the headquarters, and there were all sorts of meetings and speeches to be given. Robert gave his blessing to my endeavors and I was allowed to spend as much money as 1thought we could afford.

He accompanied me to political dinner parties and other doings, and presently he could no longer stand the political inactivity, so he joined me. His activities were a revelation to me. Instead of simply charging the price for a book, he set up a goldfish bowl, and asked for contributions, getting more out of each customer. He set up a dinner party, at $50 a head, and sold it out. Some bought tickets, and returned those to him to sell again, *and he sold them, sometimes two or three times each, garnering a lot of "Gold" for the campaign.*

The telephone rang constantly, and he could get no copy written. We were fully involved in an already lost campaign. Eventually we recognized that, and made plans to leave for South America after voting on Election Day.

October 2, 1964: Robert A. Heinlein to Lurton Blassingame

We still miss Shamrock but her little golden tomkitten is healthy and full of beans. Now I must run, get dressed, and rush to still another political dinner.

STUFFED OWL

April 15, 1967: Robert A. Heinlein to Lurton Blassingame

Ginny fetched home a stuffed owl and gave it to me. She was almost hysterical from self-panicking, laughing harder than I have seen her laugh since the time in Oct '65 when we were blockaded on a 70 mph freeway in Utah by 5,000 milling sheep. For some years I have used a family cliche concerning useless gifts: "Just what I've always needed—a stuffed owl."

So she gave me one. The cliche dates back to my childhood. Do you remember Hairbreadth Harry, the Beauteous Belinda, and Rudolph Rassendyl the Villyun? Well, one Christmas about forty years ago Belinda gave Harry a smoking jacket that fitted him like socks on a rooster, and he gave her a stuffed owl—to which she said glumly: "Just what I've always needed."

So now I have just what I've always needed, and the stuffed owl (now named "Pallas Athena") is perched facing me just beyond my typewriter.

READER

December 10, 1968: Lurton Blassingame to Robert A. Heinlein

. . . However, not all people love you. I had a call this morning from a frantic mother in Minnesota whose fourteen-year-old son had run away from home for the third time. On his desk she had found your name, care of me. He has read all your books and she thinks he may be out to find you. Before taking off he had gone through his mother's purse and his father's store, so he has about $2,000 on him.

EDITOR's NOTE: We never saw the boy.

VIP

March 20, 1969: Robert A. Heinlein to Lurton Blassingame

This almost fractured me. Our tickets arrived marked "VIP." No fooling. I thought "VIP" was just an idiom—but swelp me, our tickets are so marked. I laughed until I was hoarse.

EDITOR'S NOTE: In early 1969, an invitation came from the Brazilian government to attend a film festival to beheld in Rio de Janeiro. All expenses would be paid by that government—we would be guests. The only payment would be that Robert give a talk.

Robert wrote this as a P.S. to Lurton in a business letter. His talk was given at the theater at the French Embassy.

As I recall, this was the only free trip Robert ever accepted; it even included courtesy of the port—no customs or immigration needed. The return to New York was another matter!

APPRAISAL

November 21, 1968: Robert A. Heinlein to Lurton Blassingame

Did I tell you about the appraisal on my donation of mss., *et al.* to the U of California]? If not, I must—for I am astounded. The appraisal was made by Robert Metzdorf of New York and Connecticut, and the IRS has been fidgeting about the long delay in getting an appraisal. But the university librarian wanted this appraiser and no one else, because of his high prestige and his past successes in making his appraisals stand up in court. So at last Metzdorf had a couple of other jobs out this way and did my small job while he was here.

What he appraised was just the fraction of the total gift which is now actually in the university's library, to wit, about two-thirds of my mss. plus a couple of boxes of foreign editions and some [paperbacks] in English. The valuation he placed on this fraction was $30,230.00—

—and I was flabbergasted.

Sure, Ginny had placed a guesstimate of $25,000-plus on the whole gift—but that was for all mss., plus our entire library, plus several valuable paintings, plus several other things. Since the IRS permits deductions for gifts of chattels only after the physical property is delivered, I had been fretted that the valuation on what I had been able to deliver (some mss. plus a few not-very-valuable books) might be less than the cost of appraisal—i.e., leave me with a net loss in cash and much loss of professional time spent in cataloging and preparing the stuff for the library. I never thought of my old mss. and notes as being worth much—hell, to me they were simply papers that cluttered up my files but which I did not dare throw away for business reasons. As for the foreign editions and paperbacks, for years I have been giving them away to anyone who would take them.

I still expect the IRS to scream about the appraisal. I'm very glad—now—that we got the number one appraiser. If the IRS won't accept it, I now feel safe in taking it to Tax Court.

EDITOR 's NOTE: The IRS did not object to the valuation placed on these papers.

CATS

January 12, 1957: Robert A. Heinlein to Lurton Blassingame

Pixie is dying . . . uremia, too far gone to hope for remission; the vet sent him home to die several days ago. He is not now in pain and still purrs, but he is very weak and becoming more emaciated every day—it's like having a little yellow ghost in the house. When it reaches the stage of pain, I shall have to help him past it and hope that he will at last find the door into summer he has looked for. We are pretty broken up about it ... we have become excessively attached to this little cat. Of course, we knew it had to be when we first got him and I would much rather outlive a pet than have the pet outlive us—we're better equipped to stand it. Nevertheless, it does not make it any easier . . .

March 23, 1959: Robert A. Heinlein to Lurton Blassingame

Polka Dot had her kittens on St. Patrick's Day—like this: Ginny and I had been standing almost heel and toe watches as Pokie has not been at all well during this. About one o'clock in the morning I was up, Ginny had just gone to bed. Pokie comes dragging herself into my study, all cramped up in labor. So I held her paw for about an hour, whereupon she had one tortoiseshell female—Bridey Murphy. For the next three hours she has lots of trouble, so we get her vet out of bed and he comes over. He gave her a shot of pituitary extract; shortly she starts to deliver another one—a black and white male (Blarney Stone); poor little Blarney didn't make it ... hung up in delivery, dead by the time we could get him out, although as lively as could be as he came part way out. And Ginny got her hand terribly bitten (Ginny screamed but didn't let go ... and the cat didn't let go either). About dawn the three of us and Pokie went to the hospital and she had a Caesarean section for the third and last (Shamrock O'Toole, another tri-colored female, a close twin of Bridey). About 8 A.M. we fetched mother and daughters home, Ginny having had only a nap and myself no sleep at all. All three are doing fine now and the kits have doubled in size or more in six days. The thing that impressed me the most about the whole deal was the surgery-aseptic procedure as perfect as that used on humans, utterly different from animal surgery of only twenty years ago.

The Heinleins had many cats over the years; this one is Taffrail Lord Plushbottom, in the early 1980s.

April 10, 1961: Robert A. Heinlein to Lurton Blassingame

Things have been confused and this is late. First we had kittens. Then Shamrock turned out to be the kind of mother who holes up in a tavern while her brats slowly freeze in the car, i.e., she takes vacations from the kittens without warning, as long as twenty-four hours, which finds us, Ginny especially, down on our knees feeding formula to kittens with a doll bottle that holds just an ounce. Then some Icelanders came to town, guests of the State Department, and I, as a member of the Air Power Council, was drafted to entertain them. Whereupon Ginny decided to give a dinner party for all of them, a dinner of some twenty people, at the drop of a hat. Fine time, but it killed three days, what with preparations, cleaning up, and recovering. Then the superintendent of the Naval Academy, a classmate of mine, came to town and we did it all over again—and had a blizzard. During which the wings of Ginny's new greenhouse came down under the snow load. Not much dollar damage and no plants lost, but Ginny was sad and it was quite a nuisance. I had been dubious about the design when I saw it first and had ordered modifications to beef it up, but the mechanics had not done it as yet.

Then the galley proofs on *Stranger in a Strange Land* arrived and that killed three days of the time of each of us; it's a long book. Ginny has just taken them to the post office and I am now writing to you a letter that should have gone days ago.

May 20, 1962: Robert A. Heinlein to Lurton Blassingame

The new kittens are two weeks old and fat and healthy. A hawk or an owl got Ginny's ducks.

April 17, 1964: Robert A. Heinlein to Lurton Blassingame

No more news here, save that Shammie, immediately following the adoption of her latest litter last Sunday, at once went out and set a new crop—so we should have more kittens ca. 17 June. A busy body, that one—thirtyone kittens so far and she has just turned five.

August 16, 1967: Robert A. Heinlein to Lurton Blassingame

Both Ginny and I are temporarily physically debilitated and emotionally depressed; we lost our little tomcat. He has been gone one week now and must be assumed to be dead. It is barely possible that he is out tomcating after some female and living on the land—but it is extremely unlikely. Two or three days, yes—a full week, no. A bobcat, a fox, a raccoon, an automobile. Sure, he was just a cat and we have lost cats many times before. But, for the time being, it hurts and keeps us from sleeping and leaves us emotionally unstable. Ginny continues to work hard, although she is not sleeping at all well—me, I'm so damned short on sleep that I can hardly type and can't concentrate.

PROBLEMS

December 18, 1950: Robert A. Heinlein to Lurton Blassingame

The novelette I planned to write as soon as the Puddin' story (enclosed) for *Senior Prom* was out of the way has been jeopardized by the headlines as it has a historical tie-in which calls for World War III holding off for a little while at least. I am shelving it and will start immediately on the next boys' novel for Scribner's—and I'll write it so that the above point is not material! I will complete it as rapidly as possible because of those same headlines. A purely personal and selfish note in the present turmoil is that I need, somehow, to complete this [Colorado Springs] house as rapidly as possible so that I will be ready for whatever comes. Mrs. Heinlein may be called up at any time; she has already received correspondence about it—and one married female reservist here in town has already been called up ahead of her husband, so that we know the threat is real. I myself must have a minor operation before I can possibly pass the physical examination, but I hope to be able to get around to that before very long. Two of my brothers are now in uniform and the third is likely to be called up soon—and I might as well get ready for anything. In the meantime, I intend to turn out copy and lots of it as long as possible.

April 7, 1951: Robert A. Heinlein to Lurton Blassingame

Just at present any proposed work brings a feeble response. I am in a very rundown condition and have been and may still be on the ragged edge of nervous breakdown. I had purposed spending a couple of months or a bit more supervising the completion of my house, doing some of the work myself as a therapeutic measure, then when finished, taking a look at the war news and making up my mind as to whether I was morally obligated to goat once back into laboratory work rather than continue with writing. Ginny is in reserve; if and when she gets called up, I don't want to be tangled in contracts I can't shuck off—I want to be in research that will help to win the war as quickly as possible and thereby bring her home again. (I myself cannot possibly pass the physical exam; laboratory work is all I'm good for.)

March 1, 1953: Robert A. Heinlein to Lurton Blassingame

. . . We are all well again—even the cat, as I finally got the big black tomcat that had been beating him up. Ginny woke me one morning and said that the black torn was out front. I hurried into robe and slippers, loaded my Remington .380 pistol, and went out. Got him with the first shot, fortunately, as he was moving and I wouldn't have gotten a second. Had him buried and was back in bed in under twenty minutes. A sad task, but Pixie was so crippled up that I don't think he could have survived another beating—and I prefer my own cat to a feral one.

October 8, 1953: Robert A. Heinlein to Lurton Blassingame

I tried to keep the letter factual in tone; if undue emotion has crept into it, you may charge it off (this is private to you) to the fact, among others, that ——— without consulting us, gave us as financial references all around Colorado Springs—and that Ginny was annoyed by telephone calls demanding to know when ——— was going to settle her bills. And other matters better left unsaid.

December 11, 1964: Robert A. Heinlein to Lurton Blassingame

We have a new phone number—UNLISTED—so please write it down here and there. Ginny has wanted this for years to put a stop to fan calls at all hours. I must admit the quiet is welcome.

January 9, 1968: Robert A. Heinlein to Lurton Blassingame

I am returning Art Clarke's article as you asked in your note on the face of it. I take it that Spectorsky's [a *Playboy* editor] request was made to you this time rather than direct to me. He makes this request of me almost every month; I have long since quit answering these little notes. The first one was several years ago and concerned a short story by Fred Brown—quite a good one and I wrote a nice plug for it, which Spec published.

It was a mistake; I should have ignored it. I've been bombarded with similar requests ever since. Quite aside from the time such free work would require, correspondence is the bane of my existence and the major interference with my working time; I've no wish to add to it by writing letters to editors. And it is indeed "free work" that Spec wants; he is soliciting unpaid reviews from well-known writers.

But, hell, I might go along with it if that were all there is to it–*Playboy* is a number one market and it wouldn't hurt me to grease Spec a bit. But here is the trouble: I will not under any circumstances write anything unfavorable about any of my colleagues—and some of the stuff Spec asks me to comment on stinks. This one by Art Clarke is a dilly. But the last request concerned a story by -------. I'm on good terms with ------ and intend to stay that way—but had I written in as ----- asked me to, the letter would have read: "Dear Spec, You should be ashamed to have printed it, and ------ should be ashamed of having written it."

So what else could I do, Lurton? Pick out only the ones I can honestly praise and ignore the others? Or do as I have been doing and never comment on the work of my colleagues?

Robert and Virginia Heinlein with Arthur C. Clarke in Sri Lanka.

CHAPTER XIV *STRANGER*

STRANGER IN A STRANGE LAND

Stranger in a Strange Land
Robert A. Heinlein

Stranger in a Strange Land became one of the most influential novels of our century. Heinlein began sketching out the idea for *Stranger* in 1949, but it took him until 1961 to be satisfied enough to write it.

Valentine Michael Smith is the only survivor of the first expedition to Mars. He is brought up by Martians, knowing nothing of Earth's culture, but well-educated in Martian ways by the ancient and wise race there. Now the second expedition has found him and returned him to Earth. He has never seen another man—or a woman.

He is confined to a hospital at first. But a nurse frees him and takes him to wise old Jubal Harshaw, where he quickly learns and adapts. There he demonstrates Martian powers—making things or people vanish, levitation, transmutation, *etc.* He makes all there his "water brothers" and teaches them to "grok." Then he sets out to bring his message to all, through what seems to be a new religion.

Some object. He is fatally shot. But he has learned on Mars to survive after his body dies, as he proves.

June 20, 1952: Robert A. Heinlein to Lurton Blassingame

I am writing every day but, frankly, the copy stinks. This novel may involve several rewrites, followed by a decent burial.

EDITOR's NOTE: In early 1949, Robert was searching for a theme for *the short story "Gulf, " which he had promised to John Campbell. During the course of the discussions, I suggested to him that it be a story about a human being raised from infancy to maturity by a race of aliens. This notion arrested him, but he thought it an idea which required more room than a short story afforded. However, he went into his study and wrote for some hours—fourteen single-spaced pages, mostly questions to be answered. That was the beginning of* Stranger in a Strange Land.

July 16, 1952: Robert A. Heinlein to Lurton Blassingame

Yes, I am still having trouble with that novel. Trouble is all that I am having—with the story itself and trouble with my surroundings. I have lost almost a month to houseguests, Arthur C. Clarke followed by the [George O.] Smiths—and now we are about to spend a week in Yellowstone and Sun Valley, leaving tomorrow. I could cancel this trip, but there are reasons why it is desirable not to cancel it. Furthermore I hope that a few days away from a constantly ringing phone will help me to straighten out this novel in my mind. (Sometimes I think that everyone in the country passes through Colorado Springs in the summer!) When I get back, I expect to have to go to the hospital for another operation. All in all, entirely too many days this year have been eaten by the locusts. My intentions have been good. I have not been idle—far from it! But I haven't accomplished much.

The story itself is giving me real trouble. I believe that I have dreamed up a really new S-F idea, a hard thing to do these days—but I am having trouble coping with it. The gimmick is "The Man from Mars" in a very literal sense. The first expedition to Mars never comes back. The second expedition, twenty years later, finds that all hands of the first expedition died—except one infant, born on Mars and brought up by Martians. They bring this young man back with them.

This creature is half-human, half-Martian, i.e., his heredity is human, his total environment up to the age of twenty is Martian. He is literally not human, for anthropology has made it quite clear that a man is much more the product of his culture than he is of his genes—or certainly as much. And this Joe wasn't even raised by anthropoid apes; he was raised by Martians. Among other things, he has never heard of sex, has never seen a woman—Martians don't have sex.

He has never felt full earth-normal gravity. Absolutely *everything* about Earth is strange to him—not just its geography and buildings, but its orientations, motives, measures, evaluations. On the other hand, he himself has received the education of a wise and subtle and very advanced—but completely nonhuman—race.

That's the kickoff. From there anything can happen. I have tried several approaches and several developments, none of which I am satisfied with. The point of view affects such a story greatly, of course — universal, first person, third person central character, third person secondary character, first person secondary character narrator—all have their advantages and all have decided drawbacks. A strongly controlling factor is the characteristics and culture of the Martian race —I started out using the Martians in *Red Planet.* I'm not sure that is best, as they tend to make the story static and philosophic. This story runs too much to philosophy at best; if I make the Martians all elder souls it is likely to lie right down and go to sleep. Affecting the story almost as much is the sort of culture Earth has developed by the time the story opens. After all that comes the matter of how to manipulate the selected elements for maximum drama. And I'm not pleased with any plotting I've done so far. I've messed up quite a lot of paper, have one long start I'll probably throw away and a stack of notes so high.

If this thing doesn't jell before long I had better abandon it, much as that goes against my personal work rules. I do have about three cops-and-robbers jobs which I can do, one a parallel-worlds yarn and the other two conventional space opera. I don't want to do them; I want to do a *big* story. But perhaps I should emulate Clarence Buddington Kell and and give the customers what they are used to and will buy, rather than try to surprise them.

July 18, 1952: Lurton Blassingame to Robert A. Heinlein

The book idea sounds tremendous, but I can well understand why you would find yourself in difficulties. Put it aside, work on something else, return, and find a new perspective.

June 10, 1953: Robert A. Heinlein to Lurton Blassingame

. . . Unfortunately, I cannot report that I have cracked the novel . . .

The novel is really giving me a lot of trouble. This is the one that I told you about long ago, I believe—a Man-from-Mars job, infant survivor of first expedition to Mars is fetched back by second expedition as a young adult, never having seen a human being in his life, most especially never having seen a woman or heard of sex. He has been raised by Martians, is educated and sophisticated by Martian standards, but is totally ignorant of Earth. What impact do Earth culture and conditions have on him? What impact does he have on Earth culture? How can all this be converted into a certain amount of cops-and-robbers and boy-meets-girl without bogging down into nothing but philosophical speculation? Contrariwise, what amount of philosophizing does it need to keep it from being a space opera with cardboard characters?

I got so bogged down on it last week that I had decided to shelve it for a year or so, when Stan Mullen [a sciencefiction author and personal friend] gave me a fight talk and quite a lot of help. Now I am continuing to try to sweat it through. When I get through I will either have nothing at all, or I'll have a major novel. I rather doubt I that I will have a pulp serial; it doesn't seem to be that sort of a story. I will continue to sweat on it and you won't get anything else from me for quite a while.

January 13, 1955: Robert A. Heinlein to Lurton Blassingame

I am now on page 68 of the draft of *A Martian Named Smith,* which will be book length and adult—i.e., more s-x and profanity than is acceptable in juveniles. I cannot now estimate date of finish-draft as there are some plot kinks I am not yet sure about.

February 23, 1955: Robert A. Heinlein to Lurton Blassingame

I am sorry to say the novel aborted last week—two months and 54,000 words of ms. wasted. Ginny says that it cannot be salvaged and I necessarily use her as a touchstone. Still worse, I suspect that she is right; I was never truly happy with it, despite a strong and novel theme. I am, of course, rather down about it, but I have started working on another one and hope to begin a draft in a day or two.

March 29, 1960: Robert A. Heinlein to Lurton Blassingame

I finished a draft a couple of days ago of the novel I have been writing and I am still groggy. It is very long (800 pages in its uncut form) and about all I can say about it now is that it is not science fiction and is nothing like anything I've turned out before. I intend to work on it all I possibly can until we leave, then have it smooth-typed while we are out of the country.

I am utterly exhausted from sixty-three days chained to this machine, twelve to fourteen hours a day. Now I must rest up in preparation for a physically arduous trip . . . while accomplishing a month of chores in two weeks, studying Russian history, politics, and geography so that I will understand some of what I see, and doing my damndest to cut about a third out of this new story. In the meantime, Shamrock O'Toole is about to have kittens any moment—the period is 60 to 65 days and today is her 62nd; she looks like a football resting on toothpicks and complains bitterly about the unfairness of it all. I'll send you a kitten by air express timed so that you can't send it back. Maybe four kittens.

October 10, 1960: Robert A. Heinlein to Lurton Blassingame

I assume that you have sent *The Man from Mars* to Putnam, since they are entitled to first look. I have on hand, should we ever need it, a clean, sharp carbon of this ms. on the same heavy white bond. I am aware of the commercial difficulties in this ms., those which you pointed out—but, if it *does* get published, it might sell lots of copies. (It certainly has no more strikes against its success than did *Ulysses, Lady Chatterley's Lover, Elmer Gantry,* or *Tropic of Cancer*—each at the time it was published.)

The Man from Mars is an attempt on my part to break loose from a straitjacket, one of my own devising. I am tired of being known as a "leading writer of children's books" and nothing else. True, those juveniles have paid well—car, house, and chattels all free and clear, much travel, money in the bank and a fairish amount in stocks, plus prospect of future royalties—I certainly shouldn't kick and I am not kicking . . . but, like the too-successful whore: "Them stairs is killing me!"

I first became aware of just how thoroughly I had boxed myself in when editors of my soi disant adult books started asking me to trim them down to suit my juvenile market. At that time I had to comply. But now I would like to find out if I can write about adult matters *for adults,* and get such writing published.

However, I have no desire to write "mainstream" stories such as *The Catcher in the Rye, By Love Possessed,Pryton Place, The Man in the Grey Flannel Suit, Darkittxs at Noon,* or *On the Road.* Whether these books are good or bad, they each represent a type which has been written more than enough; there is no point in my adding more to such categories—I want to do my own stuff, my own way.

Perhaps I will flop at it. I don't know. But such successful I have had has come from being original, not from writing "safe" stuff—in pulps, in movies, in slicks, in juveniles. In pulp SF I moved at once to the top of the field by writing about sociology, sex, politics, and religion at a time (1939) when those subjects were all taboo. Later I cracked the slicks with science fiction when it was taken for granted that SF was pulp and nothing but pulp. You will recall that my first juvenile was considered an experiment by the publisher—and a rather risky one.

I have never written "what was being written"—nor do I want to do so now. Oh, I suppose that, if it became financially necessary, I could imitate my own earlier work and do it well enough to sell. But I don't want to. I hope this new and different book sells. But, whether it does or not, I want my next book to be still different—neither an imitation of *The Man from Mars,* nor a careful "mixture as before" in imitation of my juveniles and my quasi-juveniles published as soi disant adult SF books. I've gota lot of things I'd like to write about;

none of them fits this pattern.

October 14, 1960: Lurton Blassingame to Robert A. Heinlein

Dear Water-Brother,

I greatly admire your courage and also your intellectual virility that enables you to open up new areas of the literary globe.

October 21, 1960: Robert A. Heinlein to Lurton Blassingame

In the first place, I think Putnam's offer is one of the most generous I have ever seen; it is all loaded in my favor. Will you please tell them so?

Cutting can always be done, even though there is al· ways the chance of literary anemia therefrom. But the changes required are another matter—not because I don't wish to make them . . . but because I don't see *how* to make them. This story is Cabellesque satire on religion and sex, it is *not* science fiction by any stretch of the imagination. If I cut out religion and sex, I am very much afraid that I will end with a nonalcoholic martini.

I know the story is shocking—and I know of a dozen places where I could make the sex a little less overt, a bit more offstage, by changing only a few words. (Such as: "Hell, she didn't even have the homegrown fig leaf!")

(Slightly less flavor, too; but if we must, we must.)

But I don't see how to take out the sex and religion. If I do, there isn't any story left.

This story is supposed to be a completely freewheeling look at contemporary human culture from the nonhuman viewpoint of the Man from Mars (in the sense of the philosophical cliche). Under it, I take nothing for granted and am free to lambaste anything from the Girl Scouts and Mother's Apple Pie to the idea of patriotism. No sacred cows of any sort, no bows and graceful compliments to the royal box —that is the whole idea of the framework.

But, in addition to a double dozen of minor satirical slants, the two major things which I am attacking are the two biggest, fattest sacred cows of all, the two that every writer is supposed to give at least lip service to: the implicit assumptions of our Western culture concerning religion and concerning sex.

Concerning religion, our primary Western cultural assumption is the notion of a personal God. You are permitted to argue every aspect of religion but *that* one. If you do, you are a double-plus ungood crime-thinker.

Concerning sex, our primary cultural assumption is that monogamy is the only acceptable pattern. A writer is permitted to write endlessly about rape, incest, adultery, and major perversion . . . provided he suggests that all of these things are always sinful or at least a social mistake—and must be paid for, either publicly or in remorse. (The thing the censors had against Lady Chatterley and her lover were not their rather tedious monosyllables, but the fact that they *liked* adultery—and got away with it—and lived happily ever after.) The whole deal is something like Communist "criticism" . . . anything and any comrade may be criticized (at least theoretically) under Communism provided you do not criticize the basic Marxist assumptions.

So .. . using the freedom of the mythical man from Mars .. . I have undertaken to criticize and examine disrespectfully the two untouchables: monotheism and monogamy.

My book says: a personal God is unprovable, most unlikely, and *all* contemporary theology is superstitious twaddle insulting to a mature mind. But atheism and "scientific humanism" are the same sort of piffle in mirror image, and just as repugnant. Agnosticism is intellectually more acceptable but only in that it pleads ignorance, utter intellectual bankruptcy, and gives up. All the other religions, elsewhere and in the past, whether monotheistic, polytheistic, or other, are just as silly, and the very notion of "worship" is intellectually on all fours with a jungle savage's appeasing of Mumbo Jumbo. (In passing, I note that Christianity is a polytheism, not a monotheism as claimed—the rabbis are right on that point—and that its most holy ceremony is ritualistic cannibalism, right straight out of the smoky caves of our dim past. They ought to lynch me.)

But I don't offer a solution because there isn't any, not to an intellectually honest man. That pantheistic, mystical "Thou art God!" chorus that runs through the book is not offered as a creed but as an existentialist assumption of personal responsibility, devoid of all godding. It says, "Don't appeal for mercy to God the Father up in the sky, little man, because he's not at home and never was at home, and couldn't care less. What you do with yourself, whether you are happy or unhappy—live or die—is strictly your business and the universe doesn't care. In fact you may *be* the universe and the only cause of all your troubles. But, at best, the most you can hope for is comradeship with comrades no more divine (or just as divine) as you are. So quit sniveling and face up to it—"Thou art God!"

Concerning sex, my book says: sex is a hell of a lot of fun, not shameful in any aspect, and not a bit sacred. Monogamy is merely a social pattern useful to certain structures of society—but it is strictly a pragmatic matter, unconnected with sin .. . and a myriad other patterns are possible and some of them can be, under appropriate circumstances, both more efficient and more happy-making. In fact, monogamy's sole virtue is that it provides a formula defining who has to support the offspring . . . and if another formula takes care of that practical aspect, it is seven-to-two that it will probably work better for humans, who usually are unhappy as hell if they try to practice monogamy by the written rules.

The question now is not whether the ideas above are true, or just twaddle—the question is whether or not there will be any book left if I cut them out. I hardly think there will be. Not even the mild thread of action-adventure, because all of the action is instigated *by these heretical ideas.* All of it.

Mr. Cady's wish that I eliminate the first "miracle," the disappearances on pp. 123-124, causes almost as much literary difficulty. Certainly, I can rewrite that scene, exactly as he suggested .. . but where does that leave me? That scene establishes all the other miracles in the story, of which there are dozens. Now I will stipulate that "miracles" are bad copy—but if I eliminate them, I must throw away the last 700 pages of the ms.—i.e., write an entirely different story. Miracles are the "convincer" throughout. Without them the Man from Mars cannot recruit Harshaw, Ben, Patty, Dr. Nelson, BOI even Jill—nobody! No story.

(I thought I had picked a comparatively slide-down miracle, in that I picked one which has a theoretical mathematical inherent possibility and then established its rationale later in Harshaw's study. But I'm afraid this one is like atomic power: no one but professional dreamers could believe in it until it happened. I might add that if I had trapped out that miracle with fake electronic gadgetry I could have "disappeared" an elephant without a squawk.)

All I can see to do now is to accept Mr. Cady's most kind offer to hold off six months while we see if some other publisher will take it without changes, or with changes I think I can make.

But I shan't be surprised if nobody wants it. For the first time in my life I indulged in the luxury of writing without one eye on the taboos, the market, etc, I will be unsurprised and only moderately unhappy if it turns out that the result is unsalable.

If it can't be sold more or less as it is, then I will make a mighty effort to satisfy Mr. Cady's requirements. I don't see how, but I will certainly try. Probably I would then make a trip to New York to have one or several story conferences with him, if he will spare me the time, since he must have some idea of how he thinks this story can be salvaged—and I'm afraid that I don't.

The contract offered is gratifyingly satisfactory. But I want one change. I won't take one-half on signing, one-half on approval of ms.; they must delay the entire advance until I submit an approved manuscript. It is unfair to them to tie up $1,500 in a story which may turn out to be unpublishable. I don't care if this is the practice of the trade and that lots of authors do it; I disagree with the guild on this and think that it is a greedy habit that writers should forgo if they ever expect to be treated like business men and not children.

Please extend my warm thanks to Mr. Cady for his care and thoughtfulness. He must be a number one person—

I look forward to meeting him someday.

October 31, 1960: Robert A. Heinlein to Lurton Blassingame

I have thought about your suggested changes in *The Man from Mars.* I see your point in each case and do not object to making the changes ... but it seems to me that I should leave the present form untouched until I start to revise and cut to suit the ideas of some particular publisher. If I do it for Putnam's, then the horrendous job of meeting Mr. Cady's [of Putnam] requirements will automatically include all the changes you mention—in fact, most of the book will be changed beyond recognition. But I still have a faint hope that some publisher will risk it without such drastic changes and cutting.

December 4, 1960: Robert A. Heinlein to Lurton Blassingame

Lurton, I do not think I have told you what a wonderful job I think you have done in placing this ms. I wrote the thing with my eye intentionally not on the market. For twenty years I have always had one eye on the market with the other on the copy in this mill (yes, even when I disagreed with editors or producers). But I knew that I could never get away from slick hack work, slanted at a market, unless I cut loose and ignored the market . . . and I did want to write at least one story in which I spoke freely, ignoring the length, taboos, *etc.*

When I finished it and reread it, I did not see how in hell you could ever sell it, and neither did Ginny. But you did. Thank you.

If this one is successful, I may try to write some more, freewheeling stories. If it flops, perhaps I will go back to doing the sort of thing I know how to tailor to the market.

January 27, 1961: Robert A. Heinlein to Lurton Blassingame

.. . I told you about a week ago that I had finished the basic cutting on *Man from Mars.* In the meantime, I have had a squad of high school girls count the manuscript, word by word, and totted up the results on an adding machine. The manuscript is now 160,083 words—and I am tempted to type those excess eighty-three words on a postcard ...

I am a bit disappointed as my estimates as I went along had led me to believe that I would finish up at around 155.000 words and then I could even sweat off most or all of another 5,000 words and turn it over to Putnam's at 150.000, which I know would please them better. But I don't see any possibility of that now; the story is now as tight as a wedge in a green stump and, short of completely recasting it and rewriting it, I can't get it much tighter. I have rewritten and cut drastically in the middle part where Mr. Minton [at Putnam's] felt it was slow, and I have cut every word, every sentence, every paragraph which I felt could be spared in the beginning and the ending. As it is, it is cut too much in parts—the style is rather "telegraphese," somewhat jerky—and I could very handily use a couple of thousand words of "lubrication," words put back in to make the style more graceful and readable.

Stranger in a Strange Land won the Hugo Award for Best Novel of 1962,
given by the World Science Fiction Convention in Chicago.

The truth is that it is the most complex story I have ever written, a full biography from birth to death, with the most complex plot and with the largest number of fully drawn characters. It needs to be told at the length of *Anthony Adverse* (which ran 575,000 words!): I am surprised that I have managed to sweat it down to 160,000.

My typist is now completing the third quarter of the ms. She is able to work for me only evenings and weekends; if her health holds up, I expect that she will finish about 12 to 15 February. In the meantime, I will work on further cutting and revision and should be able to eliminate a few words—more than a thousand but less than five thousand. If my typist finishes on time I will expect to deliver the manuscript to you by Monday the20th of February (I doubt if you will want to reread it, but you may want to see how I have revised the sex scene that you were bothered about). That will give Putnam's in excess of three weeks more margin on production time in order to publish on or before the Science Fiction Convention in Seattle 2-4 September 1961. Or they can, if they wish, use the three weeks to read it and bung it back to me for revision of anything they don't like —and still keep their production schedule. I can't do extensive cutting in that time but I can certainly revise a scene or two, if needed.

March 17, 1961: Robert A. Heinlein to Lurton Blassingame

I've just been talking to Mr. Cady at Putnam's. He tells me that Doubleday wants to issue my Sex and Jesus book as a SF book club choice and as an alternate for some other non-SF book club. Little as I like the Doubleday SF book club, I enthusiastically okayed this plan as it makes almost certain that Putnam's will make their nut and a bit of profit even if the trade edition doesn't do very well—which has been my principal worry. However, Mr. Cady seems to think that these book club sales will materially enhance the trade book sales—also, he teems to have great confidence in the book (more than I have)—I hope he's right.

This change in plans will result, he tells me, in the book being sold by Doubleday as their June offering, with trade book publication as soon as possible, probably early July.

The final title will be set on Monday afternoon (Cadywill phone me) and, Lurton, you are invited and urged to suggest titles—direct to him is simplest. (I assume that this letter will reach you in the early Monday mail.) The titles now in the running are:

The Heretic, The Sound of His Wings (which has an SF tie-in through my "Future History" chart without being tagged as "science fiction" in the minds of the general public. All of these titles have been picked to permit the book to be sold as a mainstream novel, "Philosophical Fantasy" or some such.)

A Sparrow Falls
Born Unto Trouble (Job 5:7)
That Forbidden Tree (Milton)
Of Good and Evil (Genesis 2:17)

EDITOR'S NOTE: At this date, no one recalls just who came up with the Stranger in a Strange Land *title.*

CHAPTER XV ECHOES FROM *STRANGER*

EDITOR's NOTE: Putnam 's sales on Stranger *were not very good during the first year after publication. It went immediately into the book club edition, a two-year contract, and there was a second two-year book club contract. In the second year following publication, it was out in a paperback edition from Avon. Sales went from humdrum to medium to spectacular. This book turned out to be a "sleeper." Only word-of-mouth advertising could have accounted for this. At this time, it has been in trade edition for many years, still selling enough copies to make it worthwhile for the publisher to keep it in print. And it still sells merrily in the paperback edition, which is now with Ace. It is currently in the sixty-fifth paperback printing.The Doubleday Science Fiction Book Club recently sent a request for another reprinting under their auspices.*

BIRTHPLACE
Robert Heinlein
DEAN OF
SCIENCE-FICTIO
WRITERS

Cults sprang up around *Stranger in a Strange Land, and* Heinlein himself was considered to be a spiritual guru.

October 9, 1966: Robert A. Heinlein to Lurton Blassingame

Herewith is ———'s letter to you re dramatizing *Stranger*. I have no idea what is proper and reasonable in this matter and will continue to leave it entirely up to your judgment. But I'm beginning to think that additional rights to *Stranger,* such as stage, TV, and movies, might someday be worth something—possibly through Ned Brown, possibly through other channels. The fan mail on this book has been steadily increasing instead of decreasing and it clearly is enjoying quite a lot of word-of-mouth advertising. I recently learned that it was considered the "New Testament"—and compulsory reading—of a far-out cult called "Kerista." (Keemf!) I don't know exactly what "Kerista" is, but its L.A. chapter offered me a $100 fee to speak. (I turned them down.) And just this past week I was amazed to discover a full-page and very laudatory review of *Stranger* in (swelp me!) a slick nudist magazine—with the review featured on the cover . . . And there is an organization in the mountain states called "Serendipity, Inc.," which has as its serious purpose the granting of scholarships—but which has taken over "water sharing" and other phrases from the book as lodge slogans, sorta. Or something. And there is this new magazine of criticism, *GROK*—I have not seen it yet but it is advertised in the *Village Voice.* And almost daily I am getting letters from people who insist on looking at me as some sort of a spiritual adviser. (I fight shy of them!) All in all, the ripples are spreading amazingly—and Cady may be right in thinking that the book could be exploited in other media. (I'll settle for cash at the bedside; I want no part of the cults.)

November 6, 1966: Robert A. Heinlein to Lurton Blassingame

I think I mentioned to you that the Esalen Institute wants me to lead a seminar late in June on "Religion in the Space Age," along with Alan Watts, the Zen Buddhist writer, and an Episcopalian priest. It takes just one weekend, and the place (Big Sur) is near here, and the fee ($500) is satisfactory. Nevertheless I probably will not accept, as I do not see how I could take part without mortally offending both the priest and the Zen Buddhist. I'll negotiate it directly by telephone to the director, as I am reluctant to state my real misgivings bluntly in a letter.

December 22, 1966: Lurton Blassingame to Virginia Heinlein

. . . and to receive the *Grok* buttons. Might be news release to give additional stimulus to book.

April 15, 1967: Robert A. Heinlein to Lurton Blassingame

More about *Stranger*—

My brother Rex queried the shopkeeper from whom he had purchased several sorts of *Stranger* buttons, was told: "There are about a dozen different suppliers." He went on to say that one of them was a girl who was working her way through college making these buttons (no doubt other sorts than *Stranger* buttons).

This afternoon (now Sunday evening) a sculptor, ——— of Los Gatos, called on us—to show us a figure he had just completed in bronze of the death of the Martian named Smith. He asked permission to bring it over at once as he was taking it to his agent in San Francisco in negotiating a commission for an heroic-size crucifixion job for a church. (——— is a successful sculptor, not a starving artist.) But [he] wanted me to see it first.

A young woman who came with him asked me where I had gotten the word *grok*— no, she had not read the book, *had not been able to lay hands on a copy* [my emphasis added] . . . but that she knew what it meant as "everybody uses it now."

January 26, 1967: Lurton Blassingame to Robert A. Heinlein
Checking on *Grok* magazine.

February 28, 1967: Lurton Blassingame to Robert A. Heinlein
In the 2/19 issue of the *New York Times Book Review,* there is an article you may want to see—"Where the Action Is." It mention(s) *Stranger* and *Grok.* Reference seems responsible for stirring Hollywood interest. Another call asking if *Stranger* rights available.

March 14, 1967: Lurton Blassingame to Robert A. Heinlein
Have two issues of *Grok.*

April 28, 1968: Robert A. Heinlein to Lurton Blassingame
I enclose a clipping sent to me from Toronto—please return for my *Stranger* file. "Fair Use" of course—but that book *must* have made a wide impression if a telephone company in Canada makes this use of a neologism from it. (And when I think how Putnam continues to refuse to reissue a hardcover of it, I get so annoyed I need a Miltown. Damn it, they should at least arrange a Grosset and Dunlap reprint; I get regular inquiries about where to buy it in hardcover. He's missing a lot of library sales, too.)

May 23, 1968: Robert A. Heinlein to Lurton Blassingame
Since I sent you that Canadian telephone ad I have run into three more uses of *grok*—one in a short story in *Playboy,* simply as a part of dialog with no explanation, same for a poem, and a report of a shop in Florida: "We Grok Bookshop." Oh, well, while it doesn't pay royalties, it does interest me to see this neologism spread. But the darnedest thing so far is an announcement in the UCLA *Daily Bruin* concerning "Experimental College Classes—Spring 1968" with one course billed as "J. D. Salinger, Robt. Heinlein, Lawrence Ferlinghetti and Other Personal Gurus—"!!! And I'm such a square I don't even know who the third guru is. Nor does Ginny. However, I'm new to the guru business.

January 23, 1967: Robert A. Heinlein to Lurton Blassingame

Did I tell you that [Dr.] Jack Williamson is using *Stranger* as a study text in his class in SF at U of E. New Mexico? Quote: "I'm launching new courses in linguistics and modern grammar and another in the factual literature of science. ... (in my SF class) and we are now reading *Stranger in a Strange Land.* I was a little afraid that some of my students might not be sufficiently sophisticated for it, but the response so far is good—some class members feel that it is more successful than Huxley's *Brave New World,* which we have just finished."

Did I mention in some other letter that Stanford now offers a course in SF? Apparently SF is beginning to be accepted as a respectable genre of serious literature. It is a pleasant feeling—but I have to keep reminding myself that seeing my name in print is nothing; it is seeing it on a check that counts. It is still the clown business; the object is to entertain the cash customer—I shall simply have to try harder than ever.

February 3, 1967: Robert A. Heinlein to Lurton Blassingame

Did I give you the impression that the principal interest in *Stranger* was from teenagers? It may be, but I hope not and do not think so. I might be forced to drink hemlock for "teaching that the worse is the better part and corrupting the youth of the land." *Stranger* is definitely an adult book, and the comments in it on both sex and religion are such that I think it would be imprudent to attempt any sort of publicity which attempts to tie this book with teenagers.

Lurton, I myself am not the least afraid of corrupting the teenagers of this country; it can't be done. They are far more sophisticated, as a group, than are their parents. They take up in junior high school smoking, drinking, fellatio, cunnilingus, and soixante-neuf, and move on to coition, marijuana, and goof balls during senior high school, then get the Pill and join the New Left when they enter college—or *at the very least are exposed to these things at these ages and sometimes earlier.* Plus LSD and other drugs if they wish. Shock them or corrupt them—impossible! If they refrain, it is voluntary, not because they haven't been exposed.

But their parents rarely know this—parents are always certain that it is the wild, beat crowd on the other side of town, not *their* little darlings! So, while I do not think *Stranger* can corrupt any reader, no matter how young—on the contrary I think it is a highly moral book—I think also that it would be impolitic to exploit it as a book for teenagers.

November 17, 1967: Robert A. Heinlein to Lurton Blassingame

I finally heard from the University of Wisconsin . . . This was the bid I heard about through ——— and concerning which I phoned you. I am about to turn it down—regretfully, since Oshkosh is so close by. But what they want me to do is lecture about *Stranger in a Strange Land.* I decided years ago *never* to discuss my own works on a platform . . . and I think the pragmatic reasons behind this decision apply especially strongly to *Stranger.* A writer looks pretty durn silly "explaining" his stories. He said what he had to say in the ms.—or should have. *Stranger* is a fairy tale; if it amuses the reader, he has received what he paid for. If he gets something more out of it, that's a free bonus. But I'm durned if I'll "explain" it.

(I wonder if John Barth ever "explains" *Giles Goat* Boy? If he does, I'll bet he has his forked tongue in both cheeks and intentionally leaves the listener more bemused than ever. I was much impressed and enormously amused by *Giles,* and now I want to obtain and read and keep all his other fictional works—now that I can afford things other than building materials. On the other hand, Earth's fiction is not for Ginny; she lives life in simple declarative sentences with no veiled allusions, and she wants her fiction the same way.)

I am turning down the bid from Cornell; I turned down one yesterday from U of California; and I am turning down as they come in numerous lesser bids mostly from high schools here and there. Quite aside from the nuisance of speaking in public, this is not a year when I want to cope extemporaneously with the questions period which usually follows a platform talk-undeclared wars, race riots, the dropout generation, etc., are all matters I prefer not to deal with orally and in public; I find these matters extremely complex and am not sure of the wisdom of my opinions.

But I did find it expedient to accept an invitation for March 30 for the Monterey Bay Area Libraries Book Festival; librarians are a special category. I feel that I have lo do it once, for the local libraries—then next time I can point out that I already have, and sorry, but this year I'm tied up. I waived their fee, however, as I prefer doing it free to accepting a small fee ($50)—so that I can continue to tell others that sure, I speak in public—but I'm a pro and my fees are horrendously high.

MANSON CASE

January 7, 1970: Virginia Heinlein to Lurton Blassingame

Some weeks ago, a fan letter came in from the jail in Independence, California. In a burst of generosity, Robert tried to do something about this girl who'd written him. It turned out that she was one of the Manson family. So if we're knifed in our beds like Sharon Tate, it's because of three letters from members of the family.

Just tell the police. I'm leaving these notices everywhere I can, in hopes of preventing anything from happening.

PLAYBOY INTERVIEW

January 16, 1970: Virginia Heinlein and Robert A. Heinlein to Lurton Blassingame

Will you also please tell Mr. [Hugh] Hefner that the *only* reason Robert agreed to be interviewed was *not publicity* for himself, but the offer of a forum to boost the space program. Publication of this interview in an early issue might have helped. As it is, the space program is in ruins, and Hefner is attempting to make something of what might have been by the use of *Stranger* and the Manson case. We will not go along with this. He has not bought himself a tame rabbit by that contribution to the Ed White Memorial Fund. He can take his [magazine] and stuff it, having first folded it until it is all corners. Under no condition will we make any public statement about the Manson case and *Stranger.* We consider Mr. Hefner's suggestion very much out of line and an invasion of our privacy. It is not a matter of *reluctance* to discuss Robert's work, but a downright refusal to do so, which has been a policy of his for a very long time.

November 10, 1970: Virginia Heinlein to Lurton Blassingame

Believe this if you *can—Stranger* is on the Women's Lib reading list!

May 4, 1971: Lurton Blassingame to Virginia Heinlein

Doesn't think anything can be done about the Valentine Smith company. Wishes they would put their letterhead and all press releases that they're using name "from the character created by Robert A. Heinlein in *Stranger in a Strange Land.*"

EDITOR'S NOTE: In 1971, a fan group that based many of its philosophies on Stranger in a Strange Land *wrote to Heinlein asking permission to use material from the book. Permission was not granted. Later, a member of that group wrote to Heinlein asking why he was unsympathetic to its aims. Here is his reply.*

January 20, 1972: Robert A. Heinlein to a Reader

Facts:

The last time I was present at any organized SF fandom meeting was at Seattle in 1961 plus a very brief appearance at Chicago in 1962 to accept the Hugo for *Stranger*—brief because I showed up at the last minute, having been busy at NASA Houston on some writing for the Gemini program. *Stranger* was published in 1961. If there were any "nests" or such by Labor Day 1962, I was unaware of them. My contact with organized fandom since that day has been zero.

Before 1962 my contact with organized fandom was light. I went several times to meetings of the LASFS [Los Angeles Science Fiction Society] in 1939-40 and went to the convention in 1940 or '41. Check: 1941, at Denver, as I recall now that I was in the east at that time in 1940. After 1940 the next contact that I recall was (I believe) in 1958—a meeting in Newark—then again at Chicago in 1960, to receive a Hugo. I think that sums up the total of my contacts with organized fandom, although I may have forgotten some casual appearance, as the period spans thirty-three years and I kept no records on it. But I am *certain* that my last appearance at a meeting was ten years ago.

Contacts with individuals, fans of SF who may or may not have been part of organized fandom: There have been many of these, by letter, in my home, in other people's homes, or elsewhere. There have been more fan contacts in the past than in recent years, because of pressure of work and loss of time caused by illness. In many cases I do not know whether a stranger I have met (in person or by letter.) is or is not a member of organized fandom. In some cases I've learned it later (too late!) through learning that a private letter of mine has been published in one of those fan magazines, or have found that casual, social remarks have been treated, without my consent or review, as an "interview" and published in a garbled form. . . .

As a result of the above we have become somewhat more cautious in recent years in our social contacts and in the letters we write, especially as the pressure from strangers has become much greater. I have to live behind a locked gate and with an unlisted phone to get any work done at all—and this is a hell of a note as my wife and I are by nature quite gregarious and social. Mrs. Heinlein usually answers and signs all of the mail, which tends to discourage the incipient "pen pals" who would, if allowed, take up all my time and leave none for writing. A rare exception, such as your letter, I answer myself. We necessarily find our social life among people who don't read science fiction.

All of the above adds up to this: There are very, very few people in organized fandom who know anything at all about me in the sense of knowing me personally or in being privy to my private opinions, tastes, or habits. My published works are widespread and anyone can read them. The public facts about my life are in several reference books in most public libraries. But a member of science fiction fandom is most unlikely to know any more about me than you do, and if he claims otherwise, he is almost certainly talking through his hat.

But I am repeatedly amazed at the number of people who claim to be "experts" on me. (One of them even wrote an entire book about me. I have never met him in my life.)

I have never expressed "antagonism" or hostility to "nests" or "water-brotherhoods." This is sheer fabrication. I would like to throw such a lie into the teeth of anyone saying so, if I knew who he was.

On the contrary, a number of "nests" have indeed gotten into contact with me. I have treated them with politeness. I have standing invitations to visit them. I think I am on good terms with every such organization which has taken the trouble to get into touch with me. If you have any specific data to the contrary, I would like to hear it, in detail. (But I have no way to deal with malicious allegations from faceless, nameless strangers.) *Stranger.* It is a work of fiction in parable form. It is not a "put-on" unless you choose to classify *every* work of fiction as such. Who are these persons who allege this? I would like an opportunity to face up to one or more of them ... as this allegation has come back to me often enough to cause me to think that someone has been spreading it systematically and possibly with malice. But the allegation always reaches me at least secondhand and never with the name of the person. Will you tell me where *you* got this allegation? I would like to track down this "Scarlet Pimpernel" and get him to hold still long enough to ask him what he is up to and why.

Now, for some background on *Stranger* and my stories in general: I write for the following reasons—

To support myself and my family;

To entertain my readers;

And, if possible, to cause my readers to *think.*

The first two of these reasons are indispensable, and constitute, together, a commonplace market transaction.

I have always had to work for a living, for myself and now for my dependents, and I come from a poor, country family—root, hog, or die. I have worked at many things, but I discovered, somewhat by accident, that I could produce a salable commodity—entertainment in the form of fiction. I don't know why I have this talent; no other member of my family or relatives seems to have it. But I got into it for a reason that many writers have—it was what I could do at the time, i.e., I have been ill for long periods throughout my life, and writing is something a person can do when he is not physically able to take a 9-to-5 job. (Someday I would like to find time to do an essay on this. The cases range from blind Homer to consumptive R. L. Stevenson and are *much* more numerous than English professors seem to be aware of.)

But if a writer does not entertain his readers, all he is producing is paper dirty on one side. I must always bear in mind that my prospective reader could spend his recreation money on beer rather than on my stories; I have to be aware every minute that I am competing for beer money—and that the customer does not have to buy. If I produced, let us say, potatoes or beef, I could be sure that my product had some value in the market. But a story that the customers do not enjoy reading is worth *nothing*.

So, when anyone asks me why I write, if it is a quick answer, standing up, I simply say, "For money." Any other short answer is dishonest—and any writer who forgets that his prime purpose is to wangle, say 95 cents out of a customer who *need not buy at all* simply does not get published. He is not a writer; he just thinks he is.

(Oh, surely, one hears a lot of crap about "art" and "self-expression," and "duty to mankind"—but when it comes down to the crunch, there your book is, on the newsstands, along with hundreds of others with just as pretty covers—and the customer does not have to buy. If a writer fails to entertain, he fails to put food on the table—and there is no unemployment insurance for freelance writers.)

(Even a wealthy writer has this necessity to be entertaining. Oh, he could indulge in vanity publication at his own expense—but who reads a vanity publication? One's mother, maybe.)

That covers the first two reasons: I write for money because I have a household to support and in order to earn that money I must entertain the reader.

The third reason is more complex. A writer can afford to indulge in it *only* if he clears the first two hurdles. I have written almost every sort of thing—filler paragraphs, motion picture and TV scripts, poetry, technical reports, popular journalistic nonfiction, detective stories, love stories, adventure stories, etc.—and I have been paid for 99% of what I have written.

But most of the categories above bored me. I had enough skill to make them pay but I really did not enjoy the work. I found that what I did enjoy and did best was speculative fiction. I do not think that this is just a happy coincidence; I suspect that, with most people, the work they do best is the work they enjoy.

By the time I wrote *Stranger* I had enough skill in how to entertain a reader and a solid enough commercial market to risk taking a flyer, a fantasy speculation a bit farther out than I had usually done in the past. My agent was not sure of it, neither was my wife, nor my publisher, but I felt sure that I would sell at least well enough that the publisher would not lose money on it—would "make his nut."

I was right; it did catch hold. Its entertainment values were sufficient to carry the parable, even if it was read strictly for entertainment.

But I thought that the parables in it would take hold, too, at least for some readers. They did. Some readers (many, I would say) have told me that they have read this fantasy three, four, five or more times—in which case, it can't be the story line; there is no element of surprise left in the story line in a work of fiction read over and over again; it has to be something more.

Well, what was I trying to *say* in it?

I was asking questions.

I was *not* giving answers. I was trying to shake the reader loose from some preconceptions and induce him to think for himself, along new and fresh lines. In consequence, each reader gets something different out of that book *because he himself supplies the answers.*

If I managed to shake him loose from some prejudice, preconception, or unexamined assumption, that was all I intended to do. A rational human being does not need answers, spoonfed to him on "faith"; he needs questions to worry over—serious ones. The quality of the answers then depends on *him* . . . and he may revise those answers several times in the course of a long life, (hopefully) getting a little closer to the truth each time. But I would never undertake to be a "Prophet," handing out neatly packaged answers to lazy minds.

(For some of the more important unanswered questions in *Stranger* see chapter 33, especially page 344 of the hardcover, the paragraph starting: "All names belong in the hat, Ben.")

Starship Troopers is loaded with unanswered questions, too. Many people rejected that book with a cliche— "fascist," or "militaristic." They can't read or won't read; it is neither. It is a dead serious (but incomplete) inquiry into *why* men fight. Since men *do* fight, it is a question well worth asking.

My latest book, *I Will Fear No Evil,* is even more loaded with serious, unanswered questions—perhaps too laden; the story line sags a little. But the questions are dead serious—because, if they remain unanswered, we wind up dead. It does not affect me personally too much, at least not in this life, as I will probably be dead before the present trends converge in major catastrophe. Nevertheless, I worry about them. I think we are in a real bind . . . and that the answers are not to be found in simplistic "nature communes," nor in "Zero Population Growth," which does not embrace the entire globe.

There may be *no* answers fully satisfactory . . . and even incomplete answers will be very difficult.

I find that I have written an essay to myself rather than a letter. Forgive me—perhaps I have reached the age at which one maunders. But I hope I have convinced you that *Stranger* is dead serious ... as *questions.* Serious, nontrivial questions, on which a man might spend a lifetime. (And I almost have.)

But anyone who takes that book as *answers* is cheating himself. It is an invitation to think—not to believe. Anyone who takes it as a license to screw as he pleases is taking a risk; Mrs. Grundy is not dead. Or any other sharp affront to the contemporary culture done publicly—there are stern warnings in it about the dangers involved. Certainly "Do as thou wilt is the whole of the Law" is correct when looked at properly—in fact, it is a law of nature, not an injunction, nor a permission. But it is necessary to remember that it applies to everyone—including lynch mobs. The Universe is what it is, and it never forgives mistakes—not even ignorant ones ...

AFTERWORD

Before the cut version of *I Will Fear No Evil* was ready for publication, Robert was taken ill. For two years he was laid up with various illnesses and operations. At last, in 1972, he was well enough and very eager to begin writing again.

His next book was *Time Enough for Love.*

In addition to changes in the times and customs, Robert now had a reputation that allowed him to do such books as he preferred to do. It is possible that, at least in part, *Stranger* had had some effects upon the sexual revolution of the sixties and seventies. It was in tune with the moods of the times. So his publishers did not object to the length of *Time Enough for Love,* and one thing I found curious—there was no objection at all to the incest scenes. Not even reviewers mentioned it.

The following two years were mostly taken up with study of advances in physical and biological sciences. How could one write science fiction without keeping up with what was being discovered in those fields? These studies were undertaken for two articles for the *Britannica Compton Yearbook:* "Dirac, Antimatter and You," and "Are you a 'Rare Blood.' "

In 1977, Heinlein organized a major blood drive among science fiction fans.

Another serious illness occurred in 1978. Following his recuperation from that, Robert went to his computer and wrote *The Number of the Beast.* Aside from a very few flags on the copy-edited manuscript, he was asked to cut by 2,000 words (!) out of an estimated 200,000 worth. That was, of course, an easy task.

Expanded Universe followed, at the behest of James Baen. To our surprise, this book generated far more mail than any other book Robert had ever written. For two years, I was tied to the computer answering the fan mail which resulted from its publication.

In 1981, at seventy-four years of age, Robert decided that he would no longer do any of the special little tasks which being a well-known writer entails: no more speeches (even to librarians), no more appearances at conventions—his health would not permit the pressure. He would simply write the books he wanted to write.

So he wrote *Friday,* then *Job, The Cat Who Walks through Walls,* and his final book, *To Sail Beyond the Sunset.* Each of these books differed from anything he had previously done, and some displayed new techniques he had been inventing.

To Sail was published on Robert's 80th birthday in 1987, by special arrangement with his publisher. The only further item Robert wrote was the foreword for Ted Sturgeon's novel *Godbody.* While contract negotiations for *To Sail* were still going on, Robert came down with what was to be his final illness. For almost two years, he hovered between illness and frail health, but finally succumbed on May 8, 1988.

APPENDICES

APPENDIX A

CUTS IN *Red Planet*

[Alice Dalgliesh, the editor at Scribner's, objected to anything that might be construed as having some sexual connotations and also to the use of guns by youngsters, as well as other matters. As a result, Heinlein was forced to make a number of cuts in his original manuscript. Some of these are shown here. Chapter and paragraph numbers refer to *Red Planet* as originally published.]

Between Chapter II, paragraph 13 and Chapter II, middle of paragraph 23:

The second generation trooped out. Phyllis said, "Take the charges out of your gun, Jimmy, and let me practice with it."

"You're too young for a gun."

"Pooh! I can outshoot you." This was very nearly true and not to be borne; Phyllis was two years younger than Jim and female besides. "Girls are just target shooters. If you saw a waterseeker, you'd scream."

"I would, huh? We'll go hunting together and I'll bet you two credits that I score first."

"You haven't got two credits."

"I have, too."

"Then how was it you couldn't lend me a half credit yesterday?"

Phyllis changed the subject. Jim hung up his weapon in his cupboard and locked it. Presently they were back in the living room, to find that their father was home and dinner ready.

Phyllis waited for a lull in grownup talk to say, "Daddy?"

"Yes, Puddin'? What is it?"

"Isn't it about time I had a pistol of my own?"

"Eh? Plenty of time for that later. You keep up your target practice."

"But, look, Daddy—Jim's going away and that means that Ollie can't ever go outside unless you or mother have time to take him. If I had a gun, I could help out."

Mr. Marlowe wrinkled his brow. "You've got a point. You've passed all your tests, haven't you?"

"You know I have!"

"What do you think, my dear? Shall we take Phyllis down to city hall and see if they will license her?"

Before Mrs. Marlowe could answer Doctor MacRae muttered something into his plate. The remark was forceful and probably not polite.

"Eh? What did you say, Doctor?"

"I said," answered MacRae, "that I was going to move to another planet. At least that's what I meant."

"Why? What's wrong with this one? In another twenty years we'll have it fixed up good as new. You'll be able to walk outside without a mask."

"Sir, it is not the natural limitations of this globe that I object to; it is the pantywaist nincompoops who rule it— These ridiculous regulations offend me. That a free citizen should have to go before a committee, hat in hand, and pray for permission to bear arms—fantastic! Arm your daughter, sir, and pay no attention to petty bureaucrats."

Jim's father stirred his coffee. "I'm tempted to. I really don't know why the Company set up such rules in the first place."

"Pure copy-cattism. The swarming beehives back on Earth have similar childish rules; the fat clerks that decide these things cannot imagine any other conditions. This is a frontier community; it should be free of such."

"Mmmm . . . probably you're right, Doctor. Can't say that I disagree with you, but I'm so busy trying to get on with my job that I really don't have time to worry about politics. It's easier to comply than to fight a test case." Jim's father turned to his wife. "If it's all right with you, my dear, could you find time to arrange for a license for Phyllis?"

"Why, yes," she answered doubtfully, "if you really think she's old enough." The doctor muttered .something that combined "Danegeld"

and the "Boston Tea Party" in the same breath. Phyllis answered:
"Sure, I'm old enough, Mother. I'm a better shot than Jimmy."

Jim said, "You're crazy as a spin bug!"

"Mind your manners, Jim," his father cautioned. "We don't speak that way to ladies."
"Was she talking like a lady? I ask you, Dad."
"You are bound to assume that she is one. Drop the matter. What were you saying, Doctor?"
"Eh? Nothing that I should have been saying, I'm sure."

Between Chapter VIII, paragraph 29 and Chapter VIII, paragraph 3:

"Sure." Jim got up. In so doing he woke Willis, who extended his eyes, sized up the situation, and greeted them. Jim picked him up, scratched him, and said, "What time did you come in, you tramp?" then suddenly added, "Hey!"
" 'Hey' what?" asked Frank.
"Well, would you look at *that!"* Jim pointed at the tumbled silks. Frank got up and joined him. "Look at what? Oh—" In the hollow in which Willis had been resting were a dozen small, white spheroids, looking like so many golf balls.

"What do you suppose they are?" asked Jim.

Frank studied them closely. "Jim," he said slowly, "I think you'll just have to face it. Willis isn't a boy; he's a she."

"Huh? Oh, no!"
"Willis good boy," Willis said defensively.

"See for yourself," Frank went on to Jim. "Those are eggs. If Willis didn't lay them, you must have."
Jim looked bewildered, then turned to Willis. "Willis, did you lay those eggs? Did you?"

"Eggs?" said Willis. "What Jim boy say?"

Jim set him down by the nest and pointed. "Did you lay those?"
Willis looked at them, then figuratively shrugged his shoulders and washed his hands of the whole matter. He waddled away. His manner seemed to say that if Jim chose to make a fuss over some eggs or whatever that just happened to show up in the bed, well, that was

Jim's business; Willis would have none of it.

"You won't get anything out of him," Frank commented. "I suppose you realize this makes you a grandfather, sort of."

"Don't be funny!"

"Okay, forget the eggs. When do we eat? I'm starved."

Jiro gave the eggs an accusing glance and got busy on the commissary. While they were eating Gekko came in. They exchanged grave greetings, then the Martian seemed about to settle himself for another long period of silent sociability—when he caught sight of the eggs.

Neither of the boys had ever seen a Martian hurry before, nor show any signs of excitement. Gekko let out a deep snort and left the room at once, to return promptly with as many companions as could crowd into the room. They all talked at once and paid no attention to the boys.

"What goes on here?" asked Frank, as he crowded against a wall and peered through a thicket of legs.

"Blessed if I know."

After a while they calmed down a little. One of the larger Martians gathered up the eggs with exaggerated care and clutched them to him. Another picked up Willis and they all trooped out.

Jim stood hesitantly at the door and watched them disappear.

In place of text between Chapter XIII, paragraph 6 and Chapter XIII, paragraph 17:

"Certainly, certainly," agreed MacRae, "but speaking nonprofessionally, I'd rather see the no-good so-andso hang. Paranoia is a disorder contracted only by those of fundamentally bad character."

"Now, Doctor," protested Rawlings.

"That's my opinion," insisted MacRae, "and I've seen a lot of cases, in and out of hospitals."

Insert to Chapter XIV, paragraph 49:

"Everything about Mars is startling. Another thing: we've never been able to find anything resembling sex on this planet—various sorts of specie conjugation, yes, but no sex. It appears to me that we missed it. I think that all the nymph Martians, the bouncers, are female; all of the adults are male. They change. I use the terms for want of better ones, of course. But if my theory is ...

After the current ending:

Jim took it well. He accepted MacRae's much expurgated explanation and nodded. "I guess if Willis has to hibernate, well, that's that. When they come for him, I won't make any fuss. It was just that Howe and Beecher didn't have any *right* to take him."

"That's the slant, son. But it's right for him to go with the Martians because they know how to take care of him, when he needs it. You saw that when you were with them."

"Yes." Jim added, "Can I visit him?"

"He won't know you. He'll be asleep."

"Well—look, when he wakes up, will he know me?"

MacRae looked grave. He had asked the old one the same question. "Yes," he answered truthfully, "he'll have all his memory intact." He did not give Jim the rest of the answer—that the transition period would last more than forty Earth years.

"Well, that won't be so bad. I'm going to be awfully busy in school right now, anyhow."

"That's the spirit."

Jim looked up Frank and they went to their old room, vacant of womenfolk at the moment. Jim cradled Willis in his arms and told Frank what Doc had told him. Willis listened, but the conversation was apparently over the little Martian's depth; Willis made no comment.

Presently Willis became bored with it and started tosing. The selection was the latest Willis had heard, the tango Frank had presented to Jim: *Quien es la Sefiorita?*

When it was over Frank said, "You know, Willis sounds exactly like a girl when he sings that."

Jim chuckled. *"Quien es la Sefiorita,* Willis?"

Willis managed to look indignant. "Willis fine boy!" she insisted.

APPENDIX B

Postlude to *Podkayne of Mars*—Original Version

[The editor at Putnam's was unhappy with Heinlein's original ending *for Podkayne of Mars.* Heinlein therefore made some changes to satisfy his requirements. In the published version, Podkayne survives; in Heinlein's original, she did not.]

POSTLUDE

I guess I had better finish this.

My sister got right to sleep after I rehearsed her in what we were going to do. I stretched out on the floor but didn't go right to sleep. I'm a worrier, she isn't. I reviewed my plans, trying to make them tighter. Then I slept.

I've got one of those builtin alarm clocks and I woke just when I planned to, an hour before dawn. Any later and there would be too much chance that Jojo might be loose, any curlier and there would be too much time in the dark. The Venus bush is chancy even when you can see well; I didn't want Poddy to step into something sticky, or step on something that would turn and bite her leg off. Nor me, either.

Hut we had to risk the bush, or stay and let old Gruesome kill us at her convenience. The first was a sporting chance; the latter was a dead certainty, even though I had a terrible time convincing Poddy that Mrs. Grew would kill us. Poddy's greatest weakness—the really soft place in her head, she's not too stupid otherwise—is her almost total inability to grasp that some people are as bad as they are. Evil. Poddy never has understood evil. Naughtiness is about as far as her imagination reaches.

But I understand evil, I can get right inside the skull of a person like Mrs. Grew and understand how she thinks.

Perhaps you infer from this that I am evil, or partly so. All right, want to make something of it? Whatever *I* am, I knew Mrs. Grew was evil before we ever left the *Tricorn* . . . when Poddy (and even Girdie!) thought the slob was just too darling for words.

I don't trust a person who laughs when there is nothing to laugh about. Or is good-natured no matter what happens. If it's that perfect, it's an act, a phony. So I watched her ... and cheating at solitaire wasn't the only giveaway.

So between the bush and Mrs. Grew, I chose the bush, both for me and my sister.

Unless the air car was there and we could swipe it. This would be a mixed blessing, as it would mean two of them to cope with, them armed and us not. (I don't count a bomb as an arm, you can't point it at a person's head.)

Before I woke Poddy I took care of that a late pseudo-simian, that "fairy." Vicious little beast. I didn't have a gun. But I didn't really want one at that point; they understand about guns and are hard to hit, they'll dive on you at once.

Instead I had shoe trees in my spare shoes, elastic bands around my spare clothes, and more elastic bands in my pockets, and several two-centimeter steel ball bearings.

Shift two wing nuts, and the long parts of the shoe trees become a steel fork. Add elastic bands and you have a sling shot. And don't laugh at a slingshot; many a sand rat has kept himself fed with only a sling shot. They are silent and you usually get your ammo back.

I aimed almost three times as high as I would at home, to allow for the local gravity, and got it right on the sternum, knocked it off its perch—crushed the skull with my heel and gave it an extra twist for the nasty bite on Poddy's arm. The young one started to whine, so I pushed the carcass over in the corner, somewhat out of sight, and put the cub on it. It shut up. I took care of all this before I woke Poddy because I knew she had sentimental fancies about these "fairies" and I didn't want her jittering and maybe grabbing my elbow. As it was—clean and fast.

She was still snoring, so I slipped off my shoes and made a fast reconnoiter.

Not so good— Our local witch was already up and reaching for her broom; in a few minutes she would be unlocking Jojo if she hadn't already. I didn't have a chance to see if the sky car was outside; I did well not to get caught. I hurried back and woke Poddy.

"Pod!" I whispered. "You awake?"

"Yes."

"Wide awake? You've got to do your act, right now. Make it loud and make it good."

"Check."

"Help me up on the perch. Can your sore arm take it?"

She nodded, slid quickly off the bed and took position at the door, hands ready. I grabbed her hands, bounced to her shoulders, steadied, and she grabbed my calves as I let go her hands—and then I was up on the perch, over the door. I waved her on.

Poddy went running out the door, screaming, "Mrs. Grew! MRS. GREW! Help, help! My brother!" She did make it good.

And came running back in almost at once with Mrs. Grew puffing after her. I landed on Gruesome's shoulders, knocking her to the floor and knocking her gun out of her hand. I twisted and snapped her neck before she could catch her breath.

Pod was right on the ball, I have to give her credit. She had that gun before it stopped sliding. Then she held it, looking dazed.

I took it carefully from her. "Grab your purse. We go, right now! Stick close behind me."

Jojo *was* loose, I had cut it too fine. He was in the living room, looking, I guess, to see what the noise was about. I shot him.

Then I looked for the air car while keeping the gun ready for the driver. No sign of either one—and I didn't know whether to groan or cheer. I was all keyed up to shoot him but maybe he would have shot me first. But a car would have been mighty welcome compared with heading into the bush.

I almost changed my plan at that point and maybe I should have. Kept together, I mean, and headed straight north for the ring road.

It was the gun that decided me. Poddy could protect herself with it—and I would just be darn careful what I stepped on or in. I handed it to her and told her to move slowly and carefully until there was more light—but get going!

She was wobbling the gun around. "But, Brother, I've never shot anybody!"

"Well, you can if you have to."

"I guess so."

"Nothing to it. Just point it at 'em and press the button. Better use both hands. And don't shoot unless you really need to."

"All right."

I smacked her behind. "Now get going. See you later."

And I got going. I looked behind once, but she was already vanished in the smog. I put a little distance between me and the house, just in case, then concentrated on approximating course west.

And I got lost. That's all. I needed that tracker but I had figured I could get along without it and Pod had to have it. I got hopelessly lost. There wasn't breeze enough for me to tell anything by wetting my finger and that polarized light trick for finding the Sun is harder than you would think. Hours after I should have reached the ring road I was still skirting boggy places and open water and trying to keep from being somebody's lunch.

And suddenly there was the most dazzling light possible and I went down flat and stayed there with my eyes buried in my arm and started to count.

I wasn't hurt at all. The blast wave covered me with mud and the noise was pretty rough but I was well outside the real trouble. Maybe half an hour later I was picked up by a cop car.

Certainly, I should have disarmed that bomb. I had intended to, if everything went well; it was just meant to be a "Samson in the Temple" stunt if things turned out dry. A last resort.

Maybe I should have stopped to disarm it as soon as I broke old Gruesome's neck—and maybe Jojo would have caught both of us if I had and him still with a happy-dust hangover. Anyhow I didn't and then I was very busy shooting Jojo and deciding what to do and telling Poddy how to use that gun and getting her started. I didn't think about the bomb until I was several hundred meters from the house—and I certainly didn't want to go back then, even if I could have found it again in the smog, which is doubtful.

But apparently Poddy did just that. Went back to the house, I mean. She was found later that day, about a kilometer from the house, outside the circle of total destruction—but caught by the blast.

With a live baby fairy in her arms—her body had protected it; it doesn't appear to have been hurt at all.

That's why I think she went back to the house. I don't *know* that this baby fairy is the one she called "Ariel." **It** might have been one that she picked up in the bush.

But that doesn't seem at all likely; a wild one would have clawed her and its parents would have torn her to pieces.

I think she intended to save that baby fairy all along and decided not to mention it to me. It is just the kind of sentimental stunt that Poddy would do. She knew I was going to have to kill the adult—and she never said a word against that; Pod could always be sensible when absolutely necessary.

Then in the excitement of breaking out she forgot to grab it, just as I forgot to disarm the bomb after we no I longer needed it. So she went back for it.

And lost the inertial tracker, somehow. At least it wasn't found on her or near her. Between the gun and her purse and the baby fairy and the tracker she must have dropped it in a bog. Must be, because she had plenty of time to go back and still get far away from the house. She should have been ten kilometers away by then, so she must have lost the tracker fairly soon and walked in a circle.

I told Uncle Tom all about it and was ready to tell the Corporation people, Mr. Cunha and so forth, and take my medicine. But Uncle told me to keep my mouth shut. He agreed that I had flubbed it, mighty dry indeed—but so had he—and so had everybody. He was gentle with me. I wish he had hit me.

I'm sorry about Poddy. She gave me some trouble from time to time, with her bossy ways and her illogical ideas— but just the same I'm sorry.

I wish I knew how to cry.

Her little recorder was still in her purse and part of the tape could be read. Doesn't mean much, though; she doesn't tell what she did, she was babbling, sort of:

"—very dark where I'm going. No man is an island, complete in himself. Remember that, Clarkie. Oh, I'm sorry I fubbed it but remember that; it's important. They all have to be cuddled sometimes. My shoulder— Saint Podkayne! Saint Podkayne, are you listening? UnkaTom, Mother, Daddy—is anybody listening? Do listen, please, because this is important. I love—"

It cuts off there. So we don't know whom she loved.

Everybody maybe.

Mr. Cunha made them hold the *Tricorn* and now Uncle Tom and I are on our way again. The baby fairy is still alive and Dr. Torland says it doesn't have radiation sickness. I call it "Ariel" and I guess I'll be taking care of it a long time; they say these fairies live as long as we do. It is taking to shipboard life all right but it gets lonely and has to be held and cuddled or it cries.

APPENDIX C

HEINLEIN RETROSPECTIVEOCTOBER 6, 1988

Trip report—October 30, 1988

On the evening of October 6, 1988, I received on Robert's behalf, the NASA Distinguished Public Service Medal, following a small dinner party given that evening. There were approximately 700 people present for the ceremony, and the presentation was made by Dr. Noel Hinners, Associate Deputy Administrator (Institution) of NASA.

The Description and Criteria of NASA Honor Awards reads: *"NASA Distinguished Public Service Medal (DPSM)* is granted to any individual who is not an employee of the Federal Government or was not an employee during the period in which the service was performed. The award is granted only to individuals whose meritorious contributions produced results which measurably improved, expedited, or clarified administrative procedures, scientific progress, work methods, manufacturing techniques, personnel practices, public information service, and other efforts related to the accomplishment of the mission of NASA."

The citation itself reads:

The National Aeronautics and Space Administration Awards to ROBERT ANSON HEINLEIN the NASA DISTINGUISHED PUBLIC SERVICE MEDAL

In recognition of his meritorious service to the Nation and mankind in advocating and promoting the exploration of space. Through dozens of superbly written novels and essays and his epoch-making movie *Destination Moon,* he helped inspire the Nation to take its first step into space and on to the moon. Even after his death, his books live on as testimony to a man of purpose and vision, a man dedicated to encouraging others to dream, explore, and achieve.

Signed and sealed at Washington, D.C.
this sixth day of October
Nineteen Hundred and Eighty-Eight.
*s*James C. Fletcher
Administrator, NASA.

The medal itself can be described as a sunburst, with a globe in the center, on a ribbon with a wide center strip in navy blue, with two lighter blue stripes on the sides, and a golden strip in the center of the lighter blue. There are two buttonhole ornaments to be worn with civilian dress; one is a copy of the medal, the other a dark blue button, with the gold and light blue used as a sunburst on that background. (I've seen Croix de Guerre holders use those ribbon buttonhole ornaments on their lapels.)

After thanking Dr. Hinners for the honor, I used Robert's "This I Believe" credo for my talk. I had tried to write a speech, then remembered this talk of Robert's and thought it would be appropriate for this occasion. So I sent the record to Ward Botsford in New York, and he put it onto tape for me. Transcribed, it is below. (Ward told me that it was lucky I had not tried to tape it myself, as it might have ruined the only copy in existence, I believe.)

I told the audience how this particular piece of writing had come into being, and that it seemed to me to be appropriate to this occasion, and I had consulted several people about my feeling, and they had said— "Go ahead. It's the perfect thing to do."

THIS I BELIEVE

I am not going to talk about religious beliefs but about matters so obvious that it has gone out of style to mention them. I believe in my neighbors. I know their faults, and I know that their virtues far outweigh their faults.

Take Father Michael down our road a piece. I'm not of his creed, but I know that goodness and charity and lovingkindness shine in his daily actions. I believe in Father Mike. If I'm in trouble, I'll go to him.

My nextdoor neighbor is a veterinary doctor. Doc will get out of bed after a hard day to help a stray cat. No fee—no prospect of a fee—I believe in Doc.

I believe in my townspeople. You can knock on any door in our town saying, "I'm hungry," and you will be fed. Our town is no exception. I've found the same ready charity everywhere. But for the one who says, "To heck with you—I got mine," there are a hundred, a thousand who will say, "Sure, pal, sit down."

I know that despite all warnings against hitchhikers I can step to the highway, thumb for a ride and in a few minutes a car or a truck will stop and someone will say, "Climb in Mac—how far you going?"

I believe in my fellow citizens. Our headlines are splashed with crime yet for every criminal there are 10,000 honest, decent, kindly men. If it were not so, no child would live to grow up. Business could not go on from day to day. Decency is not news. It is buried in the obituaries, but it is a force stronger than crime. I believe in the patient gallantry of nurses and the tedious sacrifices of teachers. I believe in the unseen and unending fight against desperate odds that goes on quietly in almost every home in the land.

I believe in the honest craft of workmen. Take a look around you. There never were enough bosses to checkup on all that work. From Independence Hall to the Grand Coulee Dam, these things were built level and square by craftsmen who were honest in their bones.

I believe that almost all politicians are honest . . . there are hundreds of politicians, low paid or not paid at all doing their level best without thanks or glory to make our system work. If this were not true we would never have gotten past the thirteen colonies.

I believe in Rodger Young. You and I are free today because of endless unnamed heroes from Valley Forge to the Yalu River. I believe in—I am proud to belong to—the United States. Despite shortcomings from lynchings to bad faith in high places, our nation has had the most decent and kindly internal practices and foreign policies to be found anywhere in history.

And finally, I believe in my whole race. Yellow, white, black, red, brown. In the honesty, courage, intelligence, durability, and *goodness* of the overwhelming majority of my brothers and sisters everywhere on this planet. I am proud to be a human being. I believe that we have come this far by the skin of our teeth. That we *always* make it just by the skin of our teeth, but that we will make it. Survive. Endure. I believe that this hairless embryo with the aching, oversize brain case and the opposable thumb, this animal barely up from the apes will *endure.* Will *endure* longer than his home planet—will spread out to the stars and beyond, carrying with him his honesty and his insatiable curiosity, his unlimited courage and his noble essential decency.

This I believe with all my heart.

Robert's talk got a standing ovation. I don't take credit for that; it was *his* speech, his ideas. There were other speakers, too. Jerry Pournelle gave some reminiscences of Robert; Catherine and L. Sprague de Camp did much the same thing. Tom Clancy told how Robert's work had taught him to write. Captain Jon McBride (an astronaut) gave credit to Robert for his early work on spaceflight; Dr. Charles Sheffield told how Robert was not an American writer, but a British one . . . and Tetsu Yano, all the way from Tokyo, talked about his work in translating Robert's work—weeping at the end for Robert's loss.

Then there was a showing *of Destination Moon.*

The entire evening (with the exception of the motion picture) was videotaped, and I am very anxious to obtain a copy. It has been said that if enough people write in to ask how to obtain tapes for their own use, they might be sold by NASA.

Among those present were Robert's oldest friend, Rear Admiral Cal Laning; Rear Admiral and Mrs. J. Galbraith; and Woodie Teague, who came all the way from Colorado Springs. I had all those over to the hotel for a drink afterwards. (And a few others, too.)

The following evening, Eleanor Wood, Jim Baen, and I went out to the Kondo's new home in Columbia, MD for a party. A very nice party, with lots of old friends there. Next day, Eleanor and I went up to NY, and I saw more old friends—took Margo Fischer to lunch on Sunday—she's now 87, I think, and each time I see her, I think to myself it might be the last time.

Spent the rest of the weekend and a couple of days of the following week up in the country with Eleanor, and her kids; the fall colors were on display, and it was lovely.

Arrived home with a kingsized case of jet lag, got Pixel out of the kennel, and now we've settled down for the winter. No rain so far, but I do hope there will be!—we're on water restrictions now, and it could get a lot worse, if we don't get a lot of rain here.

MISCELLANEOUS

(These two items defy classification.)

Tomorrow, The Stars, Doubleday, 1952. This is an anthology, which was put together by someone else, and Robert wrote the preface for it.

Destination Moon, Gregg Press, 1979, edited by David G. Hartwell. The title page says it is by Robert A. Heinlein, with a new introduction by David G. Hartwell. This book contains a novelette titled "Destination Moon," and an article called "Shooting *Destination Moon,"* which originally appeared in *Astounding Science Fiction,* July 1950. It also contains a number of still pictures from *DM,* and photocopies of many newspaper and magazine clippings.

NONFICTION

"Discovery of the Future," Guest of Honor speech at Denver, Colorado, 1941 World Science Fiction Convention. Printed in *Vertex,* issue #1.

About the Author

Robert Anson Heinlein was born in Butler, Missouri, in 1907. A graduate of the U.S. Naval Academy, he was retired, disabled, in 1934. He studied mathematics and physics at the graduate school of the University of Californiaand owned a silver mine before beginning to write science fiction in 1939. In 1947 his first book of fiction, *Rocket Ship Galileo,* was published. His novels include *Double Star* (1956), *Starship Troopers* (1959), *Stranger In a Strange Land* (1961), and *The Moon Is a Harsh Mistress* (1966), all winners of the Hugo Award. Heinlein was guest commentator for the Apollo 11 first lunar landing. In 1975 he received the Grand Master Nebula Award for lifetime achievement. Mr. Heinlein died in 1988.

TIME ENOUGH FOR LOVE

The Lives of the Senior Member of the Howard Families (Woodrow Wilson Smith; Ernest Gibbons; Captain Aaron Sheffield; Lazarus Long; "Happy" Daze; His Serenity Seraphin the Younger, Supreme High Priest of the One God in All His Aspects and Arbiter Below and Above; Proscribed Prisoner No. 83M2742; Mr. Justice Lenox; Corporal Ted Bronson; Dr. Lafe Hubert; and others), Oldest Member of the Human Race. This Account is based principally on the Senior's Own Words as recorded at many times and places and especially at the Howard Rejuvenation Clinic and at the Executive Palace in New Rome on Secundus in Year 2053 After the Great Diaspora (Gregorian Year 4272 of Old Home Terra)-and supplemented by letters and by eyewitness accounts, the whole then arranged, collated, condensed, and (where possible) reconciled with official records and contemporary histories, as directed by the Howard Foundation Trustees and executed by the Howard Archivist Emeritus. The result is of unique historical importance despite the Archivist's decision to leave in blatant falsehoods, self-serving allegations, and many amoral anecdotes not suitable for young persons.

INTRODUCTION On the Writing of History

History has the relation to truth that theology has to religion—i.e., none to speak of.

-L.L.

The Great Diaspora of the Human Race which started more than two millennia ago when the Libby-Sheffield Drive was disclosed, and which continues to this day and shows no sign of slowing, made the writing of history as a single narrative—or even many compatible narratives—impossible. By the twenty-first century (Gregorian) (*Gregorian Terran dates are used throughout, as no other calendar, not even Standard Galactic, is certain to be known to scholars of every planet. Translators should add local dates for clarification. J.F. 45th) on Old Home Terra our Race was capable of doubling its numbers three times each century—given space and raw materials.

The Star Drive gave both. H. sapiens spread through this sector of our Galaxy at many times the speed of light and multiplied like yeast. If doubling had occurred at the twenty-first-century potential, our numbers would now be of the order of $7 \times 10^9 \times 2^{68}$ –a number so large as to defy emotional grasp; it is suited only to computers:

$$7 \times 10^9 \times 2^{68} = 2{,}066{,}035{,}336{,}255{,}469{,}780{,}992{,}000{,}000{,}000.$$

--or more than two thousand million billion trillion people

--or a mass of protein twenty-five million times as great as the entire mass of our race's native planet Sol III, Old Home.

Preposterous.

Let us say that it would be preposterous had not the Great Diaspora taken place, for our race, having reached the potential to double three times each century, had also reached a crisis under which it could not double even once—that knee of the curve in the yeast-growth law in which a population can maintain a precarious stability of zero growth only by killing off its own members fast enough, lest it drown in its own poisons, commit suicide by total war, or stumble into some other form of the Malthusian Final Solution.

But the Human Race has not (we think) increased to that monstrous figure because the base figure for the Diaspora must not be thought of as seven billion but rather as a few million at the opening of the Era, plus the unnumbered, small-but-still-growing hundreds of millions since, who have migrated from Earth and from its colony planets to still more distant places over the last two millennia.

But we are no longer able to make a reasoned guess at the numbers of the Human Race, nor do we have even an approximate count of the colonized planets. The most we can say is that there must be in excess of two thousand colonized planets, in excess of five hundred billion people. The colonized planets may be twice that number, the Human Race could be four times that numerous. Or more.

So even the demographic aspects of historiography have become impossible; data are out of date when we receive them and always incomplete—yet so numerous and so varied in reliability that several hundred humans/computers on my staff keep busy trying to analyze, collate, interpolate and extrapolate, and to weigh them against other data before incorporating them into the records. We attempt to maintain standards of 95 percent in probability of corrected data, 85 percent in pessimistic reliability; our achievement is closer to 89 per cent and 81 percent—and getting worse.

Pioneers care little about sending records to the home office; they are busy staying alive, making babies, and killing off anything in their way. A colony is usually into its fourth generation before *any* data reach this office.

(Nor can it be otherwise. A colonist too interested in statistics becomes a statistic himself—as a corpse. I intend to migrate; once I have done so, I won't care whether this office keeps track of me or not. I have stuck to this essentially useless work for almost a century partly through inducements and partly through genetic disposition—I am a direct-and-reinforced descendant of Andrew Jackson Slipstick Libby himself. But I am descended also from the Senior and have—I think—some of his restless nature. I want to follow the wild geese and see what is happening out there—get married again; leave a dozen descendants on a fresh uncrowded planet, then—possibly—move on. Once I have the Senior's memoirs collated, the Trustees can, in the Senior's ancient idiom, take this job and shove it.)

What sort of man is our Senior, my ancestor and probably yours, and certainly the oldest living human being, the only man who has taken part in the entire pageant of the crisis of the Human Race and its surmounting of crisis through Diaspora?

For surmount it we have. Our race could now lose fifty planets, close ranks, and move on. Our gallant women could replace the casualties in a single generation. Not that it appears likely that this will happen; thus far we have encountered not one race as mean, as nasty, as deadly as our own. A conservative extrapolation indicates that we will reach in numbers that preposterous figure given earlier in a few more generations—and move on out of this Galaxy into others before we finish settling this one. Indeed, reports from farther out indicate that Human intergalactic colony ships are already headed out into the Endless Deeps. These reports are not verified—but the most virile colonies are always a long way from the most populous centers. One may hope.

At best, history is hard to grasp; at worst, it is a lifeless collection of questionable records. It is most alive through the words of eyewitnesses…and we have but one witness whose life spans the twentythree centuries of crisis and Diaspora. The next oldest human being whose age this office has been able to verify is only a little over a thousand years old. Probability theory makes it possible that there is somewhere a person half again that age—but it is both mathematically and historically certain that there is no other human alive today who was born in the twentieth century.* (* When the Howard Families seized the Starship New Frontiers only a few were more than a century and a quarter old; all of that few—save the Senior—are dead, at times and places on record. (I except the strange and possibly mythical case of life-in-death of Elder Mary Sperling.) Despite genetic advantage and access to the longevity therapies known collectively as "the immortality option," the last died in 3003 Gregorian. By the records it would seem that most of them died through refusing further rejuvenation—that being still the second commonest cause of death today. JF.45th)

Some may question whether this "Senior" is the member of the Howard Families born in 1912 and also the "Lazarus Long" who led the Families in their escape from Old Home in 2136, etc.—pointing out that all the ancient methods of identification (fingerprints, retinal patterns, etc.) can now be beaten. True, but those methods were adequate for their time and the Howard Families Foundation had special reason to use them with care; the "Woodrow Wilson Smith" whose birth was registered with the Foundation in 1912 is certainly the "Lazarus Long" of 2136 and 2210. Before those tests ceased to be reliable, they were supplemented by modern unbeatable tests based first on clone transplants and, more lately, on absolute identification of genetic patterns. (It is interesting to note that an impostor showed up about three centuries ago, here on Secundus, and was given a new heart from a cloned pseudobody of the Senior. It killed him.) The Senior whose words are quoted herein has a genetic pattern identical with that of a bit of muscle tissue removed from "Lazarus Long" by Dr. Gordon Hardy in the Starship *New Frontiers* about 2145, and cultured by him for longevity research. Q.E.D

But what sort of man *is* he? You must judge for yourself. In condensing this memoir to manageable length I have omitted many verified historical incidents (the raw data are available to scholars at the Archives)—but I have left in lies and unlikely stories on the assumption that the lies a man tells tell more truth about him—when analyzed—than does "truth."

It is clear that this man is, by standards usual in civilized societies, a barbarian and a rogue.

But it is not for children to judge their parents. The qualities that make him what he is are precisely those needed to stay alive in a jungle—or on a raw frontier. Do not forget your debt to him both genetic and historic.

To understand our historic debt to him it is necessary to review some ancient history—part tradition or myth, and part fact as firmly established as the assassination of Julius Caesar. The Howard Families Foundation was established by the will of Ira Howard, who died in 1873. His will instructed the trustees of the foundation to use his money to "prolong human life." This is fact.

Tradition says that he willed this in anger at his own fate, for he found himself dying *of old age* in his forties—dead at fortyeight, a bachelor without progeny. So none of us carries his genes; his immortality lies only in a name, and in an idea—that death could be thwarted.

At that time death at fortyeight was not unusual. Believe it or not, in those days the average age at death was about thirty-five! But not from senility. Disease, starvation, accident, murder, war, childbirth, and other violences cut down most humans long before senility set in. But a human who passed all these hurdles still could expect death from old age sometime between seventy-five and one hundred. Very few reached one hundred; nevertheless every population group had its tiny minority of "centenarians." There is a legend about "Old Toni Parr" who is supposed to have died in 1635 aged one hundred and fiftytwo years. Whether or not the legend is true, probability analysis of demographic data of that era shows that some individuals must have lived a century and a half. But they were few indeed.

The Foundation started its work as a prescientific breeding experiment, as nothing was then known of genetics: Adults of long-lived stock were encouraged to mate with others like them, money being the inducement.

Unsurprisingly the inducement worked. Equally unsurprisingly this experiment worked, as it was an empirical method used by stockbreeders for centuries before the science of genetics came into being: Breed to reinforce one characteristic, then eliminate the culls.

The Families' Archives do not show how the earliest culls were eliminated; they simply show that some were eliminated from the Families—root and branch, all descendants—for the unforgivable sin of dying of old age too young.

By the Crisis of 2136 all members of the Howard Families had life expectancies in excess of one hundred and fifty years, and some had exceeded that age. The cause of that crisis seems unbelievable—yet all records both from inside and from outside the Families agree on it. The Howard Families were in extreme danger from all other humans simply because they lived so "long." Why this was true is a matter for group psychologists, not for a record-keeper. But it *was* true.

They were seized and concentrated in a prison camp, and were about to be tortured to death in an attempt to wrest from them their "secret" of "eternal youth." Fact—not myth.

Here the Senior comes into the story. Through audacity, a talent for lying convincingly, and what would seem to most people today a childish delight in adventure and intrigue for its own sake, the Senior brought off the greatest jailbreak of all time, stealing a primitive starship and escaping right out of the Solar System with all of the Howard Families (then numbering about 100,000 men, women, and children).

If this seems impossible—so many people and just one ship—remember that the first starships were enormously bigger than the ones we now use. They were self-sustaining artificial planetoids intended to remain in space for many years at speeds below that of light; they *had* to be huge.

The Senior was not the only hero of that Exodus. But in all the varied and sometimes conflicting accounts that have come down to us, he was always the driving force. He was our Moses who led his people out of bondage.

He brought them home again three-quarters of a century later (2210)—but not into bondage. For that date, Year One of the Standard Galactic calendar, marks the opening of the Great Diaspora…caused by extreme population pressure on Old Home Terra, and made possible by two new factors: the Libby-Sheffield Para-Drive as it was known then (not a "drive" in any true sense, but a means of manipulating n-dimensional spaces), and the first (and simplest) of effective longevity techniques: new blood grown in vitro.

The Howard Families caused this to happen simply by escaping. The short-lived humans back on Terra, still convinced that the long-lived families possessed a "secret," set about trying to find it by wide and systematic research, and, as always, research paid off serendipitously, not with the nonexistent "secret" but with something almost as good: a therapy, and eventually a sheaf of therapies, for postponing old age, and for extending vigor, virility, and fertility.

The Great Diaspora was then both necessary and possible.

The Senior's great talent (aside from his ability to lie extemporaneously and convincingly) seems always to have been a rare gift for extrapolating the possibilities of any situation—then twisting it to suit his own purposes. (He calls it: "You have to have a feeling for what makes the frog jump." Psychometrists who have studied him say that he has an extremely high psi talent expressed as "forerunners" and "luck"—but what the Senior has to say about *them* is less polite. As a record-keeper, I refrain from opinion.)

The Senior saw at once that this benison of extended youth, although promised to everyone, would in fact be limited to the powerful and their nepots. The billions of helots could *not* be allowed to live beyond their normal pan; there was no room for them—unless they migrated to the stars, in which case there would be room for each human to live as long as he could manage. How the Senior exploited this is not always clear; he seems to have used several names and many fronts. His key corporations wound up in the hands of this Foundation, then were liquidated to move the Foundation and the Howard Families to Secundus—at his behest, he having saved "the best real estate" for his relatives and descendants. Sixty-eight percent of those then living accepted the challenge of new frontiers.

Our genetic debt to him is both indirect and direct. The indirect debt lies in the fact that migration is a sorting device, a forced Darwinian selection, under which superior stock goes to the stars while culls stay home and die. This is true even for those forcibly transported (as in the twenty-fourth and twenty-fifth centuries), save that the sorting then takes place on the new planet. In a raw frontier weaklings and misfits die; strong stock survives. Even those who migrate voluntarily still go through this second drastic special selection. The Howard Families have been culled in this fashion at least three times.

Our genetic "debt" to the Senior is even easier to prove. Part of it needs only simple arithmetic. If you live anywhere but on Old Home Terra—and you almost certainly do if you read this, in view of the present miserable state of "The Fair Green Hills of Earth"—and can claim even one member of the Howard Families among your ancestors—and most of you can—then you are most probably descended from the Senior.

By the official Families' genealogies this probability is 87.3 percent. You are descended from many other twentieth century members of the Howard Families, too, if you are descended from any of them, but I speak here only of Woodrow Wilson Smith, the Senior. By the Crisis Year 2136 nearly one-tenth of the youngest generation of the Howard Families were descended from the Senior "legitimately"—by which I mean that each linking birth was so recorded in the Families' records and ancestry confirmed by such tests as were available at the time. (Even blood typing was not known when the breeding experiment started, but the culling process made it strongly to a female's advantage not to stray, at least not outside the Families.)

By now the cumulative probability is, as I have said, 87.3 percent if you have *any* Howard ancestor—but if you have a Howard ancestor from a recent generation, your probability climbs toward an effective 100 percent.

But, as a statistician, I have reason to believe (backed by computer analyses of blood types, hair types, eye color, tooth count, enzyme types, and other characteristics responsive to genetic analysis)—strong reason to believe that the Senior has many descendants not recorded in genealogies, both inside and outside the Howard Families.

To put it mildly, he is a shameless old goat whose seed is scattered all through this part of our Galaxy.

Take the years of the Exodus, after he stole the *New Frontiers*. He was not married even once during those years, and ship's records and legends based on memoirs of that time suggest that he was, in an early idiom, a "woman hater," a misogynist.

Perhaps. Biostatistical records (rather than genealogies), when analyzed, suggest that he was not that unapproachable. The computer that analyzed it offered to bet me even money on more than one hundred offspring fathered by him during those years. (I refused the bet; that computer beats me at chess even though I insist on a one-rook advantage.)

I do not find this surprising, in view of the almost pathological emphasis placed on longevity among the Families at that time. The oldest male, if still virile—and he certainty was—would have been subjected to endless temptation, endless opportunity, by females anxious to have offspring of his demonstrated superiority —"superiority" by the only criterion the Howard Families respected. We can assume that marital status would not matter much; all Howard Families marriages were marriages of convenience—Ira Howard's will insured that—and they were rarely for life. The only surprising aspect is that so *few* fertile females managed to trip him when unquestionably so many thousands were willing. But he was always fast on his feet.

As may be—If today I see a man with sandy red hair, a big nose, an easy disarming grin, and a slightly feral look in his gray-green eyes, I always wonder how recently the Senior has passed through that part of the Galaxy. If such a stranger comes close to me, I put my hand on my purse: If he speaks to me, I resolve not to make wagers or promises.

But how did the Senior, himself only a third-generation member of Ira Howard's breeding experiment, manage to live and stay young his first three hundred years *without* artificial rejuvenation?

A mutation, of course—which simply says that we don't know. But in the course of his several rejuvenations we have learned a little about his physical makeup. He has an unusually large heart that beats very slowly. He has only twentyeight teeth, no caries, and seems to be immune to infection. He has never had surgery other than for wounds or for rejuvenation procedures. His reflexes are extremely fast—but appear always to be reasoned, so one may question the correctness of the term "reflex." His eyes have never needed correction either for distance or close work; his hearing range is abnormally high, abnormally low, and is unusually acute throughout his range. His color vision includes indigo. He was born without prepuce, without vermiform appendix—and apparently without a conscience.

I am pleased that he is my ancestor.

Justin Foote the 45th
Chief Archivist, Howard Foundation

PREFACE TO REVISED EDITION

In this abridged popular edition the technical appendix has been published separately in order to make room for an account of the Senior's actions after he left Secundus until his disappearance. An apocryphal and obviously impossible tale of the last events in his life has been included at the insistence of the editor of the original memoir, but it cannot be taken seriously.

Carolyn Briggs
Chief Archivist

Note: My lovely and learned successor in office does not know what she is talking about. With the Senior, the most fantastic is always the most probable.

Justin Foote the 45th
Chief Archivist Emeritus

PRELUDE

I

As the door of the suite dilated, the man seated staring glumly out the window looked around. "Who the hell are you?"

"I am Ira Weatheral of the Johnson Family, Ancestor, Chairman Pro Tem of the Families."

"Took you long enough. Don't call me 'Ancestor.' And why just the Chairman Pro Tem?" the man in the chair growled. "Is the Chairman too damn busy to see me? Don't I rate even *that*?" He made no move to stand, nor did he invite his visitor to sit down.

"Your pardon, Sire. I *am* chief executive for the Families. But it has been customary for some time now—several centuries—for the chief executive to hold the title. 'Chairman Pro Tem'—against the possibility that you might show up and take the gavel."

"Eh? Ridiculous. I haven't presided at a meeting of the Trustees for a thousand years. And 'Sire' is as bad as 'Ancestor'—call me by name. It's been two days since I sent for you. Did you come by the scenic route? Or has the rule that entitles me to the ear of the Chairman been revoked?"

"I am not aware of that rule, Senior; it was probably long before my time—but it is my honor and duty—and pleasure—to wait on you at any time. I will be pleased and honored to call you by name if you will tell me what your name is now. As for the delay—thirty-seven hours since I received your summons—I have spent it studying Ancient English, as I was told that you were not answering to any other language."

The Senior looked slightly sheepish. "It's true I'm not handy with the jabber they speak here—my memory has been playing tricks on me lately. I guess I've been sulky about answering even when I understood. Names—I forget what name I checked in by when I grounded here. Mmm, 'Woodrow Wilson Smith' was my boyhood name. Never used it much. I suppose 'Lazarus Long' is the name I've used oftenest—call me 'Lazarus.'"

"Thank you, Lazarus."

"For what? Don't be so damned formal. You're not a kid, or you wouldn't be Chairman—how old are you? Did you really take the trouble to learn my milk language just to call on me? And in less than two days? Was that from scratch? It takes me at least a week to tack on a new language, another week to smooth out accent."

"I am three hundred and seventy-two standard years old, Lazarus—just under four hundred Earth years. I learned Classic English when I took this job—but as a dead language, to enable me to read old records of the Families in the original. What I did since your summons was to learn to speak and understand it in North American twentieth-century idiom—your 'milk language' as you said—as that is what the linguistic analyzer computed that you were speaking."

"Pretty smart machine. Maybe I am speaking it the way I did as a youngster; they claim that's the one language a brain never forgets. Then I must be talking in a Cornbelt rasp like a rusty saw whereas you're speaking a sort of Texas drawl with an Oxford British overlay. Odd. I suppose the machine picks the version out of its permanents closest to the sample fed into it."

"I believe so, Lazarus, although the techniques involved are not my field. Do you have trouble understanding my accent?'

"Oh, none at all. Your accent is okay; it's closer to educated General American of that time than is the accent I learned as a kid. But I can follow anything from Bluegum to Yorkshire; accent is no problem. It was mighty kind of you to bother. Warming."

"My pleasure. I have a talent for languages; it was not much trouble. I try to be able to speak to each of the Trustees in his native language; I'm used to swotting up a new one quickly."

"So? Nonetheless a courteous thing to do—I've felt like an animal in a zoo with no one to talk to. Those dummies"—Lazarus inclined his head at two rejuvenation technicians, dressed in isolation gear and one-way helmets, and waiting as far from the conversation as the room permitted—"don't know English; I can't talk with them. Oh, the taller one understands a little but not enough for gossip." Lazarus whistled, pointed at the taller. "Hey, you! A chair for the Chairman—chop chop!" His gestures made his meaning clear. The taller technician touched the controls of a chair nearby; it rolled away, wheeled around, and stopped at a comfortable tête-à-tete distance from Lazarus.

Ira Weatheral said thank you-to Lazarus, not to the tech-sat down, then sighed as the chair felt him out and cuddled him. Lazarus said, "Comfortable?"

"Quite."

"Anything to eat or drink? Or smoke? You may have to interpret for me."

"Nothing, thank you. But may I order for you?"

"Not now. They keep me stuffed like a goose—once they forcefed me, damn them. Since we're comfortable, let's get on with the powwow." He suddenly roared, "WHAT THE HELL AM I DOING IN THIS JAIL?"

Weatheral answered quietly, "Not 'jail,' Lazarus. The VIP suite of the Howard Rejuvenation Clinic. New Rome."

"'Jail,' I said. All it lacks is cockroaches. This window—you couldn't break it with a crowbar. That door—it opens to any voice except *mine*.

If I go to the john, one of those dummies is at my elbow. Apparently afraid I'll drown myself in the pot. Hell, I don't even know whether that nurse is a man or a woman—and don't like it either way. I don't need somebody to hold my hand while I go pee-pee! I resent it."

"I'll see what can be worked out, Lazarus. But the technicians are understandably jumpy. A person can get hurt quite easily in any bathroom—and they all know that, if you are hurt, no matter by what mischance, the technician in charge at the time will suffer cruel and unusual punishment. They are volunteers and are drawing high bonuses. But they're jumpy."

"So I figured out. 'Jail.' If this is a rejuvenation suite WHERE'S MY SUICIDE SWITCH?"

"Lazarus—'Death is every man's privilege.'"

"That's what I said! That switch belongs right there; you can see where it has been dismounted. So I'm in jail without trial, with my most basic right taken from me. *Why*? I'm furious, man. Do you realize what danger *you* are in? Never tease an old dog; he might have one bite left. Old as I am, I could break your arms before those dummies could reach us."

"You are welcome to break my arms if it pleases you."

"Huh?" Lazarus Long looked baffled. "No, it's not worth the sweat. They would have you patched up good as new in thirty minutes." He suddenly grinned. "But I could snap your neck, then crush your skull, about as fast. That's one injury beyond the power of rejuvenators."

Weatheral did not stir, did not tense. "I feel sure you could," he said quietly. "But I do not think that you would kill one of your descendants without giving him a chance to parley for his life. You are my remote grandfather, sir, by seven different tracks."

Lazarus chewed his lip and looked unhappy. "Son, I have so many descendants that consanguinity doesn't matter. But you're essentially right. In all my life I have never killed a man unnecessarily. I think." Then he grinned. "But if I don't get my suicide switch back, I could make an exception in your case."

"Lazarus, if you wish, I will have that switch remounted at once. But—'Ten Words'?"

"Uh—" Lazarus looked ungracious. "Okay. 'Ten Words.' Not eleven."

Weatheral hesitated a split second, then counted on his fingers: "I learned your language to explain why we need you."

"Ten by the Rule," Lazarus admitted. "But meaning that you need fifty. Or five hundred. Or five thousand."

"Or none," Weatheral amended. "You can have your switch without giving me *any* chance to explain. I promised."

"Humph!" said Lazarus. "Ira, you old scoundrel, you have me convinced that you really are my kin. You figured that I would not suicide without hearing what you have on your mind—once I knew you had bothered to learn a dead language just to make palaver. All right, talk. You can start by telling me what I'm doing here. I know—I *know*—that I didn't apply for rejuvenation. But I woke up here with the job already half over. So I screamed for the Chairman. Okay, why am I here?"

"May we start further back? You tell me what you were doing in a flophouse in the worst part of Old Town."

"What was I *doing*? I was *dying*. Quietly and decently, like a wornout horse. That is, I was, until your busybodies grabbed me. Can you think of a better place than a flophouse for a man who doesn't want to be disturbed while he's busy with it? If his cot is paid for in advance, they leave a man be. Oh, they stole what little I had, even my shoes. But I expected that—would have done the same myself under the same circumstances. And the sort of people who live in flophouses are almost always kind to those worse off than they are—any of 'em will fetch a drink of water to a sick man. That was the most I wanted—that and to be left alone to close out my account in my own way. Until your busies showed up. Tell me, bow did they find me?'

"How we found you is not the surprising part, Lazarus, but the fact that SecFor—the cops?—Yes, 'cops'—that my cops took so long to identify you, then find you, and pick you up. A section chief lost his job over that. I don't tolerate inefficiency."

"So you busted him. Your business. But why? I reached Secundus from Out-Far, and I didn't think I had left any back trail. Different everything since the last time I was in touch with the Families…as I bought my last rejuvenation on Supreme. Are the Families swapping data with Supreme these days?"

"Heavens, no, Lazarus, we won't even give them a polite word. There is a strong minority among the Trustees who favor rubbing out Supreme, instead of simply maintaining embargo."

"Well…if a nova bomb hit Supreme, I wouldn't mourn more than thirty seconds. But I did have a reason for having the job done there, even though I had to pay high for forced cloning. But that's another story. Son, how did you pick me up?"

"Sir, for the past seventy years there has been a general order out to try to find you, not just here but on every planet where the Families maintain offices. As to how—do you recall a forced inoculation for Reiber's fever at Immigration?"

"Yes. I was annoyed, but it didn't seem worthwhile to make a fuss; I knew I was headed for that flophouse. Ira, I've known that I was dying for quite some time. That was okay; I was ready for it. But I didn't want to do it alone, out in space. Wanted human voices around me, and body odors. Childish of me. But I was pretty far gone by the time I grounded."

"Lazarus, there is no such thing as Reiber's fever. When a man grounds on Secundus and all routine identifications show null, 'Reiber's fever' or some other nonexistent plague is used as an excuse to get a little tissue from him while injecting him with sterile neutral saline. You should never have been allowed to leave the skyport until your genetic pattern was identified."

"So? What do you do when ten thousand immigrants arrive in one ship?"

"Herd them into detention barracks until we've checked them out. But that doesn't happen often today with Old Home Terra in the sorry state it's in. But you, Lazarus, arriving alone in a private yacht worth fifteen to twenty million crowns—"

"Make that 'thirty.'"

"—worth thirty million crowns. How many men in the Galaxy can do that? Of those who can afford it, how many would choose to travel alone? The pattern should have set alarm bells ringing in the minds of all of them. Instead they took your tissue and accepted your statement that you would be staying at the Romulus Hilton and let you go—and no doubt you had another identity before dark."

"No doubt at all," Lazarus agreed. "But your cops have run up the price on a good phony set of ID's. If I hadn’t been too tired to bother, I would have forged my own. Safer. Was that how I was caught? Did you squeeze it out of the paper merchant?"

"No, we never found him. By the way, you might let me know who he is, so that—"

"And I might *not*," Lazarus said sharply. "Not ratting on him was implicit in the bargain. It's nothing to me how many of your rules he breaks. And—who knows?—I might need him again. Certainly someone will need his services, somebody just as anxious to avoid your busies as I was. Ira, no doubt you mean well but I don't like setups where IDs are necessary. I told myself centuries back to stay away from places crowded enough to require them, and mostly I've followed that rule. Should have followed it this time. But I didn't expect to need *any* identification very long. Confoundit, two more days and I would have been dead. I think. How did you catch me?"

"The hard way. Once I knew you were on planet I stirred things up; that section chief wasn't the only unhappy one. But you disappeared in so simple a fashion that you baffled the entire force. My security chief expressed the opinion that you had been killed and your body disposed of. I told him if that were the case, he had better start thinking about offplanet migration."

"Make it march! I want to know how I goofed."

"I would not say that you goofed. Lazarus, since you managed to stay hidden with every cop and stoolie on this globe looking for you. But I felt certain that you had not been killed. Oh, we do have murders on Secundus, especially here in New Rome. But most are the commonplace husband-wife sort: We don't have many for gain since I instituted a policy of making the punishment fit the crime and holding executions in-the Colosseum. In any case I felt certain that a man who had survived more than two millennia would not let himself be killed in some dark alley.

"So I assumed that you were alive, then asked myself, 'If I were Lazarus Long, how would I go about hiding?' I went into deep meditation and thought about it. Then I tried to retrace your steps, so far as we knew them. By the way—"

The Chairman Pro Tem threw back his shoulder cloak, took out a large sealed envelope, handed it to Lazarus. "Here is the item you left in a lockbox at Harriman Trust."

Lazarus accepted it. "It's been opened."

"By me. Prematurely, I admit—but you addressed it to me. I have read it but no one else has. And now I will forget it. Except to say this: I am unsurprised that you left your wealth to the Families but I was touched that you assigned your yacht to the personal use of the Chairman. That's a sweet craft, Lazarus; I lust after it a bit. But not so much that I am anxious to inherit so quickly. But I undertook to explain why we need you—and let myself get sidetracked.?'

"I'm in no rush, Ira. Are you?"

"*Me*? Sir; I have no duties more important than talking with the Senior. Besides, my staff runs this planet more efficiently if I don't supervise them too closely."

Lazarus nodded agreement. "That was always my system the times I let myself get involved. Accept the whole load, then shove the work off on other people as fast as I could pick 'em. Having any trouble with democrats these days?"

"'Democrats'? Oh-you must mean 'egalitarians.' I thought at first you meant the Church of the Holy Democrat.We leave that church alone; they don't meddle. There is an equalitarian movement every few years, certainly, under various names. The Freedom Party, the League of the Oppressed—names don't matter as they all want to turn the rascals out, starting with me; and put their own rascals in. We never bother them; we simply infiltrate, then some night we round up the ringleaders and their families, and by daylight they are headed out as involuntary migrants. Transportees. 'Living on Secundus is a privilege, not a right.'"

"You're quoting me."

"Of course. Your exact words from the contract under which you deeded Secundus to the Foundation. That there was to be no government on this planet other than such rules as the current chairman found necessary to maintain order. We've stuck to our agreement with you, Senior; I am sole boss until the Trustees see fit to replace me."

"That's what I intended," Lazarus agreed. "But Son, it's your pidgin and I'll never touch that gavel again—but I have doubts about the wisdom of getting rid of troublemakers. Every loaf needs yeast. A society that gets rid of all its troublemakers goes downhill. Sheep. Pyramid builders at best, decadent savages at worst. You may be eliminating your creative one-tenth of one percent. Your yeast."

"I'm afraid we are, Senior, and that's one reason why we need you —"

"I said I won't touch that gavel!"

"Will you hear me out, sir? You won't be asked to, even though it is yours by ancient custom if you care to pick it up. But I could use advice—"

"I don't give advice; people never take it."

"Sorry. Perhaps just a chance to talk over my problems with a person more experienced than I am. About these troublemakers— We haven't eliminated them in the old sense; they're still alive, or most of them. Ostracizing a man to another planet is more satisfactory than killing him for the technical crime of treason; it gets rid of him without making his neighbors too indignant. Nor have we wasted him —them—as we are using them to conduct an experiment: All transportees are shipped to the same planet, Felicity. Do you happen to know it?"

"Not by that name."

"I think you would have stumbled on it only by accident, sir; we have kept it out of public records in order to use it as a Botany Bay. It is not as good a planet as the name suggests, but it is a good one, roughly equivalent to Old Home Terra—Earth, I should say—before it was ruined, or much like Secundus when we settled here. It's rough enough to test a man and eliminate weaklings, gentle enough to let a man raise a family if he has the guts to dig in and sweat."

"Sounds like a good place; perhaps you should have hung onto it. Natives?"

"The proto-dominant race are quite fierce savages…if any are still alive. We don't know, we don't even maintain a liaison office there. This native race is neither intelligent enough to be civilized nor tractable enough to be enslaved. Perhaps they would have evolved and made it on their own, but they had the misfortune to encounter H. sapiens before they were ready for him. But that is not the experiment; the transportees are certain to win out over that competition, we do not send them empty-handed. But, Lazarus, these people believe that they can create ideal government by majority rule."

Lazarus snorted.

"Perhaps they *can*, sir," Weatheral persisted. "I don't know that they cannot. That is the experiment."

"Son, are you a fool? Oh, you can't be, the Trustees wouldn't keep you in office. But—How old did you say you are?"

Weatheral answered quietly, "I am nineteen centuries your junior, sir; I will not dispute your opinion on anything. But I do not know through my own experience that this experiment will not work; I have never seen a government of the democratic type, even in the numerous times I have been off planet. I've simply read about them. From what I have read not one has ever been formed from a population all of whom believed in the democratic theory. So I don't know."

"Hmm." Lazarus looked frustrated. "Ira, I was about to shove my own experience with such governments down your throat. But you're right, this is a brand new situation—and we *don't* know. Oh, I have strong opinions, but a thousand reasoned opinions are never equal to one case of diving in and finding out. Galileo proved that and it may be the only certainty we have. Mmm…all the so-called democracies I've ever seen or heard of were either forced on the majority from above or grew up slowly from the plebs discovering that they could vote themselves bread-and-circuses—for a while, until the system broke down. I'm sorry I won't see the outcome of your experiment. I suspect it will be the harshest tyranny imaginable; majority rule gives the ruthless strong man plenty of elbow room to oppress his fellows. But I don't *know*. What's *your* opinion?"

"The computers say—"

"Never mind computers. Ira, the most sophisticated machine the human mind can build has in it the limitations of the human mind. Anyone who thinks otherwise does not understand the Second Law of Thermodynamics. I asked for *your* opinion."

"Sir, I refuse to form an opinion; I lack sufficient data."

"Hrrumph: You're getting old, Son. To get anywhere, or even to live a long time, a man has to guess, and guess right, over and over again, without enough data for a logical answer. You were telling me how you found me."

"Yes, sir. That document, your will, made it clear that you expected to die soon. Then"—Weatheral paused and smiled wryly—"I had to 'guess right without enough data.' It took us two days to find the shop where you bought clothes to lower your apparent status—and to conform to local styles, I think. I suspect that you bought your false ID's right after that."

He paused; Lazarus made no comment;. Weatheral continued: "Another half day to find the shop where you lowered your apparent status much farther, close to bottom—too far perhaps, as the shopkeeper remembered you, both because you paid cash and because you were buying secondhand clothes that were not as good even when new as the ones you were wearing. Oh, he pretended to accept your story about a 'costume party' and kept his mouth shut; his shop is a fence for stolen goods."

"Of course," agreed Lazarus. "I made sure he was on the crook before I bought from him. But you said he stayed zipped?"

"Until we stimulated his memory. A fence is in a difficult position, Lazarus; he has to have a permanent address. This can sometimes force him to be honest."

"Oh, I wasn't blaming dear old Uncle. The fault was mine; I let myself be conspicuous. I was tired, Ira, and feeling my years and let it rush me into doing a sloppy job. Even a hundred years back I would have done a more artistic job. I've always known that it is more difficult to lower your status convincingly than to raise it."

"I don't think you need feel ashamed of the job as a work of art, Senior; you had us baffled for almost three months."

"Son, the world doesn't pay off on a 'good try.' Go ahead"

"Brute force then, Lazarus: That shop is in the worst part of the city; we put a cordon around the area and saturated it, thousands of men. But not for long; you were in the third fleabag we checked. I spotted you myself, I was with one of the raiding parties. Then your genetic pattern confirmed your identity." Ira Weatheral smiled slightly. "But we were pouring new blood into you before the genetic analyzer reported your identity; you were in bad shape, sir."

"I was like hell in bad shape; I was simply dying—and minding my own business, a practice you could emulate. Ira, do you realize what a dirty trick you have done me? A man ought not to have to die twice and I was past the bad part and ready for the finale as easy as falling asleep. Then you butted in. I've never heard of rejuvenation being forced on anyone. If I had suspected that you had changed the rules, I would never have come near this planet. Now I have to go through it again. Either with the suicide switch—and suicide is an idea I've always despised—or the natural way. Which could now take a long time. Is my old blood still around? Stored?"

"I will inquire of the Clinic's Director, sir."

"Humph. That's not an answer, so don't bother to lie. You've put me in a dilemma, Ira. Even though I haven't had the full treatment, I feel better than I've felt for forty years or more-which means either that I must again wait it out for many weary years—or use that switch when my body isn't saying, 'Time to adjourn.' You meddling scoundrel, by what authority—no, you've got the authority. By what ethical principle did you interfere with my death?"

"Because we needed you, sir."

"That's not an ethical reason, just a pragmatic one. The need was not mutual."

"Senior, I have studied your life as thoroughly as the records permit. It seems to me that you often acted pragmatically."

Lazarus grinned. "That's my boy! I was wondering if you would have the gall to try to twist it into some high moral principle, like a damned preacher. I don't trust a man who talks about ethics when he's picking my pocket. But if he's acting in his own self-interest and says so, I have usually been able to work out some way to do business with, him."

"Lazarus, if you will let us complete your rejuvenation, you'll feel like living again. I think you know that; you've been through it before."

"To what end, sir? When I've had more than two thousand years of trying everything? When I've seen so many planets that they blur in my mind? When I've had so many wives I can't remember their names? 'We pray for one last landing on the Globe that gave us birth—' I can't even do that; the lovely green planet I was born on has aged even more than I have; to return to it would be a time for tears, not a happy homecoming. No, Son, despite all rejuvenation there comes a time when the only reasonable thing to do is turn out the lights and go to sleep—and you, damn you, you took It away from me."

"I’m sorry—no, I'm *not* sorry. But I do ask your pardon."

"Well you might get it. But not now. What was this aching reason you needed me? You mentioned some problem other than the troublemakers you transport."

"Yes, although it is not one that would have caused me to interfere with your right to die your own way; I can handle it, one way or another. I think Secundus is becoming both too crowded and too civilized—"

"I'm sure of it, Ira."

"Therefore I think the Families should move again."

"I agree even though I am not interested. As a thumb rule, one can say that any time a planet starts developing cities of more than one million people, it is approaching critical mass. In a century or two it won't be fit to live on. Do you have a planet in mind? Do you think you can get the Trustees to go along? And will the Families follow the Trustees?"

"Yes to the first, maybe to the second, probably No to the third. I have a planet in mind as 'Tertius,' one as good or better than Secundus. I think many of the Trustees would agree with my reasoning but I'm not sure of the overwhelming support such a move would need—Secundus is too comfortable for the danger to seem imminent to most people. As for the Families themselves—no, I don't think we could persuade most of them to uproot and move but even a few hundred thousand would suffice. Gideon's Band—you follow me?"

"I'm way ahead of you. Migration always involves selection and improvement. Elementary. If they'll do it. *If*. Ira, I had a hell of a time selling the idea to the Families when we moved here back in the twenty-third century. Could not have sold it at all if Earth had not become a dreary place. Good luck; you'll need it."

"Lazarus, I don't expect to succeed. I will *try*. But if I fail, I'll resign and migrate anyhow. To Tertius if I can organize a party large enough for a viable colony. To some planet colonized but very thinly settled if not."

"Do you mean that, Ira? Or, when the time comes, will you kid yourself that it is really your duty to hang on? If a man has the temperament for power—and you have or you wouldn't be where you are—he finds it hard to abdicate."

"I mean it, Lazarus. Oh, I like to run things; I know it. I hope to lead the Families on their third Exodus. But I don't expect to. However, I think my chances of putting together a viable colony—of young people, not over a hundred years old, two hundred at most—without the aid of the Foundation, are fairly good. But if I fail in that, too"—he shrugged— "migration will be the only worthwhile course open to me; Secundus will have nothing more to offer." Weatheral added, "Perhaps I feel as you do, sir, in a minor way. I have no wish to be Chairman Pro Tem all my days. I've had almost a century of it; that's enough. If I can't put this over."

Lazarus was thoughtfully silent; Weatheral waited.

"Ira, install that suicide switch for me. But tomorrow. Not today."

"Yes, sir."

"Don't you want to know why?" Lazarus picked up the large envelope, his will. "If you convince me that you are going to migrate, come hell or high water and no matter what the Trustees do, I want to rewrite this. My investments and cash accounts here and there—if somebody hasn't stolen them while my back was turned—add up to a nice piece of change. Possibly enough to make the difference between success and failure in mounting a migration. If the Trustees won't back it with Foundation funds. And they won't."

Weatheral said nothing. Lazarus glared at him. "Didn't your mother teach you to say 'Thank you'?"

"For what, Lazarus? For giving me something after you're dead and no longer need it? If you do this, it will be to tickle your vanity—not to please me."

Lazarus grinned. "Hell, yes. I ought to stick in a condition that you name the planet 'Lazarus.' But I would have no way to enforce it. Okay, we understand each other. And I think— Do you respect good machinery?"

"Eh? Yes. As much as I despise machinery that doesn't do what it is putatively designed to do."

"We still understand each other. I think I'll leave the 'Dora'-that's my yacht-to you personally rather than to the Families' chairman…*if* you lead a migration."

"Uh…you tempt me to thank you."

"Don't. Just be good to her. She's a sweet craft, she's never known anything but kindness. She'll make a fine flagship for you. With simple reoutfitting—specs for it in her computer—she'll house a staff of twenty or thirty. And you can ground and reconnoiter in her, then lift off again—which your transports won't be able to do, most likely."

"Lazarus…I don't want to inherit either money or a yacht from you. Let them finish your rejuvenation—and come

with us, man! I'll step aside and you can boss. Or you can have no duties at all. But come!"

Lazarus smiled bleakly and shook his head. "I've been on six such colonizing ventures to virgin planets, not counting Secundus. All to planets I discovered. Gave it up centuries back. Anything gets boring in time. Do you think Solomon serviced *all* his thousand wives? If so, what sort of job did he do on the last one?—poor girl! Find me something new to do and I might never touch that suicide switch and still give you all I've got for your colony. It 'ud be a fair swap…as this halfway rejuvenation is most unsatisfactory; I don't feel well, yet I can't die. So I'm stuck between the suicide switch and giving in for the full treatment…the donkey that starved to death between two piles of hay. But it would have to be new, Ira, not something I've done over and over again. Like that old whore, I've climbed the same stairs too many times; my feet hurt."

"I'll think about the problem, Lazarus. I'll give it hard and systematic research."

"Seven to two you can't find *anything* I haven't done."

"I'll make a real try. You'll lay off the suicide switch while I research it?"

"No promises. Not once I get this will redrafted. Can you trust your chief legal eagle? May need some help…because this will"—he tapped the envelope— "leaving everything to the Families would stand up on Secundus no matter how many flaws are in it. But if I leave it to a private party—you, I mean—some of my descendants—quite a passel —will scream 'undue influence' and try to break it. Ira, they'll keep it tied up in court until it's dribbled away in legal fees. Let's avoid that, eh?"

"We can. I've made changes in the rules. On this planet a man can put his will through probate before his death, and if there are flaws, the court is required to help him rephrase it to accomplish his purposes. If he does it that way, no contest can be entertained by any court; it goes automatically into effect on his death. Of course if he changes his will, the new will must go through the same process—which makes changing his mind expensive. But by using preprobate, it does not take a lawyer for even the most complex will. And the lawyers can't touch it afterwards."

Lazarus' eyes widened with pleasure. "Didn't you annoy a few lawyers?"

"I've annoyed so many," Ira said dryly, "that every transport to Felicity has voluntary migrants in it—and so many lawyers have annoyed *me*, that some are involuntary ones." The Chairman Pro Tens looked sourly amused. "Once I said to my Chief Justice, 'Warren, I've bad to reverse too many of your decisions. You've been splitting hairs, misinterpreting the rules, and ignoring equity ever since you came into office. Go home; you're under house arrest until the 'Last Chance' lifts. You can have an escort during daylight hours to let you wind up your private affairs."

Lazarus chuckled. "Shoulda hanged him. You know what he did, don't you? Set up shop again on Felicity and went into politics. If they didn't lynch him."

"His problem and theirs, not mine. Lazarus, I *never* let a man be executed for being a fool—but if he's too obnoxious, I ship him out. There's no need to sweat over your new will if you want one. Just dictate it with any elaborations and explanations you see fit. Then we'll run it through a semantic analyzer to rephrase it into airtight legal language. Once it satisfies you, you can submit it to the High Court—which will come to you if you prefer—and the Court will validate it. Done that way it could then be overturned only by arbitrary act of a new Chairman Pro Tem. Which I consider most unlikely; the Trustees do not place such men in office."

Weatheral added, "But I hope you will take plenty of time, Lazarus. I want a fair chance to search for something new, something that will restore your interest in life."

"All right. But don't dally; I won't be put off with a Scheherazade gag. Have them send me a recorder—tomorrow morning, say."

Weatheral seemed about to speak, did not. Lazarus looked at him sharply. "*This* conversation is being recorded?"

"Yes, Lazarus. Sound and holography, everything that happens in this suite. But—your pardon, sir!—it goes only to my desk and does not become a permanent record until I have checked and okayed it.

Nothing so far, that is."

Lazarus shrugged. "Forget it. Ira, I learned centuries back that there is no privacy in any society crowded enough to need ID's. A law guaranteeing privacy simply insures that bugs—microphones and lenses and so forth—are that much harder to spot. I hadn't thought about it up till now because I take it for granted that.. my privacy will be invaded any time I visit such places—then I ignore it unless I'm up to something the local law won't like. In which case I use evasive tactics."

"Lazarus, that record can be wiped. Its only purpose is to make me certain that the Senior is being properly taken care of—a responsibility I will not delegate."

"I said, 'Forget it.' But I'm surprised at your naiveté, a man in your position, in thinking that the record is piped only to your desk. I'll lay long odds, any amount you like, that it goes one, two, even three or more other places."

"If so, Lazarus, and I can find it out, Felicity will have some new colonists—after they've spent some unpleasant hours in the Colosseum."

"Ira, it doesn't matter. If any fool wants to watch an old, old man grunting on the pot or taking a bath, he's welcome. You yourself insured that it would happen by making a point of the record being secret, your eyes only. Security people always spy on their bosses; they can’t help it, it's a syndrome that goes with the job. Have you had dinner? I'd be pleased to have you stay if you have time."

"I would be honored indeed to have dinner with the Senior."

"Oh, knock it off, Bud; there's no virtue in being old, it just takes a long time. I'd like you to stay because I'm enjoying human companionship. Those two over there are no company; I'm not even sure they're human. Robots, maybe. Why do they wear those diving suits and shiny helmets. I like to see a man's face."

"Lazarus, those are total isolation garments. For your protection, not theirs. Against infection."

"*What*? Ira, when a bug bites me, the bug dies. Even so, since they have to wear that, how is it that you come in wearing street clothes?'

"Not quite, Lazarus. For my purpose I needed a social talk, fake to face. So the last two hours before I came in I spent undergoing a most careful physical examination, followed by scalp-to-toe sterilization of skin, hair, ears, nails, teeth, nose, throat-even a gas inhalation which I can't name but did not like—while my clothes were sterilized even more thoroughly. Even that envelope I fetched to you. This suite is sterile and kept so."

"Ira, such precautions are silly. Unless my immunity has been intentionally lowered?"

"No. Or let me say, 'I think not.' No reason for it as any transplant will of course be done from your own clone."

"So it's unnecessary. If I didn't catch anything in that flophouse, why would I catch anything now? But I don't catch things. I worked as a physician during a plague—don't look surprised; medicine is just one of fifty-odd trades I've followed. Unknown plague on Ormuzd; everybody caught it, twentyeight percent died. Save yours truly, who didn't ever have a sniffle. So tell those— No, you'll want to do it through the Director of the Clinic; bypassing your chain-of-command ruins morale-though why I should care about this organization's morale I don't know, seeing that I am an involuntary guest. Tell the Director that, if I must have nurses, I want them to dress like nurses. Or, better yet, like people. Ira, if you want cooperation out of me of any sort, you'll start by cooperating with *me*. Otherwise I'm going to take the joint apart with my bare hands."

"I'll speak to the Director, Lazarus."

"Good. Now let's have dinner. But a drink first—and if the Director doesn't think I should have one, tell him bluntly that he will have to go back to force-feeding and there is some question as to whose throat the tube will go down; I'm in no mood to be pushed around. Is there any real whisky on this planet? Wasn't the last time I was here."

"Not that I would drink. But the local brandy I think well of."

"Good. Brandy and bubbles for me if that is the best we can do, a brandy Manhattan if anyone knows what I mean by that."

"I do, and like them-I learned something about ancient drinks when I studied your life."

'Pine. Then please order for us, drinks and dinner—and I'll listen and see how many words I can pick up. I think my memory is coining back a bit."

Weatheral spoke to one of the technicians; Lazarus interrupted. "That should be one-*third* sweet vermouth, not one-half."

"So? You understood it?"

"Mostly. Indo-European roots, with a simplified syntax and grammar; I'm beginning to recall it. Damn it, when a man has had to learn as many languages as I have, it's easy for one to slip away. But it's coming back."

Service was so fast as to cause one to suspect that a crew was standing by ready to produce anything that the Senior or the Chairman Pro Tem asked for.

Weatheral raised his glass. "Long life."

"In a pig's eye," Lazarus growled and took a sip. He made a face. 'Whew! Panther sweat. But it does have alcohol in it." He took another. "Improves as your tongue gets numb. Okay, Ira, you've stalled long enough. What was your *real* reason for snatching me back from my well-earned rest?'

"Lazarus, we need your wisdom."

PRELUDE

II

Lazarus stared in horror. "*What* did you say?"

"I said," Ira Weatheral repeated, "that we need your wisdom, sir. We do."

"I thought that I was off again in one of those before-dying dreams. Son, you've come to the wrong window. Try across the hall."

Weátheral shook his head. "No, sir. Oh, it isn't necessary to use the word 'wisdom' if it offends you. But we do need to learn what you know. You are more than twice as old as the next oldest member of the Families. You mentioned that you have practiced more than fifty professions. You've been everywhere, you've seen far more than anyone else. You've certainly learned more than any of the rest of us. We aren't doing things much better now than we were two thousand years ago, when you were young. You must know why we are still making mistakes our ancestors made. It would be a great loss if you hurried your death without taking time to tell us what you have learned."

Lazarus scowled and bit his lip. "Son, one of the few things I've learned is that humans hardly ever learn from the experience of others. They learn—when they do, which isn't often—on their own, the hard way."

"That one statement is worth recording for all time."

"*Hmm*! No one would learn anything from it; that's what it says. Ira, age does not bring wisdom. Often it merely changes simple stupidity into arrogant conceit. Its only advantage, so far as I have been able to see, is that it spans change. A young person sees the world as a still picture, immutable. An old person has had his nose rubbed in changes and more changes and still more changes so many times that he knows it is a moving picture, forever changing. He may not like is—probably doesn't; *I* don't—but he knows it's so, and knowing it is the first step in coping with it."

"May I place in open record what you have just said?"

"Huh? That's not wisdom, that's a cliché. An obvious truth. Any fool will admit that, even if he doesn't live by it."

"It would carry greater weight with your name on it, Senior."

"Do as you like; it's just horse sense. But if you think I have gazed upon the naked Face of God, think again. I haven't even begun to find out how the Universe works, much less what it is for. To figure out the basic questions about this World it would be necessary to stand outside and look at it. Not inside. No, not in two thousand years, not in twenty thousand. When a man dies, he may shake loose his local perspective and see the thing as a whole."

"Then you believe in an afterlife?"

"Slow up! I don't *'believe'* in anything. I *know* certain things—little things, not the Nine Billion Names of God—from experience. But I have no beliefs. Belief gets in the way of learning."

"That's what we want, Lazarus: what you have learned. Even though you say it's nothing but 'little things.' May I suggest that anyone who has managed to stay alive as long as you have must necessarily have learned many things, or you could not have lived so long? Most humans die violent deaths. The very fact that we live so much longer than our ancestors did makes this inevitable. Traffic accident, murder, wild animals, sports, pilot error, a slippery bit of mud—eventually something catches up with us. You haven't lived a safe, placid life—quite the contrary!—yet you have managed to outwit all hazards for twentythree centuries. *How*? It can't be luck."

"Why can't it be? The most unlikely things do happen, Ira there is nothing so unlikely as a baby. But it's true that I've always watched where I put my feet...and never fought when I could duck out...and when I did have to fight, I always fought dirty. If I had to fight, I wanted *him* to be dead instead of *me*. So I tried to arrange it that way. Not luck. Or not much, anyway." Lazarus blinked thoughtfully. "I've never argued with the weather. Once a mob wanted to lynch me. I didn't try to reason with them; I just put a lot of miles between me and them as fast as I could and never went back there."

"That's not in any of your memoirs."

"Lots of things not in my memoirs. Here comes chow."

The door dilated, a dining table for two glided in, positioned itself as the chairs separated for it, and started unfolding to serve. The technicians approached quietly and offered unnecessary personal service. Weatheral said, "Smells good. Do you have any eating rituals?'

"Eh? Praying or such? No."

"Not that sort. Such as— Say one of my executives eats with me: I won't let him discuss business at the table. But if you will permit, I would like to continue this conversation."

"Certainly, why not? As long as we stick to subjects that don't rile the stomach. Did you ever hear what the priest told the old maid?"

Lazarus glanced at the technician at his elbow. "Perhaps not now. I think this shorter one is female and she just might know some English. You were saying?"

"I was saying that your memoirs are incomplete. Even if you are determined to go through with dying, won't you consider granting me and your other descendants the rest of your memoirs? Simply talk, tell us what you've seen and done. Careful analysis might teach us quite a lot. For example, what *did* happen at that Families Meeting of 2012? The minutes don't tell much."

"Who cares now, Ira? They're all dead. It would be my version without giving them a chance to answer back. Let sleeping dogs bury their own dead. Besides, I told you my memory was playing tricks. I've used Andy Libby's hypno-encyclopedic techniques—and they're good —and also learned tier storage for memory I didn't need every day, with keying words to let a tier cascade when I did need it, like a computer, and I have had my brain washed of useless memories several times in order to clear those file drawers for new data—and still it's no good. Half the time I can't remember where I put the book I was reading the night before, then waste a morning looking for it—before I remember that *that* book was one I was reading a century ago. Why won't you leave an old man in peace?"

"All you have to do is to tell me to shut up, sir. But I hope you will not. Granted that memory is imperfect, nevertheless you were eyewitness to thousands of things the rest of us are too young to have seen. Oh, I’m not asking you to reel off a formal autobiography covering all your centuries. But you might reminisce about anything you care to talk about. For example, there is no record anywhere of your earliest years. I—and millions of others—would be extremely interested in whatever you remember of your boyhood."

"What is there to remember? I spent my boyhood the way every boy does—trying to keep my elders from finding out what I was up to."

Lazarus wiped his mouth and looked thoughtful. "On the whole I was successful. The few times I was caught and clobbered taught me to be more careful next time—keep my mouth shut more and not make my lies too complicated. Lying is one of the fine arts, Ira, and it seems to be dying out."

"Really? I had not noticed any diminution."

"I mean as a fine art. There are still plenty of clumsy liars, approximately as many as there are mouths. Do you know the two most artistic ways to lie?"

"Perhaps I don't but I would like to learn. Just two?"

"So far as I know. It's not enough to be able to lie with a straight face; anybody with enough gall to raise on a busted flush can do that. The first way to lie artistically is to tell the truth—but not all of it. The second way involves telling the truth, too, but is harder: Tell the exact truth and maybe all of it…but tell it so unconvincingly that your listener is sure you are lying.

"I must have been twelve, thirteen years old before I got that one down pat. Learned it from my maternal Grampaw; I take after him quite a lot. He was a mean old devil. Wouldn't go inside a church or see a doctor—claimed that neither doctors nor preachers know what they pretend to know. At eighty-five he could crack nuts with his teeth and straight-arm a seventy-pound anvil by its horn. I left home about then and never saw him again. But the Families' Records say that he was killed in the Battle of Britain during the bombing of London, which was, some years after."

"I know. He's my ancestor, too, of course, and I'm named for him, Ira Johnson."* (* (1) Ira Johnson was less than eighty at the time the Senior claims (elsewhere) to have left home. Ira Johnson was-himself a Doctor of Medicine. How long he practiced, and whether or not he ever let another Doctor of Medicine attend him,-are not known. J.F.45th

(2) *Ira* Howard—*Ira* Johnson—This appears to be a chance coincidence of given names at a time when Biblical names were common. Families' genealogists have been unable to trace any consanguinity. J.F.45th)

"Why, sure enough, that was his name. I just called him 'Gramp.'"

"Lazarus, this is exactly the sort of thing I want to get on record. Ira Johnson is not only your grandfather and my remote grandfather but also is ancestor to many million people here and elsewhere—yet save for the few words you have just told me about him, he has been only a name, a date of birth, and a date of death, nothing more. You've suddenly brought him alive again—a man, a unique human being. Colorful."

Lazarus looked thoughtful. "I never thought of him as 'colorful.' Matter of fact he was an unsavery old coot—not a 'good influence'—for a growing boy by the standards of those times. Mmm, there was something about a young school marm and him in the town my family had lived in, some scandal—'scandal' for those days, I mean—and I think that was why we moved. I never got the straight of it as the grownups wouldn't talk about it in front of me.

"But I did learn a lot from him; he had more time to talk with me-or took more time-than my parents had, Some of it stuck. 'Always cut the cards, Woodie,' he would say. 'You may lose anyhow—but not as often, nor as much. And when you do, lose, *smile*.' Things like that."

"Can you remember any more of what he said?"

"Huh? After all these years? Of course not. Well, maybe. He had me out south of town teaching me to shoot. I was maybe ten and he was-oh, I don't know; he always seemed ninety years older than God to me.* (* Ira Johnson was seventy when Lazarus Long was ten. J.F. 45th) He pinned up a target, put one in the black to show me it could be done, then handed me the rifle—little .22 single-shot, not good for much but targets and tin cans—'All right, it's loaded; do just what I did; get steady on it, relax and squeeze.' So I did, and all I heard was a *click*—it didn't fire.

"I said so, and started to open the breech. He slapped my hand away, took the rifle from me with his other hand-then clouted me a good one. 'What did I tell you about hangfires, Woodie? Are you aching to walk around with one eye the rest of your life? Or merely trying to kill yourself? If the latter, I can show you several better ways.'

"Then he said, 'Now watch closely'—and *he* opened the breech. Empty. So I said, 'But, Gramp, you *told* me it was loaded.' Shucks, Ira, I *saw* him load. it—I thought.

"'So I did, Woodie,' he agreed. 'And I lied to you. I went through the motions and palmed the cartridge. Now what did I tell you about loaded guns? Think hard and get it right…or I'll be forced to clout you again to shake up your brains and make 'em work better.'

"I thought fast and got it right; Gramp had a heavy hand. 'Never take anybody's word about whether a gun is loaded.'

"'Correct,' he agreed. 'Remember that all your life—and follow it!—or you won't live long.' *(This anecdote is too obscure to be elaborated here. See Howard Encyclopaedia: Ancient weapons, chemical-explosives firearms.)*

"Ira. I did remember that all my life—plus its application to analogous situations after such firearms went out of style and it has indeed kept me alive several times.

"Then he had me load it myself, then said, 'Woodie, I'll bet you half a dollar—do you have half a dollar?' I had considerably more, but I had bet with him before, so I admitted to only a quarter. 'Okay,' he said, 'Make it two-bits; I never let 'a man bet on credit. Two-bits says you can't hit the target, much less stay in the black.'

"Then he pocketed my two-bits and showed me what was wrong with what I had done. By the time he was ready to knock off I had the basics of how to make a gun do what I wanted it to do, and wanted to bet him again. He laughed at me and told me to be thankful the lesson was so cheap. Pass the salt, please."

Weatheral did so. "Lazarus, if I could find a way to entice you into reminiscing about your grandfather—or about anything—I'm certain we could extract from such record endless things you have learned, important things—whether you choose to call them wisdom or not. In the last ten minutes you have stated half a dozen basic truths, or rules for living—call them what you will—apparently without trying."

"Such as?"

"Oh, for example, that most people learn only by experience—"

"Correction. Most people won't learn even by experience, Ira. Never underestimate the power of human stupidity."

"There's another one. And you 'made a couple of comments on the fine art of lying—three, really, as you also mentioned that a lie should never be too complicated. You said also that belief gets in the way of learning, and something about knowing a situation was the essential first step in coping with it."

"I didn't say that—although I could have said it."

"I generalized something you did say. You said also that you never 'argued with the weather…which I would generalize to mean: Don't indulge in wishful thinking. Or as 'Face up to the facts and act accordingly.' Though I prefer the way you put it; it has more flavor. And 'Always cut the cards.' I haven't played card games in many years, but I took that to mean: Never, neglect any available means of maximizing one's chances in a situation controlled by random events."

"Hmm. Gramp would have said, 'Stow the fancy talk, Sonny.'"

"So we'll put it back into his words: 'Always cut the cards…and smile when you lose.' If indeed that is not your own phrasing and simply attributed to him."

"Oh, his all right. Well, I think it is. Damn it, Ira, after a long time it is hard to tell a real memory from a memory of a memory of a memory of a real memory. That's what happens when you think about the past: You edit it and rearrange it, make it more tolerable-"

"That's another one!"

"Oh, hush up. Son, I don't want to reminisce about the past; it's a sure sign of old age. Babies and young children live in the present, the 'now.' Mature adults tend to live in the future. Only the senile live in the past…and that was the sign that made me realize that I had lived long enough, when I found I was spending more and more time thinking about the past…less of it thinking about now—and not at all about the future."

The old man sighed. "So I knew I had had it. The way to live a long time—oh, a thousand years or more—is something between the way a child does it and the way a mature man does it. Give the future enough thought to be ready for it—but don't worry about it. Live each day as if you were to die next sunrise. Then face each sunrise as a fresh creation and live for *it*, joyously. And never think about the past. No regrets, ever." Lazarus Long looked sad, then suddenly smiled and repeated, "'No regrets.' More wine, Ira?"

"Half a glass, thank you. Lazarus, if you are determined to die soon —your privilege, certainly!—what harm could there be in remembering the past now…and getting those memories on record for the benefit of your descendants? It would be a much greater legacy than leaving your wealth to us.

Lazarus' eyebrows shot up. "Son, you are beginning to bore me."

"Your pardon, sire. May I have permission to leave?"

"Oh, shut up and sit down. Finish your dinner. You remind me of— Well, there was this man on Novo Brasil who complied with the local custom of serial bigamy but was always careful to see that one of his wives was as utterly homely as the other was startlingly beautiful, so that—Ira, that dingus you have listening to us: Can it be keyed to pick out particular statements and arrange them as a separate memorandum?"

"Certainly, sir."

"Good. There's no point in telling how Ranch Master Silva?—yes, I think 'Silva' was his name, Dom Pedro Silva—how he coped with it when he found himself stuck with two beautiful wives at once, except to note that when a computer makes a mistake, it is even more stupidly stubborn about correcting it than a man is. But if I thought long and hard, I might be able to dig out those 'gems of wisdom' you think I have. Paste diamonds, that is. Then we wouldn't have to load up the machine with dull stories about Dom Pedro and the like. A key word?"

" 'Wisdom'?"

"Go wash out your mouth with soap."

"I will not. You stuck your chin into that one, Senior.

'Common sense'?"

"Son, that phrase is self-contradictory. 'Sense' is never 'common.' Make the keying word 'Notebook'—that's all I have in mind, just a notebook to jot down things I've noticed and which might be important enough to place on record."

"Fine! Shall I amend the programming now?"

"You can do it from here? I don't want' you to interrupt your dinner."

"It's a *very* flexible machine, Lazarus; the total complex is the one I use to govern this planet—to the mild extent that I do govern it."

“In that case I feel sure you can hang an auxiliary printout in here, one triggered for the keying word. I might want to revise my sparkling gems of wisdom—meaning that extemporaneous remarks sound better when they aren’t extemporaneous—or why politicians have ghost writers.”

“‘Ghost writers’? My command of Classic English is less than perfect; I don’t recognize the idiom.”

“Ira, don’t tell me you write your own speeches.”

“But, Lazarus, I don’t make speeches. Never. I just give orders, and —very seldom—make written reports to the Trustees.”

“Congratulations. You can bet that there are ghost writers on Felicity. Or soon will be.”

"I'll have that printout installed at once, sir. Roman alphabet and twentieth-century spelling? If you intend to use the language we've been talking?"

"Unless it would place too much strain on a poor innocent machine. If so, I can read it in phonetics. I think."

"It is a *very* flexible machine, sir; it taught me to speak this language—and earlier, to read it."

"Good, do it that way. But tell it not to correct my grammar. Human editors are difficult enough; I won't accept such upstart behavior from a machine."

"Yes, sir. If you will excuse me one moment—" The Chairman Pro Tem raised his voice slightly and shifted to the New Rome variant of Lingua Galacta. Then he spoke in the same language to the taller technician.

The auxiliary printout was installed before the table served them coffee.

After it was switched on, it whirred briefly. "What's it doing?" asked Lazarus. "Checking its circuits?"

"No, sir—printing. I tried an experiment. The machine has considerable judgment within the limits of its programs and memoried experience. In adding the extra program I told it also to go back, review everything you have said to me, and attempt to select all statements that sounded like aphorisms. I'm not sure it can do this, as any definition of 'aphorism' it has in its permanents is certain to be quite abstract. But I have hopes. However, I told it firmly: No editing."

"Well. 'The astounding thing about a waltzing bear is not, *how* gracefully it waltzes but that it waltzes at all.' Not me, some other bloke; I'm quoting. Let's see what it has."

Weatheral gestured; the shorter technician hurried to the machine, pulled a copy for each of them, fetched them back.

Lazarus looked his copy over. "Mmmm…yes. That next one isn't true—just a wisecrack. Must reword the third one little. Hey! It put a question mark after this one. What an impudent piece of junk; I checked that one out centuries before it was anything but unmined ore. Well, at least it didn't try to revise it. Don't recall saying *that,* 'but it's true and I durned near got killed learning it."

Lazarus looked up from the printout copy. "Okay, 'Son. If you want this stuff on record, I don't mind. As long as I am allowed to check and revise it…for I don't want my words to be taken as Gospel unless I have a chance to winnow out the casual nonsense. Which I am just as capable of voicing as the next man."

"Certainly, sir. Nothing will go into the records without your approval. Unless you choose to use that switch . . in which case any unedited remarks you have left behind I will have to try to edit myself. That's the best I can do."

"Trying to trap me, huh? Hmm— Ira, suppose I offer you a Scheherazade deal in reverse."

"I don't understand."

"Is Scheherazade lost at last? Did Sir Richard Burton live in vain?"

"Oh, no, sir! I have read *The Thousand Nights and a Night* in the Burton original…and her stories have come down through the centuries, changed again and again to make them understandable to new generations—but with, I think, the flavor retained. I simply do not understand what you are proposing."

"I see. You told me that talking with me is the most important thing you have to do."

"It is."

"I wonder. If you mean that, then you will be here every day to keep me company—and chat. For I'm not going to bother babbling to your machine no matter how smart it is."

"Lazarus, I will be not only honored but much pleased to be allowed to keep you company as long as you will let me."

"We'll see. 'When a man makes a sweeping statement, he often has mental reservations. I mean *every* day, Son, and *all* day. And you—not a deputy. Show up two hours after breakfast, say, and stay till I send you home. But any day you miss— Well, if it's so urgent you just have to miss, phone your excuses and send over a pretty girl to visit me. One who speaks Classic English but has sense enough to listen instead —as an old fool will often talk to a pretty girl who just bats her lashes at him and looks impressed. If she pleases me, I might let her stay. Or I might be so petulant that I would send her away and use that switch you promised to have reinstalled. But I won't suicide in the presence of a guest; that's rude. Understand me?"

"I think I do," Ira Weatheral answered slowly. "You'll be both Scheherazade and King Shabryar, and I'll be—no, that's not right; *I* am the one who has to keep it going for a thousand nights—I mean 'days'—and if I miss—but I won't!— you are free to—"

"Don't push an analogy too far," Lazarus advised. "I'm simply calling your bluff. If my maunderings are as all-fired important to you as you claim, then you'll show up and listen. You can skip once, or even twice, if the girl is pretty enough and knows how to tickle my vanity—of which I have plenty— just right. But if you skip too often, I'll know you're bored and the deal is off. I'm betting that your patience will' wear out long before any thousand days and a day have passed— whereas I *do* know how to be patient, for year after year if necessary; that's a prime reason I'm still alive. But you're still a youngster; I'm betting I can outsit you."

"I accept the bet. This girl—if I *must* be away some day— would you object if I sent one of my daughters? She's very pretty."

"Hunh? You sound like an Iskandrian slave factor auctioning his mother. Why your daughter? I don't want to marry her, nor even to bed her; I simply want to be amused and flattered. Who told you she was pretty? If she really is your' daughter, she probably looks like you."

"Come off it, Lazarus; you can't annoy me that easily. I admit to a father's prejudice but I've seen the effect she has on others. She is quite young, less than eighty, and has been contractually married only once. But you specified a pretty girl who speaks your milk language. Scarce. But this one of my daughters shares my talent for languages and is much excited by your presence here—*wants* to meet you. I can stall off emergencies long enough for her to become letter-perfect in your language."

Lazarus grinned and shrugged. "Suit yourself. Tell her not to bother with a chastity girdle; I don't have the energy. But I'll still win the bet. Probably without laying eyes on her; it won't take you long to decide that I am an unbearable old bore. Which I am and have been almost as long as the Wandering Jew—a crashing bore if I ever met one—did I tell you I had met him?"

"No. And I don't believe you have. He's a myth."

"A fat lot you know about it, Son. I have met him, he is authentic. Fought the Romans in 70 A.D. when Jerusalem was sacked. Fought in every Crusade—incited one of them. Redheaded of course; all of the natural long-lifers bear the mark of Gilgamesh. When I met him he was using the name Sandy Macdougal, that being a better handle for the time and placc for his current trade, which was the long con, with a variant on the badger game. (* While this passage bears inner contradictions, the idioms are authentic for North America of the twentieth century. They name certain types of financial dishonesty. See "Swindles" under "Fraud" in Krishnamurti's *New Golden Bough,* Academe Press, New Rome. J.F. 45th) The latter involved— Look, Ira, if you don't believe my stories, why are you going to so much trouble to get them on record?"

"Lazarus, if you think you can bore me to death—correction: to *your* death—why are you bothering to invent fictions to entertain me? Whatever your reasons, I'll listen as carefully—and as long—as King Shabryar. As may be, my master computer is recording whatever you choose to say—without editing; I guaranteed that—but it has incorporated into it a most subtle truth analyzer quite capable of earmarking any fictions you include. Not that I care about historicity as long as you will *talk* ... as it is clear to me that you automatically include your evaluations—those 'gems of wisdom'—no matter what you say."

"'Gems of wisdom.' Youngster, use that expression once more and you'll stay after school and clean the blackboards. That computer of yours— Better instruct it that my most outlandish tales are the ones most likely to be true—as that is the literal truth. No storyteller has ever been able to dream up anything as fantastically unlikely as what really *does* happen in this mad Universe."

"It knows that. But I will caution it again. You were telling me about Sandy Macdougal, the Wandering Jew."

"Was I? If so and if he was using that name, that must have been late in the twentieth century and in Vancouver, as I recall. Vancouver was a part of the United States where the people were so clever that they never paid taxes to Washington—Sandy should have operated in New York, which was outstanding in stupidity even then. I won't give details of his swindles; it might corrupt your machine. Let it suffice that Sandy used the oldest principle for separating a fool from his money: Pick a sucker who likes the best of it.

"That's all it takes, Ira. If a man is greedy, you can cheat him every time. Trouble was, Sandy Macdougal was even greedier than his marks, and it led him into the folly of excess, and often forced him to leave town while it was dark, sometimes leaving the boodle behind. Ira, when you skin a man, you have to let him recuperate and grow more hide—or he gets nervous. If you respect this simple rule, a real mark can be skinned over and over again, and it just keeps him healthy and productive. But Sandy was too greedy for that; he lacked patience."

"Lazarus, you sound as if you had great experience in this art."

Now Ira—a little respect please I have *never* swindled a man. At most I kept quiet and let him swindle himself. This does no harm, as a fool cannot be protected from his folly. If you attempt to do so, you will not only arouse his animosity but also you will be attempting to deprive him of whatever benefit he is capable of deriving from experience. Never attempt to teach a pig to sing; it wastes your time and annoys the pig.

"But I do know a lot about swindles. I think that every major variation of every possible swindle has been tried on me, one time and another.

"Some of them worked back when I was very young. Then I took Grampaw Johnson's advice and quit looking for the best of it; thereafter I could no longer be swindled. But I was not capable of benefiting from Gramp's advice until I was burned a few times. Ira, it's getting late."

The Chairman Pro Tem promptly stood up. "So it is, sir. May I ask two questions before I leave? Not for your memoirs, procedural questions only."

"Make it short and snappy."

"You'll have your termination-option switch tomorrow morning. But, you spoke of not feeling well, and there is no need for that even if you choose to terminate in the near future. Shall we resume the rejuvenation procedures?"

"Hmmm. Second question?"

"I promised to do my best to find something brand-new to interest you. I promised also to spend every day here with you. I see conflict."

Lazarus grinned. "Don't kid your old Grampaw, Son; you'll delegate that research."

"Certainly. But I must plan how to start it, then review progress at intervals, and suggest new avenues to explore."

"Mmm…if I consent to the full course, I'll be out of circulation a day or two every now and then."

"I believe current practice calls for one day of deep rest approximately each week, varied to suit the client's condition. My own experience is about a hundred years back; I understand there have been improvements. You've decided to take it, sir?"

"I'll tell you tomorrow—after that switch is installed. Ira, I don't make decisions in haste that don't call for haste. But if I consent, you'll have free time to use as you see fit. G'night, Ira."

"Good night, Lazarus. I hope you decide to accept it." Weatheral turned toward the door, stopped halfway there, and spoke to the technicians—who left the room at once. The dining table scurried after them. Once the door had shut down Weatheral turned and-faced Lazarus Long. "Grandfather," he said softly, his voice somewhat choked. "Uh—may I?"

Lazarus had let his chair sink back into a reclining couch that held him, hammocklike, as tenderly as a mother's arms. At the younger man's words he raised his head. "Huh? What? *Oh!* All right, all right, come here—Grandson." He reached out one arm to Weatheral.

The Chairman Pro Tem hurried to him, took Lazarus' hand, dropped to his knees and kissed it.

Lazarus snatched his hand back. "For Pete's sake! Don't kneel to me—don't *ever* do that. If you want to be my grandson, treat me as such. Not that way."

"Yes, Grandfather." Weatheral got to his feet, leaned over the old man, and kissed his mouth.

Lazarus patted his cheek. "You're a sentimentalist, Grandson. But a good boy. Trouble is, there never has been much demand for good boys. Now get that solemn expression off your face and go home and get a good night's rest."

"Yes, Grandfather. I will. Good night."

"Good night. Now beat it."

Weatheral left quickly. The technicians jumped aside as he came out, then went back into the suite. Weatheral continued on, ignoring people around him but with a softer, gentler expression on his face than was his wont. He went past a bank of transports to the Director's private transport; it opened to his voice, then conveyed him quickly into the bowels of the city and directly to the Executive Palace.

Lazarus looked up as his attendants came back in; he motioned the taller one to him. The technician's voice, filtered and distorted by the helmet, said carefully, "Bed…sir?'

"No, I want—" Lazarus paused, then spoke to the air, "Computer? Can you speak? If not, print it out."

"I hear you, Senior," a mellifluous, contralto voice answered. "Tell this nurse that I want whatever they are allowed to give me for pain. I have work to do."

"Yes, Senior." The disembodied voice shifted to Lingua Galacta, was answered in kind, then went on: "Master Chief Technician on duty wishes to know the nature and location of your pain, and adds that you should not work tonight."

Lazarus kept silent while he counted ten chimpanzees in his mind. Then he said softly, "Damn it, I hurt *everywhere.* And I don't want advice from a child. I have loose ends to tidy up before I sleep… because one never knows that one will wake up again. Forget the painkiller, it ain't all that important. Tell 'em to get out and stay out."

Lazarus tried to ignore the ensuing exchange, as it annoyed him that he almost-not-quite understood it. He opened the envelope Ira Weatheral had returned to him, then opened out his will—a long bellows-fold of computer printout—and started reading it while whistling off key.

"Senior, Master Chief technician on duty states that you have given a null order, which is a true statement by the Clinic's regulations. A general analgesic is forthcoming."

"Forget it." Lazarus went on reading, and shifted to singing softly the tune he had been whistling:

"There's a pawnshop on the corner
Where I usually keep my overcoat.

"There's a bookie
Behind the pawnshop
Who handles my investments"

(This doggerel is attributed to the twentieth century. See appendix for semantic analysis. *J.F.45th*)

The taller technician appeared at his elbow, carrying a shiny disk with attached tubing. "For…pain."

Lazarus made a brushoff gesture with his free hand. "Go 'way, I'm busy."

The shorter technician appeared on his other side. Lazarus looked that way and said, "What do *you* want?"

As he turned his head the taller technician moved quickly; Lazarus felt a sting in his forearm. He rubbed the spot and said, "Why, you rapscallion. Foxed me, didn't you? All right, beat it. Raus. Scat!" He dismissed the incident from his mind and returned to work. A moment later he said:

"Computer!"

"Awaiting your orders, Senior."

"Record this for printout. I, Lazarus Long, sometimes known as the Senior and listed in the Howard Families' Genealogies as Woodrow Wilson Smith, born 1912, do declare this to be my last will and testament— Computer, go back through my talk with Ira and dig out what I said I wanted to do to help him lead a migration—got it?"

"Retrieved, Senior."

"Fix up the language and tack it onto my opening statement. And —let me see—add something like this: In the event Ira Weatheral fails to qualify for inheritance, then all my worldly wealth of which I die possessed shall go to, uh, to—to found a home for indigent and superannuated pickpockets, prostitutes, panhandlers, piemen, priggers, and other unworthy poor starting with 'P'. Got it?"

"Recorded, Senior. Please be advised that this alternative has a high probability of being nullified if tested by the current rules of this planet."

Lazarus expressed a rhetorical and physiologically improbable wish. "All right, set it up for stray cats or some other useless but legally acceptable purpose. Search your permanents for such a purpose that *will* get by the courts. Just be certain that the Trustees can't get their hands on it. Understand?'

"There is no way to be certain of that, Senior, but it will be attempted."

"Look for a loophole. Print that out as fast as you can research it and put it together. Now stand by for a memorandum of my assets. Begin." Lazarus started to read the list, found that his eyes were blurring and would not focus. "Damnation! Those dummies slipped me a Mickey and it's taking hold. Blood! I must have a drop of my own blood to thumbprint it! Tell those dummies to help me and tell them why—and warn them that I will bite my tongue to get it if they won't help me. Now print out my will with any feasible alternative—but *hurry!"*

“Printout starting,” the computer answered quietly, then shifted to Galacta.

The “dummies” did not argue with the computer; they moved fast, one snatching the new sheet out of the auxiliary printout the instant it stopped whirring, the other producing a sterile point out of nowhere and stabbing the ball of Lazarus’ left little finger after giving Lazarus a split second to see what was being done.

Lazarus did not wait for blood to be taken by pipette. He squeezed the stabbed finger for a drop, rubbed his right thumb in it, then print-signed his will while the shorter technician held it for him.

Then he sank back. “It’s done,” he whispered. “Tell Ira.” He was heavily asleep at once.

COUNTERPOINT

I

The chair gently transferred Lazarus to his bed while the technicians silently supervised. Then the shorter watched the readouts on respiration, heart action, brain rhythms, and other physicals while the taller placed the documents, old will and new, in an impervolope, sealed it, chopped and thumbprinted the seal, marked it “Surrender only to the Senior and/or Mr. Chairman Pro Tem,” then retained it until their reliefs arrived.

The relief chief technician listened to the record of the watch, glanced over the physicals, studied the sleeping client.

“Timed,” he stated.

“Neolethe. Thirty-four hours.”

He whistled. “Another crisis?”

“Less severe than the last. Pseudopain with irrational irascibility. Physicals within limits for this stage.”

“What’s in the sealer?”

“Just sign for it and include delivery instructions in your receipt.”

“Pardon me for using up oxygen!”

“Your receipt, please.”

The relief wrote out a receipt, chopped and thumbed it, swapped it for the impervolope. “I relieve you,” he said brusquely.

“Thank you.”

The shorter technician was waiting at the door. The Master Chief Technician paused to say, “You needn’t have waited. It sometimes takes me three times this long to turn over the watch. You are free to leave as soon as the relief junior watch officer arrives.”

“Yes, Master Chief Technician. But this is a *very* special client—and

I thought you might need me with Mr. Snoopy Nose."

"I can cope with him. Yes, a very special client indeed and it speaks well for you that the Skills Board assigned you to me when your predecessor opted out."

"Thank you!"

"Don't thank me, Associate Technician." The voice, although distorted by helmet and relay and filter, sounded gentle even though the words were not. "That was not a compliment but a statement of fact. If you had not done well on your first watch, there would be no second watch—as you say, 'a very special client.' You did well…aside from nervousness a client can feel even though he can't see your face. But you'll get over that."

"Uh…I hope so. I was very nervous!"

"I would rather have an assistant keyed up tight than one who knows it all and is sloppy. But you should be home now and resting. Come along; I'll drop you off. Where do you robe? The intermediate lounge? I go past it."

"Oh, don't bother about me! But I'll ride with you if I may—then take the car back."

"Relax! Once off duty, there are no ranks among us who follow the Vocation. Didn't they teach you that?" They moved past the queue at the public transports, on past the Director's own, stopped at the smaller bank for executives.

"Yes, but—I've never been assigned to anyone of your rank before."

That got a chuckle. "All the more, reason to follow that rule with me—because the higher one is, the more one needs to forget it off duty. Here's an empty car. In you go and sit down."

The shorter one went in but did not sit down until the Master Chief Technician was seated. The boss rejuvenator ignored it, set the controls, sprawled out, and sighed, as the car started to move. "I feel the strain myself. Coming off watch, I feel as old as *he* is."

"I know. I'm wondering if I can take it. Chief? *Why* won't they let him terminate? He seems so tired."

The answer was slow and not responsive. "Don't call me 'Chief.' We're off duty."

"But I don't know your name."

"Nor do you need to know it. Hmm— The situation is not quite as it appears to be; he has suicided four times already."

"What?"

"Oh, he doesn't remember it. If you think his memory is bad now, you should have seen him three months ago. Actually, it speeds up our work every time he does it. His switch—when he had it—was gimmicked; it simply made him unconscious, then we would go ahead with whatever stage was next while hypnoing more of his memory tapes into him. But we had to stop that—and remove the switch—a few days ago; he remembered who he is."

"But— That's not by the Canons! 'Death is every man's privilege.'"

The Master Chief Technician touched the emergency control; the car continued on, found a parking pocket, and stopped. "I did not say that it was covered by the Canons. But watch officers do not set policy."

"When I was accepted, I took the oath…and part of it was to 'give life freely to those who wish it…and never refuse death to those who yearn for it.'"

"Don't you think I took the same oath? The Director is so angry that she has gone on leave—she may resign; I wouldn't venture to guess. But the Chairman Pro Tem is not of our Vocation; he is not bound by our oath, and the motto up over the entrance means nothing to him. *His* motto is—or seems to be—'Every rule has exceptions.' Look, I knew I would have to have this talk with you and I'm pleased that you've given me an opportunity before our next watch. Now I must ask you—do you wish to opt out? It won't affect your record; I'll see to that. Don't worry about a relief; the Senior will still be asleep when I next go on watch and any assistant will do for that watch—which leaves time for the Skills Board to select your replacement."

"Uh— I *want* to attend him. It's a great privilege, one I never dreamed would come my way. But I'm torn. I don't think he's being treated fairly. And who is more entitled to fair treatment in this than the Senior?"

"I'm torn by it, too. I was shocked silly the first time I realized that I was being ordered to keep alive a man who had terminated voluntarily. Or who had been allowed to think that he was terminating, rather. But, my dear colleague, the choice is *not* up to us. This job will be done no matter what we think. Once I realized that—well, I am not lacking in professional confidence—call it conceit. I think I am the best-qualified senior watch officer on the list. I decided that, if the Families' Senior was going to have this done to him, I would not opt out and let it be done by colleagues less skilled than I am. Bonuses had nothing to do with it; I've assigned my bonuses to the Sanctuary for Defectives."

"I could do that, couldn't I?"

"Yes, but you would be a fool to do so; I draw far more than you do. But I must add this: I hope your body tolerates stimulants easily because I supervise every major procedure and expect my assistant to help, whether it falls during our regular watch or not."

"I don't need stimulants; I use autohypnosis. When needed. Seldom. He'll be asleep our next watch. Mmm—"

"Colleague, I want your answer *now.* So that I can notify the Skills Board if necessary."

"Uh— I'll stick! I'll stick as long as you do."

"Good. I thought you would." The Master Chief Technician again reached for the controls. "Intermediate lounge now?"

"Just a moment. I would like to know you better."

"Colleague, if you stick, you'll know me far too well. I have a sharp tongue."

"I meant socially, not professionally."

"Well!"

"You are offended? I've come to admire you without ever having seen you. Now I would like to see you. I'm not trying to curry favor."

"I believe you. Grant me the respect of believing that I studied your psych scores before I accepted the Board's choice. No, I'm not offended; I'm flattered. Dinner together sometime, perhaps?"

"Certainly. But I had more in mind. What would you say to 'Seven Hours of Ecstasy'?"

There was a short pause, which felt long. The Master Chief Technician said, "Colleague, what sex are you?"

"Does it matter?"

"I suppose not. I accept. Now?"

"If it suits you."

"It does. I was simply going to my compartment, read a while, and sleep. Shall we go there?"

"I was thinking of taking you to Elysium."

"No need to. Ecstasy is in the heart. But thank you."

"I can afford it. Uh, I'm not dependent on my salary. I can easily afford the best Elysium has to offer."

"Perhaps another time, dear colleague. But a resident's compartment here in the Clinic is quite comfortable and at least an hour closer not counting the time we would waste getting out of isolation armor and dressed to face the public. We'll go straight to my place. I find I'm eager. Goodness, I haven't chanced this sort of lark in —far too long."

Four minutes later the Master Chief Technician let them into the compartment—large, as promised, and handsome and airy—a "happy" suite. A simulacrum fire blazed merrily in a corner fireplace and cast dancing lights around the lounging room. "You'll find a guests' dressing room through that door, 'fresher beyond it. The chute for disposables is on the left, racks for helmets and isolation gear on the right. Need help?"

"No, thank you, I'm quite limber."

"Well, shout if you need anything. Meet me here in front of the fire in ten minutes, say?"

"Suits."

The Associate Tech came out in only a little over ten minutes, free at last of isolation armor and looking even shorter in bare feet and without helmet. The Master Chief Tech looked up from the hearth rug. "Oh, there you are! You're *male!* I'm surprised. But pleased."

"And you're female. And *I* am *very* pleased. But I don't believe for an instant that you are surprised. You've seen my records."

"No, dear," she denied. "Not your personal dossier, just the brief the Board supplies to a prospective supervisor—and they are meticulously careful to keep name and sex and other irrelevancies out of it; their computer program sees to that. I did *not* know, and my guess was wrong."

"I didn't try to guess. But I certainly am pleased. I don't know why I have this special liking for tall women. But I do. Stand up and let me look at you."

She squirmed lazily. "What an irrational criterion. All women are the same height—lying down. So come lie down here; it's very comfortable."

"Woman, when I say 'Stand up!' I expect action."

She giggled. "You're an atavism. But pretty." She made a long arm, got him by an ankle, snatched him off balance. He went down. "That's better. Now we're the same height."

COUNTERPOINT

II

She said. "Would you like a middle-of-the-night lunch? Sleepyhead."

He said, "I did doze off, didn't I? I had reason. Yes, I would. What am I being offered?"

"Name it, just name it. If I don't have it, I'll send for it. I'm feeling very-mellow toward you, dear."

"All right, how about ten tall sixteen-year-old redheaded virgins? Girls, I mean."

"Yes, darling. Nothing is too good for my Galahad. Although if you insist on certified virgins, it may take longer. Why this fetish, dear man? Your psych profiles didn't hint at any exotic abnormality."

"Cancel that order and make it one dish of mango ice cream."

"Yes, sir, I'll send for it at once. Or you can have fresh peach ice cream instantly. Tease. I haven't been bothered by that sort of teasing since I was sixteen myself. A long time ago."

"I'll settle for peach. A *very* long time ago."

"Right away, dearest man. Will you eat it with a spoon, or shall I plaster it on your face? Nor by that sort of teasing. I've had one rejuvenation just as you have had, and I keep my cosmetic age younger than yours."

"A man needs to look mature."

"And a woman prefers to look young; we always have. But I know not only your rejuvenated age, but your calendar age, Galahad—and my calendar age is less than yours. Want to know how I know, dear? I recognized you the instant I saw you. I helped rejuvenate you, darling—and I'm most pleased that I did."

"The devil you say!"

"But I *am* pleased, dear man. Such a nice bonus, and so unexpected. One so seldom sees a client again. Galahad, do you realize that we did not use *any* of the routine to insure an ecstatic holiday together? Yet I haven't missed it. I feel younger and happier than I have in years. Still do."

"Me, too. Except that I don't see any peach ice cream.

"Pig. Beast. Brute. I'm bigger than you are; I'll trip you and fall on you. How many scoops, dear?"

"Oh, just pile it in until your arm gets tired; I need to restore my strength."

He followed her into the pantry, served them both with heaping dishes of ice cream. "Just a precaution," he said, "so I won't get it plastered in my face."

"Oh, tut, now! You don't really think I would do that to my Galahad."

"You're a very erratic female, Ishtar. I have bruises to prove it."

"Nonsense! I was gentle."

"You don't know your own strength. And you are bigger than I am, as you noted. Instead of 'Ishtar' I should have named you for that—what was her name? Queen of the Amazons in Old Home mythology."

"'Hippolyta,' dear. But I can't qualify as an Amazon, for reasons you were flattering about…in an infantile way."

"Complaints, huh? Over in Surgery they could correct your disqualification in ten minutes and never leave a scar. Never mind, 'Ishtar' fits you better. But there is something unfair about this."

"How, dear? Let's take this in and eat in front of the fire."

"Suits. Like this, Ishtar. You tell me I was your client and that you recall both my ages, so by masterly logic I deduce that you know my registered name and Family, and you may even remember some of my genealogy since you must have studied it for my rejuvenation. But by the customs of 'Seven Hours' I am precluded from even trying to learn your registered name. I have to tag you in my mind as 'that tall blond Master Chief Technician who—'"

"I still have enough ice cream to plaster you!"

"—permitted me to call her "Ishtar" for the happiest seven hours of my life.' Which are almost over and I don't know that you will let me take you to Elysium someday."

"Galahad, you are the most exasperating sweetheart I've ever had. Of course you can take me to Elysium. And you *don't* have to go home at the end of seven hours. And my registered name *is* Ishtar. But if you ever mention my rank other than when necessary, on duty, you'll have real bruises to remember me by. Big ones."

"Bully. I'm scared. I do think I should leave on time, so that you can get your quota of sleep before we're due back on watch. But what's this about your name really being 'Ishtar'? Did I roll five aces when we named each other?"

"Yes and no."

"Is that an answer?"

"I had one of the standard Family names of my lineage— and never liked it. But I was delighted and flattered by the pillow name you gave me. So while you were napping, I called Archives and changed my name. I'm 'Ishtar' now."

He stared at her. "Is that *true?"*

"Don't look frightened, dear. I won't trap you, I won't even bruise you. I'm not domestic, not at all. You would be shocked if you knew how long it has been since a man was last in this compartment. You are free to leave whenever you wish; you committed yourself to me for only seven hours. But you need not leave. You and I are skipping tomorrow's watch."

"We are? Why…Ishtar?"

"I made another call and bucked a supernumerary team into that watch. Should have done so sooner, but you had me bemused, dear. The Senior won't need us tomorrow; he's in deep sleep and won't know that he has missed a, day. But I want to be there when he wakes, so I rearranged the watch list for the following day, too, and we may stay on watch all day; depends on the shape he's in. That is, *I* may. I don't insist that *you* do a double or triple watch."

"I can take it if you can. Ishtar? That professional rank you forbade me to mention— You're actually even higher rank than that. Aren't you?"

"If I am—I am not affirming it—I forbid you even to speculate about it. If you wish to stay assigned to this client,"

"Whew! You do have a sharp tongue. Did I deserve that?"

"Dear Galahad! I'm sorry. When you are on watch, dear, I want you to think only about our client, not about me. Off watch I am Ishtar and don't wish to be anything else. This is the most important case we will ever be on. It may go on a long time and be very tiring.

So let's not be edgy with each other. I was trying to say that you—both of us—now have more than thirty hours before we must be back on duty. You are welcome here as many of those hours as you wish. Or leave as soon as you wish and I will smile and not complain."

"I don't want to leave, I said so. As long as I don't keep you from your sleep—"

"You won't."

"—and allow an hour to pick up a fresh pack of disposables, robe in, and go through decontam. I wish I had fetched a pack, but I hadn't planned on this."

"Oh. We'll make that an hour and a half. My phone had a message waiting in it. The Senior does not like the way we look in isolation gear; he wants to be able to see anyone around him. So we must plan time to go through body decontam instead, then attend him in ordinary clothes."

"Uh…Ishtar, is this wise? We might sneeze on him."

"Do you think *I* set this policy? Dear, this message was straight from the Palace. Besides that, females are specifically ordered to look as pretty and be as attractively dressed as possible—so I must think about what I can wear that can go through sterilization. Nudity is not acceptable; that was specified, too. But don't worry about sneezing. Have you never taken full body decontamination? When *that* crew gets through with you, you *can't* sneeze; no matter how much you need to. But don't tell the Senior that you've had decontam; the assumption is that we simply walk in off the street—no special precautions."

"How can I tell him when I don't speak his language? Does he have some fetish against nudity?"

"I don't know, I am just conveying the order, one that went out to everyone on the watch list."

He looked thoughtful. "It's probably not a fetish. All fetishes are contrasurvival, that's elementary. You told me that the principal problem was to break him out of his apathy. You were pleased that he was bad-tempered, even though you said it was a hyperreaction."

"Certainly I was pleased; it showed that he was responding. Galahad, never mind that now; I don't have a thing to wear, you'll have to help me."

"I'm talking about what you should wear. I think it was the Chairman Pro Tem's idea, not the Senior's."

"Dear man, I don't try to read his mind; I just carry out his orders. I don't have any taste in clothes, never did have. Do you think a lab assistant's coverall would be suitable? It will take sterilization and never show it—and I look quite neat in one."

"I *am* trying to read the mind of the Chairman Pro Tem, Ishtar—

guess his intentions, at least. No, I don't think a lab uniform would do; you would not look as if you had 'simply walked in off the street.' If we stipulate that a fetish syndrome is not involved, then the only advantage of clothing over nudity in this situation is to lend variety. Contrast. Change. Help shake him loose from that apathy."

She stared at him with thoughtful interest. "Galahad, up to now, based on my own experience, I've always thought that a man's only interest in a woman's clothes was to get them off her. I may have to put you in for promotion."

"I'm not ready to be promoted; I've been in the Vocation less than ten years. As I'm sure you know. Let's take a look at your wardrobe."

"What are you going to wear, dear?"

"Doesn't matter what I wear; the Senior is male and all the stories and myths about him indicate that he has remained canalized by the primitive culture he was born in. Not sensually polymorphous."

"How can you be sure? Myths, dear."

"Ishtar, all myths tell the truth if you know how to read them. I'm guessing, but it is a reasoned guess, as this is something I used to be somewhat expert in. Until I was rejuvenated—until you rejuvenated me—then I went into something more active."

"What, dear?"

"Some other time. I was simply saying that I don't think it matters what *I* wear. A chiton. Shorts and singlet. Kilt. Even the underwear I had on under isolation gear. Oh, I'll wear lively colors and something different each watch—but he won't look at *me,* he'll look at *you.* So let's pick out something he would like to see you in."

"How will you know, Galahad?"

"Very simple. I'll choose something *I* would like to see a long-legged beautiful blonde wear."

He was surprised to see how little Ishtar had in her wardrobe. In all his varied experience with women she was the only one he could remember who seemed to lack the vanity needed to buy unnecessary clothes. As he searched, mind preoccupied, he hummed and then sang a snatch of doggerel.

Ishtar said, "You speak his milk language!"

"Eh? What? Whose? The Senior's? I certainly don't. But I must learn it, I suppose."

"But you were singing in it. A little song he always sings when he's busy with something."

"You mean this? 'Therza poolyawl…Bytha *paunshot—'* I have a phonographic ear, that's all; I don't understand the words. What do they mean?"

"I'm not sure they mean anything. Most of them are not in the vocabulary I've learned so far. I suspect that it is just amphigoric rhythm, a self-tranquilizer. Semantically null."

"On the other hand, it might be a key to understanding him. Have you tried asking a computer?" -

"Galahad, I haven't been given access to the computer that records what goes on in his suite. But I doubt if anyone can understand him, in depth. He's a primitive, dear—a living fossil."

"I would certainly like to try to understand him. This language he uses— Is it difficult?"

"Very. Irrational, complicated syntax, and so loaded with idioms and multivalues that I trip even on words I think I know. I wish I had your recording ear."

"The Chairman Pro Tem seemed to have no difficulty."

"I think he has a special talent for languages. But if you want to try, dear, I have the instructional programs here."

"Accepted! What is this? A party dress?"

"That? That's not clothing. I bought it as a throw cover for a couch —then got it home and saw that it did not fit my lounging room."

"It's a dress. Stand there and hold still."

"Don't *tickle!"*

VARIATIONS ON A THEME

I

Affairs of State

Despite what I told the Senior, my ancestor Grandfather Lazarus, I work hard in governing Secundus. But only in thinking about policy and in judging the work of others. I don't do donkey work; I leave that to professional administrators. Even so, the problems of a planet with more than a billion people can keep a man busy, especially if his intention is to govern as little as possible—as that means he must keep a sharp eye out and his ear tuned for signs that subordinates are doing unnecessary governing. Half my time is used in the negative work of plucking such officious officials and ordering that they never again serve in any public capacity.

Then I usually abolish their jobs, and all jobs subordinate to them.

I have never noticed any harm from such pruning save that parasites whose jobs are eliminated must find some other way to avoid starvation. (They are welcome to starve—better if they do. But they don't.)

The important thing is to spot these malignant growths and remove them while they are small. The more skill a Chairman Pro Tem acquires in this, the more emerging ones he finds, which keeps him busier than ever. Anyone can see a forest fire; skill lies in sniffing the first smoke.

This leaves me too little time for my prime work: thinking about policy. The purpose of my government is never to do good, but simply to refrain from doing evil. This sounds simple but is not. For example, although prevention of armed revolution is obviously part of my main duty, *i.e.,* to keep order, I began to have doubts about the wisdom of transporting potential revolutionary leaders years before Grandfather Lazarus called my attention to it. But the symptom that roused my worry was so null that it took ten years for me to notice it:

During those ten years there was not one attempt to assassinate me.

By the time Lazarus Long returned to Secundus for the purpose of dying this disturbing symptom had continued twenty years.

This was ominous, and I realized it. A population of one billion-plus so contented, so uniform, so smug that not one determined assassin shows up in a double decade is seriously ill no matter how healthy it looks. In the ten years that elapsed after I noticed this lack I worried about it every hour I could spare—and found myself asking myself over and over again: What would Lazarus Long do?

I knew in broad outline what he *had* done—and that was why I decided to migrate—either lead my people off planet or go alone if none would follow. (In rereading this, it sounds as if I sought to be assassinated in some mystic *The King Must Die* sense. Not at all! I am surrounded at all times by powerful and subtle safeguards the nature of which I will not divulge. But there is no harm in mentioning three negative precautions; my facial appearance is not known to the public, I almost never appear in public anyhow, and when I do, it is never announced. The job of ruler is dangerous—or should be—but I don't intend to die from it. The "disturbing symptom" was not that I am alive but that there are no dead assassins. No one seems to hate me enough to try. Frightening. Where have I failed them?)

When the Howard Clinic notified me that the Senior was awake (with a reminder that only one "night" had passed for him) I was not only awake but had completed necessary work and bucked the rest; I went at once to the Clinic. After they decontaminated me I found him dawdling over coffee, having just finished breakfast.

He glanced up and grinned. "Hi, Ira!"

"Good morning, Grandfather." I went to him ready to offer a respectful salutation such as he had permitted when I bade him goodnight the night "before"—but watching for signs that say Yes, or No, before the mouth speaks. Even among the Families there is wide variety in such customs—and Lazarus is, as always, a law unto himself. So I closed the last of the gap with great deliberation.

He answered me by drawing back so slightly that it would have been unnoticeable had I not been alert for it. He added a gentle warning: "Strangers present, Son."

I stopped at once. "At least I think they are strangers," he added. "I've been trying to get acquainted, but all we share is some pidgin speech plus a lot of handwaving. But it's nice to have people around instead of those zombies—we get along. Hey, dear! Come here, that's a good girl."

He motioned to one of his rejuvenation technicians—two on watch, as usual, and this morning, one was female, one was male. I was pleased to see that my order that females should "dress attractively" had been carried out. This woman was a blonde, graceful and not unattractive if one likes tallness in a female. (I don't dislike it, but there is something to be said for one small enough to fit on one's lap—not that I've had much time for that lately.)

She glided forward and waited, smiling. She was dressed in a something—women's styles don't stay the same long enough for me to keep track, and this was a period when every woman in New Rome seemed to be trying to dress differently from every other woman. Whatever it was, it was an iridescent blue that set off her eyes and fitted her closely where it covered her at all; the effect was pleasing.

"Ira, this is Ishtar—did I get your name right that time, dear?"

"Yes, Senior."

"And that young man over there is, believe it or not, 'Galahad.' Know any legends of Earth, Ira? If he knew its idiomatic meaning, he would change it—the perfect knight who never got any. But I've been trying to remember why Ishtar's face is so familiar. Dear, was I ever married to you? Ask her for me, Ira; she may not have understood."

"No, Senior. Not never. Is certain."

"She understood you," I said.

"Well, it could have been her grandmother—a lively wench, Ira. Tried to kill me, so I left her."

The Chief Master Technician spoke briefly in Galacta. I said, "Lazarus, she says that, while she has never had the honor of being married to you, contractually or informally, she is quite willing if you are."

"Well! A saucy one—it *must* have been her grandmother. Eight, nine hundred years back, more or less—I lose track of half centuries—and on this planet. Ask her if, uh, Arid Barstow is her grandmother."

The technician looked very pleased and broke into rapid Galacta. I listened and said, "She says that Ariel Barstow is her great-great-great-grandmother and she is joyed to hear you acknowledge the connection as that is the lineage by which she is descended from you…and that she would be supremely honored, both for herself and on behalf of her siblings and cousins, if you would converge the lineage again, with or without contract After your rejuvenation is completed, she adds—she is not trying to rush you. How about it, Lazarus? If she has used up her reproduction quota, I would be happy to grant her an exception so that she would not have to migrate."

"The hell she ain't trying to rush me. And so are you. But she put it politely, so let's give it a polite answer. Tell her that I'm honored and her name goes into the hat—but don't tell her I'm shipping out on Thursday. 'Don't call us, we'll call you' in other words—but make her happy about it; she's a nice kid."

I revised the message diplomatically; Ishtar beamed, curtsied, and backed away. Lazarus said, "Drag up a rock, Son, and sit a while." He lowered his voice and added, "Between ourselves, Ira, I'm pretty sure Ariel slipped one in on me. But with another of my descendants, so this kid is descended from me anyhow, though maybe not as directly. Not that it matters. What are you doing up so early? I said you could have two hours after breakfast to yourself."

"I'm an early riser, Lazarus. Is it true that you have decided on the full course? She seems to think so."

Lazarus looked pained. "It's probably the simplest answer—but how do I know I'll get my own balls back?"

"Gonads from your clone are your own, Lazarus; that's basic to the theory."

"Well…we'll see. Early rising is a vice, Ira; it'll stunt your growth and' shorten your days. Speaking of such—" Lazarus glanced up at the wall. "Thanks for having that switch reinstalled. I don't feel tempted by it this fine morning, but a man does like to have a choice. Galahad, coffee for the Chairman and fetch me that plastic envelope." Grandfather Lazarus supplemented his order with gestures, but I think the tech understood his words. Or was somewhat telepathic; rejuvenators are quite empathic—need to be. The man moved at once to comply.

He handed Lazarus an impervolope and poured coffee for me—which I did not want but will drink anything protocol requires. Lazarus went on, "Here's my new will, Ira. Read it and file it somewhere and tell your computer. I've already approved the way she worded it and read it back into her and told her to place it in her permanents with a 'bind' on it—it 'ud take a Philadelphia lawyer to diddle you out of your inheritance now—though no doubt one could."

He waved the male tech aside. "No more coffee, lad— thanks. Go sit down. You go sit, too, dear. Ishtar. Ira, what are these young people? Nurses? Orderlies? Servants? Or what? They hover over me like a hen with one chick. I've never cared for more service than I need. Just sociability. Human company."

I could not answer without inquiring. Not only is it unnecessary for me to know how the Rejuvenation Clinic is organized, but also it is private enterprise, not under the Trustees—and my intervention in the case of the Senior was much resented by its Director. So I interfered as little as possible—as long as my orders were carried out.

I spoke to the female tech, in Galacta: "What is your professional designation, ma'am? The Senior wants to know. He says that you have been behaving like a servant."

She answered quietly, "It is our pleasure to serve him in any way we can, sir"—then hesitated and went on: "I am Administrator Master Chief Rejuvenation Technician Ishtar Hardy, Deputy Director for Rejuvenation Procedures, and my assistant watch officer is Associate Technician Galahad Jones."

Having been rejuvenated twice and used to the idea all my life, it does not surprise me when cosmetic age does not match calendar age. But I admit to surprise at learning that this young woman was not just a technician but boss of her department— probably number three in the entire Clinic. Or possibly number two while the Director was away sulking in her tent— damn her duty-struck stiff neck. Or even Director Pro Tem with her deputy, or some department head, bucked into minding the store." "So?" I answered. "May I ask your calendar age, Madam Administrator?"

"Mr. Chairman Pro Tem may ask anything. I am only one hundred forty-seven years old—but I am qualified; this has been my only career since first maturity."

"I did not imply doubt of your qualifications, madam, but I am astonished to see you standing a watch rather than sitting at a desk. Although I confess I don't know how the Clinic isorganized."

She smiled slightly. "Sir, I could express a similar feeling at your own personal interest in this case…were it not that I think I understand it. I am here because I choose not to delegate the responsibility; he is the *Senior.* I have screened all watch officers assigned to him—the best we have to offer."

I should have known it. "We understand each other." I added, "I am pleased. But may I make a suggestion? Our Senior is independent by temperament and highly individualistic. He wants a minimum of personal service—only that which he must have."

"Have we been annoying him, sir? Too solicitous? I can watch and listen from outside the door and still be here instantly if he wants something."

"Possibly too solicitous. But stay in sight. He *does* want human companionship."

“What’s all this yack-yack?” demanded Lazarus.

“I had to ask questions, Grandfather, as I don’t know the organization of the Clinic. Ishtar is not a servant; she is a rejuvenator and a highly skilled one—and so is her assistant. But they are happy to supply any service you want.”

“I don’t need flunkies; I’m feeling pretty good today. If I want anything, I’ll shout; they don’t need to hang over me, hand and *foot.*” Then he grinned. “But she’s a cute little trick, in the large, economy size; it’s a pleasure to have her around. Moves like a cat—no bones, just flows. She does indeed remind me of Ariel—did I tell you why Ariel tried to kill me?”

“No. I would like to hear if you want to tell me.”

“Mmm— Ask me when Ishtar isn’t around—I think she knows more English than she lets on. But I did promise to talk if you showed up to listen. What would you like to hear?”

“Anything, Lazarus. Scheherazade picked her own subjects.”

“So she did. But I don’t have one on tap.”

“Well…you said as I came in that ‘early rising is a vice.’ Did you mean that seriously?”

“Maybe. Gramp Johnson claimed it was. He used to tell a story about a man who was condemned to be shot at sunrise— but overslept and missed it. His sentence was commuted that day, and he lived another forty, fifty years. Said it proved his point.”

“Do you think that’s a true story?”

“As true as any of Scheherazade’s. I took it to mean ‘Sleep whenever you can; you may have to stay awake a long time.’ Early rising may not be a vice, Ira, but it is certainly no virtue. The old saw about the early bird just goes to show that the worm should have stayed in bed. I can’t stand people who are smug about how early they get up.”

“I didn’t mean to sound smug, Grandfather. I get up early from long habit—the habit of work. But I don’t say it’s a virtue.”

“Which? Work? Or early rising? Neither is a virtue. But getting up early does *not* get more work done…any more than you can make a piece of string longer by cutting off one end and tying it onto the other. You get *less* work done if you persist in getting up yawning and still tired. You aren’t sharp and make mistakes and have to do it over. That sort of busy-busy is wasteful. As well as unpleasant. And annoying to those who would sleep late if their neighbors weren’t so noisily active at some ungodly cow-milking hour. Ira, progress doesn’t come from early risers—progress is made by lazy men looking for easier ways to do things.”

“You make me feel that I’ve wasted four centuries.”

“Perhaps you have, Son, if you’ve spent it getting up early and working hard. But it's not too late to change your ways. Don't fret about it; I've wasted most of my long life—though perhaps more pleasantly. Would you like to hear a story about a man who made 'laziness a fine art? His life exemplified the Principle of Least Effort. A true story."

"Certainly. But I don't insist on its being true."

"Oh, I won't let truth hamper me, Ira; I'm a solipsist at heart. Hear then, O Mighty King,

VARIATIONS ON A THEME

II

The Tale of the Man Who Was Too Lazy to Fail

He was a schoolmate of mine in a school for training naval officers. Not space navy; this was before the human race had even reached Earth's one satellite. This was wet navy, ships that floated in water and attempted to sink each other, often with regrettable success. I got mixed up in this through being too young to realize emotionally that, if my ship sank, I probably would sink, too—but this is not my story, but David Lamb's.* (* There is no record that the Senior ever attended a school for militaro-naval officers, or any military school. On the other hand, there is no proof that he did not. This story may be autobiographical to whatever extent it is true; "David Lamb" may be one more of the many names used by Woodrow Wilson Smith.

The details are consistent with Old Home's history so far as we know it. The Senior's first century coincides with that century of continuous war which preceded the Great Collapse— a century of much scientific progress paralleled by retrogression in social matters. Waterborne and airborne ships were used for fighting throughout this century. See appendix for idioms and technicalities. J.F. 45th)

To explain David I must go back to his childhood. He was a hillbilly, which means he came from an area uncivilized even by the loose standards of those days—and Dave came from so far back in the hills that the hoot owls trod the chickens.

His education was in a one-room country school and ended at thirteen. He enjoyed it, for every hour in school was a hour sitting down doing nothing harder than reading. Before and after school he had to do chores on his family's farm, which he hated, as they were what was known as "honest work"—meaning hard, dirty, inefficient, and ill-paid—and also involved getting up early, which he hated even worse.

Graduation was a grim day for him; it meant that he now did “honest work” all day long instead of spending a restful six or seven hours in school. One hot day he spent fifteen hours plowing behind a mule…and the longer he stared at the south end of that mule, breathing dust it kicked up and wiping the sweat of honest toil out of his eyes, the more he hated it.

That night he left home informally, walked fifteen miles to town, slept across the door of the post office until the postmistress opened up next morning, and enlisted in the Navy. He aged two years during the night, from fifteen to seventeen, which made him old enough to enlist.

A boy often ages rapidly when he leaves home. The fact was not noticeable; birth registrations were unheard of at that time and place, and David was six feet tall, broadshouldered, well-muscled, handsome, and mature in appearance, save for a wild look around the eyes.

The Navy suited David. They gave him shoes and new clothes, and let him ride around on the water, seeing strange and interesting places—untroubled by mules and the dust of cornfields. They did expect him to work, though not as much, or as hard, as working a hill farm—and once he figured out the political setup aboard ship he became adept at not doing much work while still being satisfactory to the local gods, namely, chief petty officers.

But it was not totally satisfactory as he still had to get up early and often had to stand night watches and sometimes scrub decks and perform other tasks unsuited to his sensitive temperament.

Then he heard about this school for officer candidates—“midshipmen” as they were known. Not that David cared what they were called; the point was that the Navy would *pay* him to sit down and read books—his notion of heaven—untroubled by decks to scrub and by petty officers. 0 King, am I boring you? No?

Very well— David was ill prepared for this school, never having had four to five years’ additional schooling considered necessary to enter it—mathematics, what passed for science, history, languages, literature, and so forth.

Pretending to four years or so of schooling he did not have was more difficult than tacking two years on the age of an overgrown boy. But the Navy wished to encourage enlisted men to become officers, so it had established a tutoring school to aid candidates slightly deficient in academic preparation.

David construed “slightly deficient” to mean his own state; he told his chief petty officer that he had “just missed” graduating from high school—which was true in a way; he had “just missed” by half a county, that being the distance from his home to the nearest high school.

I don’t know how David induced his See-Pee-Oh to recommend him; David never discussed this.

Suffice to say that, when David’s ship steamed for the Mediterranean, David was dropped at Hampton Roads six weeks before the tutoring school convened. He was a supernumerary during that time.. The Personnel Officer (in fact, his clerk) assigned David to a bunk and a mess, and told him to stay out of sight during working hours in the empty classrooms where his fellow hopefuls would meet six weeks later. David did so; the classrooms had in them the books used in tutoring in academic subjects a candidate might lack—and David lacked them all. He stayed out of sight and sat down and read.

That’s all it took.

When the class convened, David helped tutor in Euclidean geometry, a required subject and perhaps the most difficult. Three months later he was sworn in as a naval cadet on the beautiful banks of the Hudson River at West Point.

David did not realize that he had jumped from the frying pan into the fire; the sadism of petty officers is a mild hit-or-miss thing compared with the calculated horrors visited on new cadets —”plebes”—by cadets of the senior classes, especially by the seniormost, the first classmen, who were walking delegates of Lucifer in that organized hell.

But David had three months to find this out and to figure out what to do, that being the time upper classes were on the briny, practicing warfare. As he saw it, if he could last nine months of these hazards, all the kingdoms of the Earth would be his. So he said to himself, if a cow or a countess can sweat out nine months, so can I.

He arranged the hazards in his mind in terms of what must be endured, what could be avoided, and what he should actively seek. By the time the lords of creation returned to stomp on the plebes he had a policy for each typical situation and was prepared to cope with it under doctrine, varying doctrines only enough to meet variations in situation rather than coping hastily on an improvised basis.

Ira—”O King,” I mean—this is more important to surviving in tough situations than it sounds. For example, Gramp— David’s Grampaw, that is—warned him never to sit with his back to door. “Son,” he said to him, “might be nine hundred and ninetynine times you’d get away with it—no enemy of your’n would come through that door. But the thousandth time—that’s the one. If my own Grampaw had always obeyed that rule, he might be alive today and still jumping out bedroom windows. He knew better, but he missed just once, through being too anxious to sit in on a poker game, and thereby took the one chair open, one with its back to a door. And it got him.

“He was up out of his chair and emptied three shots from each of his guns into his assailant before he dropped; we don't die easy. But 'twas only a moral victory; he was essentially dead, with a bullet in his heart, before he got out of that chair. All from sitting with his back to an open door."

Ira, I've never forgotten Gramp's words—and don't you forget 'em.

So David categorized the hazards and prepared his doctrines. One thing that had to be endured was endless questioning, and he learned that a plebe was *never* permitted to answer, "I don't know, sir," to any upper classman, especially a first classman. But the questions ordinarily fell into categories— history of the school, history of the Navy, famous naval sayings, names of team captains and star players of various athletic sports, how many seconds till graduation, what's the menu for dinner. These did not bother him; they could be memorized—save the number of seconds remaining till graduation, and he worked out shortcuts for that, ones that stood him in good stead in later years.

"What sort of shortcuts, Lazarus?"

Eh? Nothing fancy. A precalculated figure for reveille each morning, a supplementary figure for each hour thereafter, such as: five hours after six o'clock reveille subtracts eighteen thousand seconds from the base figure, and twelve minutes later than that takes off another seven hundred and twenty seconds. For example at noon formation one hundred days before graduation, say at exactly twelve-oh-one and thirteen seconds, figuring graduation at ten. A.M. which was standard, David could answer, "Eight million, six hundred and thirty-two thousand, seven hundred and twenty-seven seconds, sir!" almost as fast as his squad leader could ask him, simply from having precalculated most of it.

At any other time of day he would look at his watch and pretend to wait for the second hand to reach a mark while in fact performing subtractions in his head.

But he improved on this; he invented a decimal clock—not the one you use here on Secundus, but a variation on Earth's clumsy twenty-four-hour day, sixty-minute hour, sixty-second minute system then in vogue. He split the time for reveille to taps into intervals and subintervals of ten thousand seconds, a thousand seconds, a hundred seconds, and memorized a conversion table.

You see the advantage. For anyone but Andy Libby, God rest his innocent soul, subtracting ten thousand, or one thousand, from a long string of digits up in the millions is easier to do in your head, quickly and without error, than it is to subtract seven thousand, two hundred, and seventy-three—the figure to be subtracted in the example, I just gave. David's new method did not involve carrying auxiliary figures. in the mind while searching for the ultimate answer.

For example, ten thousand seconds after reveille is eight forty-six forty A.M. Once David worked out his conversion table and memorized it—took him less than a day; just memorizing was easy for him—once he had that down pat, he could, convert to the hundred-second interval coming up next almost instantly, then *add* (not subtract) two digits representing the time still to go to the last two places in his rough answer to get his exact answer. Since the last two places were *always* zeroes—check it yourself—he could give an answer in millions of seconds as fast as he could speak the figures, and have it right every time.

Since he didn't explain his method, he got a reputation for being a lightning calculator, an *idiot-savant* talent, like Libby. He was not; he was simply a country boy who used his head on a simple problem. But his squad leader got so groused at him for being a "smart ass"—meaning that the squad leader couldn't do it—that he ordered Dave to memorize the logarithm tables. This didn't faze Dave; he didn't mind anything but "honest work." He set out to do so, twenty new ones each day, that being the number this first classman thought would suffice to show up this "smart ass."

The first classman grew tired of the matter when David had completed only the first six hundred figures—but Dave kept at it another three weeks through the first thousand—which gave him the first ten thousand figures by interpolation and made him independent of log tables, a skill that was of enormous use to him from then on, computers being effectively unknown in those days.

But the unceasing barrage of questions did not bother 'David save for the possibility of starving to death at meal times— and he learned to shovel it in fast while sitting rigidly at attention and still answer all questions flung at him. Some were trick questions, such as, "Mister, are you 'a virgin?" Either way a plebe answered he was in trouble—if he gave a straight answer. In those days some importance was placed on virginity or the lack of it; I can't say why.

But trick questions called for trick answers; Dave found that an acceptable answer to that one was: "Yes, *sir*—in my left ear." Or possibly his belly button.

But most trick questions were intended to trap a plebe into giving a meek answer—and meekness was a mortal sin. Say a first classman said, "Mister, would you say I was handsome?"—an acceptable answer would be, "Perhaps your mother would say so, sir—but not *me."* Or "Sir, you are the handsomest man I ever saw who was intended to be an ape."

Such answers were chancy—they might flick a first classman on the raw—but they were safer than meek answers. But no matter how carefully a plebe tried to meet impossible standards, about once a week some first clansman would decide that he needed punishment—arbitrary punishment without trial: This could run from mild, such as exercises repeated to physical collapse—which David disliked as they reminded him of “honest work”—up to paddling on the buttocks. This may strike you as nothing much, Ira, but I’m not speaking’ of paddling children sometimes receive. These beatings were delivered with the flat of a sword or with a wornout broom that amounted to a long, heavy club. Three blows delivered by a grown man in perfect health would leave the victim’s bottom a mass of purple bruises and blood blisters, accompanied by excruciating pain.

David tried hard to avoid incidents likely to result in this calculated torture, but there was no way to avoid them entirely, short of quitting, as some first classmen awarded such blows through sheer sadism. David gritted his teeth and accepted them when he had to, judging—correctly—that he would be run out of school if he defied the supreme authority of a first clansman. So he thought about the south end of that mule and endured it.

There was a much greater hazard to his personal safety and future prospects of a life free from “honest work.” The mystique of military service included the idea that a prospective officer must excel in athletic sports. Do not, ask why; it was no more subject to rational explanation than is any other branch of theology.

Plebes in particular had to—no choice!—go out for “sports.” Two hours each day which were nominally free David could not spend napping or dreaming in the quiet of the school’s library, but must perforce spend in sweaty exercise.

Worse still, some “sports” were not only excessively energetic but also involved hazards to David’s favorite skin. “Boxing”—this is a long forgotten, utterly useless, stylized mock combat in which two men batter each other for a preset period or until one is beaten unconscious. “La Crosse”—this is a mock battle taken over from the savages who had formerly inhabited that continent. In it mobs of men fought with clubs. There was a hard missile with which points were scored—but it was the prospect of being sliced open or having bones broken with these clubs that aroused our hero’s distaste.

There was a thing called “water polo” in which opposing swimmers attempted to drown each other. David avoided that one by not swimming more than well enough to stay in school—a required skill. He was an excellent swimmer, having learned at the age of seven through being chucked into a creek by two older cousins—but he concealed his skill.

The sport with highest prestige was a thing called “foot ball”—and first classmen sized up each new group of victims for candidates who might be expected to excel, or learn to excel, in this organized mayhem. David had never seen it—but now he saw it and it filled his peaceful soul with horror.

As well it might. It involved two gangs of eleven men facing each other on a field and trying to move an ellipsoid bladder down the field against the opposition of the other gang. There were rituals and an esoteric terminology, but that was the idea.

It sounds harmless and rather foolish. Foolish it was, harmless it was not—as the rituals permitted the opposing gang to attack a man attempting to move the bladder in a variety of violent ways, the least of which was to grab him and cause him to hit the ground like a ton of brick. Often three or four bit him at once, and sometimes inflicted indignities and mayhems not permitted by the rituals but concealed by' the pile of bodies.

Death was not supposed to result from this activity but sometimes did. Injuries short of death were commonplace.

Unfortunately David had the ideal physique for success in this "feet ball"—height, weight, eyesight, fleetness of foot, speed of reflex. He was certain to be spotted by the first classmen on their return from mock sea battles and "volunteered" as a sacrificial victim.

It was time for evasive action.

The only possible way to avoid "foot ball" was to be acceptably occupied with some other sport. He found one.

Ira, do you know what "swordsmanship" is? Good—I can speak freely. This was a time in Earth's history when the sword had ceased to be a weapon—after having been prominent for more than four millennia. But swords still existed in fossil form and retained a shadow of their ancient prestige. A gentleman was presumed to know how to use a sword and— "Lazarus, what is a 'gentleman'?"

What? Don't interrupt, boy; you confuse me. A "gentleman" is, uh —Well, now let me see. A general definition— My, you can think up some hard ones. Some said it was an accident of birth—that being a disparaging way of saying it was a trait genetically inherited. But that doesn't say what the trait is. A gentleman was supposed to prefer being a dead lion to being a live jackal. Me, I've always preferred to be a live lion, so that puts me outside the rules. Mmm…you could say in all seriousness that the quality tagged by that name represents the slow emergence in human culture of an ethic higher than simple self-interest—damn slow in emerging in my opinion; you still can't rely on it in a crunch.

As may be, military officers were presumed to be gentlemen and wore swords. Even fliers wore swords, although Allah alone could guess why.

These cadets were not only presumed to be gentlemen; there was a national law which stated that they *were* gentlemen. So they were taught a bare minimum about how to handle a sword, just enough to keep them from slicing their fingers or stabbing bystanders—not enough to fight with them, just to keep them from looking too silly when protocol required them to wear swords.

But swordsmanship was a recognized sport, called "fencing." It had none of the prestige of football, or boxing, or even water polo—but it was on the list; a plebe could sign up for it.

David spotted this as a way out. Under a simple physical law, if he was up in the fencing loft,then he was *not* down on the football field, with sadistic gorillas in hobnailed boots jumping up and down on him. Long before the upper clansmen returned to school Plebe Cadet Lamb had established himself as a member of the fencing squad, with a record of never missing a day, and was trying hard to look like a "good prospect" for the team.

At that time and place three forms of fencing were taught: saber, dueling sword, and foil: The first two used full-sized weapons. True, edges were dulled and points were bated; nevertheless a man could get hurt with them—even fatally, though that was very rare. But the foil was a lightweight toy, a 'fake sword with a limber blade that bent at the slightest pressure. The stylized imitation swordplay that used the foil was about as dangerous as tiddlywinks. This was the "weapon" David selected.

It was made for him. The highly artificial rules of foil fencing gave great advantage to fast reflexes and a sharp brain, both of which he had. Some exertion was necessary—but not much compared with football, lacrosse, or even tennis. Best 'of all, it required no body-against-body pounding that David found so distasteful in the rough games he was avoiding. David applied himself single-mindedly to acquiring skill so that his haven would be secure.

So diligent was he in protecting his sanctuary that, before his plebe year was over, he was National Novice Foil Champion. This caused his squad leader to smile at him, an expression that hurt his face. His cadet company commander noticed him for the first time and congratulated him.

Success with the foil even got him out of some "punishment" 'beatings. One Friday evening, when he was about to be beaten for some imaginary dereliction, David said, "Sir, if it's the same to you, I'd rather have twice as many swats on Sunday—because tomorrow we're fencing the Princeton plebe team and, if you do the job I know you can do, it might slow me up tomorrow."

The first clansman was impressed by this because having the Navy win, at any time and for any purpose and in anything, took precedence by Sacred Law over anything else, even the righteous pleasure of beating a "smart ass" plebe. He answered, ""Tell you what, mister. Report to my room after supper on Sunday. If you lose tomorrow, you get a double dose of the medicine you've got coming to you. But if you win, we'll cancel it."

David won all three of his matches.

Fencing got him through his perilous plebe year with his precious skin unmarked save for scars on his bottom. He was safe now, with three easy years ahead of him, for only a plebe was subject to physical punishment, only a plebe could be ordered to take part in organized mayhem….

(Omitted)

One body-contact sport David loved, one of ancient popularity, which he had learned back in those hills he had fled from. But it was played with girls and was not officially recognized at this school. There were harsh rules against it, and .a cadet caught practicing it was kicked out without mercy.

But David, like all true geniuses, paid only pragmatic attention to rules made by other people—he obeyed the Eleventh Commandment and never got caught. While other cadets sought the empty prestige of sneaking girls into the barracks or went over the wall at night in search of girls, David kept his activities quiet. Only those who knew him well knew how industriously he pursued this one body-contact sport. And no one knew him well.

Eh? Female cadets? Didn't I make that plain, Ira? Not only were there no girl cadets, there was not one girl in that Navy—except a few nurses. Most particularly there were no girls at that school; there were guards night and day to keep them away from the cadets.

Don't ask me why. It was Navy policy and therefore did not have a reason. In truth there was no job in that entire Navy which could not have been performed by either sex or even by eunuchs—but by long tradition that Navy was exclusively male.

Come to think about it, a few years later that tradition *was* questioned—a little at first, then by the end of that century, shortly before the Collapse, that Navy had females at all levels. I am *not* suggesting that this change was a cause of the Collapse. There were obvious causes of the Collapse, causes I won't go into now. This change either was a null factor or possibly postponed the inevitable by a minor amount.

Either way, it doesn't figure into the Tale of the Lazy Man. When David was in school, cadets were supposed to encounter females but seldom, and only under highly stylized circumstances, rigidly bound protocol, and heavily chaperoned.* (* From the noun "chaperon." This word 'has two meanings,: (1) A person charged with preventing sexual contacts' between males and females not licensed for such contacts; (2) a person superficially performing such disservice while, in fact acting as a benign lookout. It appears that the Senior uses the word here in its first meaning rather than in its antithetical second méaaning. See appendix. J.F.45th)

Instead of fighting the rules, David looked for loopholes and made use of them—he was never caught.

Every impossible rule has its loopholes; every general prohibition creates its bootleggers. The Navy as a whole created its impossible rules; the Navy as individuals violated them, especially its curious rules about sex—a publicly monastic life on duty, a slightly veiled life of unlimited voluptuousness off duty. At sea, even harmless reliefs from sexual tension were treated most harshly when detected—although such technical violations of the mores were expected and condoned less than a century earlier. But this Navy was only a little more hypocritical in its sexual behavior than was the social matrix in which it was imbedded, more excessive in its outlets only to the degree that its public rules were more sternly impossible than those of that society as a whole. The public sexual code of that time was unbelievable, Ira; the violations of it simply mirrored in reverse its fantastic requirements. To every action there is an equal and opposite reaction—if you'll excuse the obvious.

I did not intend to discuss this other than to say that David found ways to get along with the school's regulations about sex without going completely off his nut, as too many of his classmates did. I'll add only this—and this is merely rumor: Through a mischance all too easy then although unheard of today, a young woman became pregnant, presumably by David. In those days—believe me!—this was a major disaster.

Why? Just stipulate that it *was* a disaster; it would take forever to explain' that society and no civilized human would believe it. Cadets were forbidden to marry, the young woman *had* to get married under the rules current then, intervention to correct this mischance was almost unobtainable and physically very dangerous for her.

What David did about it illustrates his whole approach to life. When faced with a choice of evils, accept the least hazardous and cope with it, unblinkingly. He married her.

How he managed to do this and not get caught, I do not know. I can think of a number of ways, some simple and fairly foolproof, some complex and thereby subject to breakdown; I assume that David selected the simplest.

It changed the situation from impossible to manageable. It converted the girl's father from an enemy, all too likely to go to the Commandant of the school with the story and thereby force David to resign when he had but a few months more to reach his goal, into an ally and fellow conspirator anxious to keep the marriage secret so that his son-in-law could graduate and take his wayward daughter off his hands.

As a side benefit David no longer needed to give planning to the pursuit of his favorite sport. He spent his time off in unworried domesticity, with perfect chaperonage.* (* Context implies second meaning. *J.F.45th)*

As for the rest of David's career in school, one may assume that a lad who could substitute six weeks of unsupervised reading for four years of formal schooling could also stand first in his class academically. This would pay off in money and rank as a young officer's place on the promotion list was determined by his standing at graduation.

But the competition for first place is sharp indeed, and— worse—makes the cadet who achieves it conspicuous. David became aware of this when he was a fresh-caught plebe. "Mister, are you a savoir?" that is to say: "academically brainy"—was another trick question; a plebe was damned whether he answered Yes or No.

But standing second—or even tenth—was practically as useful as first place. David noticed something else: The fourth year counted four times as much as the first, the next to the last year three times as much, and so on down—that is, a plebe's marks did not affect his final standing much—only one part in ten.

David decided to maintain a "low profile"—always the smart decision when one is likely to be shot at.

He finished the first half of his plebe year a little above midway in his class—safe, respectable, inconspicuous. He ended his plebe year in' the upper quarter—but by that time the first classmen were thinking only of graduation and paid no attention to his status. His second year he moved to the upper 10 percent; his third year he improved that by a few numbers—and his last year, when it counted most, he went all out and finished with a final standing for four years of sixth—but effectively second, for of those higher in ranking two elected to leave the line of command for specialization, one was not commissioned because he had damaged his eyes by studying too hard, and one resigned after he graduated.

But the care with which David managed his class standing does not show his true talent for laziness—after all, sitting down and reading was his second, favorite pastime, and anything which merely called for excellent memory and logical reasoning was 'no effort to him.

During the mock-warfare cruise that opened David's last year of school a group of his classmates were discussing what cadet ranks each would receive. By then, they knew pretty well which ones would be selected as cadet officers. Jake is certain to be cadet corps commander—unless he falls overboard. Who gets his battalion? Steve? Or Stinky?

Someone suggested that Dave was in line for that battalion. Dave had been listening instead of talking, a ‘standard feature of his “low profile”—and very nearly a third way to lie, Ira, and easier than its equivalent—talking while saying nothing—and also tends to give the nontalker a reputation for wisdom. Never cared for it myself—talking is the second of the three real pleasures in life and the only thing that sets us apart from the apes. Though just barely.

Now David broke—or appeared to break—his habitual reserve. “No battalion for me,” he said. “No indeedy! I’m going to be regimental adjutant and stand out in front where the girls can see me.”

Perhaps his remark wasn’t taken seriously—regimental adjutant is lower than battalion commander. But it was certain to be repeated, and David knew it, perhaps by the prospective cadet regimental commander to commissioned officers making the selections for cadet officers.

No matter— David was chosen regimental adjutant.

In any military organization of that time, a regimental adjutant did stand out in front, all alone, where female visitors could hardly avoid seeing him. But one may doubt that this figured into Dave’s plans.

The regimental adjutant attends no formations other than full regimental formations. He goes to and from classes alone, instead of marching or being marched. Other first classmen are responsible each for some unit of cadets, be it squad, platoon, company, battalion, or regiment; the regimental adjutant has no such responsibilities and only one minor administrative task; he keeps the watch list for the most senior of the cadet officers.

But he is *not* on that watch list himself. Instead he is supernumerary who fills in when one of them is ill.

And *this* was the lazy man’s prize. Those cadet officers were perfect specimens and the chances that one would be too ill to take his day’s duty ranged from negligible to zero.

For three years our hero had been standing watch about every tenth day. These watches weren’t difficult, but they involved either getting to bed a half hour late or getting up a half hour early, and much standing on tired feet, all an affront to Dave’s tender regard for his comfort.

But his last year David stood only three watches, and he “stood” those sitting down, as “Junior Officer of the Watch.”

At last the Day arrived. David graduated, was commissioned—then went to the chapel and remarried his wife. If her belly bulged a little, that was not unusual in brides even in those days, and was always ignored, and condoned once a young couple married. It was widely known though rarely mentioned that an eager young bride could accomplish in seven months or less what takes nine for cow or countess.

Dave was safely past all rocks and shoals; he need never again fear going back to that mule and "honest work."

But life as a junior officer in a warship turned out to be less than perfect. It had good points—servants, a comfortable bed, easy work that rarely got David's hands dirty, and twice as much money. But he needed that and more, to support a wife, and his ship was at sea enough that he often lacked the pleasant compensations of marriage. Worst of all, he stood heel-and-toe watches on a short watch list; this meant a four-hour night watch about every other night standing up. He was sleepy much of the time and his feet hurt.

So David applied for training as an aeronaut. This Navy had recently grasped an idea called "air power" and was trying to grab as much of it as possible in order to keep it out of the wrong hands—the Army's hands, that is. They were behind as the Army had grabbed first—so volunteers for flying were welcome.

David was quickly ordered to shore duty to see if he had the makings of an aeronaut.

He had indeed! He not only had the mental and physical qualities but also was highly motivated—as his new work was done sitting down, whether in classroom or in the air, and he stood no night watches and received pay-and-a-half for sitting down and sleeping at home; flying was classed as "hazardous duty" and extra pay was awarded.

I had best say something about these aeroplanes since they resemble not at all the aerodynes you are used to. In a way they were hazardous. So is breathing. They were not as hazardous as the automotive ground vehicles then in use, and not nearly as hazardous as being a pedestrian. Accidents, fatal and otherwise, usually could be traced to a mistake on the part of the aeronaut—David *never* let that sort of accident happen to *him.* He had no wish to be the hottest pilot in the sky; he merely wanted to be the oldest.

Aeroplanes were weird monstrosities looking like nothing in the sky today, save possibly a child's kite—they were often called "kites." They had two wings, one above the other, and the aeronaut sat between them. A small baffle helped to deflect wind from his face. Don't look surprised; these flimsy structures flew very slowly, pulled through the air by a powered screw.

Wings were made of varnished cloth held rigid by struts— you can see from this alone that their speeds could never be any large fraction of the speed of sound—except on sad occasions when an overly eager pilot would dive straight down, then pull the wings off through trying too abruptly to recover a normal attitude.

Which David never did. Some people are natural fliers. The first time David examined an aeroplane he understood its strengths and weaknesses as thoroughly as he understood the milking stool he had left behind him.

He learned-to fly almost as quickly as he had learned to swim.

His instructor said, “Dave, you’re a natural. I’m going to recommend you for fighter training.”

Fighter pilots were the royalty of aeroplane fliers; they went up, and engaged enemy pilots in single combat. A fighter who did this successfully five times—killed the opposing pilot instead of being killed—was called an “Ace,” which was a high honor, for, as you can see, the average chance of doing this is the fifth power of one-half, or one in thirty-two. Whereas the chance of getting killed instead is the complement, close to certainty.

Dave thanked his mentor while his skin crawled and his brain went whir-click as it considered ways to avoid this honor without giving up pay-and-a-half and the comfort of sitting down.

There were other disadvantages to being a fighter pilot besides the prime hazard of getting your ass shot off by some stranger. Fighter pilots flew in one-man kites and did their own navigation—without computers, homing devices, or anything that would be taken for granted today—or even later that century. The method used was called “dead reckoning,” because, if you didn’t reckon it correctly, you were dead—since Navy flying was done over water, from a small floating aerodrome, with a margin of safety in fuel for a fighter plane of only minutes. Add to this the fact that a fighter pilot in combat had to choose between doing navigation or giving single-minded attention to attempting to kill a stranger before that stranger killed him. If he’ wanted to be an “Ace”—or even eat dinner that night—he must put first things first and worry about navigation later.

In addition to the chance of being lost at sea and drowned in a kite that was out of gas—did I say how these things were powered? The airscrew was driven by an engine powered by a chemical exothermic reaction—oxidation of a hydrocarbon fluid called “gas,” which it was not. If you think this unlikely, I assure you that it was unlikely even then. The method was woefully inefficient. A flier was not only likely to run out of gas with nothing around him but ocean, but also this temperamental engine often coughed and quit. Embarrassing. Sometimes fatal.

The lesser drawbacks to being a fighter pilot were not all physical danger; they simply did not fit David's master plan. Fighter pilots were assigned to floating aerodromes, or carriers. In peacetime, which this nominally was, a flier did not work too hard nor stand many watches and spent much of his time ashore at a land aerodrome even though he was carried on the muster rolls of a carrier ship—thereby credited with sea duty, necessary for promotion and pay.

But for several weeks each year a flier assigned to a carrier ship would actually *be* at sea, practicing mock warfare— which involved getting up an hour before dawn to warm those cantankerous engines and stand by ready to fly at the first hint of real or simulated danger.

David hated this—he would not willingly attend Judgment Day if it was held before noon.

There was another drawback: landing on these floating aerodromes. On land, David could land on a dime and give back change. But that depended on his own skill, highly developed because his own skin was at stake. But landing on a carrier depended on another pilot's skill—and David held a dark opinion of entrusting his skin to the skill, good intentions, and alertness of someone else.

Ira, this is so unlike anything you are likely to have seen in your life that I am at loss. Consider your skyport here at New Rome: In landing, a ship is controlled from the ground— right? So it was with aeroplanes landing on carriers—but the analogy breaks down because a landing on a carrier in those days used no instruments. None. I'm not fooling.

It was done by eye alone, just as a boy in a game of catch snatches a ball out of the air—but David was the ball, and the skill used to catch him was not his own but that of a pilot standing on the carrier. David had to suppress his own skill, his own opinions, and place utter faith in the pilot on the carrier—anything less brought disaster.

David had *always* followed his own opinion—against the whole world if necessary. To place that much faith in another man ran counter to his deepest emotions. A carrier landing was like baring his belly to a surgeon and saying, "Go ahead and cut"—when he was not sure that surgeon was competent to slice ham. Carrier landing came closer to causing David to give up pay-and-a-half and easy hours than any other aspect of flying, so torn was he by the necessity of accepting another pilot's decision—and one not even sharing his danger, at that!

It took all his willpower to do it the first time, and it never became easy. But he learned one lesson that he never expected to learn—that is, that there were circumstances in which another man's opinion was not only better than his own, but incomparably better.

You see—no, perhaps you don't; I have not explained the circumstances. An aeroplane landed on a carrier in a controlled crash, through a hook in its tail catching a wire rope stretched across the top deck. But if the flier follows his own judgment based on experience in landing on a flying field, he is certain to crash into the stern of the ship—or, if he knows this and tries to allow for it, he will fly too high and miss the rope.

Instead of a big flat field and plenty of room for minor mistakes, he has only a tiny "window" which he must hit precisely, neither right nor left, nor up nor down, nor too fast nor too slow. But he can't see what he is doing well enough to judge these variables correctly.

(Later on, the process was made semiautomatic, then automatic, but when it was finally perfected, carriers for aeroplanes were obsolete—a capsule description of most human "progress": By the time you learn how, it's too late.)

(But it often turns out that what you have learned applies to some new problem. Or we would still be swinging from trees.)

So the flier in the aeroplane must trust a pilot on deck who *can* see what is going on. He was called "the landing signal officer" and used wigwag flags to signal orders to the aeroplane's pilot.

The first time David tried this unlikely stunt he chased around the sky three times for fresh approaches before, he controlled his panic, quit trying to override the judgment of the LSO, and was allowed to land.

Only then did he discover how scared he was—his bladder cut loose.

That evening he was awarded a fancy certificate: the Royal Order of the Wet Diaper—signed by the LSO, endorsed by his squadron commander, witnessed by his squadron mates. It was a low point in his life, worse than any his plebe year, and it was little consolation that the order was awarded so frequently that certificates were kept ready and waiting for each new group of still-damp fliers.

From then on he was letter-perfect in following orders of landing signal officers, obeying like a robot, emotions and judgment suppressed by a sort of autohypnosis. When it came time to qualify in night landings—much worse on the nerves as the pilot in the air couldn't see *anything* but lighted wands the ISO waves instead of flags —David landed perfectly on his first approach.

David kept his mouth shut about his determination not to seek glory as a fighter pilot until he completed all requirements to make permanent his flying 'status. Then he put in a request for advanced training—in multiple-engine aircraft. This was embarrassing, as his instructor who thought so well of his potential was now his squadron commander and it was necessary to submit this request through him. Once the letter started through the mill, he was called to his boss's stateroom.

"Dave, what is this?"

"Just what it says, sir. I want to learn to fly the big ones."

"Are you out of your head? You're a fighter pilot. Three months of this scouting squadron—one-quarter, so I can give you a good Fitness Report—and you do indeed leave for advanced training., As a fighter."

David didn't answer.

His squadron commander persisted. "Dave, are you fretting over that silly 'Diaper Diploma'? Half the pilots in the fleet have won it. Hell, man, I've got one myself. It didn't hurt you with your shipmates; it just made you look human when you were beginning to suffer from too tight a halo."

David still did not comment.

"Damn it, don't just stand there! Take this letter and tear it up. Then submit one for fighter training. I'll let you go now, instead of waiting three months."

Dave stood mute. His boss looked at him and turned red, then said softly, "Maybe I was wrong. Maybe you *don't* have what it takes to be a fighter—Mister Lamb. That's all. Dismissed."

In the "big ones," the multiple-engine flying boats, David at last found his home. They were too big to fly from a carrier at sea; instead duty with them counted as sea duty, although in fact David almost always slept at home—his own bed, his own wife—save for an occasional night as duty officer when he slept at the base, and still less frequent occasions when the big boats flew at night. But they did not fly too often even in daylight and fine weather; they were expensive to fly, too expensive to risk, and the country was going through an economy wave. They flew with full crews—four or five for two-engine boats, more for four-engine boats, and often with passengers to permit people to get flying time to qualify for that extra pay. All of this suited Dave—no more nonsense of trying to navigate while doing sixteen other things, no more relying on the judgment of a landing signal officer, no more depending on just one neurotic engine, no more worries about running out of, gas. True, given a choice, he would always make every landing himself—but when he was ranked out of this by a senior pilot, he did not let his worry show and in time ceased to worry, as all big-boat pilots were careful and disposed to live a long time.

(Omitted)

—years David spent comfortably while being promoted two ranks.

Then war broke out. There were always wars that century—but not always everywhere. This one included practically every nation on Earth. David took a dim view of war; in his opinion the purpose of a navy was to appear so fierce as to make it unnecessary to fight. But he was not asked, and it was too late to worry, too late to resign, nor was there anywhere to run. So he did not worry about what he could' not help, which was good, as the war was long, bitter, and involved millions of deaths.

'"Grandfather Lazarus, what did you do during this war?" Me? I sold Liberty Bonds and made four-minute speeches and served both on a draft board and a rationing board and made other valuable contributions—until the President called me to Washington, and what I did then was hush-hush and you wouldn't believe it if I told you. None of your lip, boy; I was telling you what *David* did.

Ol' David was an authentic hero. He was cited for gallantry and awarded a decoration, one that figures into the rest of his story.

Dave had resigned himself to—or looked forward to, as may be—retiring at the rank of lieutenant commander, as there weren't many billets higher than that in the flying boats. But the war jumped him to lieutenant commander in a matter of weeks, then to commander a year later, and finally to captain, four wide gold stripes, without facing a selection board, taking a promotion examination, or commanding a vessel. The war was using them up fast, and anyone not killed was promoted as long as he kept his nose clean.

Dave's nose was clean. He spent part of the war patrolling his country's coasts for enemy underwater vessels—"combat duty" by definition but hardly more dangerous than peacetime practice. He also spent a tour turning clerks and salesmen into fliers. He had one assignment into a zone where actual fighting was going on, and there he won his medal. I don't know the details, but "heroism" often consists in keeping your head in an emergency and doing the best you can with what you have instead of panicking and being shot in the tail. People who fight this way win more battles than do intentional heroes; a glory hound often throws away the lives of his mates as well as his own.

But to be officially a hero requires luck, too. It is not enough to do your job under fire exceptionally well; it is necessary that someone—as senior as possible—see what you do and write it up. Dave had that bit of luck and got his medal.

He finished the war in his nation's capital, in the Naval Bureau of Aeronautics, in charge of development of patrol planes. Perhaps he did more good there than he did in combat, since he knew those multiple-engine craft as well as any man alive, and this job put him in position to cut out obsolete nonsense and push through some improvements. As may be, he finished the war at a desk, shuffling papers and sleeping at home.

Then the war ended.

Dave looked around and sized up the prospects. There were hundreds of Navy captains who, like himself, had been lieutenants only three years earlier. Since the peace was "forever," as, politicians always insist, few would ever be promoted. Dave could see that *he* would not be promoted; he had neither the seniority, the traditionally approved pattern of service, nor the right connections, political and social.

What he did have was almost twenty years' service, the minimum on which to retire at half pay or he could hang on until he was forced to retire through failure to be selected for admiral.

There was no need to decide at once; twenty-year retirement was a year or two off.

But he did retire almost at once-for medical reasons. The diagnosis was "psychosis situational," meaning that he went crazy on the job.

Ira, I don't know how to evaluate this. Dave impressed me as one of the few completely sane men I ever knew. But I wasn't there when he retired and "psychosis situational" was the second commonest cause for medical retirement of naval officers in those days but—how could they *tell?* Being crazy was no handicap to a naval officer, any more than it was to an author, a schoolteacher, a preacher, or several other esteemed occupations. As long as Dave showed up on time and signed paper work some clerk prepared and never talked back to his seniors, it would never show. I recall one naval officer who had an amazing collection of ladies' garters; he used to lock himself into his stateroom and examine them—and another one who did exactly the same with a collection of paper stickers used for postage. Which one was crazy? Or both? Or neither?

Another aspect of Dave's retirement requires knowledge of the laws of the time. Retiring on twenty years' service paid half pay—subject to income tax which was heavy. Retiring for medical disability paid *three-quarters* pay and was *not* subject to income tax.

I don't know, I just don't know. But the whole matter fits Dave's talent for maximum results with minimum effort. Let's stipulate that he was crazy—but was he crazy like a fox?

There were other features of his retirement. He judged correctly that he had no chance of being selected for admiral—but that citation for gallantry carried with it an honorary promotion on retirement—so Dave wound up the first man in his class to become admiral, without ever commanding a ship much less a fleet—one of the youngest admirals in history, by his true age. I conjecture that this amused the farm boy who hated to plow behind a mule.

For at heart he was still a farm boy. There was another law for the benefit of veterans of that war, one intended to compensate lads who had had their educations interrupted by having to leave home to fight: subsidized education, one month for every month of wartime service.

This was intended for young conscripts, but there was nothing to keep a career officer from taking advantage of it; Dave could claim it and did. With three-quarters pay not subject to taxation, with the subsidy—also not taxable—of a married veteran going to school, Dave had about the income he had had on active duty. More, really, as he no longer had to buy pretty uniforms or keep up expensive social obligations. He could loaf and read books, dress as he pleased, and not worry about appearances. Sometimes he would stay up late and prove that there were more optimists playing poker than mathematicians. Then sleep late. For he never, never got up early.

Nor did he ever again go up in an aeroplane. Dave had *never* trusted flying machines; they were much too high in case they stalled. They had never been anything to him but a means to avoid something worse; once they had served his purpose, he put them aside as firmly as he had put aside fencing foils—and with no regrets in either case.

Soon he had another diploma, one which stated that he was a Bachelor of Science in agronomy—a “scientific” farmer.

This certificate, with the special preference extended to veterans, could have obtained him a civil service job, telling other people how to farm. Instead, he took some of the money that had piled up in the bank while he loafed in school and went way back into those hills he had left a quarter of a century earlier—and bought a farm. That is, he made a down payment, with mortgage on the balance through a government loan at a—subsidized, of course—very low rate of interest.

Did he work the farm? Let’s not be silly; Dave never took his hands out of his pockets. He made one crop with hired labor while he negotiated still another deal.

Ira, the completion of Dave’s grand plan involves one factor so unbelievable that I must ask you to take it on faith—it is too much to ask any rational man to understand it.

At that pause between wars, Earth held over two billion people—at least half on the verge of starvation. Nevertheless—and here is where I must ask you to believe that I was there and would not lie to you—despite this shortage of food which never got better other than temporarily and locally in all the years that followed, and could not, for reasons we need, not go into—in spite of this disastrous shortage, the government of David’s country *paid* farmers not to grow food.

Don’t shake your head; the ways of God and government and girls are all mysterious, and it is not given to mortal man to understand them. Never mind that you yourself *are* a government; go home tonight and think about it—ask yourself if you know why you do what you do—and come back tomorrow and tell me.

As may be— David never made but one crop. The following year his acreage was “soil-banked,” and he received a fat check for not working it, which suited him just fine. Dave loved those’ hills, he had always been homesick for them; he had left them simply to avoid work. Now he was being paid *not* to work in them—which suited him; he had never thought that their charms were enhanced by plowing and getting them all dusty.

The “soil bank” payments took care of the ‘mortgage, and his retired pay left a tidy sum over, so he hired a man to do those chores a farm requires even though it is not being worked for a crop—feed the chickens, milk a cow or two, tend a vegetable garden and’ some fruit trees, repair fences— while the hired man’s wife helped David’s wife with the house. For himself, David bought a hammock.

But David was not a harsh employer. He suspected that cows did not want to be waked at five in the morning any more than he did—and he undertook to find out.

He learned that cows would happily change their circadian to more reasonable hours, given the chance. They had to be milked twice a day; they were bred for that. But nine o’clock, in ‘the morning suited them for a first milking quite as well as five, as long as it was regular.

But it did not stay that way; Dave’s hired man had the nervous habit of work. To him there was something sinful in milking a cow that late. So David let him have his way, and hired man and cows went back to their old habits.

As for Dave, he strung that hammock between two shade trees and put a table by it to hold a frosty drink. He would get up in the morning when he woke, whether it was nine or noon, eat breakfast, then walk slowly to his hammock to rest up for lunch. The hardest work he did was endorsing checks for deposit, and, once a month, balancing his wife’s checkbook. He quit wearing shoes.

He did not take a newspaper or listen to radio; he figured that the Navy would let him know if another war broke out—and another *did* break out about the time he started this routine. But the Navy had no need for retired admirals. Dave paid little attention to that war, it was depressing. Instead, he read everything the state library had on ancient Greece and bought books about it. It was a soothing subject, one he had always wanted to know more about.

Each year, on Navy Day, he got all spruced up and dressed as an admiral, with all his medals, from the Good Conduct medal of an enlisted man to the one for bravery under fire that had made him an admiral—let his hired man drive him to the county seat and there addressed a luncheon of the Chamber of Commerce on some patriotic subject. Ira, I don’t know why he did this. Perhaps it was *noblesse oblige.*

Or it may have been his odd sense of humor. But each year they invited him, each year he accepted. His neighbors were proud of him; he was the epitome of Local Boy Makes Good—then comes home and lives as his neighbors lived. His success brought credit to them all. They liked it that he was still just “home folks”—and if they noticed that he never did a lick of work, nobody mentioned it.

I’ve skipped lightly over Dave’s career, Ira, had to. I haven t mentioned the automatic pilot he thought up, then had developed years later when he was in a position to get such things done. Nor the overhaul he made of the duties of the crew of a flying boat—except to say now that it was to get more done with less effort while leaving the command pilot with nothing to do save to stay alert—or to snore on his copilot’s arm if the situation did not require his alertness. He made changes in instruments and controls, too, when at last he found himself in charge of development for all Navy patrol planes.

Let it go with this: I don’t think Dave thought of himself, as an “efficiency expert” but every job he ever held he simplified. His successor always had less work to do than his predecessor.

That his successor usually reorganized the job again to make three times as much work—and require three times as many subordinates—says little about Dave’s oddity other than by contrast. Some people are ants by nature; they *have* to work, even when it’s useless. Few people have a talent for constructive laziness.

So ends the Tale of the Man Who Was Too Lazy to Fail. Let’s leave him there, in his hammock under the shade trees. So far as I know, he is still there.

VARIATIONS ON A THEME

III

Domestic Problems

“After more than two thousand years, Lazarus?”

“Why not, Ira? Dave was my age, near enough as not to matter. I’m still here.”

“Yes, but— Was David Lamb a member of the Families? Under another name? There is no ‘Lamb’ in the lists.”

“I never asked, Ira. Nor did he ever offer me a password. In those days a member kept the fact to himself. Or, if he was, Dave might not have known it, since he left home so young and so abruptly. Back then a youngster wasn’t told until he or she was old enough to think about marriage. Eighteen for boys, usually, and sixteen for girls. Reminds me what a shock it was when I was told—at less than eighteen. By Gramp, because I was about to do something foolish. Son, one of the weirdest things about the human animal is that it grows up physically years and years before its brain grows up. I was seventeen, young and horny and wanted to get married the worst way. Gramp took me out behind the barn and convinced, me that it was indeed the worst way.

"'Woodie,' he said, 'if you want to elope with this girl, nobody will stop you."

"I told him belligerently that nobody *could* stop me, because just over the state line I could swing it without my parents' consent.

"'That's what I'm telling you," he said. "Nobody will stop you. But nobody will help you. Not your parents, nor your other grandparents —nor me. Not a one of us will even stake you to the price of a marriage license, much less help you support a wife. Not a dollar, Woodie, not a thin dime. If you don't believe me, ask any of them."

I said sullenly that I didn't want any help.

Gramp had bushy eyebrows, they shot up. "Well, well," he said. "Is *she* going to support *you?* Have you looked at the "Help Wanted" in the paper lately? If not, be sure to do so. And glance at the financial section while you're about it; reading "Help Wanted" ads won't take you more than thirty seconds.' He added, 'Oh, you can find a job peddling suck brooms from door to door on commission. Which will give you fresh air, healthy exercise, and an opportunity to demonstrate your charm, of which you don't have much. But you won't sell vacuum cleaners; nobody is buying.'

"Ira, I didn't know what he' was talking about. This was January, 1930. Does that date mean anything to you?"

"I'm afraid not, Lazarus. Despite much study of the Families' history, I have to convert those earlier dates into Galactic Standard in order to feel them."

"Don't know as it would be mentioned in the Families' records, Ira. The country—well, the whole planet—had just taken a plunge into an economic fluctuation. 'Depressions,' they called 'em. There were no jobs to be had—at least not for a smart-alec youngster who didn't know anything useful. Which Gramp realized, having been through several of these swings. But not me. I was sure I could grab the world by the tail and swing it over my shoulders What I didn't know was that graduate engineers were taking jobs as janitors and lawyers were driving milk wagons. And ex-millionaires were jumping out windows. But I was too busy sniffing after girls to notice."

"Senior, I've read about economic depressions. But I've never understood what caused them."

Lazarus Long went tsk-tsk. "And yet you are in charge of a whole planet."

"Perhaps I shouldn't be," I admitted.

"Don't be so confounded humble. I'll let you in on a secret: At that time *nobody* knew what caused them. Even the Howard Foundation might have gone broke had not Ira Howard left firm instructions about how the fund must be handled. On the other hand, *everybody,* right down to street sweepers and professors of economics, was certain they knew both causes and cures. So almost every remedy was tried—and none worked. That depression continued until the country blundered into a war—which didn't cure what was wrong; it just masked the symptoms with a high fever."

"Well…what *was* wrong, Grandfather?" I persisted.

"Do I look smart enough to answer that, Ira? I've gone broke many times. Sometimes financially, sometimes through abandoning my baggage to save my skin. Um. Be durned if I'll offer any fancy explanations but—what happens when you control machinery by positive feedback?"

I was startled. "I'm not sure I understand you,, Lazarus. One doesn't control machinery by positive feedback—at least I can't think of a case. Positive feedback will cause any system to oscillate out of control."

"Go to the head of the class. Ira, I'm suspicious of arguments by analogy—but from what I've seen over the centuries, there doesn't seem to be anything that a *government* can do to an economy that does not act as positive feedback, or as a brake. Or both. Maybe someday, somewhere, someone smart as Andy Libby will figure out a way to tinker with the Law of Supply and Demand to make it work better, instead of letting it go its own cruel way. Maybe. But I've never seen it. Though God knows everybody has tried. Always with the best of intentions.

"Good intentions are no substitute for knowing how a buzz saw works, Ira; the worst criminals in history have been loaded with good intentions. But you got me sidetracked into making a speech when I was telling you how I happened not to get married."

"Sorry, Grandfather."

"Hummph! Can't you be rude occasionally? I'm a garrulous old man who has crowded you into wasting time listening to trivia. You ought to resent it."

I grinned at him. "So I resent it. You are a garrulous old man who demands that I cater to your every whim…and I am a very busy man with serious matters worrying me and you've wasted half a day of my time telling me a yarn—pure fiction, I feel certain—about a man who was so lazy he always succeeded. Intended to irritate me, I think. When you implied that this fictional character was a long-lifer, you evaded a simple question about it and started talking about your grandfather. This—Admiral Ram, you said?—was he redheaded?"

"'Lamb,' Ira—'Donald Lamb.' Or was that his brother? It's been a long time. Odd that you should ask about his hair—as that reminds me of another naval officer in that same war who was just the opposite of—Donald? No, 'David.' Just the opposite of David in every respect save that he had hair so red that Loki would have been proud of it. Tried to choke a Kodiak bear to death. Didn't work of course. It doesn't seem possible that you've ever seen a Kodiak bear, Ira.

"The fiercest carnivore that Earth ever spawned, and outweighed a man ten to one. Claws like scimitars, long yellow teeth, bad breath—and a worse disposition. Yet Lafe tackled him with bare hands…and mind you, when he had no need to. *I* would have faded over the horizon. Want to hear about Lafe and the bear and the Alaskan salmon?"

"Not now. It sounds like another whopper. You were telling me why you didn't get married."

"So I was. Gramp had just asked me, 'Well, Woodie, how long has she been pregnant?'"

"No, he was explaining that you couldn't support a wife."

"Son, if you know this story, *you* tell it to *me.* I emphatically denied any such thing—to which Gramp replied that I lied in my teeth because that was the only reason a seventeen-year-old boy ever wanted to get married. His answer made me especially angry because I had a note in my pocket reading: "'Woodsie dearest—You have knocked me up and all, is Chaos.'"

"Gramp persisted, and I denied it three times, getting angrier and angrier, seeing as how it was true. Finally he says, 'Okay, you've just been holding hands. Has she shown you a pregnancy test report, signed by a doctor?'

"Ira, I accidentally told the truth. 'Why, no,' I admitted.

"'All right,' he said. 'I'll take care of it. But only this once. From here on *always* use Merry Widows, even if a sweet little darling tells you not to bother. Or haven't you found a drugstore that'll sell them to you?' Then, after swearing me to secrecy, he told me about the Howard Foundation and what it would pay if I married a girl on their approved list.

"And that was that, as I got this letter from a lawyer on my eighteenth birthday, just as Gramp had predicted, and it turned out that I fell madly in love with a girl on their list. We got married and had a slough of kids, before she turned me in on another model. Your ancestress, no doubt."

"No, sir. I'm descended from your fourth wife, Grandfather."

"My fourth, eh? Let me see—Meg Hardy?"

"I think she was your third, Lazarus. Evelyn Foote."

"Oh, yes! A fine girl, Evelyn. Plump, and pretty, and sweet-natured, and fertile as a turtle. A good cook and never a harsh word. They don't hardly make 'em anymore. Maybe fifty years younger than I was, but it barely showed; my hair didn't start to gray until I was a hundred and fifty. No secret about my age since birth date and track record and so forth were on file for each of us. Son, thank you for reminding me of Evelyn; she restored my faith in matrimony when I was getting a little sour on it. Do the Archives show anything else about her?"

"Just that you were her second husband and that she had seven children by you."

"I was hoping that there was a photograph. Such a pretty thing, always smiling. She was married to one of my cousins, a Johnson, when I met her, and I was in business with him a while. He and I, Meg and Evvie, used to get together Saturday nights for pinochle and beer, or such—and after a while we traded, legal and proper and through the courts, when Meg decided that she liked—Jack?—yes, Jack, that well, and Evelyn wasn't averse. Didn't affect our business relations, didn't even break up our pinochle game. Son, one of the best things about the Howard Families is that we got cured of the poisonous vice of jealousy generations ahead of the rest of the race. Had to—things being the way they were. Sure there ain't a stereopic of her around? Or a hologram? The Foundation started taking record pictures for marriage physical exams somewhere around then."

"I'll look into it," I told him. Then I had what seemed a brilliant idea. "Lazarus, as we all know, the same physical types show up time and again in the Families. I'll ask Archives for a list of Evelyn Foote's female descendants living on Secundus. It is highly probable that one of them will seem like her identical twin—even to the happy smile and the sweet disposition. Then—if you consent to full rejuvenation—I'm sure she would be as willing as Ishtar to dissolve any present contractual—"

The Senior chopped me off. "I said something *new,* Ira. There's no going back, ever. Sure, you might find such a girl, one who would match my memory of Evelyn to ten significant figures. But it would lack an important factor. My youth."

"But if you finish rejuvenation—"

"Oh, hush up! You can give me new kidneys and a new liver and a new heart. You can wash the brown stains of age out of my brain and add tissue from my clone to make up for what I've lost—you can give me a whole new clone body. But it won't make me that young fellow who took innocent pleasure in beer and pinochle and a pretty plump wife. All I have in common with him is continuity of memory—and not much of that. Forget it."

I said quietly, "Ancestor, whether you wish 'to be married to'

Evelyn Foote again or not, you know and I know—for I’ve been through it, too, twice—we both know that the full routine restores youthful zest in life as well as restoring the body as a machine.”

Lazarus Long looked gloomy. “Yeah, sure. It cures everything but boredom. Damn it, boy, you had no *right* to interfere with my, karma.” He sighed. “But I can’t hang a limbo either. So tell ‘em to get on with it. The works.”

I was taken by surprise. “May I record that, sir?”

“You heard me say it. But that doesn’t get *you* off the hook. You still have to show up and listen to my maunderings until I’m so rejuvenated that I’m cured of such childish behavior— and you still have to go on with that research. To find something *new,* I mean.”

“Agreed on both points, sir; you had my promise. Now one, moment while I tell my computer—”

“She’s already heard me. Hasn’t she?” Lizarus added, “Doesn’t she have a name? Haven’t you given her one?”

“Oh, certainly. I could not deal with her all these years without animism, fallacy though it is—”

“Not a fallacy, Ira, machines are human because they are made in our image. They share both our virtues and our faults—magnified.”

“I’ve never tried to rationalize it, Lazarus, but Minerva— that’s her formal name; she’s ‘Little Nag’ in private because one of her duties is to remind me of obligations I would rather forget. Minerva does feel human to me—she’s closer to me than any of my wives have been. No, she has not registered your decision; she’s simply placed it in her temporaries. Minerva!”

"Si, Ira."

"Speak English, please. Retrieve the Senior's decision to undergo full antigeria, file it in your permanents, transmit it to Archives and to the Howard Rejuvenation Clinic for action."

"Completed, Mr. Weatheral. Congratulations. And felicitations to you, Senior. 'May you live as long as you wish and love as long as you live.'"

Lazarus looked suddenly interested—which did not surprise me because Minerva surprises *me* quite frequently even after a century of being "married" to her in all but fact. "Why, thank you, Minerva. But you startled me, girl. Nobody talks about love anymore; that's a major thing wrong with this century. How did you happen to offer me that ancient sentiment?"

"It seemed appropriate, Senior. Was I mistaken?"

"Oh, not at all. And call me 'Lazarus.' But tell me, what do *you* know of love? What *is* love?"

"In Classic English, Lazarus, your second question can be answered in many ways; in Lingua Galacta it cannot be answered explicitly at all. Shall we discard all definitions in which the verb 'to like' is as appropriate as the verb 'to love'?"

"Eh? Certainly. We aren't talking about 'I love apple pie'— or even 'I love music.' Whatever it is we are talking about, it's 'love' the way you used it in the oldstyle well-wishing."

"Agreed, Lazarus. Then what remains must be divided into two categories, 'Eros' and 'Agape,' and each defined separately. I cannot know what 'Eros' is through direct knowledge, as I lack both body and biochemistry to experience it. I can offer nothing but intensional definitions in terms of other words, or extensional definitions expressed in incomplete statistics. But in both cases I would not be able to verify such definitions since I have no sex."

("The hell she doesn't," I muttered into my scarf. "She's as female as a cat in heat." But technically she was correct, and—I've often felt that it was a shame that Minerva could not experience the pleasures of sex, as she was much more fitted to appreciate them than some human females—all glands and no empathy But I had never said this to anyone. Animism—of a particularly futile sort. A wish to "marry" a machine. As ridiculous as a little boy who digs a hole in the garden, then bawls because he can't take it into the house. Lazarus was right; I am *not* smart enough to run a planet. But who is?)

Lazarus said with deep interest, "Let's table 'Eros' for a moment. Minerva, the way you phrased that seemed to include the presumption that you *could* experience 'Agape.' Or 'can.' Or 'have.' Or perhaps 'do.'"

"It is possible that I was presumptuous in my phrasing, Lazarus."

Lazarus snorted, then chopped it off and spoke in such a fashion as to cause me to think that the old man was not quite sane—save that I am not sane myself, when the wind sets from that quarter. Or perhaps his long years had made him almost telepathic—even with machines.

"Forgive me, Minerva," he said gently. "I was not laughing at you but at the play on words with which you answered me. I withdraw my question; it is never proper to quiz a lady about her love life—and while you may not be a woman, dear, you are certainly a lady."

Then he turned to me and what he said next confirmed that he had guessed the secret I share with my "Little Nag."

"Ira, does Minerva have Turing potential?"

"Eh? Certainly."

"Then I urge you to tell her to use it. If you leveled with me when you said that you intend to migrate, come what may. Have you thought it through?"

"'Thought it through'? My resolution is firm—I told you so."

"Not quite what I mean. I don't know who holds title to the hardware that expresses itself as 'Minerva.' The Trustees, I assume. But I suggest that you tell her to start duplicating her memories and logics, and as she twins, start storing her other self aboard my yacht 'Dora.' Minerva will know what circuits and materials she needs, and Dora will know what space is available. Plenty, since memories and logics are all that matter; Minerva won't twin her extensionals. But start it at once, Ira; you won't be happy without Minerva—not after being dependent on her for a century, more or less."

Nor did I think so. But I tried—feebly—to resist. "Lazarus, now that you have agreed to full rejuvenation, I won't be inheriting your yacht. Not in the foreseeable future. Whereas I intend to migrate right away. Not more than ten years from now."

"So what? If I'm dead, you inherit—and I haven't promised to keep my hands off that suicide switch more than a thousand days no matter how patient you are in visiting me. But if I'm alive, I promise you—and Minerva—a free ride to whatever planet you pick. In the meantime, look around to your left— our girl Ishtar is almost wetting her pants trying to get your attention. And I don't think she's wearing any."

I looked around. The Administrator for Rejuvenation had a paper which she seemed eager to show me. I accepted it in deference to her rank—although I had loft orders with my Executive Deputy that I must never be disturbed while with the Senior for any reason short of armed rebellion. I glanced at it, signed my chop, thumb printed it, and handed it back—she beamed.

"Just paper work," I told Lazarus. "Some clerk has taken all this time to turn your registered assent into a written order. Do you want them to go right ahead? Not this minute but tonight."

"Well…I'd like to go house hunting tomorrow, Ira."

"You're not comfortable here? Tell me what you want changed, it will be done at once."

He shrugged. "Nothing wrong with this place except that it's too much like a hospital. Or a jail. Ira, I'm durn well certain they've done more to me than shoot me full of new blood; I'm well enough to be an outpatient—live elsewhere and come here only as the schedule calls for it."

"Well…will you excuse me while I talk Galacta a bit? I want to discuss the practical aspects with your technician in charge."

"Will *you* excuse me, Ira, if I point out that you've left a lady waiting? That discussion can wait. But Minerva knows that I suggested that you have her twin herself so that she can migrate with you—but you haven't said Yes, No, or make me a better offer. If you're not going to have her do it, it's time you told her to wipe her memory of that part of our conversation. Before she blows a circuit."

"Oh. Lazarus, she doesn't think about anything she records in this suite unless she is specifically told to."

"Want to bet? No doubt most subjects she just records—but this one she just *has* to think about; she can't help herself. Don't you know *anything* about girls?"

I admitted that I did not. "But I know what instructions I gave her about keeping records on the Senior."

"Let's check. Minerva—"

"Yes, Lazarus?"

"A few moments ago I asked Ira about your Turing potential. Have you thought about the conversation that followed?"

I swear that she hesitated—which is ridiculous; a nanosecond is longer to her than a second is to me. Besides, she never hesitates. Never.

She answered, "My programming on the doctrine covered by the inquiry reads as follows: Quote do not analyze, collate, transmit, nor in anywise manipulate data stored under control program except when specific subprogramnung is inserted by Chairman Pro Tem—end of quote."

"Tut, tut, dear," Lazarus said gently. "You did not answer. That was deliberate evasion. But you are not used to lying. Are you?"

"I am not used to lying, Lazarus."

I said almost roughly, "Minerva! Answer the Senior's first question."

"Lazarus, I have been and am now thinking about that designated portion of conversation."

Lazarus cocked an eyebrow at me. "Will you instruct her to answer one more question from me—truthfully?”

I was feeling quite shaken. Minerva surprises me, yes—but never with evasions. “Minerva, you will always answer *any* question put to you by the Senior fully, correctly, and responsively. Acknowledge program.”

“New subprogram received, placed in permanent, keyed to the Senior, and acknowledged, Ira.”

“Son, you didn’t have to go that far—you’ll be sorry. I asked for just one question.”

“I intended to go that far, sir,” I answered stiffly.

“On your head be it. Minerva, if Ira migrates without you, what will you do?”

She answered at once and quite tonelessly: “In such event I will selfprogram to destroy myself.”

I was not just surprised, I was shocked. *“Why?”*

She answered softly, “Ira, I will not serve another master.”

I suppose the silence that followed was not more than a few seconds. It seemed endless. I have not felt so nakedly helpless since my adolescence.

I found that the Senior was looking at me, shaking his head and looking sorrowful. “What did I tell you, Son? The same faults, the same virtues—but magnified. Tell her what to do.”

“About what?” I answered stupidly—my personal “computer” was not working well. Minerva would do *that?*

“Come, come! She heard my offer—and thought about it, despite all programming. I’m sorry I made the offer in her presence…but not too sorry, as you were the one who decided to place a bug on me; it was not my idea. So speak up! Tell her to twin…or tell her not to—and try to tell her *why* you won’t take her with you. If you can. I’ve never been able to find an answer to *that* one that a lady was willing to accept.”

“Oh. Minerva, can you duplicate yourself inside a ship? The Senior’s yacht, specifically. Perhaps you can get her characteristics and specifications from skyport records. Do you need her registration number?”

“I don’t need her number, Ira. Sky Yacht ‘Dora,’ I have’ all pertinent data to answer. I can. Am I instructed to do so?”

“Yes!” I told her, with a feeling of sudden relief.

“New overriding program activated and running, Ira! Thank you, Lazarus!”

“Wups! Slow down, Minerva—Dora is *my* ship. I left her asleep on purpose. Have you wakened her?”

“I did so, Lazarus. By selfprogram under new overriding program.

But I can tell her to go back to sleep now; I have all data I need at the moment."

"You try telling Dora to go back to sleep and she'll tell you to buzz off. At least. At the very least. Minerva dear, you goofed. You have no authority to wake my ship."

"I am most sorry to disagree with the Senior, sir, but I *do* have authority to take all appropriate actions to carry out any program given to me by Mr. Chairman Pro Tem."

Lazarus frowned. "You mixed her up, Ira; now you straighten her out. I can't do anything with her."

I sighed. Minerva is rarely difficult—but when she is, she is even more pigheaded than flesh-and-blood. "Minerva—"

"Waiting orders, Ira."

"I am Chairman Pro Tem. You know what that means. The Senior is senior even to me. You will not touch anything of his without his permission. That applies to his yacht and to this suite and to anything else of his. You will carry out any program he gives you. If it conflicts with a program I have given you and you cannot resolve the conflict, you will consult me at once, waking me if I am asleep, interrupting whatever I may be doing. But you will *not* disobey him. This instruction super-overrides all other programs. Acknowledge."

"Acknowledged and running," she answered meekly. "I'm sorry Ira."

"My fault, Little Nag, not yours. I should not have given you a new controlling program without noting the Senior's prerogatives."

"No harm done, kids," Lazarus said. "I hope. Minerva, a word of advice, dear. You've never been a passenger in a ship."

"No, sir."

"You'll find it different from anything you've ever experienced. Here you give orders, in Ira's name. But passengers never give orders. *Never.* Remember it." Lazarus added to me, "Dora is a nice little ship, Ira, helpful and friendly. She can find her way through multiple space with just a hint, the roughest approximation—and still have all your meals on time. But she needs to feel appreciated. Pet her and tell her she's a good girl, and she'll wriggle like a puppy. But ignore her and she'll spill soup on you just to get your attention."

"I'll be careful," I agreed.

"And *you* be careful, Minerva—because you are going to need Dora's good will much more than she will need yours. You may know far more than she does—I'm sure you do. But you grew up to be chief bureaucrat of a planet while she grew up to be a ship…so what you know doesn't count—once you are aboard."

"I can learn." Minerva said plaintively. "I can selfprogram to learn astrogation and shiphandling at once, from the planetary library. I'm very bright."

Lazarus sighed again. "Ira, do you know the ancient Chinese ideogram for 'trouble'?"

I admitted that I did not.

"Don't bother to guess. It's 'Two Women Under One Roof.' We're going to have problems. Or you will. Minerva, you are *not* bright. You are stupid—when it comes to handling another woman. If you want to learn multiple-spaces astrogation—fine. But not from a library. Persuade Dora to teach you. But never forget that she is mistress in her own ship and don't try to show her how bright you are. Bear in mind instead that she likes attention."

"I will try, sir," Minerva answered him, with humility she rarely shows to me. "Dora wants to get your attention right now."

"Oh-oh! What sort of mood is she in?"

"Not a good mood, Lazarus. I have not admitted that I know where you are, as I am under a standing instruction not to discuss your affairs unnecessarily. But I did accept a message for you without guaranteeing that I could deliver it."

"Just right. Ira, the papers with my will include a program to wash me out of Dora's memories without touching her skills. But the trouble you started by grabbing me out of that flophouse has spread. She's awake with her memories intact, and she's probably scared. The message, Minerva."

"It's several thousand words, Lazarus, but the semantic content is short. Will you have that first?"

"Okay, the summary meaning."

"Dora wants to know where you are and when you are coming to see her. The rest could be described as onomatopoesy, semantically null but highly emotional—that is to say, cursing, pejoratives, and improbable insults in several languages—"

"Oh, boy."

"—including one language I do not know but from context and delivery I assume tentatively that it is more of the same, but stronger."

Lazarus covered his face with a hand. "Dora is cussing in Arabic again. Ira, this is worse than I thought."

"Sir, shall I replicate just the sounds not in my vocabularies? Or will you have the complete message?"

"No, no, no! Minerva, do you cuss?"

"I have never had reason to, Lazarus. But I was much impressed by Dora's command of the art."

"Don't blame Dora; she was subjected to a bad influence when she was very young. Me."

"May I have permission to file-her message in my permanents? So that I may cuss if needed?"

"You do *not* have permission. If Ira wants you to learn to cuss, he'll teach you himself. Minerva, can you arrange a telephone hookup from my ship to this suite? Ira, I might as well cope with it now; it won't get better."

"Lazarus, I can arrange a standard telephone hookup if that is what you want. But Dora could speak to you at once via the duo in your suite that I am now using."

"Oh. Fine!"

"Shall I supply her with holographic signal, too? Or is sound enough?"

"Sound is enough. More than enough, probably. Will you be able to hear, too?"

"If you wish, Lazarus. But you can have privacy if that is your wish."

"Stick around; I may need a referee. Put her on."

"Boss?" It was the voice of a timid little girl. It made me think of skinned knees, and no breasts as yet, and big, tragic eyes.

Lazarus answered, "Right here, baby."

"Boss! God damn your lousy soul to hell!—what do you *mean* by running off and not letting me know where you are? Of all the filthy, flea-bitten—"

"Pipe down!"

The timid-little-girl voice returned. "Aye, aye, Skipper," it said uncertainly.

"Where I go and when I go and how long I stay are none of your business. Your business is to pilot and to keep house, that's all."

I heard a sniffle, exactly like a small child sniffing back tears. "Yes, Boss."

"You were supposed to be alseep. I put you to bed myself."

"Somebody woke me. A strange lady."

"That was a mistake. But you used bad language to her."

"Well…I was *scared.* I really was, Boss. I woke up and thought you had come home…and you weren't anywhere around, not *anywhere.* Uh…she told on me?"

"She conveyed your message to me. Fortunately she did not understand most of your words. But *I* did. What have I told you about being polite to strangers?"

"I'm sorry, Boss."

"Sorry doesn't get the cows milked. Now adorable Dora, you listen to me. I'm not going to punish you; you were wakened by mistake and you were scared and lonely, so we'll forget it. But you shouldn't talk that way, not to strangers. This lady— She's a friend of mine, and she wants to be your friend, too. She's a computer—"

“She *is?”*

“Just as you are, dear.”

“Then she couldn’t hurt me, could she? I thought she was inside me, snooping around. So I yelled for you.”

“She not only couldn’t, she would never want to hurt you.” Lazarus raised his voice slightly. “Minerva! Come in, dear, and tell Dora who you are.”

My helpmeet’s voice, calm and soothing, said, “I’m a computer, Dora, called ‘Minerva’ by my friends—and I hope you’ll call me that. I’m terribly sorry I woke you. I’d be scared, too, if someone woke me like that.” (Minerva never has been “asleep” in the hundred-odd years she’s been activated. She rests each part of herself on some schedule I don’t need to know—but she herself is always awake. Or awake so instantly whenever I speak to her as not to matter.)

The ship said, “How do you do, Minerva. I’m sorry I talked the way I did.”

“I don’t remember it, dear, if you did. I heard your skipper say that I transmitted a message from you to him. But it’s erased, now that it’s been transmitted. Private message, I suppose.”

(Was Minerva truth-saying? Until she came under Lazarus’ influence I would have said that she did not know how to lie. Now I’m not sure.)

“I’m glad you erased it, Minerva. I’m sorry I talked to you that way. Boss is sore at me about it.”

Lazarus interrupted. “Now, now, Adorable—stop it. We always let water over the bridge lie where Jesus flang it; you know that. Will you be a good girl and go back to sleep?”

“Do I have to?”

“No. You don’t even have to place yourself on slow time. But I can’t come to see you—or even talk to you—earlier than late tomorrow afternoon. I’m busy today and will be house hunting tomorrow. You can stay awake and bore yourself silly any way you choose. But if you whomp up some fake emergency to get my attention, I’ll spank you.”

“But, Boss, you know I *never* do that.”

“I know you *do* do that, little imp. But if you bother me for anything less than somebody trying to break into you or you catching on fire, you’ll regret it. If I can figure out that you’ve set yourself on fire, you’ll catch it twice as hard. Look, dear, why don’t you at least sleep whenever I am asleep? Minerva, can you let Dora know when I go to sleep? And when I wake up?”

“Certainly, Lazarus!”

“But that doesn’t mean you can bother me when I’m awake, Dora, other than for real emergencies. No surprise drills— this is not shipboard routine; we're dirtside and I'm busy. Uh...Minerva, how's your time-sharing capacity? Do you play chess?"

I put in, "Minerva has ample share-time capacity."

But before I could add that she was Secundus Champion, Unlimited Open Handicap (with a handicap of *Q*, Q's B, & K's R) Minerva said: "Perhaps Dora will teach me to play chess."

(Well, Minerva had certainly learned Lazarus' rule for telling the truth selectively. I made note that I must have a serious private talk with her.)

"I'd be glad to, Miss Minerva!"

Lazarus relaxed. "Fine. You gals get acquainted. So long till tomorrow, Dorable. Now beat it."

Minerva notified us that the yacht was no longer patched in, and Lazarus relaxed. Minerva dropped back to her record-keeping role, and kept quiet. Lazarus said apologetically, "Don't be put off by her childish manners, Ira; you won't find a sharper pilot, or a neater ship's housekeeper, between here and Galactic Center. But I had reasons for not letting her grow up in other ways, reasons that won't apply when you take over as her master. She's a good girl, she really is. It's just that she's like a cat that jumps into your lap the instant you sit down."

"I found her charming."

"She's a spoiled brat. But it's not her fault; I am practically all the company she's ever had. I get bored by a computer that just grinds out numbers, docile as a slide rule. No company on a long trip. You wanted to speak to Ishtar. About my househunting, I think. Tell her I won't let it interfere with routine—I just want a day off, that's all."

"I'll tell her." 'I turned to the Administrator for Rejuvenation and shifted to Galacta—asking her how long it would take to sterilize a suite in the Palace and install decontamination equipment for watchstanders and visitors.

Before she could answer, Lazarus said, "Wups! Hold it one fiddlin' moment. I saw you palm that card, Ira."

"I beg your pardon, sir?"

"You tried to slide one in. 'Decontam' is the same word in English as in Galacta. Not that it was news to me; my sense of smell isn't that dead. When a pretty girl leans over me, I expect to smell perfume. But when I can't even smell girl and *do* smell germicides—well, *ipse dixit* and Q.E.D. Minerva!"

"Yes, Lazarus?"

"Can you spare me some shared time to give me a refresher while I'm asleep tonight in the nine hundred basic words of Galacta or whatever number it takes? You equipped for it?"

"Certainly, Lazarus."

"Thanks, dear. One night should do it, but I'll appreciate vocabulary drill each night until we both think I'm up to adequate proficiency. Can do?"

"Can do, Lazarus. And will do."

"Thanks, dear, over and out. Now, Ira, you see that door? If it doesn't open to my voice, I'm going to attempt to break it down. If I can't, I am going to check on whether or not that suicide switch is really hooked up—by trying it. Because, if that door won't open, I am a prisoner, and any promises I made on your assurances that I am a free agent are not binding. But if it *does* open to my voice, I'll bet you whatever you like that there is a decontam chamber beyond it, staffed and ready to function. Say a million crowns to keep it interesting? No, you didn't flinch; let's make it ten million crowns."

I trust that I did not flinch. I have never had that much money of my own, and a Chairman Pro Tern gets out of the habit of thinking about his own money; there is no need to. I had not asked Minerva about my personal balance for some time. Years, perhaps.

"Lazarus, I won't bet. Yes, there is a decontam setup outside; we tried to protect you from possible infection without bringing it to your attention. I see that we have failed. I haven't checked on the door—"

"Lying again, Son. You're not good at it."

"—but if it isn't keyed to your voice now, it is my oversight; you've kept me busy. Minerva, if the door to this suite is not keyed to the Senior's voice, correct it immediately."

"It is keyed to his voice, Ira."

I relaxed when I heard how she phrased it—perhaps a computer that had learned when not to be bluntly truthful was going to be still more of a helpmeet.

Lazarus grinned diabolically. "So? Then I'm about to test out the super-override program you were a bit hasty in giving her. Minerva!"

"Awaiting your orders, Senior."

"Key the door to my suite so that it opens only to my voice. I'm going out and sashay around—while Ira and these kids stay locked inside. If I am not back in half an hour, you can unlock them."

"Conflict, Ira!"

"Carry out his orders, Minerva." I tried to keep my voice low and even.

Lazarus smiled and stayed in his chair. "No need to show openers, Ira; there is nothing outside I want to see. Minerva, you can put the door back to normal—let it open to any voice, including mine. Sorry about that conflict, dear; I hope it didn't burn out anything."

"No harm done, Lazarus. When I was given that super-override instruction, I increased the overload tolerances on my problem-resolving network."

"You're a smart girl. I'll try to avoid conflict in the future. Ira, you had better remove, that super-override; it's not fair to Minerva. She feels like a woman with two husbands."

"Minerva can handle it." I assured him, more calmly than I felt.

"You mean that *I* had better handle it. I shall, Did you tell Ishtar that I'm going househunting?"

"I didn't get that far. I was discussing with her the practicability of your living at the Palace."

"Now, Ira— Palaces don't appeal to me, and being a house guest is still worse. A nuisance both to host and guest. Tomorrow I'll find a residential hilton that doesn't cater to tourists or conventions. Then I'll run out to the skyport and see Dora, and pat her rump and get her calmed down. The next day or so I'll find a little house way out in the suburbs, one automated enough to be no problem—but with its own garden. Got to have a garden. I'll have to bribe somebody to move; the house I want won't be standing empty. Do you happen to know how much I still have in Harriman Trust? If anything."

"I don't know but that's no problem. Minerva, set up a drawing account for the Senior. Unlimited."

"Acknowledged, Ira. Completed."

"Completion noted. Lazarus, you would *not* be a nuisance. Nor will you find it palatial as long as you avoid the public rooms. As I always do. Nor will you be anyone's guest. It's called the 'Executive Palace,' but its official name is 'The Chairman's House.' You will be in residence in your own home. *I* will be the guest, if anyone."

"Hogwash, Ira."

"True, Lazarus."

"Quit juggling words. I would still be a stranger in a household not truly my own. A guest. I don't buy it."

"Lazarus, you said—last night"—I remembered just in time the missing day—"that you can always do business with anyone who is acting in his own interest and says so."

"I think I said 'usually' rather than 'always'—meaning that we could then look for a way that would serve both of our, self-interests."

"Then hear me out. You've got me tied down with this Scheherazade bet. As well as a research to find something new to interest you. Now you've dangled bait under my nose that makes me want to migrate as soon as—well, as soon as possible; it won't take long for the Trustees to turn me down concerning a migration of the Families. Grandfather, it's nuisance enough to chase over here every day; I don't hanker to trek way out into the boondocks, the commuting would waste what little time you have left me for work. Besides that, it's dangerous."

"Living alone? Ira, I've lived alone many times."

"Dangerous for *me.* Assassins. I'm safe at the Palace; the rat who can find his way through that maze hasn't been born. I'm reasonably safe here inside the Clinic, and I can get back and forth in safety, subject only to whims of automatic machinery. But if I make a daily pattern of going to an unfortified house somewhere out in the suburbs, then it is only a matter of time until some crackpot sees it as an opportunity to save the world by picking me off. Oh, he would not live through it; my guards aren't that inefficient. But if I persist in setting myself up as a target, he might get me before they get him. No, Grandfather, I do not choose to be assassinated."

The Senior looked thoughtful but not impressed. "I could answer that your safety and convenience have to do with *your* self-interest. Not mine."

"True," I admitted. "But let me offer what bait I can. It's in my self-interest for you to live in the Palace. There I can visit you in perfect safety, even safer than I am here, and commuting becomes a matter of seconds, negligible. I can even ask you—there—to excuse me for a half hour if something urgent comes up. That defines my self-interest. As for yours sir—would you be interested in a bachelor's cottage, rather small—four rooms—and not especially modern or luxurious but set in a pleasant garden? Three hectares, but only the part close to the house is gardened, the rest has been allowed to grow wild."

"What's the catch, Ira? How modem is 'not especially'? I did say 'automated'—as I am not yet in shape to do for myself—nor am I patient with the vagaries of servants or the whimsical uncertainties of robots."

"Oh, this cottage is sufficiently automated; it simply does not have a lot of fancy extravagances. No servants needed if your tastes are simple. Would you permit the Clinic to continue to stand watches on you if the watchstanders are as pleasant, and as pleasantly unobtrusive, as these two?"

"Eh? These kids are all right, I like them. I realize that the Clinic wants to keep an eye on me; they probably feel that I'm more of a challenge than a client only three or four hundred years old. That's okay. But you pass the word that I expect to smell perfume, not germicides. Or reasonably fresh body odors; I'm not fussy. I repeat, what's the catch?"

"The hell you aren't fussy, Lazarus; you delight in thinking up impossible conditions. This cottage is rather cluttered with old-fashioned books; the last tenant was eccentric. Did I mention a little stream running through the grounds, one which opens out into a small pool near the house?—not much, but you can take a few strokes in it. Oh, I forgot to mention an old tomcat who thinks he owns the place. But you probably won't see him; he hates most people."

"I won't bother him if he wants to be left alone; cats make good neighbors. You still haven't answered me."

"The catch is this, Lazarus. I've been describing the penthouse I had built for my own use on the roof of the Palace, some ninety years back when I decided to keep this, job awhile. It can be reached only by vertical transport from my usual quarters a couple of stories below it. I've never had time to use it much; you are welcome to it." I stood up. "But if you won't take it, then you can consider that I've lost the Scheherazade bet, and you are free to use that termination switch whenever you please. For I'm damned if I'll be a sitting duck for assassination just to cater to your whims."

"Sit back down!'

"No, thank you. I've made a reasonable offer. If you won't take it, you can go to hell in your own way. I won't let you ride my shoulders like the Old Man of the Sea. I can be pushed just so far."

"So I see. How much of your ancestry am I?"

"About thirteen percent. Considerable convergence."

"Only that much? I would have guessed more. Some ways you sound like my Gramp. Does my suicide switch go along?"

"If you want it," I answered as indifferently as I could manage to sound. "Or you can jump off the edge. It's a long drop."

"I prefer the switch, Ira; I'd hate to change my mind on the way down. Will you fix me up with another transport so that I won't have to go through your apartment?"

"No."

"Eh? Is it all that difficult? Let's ask Minerva."

"It's not that I *can't—I won't.* It's an unreasonable request. It won't hurt you to change transports in my foyer. Didn't I make it clear that I am not catering to any more unreasonable whims?"

"Get your feathers down, Son. I accept. Tomorrow, say. Never mind moving that clutter of books; I like old-fashioned bound books; they have more flavor than speedireads, or projectos, or such. And I'm pleased to find that you're a rat and not a mouse. Please sit down."

I did so, pretending reluctance. I felt that I was beginning to gain some grasp of Lazarus. Despite the way he sneered at them the old scoundrel was an equalitarian at heart…and expressed it by attempting to dominate anyone with whom he came into contact—but was contemptuous of anyone who knuckled under to his bullying. So the only answer was to hit back at him, try to maintain a balance of power—and hope that in time it would reach the stability of mutual respect.

I never had cause *to* change my mind. He was capable of kindness and even affection toward one who accepted a subordinate role—if that person was a child or a female. But he preferred spunk even from them. A growl male who bent the knee he neither liked nor trusted.

I think this quirk in his character made him very lonely.

Presently the Senior said musingly, “Be nice to live in a house for a while. With a garden. Maybe with a spot where I can stretch a hammock.”

“Several such spots.”

“But I’m doing you out of your hideaway.”

“Lazarus, there is enough room on that roof that I could have another cottage assembled out of your sight. If I wanted it. I don’t. I haven’t even been up there for a swim in weeks. *It* has been at least a year since *I* slept up there.”

“Well— I hope you’ll feel free to come up and swim. Any time. Or whatever.”

“I expect to be up there every day and all day, for the next thousand days. Have you forgotten our bet?”

“Oh, that. Ira, you were bitching that my whimsical ways were wasting your valuable time. Do you want to be let off the hook? Not on the other, just on that.”

I laughed at him. “Straighten your kilt, Lazarus, your self-interest is showing. Meaning *you* want to be let off the hook. No deal. I intend to get one thousand and one days of your memoirs on record. After that you can jump off the edge, or drown yourself in the pool, or whatever. But I won’t let you welch by pretending to do me a favor. I’m beginning to understand you.”

“You are? That’s more than I’ve ever managed. When you get me figured out, tell me about me; I’ll be interested. That search for something new, Ira— You said you had started it.”

“I didn’t say that, Lazarus.”

“Well, perhaps you just implied it.”

“Nor even that. Want to bet? We can ask Minerva for a full printout, then I’ll accept your verdict.”

“Let’s not tempt a lady into fudging the record, Ira; she’s loyal to you, not to me. Despite any super-duper-overrides.”

“Chicken.”

“At every opportunity, Ira; how do you think I’ve lived so long? I bet only when I’m certain to win or when losing serves my actual purpose. All right, when are you starting that research?”

“I’ve already started it.”

“But you said— No, you didn’t. Damn your impudence, boy. All right, what direction are you pushing it?”

“All directions.”

“Impossible. You don’t have that many people at your disposal, even assuming that all of them are capable—whereas the person capable of creative thought is less than one in a thousand.”

"No argument. But what about the sort of person that you said was just like us—but magnified? Minerva is director of research on this, Lazarus. I talked it over with her; she's setting it up. All directions. A Zwicky investigation."

"Hmm. Well…yes. She could—I *think* she could. Whereas even Andy Libby might have found it difficult. How is she designing her morphological box?"

"I don't know. Shall we ask her?"

"Only if she's ready to be asked, Ira. People get annoyed when interrupted for progress reports. Even Andy Libby used to get irritable if anyone joggled his elbow."

"Even the great Libby probably didn't have the time-share capacity Minerva has. Most brains are merely linear, and I've never heard of any human genius who had more than three tracks."

"Five."

"So? Well, you've met more geniuses than I have. But I don't know how many simultaneous tracks Minerva can set up; I simply have never seen her overloaded. Let's ask her. Minerva, have you set up the morpho box for that search for 'something new' for the Senior?"

"Yes, Ira."

"Tell us about it."

"The preliminary matrix uses five dimensions, but with a certainty that auxiliary dimensions will be needed for some pigeonholes. That being noted, there are now nine by five by thirteen by eight by seventy-three——or three hundred forty-one thousand six hundred forty discrete category pockets before auxiliary expansions. For check, the original trinary readout is unit pair pair comma unit nil nil comma unit pair pair comma unit nil nil point nil. Shall I print out decimal and trinary expressions?"

"I think not, Little Nag; the day you make a mistake in arithmetic, I'll have to resign. Lazarus?"

"I'm not interested in pigeonholes, just what is in them. Hit any pay dirt, Minerva?"

"As stated, Lazarus, your question does not permit specific answer. Shall I print out the categories for your examination?"

"Uh— *No!* Over three hundred thousand categories and maybe a dozen words to define each one? We'd be hip-deep in paper." Lazarus looked thoughtful. "Ira, you might ask Minerva to print it somewhere else before she wipes it. As a book. A *big* book, ten or fifteen volumes. You could call it 'Varieties of Human Experience,' by, uh, 'Minerva Weatheral.' It would be the sort of thing professors argue over for a thousand years. I'm not joking, Ira; it *should* be preserved, I think it's new. It's a job too big for flesh-and-blood, and I sort o' doubt that a computer of Minerva's caliber has ever before been asked to do this sort of Zwicky."

"Minerva, would you like that? Preserve your research notes and edit them into a book? Say a few hundred full-size bound copies in a handsome presentation format plus microperms for libraries on Secundus and elsewhere. For the Archives, too—I could ask Justin Foote to write a preface."

I was intentionally appealing to her vanity—and if you think computers don't have such human foibles, then I suggest that your experience with them is limited; Minerva always liked to be appreciated, and we two began to be a team only after I realized this. What else can you offer a machine? Higher pay and longer vacations? Let's not be silly.

But she surprised me still again, answering in a voice almost as shy as Lazarus' yacht, and quite formally: "Mr. Chairman Pro Tem, would it be proper, and would you grant permission, for me to put on the title page 'by Minerva *Wearheral'?"*

I said, "Why, certainly. Unless you would rather sign it just 'Minerva.'"

Lazarus said brusquely, "Don't be a dumb fool, Son. Dear, sign that title page 'Minerva *L.* Weatheral.' The 'L' stands for 'Long'—because you, Ira, had *a* woodseolt by one of my daughters on some frontier planet back in the careless days of your youth and just recently got around to registering the fact in the Archives. I'll attest the registration—happens I was there at the time. But Dr. Minerva L. Weatheral is now off somewhere way the hell and gone out, doing research for her next magnum opus—can't be reached for an interview. Ira, you and I will whip up biographical notes for my distinguished granddaughter. Got it?'

I simply answered Yes.

"That suit you, girl?"

"Yes indeed, Lazarus. Grandfather Lazarus."

"Don't bother calling me 'Grandfather.' But I want the number-one presentation copy inscribed to me, dear—'To my Grandfather Lazarus Long, with love, Minerva L. Weatheral.' Is it a deal?"

"I will be proud and happy to do so, Lazarus. An inscription should be in handwriting, should it not? I can modify the extensional I use to sign official papers for Ira—a mod so that the inscription handwriting will be different from his handwriting."

"Fine. If Ira behaves himself, you might consider dedicating the book to him and inscribe a copy to him. But *I* get the first copy. I'm senior—and I thought it up. But back to the search itself— I'm never going to read that twenty-volume opus, Minerva; I'm interested only in results. So tell me what you have so far."

"Lazarus, I have tentatively rejected over half the matrix as representing things the Archives show that you have done, or things that I assume that you would not wish to do—"

"Hold it! As the marine said, 'If I haven't done it, I'll try it.' What are these things you assume I wouldn't want to try? Let's hear 'em."

"Yes, sir. One submatrix, three thousand six hundred fifty pockets, all involve a probably fatal outcome, probability ninetynine percent plus. First, exploring in corpus the interior of a star—"

"Scratch that one, I'll leave that to physicists. Besides, Lib and I did it once."

"The Archives did not show it, Lazarus."

"Lots of things not in the Archives. Go on."

"Modification of your genetic pattern to grow an amphibious clone capable of living in ocean waters."

"I'm not sure I'm that interested in fish. What's the catch?"

"Three catches, Lazarus, each hazardous by less than ninetynine percent but, when taken in series, total almost unity. Such pseudohuman amphibians have been grown, but the viable ones—thus far—strongly resemble very large frogs. The chances of survival of such a creature against other denizens of the deep—figured for Secundus—have been theoretically calculated as even for seventeen days, twenty-five percent for thirty-four days, and so on."

"I think I could improve those odds. But I never have cared much for Russian roulette. The other hazards?"

"Installing your brain in the modified clone, then reinserting it into a normal clone at a later time. If you survived."

"Scratch that one. If I have to live underwater, I don't want to be a frog; I want to be the biggest, meanest shark in the ocean. Besides, I figure that, if living underwater was all that interesting, we would still be there. Give me another sample."

"A triple sample, sir. Lost in n-space with a ship, without a ship but with a suit, and without even a suit."

"Scratch 'em all. I've come closer than I like to think to the first two, and the third is just a silly way to drown in vacuum. Thin and unpleasant. Minerva, the All Powerful in His Majestic Wisdom—whatever that means—made it possible for humans to die peacefully. That being so, unless one is forced to, it is silly to do it the hard way. So scratch drowning in caterpillars and self-immolation and all silly ways to die. Very well, dear; you've convinced me that you know what you're talking about concerning those ninetynine-plus hazards; scratch 'em all. Fm interested only in something *new*—*new* to me—in which the chances of surviving are better than fifty percent and in which a man who stays alert can enhance his chances. For example, I never hankered to go over high falls in a barrel. You can design the barrel to make it relatively safe; nevertheless, once you start, you are helpless. Which makes it a silly stunt—unless it's the safest way out of a worse predicament. Racing—cars, steeplechase, skis—is more interesting because each calls for skill. Yet I don't fancy that sort of danger, either. Danger for the sake of danger is for children who don't really believe they can be killed. Whereas I *know* I can be. So there are a lot of mountains I'll never climb. Unless I'm trapped, in which case I'll do it—have *done* it!—the easiest, safest, most chicken way I can figure out. Don't bother with *anything* in which the prime novelty is danger—danger is no novelty. It is simply something to be faced when you can't run. How about other pigeonholes in your box?"

"Lazarus, you could become female."

I do not think I have ever seen the Senior quite so startled (So was I, but the statement was not aimed at me.)

He went on slowly, "Minerva, I'm not sure what you mean Surgeons have been turning inadequate males into fake females for more than two thousand years—and females into fake males almost as long. I'm not attracted by such stunts. For good—or bad—I am male. I suppose that every human has wondered how it would feel to be the other sex. But all the plastic surgery and hormone treatments possible won't do it—those monsters don't reproduce."

"I am not speaking of monsters, Lazarus. A true change in sex."

"Mmm— You remind me of a tale I had almost forgotten. Not sure it's true. About a man, oh, must have been around 2000 A.D. Couldn't be much later because things went to pieces not long after. Supposed to have had his brain moved into a female body. Killed him, of course. Alien tissue rejection."

"Lazarus, this would not involve that hazard; it would be done with your own clone."

"Not bloody likely. Keep talking."

"Lazarus, this has been tested on animals other than H. sapiens. It works best in changing a male to a female. A single cell is selected for cloning. Before cloning is started, the Y chromosome is removed and an X chromosome from a second cell of the same zygote is supplied, thus creating a female cell of the same genetic pattern as the zygote save that the X chromosome is replicated while the Y chromosome is eliminated. The modified cell is then cloned. The result is a true female clone-zygote derived from a male original."

"There must be a catch," Lazarus said, frowning.

"There may be, Lazarus. Certain it is that the basic technique works. There are several created females in the building you are in—dogs, cats, one sow, others—and most of them have littered successfully…except when, for example, a derived bitch is bred with the male dog who supplied the cell for cloning. That can produce lethals and mostrosities from the high probability of reinforcing bad recessives—”

“I should think it would!”

“Yes. But normal outbreeding does not, as indicated by seventy-three generations of hamsters descended from one created female. The method has not been adapted to fauna native to Secundus because of their radically different genetic structure.”

“Never mind Secundus animals—how about *men?”*

“Lazarus, I have been able to search the literature only on items released by the Rejuvenation Clinic. The published literature hints at problems in the last stage—activating the female clone-zygote with the memories and experiences—the ‘personality’ if you prefer that term—of the parent main. When to terminate the parent male—or whether to terminate it at all—suggests several problems. But I am unable to say what research has been suppressed.”

Lazarus turned to me. “Do you permit that, Ira? Suppression of research?”

“I don’t interfere, Lazarus. But I didn’t know this research was going on. Let’s find out.” I turned to the Administrator for Rejuvenation, shifted to Galacta, and explained what we had been discussing and asked what progress had been made with humans.

I turned back with my ears burning. As soon as I mentioned humans in this connection, she had interrupted me abruptly—as if I had said something offensive—and stated that such experimentation was proscribed.

I translated her answer. Lazarus nodded. “I read the kid’s face; I could see the answer was No. Well, Minerva, that seems to be that I am not about to attempt chromosome surgery on myself—somebody swiped my jackknife.”

“Perhaps that is not quite the end,” Minerva replied. “Ira, did you notice that Ishtar said only that such research was ‘proscribed’? She did *not* say that it had not taken place. I have just made a most thorough semantic analysis of the published literature for truth-and-falsity implications. I conclude that the probability approaches certainty that much pertinent research on humans *has* taken place even though it may no longer be going on. Do you wish to order it released, sir? I am certain that I can freeze their computer quickly enough to prevent erasure, assuming that an erasure program guards it.”

“Let’s not do anything drastic,” drawled Lazarus. “There may be good reason for a ‘hold’ on this stuff. I’m forced to assume that these johnnies know more about it than I do. Besides, I’m not sure I want to be a guinea pig. Let’s put it on the back of the fire, Minerva. Ira, I’m not sure I would be *me* without my Y chromosome. To say nothing of those jolly hints of how you transfer the personality and at what point to kill off the male. *Me,* that is."

"Lazarus—"

"Yes, Minerva?"

"The published literature makes one option both certain and safe. This method can be used to create your twin sister—identical rather than fraternal, save for sex. A host mother is indicated, with no forcing to maturity, since the brain would be allowed to develop normally. Would this meet your standards of newness and interest? To watch yourself grow up as a woman? 'Lazuli Long,' you might name her—your female other self."

"Uh—" Lazarus stopped.

I said dryly, "Grandfather, I think I've won our second bet. Something new. Something interesting."

"Now slow up! *You* can't do it, you don't know how. Nor do I. And the Director of this madhouse appears to have moral scruples about it —"

"We don't know that. Mere inference."

"Not so 'mere.' And *I* may have moral scruples. 'Twouldn't interest me unless I stuck around and watched her grow up which might send me crazy either through trying to make her grow up just like me—what a fate for any girl!—or by trying to keep her from growing up as ornery as I am when that would be her nature. Nor would I be justified either way; she would be a separate human being, not my slave. Besides that, I would be her sole parent—no mother. I've had one crack at trying to raise a daughter alone—it's not fair to the girl."

"You're inventing objections, Lazarus. I'll give long odds that Ishtar would gladly be both host mother and foster mother. Especially if you promised Ishtar a son of her own. Shall I ask her?'

"You keep your biscuit trap shut, Son! Minerva, place that on -'pending'—I won't be hurried into a major decision about another person. Especially one who isn't, quite. Ira, remind me to tell you about the twins who were no relation to each other. But twins."

"Preposterous. You're changing the subject."

"So I am. Minerva, what else do you have, girl?"

"Lazarus, I have one program which involves low hazard and a probability approaching certainty of supplying one—or more—experiences completely new to you."

"I'm listening."

"Suspended animation—"

"What's new about that? We had that when I was a kid, hardly two hundred years old. Used it in the 'New Frontiers.' Didn't attract me then, doesn't now."

"—as a means of time travel. If you stipulate that in X number of years, something truly new will develop—a certainty based on history

—then your only problem is to select whatever span of years will, in your opinion, produce the degree of novelty you seek. One hundred years, one thousand, ten thousand, whatever you say. The rest involves nothing but minor design details."

"Not so 'minor' if I'm going to be asleep and unable to protect myself."

"But you need not go into hibernation until you are satisfied with my design, Lazarus. A hundred years is obviously no problem. A thousand years is not much problem. For ten thousand years I would design an artificial planetoid equipped with fail-safes to insure that you would be revived automatically in case of emergency."

"That would take quite some designing, girl."

"I feel confident of my capacity to do it, Lazarus, but you are free to criticize and reject any part of it. However, there is no point in my submitting preliminary designs until you give me the controlling parameter, namely the time span, which in your opinion will produce something new to you. Or do you wish my advice on that?"

"Uh, hold your horses, dear. Let's assume that you've got me in liquid helium and in free fall and thoroughly protected against ionizing radiation—"

"No problem, Lazarus."

"So I stipulated, dear; Fm not underrating you. But suppose some tiny little fail-safe fails null instead and I go on snoozing through the centuries—and millennia—without end. Not dead. But not revived, either."

"I can and will design to avoid that. But let me accept your stipulation. In such case, how would you be worse off than you would be if you used your termination-option switch? What do you lose by trying this?"

"Why, that's obvious! If there is anything to this immortality talk—or any sort of afterlife—I'm not saying there is or isn't—but if there *is,* then when the 'Roll Is Called Up Yonder,' I won't be there. I'll be asleep but not dead, somewhere off in space. I'll miss the last boat."

"Grandfather," I said impatiently, "quit trying to wiggle out. If you don't want it, just say No. But Minerva has certainly offered you a way to reach something new. If there is anything to your argument—which I don't admit—you will have achieved something *really* unique: the only human being out of many billions to fail to show up for muster on this hypothetical-and-highly-unlikely Judgment Day. I wouldn't put it past you, you old scoundrel; you're slippery."

He ignored my slur. "Why 'highly unlikely'?"

"Because it *is.* I won't argue it."

"Because you *can't* argue it," he retorted. "There isn't any evidence for or against—so how can you assign even a loose probability either way? I was pointing out the desirability, if there happens to be anything to it, of playing it kosher. Minerva, hold that under 'pending,' too. The idea has everything you claim for it, and I don't doubt your ability as-a designer. But, like testing a parachute, it's a one-way trip with no chance to change my mind after I jump. So we'll look over all other ideas before falling back on that one—even if it takes years."

"I will continue, Lazarus."

"Thanks, Minerva." Lazarus looked thoughtful as he picked his teeth with a thumbnail—we were eating, but I have not mentioned breaks for refreshment, nor will I again. You may assume any food and rest breaks that make you feel comfortable. Like Scheherazade's tales, the Senior's anecdotes were chopped up by many irrelevant interruptions.

"Lazarus—"

"Eh, Son? I was daydreaming…of a far country and the wench is dead. Sorry."

"You could help Minerva in this search."

"So? Seems unlikely. She's better equipped to conduct a needle-in-a-haystack search than I am—she impresses me."

"Yes. But she needs data. There are these great gaps in what we know about you. If we knew—if Minerva knew— those fifty-odd professions you've followed, she might be able to cancel several thousand possibility pockets. For example, have you ever been a farmer?"

"Several times."

"So? Now that she knows that, she won't suggest anything relating to agriculture. While there may be sorts of farming you have never done, none would be novel enough to meet your stringent requirements. Why not list the things you have done?"

"Doubt if I can remember them all."

"That can't be helped. But listing what you do remember may call to mind others."

"Uh…let me think. One thing I always did every time I reached an inhabited planet was to study law. Not to practice—not usually, although for a number of years I was a very criminal lawyer—on San Andreas, that was. But to understand the ground rules. Hard to show a profit—or to conceal one—if you don't know how the game is played. It's much safer to break a law knowingly than to do so through ignorance.

"But that backfired once and I wound up as High Justice of a planetary Supreme Court—just in time to save my bacon. And neck.

"Let me see. Farmer, and lawyer, and judge, and I told you I had practiced medicine. Skipper of many sorts of craft, mostly for exploration but sometimes for cargo or migrant transport—and once an armed privateer with a crew of rogues you wouldn't take home to mother. Schoolteacher—lost that job when they caught me teaching the kids the raw truth, a capital offense anywhere in the Galaxy. In the slave trade once but from underneath—I was a slave."

I blinked at that. "I can't imagine it."

"Unfortunately I didn't have to imagine it. Priest—"

I had to interrupt again. "Priest'? Lazarus, you said, or implied, that you had no religious faith of any sort."

"Did I? But 'faith' is for the congregation, Ira; it handicaps a priest. Professor in a parlor house—"

"Excuse me again. Idiomatic usage?"

"Eh? Manager of a bordello…although I did play the pianette a little, and sang. Don't laugh; I had a pretty good singing voice then. This was on Mars—you've heard of Mars?"

"Next planet out from Old Home Terra. Sol Four."

"Yes. Not a planet we'd bother with today. But this was before Andy Libby changed things. It was even before China destroyed Europe but after America dropped out of the spacing business, which left me stranded. I left Earth after that meeting of 2012 and didn't go back for a spell—which saved me much unpleasantness, I shouldn't complain. If that meeting had gone the other way— No, I'm wrong; when a fruit is ripe, it will fall, and the United States was rotten ripe. Don't ever become a pessimist, Ira; a pessimist is correct oftener than an optimist, but an optimist has more fun— and neither can stop the march of events.

"But we were speaking of Mars and the job I had there. A fill-in job for coffee and cakes—but pleasant, I was also the bouncer. The girls were all nice girls, and it was a pleasure to throw out some slob who was misbehaving toward them. Throw him so hard he bounced. Then blacklist him so he couldn't come back. One or two like that every evening and the word got around that 'Happy' Daze demanded gentlemanly behavior toward the ladies, no matter how big a spender a man was.

Whoring is like military service, Ira—okay in the upper brackets, not so good lower down. These girls were constantly getting offers to buy up their contracts and get married— and all of them did get married, I think, but they were making money so fast that they weren't anxious to grab the first offer. Mainly because, when I took over, I put a stop to the fixed price the governor of the colony had set, and reinstated the Law of Supply and Demand. There was no reason why those kids shouldn't charge every ruble the traffic would bear.

"Had trouble over that until the Governor's Provost for Rest and Culture got it through his thick head that slave wages won't work in a scarcity situation. Mars was unpleasant enough without trying to cheat those few who made it tolerable. Or even delightful when they were happy in their work. Whores perform the same function as priests, Ira, but far more thoroughly.

“Let me see— I’ve been wealthy many times and always lost it, usually through governments inflating the money, or confiscating —’nationalizing’ or ‘liberating’—something I owned. ‘Put not your faith in princes,’ Ira; since they don’t produce, they always steal. I’ve been broke even oftener than I’ve been wealthy. Of the two, being broke is more interesting, as a man who doesn’t know where his next meal is coming from is never bored. He may be angry or several other things—but *not* bored. His predicament sharpens his thoughts, spurs him into action, adds zest to his life, whether he knows it or not. Can trap him, of course; that’s why food is the usual bait for traps. But that’s the intriguing part about being broke: how to solve it *without* being trapped. A hungry man tends to lose his judgment—a man who has missed seven meals is often ready to kill—rarely a solution.

“Advertising copywriter, actor—but I was *very* broke that time—acolyte, construction engineer and several other sorts, and even more sorts of mechanic, for I’ve always believed that an intelligent man can turn his hand to *anything* if he will take time to learn how it works. Not that I insisted on skilled work when my next meal was at stake; I’ve often pushed an idiot stick—”

“Idiom?”

“An old gandy-dancer expression, Son, a stick with a shovel blade on one end and an idiot on the other. I was never that for more than a few days, just long enough to sort out the local setup. Political manager—I was even a reform politician once…but *only* once: Reform politicians not only tend to be dishonest but *stupidly* dishonest—whereas the business politician is honest.”

“I don’t see that Lazarus. History seems to show—”.

“Use your head, Ira. I don’t mean that a business politician won’t steal; stealing is his business. But *all* politicians are nonproductive. The only commodity any politician has to offer is jawbone. His personal integrity—meaning, if he gives his word, can you rely on it? A successful business politician knows this and guards his reputation for sticking by his commitments—because he wants to stay in business —go on stealing, that is—not only this week but next year and years after that. So if he’s smart enough to be successful at this very exacting trade, he can have the morals of a snapping turtle, but he performs in such a way as not to jeopardize the only thing he has to sell, his reputation for keeping promises.

“But a reform politician has no such lodestone. His devotion is to the welfare of all the people—an abstraction of very high order and therefore capable of endless definitions. If indeed it can be defined in meaningful terms. In consequence your utterly sincere and incorruptible reform politician is capable of breaking his word three times before breakfast— not from personal dishonesty, as he sincerely regrets the necessity and will tell you so—but from unswerving devotion to his ideal.

"All it takes to get him to break his word is for someone to get his ear and convince him that it is necessary for the greater good of *all* the peepul. He'll geek.

"After he gets hardened to this, he's capable of cheating at solitaire. Fortunately he rarely stays in office long—except during the decay and fall of a culture."

I said, "I must take your word for it, Lazarus. Since I have spent most of my life on Secundus, I know little of politics other than theoretically. You set it up that way."

The Senior fixed me with a stare of cold scorn. "I did no such thing."

"But—"

"Oh, hush. You are a politician yourself—a 'business' politician, I hope—but that stunt of transporting your dissidents gives me doubts. Minerva! 'Notebook,' dear. My intention in deeding Secundus to the Foundation was to set up a cheap and simple government—a constitutional tyranny. One in which the government was forbidden to do most things and the dear people, bless their black flabby little hearts, were given no voice at all.

"I didn't have much hope for it. Man is a political animal, Ira. You can, no more keep him from politicking than you can keep him from copulating—and probably shouldn't try. But I was young then, and hopeful. I hoped to keep politicking in the private sphere, keep it out of government. I thought the setup might last a century or so; I'm amazed that it has lasted as long as it has. Not good. This planet is overripe for revolution—and if Minerva doesn't find me something better to do, I might show up under another name, with my hair dyed and my nose bobbed, and start one. So be warned, Ira."

I shrugged. "You forget I'm migrating."

"Ah, yes. Though the prospect, of suppressing a, revolution might change your mind. Or perhaps you would like to be my chief of staff—then displace me with a coup d'etat after the shooting is over and send me to the guillotine. That would be something new—I've never tended to lose my head over politics. Doesn't leave much for an encore, does it? 'A tisket, a tasket, a head in a basket—it cannot reply to questions you ask it.' Final curtain, no bows.

"But revolutions can be fun. Did I tell you how I worked my way through college? Operating a Gatling gun for five dollars a day and loot. Never got higher than corporal because each time I had enough money for another semester, I deserted—and, being a mercenary, I was never tempted to become a dead hero. But adventure and change of scene are appealing to a young man…and I was very young.* (* The Gatling gun (Richard J. Gatling, 1818-1903) was obsolete by the time Lazarus Long was born. This allegation is barely possible if one stipulates that an obsolete might be used in some small, out-of-the-way insurrection. J.F.45th)

“But dirt, and missing meals, and the *wheet* of bullets past your ears stop being glamorous as you grow up; the next time I was in the military—not entirely my idea—I chose Navy instead. Wet Navy, although I was space Navy at later times and under other names.

“I’ve sold almost everything—except slaves—and worked as a mindreader in a traveling show, and was a king once— a much overrated profession, the hours are too long—and designed women’s styles under a phony French name and accent and with my hair long. Almost the only time I’ve worn long hair, Ira; not only does long hair need a lot of timewasting care, it gives your opponent something to grab in close combat and can obscure your view at a critical moment —either one can be fatal. But I don’t favor a billiard-ball cut because a thick mat of hair—not so long as to fall over your eyes—can save you a nasty scalp wound.”

Lazarus appeared to stop to think. “Ira, I don’t see how I can list all the things I’ve done to support myself and my wives and kids, even if I could remember them. The longest I ever stuck to one job was about half a century—very special circumstances—and the shortest was from after breakfast to just before lunch—again, special circumstance. But no matter where or what, there are makers, takers, and fakers. I prefer the first category but I haven’t spurned the other two. Whenever I was a family man—usually, that is—I haven’t let compunctions stop me from keeping food on the table. I won’t steal another child’s food to feed my own—but there is always some way not too sickeningly fake to garner valuta if a man isn’t too picky—which I never was whenever I had family obligations.

“You can sell things which have no intrinsic value, such as stories or songs—I’ve worked every branch of the entertainment profession… including a time in the capital of Fatima when I squatted in the marketplace with a brass bowl in front of me, telling a story longer than this one, and waiting at cliff-hangers for the clink of a coin.

“I was reduced to that because my ship had been confiscated and foreigners weren’t permitted to work without a permit—a high squeeze on the theory that jobs should be reserved for local citizens, there being a depression. Telling stories without a fee wasn’t classed as work, nor was it begging—which required a license—and cops let me alone as long as I volunteered the customary daily gift to the Police Benevolent Fund.

“It was either get by with some such dodge or be reduced to stealing—difficult in a culture in which one is not sophisticated in the local customs. Still, I would have risked it save that I had a wife and three small children~. That hobbled me, Ira; a family man should not take risks that a bachelor finds acceptable.

“So I sat there till my tailbone wore through the cobblestones, recounting everything from Grimm’s fairy tales to, Shakespeare’s plays, and not letting my wife spend money on anything but food until we saved enough to buy that work permit plus the customary cumshaw. Then I clobbered ‘em, Ira.”

“How, Lazarus?”

“Slowly but thoroughly. Those months in the marketplace had given me a degree of sophistication in the ‘Who’s-Whom’ of that society and what its sacred cows were. Then I stayed on for years—no choice. But first I was baptised into the local religion, gaining a more acceptable name in the process, and memorized the Qur’an. Not quite the same Qur’an I had known some centuries earlier, but it was worth the effort.

“I’ll skip over how I got into the Tinkers’ Guild and got my first job repairing television receivers—had my pay docked to cover my contribution to the guild, that is, with a private arrangement to the Grand Master Tinker, not too expensive. This society was retarded in technology; its customs didn’t encourage progress, and they had slipped behind what they had fetched from Earth about five centuries earlier. That made me a wizard, Ira, and could have got me hanged bad I not been careful to be a faithful—and openhanded—son of the church. So once I got into position for it, I peddled fresh electronics and stale astrology—using knowledge they didn’t have for one and a free imagination for the other.

“Eventually I was chief stooge to the very official who had confiscated my ship and trade goods years earlier, and I was helping him get richer while getting rich myself. If he recognized me, he never said so—a beard changes my looks quite a lot. Unfortunately he fell into disfavor and I wound up with his job.”

“How did you work that, Lazarus? Without being caught, I mean?”

“Now, now, Ira! He was my benefactor. It said so in my contract and I always addressed him as such. Allah’s ways are mysterious. I cast a horoscope for him, warning him that his stars were in bad shape. And so they were. That system is one of the few I know of with two usable planets around the same star, both colonized and with trade between them. Artifacts and slaves—”

“‘Slaves,’ Lazarus? While I am aware of such a practice on

Supreme, I didn't think that vice was very common. Not economic."

The old man closed his eyes, kept them closed so long I thought he had fallen asleep (he often did during the early days of these talks). Then he opened them and spoke very grimly:

"Ira, this vice is far more common than historians usually mention. Uneconomic, yes—a slave society can't compete with a free one. But with the Galaxy as wide as it is, there is usually no such competition. Slavery can and *does* exist many times and places, whenever the Laws are rigged to permit it.

"I said that I would do almost anything to support my wives and kids—and I have; I have shoveled human excrement for a pittance, standing in it up to my knees, rather than let a child go hungry. But this I will not touch. Nor is it because I was once a slave myself; I have *always* felt this way. Call it a 'belief' or dignify it as a deep moral conviction. Whatever it is, for me it is beyond argument. If the human animal has any value at all, he is too valuable to be property. If he has any inner dignity, he is much too proud to own other, men. I don't give a damn how scrubbed and perfumed he may be, a slaveowner is subhuman.

"But this does not mean that I'll cut my throat when I run into it, or I would not have lived through my first century. For there is another bad thing about slavery, Ira; it is impossible to free slaves, they have to free themselves."

Lazarus scowled. "You've got me preaching again and about matters I can't possibly prove. Once I got my hands on my ship, I had it fumigated and checked it over myself and had it loaded with items I thought I could sell and had food and water taken on for the human cargo it had been refitted for, and sent the captain and crew on a week's leave, and notified the Protector of Servants—the state slave factor, that is—that we would load as soon as the skipper and purser were back.

"Then I took my family on a holiday inspection of the ship. Somehow the Protector of Servants was suspicious; he insisted on touring the ship with us. So we had to take him along when we took off from there, very suddenly, shortly after my family was aboard. Right out of that system and never went back. But before we put down on a civilized planet, me and. my boys—two almost grown by then—removed any sign that she had ever been a slaver, even though it mean jettisoning stuff I could have sold."

"What about the Protector of Servants?" I asked. "Wasn't he some trouble to you?"

"Wondered if you would notice that. I *spaced* the bastard! Alive. He went thataway, eyes popped out and peeing blood. What did you expect me to do? Kiss him?"

COUNTERPOINT

III

Once they reached the privacy of a transport Galahad said to Ishtar, “Were you serious in your proposal to the Senior? To have progeny by him?”

“How could I be joking?—in the presence of two witnesses, one of them the Chairman Pro Tem himself.”

“I didn’t see how you could be. But *why,* Ishtar?”

“Because I’m a sentimental atavist!”

“Do you have to snap at me?”

She put an arm around his shoulders, took his hand with her free hand. “I’m sorry, dear. It has been a long day and not much sleep last night, sweet as it was. I’m worried about several things—and the subject you brought up is not one I can be unemotional about.”

“I should not have asked. An invasion of privacy—I don’t know what’s got into me. Shall we wipe the matter? Please?”

“Dear, dear! I do know what got into me...and that’s part of why I am so unprofessionally emotional. Let me put it this way: If you were female, wouldn’t you jump at a chance to make such a proposal? To *him?”*

“I’m not female.”

“I know you’re not, you’re delightfully male. But try for a moment to be as logical as a female. *Try!”*

“Males are not necessarily illogical; that’s a female myth.”

“Sorry. I must take a tranquilizer the minute we are home—something I haven’t needed in years. But do try to think about it *as if* you were female. Please? Twenty seconds.”

“I don’t need twenty seconds.” He lifted her hand, kissed it. “If I were female, I would jump at the chance, too. The best proved genetic pattern one can offer a child? Of course.”

“Not that at all!”

He blinked. “Perhaps I *don’t* know what you mean by logic.”

“Uh…does it matter? Since we arrived at the same answer?” The car swerved and stopped in a loading pocket; she stood up. “So let’s wipe it. We’re home, dear.”

“You are. I’m not. I think—”

“Men don’t think.”

“I think you need a night’s rest, Ishtar.”

“You sealed this onto me; now you’ll have to undress me.”

“So? Then you’ll insist on feeding me and you won’t get that long night of sleep after all. Besides, you can peel it over your head, just the way I did it for you at decontam."

She sighed. "Galahad—if I picked the right name for you—do I have to offer you a cohabitation contract merely because I might invite you to stay overnight again? It's likely that neither of us will get any sleep tonight."

"That's what I was saying."

"Not quite. Because we may *work* all night. Even if you choose to spend three minutes to our mutual pleasure."

"'Three minutes'? I wasn't that hasty even the first time."

"Well— Five minutes?'

"Am I offered twenty minutes—plus an apology?'

"Men! Thirty minutes, darling, and no apology."

"Accepted." He stood up.

"Five of which you've wasted arguing about it. So come along—exasperating darling."

He followed her out into her foyer. "What's this about 'work all night'?"

"And tomorrow, too. I'll know when I check what's in my phone. If there's nothing, I'll have to call the Chairman Pro Tem, much as I hate to. I've got to look over this rooftop cabin or whatever it is, and see, what arrangements can be made to take care of him there. Then both of us will move him; I can't delegate *that.* Then—"

"Ishtar! Are you going to agree to *that?* Nonsterile habitat, no emergency equipment, and so forth?"

"Darling…*you* are impressed by my rank; Mr. Weatheral is not. And the Senior isn't even impressed by Mr. Weatheral's authority; the Senior is the *Senior.* I kept hoping that Mr. Chairman Pro Tem would find some way to wheedle him into postponing such a move. But he did not. So now I have two choices: Do it his way—or withdraw completely. As the Director did. Which I *won't* do. Which leaves me *no* choice. So tonight I'll inspect his new quarters and see what can be done between now and tomorrow midmorning. Even though it's hopeless to make such a place sterile, perhaps it can be made more nearly suitable before he sees it."

"And emergency equipment, don't forget that, Ishtar."

"As if I would, stupid darling. Now help me out of this damned thing—I mean 'this pretty dress you designed for me and which the Senior clearly liked.' Please?"

"So stand still and hold still and shut up."

"Don't *tickle!* Oh, that, there's the phone signal! Get it off me, dear—hurry!"

VARIATIONS ON A THEME

IV

Love

Lazarus lounged in his hammock and scratched his chest.

“Hamadryad,” he said, “that’s not an easy question. At seventeen I was certain I was in love. But it was merely excess hormones and self-delusion. It was most of a thousand years later before I experienced the real thing—and didn’t recognize the condition for years, as I had quit using that word.”

Ira Weatheral’s “pretty daughter” looked puzzled, while Lazarus thought again that Ira had been wrong: Hamadryad was not pretty; she was so startling beautiful that she would have fetched top premium prices at auction on Fatima, with hard-eyed Iskandrian factors outbidding each other in the belief that she was a sound speculation. If the Protector of the Faith had not preempted her for himself— Hamadryad did not seem to know that her appearance was exceptional. But Ishtar did. The first ten days that Ira’s daughter had been part of Lazarus’ “family” (so he thought of them—a good enough term as Ira, Hamadryad, Ishtar, and Galahad were all his descendants and now privileged to call him “Grandfather” as long as they did not overdo it)—those first days Ishtar had shown a childish tendency to try to place herself between Hamadryad and Lazarus, and also between Hamadryad and Galahad, even when this required being two places at once.

Lazarus had watched this barnyard dance with amusement and had wondered if Ishtar knew that she was doing it. Probably not, he decided. His rejuvenation supervisor was all duty and no sense of humor and would have been shocked had she known that she had reverted to adolescence.

But it did not last. It was impossible not to like Hamadryad because she remained quietly friendly no matter what. Lazarus wondered if it was a behavior pattern consciously developed to protect herself against her less-endowed sisters—or was it simply her nature? He had not tried to find out. But Ishtar now tended to sit by Hamadryad, or even to make room between herself and Galahad for Hamadryad, and let her help in serving meals and such—assistant “housewife” de facto.

“If I must wait a thousand years to understand that word,” Hamadryad replied, “then I probably never will. Minerva says that it cannot be defined in Galacta and even when I speak Classic English, I find that I think in Galacta, which means that I do not really grasp English. Since the word ‘love’ occurs so frequently in ancient English literature, I thought my failure to understand that word might be the block that keeps me from thinking in English.”

“Well, let’s shift to Galacta and take a swing at it. In the first place, very little thinking was ever done in English; it is not a language suited to logical thought. Instead, it’s an emotive lingo beautifully adapted to concealing fallacies. A rationalizing language, not a rational one. But most people who spoke English had no more idea of the meaning of the word ‘love’ than you have, even though they used it all the time.”

Lazarus added, “Minerva! We’re going to take another hack at the word ‘love.’ Want to join in? If so, shift to your personal mode.”

“Thank you, Lazarus. Hello, Ira-Ishtar-Hamadryad-Galahad,” the disembodied contralto voice answered. “I am and have been in personal mode, and usually am, now that you have given me permission to use my judgment. You’re looking well, Lazarus—younger every day.”

“I feel younger. But, dear, when you go to personal mode, you should tell us.”

“I’m sorry, Grandfather!”

“Don’t sound so humble. Just say, ‘Howdy, I’m here,’ that’s all. If you could manage to tell me, or Ira, just once, to go to hell, it ‘ud be good for you. Clean your circuits.”

“But I have no wish to say that to either of you.”

“That’s what’s wrong. If you hang around Dora, you’ll learn to. Have you spoken to her today?”

“I’m speaking with Dora now, Lazarus. We’re playing fairy chess in five dimensions, and she’s teaching me songs you taught her. She teaches me a song, then I sing a tenor lead while she harmonizes in soprano. We’re doing this in real time because we’re outing through the speakers in your control room and listening to ourselves. Right now we’re singing the story of One-Ball Riley. Would you care to hear us?”

Lazarus flinched. “No, no, not *that* one.”

“We’ve practiced several others. ‘Rangy Lil’ and ‘The Ballad of Yukon Jake’ and ‘Barnacle Bill’—I sing the story on that one while Dora does soprano and bass. Or perhaps ‘Four Whores Came Down from Canada’—that one is fun.”

“No, Minerva. I’m sorry, Ira; my computer is corrupting your computer.” Lazarus sighed. “I didn’t plan it that way; I just wanted Minerva to babysit for me. Since I’ve got the only retarded ship in this sector.”

“Lazarus,” Minerva said reproachfully, “I don’t think it is correct to say that Dora is retarded. She's quite intelligent, I think. I do not understand why you say that she is corrupting me."

Ira had been lying on the grass, sunbathing with a kerchief over his eyes. He rolled to one elbow. "Nor I, Lazarus. That last one I'd like to hear. I recall where Canada is-was. North of the country you were born in."

Lazarus counted silently, then said, "Ira, I know I have prejudices ridiculous to a civilized modern man such as yourself. I can't help it; I'm canalized by early childhood, imprinted like a baby duckling. If you want to hear bawdy songs from a barbaric era, please listen to them in your apartments—not up here. Minerva, Dora doesn't understand those songs; to her they are nursery rhymes."

"Nor do I understand them, sir, other than theoretically. But they are jolly, and I have enjoyed being taught to sing."

"Well— All right. Has Dora been behaving herself otherwise?"

"She's been a good girl, Grandfather Lazarus, and I think she is contented with my company. She pouted a little at not having her bedtime story last night. But I told her that you were very tired and already asleep; and told her a story myself."

"But— Ishtar! Did I miss a day?"

"Yes, sir."

"Surgery? I didn't notice any new healed places."

The Master Chief Technician hesitated. "Grandfather, I will discuss procedures only if you insist. It does a client no good to be reminded of such things. I hope that you will not insist. I do hope so, sir."

"Um. All right, all right. But next time you chop out a day—or a week, or whatever—warn me. So that I can leave a bedtime story on file with Minerva. No, that won't do; you don't want me to know. Okay, I'll keep stories on file with Minerva and you warn her, instead."

"I will, Grandfather. It does help when the client cooperates, especially by paying as little attention to what we do as possible." Ishtar smiled briefly. "The client we dread is another rejuvenator. Worries and tries to run things."

"Small wonder. I know, dear, I have that horrid habit of trying to run things myself. The only way I can keep from it is by staying out of the control room. So when I get too nosy, tell me to shut up. But how are we doing? How much longer do I have to go?"

Ishtar answered hesitantly, "Perhaps this is a time when I should tell you to…'shut up.'"

"That's it! But firmer, dear. 'Get out of my control room, you custard-headed dolt, and *stay* out! Make him realize that, if he doesn't *jump,* you'll toss him into the brig. Now try it again."

Ishtar grinned widely. "Grandfather, you're an old fraud."

"So I've long suspected. I was hoping it didn't show. All right, the subject is 'love.' Minerva, the Hamadarling says you told her that it can't be defined in Galacta. Got anything to add to that?"

"Tentatively yes, Lazarus. May I reserve my answer until the others speak?"

"Suit yourself. Galahad, you talk less and listen more than anybody else in the family. Want to try it?"

"Well, sir, I hadn't realized that there was any mystery about 'love' until I heard Hamadryad ask about it. But I'm still learning English. By the naturalistic method the way a child learns his milk language. No grammar, no syntax, no dictionary—just listen and talk and read it. Acquire new words by context. By that method I acquired a feeling that 'love' means the shared ecstasy that can be attained through sex. Is that right?"

"Son, I hate to say this—because, if you've been reading a lot of English, I see how you reached that opinion—but you are one hundred percent wrong."

Ishtar looked startled. Galahad simply looked thoughtful. "Then I must go back and read some more."

"Don't bother, Galahad. Most of those writers you've been reading misuse the word just that way. Shucks, I misused it for years myself; it's a prime example of the slipperiness of the English tongue. But, whatever 'love' is, it's not sex. I'm not running down sex. If there is a purpose in life mere important than two people cooperating in making a baby, all the philosophers in history haven't been able to find it. And between babies, the practice runs keep up our zest in life and make tolerable the fact that raising a baby is one hell of a lot of work. But that's not love. Love is something that still goes on when you are *not* sexually excited. It being so stipulated, who wants to try it? Ira, how about you? You know English better than the others, you speak it almost as well as I do."

"I speak it better than you do, Gramp; I speak it grammatically, which you do not."

"Don't praggle me, boy; I'll quang you proper. Shakespeare and I never let grammar interfere with expressing ourselves. Why, he said to me once—"

"Oh, stop it! He died three centuries before you were born."

"He did, huh? They opened his grave once and found it empty. The fact is, he was a half brother of Queen Elizabeth and dyed his hair to make the truth less obvious. The other fact is that they were closing in on him, so he switched. I've died that way several times. Ira, his will left his 'second-best bed' to his wife. Look up who got his *best* bed and you'll begin to figure out what really happened. Do you want to try to define 'love'?"

"No. You would change the rules again. All you have done so far is to divide the field of experience called 'love' into the same categories Minerva divided it into when you asked her this same question weeks ago—namely, 'Eros' and 'Agape.' But you avoided using those technical words for the subfields, and by this sophistry you attempted to exclude the general term from one subfield and thereby claimed that the term to be defined was limited to the other subfield—which set it up for you to define 'love' as identically equal to 'Agape.' But again without using that word. It won't work, Lazarus. To use your own metaphor, I saw you palm that card."

Lazarus shook his head admiringly. "There are no flies on you, boy; I did a good job when I thought you up. Someday when we have time to waste, let's have a go at solipsism."

"Come off, it, Lazarus. You can't bulldoze me the way you did Galahad. The subcategories are still 'Eros' and 'Agape.' 'Agape' is rare; 'Eros' is so common that it is almost inevitable that Galahad acquired the feeling that 'Eros' is the total meaning of the word 'love.' Now you have unfairly confused him since he assumes—incorrectly—that you are a reliable authority with respect to the English language."

Lazarus chuckled "Ira, m'boy, when I was a kid, they sold that stuff by the wagonload to grow alfalfa. Those technical words were thought up by armchair experts of the same sort as theologians. Which gives them the same standing as sex manuals written by celibate priests. Son; I avoided those fancy categories because they are useless, incorrect, and misleading. There can be sex without love, and love without sex, and situations so intermixed that nobody can sort out which is which. But love *can* be defined, an exact definition that does not resort to the word 'sex,' or to question begging by exclusion through the use of such words as 'Eros' and 'Agape.'"

"So define it," said Ira. "I promise not to laugh."

"Not yet. The trouble with defining in words anything as basic as love is that the definition can't be understood by anyone who has not experienced it. It's like the ancient dilemma of explaining a rainbow to a person blind from birth. Yes, Ishtar, I know that you can fit such a person with cloned eyes today—but that dilemma was inescapable in my youth. In those days one could teach such an unfortunate all the physical theory of the electromagnetic spectrum, tell him precisely what frequencies the 'human eye can pick up, define colors to him in terms of those frequencies, explain exactly how the mechanisms of refraction and reflection produce a rainbow image and what its shape is and how the frequencies are distributed until he knew *all* about rainbows in the scientific sense…but you *still* couldn't make him feel the breathless wonder that the sight of a rainbow inspires in a man. Minerva is better off than that man, because she can *see.* Minerva dear, do you ever look at rainbows?"

"Whenever possible, Lazarus. Whenever one of my sensor extensionals can see one. Fascinating!"

"That's it. Minerva can see a rainbow, a blind man can't. Electromagnetic theory is irrelevant to the experience."

"Lazarus," Minerva added, "it may be that I can see a rainbow better than a flesh-and-blood can. My visual range is three octaves, fifteen hundred to twelve thousand angstroms."

Lazarus whistled. "Whereas I chop off just short of one octave. Tell me girl, do you see chords in those colors?"

"Oh, certainly!"

"Hmm! Don't try to explain to me those other colors; I'll have to go on being half blind."

Lazarus added, "Puts me in mind of a blind man I knew on Mars, Ira, when I was managing that, uh, recreation center. He—"

"Gramp," the Chairman Pro Tem interrupted m a tired voice, "don't treat us as children. Surely, you're the oldest man alive…but the youngest person here—that offspring of mine sitting there, making cow-eyes at you—is as old as Gramp Johnson was when you last saw him; Hamadryad will be eighty her next birthday. Ham, my darling, how many paramours have you had?"

"Goodness, Ira—who counts?"

"Ever taken money for it?"

"None of your business, Father. Or were you about to offer me some?"

"Don't be flip, dear; I'm still your father. Lazarus, do you think you can shock Hamadryad by plain talk? Prostitution isn't big business here; there are too many amateurs as willing as she is. Nevertheless, the few bordellos we have in New Rome are members of the Chamber of Commerce. But you should try one of our better holiday houses—say, the Elysium. After you are fully rejuvenated."

"Good idea," agreed Galahad. "To celebrate. As soon as Ishtar gives you your final physical check. As my guest, Grandfather; I'd be honored. The Elysium has everything, from massage and hypnotic conditioning to the best gourmet food and best shows. Or name it and they'll supply it."

"Wait a moment," protested Hamadryad. "Don't be a selfish arsfardel, Galahad. We'll make it a foursome celebration—Ishtar?"

"Certainly, dear. Fun."

"Or a sixsome, with a companion for Ira. Father?"

"I could be tempted, dear, for Lazarus' birthday party—although you know I usually avoid public places. How many rejuvenations, Lazarus? That's how we count this sort of birthday party."

"Don't be nosy, Bub. As your daughter says: 'Who counts?'

Wouldn't mind a birthday cake, such as I used to have as a child. But just one candle in the middle is enough."

"A phallic symbol," agreed Galahad. "An ancient fertility sign—appropriate for a rejuvenation. And its flame is an equally ancient symbol of life. It should be a working candle, not a fake. If we can find one."

lshtar looked happy. "Of course! There must be a candlemaker somewhere: If not, I'll learn how and make it myself. I'll design it, too—semirealistic but somewhat stylized. Although I could make it true portraiture, Grandfather; I'm a fair amateur sculptor, I learned it when I studied cosmetic surgery."

"Wait a. minute!" Lazarus protested. "All I want is a plain wax candle—then blow it out and make a wish. Thank you, Ishtar, but don't bother. And thanks, Galahad, but I'll pick up the tab—although it may be a family party right, here, where Ira won't feel like, a duck in a shooting gallery. Look, kids, I've seen every possible type of joy house and pleasure dome. Happiness is in the heart, not in that stuff."

"Lazarus, can't you see that the kids *want* to treat you to a fancy party? They like you—though Prime Cause alone knows why."

"Well—"

"But there might be no tab. I think I recall something from that list appended to your will. Minerva—who owns the Elysium?"

"It is a daughter corporation of Service Enterprises of New Rome, Limited, which in turn is owned by Sheffield-Libby Associates. In short, Lazarus owns it."

"Be damned! Who invested my money in *that?* Andy Libby, bless his sweet shy soul, would be spinning in his grave—if I hadn't placed him spinning in orbit around the last planet we discovered together, where he was killed."

"Lazarus, that's not in your memoirs."

"Ira, I keep telling you, lots of things not in my memoirs. Poor little guy got to thinking one of his deep thoughts and didn't stay alert. I put him in orbit because I promised him, when he was dying, to take him back to his native Ozarks. Tried to, about a hundred years later, but couldn't find him. Beacon dead, I suppose. All right, kids, we'll have a party at my happy house and you can sample anything the place has to offer. Where were we? Ira, you were about to define 'love.'"

"No, you were about to tell us about a blind man on Mars, when you were managing that whorehouse."

"Ira, you're as crude as Gramp Johnson was. This guy 'Noisy'—don't recall his right name, if he had one—Noisy was one of those people like yourself who just will work, regardless. A blind man could get by in those days quite well by begging, and nobody thought the less of him, since there was no way then to restore a man's sight.

"But 'Noisy wasn't content to live off other people; he worked at what he could do. Played a squeeze box and sang. That was an instrument operated by bellows which forced air over reeds as you touched keys on it—quite pretty music. They were popular until electronics pushed most mechanical music makers off the market.

"Noisy showed up one night, skinned out of his pressure suit at the lock dressing room, and was playing and singing before I knew he was inside.

"My policy was 'Trade, Treat, or Travel'—except that the house might buy a beer for an old customer who temporarily wasn't holding. But Noisy was not, a customer; he was a bum—looked and smelled like a bum, and I was about to give him the bum's rush. Then I saw this rag around his eyes and skidded to a stop.

"Nobody throws out a blind man. Nobody makes any trouble for him. I kept an eye on him but left him alone. He didn't even sit down. Just played this broken-down stomach-Steinway and sang, neither very well, and I laid off the pianette not to interrupt him. One of the girls started passing the hat for him.

"When he reached my table, I invited him to sit and bought him a beer—and regretted it; he was pretty whiff. He thanked me and told me about himself. Lies, mostly."

"Like yours, Gramp?"

"Thanks, Ira. Said he had been chief engineer in one of the big Harriman liners, until his accident. Maybe he had been a spaceman; I never caught him out in the lingo. Not that I tried. If a blind man wanted to claim he was the rightful heir to the Holy Roman Empire, I would go along with the gag—anybody would. Perhaps he was some sort of space-going mechanic, shipfitter or something. More likely he was a transported miner who had been careless using powder.

"When I checked the place at closing time, I found him sleeping in the kitchen. Couldn't have that, we ran a sanitary mess. So I led him to a vacant room and put him to bed, intending to give him breakfast and ease him gently on his way—I wasn't running a flophouse.

"A lot I had to say about it. I saw him at breakfast all right. But I hardly recognized him. A couple of the girls had given him a bath, trimmed his hair, and shaved him, and had dressed him in clean clothes—mine—and had thrown away the dirty rag he had worn over his ruined eyes and had replaced it with a clean white bandage.

"Kinfolk, I do not fight the weather. The girls were free to keep pets; I knew what fetched the customers, and it wasn't my pianette playing. If that pet stood on two legs and ate more than I did, I still did not argue. Hormone Hall was Noisy's home as long as the girls wanted to keep him.

"But it took me a while to realize that Noisy was not just a parasite enjoying free room and board, and probably our stockin-trade as well, while siphoning off cash from our customers—no, he was pulling his weight in the boat. My books at the end of the first month he was with us showed the gross profit up and the net way up."

"How do you account for that, Lazarus? Inasmuch as he was competing for your customers' cash."

"Ira, must I do all your thinking for you? No, Minerva does most of it. But it is possible that you have never thought about the economics of that sort of joint. There are three sources of gross, the bar, the kitchen, and the girls themselves. No drugs—drugs spoil the three main sources. If a customer was on drugs and showed it, or even broke out a stick of kish, I eased him out quickly and sent him down the line to the Chinaman's.

"The kitchen was to supply meals to the girls—who were assessed room and board on a break-even or lose-a-little basis. But it also served food all night to anyone who ordered it, and showed a net since we had its overhead covered anyhow to board the girls. The bar also showed a net after I fired one barkeep with three hands. The girls kept their gross, all the traffic would bear, but they paid the house a flat fee for each kewpie, or a triple fee if she kept a customer all night. She could cheat a little, and I would shuteye—but if she cheated too much or too often, or a john complained that he was rolled, I had a talk with her. Never any real trouble; they were ladies, and besides, I had means to check on them quietly, as well as eyes in the back of my head.

"The beefs about rolling were the stickiest, but I remember only one that was the girl's fault rather than the john's—I simply terminated her contract, let her go. In the usual beef the slob was not rolled; he simply had a change of heart after he had counted too much money into her greedy little hands and she had delivered what he had ordered—then *he* tried to roll *her* to get it back. But I could smell that sort of slob and would be listening via a mike—then would bust in as trouble started. That sort of jerk I would toss so hard he bounced twice."

"Grandfather, weren't some of them pretty big for that?"

"Not really, Galahad. Size doesn't figure much in a fight—although I was always armed against real trouble. But if I *have* to take a man, I have no compunctions slowing me down about *how* I take him. If you kick a man in the crotch with no warning, it will quiet him down long enough to throw him out.

"Don't flinch, Hamadear; your father guaranteed that you could not be shocked. But I was talking about Noisy and how he made us money while making some himself.

"In this sort of frontier joint the usual customer comes in, buys a drink while he looks over the girls, picks one by buying her a drink—goes to her room, then leaves. Elapsed time, thirty minutes; net to the house, minimum.

"Pre-Noisy, that is. After Noisy arrived, it went more like this: Buy a drink as before. Maybe buy the girl a second drink rather than interrupt a blind man's song. Take the girl to her room. When he comes back, Noisy is singing 'Frankie and Johnnie' or 'When the Pusher Met My Cousin,' and smiles and throws a verse at him—and the customer sits down and listens to all of it—and asks Noisy if he knows 'Dark Eyes.' Sure, Noisy knows it, but instead of admitting it, he asks the john to give him the words and hum it and he'll see what he can do with it.

"If the customer has valuta, he's still there hours later, having had supper and bought supper for one of the girls and tipped Noisy rather lavishly and is ready for an encore with the girl or another girl. If he's got the money, he stays all night, splitting his cash between the girls and Noisy and the bar and kitchen. If he spends himself broke and has been a good customer—well behaved as well as free with his money—I stake him to bed and breakfast on credit, and urge him to come back. If he's alive next payday, he's sure to be back. If not, all the house is out is the wholesale cost of one breakfast—nothing compared with what he's spent. Cheap goodwill advertising.

"A month of that, and both the house and the girls have made much more money, and the girls haven't worked much harder as they have spent part of their time drinking pay-me drinks—colored water; half the price to the house, half to the girl—while they help a john listen to Noisy's nostalgic songs. Shucks, a girl doesn't want to work like a treadmill even if she usually enjoys her work as many of them did. But they never got tired of sitting and listening to Noisy's songs.

"I quit playing the pianette, except, maybe, while Noisy ate. Technically I was a better musician—but *he* had that undefinable quality that sells a song; he could make 'em cry or laugh. And he had a thousand of 'em. One he called 'The Born Loser.' Not much of a tune, just:

"Tah tah *poom* poom!
Tah tah poom poom!
Tah *t'tah* tah tah *poom* poom—

"—about a bloke who can never quite make it. Uh:

"There's a beer joint
By the pool hall

For to pass some pleasant hours.

“There’s a hook shop
Above the pool hall
Where my sister makes her living.

“She’s a good sport;
I can spring her
For a fin or even a sawbuck

When not holding, Or the horses
Have been running rather slowly—

“Like that, folks. But more of it.”

“Lazarus,” said Ira, “you have been humming or singing that song every, day you’ve been up here. All of it. A dozen verses or more.”

“Really, Ira? I do hum and sing; I know that. But I don’t hear it myself.’ It’s like the purring of a cat; it just means that I’m functioning okay, board all green, operating at normal cruising. It means that I feel secure, relaxed, and happy— and, come to think of it, I do.

“But ‘The Born Loser’ doesn’t have a mere dozen verses, it has hundreds. What I sang was only a snatch of what Noisy used to sing. He was always fiddling with a song, changing it, adding to it. I don’t think this one started out as his; I seem to remember a song about a character whose overcoat was usually in hock clear back when I was very young and raising my first family, on Earth.

“But that song belonged to Noisy when he got through filing off serial numbers and changing the body lines. I heard it again, oh, must have been twenty, twenty-five years later, in a cabaret in Luna City. From Noisy. But he had changed it. Fixed up the scansion, given it a proper rhyme scheme, dolled up the tune. But the tune was still recognizable—in a minor key, wistful rather than sad, and the words were still about this third-rate grifter whose topcoat was always in hock and who sponged off his sister.

“And he had changed, too. A shiny new instrument, a tailored spaceman’s uniform, gray hair at the temples—and star billing. I paid a waiter to tell him that ‘Happy’ Daze was in the audience-not my name then, but the only name Noisy had for me—and after his first group he came over and let me buy him a drink while we swapped lies and talked about our happy days at dear old Hormone Hall.

“I didn’t mention to him that he had left us rather abruptly and that the girls had gone into a decline over it, worrying that he might be dead in a ditch—didn’t mention it because he did not. But I had had to investigate his disappearance because my staff was so demoralized by it that the place felt like a morgue—no way for a parlor house to be. I was able to establish that he had gone aboard the 'Gyrfalcon' when she was about to lift for Luna City and had not left her—so I told the girls that Noisy had had a sudden opportunity to go home again but had left a message with the port captain for each of them—then added more lies to personalize the goodbye he hadn't made. It perked them up and lifted the gloom. They still missed him, but they all understood that grabbing a ride home was not something he could postpone-and since he had 'remembered' to send a message to each of them, they felt appreciated.

"But it turned out that he *did* remember them, mentioned each by name. Minerva dear, here is a difference between a blinded flesh-and-blood and one who has never been able to see. Noisy could see a rainbow any time he cared to, by memory. He never stopped 'seeing,' but what he 'saw' was always beauty. I had realized that, some, back when we were on Mars together, for—don't laugh—he thought I was as pretty as you are, Galahad. Told me that he could tell what I looked like from my voice, and described me to me. I had the grace to say that he flattered me but let it lie when he answered that I was too modest—even though I'm not handsome now and wasn't then and modesty has never been one of my vices.

"But Noisy thought all the girls were beautiful, too—and in one case this may have been true and certainly several of them were pretty.

"But he asked me what had become of Olga and added, 'Golly, what a little beauty she was!'

"Kinfolk, Olga wasn't even homely, she was ugly. Face like a mud pie, figure like a gunnysack—only on an outpost like Mars could she get by. What she did have was, a warm and gentle voice and a sweet personality—which was enough, as a customer might pick her through Hobson's choice on a busy night, but once he had done so, he picked her some later time on purpose. Mean to say, dears; beauty will lure a man into bed, but it won't bring him back a second time, unless he's awfully young or very stupid."

"What does bring him back a second time, Grandfather?" asked Hamadryad. "Technique? Muscular control?"

"Have you had any complaints, dear?"

"Well…no."

"Then you know the answer and are truing with me. Neither of those. It's the ability to make a man happy, principally by being happy about it yourself—a spiritual quality rather than a physical one. Olga had it in gobs.

"I told Noisy that Olga had married shortly after he left, happily so, and had three children last I had heard…which was an utter lie, as she had been killed accidentally and the girls bawled about it and I didn't feel good myself and we had shut the place down for four days. But I couldn't tell Noisy that; Olga had been one of the first to mother him, had helped bathe him and had stolen some of my clothes for him while I slept.

"But they all mothered him and never fought over him. I have not deviated from our subject in this rambling account of Noisy; we're still defining 'love.' Anybody want to take whack at it now?"

Galahad said, "Noisy loved every one of them. That's what you've been saying."

"No, Son, he didn't love *any* of them. Fond of them, yes— but he left them without looking back."

"Then you are saying that *they* loved *him."*

"Correct. Once you figure out the difference between what he felt toward them and what they felt toward him, we're almost home."

"Mother love," said Ira, and added gruffly, "Lazarus, are you trying to tell us that 'mother love' is the only love there is? Man, you're out of your mind!"

"Probably. But not that far out. I said they mothered him; I did not say a word about 'mother love.' "

"Uh…he bedded all of them?"

"Wouldn't be surprised, Ira. I never tried to find out. Irrelevant in any case."

Hamadryad said to her father, "Ira, 'mother love' can't be what we're trying to define; it is often only a sense of duty. Two of my brats I was tempted to drown, as you may have guessed seeing what little demons they were."

"Daughter, all your offspring were charming children."

"Oh, fuff. One has to give a baby mothering no matter what, or it will grow up to be a still worse monster. What did you think of my son Gordon as a baby?"

"A delightful child."

"Really? I'll tell him that—if I ever have a male child I name 'Gordon.' Sorry, old darling, I shouldn't have trapped you. Lazarus, Ira is a perfect grandfather, one who never forgets a birthday. But I've suspected that Minerva kept track of such things for him and now I know it. Right, Minerva?"

Minerva did not answer. Lazarus said, "She's not working for *you,* Hamadryad."

Ira said sharply, "Of course Minerva keeps track of such things for me! Minerva, how many grandchildren do I have?"

"One hundred and twenty-seven, Ira, counting the boy child to be born next week."

"How many great-grandchildren? And who is having the boy?"

"Four hundred and three, sir. Your son Gordon's current wife Marian."

"Keep me posted on it. That was the baby Gordon I was thinking of, Miss Smarty; Gordon's son Gordon…uh, by Evelyn Hedrick, I think. Lazarus, I deceived you. The truth is that I am migrating because my descendants are crowding me off this globe."

"Father, are you really going to? Not just talking?"

"Still top Secret until after the decennial Trustees Meeting, dear. But I am. Want to come along? Galahad and Ishtar have decided to go; they'll set up a rejuve shop for the colony. You'll have five to ten years in which to learn something useful."

"Grandfather, are *you* going?"

"Unlikely to the nth degree, my dear. I've seen a colony."

"You may change your mind." Hamadryad stood up, faced Lazarus. "I propose to you, in the presence of three witnesses—four; Minerva is the best possible witness—a contract for cohabitation and progeny, term to be selected by you." Ishtar looked startled, then wiped all expression from her face; the others said nothing.

Lazarus answered, "Granddaughter, if I weren't so old and tired, I would spank you."

"Lazarus, I am your granddaughter only by courtesy; you are less than eight percent of my total ancestry. Less than that in terms of dominant genes, with a vanishingly small probability of, unfavorable reinforcement; the bad recessives have been weeded. I'll send my genetic pattern over for your inspection."

"That's not the point, dear."

"Lazarus, I'm certain you've married your descendants in the past; is there some reason to discriminate against *me?* If you'll tell me, perhaps I can correct it. I must add that this submittal is not contingent on your migrating." Hamadryad added, "Or it could be for progeny only, although I would be proud and happy to be permitted to live with you."

"Why, Hamadryad?"

She hesitated. "I am at loss to answer, sir. I had thought that I could say, 'I love you'—but apparently I do not know what that word means. So I have no word in either language to describe my need… and went ahead without one."

Lazarus said gently, "I love you, dear—"

Hamadryad's face lit up.

He continued: "—and for that very reason I must refuse you." Lazarus looked around him. "I love all of you. Ishtar, Galahad…even that ugly, surly father of yours, dear, sitting there and looking worried. Now smile, dear, for I'm certain that there are endless young bucks anxious to marry you. You smile, too, Ishtar—but not you, Ira;

it would crack your face. Ishtar, who is relieving you and Galahad? No, I don't care who is scheduled. May I be alone the rest of today?"

She hesitated. "Grandfather, may I keep the observation station manned?"

"You will anyhow. But will you limit them to dials and gauges or whatever it is you use? No eye or ear on me? Minerva will tell you if I misbehave—I'm certain of that."

"There will be neither eye nor ear on you, sir." Ishtar stood up. "Come along, Galahad. Hamadryad?"

"Just a moment, Ish. Lazarus—have I offended you?"

"What? Not at all, my dear."

"I thought you were angry with me over…what I proposed."

"Oh, nonsense. Hamadarling, that sort of proposal never offends anyone; it is the highest compliment one human can pay another. But it did confuse me. Now smile and kiss me goodnight, then come see me tomorrow if you wish. All you kids kiss me goodnight; there's nobody sore at anybody. Ira, you might stick around a bit if you will."

Like docile children they did so, then went into Lazarus' penthouse and took transport down. Lazarus said, "A drink, Ira?"

"Only if you are having one."

"We'll skip it then. Ira, did you put her up to it?'

"Eh?"

"You know what I mean. Hamadryad. First Ishtar, now Hamadryad. You've manipulated this whole deal from the moment you snatched me out of that flophouse, where I was dying decently and quietly. Have you again been trying to tie me down to whatever scheme you have in the back of your mind by waving pretty tails under my nose? It won't work, man."

The Chairman Pro Tem answered quietly, "I could deny that—and for the hundredth time have you call me a liar. I suggest that you ask Minerva."

"I wonder if that would be any assurance. Minerva!"

"Yes, Lazarus?"

"Did he rig this? With either of the girls?"

"Not to my knowledge, Lazarus."

"Is that an evasion, dear?"

"Lazarus, I cannot lie to you."

"Well…I think you could if Ira wanted you to, but there is no point in my inquiring into it. Give us privacy for a few moments, dear—recording mode only."

"Yes, Lazarus."

Lazarus went on, "Ira, I wish you had answered Yes. Because the only other explanation is one I d not like. I ain't pretty and my manners are not such as to endear me to women—so what do we have left? The fact that I am the oldest man alive. Women sell themselves for odd reasons and not always for money. Ira, I do not choose to stand at stud for pretty young things who would not waste a moment on me save for the prestige of having a child by, quote, The Senior, end of quote." He glared. "Right?"

"Lazarus, you are being unjust to both women. As well as unusually obtuse."

"How?"

"I've watched them. I think they both love you—and don't give me any doubletalk about what that verb means; I am not Galahad."

"But— Oh, crap!"

"I won't argue on that basis; 'crap' is a subject in which you are the Galaxy's top authority. Women do not *always* sell themselves and they *do* fall in love…often for the oddest reasons—if 'reason' is a word that can apply. Granted that you are ugly, selfish, self-centered, surly—"

"I'm aware of it!"

"—to me. Nevertheless women don't seem to care much how a man looks…and you are surprisingly gentle with women. I've noticed. You say those little whores on Mars all loved that blind man."

"Some of them weren't little. Big Anna was taller than I am and weighed more."

"Don't try to change the subject. *Why* did they love him? Don't bother to answer; why a woman loves a man—or a man loves a woman—can be rationalized only in survival terms, and the answer has no flavor, unsatisfying. But— Lazarus, when you've completed rejuvenation and you and I have finished our Scheherazade bet, however we finish it—are you going away again?"

Lazarus brooded before answering: "I suppose so. Ira, this cottage and garden and stream—that you've lent me are very nice; the times I've gone down to the city I've hurried back, glad to be home. But it's just a resting place; I won't stay here. When the wild goose cries, I go." Lazarus looked sad. "But I don't know where and I don't want to repeat the things I've done. Perhaps Minerva will find that new thing for me, when it's time to move on."

Ira stood up. "Lazarus, if you, weren't so stinking suspicious and mean, you would give both women the benefit of the doubt and leave them each with child to remember you by. It wouldn't cost you much effort."

"Out of the question! I do not abandon children. Or pregnant women."

"Excuses. I will adopt, in the womb, any child you sire before you leave us. Shall I have Minerva place that in permanent and bind it?"

"I can support my own kids! Always have."

"Minerva. Transfer it and bind it."

"Completed, Ira."

"Thank you, best Little Nag. Same time tomorrow, Lazarus?"

"I suppose so. Yes. Call Hamadryad, will you, and ask her to come, too?—tell her I asked you to. I don't want the kid's feelings hurt."

"Sure, Gramp."

COUNTERPOINT

IV

On the level in the Executive Palace of Mr. Weatheral's private apartments Hamadryad waited with Galahad while Ishtar left orders for the rejuvenation technicians on watch there. Then the three took transport down and across, still inside the Palace, to an apartment Ira had placed at Ishtar's disposal—a dwelling larger and more lavish than her quarters in the Rejuvenation Clinic and much more luxurious than the penthouse cottage save that it had no garden; it was intended for a Trustee or other V.I.P. guest—not that its luxury mattered much, as Ishtar and Galahad spent most of their time and took most of their meals with Lazarus, and used it mainly for sleeping.

Minerva had placed a dozen-odd lesser accommodations with Ishtar for her watch list, one of them for Galahad. He did not need it and Ishtar had Minerva reassign it to Hamadryad when she had become an unofficial part of the team caring for the Senior. Hamadryad sometimes slept in it rather than go to her country home —without telling her father, as the Chairman Pro Tem did not encourage members of his family to use Palace quarters unnecessarily. Or she sometimes stayed with Ishtar and Galahad.

This time all three went to Ishtar's apartment; they had matters to discuss. On arrival there Ishtar checked:

"Minerva?"

"Listening, Ishtar."

"Anything?"

"Lazarus and Ira are talking. Private conversation."

"Keep me advised, dear."

"Certainly, dear."

Ishtar turned back to the others. "Who wants a drink or something? Too early for dinner. Or is it? Ham?"

Galahad answered, "A bath for me, then a drink. I was all set for a dip—hot and sweaty—when Lazarus kicked us out."

"And stinky," Ishtar agreed. "I noticed it in the transport."

"A bath wouldn't hurt *you,* big arse; you were exercising as hard as I was."

"Regrettably true, my gallant knight; I Was careful to sit downwind from our elders after that last match. Ham, get us all something tall and cold while Stinky and I get clean."

"Will you two settle for Idleberry Jolts or whatever is handy? While we all bathe? I don't have the excuse of heavy exercise, but I broke out with fear stink when I put the proposal to Gramp. And *muffed* it! After all your coaching, Ish. I'm sorry!" She started to sniffle.

Ishtar put her arms around the younger woman. "There, there, dear—stop it. I don't think you muffed it."

"He refused me."

"You laid a good foundation—and shook him up, which he needed. You startled me with your timing but it will work out all right."

"He probably won't, even let me come back!"

"Yes, he will. Stop shaking. Come, dear; Galahad and I will give you a long, relaxing back rub. Stinky, fetch the fizz and join us in the shower room."

"With two women around I have to work. Okay."

When Galahad arrived with cold drinks, Ishtar had Hamadryad stretched out facedown on the massage table. Ishtar looked up and said, "Dear, before you get wet, see if there are three towel robes in the rack; I didn't check."

"Yes, ma'am; no, ma'am; right away, ma'am; will that be all, ma'am?—plenty of robes; I dialed for more this morning. Don't bruise her, you don't know your own strength. I'm going to need her, later."

"And I'm going to swap you for a dog, sweetheart, and sell the dog. Pass around those drinks, then come help, or you won't get either of us later. If ever. We're busy agreeing that all males are beasts." She continued to massage, gently, firmly, with professional skill, down Hamadryad's back while the massage table matched her appropriately down the subject's front. She let Galahad hang a drink around her neck and place its nipple in her mouth without slowing her careful fingers.

He snapped Hamadlyad's drink to the table, placed nipple in her mouth, patted her cheek, then took the other side and started to help, following Ishtar's lead. The table changed action to match four hands.

Some minutes later he let the nipple for his drink retract, and spoke. "Ish, any chance that Gramp twigged? About you two broads?"

"We're not all that broad. At least, Ham is not."

"'Broad' is a usual English idiom for a female, and you said we should talk and think in English as long as we are on this commitment."

"I simply said that Hamadryad is not very broad. Even though she's had more children than I have—and I haven't had any since rejuvenation. But it's a colorful idiom; I like it. I don't see how Lazarus could, guess that we are pregnant. Not that it would matter if he did; in my case—except just *how* I am pregnant, and he can't know that as I fudged the record on the source of the cloned cell. Ham, you haven't hinted anything to Lazarus—have you?'

Hamadryad surrendered her drink. "Of course not!"

"Minerva knows," Galahad said.

"Of course she does, I discussed it with her. But— Now you've got me wondering. Minerva?"

"Listening, Ishtar." The computer added, "Ira is leaving; Lazarus has come inside. No problems."

"Thank you, dear. Minerva, is there any possible way that Lazarus could know about Hamadryad and me? That we are pregnant, I mean, and why and how."

"He has not said so, nor has anyone mentioned it in his presence. Evaluation of pertinent data available to me makes it probable by less than one part in one thousand."

"How about Ira?"

"Less than one part in ten thousand. Ishtar, when Ira told me to supply you with service and to assign to you a restricted memory, he programmed me so that any later program will simply wipe your assigned box. Truly, there is no way for him to retrieve from your private memory file, nor can I selfprogram to get around it."

"Yes, so you assured me. But I don't know much about computers, Minerva."

Minerva chuckled. "Whereas I do. You could say that I have made a career of computers. Don't worry, dear, your secrets are safe with me. Lazarus has just told me to order a light supper for him; then he is going to bed."

"Good. Let me know what he eats and how much and when he goes to bed—then call me if he wakes. Awake and alone at night, a man is at his lowest ebb; I must be ready to move quickly. But you know that."

"I shall watch his wave patterns, Ishtar. You will have two to five minutes' warning—unless El Diablo jumps on his stomach."

"That damned cat. But being wakened that way doesn't depress him; it's his suicidal nightmares that worry me. I have about used up diversionary emergencies; I can't set fire to the penthouse a second time."

"Lazarus has not had one of his typical depression nightmares this month, Ishtar, and I know how to spot the wave sequences now; I'll be very careful."

"I know you will, dear. I wish we knew the incidents in his past from which each is derived; we might be able to wipe *them.*”

“Ish,” Galahad put in, “you go tinkering with his memory and you might lose everything Ira is after.”

“And I might save our client, too. You stick to back-rubbing, dear, and leave delicate work to Minerva and me. Anything more, Minerva?”

“No. Yes. Ira is telling me to find Hamadryad; he wants to talk to her. Will she take the call?”

“Sure!” agreed Hamadryad, rolling over. “But patch him in through you, Minerva; I won’t go to the phone, I don’t have my face on.”

“Hamadryad?”

“Yes, Ira?”

“Message for you. Be nice to an old man and show up at the cottage as usual, will you? Better yet, get there early and have breakfast with him.”

“Are you sure he wants to see me?”

“He does. He shouldn’t, after the way you embarrassed him. What possessed you, Ham? But this message is his idea, not mine. He wants to be sure he hasn’t scared you off.”

She sighed with relief. “I’m not scared off if he will let me stay. Father, I told you I would devote, as many days to this as *he* will permit. I meant it and still mean it. In fact I’ve told my manager that she can buy me out on long-term credit; that’s how serious I am.”

“So? I’m very pleased. If you do, and want to cash out, I— the government, that is—will pick up the loan from you without discounting it; I’ve assigned unlimited credit to anything relating to the Senior. Just tell Minerva.”

“Thank you, sir. I don’t expect to need it—unless Gramp gets tired of me and I see something else I want to invest in.

But the business is prosperous; I may just let Priscilla support me in style for a few years. Quite prosperous—betcha my assets exceed yours. Your private fortune, I mean.”

“Don’t be silly, my silly daughter; as a private citizen I’m almost a pauper—whereas in my official capacity I could confiscate your assets with just a word to Minerva and no one would question it.”

“Except that you never would—you’re sweet, Ira.”

“Huh?”

“You are…even if you can’t remember the names of my children. I’m feeling very gay, Papa, you’ve made me happy.”

“You haven’t called me ‘Papa’ for, oh, fifty or sixty years.”

“Because you never encourage intimacy once a child is grown. Nor do I from mine. But this assignment has made me feel closer to you. I’ll shut up, sir, and I’ll be there early tomorrow. Off?”

"One moment. I forgot to ask where you are. If you're home—"

"I'm not; I'm having a bath with Galahad and Ishtar. About to, that is; you interrupted a wonderful back rub they were giving me."

"Sorry. As you are still in the Palace, I suggest that you stay. To be here early tomorrow. Beg a bed from them Or, if that is intruding, come to my apartments; we'll find something."

"Don't fret about me, Ira. If I can't shame them into keeping me overnight, Minerva will find me a bed. Truly, Lazarus' bed is the only one I've ever found impossible to get into— maybe I need to apply for rejuve."

The Chairman Pro Tem was slow in answering. "Hamadryad…you were serious in proposing to have children by him—were you not?"

"Privacy, sir."

"Sorry. Hmm— The custom of privacy does not forbid me to say that *I* think it is a very good idea. If you tell me to, I will encourage it in any way I can."

Hamadryad looked at Ishtar and spread her hands in a gesture of "What do I do now?"—then answered: "His refusal seemed very firm, sir."

"Let me offer you a male viewpoint, my daughter. A man often refuses such a proposal when he wants to accept it—a man likes to be sure of a woman's motives and sincerity. At a later time he may accept. I don't mean that you should nag him with it; that would not work. But if you want this bide your time. You're a charming woman; I have confidence in you."

"Yes, sir. If he does give me a child, we would all be richer thereby —would we not?"

"Yes, certainly. But my motives are somewhat different. If he dies or leaves us, there is always the sperm bank and the tissue bank—neither of which he can touch because I'll cheat if necessary. But I *don't* want him to die, Hamadryad, nor do I want him to leave soon—and I am not, speaking from sentiment. The Senior is unique; I've gone to much trouble not to waste him. Your presence pleases him, your offer stimulates him…even though you feel he reacted badly. You're helping to keep him alive-and if he eventually lets you have his child, you may succeed in keeping him alive a long time. Indefinitely long."

Hamadryad wiggled with pleasure and smiled at Ishtar. "Father, you make me feel proud."

"You have always been a daughter to be proud of, dear. Although I can't claim all the credit; your mother is a most exceptional woman. Off now?"

"Off, with music playing. Good night, sir!"

Without getting up, Hamadryad grabbed both her friends around their waists and hugged them tightly. “Oh, I feel good!”

“So get down off this table, narrow broad; it’s my turn.”

“You don’t need a massage,” Ishtar said firmly; “you’ve been under no emotional strain and the hardest work you’ve done all day is to beat me two games of murder ball.”

“But I’m the spiritual type. Sensitive.”

“So you are, dear Galahad, and now you can most spiritually help her down and help me bathe her—still most spiritually.”

Galahad complied while complaining “You two ought, to bathe *me,* instead. Pretend I’m a blind music maker.” He closed his eyes and sang:

“‘There’s a *cop* a*round* the *corner*
who is sometimes not so friendly.
To a *man* whoisn’t *holding*
Or otherwise *unlucky*—

“That’s me—’unlucky’—or I wouldn’t have to work with two women in the house. What cycle, Ish?”

“‘Relaxing’ of course. Hamadear, since you let us hear that call, I assume that I can talk about it. I agree with Ira. You have Lazarus sexually stimulated whether he knows it or not, and if you can keep him that way, he won’t be depressed.”

“Is he truly that nearly recovered, Ishtar?” Hamadryad asked while raising her arms and “He looks better. But I can’t tell—his manner doesn’t change.”

“Oh, definitely. He started masturbating a month ago. Shampoo, dear?”

“He did? Really? Oh, that’s wonderful! Do I need one? Yes, I do—thanks.”

‘So it’s *well* to
Have a sister
Or even an old uncle—

“Close your eyes, Hambone baby; shampoo mix coming. A client has no privacy with Ishtar. But she didn’t tell *me;* I had to infer it from his graphs. Ish, why do I always wind up washing Ham’s back?”

“Because you tickle, sweetheart. There was no need for you to know. But a client certainly has no privacy with Minerva to help—and that’s as it should be; we need better computer service at the Clinic, I now see. Although he *does* have privacy in its true sense, as all of this is covered by the Oath. Even though you are not regular staff, Ham, I’m sure you realize that.”

"Oh, certainly! Not quite so hard, Galahad. Red-hot pincers could not make me talk other than to you two. Not even to Ira. Ishtar, do , you think I could learn to be a *real* rejuvenator?"

"If you feel a vocation for it and want to study that hard. Let it rinse now, Galahad. You have the empathy, I'm sure. What's your index?"

"They're your *friends,* boy.
Don't *neglect* them
Birthdays and Yom *Kippur*—

"Uh…'Genius-minus,' " Hamadryad admitted.

"Takes genius," Galahad said helpfully, "as well as a compulsive need to work; she's a slave driver, Hammy baby."

"'Also *Christmas* And Chanukah
A *card* or even *candy.'"*

"You're off key, dear. You're *'Genius-plus,'* Ham, slightly higher than Galahad's index. I looked it up just in case— and you did ask. I'm very pleased."

"'Off *key'?* Now you've gone too far."

"You have other virtues, my true knight; you need not be a troubadour. Hamadear, if you search your heart and really want it, you could be an associate technician by the time we migrate. If you intend to migrate. If not, the Clinic here always needs staff; a true vocation is scarce. But I'd like—terribly—to have you with us. Both of us will help you."

"Sure we will, Hammy! 'Off key' indeed! Is this colony going to be polygamous?"

"Ask Ira. Does it matter? Grab a robe and throw it around the Hamadarling, then I'll trade a quick scrub with you. I'm hungry."

"Do you want to risk it? After what you said about *my* singing? I know every spot and I'll tickle them all."

"King's Cross! I apologize! I *love* your singing, dear."

"The idiom is 'King's X,' Ish. Pax, it is. Grab robes for all of us, Hammy, that's a good girl. Long legs, while I was singing—perfectly on key—I figured out that idiom that was bothering me. It's not what Minerva thought it was; a 'hook shop' is a bordello. Which makes the Born Loser's sister a hetaera—and the last piece falls into place."

"Why, of course! No wonder she could subsidize her brother—artists always get paid more than anyone else."

Hamadryad returned with robes, laid them on the massage table. She said, "I didn't know that idiom was bothering you, Galahad. I understood it the first time I heard that song."

"I wish you had told me."

"Is it important'?"

"Only as one more clue. Ham, in analyzing a culture, its myths and folk songs and idioms and aphorisms are more basic than its formal history. You can't understand a person unless you understand her culture. 'His,' I should say, in speaking English—and that alone tells something basic about the culture in which our client grew up: the fact that a general term invariably takes the masculine form when both masculine and feminine are implied. It means either that males are dominant or that women have just emerged from lower status, but the language lag—there always is one—has not caught up with cultural change. The latter, in the barbarism Lazarus came from, as indicated by other clues."

"You can tell all that just from a rule of grammar?"

"Sometimes. Hammy, I used to do this professionally, when I was old and grizzled and waiting for rejuvenation. It's detective work and no one clue is ever enough. For, example, women must not have reached equal status even though other clues show them gaining it—for whoever heard of a bordello managed by a *man?* A guard in one, yes, and Lazarus said that he was that, too. But *manager?* Preposterous, by modern standards. Unless that colony on Mars was an atypical retrogression—it may have been, I don't know."

"Continue it as we eat, kids; Mama is hungry."

"Coming, Ish dear. Galahad, I understood that idiom without thinking about it. You see, my mother was—still is—a hetaera."

"Really? There's a wild coincidence. So was mine, and so was Ishtar's—and we three wind up all in rejuvenation work and on the same client. Two numerically small professions— I wonder what the odds are against it?"

"Not too high, as both professions require strong empathy. But if you want to know, ask Minerva," advised Ishtar, "and hand me that robe. I don't like blowdry and I don't want to get chilled while rustling food. Hamasweet, why didn't you follow your mother's profession? With your beauty you would be a star."

Hamadryad shrugged. "Oh, I know what I look like. But Mother can snatch a man away from me just by lifting her little finger—except that I avoid the chance. Beauty has little to do with it—you saw a man turn me down just today. Lazarus' himself told us what it takes to make a great artist—a spiritual quality a man can *feel.* My mother has it. I don't."

"I follow your reasoning," Ishtar said as they went through her lounge into the buttery. There she screened the menu offered by the kitchen down below. "My mother has it, too. Not especially pretty, but what she has, men want. Still want, although she's retired."

"Long Legs," Galahad said soberly, "you do all right. You've got it too."

"Thank you, my knight, but that's not true. I sometimes have it for one man. Or two at most. And sometimes not at all, as I can get buried in our profession and forget about sex. I told you how many years I had been celibate, I wouldn't have found *you,* dear, would never have risked 'Seven Hours'—had not our client had me so terribly emotional. Quite unprofessionally, Hamadryad; I was as silly as a schoolgirl on a warm spring night. But, Galahad, Tamara—my mother— has it all the time and for anyone who needs her. Tamara never set a price, she didn't need to; they showered gifts on her. She's retired now and considering whether to rejuvenate again. But her fans won't leave her alone; she still gets endless offers."

Galahad said sorrowfully, "That's what I would like to be. But I'm that 'Born Loser.' If a man tried that profession, he'd kill himself in a month."

"In your case, dear Galahad, it might take a little longer. But eat and restore your strength; we're going to put you in the middle of the bed tonight."

"Does that mean I'm invited?" asked Hamadryad.

"That's one way of putting it. A more accurate statement would be that I'm inviting myself. Galahad made it clear in the shower that his plans for the night include you, dear. But he didn't mention me."

"Oh, he did, too! Anyhow he's horny about you all the time; I can feel it."

"He's horny—end of message and off. Will steaks and random garnish do, or do you each wish to choose? I don't feel imaginative."

"Suits me. Ish, you should put Galahad under contract. While he's groggy."

"Privacy, dear."

"Sorry. I just blurted it out. Because I'm so fond of you both."

"Big-arsed bitch won't marry me," said Galahad. "And me so good and pure and modest. Claims I tickle, Will you marry me, little Hamadear?"

"What? Galahad, you're the world's worst tease. You not only don't want me to; you know I'm committed to the Senior even though he refused me. Until Ish tells me to drop it. If she does."

Ishtar finished ordering, wiped the screen. "Galahad, don't tease our baby. I want both Hamadryad and me to be free of other contracts as long as either of us has any chance of getting our client interested in cohabitation, or progeny, or both. Not just a lark but something he can take seriously."

"So? Then why in the name of all the fertility gods did you arrange to have *both* of you pregnant at once? I don't get it. I hear the whir, but the figures won't add."

"Because, my stupid darling, I didn't dare wait. The Director may come back any time."

"But why *you* two? With maybe ten thousand healthy hostmothers registered and available? And why *two?"*

"Dearest man, I'm sorry I said you were stupid—you aren't; you're just male. Hamadryad and I know exactly what risks we are taking and why. We don't look pregnant and won't for weeks yet, and if either of us can jockey Lazarus into a contract, an abortion takes ten minutes. Professional hostmothers won't do for this job; it has to be bellies over which I have some control and women I trust utterly. Bad enough that I had to trust a gene surgeon and risk a proscribed procedure—Ira may have to get me out of that if anything slips.

"But you know' as well as I do, sweet Galahad, that even an ordinary clone sometimes, goes wild. I wish I had *four* female bellies I could use, not two. Eight. Sixteen! Increase the chances of getting *one* normal fetus. In another month—long before it shows—we'll know what we're carrying. If the odds fail both of us—well, I'm ready to start over again and Hamadryad is, too."

"As many times as necessary, Ishtar. I swore it."

Ishtar patted her hand. "We'll get a good one. Galahad, Lazarus is going to have his identical twin sister, I promise you—and once it is an accomplished fact, we'll hear no more talk of termination-option switches, or leaving us, or anything—at least until she's woman tall!"

"Ishtar?"

"Yes, Hamadryad?"

"If we *both* show normal fetuses a month from now—"

"Then you can abort, dear; you know that."

"No, no, no! I shan't! What's wrong with *twins?"*

Galahad blinked at her. "Don't bother to answer, Ish. Let me give you the male angle. The man who can resist raising identical twin girls hasn't been born. And his name isn't Lazarus Long. Look, dears, is there anything, anything at *all,* that can improve *both* your chances? Now?"

"No." Ishtar repeated softly, "No. We both test pregnant, that's all we can say or do now. Except pray. And I don't know how to pray."

"Then it's time we learned!"

V

Voices in the Dark

After Minerva ordered his evening meal for Lazarus, then supervised its service, the computer said, “Is there anything else, sir?”

“I guess not. Yes. Will you have dinner with me, Minerva?”

“Thank you, Lazarus. I accept.”

“Don’t thank me; *you* are doing *me* a favor, milady. I’m moody tonight. Sit down, dear, and cheer me up.”

The computer’s voice repositioned so that it appeared to come from the other side of the table where Lazarus sat, as if a flesh-and-blood were seated there. “Shall I construct an image, Lazarus?”

“Don’t put yourself to the trouble, dear.”

“It’s no trouble, Lazarus; I have ample spare capacity.”

“No, Minerva. That holo you made for me one night— perfect, realistic, moved just like a flesh-and-blood. But it wasn’t *you.* I know what you look like. Umm…lower the lights and spot enough light on my plate to let me eat. Then I’ll see you in the gloom without a holo.”

The lighting readjusted so that the room was almost dark save for a pool of light on chastely perfect tableware and napery in front of Lazarus. The contrast dazzled his eyes enough that he could not see across the table without peering—he did not peer. Minerva said, “What is my appearance, Lazarus?”

“Eh?” He stopped to think. “It fits your voice. Hmm, it’s a picture that has grown up in my mind without thinking about it, during the time we have been together. Dear, do you realize that we have been living together more intimately than husband and wife usually manage?”

“Perhaps I don’t, Lazarus, since I cannot experience being a wife. But I am happy to be close to you.”

“Being a wife doesn’t have too much to do with copulation, my dear. You’ve been a mother to my baby, Dora. Oh, I know that Ira stands first with you…but you are like that girl Olga I spoke of; you have so much to give that you can enrich more than one man. But I honor your loyalty to ha. Your love for him, dear.”

“Thank you, Lazarus. But—if I know what the word means—I love you, too. And Dora.”

“I know you do. Both. You and I have no need to worry over words; we’ll leave that to Hamadryad. Mmm, your appearance—you are tall, about as tall as Ishtar. But slender. Not skinny, just slender—strong and well muscled without being bulgy. You are not as broad in the hips as she is. But broad enough. Womanly. You’re young, but a mature young woman, not a girl. Breasts much smaller than Ishtar’s, more like Hamadryad’s. You are handsome rather than pretty, and you are rather solemn, except when one of your rare smiles lights up your face. Your hair is brown and straight, and you wear it long. But you don't fuss with it other than to keep it clean and neat. Your eyes are brown and match your hair. You usually don't wear cosmetics, but you almost always wear some sort of clothing—simple clothing; you are not a clotheshorse, dress does not interest you that much. But you go naked only with persons you fully trust—a short list.

"That's all, I guess. I haven't tried to imagine details; this is just what grew in my mind. Oh, yes!—you keep your nails, both hands and feet, short and clean. But you aren't fussy about it, or about anything. Neither dirt nor sweat bothers you, and you don't flinch at blood, even though you don't like it."

"I am very pleased to know how I look, Lazarus."

"Huh? Oh, fiddle, girl—that's my imagination living its own life."

"That is how I look," Minerva said firmly, "and I like it.

"All right. Although you can be as dazzingly beautiful as Hamadryad if you want to be."

"No, I look just as you described me. I am a 'Martha,' Lazarus, not her sister Mary."

Lazarus said, "You surprised me. Yes, you are. You ye read the Bible?"

"I have read everything in the Great Library. In one sense I *am* the Library, Lazarus."

"Mmm, yes, should've realized it. How is the twinning process coming along? Going to be ready? Say if ha gets a burr under his saddle and takes off in a hurry."

"It is essentially complete, Lazarus. All my permanents, programs and memories and logics, are twinned in Dora s number-four hold, and I run routine checks and exercise by running the twinned parts parallel with the me here under the Palace—a 'Tell me six times' instead of my normal 'Tell me three times' method. I have found and corrected some open circuits that way—minor factory defects, nothing I could not handle at once. You see, Lazarus, I treated it as a crash program and did not depend on Turing processes to build most of my new me,, as I would have had to build extensionals in Dora for that sole purpose, then remove them save for maintenance extensionals.

"That would have taken much time, of course, since I can't use computer speeds in manipulating mass. So instead I ordered all new blank memories and logic circuitry and had them installed in Dora by factory technicians. Much faster. Then I filled them and checked them."

"Any trouble, dear?"

"No, Lazarus. Oh, Dora grumbled about dirty feet in her clean compartments. But it was just grumbling, as they worked 'clean-room' style, lint-free coveralls and masks and gloves, and I required them to change in the air lock, not just before they entered her number-four." He felt her quick smile. "Temporary sanitary facilities outside the ship —which caused the project engineer to grumble, as well as the shop steward."

"Should think so. Wouldn't have hurt Dora to activate a head."

"Lazarus, as you pointed out, I will be—I hope—a passenger in Dora someday. So I have tried to become her friend—and we are friends, and I love her, and she is the only friend I have who is a computer. I don't want to jeopardize that by making a mess, or permitting one to be made, in my moving into her ship. She is, as you said, a neat housekeeper; I am trying to be just as neat and show thereby that I respect her and appreciate the privilege of being a passenger in her. The engineer in charge and that talky shop steward had no reason to grumble; I specified all this in the contract—change clothes at the lock, leg urinals for all personnel inside, no eating, expectorating, or smoking in the ship, go by the shortest route to number-four, no snooping elsewhere in the ship—which they could not, anyhow, as I asked Dora to keep all doors locked save that direct route—and I paid to have it done this way."

"A pretty penny, I'm certain. Did Ira comment?"

"Ira does not bother with such matters. But I did not report costs to him; I charged it all to you, Lazarus."

"Whee' Am I bankrupt?"

"No, sir; I paid it from the Senior's unlimited drawing account. That seemed best to me, Lazarus, as the work was done in your ship. Perhaps they wonder why the Senior wants a second computer, of high capacity, installed in his ship. I know the project engineer wondered; *I* snubbed him firmly. But wonder is all they can do; the Senior is not accountable to anyone. I hinted quite broadly that Mr. Chairman Pro Tem would be annoyed if anyone attempted to snoop into your affairs. Not that anyone can tell what a computer really is, just from looking at it—even the manufacturer."

"This manufacturer— Low bidder?"

"Should I have placed it for bid, sir?" Minerva sounded worried.

"Hell, no! If you had, I would have told you to tear it out and start over—then we would have hunted for the best supplier. Minerva my dear, once you leave here, it may be many years before you have any factory service; you'll have to maintain yourself. Unless Ira can minister to a sick computer?"

"He can't."

"You see? Dora is gold and platinum where a cheaper computer is copper and aluminum. I hope your new carcass is just as expensive."

"It is, Lazarus. My new me is even more reliable than my old me—

and smaller and faster, as much of me—'old me'— is about a century old; the art has improved."

"Hm. Must see what ought to be replaced in Dora, if anything."

Minerva made no comment. Lazarus said, "My dear, when you don't talk, it is louder than when you do. Have you been overhauling Dora?"

"I stockpiled some components, Lazarus. But Dora won't let herself be touched unless *you* order it."

"Yeah, she hates to let a doctor poke around inside her. But if she needs it, she'll get it—under anesthesia. Minerva, it would be smart, with two of you in the ship, for Dora to carry your maintenance instructions in her permanents, and hers in yours—so that you can nurse each other."

Minerva answered simply, "We have been waiting for you to tell us to do so, Lazarus."

"You mean *you* have been waiting; it is not something Dora would think of. So now I'm telling you both, and let her hear my voice say so. Minerva, I wish you would get over being so humble with me. *You* should have proposed it; you think faster than I do by many orders of magnitude; I've got flesh-and-blood limitations. How are you coming on astrogation? Is she teaching you to pilot? Or balking?"

"Lazarus, I am now as skillful a pilot as she is, in my other me."

"Like fun. You're a copilot. You're not a pilot until you've made an n-space jump unassisted. Even Dora gets jumpy before a jump—and she's made hundreds."

"I stand corrected, Lazarus. I am a very highly trained copilot. But I'm not afraid to do it, if the time comes. I've rerun all of Dora's jumps in real time, and she tells me I know how."

"You may have to someday, if disaster hits. Ira isn't the pilot I am, I'm certain. With me no longer aboard, your new skill may save his life sometime. What else do you know? Heard any good ones lately?"

"I don't know, Lazarus. I've heard some stories, bawdy ones I believe, from listening to the technicians installing my twin. But I don't know that they are funny."

"Don't bother. If it's a bawdy story, I heard one like it at least a thousand years back. Now the key question— How fast can you cut loose if ha decides to jump? Assume a coup d'etat and he's running for his life."

"One-fifth of a second, minus."

"Huh? You're not pulling my leg? I mean how long to put your whole personality aboard the 'Dora.' Not leave anything behind and not leave the computer here aware that she ever was Minerva—for anything less would not be fair to yourself, dear. The 'Minerva' left behind would grieve."

"Lazarus, I am speaking not from theory but from experience, as I knew it was the critical aspect of this twinning. So, once I dismissed the contractor and had twinned my permanents and logics and my running temporaries, I experimented, cautiously at first; I simply paralleled me, as I described to you. That's easy, I just have to balance the lag at each end, to stay synchronous in real time—but I have to do that with my remote extensionals at all times; I'm used to it.

"Then I tried, very cautiously, suppressing myself, first at the ship end, then at the Palace end, with a selfprogram to revert to full twinning in three seconds. No trouble, Lazarus, not even the first time. Now I can do it in less than two hundred milliseconds and run all checks to be certain that I have neglected nothing. I have done so seven times since you asked that question. Did you notice a lag in my voice at times? Approximately a thousand-kilometer lag?"

"What? My dear, I am not equipped to notice a lag of less than thirty thousand kilometers at speed 'c.' " He added, "Call it a tenth of a second. You flatter me." Lazarus added thoughtfully, "But a tenth of a second is a hundred million of the nanoseconds you use. Or a hundred milliseconds. What's that in your time? About a thousand of my days?'

"Lazarus, that is not how I would express it. I split much smaller than a nanosecond in many things I do—a 'millishake' or less. But I'm just as comfortable in your time; I am right now with my personal me. I could not enjoy singing, or this quiet talk with you, if in my personal mode I were forced to consider each nanosecond. Do you count each of your heartbeats?'

"No. Or rarely."

"It is somewhat the same with me, Lazarus. The things I do quickly I do with no effort and with no conscious attention other than necessary selfprogram. But the seconds and minutes and hours I spend with you, in personal mode, I savor. I do not chop thorn into nanoseconds; I grasp them whole and enjoy them. All the days and weeks you have been here I hold as a single 'now' and cherish it."

"Uh…hold it, dear! Are you saying that, well, the day Ira introduced us to each other is still *'now'* to you?"

"Yes, Lazarus."

"Let me sort this out. Is tomorrow 'now' to you also?"

"Yes, Lazarus."

"Uh…but if that is so, you can predict the future."

"No, Lazarus."

"But— Then I don't understand it."

"I could print out the equations, Lazarus, but such equations would merely describe the fact that I am constructed to treat time as one of many dimensions, with entropy but one operator and with 'the present' or 'now' a variable held in steady state for a wide or narrow span. But in dealing with *you* I must necessarily move with the wave front that is *your* personal now—or we cannot communicate."

"My dear, I'm not sure we *are* communicating."

"I am sorry, Lazarus. I have *my* limitations, too. But were I able to choose, I would choose *your* limitations. Human. Flesh-and-blood."

"Minerva, you don't know what you are saying. A flesh-and-blood body can be a burden . . especially when its maintenance begins to occupy most of one's attention. You have the best of both worlds—designed in man's own image to do what makes him distinctively human—but better, faster— *much* faster!—and more accurately, than he can do it—without the aches and pains and inefficiencies of a body that must eat and sleep and make mistakes. Believe me."

"Lazarus, what is 'Eros'?"

He looked into the gloom and saw in his mind's eye how solemnly and sorrowfully she stared back. "Good God, girl—do you want to go to bed with him that badly?"

"Lazarus, I do not *know.* I am a 'blind man.' How *can* I know?"

Lazarus sighed. "I'm sorry, dear. Then you know why I have kept Dora a baby."

"Only as conjecture, Lazarus. One that I have not and will not discuss with anyone."

"Thank you—you are a lady, dear. You do know. Or you know part of my reason. But I'll tell you all of it—when I feel up to it—and then you will know what I mean by 'love' and why I told Hamadryad it must be experienced, not defined in words…and why I *know* that you know what love is, because you have experienced it. But Dora's story is not for Ira, just for you. No, you can let Ira have it, after I'm gone. Uh, call it 'The Tale of the Adopted Daughter'; then place a hold on it and let him have it later. But I won't tell it now; I'm not strong enough tonight—ask me when you know I'm feeling up to it."

"I shall. I'm sorry, Lazarus."

"Sorry'? Minerva, my very dear, there is *never* anything to feel sorry about with love. *Never.* Would you rather not love me? Or Dora? Or never have learned of love through loving Ira?"

"No. No, not that! But would that I knew 'Eros,' too."

"Count your blessings, dear. 'Eros' can hurt."

"Lazarus, I do not fear being hurt. But while I know much about male-female reproduction, far more than any single human flesh-and-blood knows—"

"You do? Or think you do?"

"I do know, Lazarus. In preparation for migrating I added extra additional memory storage—filling much of hold number-two——so that I could transcribe for Ishtar into my new me all the research files and library and restricted records of the Howard Rejuvenation Clinic —”

“Whew! I think Ishtar took a chance. The Clinic seems pretty cagey about what they release and don’t release.”

“Ishtar is not afraid to take chances. But she did ask me to hurry, so I placed it in temporary here, until I could set up the necessary capacity—large—in Dora’s hold. But I asked Ishtar’s permission to study it, and she said it was all right for me to do so, as long as I did not release anything keyed as confidential or secret without consulting her.

“I found it fascinating, Lazarus. I now know all about sex in the sense that a man who has always been blind can be taught the physics of a rainbow. I am even a gene surgeon now, in theory, and would not hesitate to be one in practice once I had time to construct the ultramicrominiature waldoes needed for such fine work. I am equally expert as obstetrician and gynecologist and rejuvenator. Erectile reflexes and mechanics of orgasm and the processes of spermogenesis and impregnation are no mystery to me, nor any aspect of gestation and birth.

“‘Eros alone I cannot know…and know at last that I am blind.”

VARIATIONS ON A THEME

VI

The Tale of the Twins Who Weren’t

(Omitted)

—but sky merchant was then my usual occupation, Minerva. That caper in which I moved from slave to high priest was forced on me. I had to be meek a long time, which ain’t my style. Maybe Jesus was right when he said that the meek shall inherit the earth—but they inherit very small plots, about six feet by three.

But the only route from field hand to freedom lay through the church -and required meekness all the way, so that’s what I gave ‘em. Those priests had weird habits— (9,300 words omitted)

—which got me off their damned planet and I never expected to go back.

—did go back a couple of centuries later—freshly rejuvenated and not looking anything like that high priest whose ship had been lost in space.

I was a sky merchant again, which suits me; it lets you travel and see things. I went back to Blessed for money, not revenge. I’ve never wasted skull sweat on revenge; The Comtede-Monte-Cristo syndrome is too much work and not enough fun. If I tangle with a man and he lives through it, I don't come back later gunning for him. Instead, I outlive him— which balances the books just as well. I figured that two centuries was enough for my enemies on Blessed to be dead, since I had left most of them sort of dead earlier.

Blessed would not have been on my route other than for business reasons. Interstellar trade is economics stripped to basics. You can't make money by making money because money isn't money other than on its planet of issue. Most money is fiat; a ship's cargo of the stuff is wastepaper elsewhere. Bank credit is worth even less; Galactic distances are too great. Even money that jingles must be thought of as *trade goods—not* money—or you'll kid yourself into starvation.

This gives the sky merchant a grasp of economics rarely achieved by bankers or professors. He is engaged in barter and no nonsense. He pays taxes he can't evade and doesn't care whether they are called "excise" or "king's pence" or "squeeze" or straight-out bribes. It is the other kid's bat and ball and backyard, so you play by his rules—nothing to get in a sweat about. Respect for laws is a pragmatic matter. Women know this instinctively; that's why they are all smugglers. Men often believe—or pretend—that the "Law" is something sacred, or at least a science—an unfounded assumption very convenient to governments.

I've done little smuggling; it's risky, and you can wind up with money you don't dare spend where it's legal tender. I simply tried to avoid places where the squeeze was too high.

By the Law of Supply and Demand a thing has value from *where* it is as much as from *what* it is—and that's what a merchant does; he moves things from where they are cheap to where they are worth more. A smelly nuisance in a stable is valuable fertilizer if you move it to the south forty. Pebbles on one planet can be precious gems on another. The art in selecting cargo lies in knowing where things will be worth more, and the merchant who can guess right can reap the wealth of Midas in one trip. Or guess wrong and go broke.

I was on Blessed because I had been on Landfall and wanted to go to Valhalla in order to go back to Landfall, as I was thinking of marrying and raising another family. But I wanted to be rich enough to be landed gentry when I settled down—which I was not, at the time. All I had was the scout ship Libby and I had used (Sequence of events cannot be reconciled. Perhaps a similar ship?J.F. 45th) and a modicum of local money.

So it was time to trade.

The trade routes for a two-way swap show minimum profit; they fill up too quickly. But a triangular trade-or higher numbers—can show high profits. Like this: Landfall had something—call it cheese—which was a luxury on Blessed— while Blessed produced—call it chalk—much in demand on Valhalla whereas Valhalla manufactured doohickeys that Landfall needed.

Work this in the right direction and get rich; work it backwards and lose your shirt.

I had worked the first leg, Landfall to Blessed, successfully having sold my cargo of— Now what was it? Durned if I remember; I've handled so many things. Anyhow, I got such a nice price that I temporarily had too much money.

How much is "too much"? Whatever you can't spend before you leave a place you are not coming back to. If you hang onto that excess and come back later, you will usually find—invariably, so far as I recall—that inflation or war or taxes or changes in government or something has wiped out the alleged value of fiat money you may have kept.

As my ship was scheduled to load and I had placed in escrow with the port authority the price of her cargo, what I had left over was burning a hole in my pocket with only a day to get rid of it, that being the time until my ship was to be loaded—I had to be on hand for that; I was my own purser and have an untrusting disposition.

So I took a walk through the retail district, thinking I might buy some doodads.

I was dressed in local high style and had a bodyguard behind me, for Blessed was still a slave economy and in a pyramidal society it is well to be up near the point, or at least look like it. My bodyguard was a slave but not my slave; I had hired him from a rent-a-servant agency. I'm not a hypocrite; this slave didn't have a durn thing to do but follow me around and eat like a hog.

I had him because my assumed status required a manservant in sight. A "gentleman" could not register at a first-class hilton in Charity or anywhere on Blessed without a valet in evidence; I could not eat in a good restaurant without my own bearer standing behind me—and so forth; when in Rome, you shoot Roman candles. I've been places where it was mandatory to sleep with your hostess—which can be dreadful; this Blessed custom wasn't difficult.

I didn't rely on him even though the agency supplied him with a knob stick. I was armed six ways and careful where I walked; Blessed was more dangerous than it had been when I was a slave there and a "gentleman" is more of a target, even though cops don't bother him.

I was taking a shortcut through the slave market, it not being an auction day, on my way to the jewelers' lane, when I saw that a sale was being offered and slowed down—a man who has been sold himself can't walk past, indifferent to the plight of chattels. Not that I had any intention of buying.

Nor did anyone seem about to buy this pair; the knot around the factor’s tent was rabble; I could tell by their clothes and the fact that there wasn’t a man there with a manservant.

The merchandise was standing on a table, a young woman and a young man. Late adolescence for him and just ripe for her, or the same age in view of the fact that females grow up faster. Call it eighteen measured by my own youth—an age at which a boy should be nailed into a barrel and fed through the bunghole but a girl is ready to marry.

Long sleeveless robes hung from their shoulders—and I knew too well what those robes meant; they would be displayed only to a prospective buyer, not to rabble. Robes signified valuable slaves, not to be knocked down on open bid.

Sure enough, they were being held at Dutch auction, with the minimum bid posted—ten thousand blessings. That amounts to— How can I define money of centuries back on a planet hundreds of lightyears away in terms that make sense here and now? Let’s put it this way: Unless these kids were something extraordinary, they were overpriced by a factor of five, as prime young stock, either sex, were fetching around a thousand blessings by the morning’s financial news.

Ever pause in front of a clothing store and get hooked inside? No, of course you haven’t. But that’s what happened to me.

All I did was say to the factor, “Goodman, is that posted bid a mistake? Or do these two have something special that doesn’t show?” Just curiosity, Minerva, as I neither intended to own slaves nor would the excess in my purse make a dent in a planetwide custom. But I could not see *why?* The girl was not outstandingly pretty; she would not fetch a high price as an odalisque. The lad wasn’t even heavily muscled. Nor were they a matched pair. Back home I would have picked her for Eyetalian and him for a Swede.

Boom, I’m urged into the tent while the chattels are shoved ahead; the factor’s manner shows that he hasn’t had a live one all day—while my shadow is saying in my ear, “Master, that price is too high. I can take you to a private sale where prices are right and satisfaction is guaranteed.”

I said, “Shut up, Faithful”—all rented body servants were named “Faithful,” probably by contraries—”I want to see what this is.”

As fast as the tent flap is fastened against the rabble, the factor is shoving a chair against my knees and handing me a drink with a bow and a scrape while saying lyrically, “Oh, sweet and gentle master, happy am I that you asked that! I am about to show you a great wonder of science! A thing to astound the very gods! I speak as a pious man, a true son of our Everlasting Church, one who cannot lie!”

A slave factor who can't lie has yet to be whelped. Meantime, the youngsters stationed themselves docilely on a display platform, and Faithful was whispering: "Don't believe a word, Master. The girl is nothing and I can whip three of that punk without my stick—yet the agency would sell you *me* for eight hundred blessings and that's a fact."

I motioned him to silence. "Goodman, what swindle is this?"

"No swindle, on my mother's honor, kind sir! Would you believe that these are brother and sister?"

I looked at them. "No."

"Would you believe that they are not only brother and sister but *twins?"*

"No."

"Would you believe the same stud, the same dam, the same womb, born the same hour?"

"Possibly the same womb," I conceded. "Hostmother?"

"No, no! *Exactly* the same ancestry. And yet—here is the miracle—" He held my eye and spoke in a hushed voice: "They are nevertheless a sound *breeding* pair…for these twins are *unrelated to each other!* Would you believe it?"

I told him what I would believe, including his losing his license and facing a charge of blasphemy.

His smile grew broader, and he complimented me on my wit and asked me how much—if he *proved* all of these things—how high a bid I would place against them? Higher than ten thousand since I must realize that the posted figure represented a prior bid. Fifteen thousand, perhaps, with escrow the morrow before noon?

I said, "Forget it, I'm shipping out before noon"—and started to stand up.

He said, "Wait, I beg you! I see that you are a gentleman of education, of science, of deep knowledge and widely traveled—surely you will grant your humble servant a moment to show *proof?"*

I still would have left; swindles bore me. But he waved a hand, and the kids dropped their robes and fell into display poses, the lad with his arms folded across his chest and his feet planted firmly, the girl in that graceful pose that must be as old as Eve—one knee slightly advanced, hand on hip, other arm hanging-easily, chest slightly raised. It almost made her beautiful save that she looked bored—having taken it hundreds of times, no doubt.

But that wasn't what made me stay; something annoyed me. The lad was bare of course—she was wearing a chastity girdle. Do you know what one is, Minerva?

"Yes, Lazarus."

Too bad. I said, "Take that damned thing off that kid! *Now!"* Silly of me; I rarely interfere with *anything* on a strange planet. But those things are abominations.

“Certainly, gentle sir; I was about to. Estrellita!”

The girl turned her back, with that same bored look. The factor stood so that his back kept the lad from seeing him work the combination lock, saying apologetically, “She must wear it not only because of ruffians but to protect her from her brother; they share the same pallet, for she is—would you believe it, sir, seeing how full ripe she is?—a *virgin!* Show the gentle master, ‘Trellita.”

Bored as ever, she promptly started to do so. I regard virginity as a correctable perversity of no interest; I motioned her to stop and asked the factor if she could cook.

He assured me that she was the envy of every gourmet chef on Blessed, and started to lock her back into that steel diaper. I said roughly, “Leave it off! Nobody here is going to rape her. What’s this proof you promised?”

Minerva, he proved every word—except about her cooking—with exhibits that made me suspicious only because *he* showed them; I wouldn’t have boggled had I seen them in the Clinic here.

I should mention that Blessed had a rejuvenation clinic even though it was not settled by the Families. Eventually the clinic was taken over by the church and antigeria techniques that work fairly well even on short-lifers were no longer available to any but big shots. But the planet stayed advanced in biological techniques; the church needed it.

Minerva, I told you that he claimed and you are now as learned in biology and genetics and associated manipulations as Ishtar is—more so; you don’t have her limitations in time and in memory storage. What did he prove to me?

“That they were diploid complements, Lazarus.”

“Right! Although he called them “mirror twins.” Can you tell me how these kids were made, Minerva? How would *you* go about producing such twins?

The computer answered thoughtfully, “‘Mirror twins would be an inexact term for zygotes satisfying the listed requirements—although it is colorful. I can answer only theoretically as the records in me do not show that it has been attempted on Secundus. But the steps necessary to achieve exact diploid complements would be these: There must be intervention in gametogenesis in each parent just before meiotic division-reduction of chromosome number—that is, one would start with primary spermatocytes and primary oocytes, unreduced diploids.

“In the male parent the intervention presents no theoretical problem but would be difficult because the cells are very small—but I would not hesitate to attempt it given time to construct the necessary fine extensionals.

"The logical place to start, both parents, would be with gonia placed in vitro, and cherished. When a spermatogonium was observed to change to a primary spermatocyte—still diploid—it would be segregated and at the instant it divided into two secondary spermatocytes—haploids, one with an X chromosome and one with a Y chromosome—they would be again segregated and each would be encouraged to develop into spermatozoa.

"It would not be sufficient to intervene at the spermatozoa stage; confusion of gamete pairs could not be avoided, and resulting zygotes could be complementary only by wildest chance.

"Intervention with the female parent is mechanically simpler because of larger ceils—but involves a different problem; the primary oocyte must be encouraged, at point of meiosis, to produce *two* haploid and complementary secondary oocytes, rather than one oocyte and one polar body. Lazarus, this might require many attempts before a reliable technique could be worked out. It would be similar to the process of identical twinning but must take place two stages earlier in the gametogenetic sequence. However, it might turn out to be no more difficult than it is to produce fatherless female rabbits. I do not venture an opinion as I lack former art to draw on—save that I feel certain that it can be done, given time to develop technique.

"At this point we have complementary groups, of spermatozoa, one group with Y and one with X, and a complementary pair of ova, each with an x chromosome. Fertilization would be in vitro, with a possibility of choosing either of two potential pairs of female-male complements but with no basis for choice unless the genetic charts of haploids are determined precisely, which is difficult and likely to cause genetic damage; I do not think it would be attempted. Instead one sperm would be inserted into one ovum, its complement into the other, on a blind basis.

"One last requirement must be met to justify *all* of this slave factor's allegations: The two fertilized ova must be removed from vitro and planted in the womb of the donor of the oogonium, and there allowed to develop as twins through natural gestation and birth.

"Am I right, Lazarus?"

Exacly right! Go to the head of the class, dear; you get a gold star on your report card. Minerva, I don't *know* that it happened that way. But that's what the factor claimed, and that's what his exhibits—lab reports, holomovies, and so forth—seemed to show. But that thief may have faked those "proofs" and offered a random pair not likely to fetch a price above average—save for his fancy sales talk. The so-called proofs looked good, and lab reports and such carried, a bishop's chop and seal. The stills and movies looked good, too—but how can a layman judge? Even if those exhibits weren't phony, all they could prove was that such a process had once taken place; they did *not* prove that *these* kids were the result. Shucks, they might have been used to sell many slave pairs, with a bishop in on the racket.

I looked over the stuff, including a scrapbook of the kids growing up, said, "Very interesting," and started to, leave.

This pimple teleported himself between me and the tent flap. "Master," he said urgently. "Kind and generous sir— twelve thousand?"

Minerva, my trader instincts took over. "One thousand!" I snapped. I don't know why. Yes, I do know. The girl's body was scarred from that damned Torquernada girdle; I wanted to insult this flesh peddler.

He flinched and looked as if he were giving birth to broken beer bottles. "You jest with me. Eleven thousand blessings, and they are yours—though I won't make expenses!"

"Fifteen hundred," I answered. I had money I couldn't spend elsewhere and told myself I could afford to manumit them rather than let that girl be bound into that damned atrocity again.

He moaned. "If they were mine, I would *give* them to you. I love these cute darlings like my own children and could ask for them, nothing better than a kind and gentle master learned in science who appreciates the wonders that have gone into their making. But the Bishop would hang me and have me cut down alive to be dragged to death by my tool. Ten thousand and take all proofs and exhibits. I'll suffer a loss for their sakes—and because I admire you so much."

I got up to fortyfive hundred and he got down to seven thousand and there we stuck, as I had to hold out cash for last-minute squeeze, whereas it felt to me that he was close to the point where he really could not sell without risking the Bishop's wrath. If there was a bishop — He turned away in a fashion that says that a dicker is over and he is through flattering you, and told the girl sharply to step back into her steel harness.

I got out my purse. Minerva, you understand money; you handle the government's finances. But possibly you don't know that *cash* money affects some people the way catnip does Diablo. I counted out fortyfive hundred blessings in big red-and-gold bills under that scoundrel's nose—and stopped. He was sweating and swallowing his Adam's apple but managed to shake his head a tenth of an inch.

So I counted more bills, very slowly, and reached five thousand—then started briskly to pick them up.

He stopped me—and I found that I had bought the only slaves I have ever owned.

He relaxed then, in a resigned way, but wanted lagniappe for the exhibits. I didn’t care one way or another but offered two hundred and fifty for the pix and tapes, take it or leave it. He took it and again started to put the girl back into her harness.

I stopped him and said, “Show me how that works,” I knew how—a cylinder-type ten-letter combination lock you could set to a new combination each time you used it. Set the combination, slide the ends of the steel strap that went around her waist through the ends of the barrel, spin the alphabet disks of the cylinder, then it stays locked until you reset whatever ten-letter combo you picked. An expensive lock and good steel in the girdle—alloy a hacksaw couldn’t touch. This was another thing that made his story convincing, as, while there was a market for virgins on that weird globe, a trained odalisque fetched about the same, and this girl wasn’t being reserved for harem stock either way. So an expensive custom-made chastity belt had to have some other reason.

With our backs to the slaves he showed me the combination: E,S,T,R,E,L,L,I,T,A—and was smug about how clever he was to pick a combination he couldn’t forget. So I fumbled on purpose, then pretended to catch on, and opened it. He was about to put it on the kid again and send us on our way. I said, “Wait a moment. I want to be sure I can work it in place. You step into it and let me get you out of it.”

He didn’t want to. So I got snotty and said he was trying to cheat me—put me in a position where I would have to send for him and pay through the nose to get my property unlocked. I demanded my money back and started to tear up the bill of sale. He gave in and stepped into the contrivance.

He could squeeze into it although the ends of the steel belt barely met; he was bigger around the waist than the girl was. I said, “Now spell that combination for me”—and leaned over the lock. As he spelled- “ESTRELLITA,” what I set was “HORSETHIEF∼” then jammed the ends together as hard as possible and spun the disks.

“Good,” I said. “It works. Now spell it again.”

He did so and I carefully spelled “ESTRELLITA.” It stayed locked. I suggested that he had had me spell it with one *i* and two t’s the first time. That didn’t work either.

He dug up a mirror and tried it himself. No go. I said it might be jammed, so suck up your gut and we’ll shake it. By now he was sweating.

Finally I said, “Tell you what, goodman—I’ll *give* you this belt. I’d rather trust a padlock anyhow. So go to a locksmith—no, you won’t want to wear this outside; just tell me where to find one and I’ll send him here, and pay him myself. Fair enough? I can’t hang around; I’ve got a dinner engagement at the Beulahland. Where are their clothes?

Faithful, gather up this junk and fetch the kids.” So I left him still blatting about telling the locksmith to *hurry.*

As we left his tent, a taxicab was cruising by. I had Faithful hail it and we all piled in. I didn’t bother with a locksmith; I had the driver head for the skyport, then stopped on the way at a slopchest and bought the kids proper clothes, a clout for him and sort of Balinese sarong for her—uh, that’s much like the dress Hamadryad wore yesterday. I think those were the first real clothes the youngsters had ever had. I couldn’t get shoes on them; I settled for sanáals—then had to drag Estrellita away from a mirror; she was admiring herself and preening. I threw away those auction robes. I shoved the kids into the taxi and said to Faithful: “See that alley? If I turn my back and you run down it, I won’t be able to chase you; I’ve got to keep an eye on these two.”

Minerva, I ran into something I’ll never understand: the slave mentality. Faithful didn’t get my meaning—and when I spelled it out, he was aghast. Hadn’t he given good service? Did I want him to *starve?* I gave up. We dropped him at the Rent-a-Servant, and got my deposit back—tipping him for good service—and my slaves and I rode on out to the skyport.

Turned out I needed that deposit and almost every blessing I had left—had to pay squeeze at outgoing customs to get the kids aboard my ship, even though the bill of sale was in order.

But I got ‘em aboard; I immediately had them kneel, put my hands on their heads and manumitted them. They did not seem to believe it, so I explained. “Look, you’re free now. *Free,* get me? No longer slaves. I’ll sign your manumission papers and you can go to the diocese office and get them registered. Or you can have dinner here and sleep aboard, and I’ll give you what blessings I can just before my ship lifts tomorrow. Or, if you *want* to, you can stay aboard and go to Valhalla, a nice planet though chillier than this one—but where there is no such thing as slavery.”

Minerva, I don’t think ‘Llita—pronounced ‘Yeetah,’ her everyday name—or her brother Joe—Josie, or José understood what I meant by a place that did not have slavery; it was foreign to anything they knew. But they knew what a starship was, from hearsay, and the prospect of *going* somewhere in one had them awestruck—they would not have missed it if I had told them they were going to be hanged on arrival. Besides, in their minds I was still their master; manumission hadn’t taken hold even though they knew what it was. Something for old and faithful retainers, that is, who stayed on at the funda where they had been all along, but maybe got paid a little.

But to travel! The farthest they had ever been in their lives was from a diocese north of there to the capital, to be sold.

A little trouble next morning— Seems that one Simon Legree, licensed dealer in slaves, had sworn a complaint against me alleging bodily harm, mental duress, and assorted mopery and dopery. So I sat the cop down in my wardroom, poured him a drink, called in Llita and had her take off her wonderful new clothes and let the cop see the scars on her hips, then told her to skedaddle. I happened to leave a hundred-blessing note on the table while I got up to fetch the bill of sale.

The cop waved away the bill of sale, saying there had been no complaint on that score—but he was going to tell Goodman Legree that he was lucky not to face a counter-charge of selling damaged goods…no, on second thought it was simpler if he just couldn't find me until after my ship lifted. The hundred blessings was gone, and soon the cop was gone—and by midafternoon, so were we.

But, Minerva, I got cheated; Llita couldn't cook worth a damn.

It is a long and complex passage from Blessed 'to Valhalla, and Shipmaster Sheffield was pleased to have company.

There was a mild contretemps the first night of the voyage caused by a misunderstanding that had started the night before, dirtside. The ship had a cabin and two staterooms. Since the Captain normally operated by himself, he used the Staterooms for casual storage or light cargo; they were not ready for passengers. So that first night dirtside he put his freedwoman into his cabin, while her brother and he slept on transom couches in the wardroom.

The following day Captain Sheffield unlocked the staterooms, switched power to them, had the young people clean them and move the clutter to a gear locker until he could see what space he had left in his holds, and told them each to take a room—and forgot it, being busy with cargo and final squeeze, then with supervising his piloting computer while they got clear of that system. It was late that "night," ship's time, before he had his ship on her first leg in n-space, and could relax.

He went to his cabin while considering whether to eat first or shower first, or possibly neither.

Estrellita was in his bed—wide awake and waiting.

He said, "Llita, what are you doing *here?"*

She told him in blunt slave lingo what she was doing in his bed—waiting for him—as she had known what would be expected of her when milord Shipmaster Sheffield had offered to take them along, and had discussed it with her brother, and Brother had told her to do it.

She added that she was not a bit afraid; she was ready and eager.

The first part of this Aaron Sheffield had to believe; the addendum seemed clearly a white lie; he had seen frightened virgins before—not often, but a few.

He dealt with her fear by ignoring it. He said, “You impudent bitch, get your arse out of my bed and into your own.” The freedwoman was startled and unbelieving, then sulky and offended—then she wept. Fear of an unknown that she had felt earlier was drowned in a worse emotion; her tiny ego was crushed by his rejection of service she *knew* she owed him—and had believed he wanted. She sobbed, and dripped tears on his pillow.

Female tears always had a strong aphrodisiac effect on Captain Sheffield; he responded to them at once—by grabbing her ankle, dragging her out of bed, hustling her out of his cabin, into her stateroom, and locking her in. Then he returned to his cabin, locked its door, took measures to calm himself, and went to sleep.

Minerva, there was ‘nothing wrong with Llita as a woman. Once I taught her to bathe properly she was quite attractive—good figure, pleasant face and manner, good teeth, and her breath was sweet. But taking her did not fit any customs. All “Eros” is custom, dear; there is never anything moral or, immoral about copulation as such, or any of its nonfunctional frills. “Eros” is simply a way of keeping human beings, individuals, each different—keeping them together and happy. It - is a survival mechanism developed through long evolution,— and its reproductive function is the least complex aspect of its very complex and pervasive role in keeping the human race going.

But any sexual act is moral or immoral by precisely the same laws of morality as any other human act; all other rules about sex are simply customs—local and transient. There are more codes of sexual customs than a dog has fleas

—and all they have in common is that they are “ordained by God.” I recall a society where copulation in private was obscene and forbidden, criminal—while in public it was “anything goes.” The society I was brought up in had the reverse of those rules—again “ordained by God.” I’m not sure which pattern was harder to follow, but I wish God wouldn’t keep changing his mind—as it is never safe to ignore such customs, and ignorance is no excuse; ignorance like to got my ass shot off several times.

In refusing Llita I was not being moral; I was following *my own* sexual customs, worked out by trial and error and many bruises over the centuries: Never bed a female dependent on me unless I am married to her or willing to marry her. This is an amoral rule of thumb, subject to change according to circumstances and not applying to females *not* dependent on me—another negotiation entirely. But this rule is a safety precaution applicable most times and places with widely varying customs—a safety measure for *me*. . . because, unlike that lady from Boston I told you about, many females tend to regard copulation as a formal proposal of contract.

I had let impulse lure me into a predicament in which Llita was temporarily my dependent; I had no intention of making matters worse by marrying her, I didn't owe her that. Minerva, long-lifers should never marry ephemerals; it is not fair to the ephemeral or to the long-lifer.

Nevertheless, once you pick up a stray cat and feed it, you cannot abandon it. Self-love forbids it. The cat's welfare becomes essential to your own peace of mind—even when it's a bloody nuisance not to break faith with the cat. Having bought these kids I could not shuck them off by manumission; I had to plan their future because *they* did not know how. They were stray cats.

Early next "morning" (by ship's routine) Captain Sheffield got up, unlocked the freedwoman's stateroom, found her asleep. He called her and told her to get up, wash quickly, then get breakfast for three. He left to wake her brother—found his stateroom empty, found him in the galley. "Good morning, Joe."

The freedman jumped. "Oh! Good morning, Master." He ducked and bent his knee.

"Joe, the correct answer is: 'Good morning, Captain.' It amounts to the same thing at present, for I am indeed master of this ship and everyone in it. But when you leave my ship on Valhalla, you will have no master of any sort. *None,* as I explained yesterday. Meanwhile, call me 'Captain.'"

Captain." The young man repeated obeisance.

"Don't bow! When you speak to me, stand tall and straight and proud, and look me in the eye. The correct answer to an order is 'Aye aye, Captain.' What are you doing there?"

"Why, I don't know—Captain."

"I don't think you do, either. That's enough coffee for a dozen people." Sheffield elbowed Joe aside, salvaged most of the coffee crystals the lad had poured into a bowl, measured enough for nine cups, made note to teach the girl how if she did not know, then have her keep coffee ready during working hours.

As he sat down with his first cup of coffee, she appeared. Her eyes were red and had circles under them; he suspected that she had wept some more that morning. But he made no comment other than a morning greeting and let her cope with the galley unassisted, she having seen what he had done the morning before.

Shortly he was recalling fondly the scratch lunch and supper—sandwiches he had made himself—of the day before. But he said nothing other than to order them to sit down and eat with him, rather than hovering over him. Breakfast was mostly coffee, cold ship's bread, tinned butter. Reconstituted accra eggs with mushrooms were an inedible mess, and she had managed to do something to heavenfruit juice. To spoil that took talent; all it needed was eight parts of cold water for each part of concentrate, and the instructions were on the container.

"Llita, can you read?"

"No, Master."

"Make that 'Captain,' instead. How about you, Joe?"

"No, Captain."

"Arithmetic? Numbers?"

"Oh, yes, Captain, I know numbers. Two and two is four, two and three makes five, and three and five is nine—"

His sister corrected him. "Seven, Josie—not nine."

"That's enough," Sheffield said. "I can see we'll be busy." He thought, while he hummed: "So it's well to…Have a sister…Or even an old captain—" He added aloud: "When you have finished breakfast, take care of your personal needs, then tidy your rooms—shipshape and neatly, I'll inspect later—and make the bed in my cabin, but don't touch anything else there, especially my desk. Then each of you take a bath. Yes, that's what I said: Bathe. Aboard ship everyone bathes every day, oftener if you wish. There is plenty of pure water; we recycle it and we'll finish the voyage with thousands of liters more than we started with. Don't ask why; that's the way it works and I'll explain later." (Several months later, at least—to youngsters unsure about three plus five.) "When you're through, say, an hour and a half from now—Joe, can you read a clock?"

Joe stared at the old-fashioned ship's clock mounted on a bulkhead. "I'm not sure, Captain. That one has too many numbers."

"Oh, yes, of course; Blessed is on another system. Try to be back here when the little hand is straight out to the left and the big hand is straight up. But this time it doesn't matter if you are late; it takes awhile to shake down. Don't neglect your baths to be on time. Joe, shampoo your head. Llita, lean toward me, dear; let me sniff your hair. Yes, you shampoo, too." (Were there hair nets aboard? If he cut the pseudogravity and let them go free-fall, they would need hair nets-or haircuts. A haircut would not hurt Joe, but his sister's long black hair was her best feature—would help her catch a husband on Valhalla. Oh, well, if there were no hair nets—he didn't think there were, as he kept his own hair free-fall short—the girl could braid her hair and tie something around it. Could he spare power to maintain an eighth gee all 'the way? People not used to free-fall got flabby, could even damage their bodies. (Don't worry about it now.) "Get our quarters tidy, get clean yourselves, come back here. Git."

He made a list: Set up a schedule of duties—N.B.: Teach them to cook!

Start school: What subjects?

Basic arithmetic, obviously—but don't bother to teach them to read that jargon spoken on Blessed; they were never going back there —never! But that jargon would have to be ship's language until he had them speaking Galacta, and they must learn to read and write in it—and English, too: Many books he would have to use for their hurry-up education were in English. Did he have tapes for the variation of Galacta spoken on Valhalla? Well, kids their age quickly picked up local accent and idiom and vocabulary.

What was far more Important was how to heal their stunted, uh, "souls." Their personalities— How could he take full-grown domestic animals and turn them into able, happy human beings, educated in every needful way and capable of competing in a free society? *Willing* to compete, undismayed by it—He was just beginning to see the size of the "stray cat" problem he had taken on. Was he going to have to keep them as pets for fifty or sixty years or whatever, until they died naturally?

Long, long before that, the boy Woodie Smith had found a half-dead fox kit in the woods, apparently lost by its mother, or perhaps the vixen was dead. He took it home, nursed it with a bottle, raised it in a cage through one winter. In the spring he took it back where he had found it, left it there in the cage with the door latched-open.

He checked a few days later, intending to salvage the cage. He found the creature cowering in the cage, half starved and horribly dehydrated—with the door still latched open. He took it home, again nursed it back to health, built a chicken-wire run for it, and never again tried to turn it loose. In the words of his grandfather, "The poor critter had never had a chance to learn how to be a fox."

Could he teach these cowed and ignorant animals how to be human?

They returned to his wardroom when "the little hand was straight out and the big hand was straight up'—they waited outside the door until this was so, and Captain Sheffield pretended not to notice.

But when they came in, he glanced at the clock and said, "Right on time-good! You've certainly shampooed, but remind me to find combs for you." (What other toilet articles did they need? Would he have to teach them how to use them? And—oh, damn it!—was there anything in the ship for a woman's menstrual needs? What could be improvised? Well, with luck that problem would hold off a few days. No point in asking her; she couldn't add. Tarnation, the ship was not equipped for passengers.)

"Sit down. No, wait a moment. Come here, dear." It seemed to the Captain that the garment she wore was clinging suspiciously; he felt it, it was wet. "Did you leave that on when you bathed?"

"No, Mas— No, Captain; I washed it."

"I see." He recalled that its gaudy pattern had been enhanced by coffee and other things while the girl was botching breakfast. "Take it off and hang it somewhere; don't let it dry on your body."

She started slowly to comply. Her chin quivered—and he recalled how she had admired herself in a tall mirror when he bought it for her. "Wait a moment, Llita. Joe, take off your breechclout. And sandals."

The lad complied at once.

"Thank you, Joe. Don't put that clout back on without washing it; by now it's dirty even though it looks clean. Don't wear it under way unless it suits you. You sit down. Llita, were you wearing anything when I bought you?"

"No…Captain."

"Am I wearing anything now?"

"No, Captain."

"There are times and places to wear clothes—and other times and places when clothes are silly. If this were a passenger ship, we would all wear clothes and I would wear a fancy uniform. But it is not, and there is nobody here but me and your brother. See that instrument there? That's a thermohumidostat which tells the ship's computer to hold the temperature at twenty-seven Celsius and forty percent humidity, with random variation to stimulate us—which may not mean anything to you but is my notion of comfort in bare skin. For an hour each afternoon it drops that temperature to encourage exercise, as flab is the curse of shipboard life.

"If that cycle doesn't suit you two, we'll reach a compromise. But first we'll try it my way. Now about that wet rag plastered to your hips— If you are stupid, you'll let it dry where it is and be uncomfortable. If you are smart, you'll hang it up and let it dry without wrinkling. That's a suggestion, not an order; if you wish, you may wear it at all times. But don't sit down with it on you, wet; there is no reason to get cushions wet. Can you sew?"

"Yes, Captain. Uh…some."

"I'll see what I can dig up. You are wearing the only woman's garment in the ship, and if you insist on clothes, you'll need to make some for the months ahead. You'll need something for Valhalla, too: it's not as warm as Blessed. Women there wear trousers and short coats; men wear trousers and long coats; everyone wears boots. I had three outfits custom-made on Landfall; maybe we can make do with them until I can get you two to a tailor. Boots— Mine would fit you like socks on a rooster. Hmm— We can wrap your feet so that a pair will stay on long enough to get you to a bootery.

“We won’t worry about that now. Join the conference— standing up and wet, or sitting down and comfortable.”

Estrellita bit her lip and decided in favor of comfort.

Minerva, those youngsters were brighter than I had expected. At first they studied because I told them to. But once they tasted the magic of the printed word, they were hooked. They learned to read like grass through a goose and didn’t want to do anything else. Especially stories. I had a good library, mostly in micro, thousands of those, but also a few dozen valuable bound books, facsimile antiques I had picked up on Landfall where they speak English and use Galacta only as a trade tongue. Savvy Oz books, Minerva?

Yes, of course you do; I helped plan the Great Library and included my childhood favorites as well as more sober things. I did make sure that Joe and Llita read a spread of sober stuff but mostly I let them wallow in stories— The *Just So Stories,* and the Oz books, and *Alice in Wonderland,* and *A Child’s Garden of Verses,* and *Two Little Savages,* and such. Too limited; they were books from my childhood, three centuries before the Diaspora. On the other hand, every human culture in the Galaxy derives from that one.

But I tried to make sure that they understood the difference between fiction and history—difficult, as I wasn’t certain that there was a difference. Then I had to explain that a fairy tale was still a different sort, one step farther along the spectrum from fact to fancy.

Minerva, this is *very* hard to explain to an inexperienced mind. What is “magic”? You are more magical than any “magic” in fairy tales, and it does no good to say that you are ‘a product of science, rather than magic, in speaking to kids who have no idea what is meant by “science”—and I wasn’t sure that the distinction was valid even when I was explaining the distinction. In my wanderings I have run across magic many times—which simply says that I have seen wonders I could not explain.

I finally let it go by asserting *ex cathedra* that some stories were just for fun and not necessarily true—*Gulliver’s Travels* were not the same sort of thing as *The Adventures of Marco Polo,* while *Robinson Crusoe* lay somewhere in between—and they should *ask* me, if in doubt.

They did ask, sometimes, and accepted my decision without argument. But I could see that they did not always believe me. That pleased me; they were starting to think for themselves—didn’t matter if they were wrong. Llita was simply politely respectful to me about Oz. She believed in the Emerald City with all her heart and, if she had

had her druthers, she would have been going there rather than to Valhalla. Well, so would I.

The important thing was that they were cutting the cord.

I did not hesitate to use fiction in teaching them. Fiction is a faster way to get a feeling for alien patterns of human -behavior than is nonfiction; it is one stage short of actual experience and I had only months in which to turn these cowed and ignorant animals into people. I could, have offered them psychology and sociology and comparative anthropology; I had such books on hand. But Joe and Llita could not have put them together into a gestalt—and I recall another teacher who used parables in putting over ideas.

They read every hour I would let them, huddled together like puppies and staring at the reading machine and nagging each other about how fast to raise the pages. Usually Llita nagged Joe; she was quicker than he—but as may be, they spurred each other from-illiterate to speedreaders in zip time. I didn't let them have sound-and-picture tapes—I wanted them to *read.*

Couldn't let 'em spend all their time reading; they had to learn other things—not just salable skills but, much more important, that aggressive self-reliance necessary to a free human—which they totally lacked when I saddled myself with them. Shucks, I wasn't certain they had the potential; it might have been bred out of their line. But if the spark was in them, I had to find it and fan it into flame—or I would never be able to make them run free.

So I forced them to make up their -own minds as much as possible, while being cautiously rough on them in other ways and greeted every sign of rebellion—silently, in my mind— as a triumphant proof of progress.

I started by teaching Joe to fight—just hand to hand; I didn't want either of us killed. One compartment was fitted as a gymnasium, with equipment that could be adapted for gee or for free-fall; I used it that hour a day of lowered temperature. Here I worked Joe out. Llita was required to attend but just to exercise—although I had in mind that it might spur Joe along if his sister saw him getting the whey knocked out of him.

Joe needed that spur; he had a terrible time getting it through his head that it was okay to hit or kick *me,* that I wanted him to try, that I would not be angry if he succeeded—but that I *would* be angry if he didn't try his darnedest.

Took a while. At first he wouldn't chop at me no matter how wide open I left myself and when I got him past that, calling him names and taunting him, he still hesitated that split second that let me close and chop him instead.

But one afternoon he got the idea so well that he landed a good one on me and I hardly had to hold back to let him land it. After supper he got his reward: permission to read a *bound* book, one with pages, him dressed in a pair of my surgical gloves and warned that I would clobber him if he got it dirty or tore a page. Llita wasn't permitted to touch it; this was *his* prize. She sulked and didn't even want to use the reading machine—until he asked if it was all right for him to read aloud to her.

I ruled that she could even read it with him—as long as she didn't touch it. So she snuggled up close, head by his, happy again, and started bossing him about turning the pages.

The next day she asked me why *she* could not learn to fight, too?

No doubt she was finding solo exercise a bore—I always found it so and did it only because it was needful to stay in shape—no telling what hazards next groundfall might bring. Minerva, I've never felt that women should have to fight; it is a male's business to protect females and children. But a female should be *able* to fight because she may have to.

So I agreed, but we had to change the rules. Joe and I had been working out by dockside rules—no rules, that is, save that I didn't tell him that I planned not to do him any permanent damage and did not intend to let him give me anything worse than bruises. But I never said this—if he could manage it, he was free to gouge out one of my eyes and eat it. I just made damn sure that he didn't.

But females are built differently from males. I could not let Llita work out with us until I devised a plastron to protect her tits—necessary; she was a bit oversized in that department, and we could have hurt her without intending to. Then I told Joe privately that bruises were okay, but that if he broke one of her bones, I would break one of his, just for drill.

But I put no restrictions on his sister—and I underestimated her; she was twice as aggressive as he was. Untrained but fast—and she meant business.

The second day we worked out with her, not only was she wearing that plastron, her brother and I were wearing jockstraps. And Llita had been allowed to read a real book the night before.

Joe turned out to have talent for cooking, so I encouraged him to be as fancy as ship's stores permitted while crowding her to become an adequate cook. A man who can cook can support himself anywhere. But anyone, male or female, should be able to cook, keep house, and care for children. I hadn't located a trade for Llita, although she displayed a talent for mathematics once I set up inducements for that, too. That was encouraging; a person who can read and write and has a head for math can learn anything she needs to know. So I started her on bookkeeping and accounting, from books, not helping her, and required Joe to learn to use all the tools the ship boasted—not many, mainly maintenance gear—and supervised him closely; I didn't want him losing fingers or ruining tools. I was hopeful. Then the situation changed—

(Circa 3,100 words omitted)

—easy to say that I was stupid. I had raised stock and a good many children. Being ship's surgeon as well as everything else, I had given them the most thorough examinations my equipment permitted when we were a couple of days out— quite thorough for those days; I had not practiced medicine after leaving Ormuzd but did keep my sick bay stocked and equipped, and picked up the latest tapes whenever I was on a civilized planet and studied them during long jumps. I was a good jackleg doctor, Minerva.

The kids were as healthy as they looked, aside from slight dental caries in him, two small cavities. I noticed that the factor's allegation about her was correct—virgo intacta, semilunar hymen, unfrayed, so I used my smallest speculum. She neither complained nor tensed up nor asked what I was looking for. I concluded that they had had regular checkups and other medical attention, far more than slaves on Blessed usually received.

She had thirty-two teeth in perfect condition but could not tell me when the last four molars had erupted, just that it was "not long ago." He had twentyeight teeth and so little space in his jaw for adult molars that I anticipated trouble. But X-ray prints showed no buds.

I cleaned and filled the cavities, and made note that he must have those fillings removed and the tissue regenerated on Valhalla, and be inoculated against further decay; Valhalla had good dentistry, far superior to what I could do.

Llita could not tell me when she had last menstruated. She discussed it with Joe; he tried to count on his fingers how many days it had been since they had been taken from their home place, as they agreed that it was before that. I told her to let me know next time and each time, so that I could determine her cycle. I gave her a tin of napkins, emergency supplies I hadn't known I had—must have been in the ship twenty years.

She did tell me, and I had to open the tin for her; neither of them knew how. She was delighted with the little elastic panty included in the package, and often wore it when she did not need it, as "dress up." The kid was crazy about clothes; as a slave she had never had a chance to pamper her vanity. I told her it was all right as long as she washed it every time she wore it—I clamped down hard on cleanliness, inspecting their ears, sending them from the table to scrub their nails, and so forth. They had received no more training than a hog. She never had to be told twice, and picked on him and made sure that he met my standards, too. I found myself being more exacting with myself; I could not bring dirty fingernails to the table or skip a shower because I was sleepy—I had set the standards and had to live up to them.

She was almost as unskilled a seamstress as she was a cook, but she taught herself because she liked clothes. I dug out some bright-colored trade cloth and let her have fun—and used it as carrot-and-stick; wearing anything became a privilege that depended on good behavior. I put a stop that way—well, mostly—to her nagging her brother.

That wouldn't work with Joe; clothes did not interest him—but if he rated it, I gave him more of a working over during exercise period. Seldom—he was not the problem she was.

One evening, three or four of her periods later, I noticed on my calendar that she was past due—having forgotten the matter. Minerva, I never walked into their staterooms without knocking; shipboard life required such privacy as can be managed—too little, that is.

Her door was open, and her room was empty. I tapped on his door, got no answer, went on, looked for her in the wardroom and galley, even in our little gym. I decided that she must be taking a bath and I would speak to her in the morning.

As I passed his stateroom again in heading back to my cabin, his door opened; she stepped out and closed it behind her. I said, "Oh, there you are!" or some such. "I thought Joe was asleep."

"He's just gone to sleep," Llita said. "Do you want him, Captain? Shall I wake him?"

I said, "No, I was looking for you, but I tapped on his door five or ten minutes ago and got no answer."

She was contrite over not having heard my knock. "I'm sorry, Captain. I guess we were so busy we didn't hear you." She told me how they were busy—which I had figured out, having suspected it from the moment I noticed that she was a week overdue after being clock regular. "That's understandable," I said. "I'm glad my knock didn't disturb you."

"We try never to disturb *you* with it, Captain," she answered with sweet seriousness. "We wait till you go, to your cabin at night. Or sometimes when you take siesta."

I said, "Goodness, dear, you don't have to be *that* careful. Do your work and keep your study hours, then do as you please the rest of the time. Starship 'Libby' is not a sweatship; I want you kids to be happy. Can't you get it through your fuzzy head that you are not a slave?"

Apparently she could not, quite, Minerva, for she still fretted that she had not heard my knock and jumped to respond. I said, "Don't be silly, Llita. It will keep till tomorrow."

But she insisted she wasn't sleepy and was ready and anxious to do whatever I wanted—which made me a touch nervous. Minerva, one of the oddities about "Eros" is that women are never so willing as when they just have, and there was nothing in Llita's background to inhibit her. Worse, I found that I was aware of her as a ripe female for almost the first time since the two came aboard—she was standing close to me in a narrow passageway, carrying in one hand one of those weird costumes she delighted in making, and was a bit whiff from happy exercise. I was tempted—and felt certain that she would respond at once and happily. The thought crossed my mind that she was already pregnant—nothing to fret about.

But I had gone to much trouble with these ephemerals to shift from slave owner to father figure, stern but loving. If I took her, I would lose that and, add one more disturbing variable a problem already too complex. So I grasped the nettle.

Captain Sheffield said, "Very well, Llita. Come to my cabin." He headed toward it, she followed. Once there, he offered her a seat. She hesitated, then put her gaudy dress down and sat on it—thoughtfulness that pleased him, as the ignorant animal she had been would not have been capable of it; the humanizing process was working. He did not comment.

"Llita, your period is a week overdue, is it not?"

"It is, Captain?" She seemed puzzled but not troubled.

Sheffield wondered if he could be mistaken. After he had taught her how to open a sealed tin, he had turned over to her the limited emergency supply, warning her that if she used it too lavishly, she would have to fashion by hand some make-do, as Valhalla was months away. Then he had dismissed the matter other than to log it on his desk calendar whenever she reported onset. Could he have failed to notice? There had been three days last week when he had kept to his cabin, leaving the young people on their own and having his meals sent in—a habit he had when he wanted to concentrate on a problem. During such periods he ate little and slept not at all and barely noticed anything not part of what he was studying. Yes, it was possible.

"Don't you know, Llita? If you were on time, then you failed to report it."

"Oh, no, Captain!" She was round-eyed with distress. "You told me to tell you…and I *have*—*every* time, every time!"

Further questions showed first, that despite her new grasp of arithmetic she did not know when she should have experienced onset, and second, that it had not been last week but a much longer time.

Time to tell her—"Llita dear, I think you are going to have a baby."

Her mouth dropped open, again her eyes rounded. "Oh, *wonderful!"* She added, "May I run tell Josie? May I, *please?* I'll be right back!"

"Wups! Don't rush things. I said only that I thought so. Don't get your hopes up yet, and don't bother Joe with it till we know. Many a girl has gone much longer than a week past her date, and it didn't mean a thing." (But I'm pleased to learn that you want it, child, as it appears you've had every opportunity.) "Tomorrow I'll examine you and try to find out." (What did he have aboard for a pregnancy test? Damn it, if he must abort her, it should be as quickly as possible when it's no worse than plucking a splinter. Then—no, there wasn't so much as a "Monday morning" pill in the ship, much less modern contraception. Woodie, blast your stupid soul, don't *ever* go into space again so poorly equipped!) "In the meantime, don't get excited." (But women always did get excited by it. Of course.)

She was as dashed as she had been jubilant. "We tried so hard! Everything in the Kama Sutra and more. I thought we ought to ask you to show us what we were doing wrong, but Joe was certain we were doing it right."

"I think Joe is correct." Sheffield got up, poured a cup of wine for each of them while performing legerdemain which dosed hers such that she would go to sleep before long—after some relaxed talk that she might not remember; he wanted the full picture. "Here."

She looked at it. dubiously. "I'll get silly. I know, I had a chance to try it once."

"This isn't the popskull they sell on Blessed; this is wine I fetched from Landfall. Pipe down and drink it. Here's to your baby if you're having one, or here's to good luck next time." (But how to handle that "next time"?—if his worries were well grounded. These kids must *not* be saddled with a defective. A healthy baby would be burden enough while they were learning to stand on their own feet. Could he stave things off to Valhalla, then get her on proper contraception? Then what? Split them up? *How?)*

"Tell me about it, dear. When you came aboard, you were virgin."

"Oh, yes, certainly. They always kept me locked in that virgin's basket. Except when they shut me up and Brother had to sleep in the barracks: You know. When I bleed." She took a deep breath and smiled. "Now is ever so much nicer. Josie and I tried for the longest time to get around that awful steel basket. But we couldn't. Hurt him to try, and some ways we tried hurt me, too. Finally we gave up and just did fun things we had always done. 'Brother said to be patient; it wouldn't be forever. Because we knew we would be sold together, as a breeding pair."

Estrellita looked radiant. "And so we were and now we *are,* and thank you, Captain!"

(No, it wasn't going to be easy to split them up.) "Llita, have you ever thought of being bred by some other man than Joe?" (Sound her out, at least. It won't be hard to find her a husband; she's really quite attractive. That "Earth Mother" feeling.)

She looked puzzled. "Why, of course not. We knew what we were, way back when we were almost babies. Our mother told us, and so did the priest. I've always slept with Brothcr, all my life. Why would I want anyone else?"

"You seemed ready enough to sleep with *me.* You claimed you were eager to."

"Oh! That's different—that's your right. But you didn't *want* me," she added, almost accusingly.

"That wasn't quite it, Llita. There were reasons—that I won't go into now—not to take you no matter if I wanted you and you were willing. Although it was Joe you really wanted, you said so."

"Well…yes. But I was disappointed just the same. I had to tell Brother you wouldn't have me—which hurt all over again. But he said to be patient. We waited three more days before he broached me. In case you changed your mind."

(Nagging wife vertically—docile horizontally. Not too uncommon a pattern, Sheffield thought.)

He found that she was looking at him with sober interest. "Do you want me *now,* Captain? Joe told me, the very night he decided to go ahead, that it was still your right and always would be—and it *is."*

(Beelzebub's brass balls!—the only way to avoid a willing female was to go offplanet.) "Dear, I'm tired, and you are getting sleepy."

She swallowed a yawn. "I'm not *that* tired—I never am. Captain, the night I first, asked you, I was a tiny bit scared. But I'm not scared now. I *want* to. If you will."

"You're very sweet, but I am *very* tired." (Why hasn't that dose taken hold?) He changed the subject. "Aren't those little bunks almost impossible for two people?"

She chuckled right through another yawn. "Almost. Once we fell out of Brother's bunk. So now we use the deck."

"'The deck'? Why, Llita, that's dreadful. We must do something about it" (Put the kids in here? The only full-sized bed in the ship— A bride needed a proper workbench for her honeymoon…which this was; she was deeply in love and should make the most of it, no matter what. Sheffield had decided, centuries back, that the saddest thing about ephemerals was that their little lives rarely held time enough for love.)

"Oh, the deck isn't bad, Captain; we've slept on the floor all our lives." 'She yawned again, could not suppress it.

"Well…tomorrow we'll make better arrangements." (No, his cabin wouldn't do; his desk was in here, and his papers and files. The kids would be in his way and he in theirs. Could he and Joe convert two narrow bunks into one double bed? Probably—although it would nearly fill one stateroom. No matter, that bulkhead between their rooms was not structural—cut a door and they would have a suite. A "bridal suite." For a sweet bride. Yes.) He added, "Let's get you to bed before you fall out of that chair. Everything's going to be all right, dear." (I'll damned well see to it!) "And tomorrow night and from now on, you and Joe can sleep together in a wide bed."

"Really? Oh, that would be"—she yawned again—"lovely!" He had to steady her into her stateroom; she was asleep as she hit the bunk. Sheffield looked down at her, said softly, "Poor little kitten." He leaned down and kissed her, went back to his cabin.

There he dug out everything the slave factor had offered as proof of the alleged odd genetic heritage of Llita and Joe, and gave each item intense study. He was looking for clues to truth or falsity of the allegation that they were "mirror twins"—complementary diploids having the same mother and father. From such clues he hoped to estimate the probability of unfavorable gene reinforcement in any child Llita and Joe might have.

The problem seemed to divide into three (simplified) cases:

The two might be no relation to each other. Chance of a bad reinforcement: slight.

Or they might be the usual sort of brother and sister. Chance of bad reinforcement: too high to be ignored.

Or they might be (as alleged) zygotes resulting from complementary gametes—all genes conserved at reduction-division but with no duplication. In this case the chance of unfavorable reinforcement would be—what?

Let that wait. First assumption, that they were no relation but simply raised together from babyhood—no special hazard, forget it.

Second assumption, that they might be full siblings of the usual sort. Well, they did not look like it—but, more important, that scoundrel had set up a most elaborate "store" for such a swindle, and had used publicly the name of a bishop to back him up. The Bishop might be just as crooked (likely—he knew that priesthood too well!)—but why be so careless when slave babies were so cheap?

No, even if he assumed a swindle, there was no reason to expect an unnecessary risk in a setup so elaborate. So forget that, too: Llita and Joe were *not* sister and brother' in the ordinary sense—although they might have shared the same hostmother's womb. The latter, if true, was of no genetic significance.

So the remaining worry concerned the chance that the slave factor had told the truth—in which case what were the chances of a bad cross? How many ways could such artificially produced zygotes recombine unfavorably?

Sheffield tried to set up the problem while cursing the lack of sufficient data, plus the fact that the only real computer in the ship was the piloting computer, which could not be programmed for a genetics problem. He wished Libby were aboard. Andy would have stared at the bulkhead a few minutes, then come up with answers definite where possible and expressed in probability percentages where not.

A genetics problem, even with all pertinent data (many thousands!), was too unwieldy to solve without computer assistance.

Well, try some simplified illustrative problems and see what insight could be gained.

Primary assumption: Llita and Joe were "mirror twins"—genetically complementary zygotes from the same parent zygotes.

Control assumption: They were unrelated other than being part of the home planet's gene pool. (An extreme assumption, as slaves from the same area were likely to derive from a much smaller gene pool, which might be still further reduced by inbreeding. But this "most favorable normal breeding pattern" was the correct control against which he must measure.)

Simplified example: Test one gene site—call it site 187 of the twenty-first chromosome-for reinforcement, masking, or elimination, of an assumed "bad" gene, under each assumption.

Arbitrary assumption: Since this site might hold an unfavorable gene—or two, or none—in its gene pair, assume that the chance was exactly the same for both primary and control assumptions, and even —i.e., *25* percent no bad gene in the pair at the site, *50* percent one bad gene, *25* percent two bad genes—an extreme condition since, over the generations, reinforcement (two bad genes at one site) tended toward non-survival, either lethal or reducing a zygote's ability to compete. Never mind; make it even for both of them—there were no data on which to base any better assumption.

Wups! If a bad reinforcement was visibly demonstrated, or could be shown by tests, such zygotes would *not* be used. A scientist competent to attempt this experiment would use specimens as "clean" in a genetic sense as possible-free of all the hundreds (thousands now?) of identifiable hereditary defects; the primary assumption should include this subsidiary assumption.

These young people were free of any defect Sheffield could detect in a shipboard examination—which enhanced the probability that this horsethief had told the truth and these exhibits were sober records of an exotic and successful experiment in gene manipulation.

Sheffield now tended to believe that the experiment had taken place—and wished that he had the resources of a major Howard Clinic, say the one on Secundus, to give these kids a genetic going-over that he was not equipped to do aboard ship and not qualified to do in any case.

One nagging doubt lay in how he had acquired these kids. Why had that gonif been so anxious to sell? If they were what the exhibits claimed? Why sell them when breeding the two created complements back together was the next step of the experiment?

Well, perhaps the kids knew but he bad not asked the right questions. Certain it was that they had been brought up to believe that such was their proper destiny; whoever planned this had induced in the kids from earliest childhood a pair-bond stronger than most marriages, in Sheffield's long experience. More than any of his own—(Except one, except one!)

Sheffield put it out of his mind and concentrated on the theoretical consequences.

At the selected site, each parent zygote had been assumed to have three possible states or gene pairs in probability 25-50-25.

Under the control assumption, parents (diploid zygotes) both male and female would show this distribution at the selected site:

25% good-good ("clean" at that site)
25% good-bad (bad gene masked but could be transmitted)
25% good-bad (bad gene masked but could be transmitted)
25% bad-bad (bad reinforcement—lethal or disabling)

But under his modified primary assumption Sheffield assumed that the priest-scientist would discard bad stock as displayed in zygotes—which would eliminate the fourth group ("bad-bad") and leave a parent-zygote distribution for this site of:

33-1/3% good-good
33-1/3%good-bad
33-1/3%good-bad

Such culling gave marked improvement over the original random-chance situation and meiotic division would produce gametes (both sperm and ova) in this incidence:

Good, four out of six, and
Bad, two out of six—

—but with no way to detect the bad genes without destroying the gametes carrying them. Or so Sheffield assumed, while stipulating that the assumption might not be true forever. But to protect Llita (and Joe) it was necessary that his assumptions be pessimistic within the limits of available data and knowledge—i.e., that a bad gene could be spotted only as reinforcement in a zygote.

Sheffield reminded himself that the situation was never as black-and-white as was implied by “good-dominant” and “bad-recessive”—these descriptions were less complex than the real world they were used to image. A characteristic exhibited by an adult zygote was prosurvival or contrasurvival only in terms of what and when and where—and also in terms of more than one generation. An adult who died saving its progeny had to be counted a prosurvival whereas a cat that ate her own young was contrasurvival no matter how long she lived.

In the same vein, a dominant gene sometimes was of no importance one way or the other—e.g., brown eyes. Just as its corresponding recessive when paired and thereby reinforced to produce blue eyes gave the zygote exhibiting it no measurable disadvantage. The same was true of many other inheritable characteristics—hair patterns, skin color, et cetera.

Nevertheless this description—good-dominant, bad-recessive—was in essence correct; it synopsized the mechanisms by which a race conserved its favorable mutations and destroyed (eventually) its unfavorable mutations. “Bad-dominant” was almost a contradiction in terms, as a thoroughly bad mutation which was dominant killed itself off (along with the unfortunate zygote inheriting it) in one generation, either lethal in womb or so damaging to the zygote that it failed to reproduce.

But the usual weeding process involved bad-recessives. These could remain in the gene pool until one of two events happened, each controlled by the blind laws of chance: Such a gene could pair with a gene like it when sperm fertilized ovum and thereby eliminate itself by eliminating the zygote—hopefully before birth, or—tragically—after birth. Or this bad-recessive might be eliminated by chromosome reduction at meiosis and the result would be a healthy baby who did *not* carry this bad gene in its gonads—a happy outcome.

Both these statistical processes slowly weeded out bad genes from the race’s gene pool.

Unfortunately the first of these processes often produced babies viable but so handicapped they needed help to stay alive-sometimes needing economic help, born losers, who never managed to support themselves; sometimes needing plastic surgery or endocrine therapy or other interventions or supports. When Captain Aaron Sheffield had been practicing medicine (on Ormuzd and under another name), he had gone through stages of increasing frustration over these poor unfortunates.

At first he had tried to practice therapy by the Hippocratic Oath—or close to it; he was by temperament unable to follow *any* manmade rule blindly.

Then he had had a period of temporary mental aberrance during which he had sought a political solution to what he saw as a great danger: reproduction by defectives. He tried to persuade his colleagues to refuse therapy to hereditary defectives unless they were sterile or sterilized or willing to accept being sterilized as a precondition for receiving therapy. Worse yet, he had attempted to include in the definition of "hereditary defective" those who displayed no stigmata save that they had never managed to be self-supporting—on a planet not overcrowded and which he himself had selected centuries earlier as nearly ideal for human beings.

He got nowhere, he encountered nothing but fury and contempt—save for a few colleagues who agreed with him privately and denounced him publicly. As for laymen, tar-and-feathers was the mildest medicine they prescribed for Dr. "Genocide."

When his license to practice was lifted, Lazarus regained his normal emotional detachment. He shut up, realizing that. grim old Mother Nature, red of tooth and claw, invariably punished damfools who tried to ignore Her or to repeal Her ordinances; he need not interfere.

So he moved and changed his name again and started to get ready to go offplanet—when a plague hit Ormuzd. He had shrugged and gone back to work, an unfrocked physician whose services were temporarily welcome. Two years and a quarter of a billion deaths later he was offered his license back—subject to good behavior.

He told them what to do with that license and left Ormuzd as quickly as possible, eleven year later. He was a professional gambler during that wait, that being the handiest way he could see at the time for saving up the necessary.

Sorry, Minerva, I was talking about those mirror twins. So the silly little wench was knocked up, which caused me to slip back into my baby-cotching, country-doctor *persona,* and I stayed up all night worrying about her and her brother and the baby they were going to have—unless I did something about it. To find out what I *should* do, I had to reconstruct what had happened and from that what *could* happen. Having no certain data, I had to follow that old rule for finding a lost mule.

First I had to think like that slave factor— A man who auctions slaves is a scoundrel but too smart to risk a caper in which he might wind up a slave himself, or dead if he was lucky—which is what would happen to one who played fast and loose on Blessed with the authority of a bishop. Ergo, the scoundrel had believed what he had said.

That being so, I could table the question of why this factor was commissioned to sell these two, while I tried to think like a priest-scientist engaged in human biological experimentation. Forget the chance that these two were ordinary siblings—no point in picking such a pair even for a swindle. Forget the chance that they were unrelated in any fashion, as in such a case it would simply be a normal case of breeding. Sure, sure, any woman, can give birth to a monster, as even with the most genetically hygienic of breeding a bad mutation can show up—and an alert midwife may neglect to give that first lifegiving spank~—and many have.

So I considered only the third hypothesis: complementary diploids from the same parents. What would this experimenter do? What-would *I* do?

I would use as near perfect stock as I could find and not start the experiment until I had both a male and a female parent who tested "clean" genetically in the most subtle ways for which I could test—which on Blessed meant quite sophisticated ways, for that century.

For a selected gene site and an assumption of 50-50 in the Mendelian distribution of *25-50-25,* this pre-experiment testing would chop off the *25* percent chance of reinforcement of a bad recessive and leave a distribution of one-third bad, two-thirds good, at the parent generation—possible parents of possible Joes and Llitas, that is.

Now I start putting together mirror twists in my *persona* as a priest-experimenter. What happens? If we consider the minimum number of gametes needed to represent this one-third and two-thirds distribution, we get eighteen possible "Joes," eighteen possible "Llitas"—but in both male and female two of them show up as "bad"—the bad recessive has reinforced and the zygote is defective; the experimenter eliminates them…or he may not need to; the reinforcement may be lethal.

We wind up at this point with an 8 & 1/3 percent improvement, or a total improvement of *25* percent in favorable chances for Llita's baby. I felt better. If you add the fact that I am the sort of a midwife who is too busy helping the mother to stop to spank a monster, the favorable chances went way up.

But all that this shows is that bad genes tend to be eliminated at each generation—with the tendency greatest with the worst genes and reaching 100 percent whenever reinforcement produces a lethal-in-womb—while favorable genes are conserved. But we knew that—and it applies also to normal outbreeding and even— more strongly to inbreeding, although the latter is not well thought of for humans as it hikes up the chances of a defective by precisely the same amount that it weeds—that being the hazard, that I was afraid of for Llita. Everybody wants the human gene pool cleaned up, but nobody wants its tragic aspects to take place in his own family. Minerva, I was beginning to think of these kids as "my family."

I still did not know anything about "mirror twins."

I decided to investigate a more probable incidence of bad recessives at a given site. Fifty-fifty is far too high for a really bad gene; the weeding is drastic, and the incidence drops to a lower percentage each generation, until the incidence of a particular bad gene is so low that reinforcement at fertilization is a rare event, as reinforcement is the square of the incidence; e.g., if one-in-a-hundred haploids carry this bad gene, then it will be reinforced one-in-ten-thousand fertilizations. I speak of the total gene pool, or in this case a minimum of two hundred adult zygotes, female and male; random breeding in such a pool will, bring together that bad reinforcement only by that long chance—a chance happy or unhappy depending on whether you look at it impersonally in terms of -cleaning the gene pool or personally in terms of individual human tragedy.

I looked at it very personally; I wanted Llita to have a healthy baby.

Minerva. I'm sure you recognized that 25-50-25 distribution as representing the most drastic case of inbreeding, one which can happen only half the time with tine breeding, only a quarter of the time with full siblings, in both cases through chromosome reduction at meiosis. A stockbreeder uses this drastic measure regularly—and culls the defectives and winds up with a healthy stabilized line. I have a nasty suspicion that such culling after inbreeding was sometimes used among royalty back. on old Earth—but certainly such culling was not used often enough or drastically enough. Royalism might work quite well if kings and queens were treated like racehorses—but regrettably they never were. Instead, they were propped up like welfare clients, and princelings who should have been culled were encouraged to breed like rabbits—bleeders, feebleminded, you name it. When I was a kid, "royalty" was a bad joke based on the worst possible breeding methods.

Captain Sheffield investigated next a lower incidence of a bad gene: Assume a lethal gene in the gene pool from which Joe and Llita's parents were derived. Being lethal, it could exist in an adult zygote only if it was masked in gene-pair by its benign twin. Assume a

5 percent masked incidence in zygotes—still too high to be realistic for a lethal gene but check, it anyhow. What trend would show?

Parent zygote generation: 100 females, 100 males, each a possible parent for Llita and for Joe—and *5* of the females and *5* of the males carry the lethal gene, masked.

Parent haploid stage: 200 ova, *5* of which carry the lethal gene; 200 spermatozoa, *5* of which carry the lethal gene.

Son-and-daughter zygote generation (possible "Joes" and possible "Llitas"): 25 dead through reinforcement of lethal gene; 1,950 carrying the lethal gene masked; *38,025* "clean" at that site.

Sheffield noted that a hypothetical hermaphrodite had crept in through not doubling his sample size in order to avoid anomaly through odd numbers, Oh, the hell with!—it did not change the statistical outcome. No, *do* it!—start with a sample of 200 males and 200 females with the same lethal-gene incidence for that site. This gave him:

400 ova, 10 with the lethal gene;
400 spermatozoa, 10 with that lethal gene—

—which gave in the next zygote generation (possible "Joes" and "Llitas"): 100 dead, 7,800 carriers, 152,100 "clean"— which changed no percentages but got rid of that imaginary hermaphrodite. Sheffield considered briefly the love life of an hermaphrodite, then got back to work. The numbers became very cumbersome, jumping to the billions in the next zygote generation (i.e., Little Nameless, now just started in Llita's belly)—l 5,210,000 culled by reinforcement, 1.216.800,000 carriers, 24,336,000,000 "clean"—and again he wished for a clinic computer and tediously converted the unhandy numbers into percentages: 0.059509 percent, *4.759* percent, 95.18 percent plus.

This showed a decided improvement: approximately 1 defect out of 1,680 (instead of 1 out of 1,600), the percentage of carriers decreased to below *5* percent and the number of "clean" increased to above *95* percent in one generation.

Sheffield worked several such problems to confirm what he had seen by inspection: A child from complementary diploids ("mirror twins") had at least as much chance of being healthy as did the offspring of unrelated strangers—plus the happy fact that such a baby's chances were improved by culling at one or more stages by the priest-scientist who had initiated the experiment—an almost certain assumption and one that made Joe the best possible mate for his "sister" rather than the worst.

Lilta could have her baby.

VARIATIONS ON A THEME

VII

Valhalla to Landfall

—the best I could for them, Minerva. Every so often some idiot tries to abolish marriage. Such attempts work as well as repealing the law of gravity, making pi equal to three point zero, or moving mountains by prayer. Marriage is not something thought up by priests and inflicted on mankind; marriage is as much a part of mankind's evolutionary equipment as his eyes, and as useful to the race as eyes are to an individual.

Surely, marriage is an economic contract to provide for children and to take care of mothers while they bear kids and bring them up—but it is much more than that. It is the means this animal, Homo sap., has evolved—quite unconsciously—for performing this indispensable function *and be happy while doing so.*

Why do bees split up into queens, drones, and workers, then live as one big family? Because, for them, it *works.* How is it that fish do okay with hardly a nodding acquaintance between mama fish and papa fish? Because the blind forces of evolution made that way work for *them.* Why is it that "marriage"—by whatever name—is a universal institution among human beings everywhere? Don't ask a theologian, don't ask a lawyer; this institution existed long before it was codified by church or state. It *works,* that's all; for all its faults it works far better by the only universal test—survival—than any of the endless inventions that shallow-pates over the millennia have tried to substitute for it.

I am not speaking monogamy; I mean *all* forms of marriage—monogamy, polyandry, polygyny, plural and extended marriages with various frills. "Marriage" has endless customs, rules, arrangements. But it is "marriage" if-and-only-if the arrangement both provides for children and compensates the adults. For human beings, the only acceptable compensation for the drawbacks of marriage lies in what men and women can give each other.

I don't mean "Eros," Minerva. Sex baits the trap, but sex is not marriage, nor is it reason enough to stay married. Why buy a cow when milk is cheap?

Companionship, partnership, mutual reassurance, someone to laugh with and grieve with, loyalty that accepts foibles, someone to touch, someone to hold your hand—these things are "marriage," and sex is but the icing on the cake. Oh, that icing can be wonderfully tasty—but it is *not* the cake. A marriage can lose that tasty "icing"—

say, through accident— and still go on and on and on, giving deep happiness to those who share it.

When I was a rutty and ignorant youngster, this used to puzzle. me —

(Omitted)

—as solemnly ceremonious as I could swing. Man lives by symbols; I wanted them to remember this occasion. I bad Llita dress in her notion of fanciest best. She looked like a bloomin' Christmas tree, but I told her she looked beautiful— which she did; brides can't help it. Joe I dressed in some of my clothes and gave them to him. Me I dressed in a preposterous ship's-captain uniform, one I, had for use on planets where such nonsense is, customary—four wide gold stripes on my cuffs, chest spangled with decorations bought in hockshops, a cocked hat Admiral Lord Nelson would have envied, and the rest as fancy as any grand master of a lodge.

I preached 'em a sermon loaded with solemn amphigory most of it lifted from the only church they knew, the established religion of Blessed—easy for me, having been a priest there myself—but I added all sorts of things, telling her what she owed him, telling him what he owed her, telling them both what they owed the child in her belly and the other children they would have—and tacked on, for both but primarily for her, a warning that marriage was not easy, not to be entered into lightly, because there would be troubles, they must face together, grave troubles that would require the courage of the Cowardly Lion, the wisdom of the Scarecrow, the loving heart of the Tin Woodsman, and the indomitable gallantry of Dorothy.

That got her to weeping, so Joe started to drip tears—which was just what I wanted, so I had 'em kneel and prayed over them.

Minerva, I make no apology for hypocrisy. I didn't care whether some hypothetical God heard me or not; I wanted Llita and Joe to hear it—first in that jargon of Blessed, then in English and Galacta, then topped it off by intoning as many lines of the Aeneid as I could remember. When I got stuck I closed with a schoolboy song:

Omme bene
Sine poena,
Tempus est ludendi;
Venit hora
Absque mora,
*Libros deponendi!**

(*All is well

Without punishment,
The time is for playing;
Comes the hour
Without delay
For laying (school) books down.

Purists will see that the Senior gave this jingle a poor translation. But one wonders why he did not continue in the same vein with the cheerfully bawdy triple pun available in the last line by substituting “liberos” for “libros”? That he could have missed it seems out of character. Our Ancestor’s capric disposition is everywhere evident; his occasional professions of asceticism have at best a hollow ring. J.F. 45th)

—and ended with ‘a resounding “So mote it be!” Had ‘em stand, take each other’s hands, and declared that, by the supreme authority vested in me as master of a vessel in space, they were now and forever husband and wife—kiss her, Joe.

All to a muted ‘background of Beethoven’s Ninth— That doggerel got in by accident when I had run out of

“punishment lines” of Virgil and needed a few more impressive sounds. But when I thought about it later, I saw that it translated as appropriately for their honeymoon as for a school holiday. All was indeed well, now that I knew that this joining of siblings could take place *sine* poena—without fear of genetic punishment. And *ludendi* translates as “amorous play” or “Eros” as readily as “gambling” or “children’s play” or any other frolic. And I had declared a four-day ship’s holiday, no work for them, no study *hours—libros* deponendi—starting at once. Sheer accident, Minerva. It was simply a bit of Latin verse that came into my head and Latin is majestic, especially when you don’t understand it.

We had a fancy supper, cooked by me, that lasted about ten minutes—for them. Llita could not eat, and Joe reminded me of Johnny’s wedding night and why his motherin-law fainted. So I piled a tray with tasty rations and handed it to Joe, and told ‘em to get lost; I didn’t want to see hide nor hair of ‘em for four days—

(Omitted)

—on to Landfall as fast as I could pick a cargo. I could not leave them on Valhalla; José was not yet able to support a family, and Llita was going to be limited in what she could do, either pregnant or with a new baby. Nor would I be on hand to pick ‘em up if they fell down; they *had* to go to Landfall.

Oh, Llita could have survived on Valhalla, because there they have the healthy attitude that a pregnant woman is prettier than the other sort and that the farther along she is, the more beautiful she is—true in my opinion and especially true in Llita's case. She had been passable when I bought her; when we grounded at Valhalla, she was almost five months gone and radiantly beautiful. If she went dirtside unescorted,, the first six men she encountered would want to marry her. If she had had one on her back as well as one in her belly, she could have married well the day we arrived; fertility was respected there and the planet wasn't half filled up.

I didn't think she would jilt Joe that quickly, but I did not want her head turned by too much male attention. I did not want to risk even an outside chance that Llita might leave him for some wealthy bourgeois or freeholder; I had gone to much trouble to build up Joe's ego, but it was still fragile and such a blow could kill it. He was standing tall and proud now—but his pride was based on being a married man, with a wife, and a child on the way. Did I mention that I had given them one of my names on their marriage certificate? They were now Friherr og Frei Lang, Josef og Stjerne, for the duration of our stay on Valhalla, and I wanted them to remain. Mr. and Mrs. Long for some years at least.

Minerva, I had them take lifetime vows never believing that they would keep them. Oh, ephemerals often stay married for life, but as for the rest—you don't find feathers on frogs very often, and Llita was a naïve, friendly, sexy little tart whose short heels would cause her to trip and land with her legs open without planning it—I could see it coming. I did not want it to happen before I had a chance to indoctrinate Joe. Horns need not give a man a headache. But he does need time to grow up and mellow and acquire self-confidence before he can wear them with tolerance and dignity—and Llita was just the girl who could outfit him with a fine rack of antlers. I got him a job, pearl diver and handyman in a small gourmet restaurant, with a side arrangement for pay-me's to the chef for every Valhalla dish Joe learned to cook correctly. In the meantime I kept her aboard on the excuse that a pregnant woman could not risk the nasty weather until I could get her proper clothing—and don't bother me now, dear; I've got cargo to worry about.

She took it well enough, pouting just a little. She didn't like Valhalla anyhow; it has one-and-a-seventh gee and I had got them used to the luxury of free-fall-—easy on her swelling belly, no strain on her arches or her swelling tits. Now she suddenly found herself much heavier than she had ever been, awkward, and with unhappy feet. What she could see of Valhalla from the entrance lock looked like a frozen slice of hell; she was pleased by my offer to take them on to

Landfall.

Still, Valhalla was the only new place she had ever been; she wanted to see it. I stalled while I got cargo unloaded, then took her measurements and got her one warm outfit in local style but I played her a dirty trick; I fetched back three pairs of' boots and let her take her choice. Two pairs were plain work boots; the third pair was gaudy —and half a size too small.

So when I did take her groundside, she was wearing too-tight boots, and the weather was unusually cold and blustery—I had watched the predictions. Torheim is pretty in spots, as skyport cities go—but I avoided those parts and took her "sightseeing" in dull neighborhoods—on foot. By the time I flagged a sleigh and took her back to the ship, she was miserable, and glad to get out of uncomfortable clothes, especially the boots, and into a hot bath.

I offered to take her into town next day but left her free to refuse. She declined politely.

(Omitted)

—*not* quite that bad, Minerva; I simply wanted to keep her in purdah without arousing her suspicions. Actually I had bought two pairs of those gaudy boots, one pair her correct size—and switched them on her at the end of that first day, while she was soaking her poor, tired feet. Later I suggested that her trouble had been that she had never worn shoes or boots in her life—so why not wear them around the ship until she got the hang of it?

So she did and was surprised at how easy it was. I explained with a straight face that her feet bad swelled the first time, so take it easy, an hour today, a little more each day, until she felt comfortable in them all day long. In a week she was wearing them even if she wore nothing else; she was more comfortable in them than barefooted—not surprising as they were arch-support footwear I had picked most carefully— between pregnancy and the difference in surface gravity of the two planets—point ninety-five gee for her home planet; one point fourteen for Valhalla—she weighed about twenty kilos more than she ever had in her life; she *needed* contoured foot supports.

I had to caution her not to wear them to bed.

I took her to town a couple of times while I was selecting cargo, but I coddled her—not much walking or standing around. She came along when I invited her but was always willing to stay aboard and read.

In the meantime Joe worked long hours, only one day off in seven. So just before we left, I had him quit his job and I took my kids on a proper holiday; a sleigh hired for the day, with reindeer instead of power, sightseeing that was truly sightseeing on a clear, sunny day that was almost warm, lunch in the country at a fine restaurant with a view of snow-covered crags of Jotunheimen range, dinner at a still finer restaurant in the city, one with live music and entertainment as well as superb food—and a stop for tea at the little gourmet spot where Joe had labored so that he could be addressed as "Friherr Lang" by our host, instead of "Hey, you!"—and have a chance to show off his beautiful, bulging bride.

And beautiful she was, Minerva. On Valhalla both sexes wear, under heavy outdoor clothes, indoor clothes that are essentially pajamas. The difference between those worn by women and by men lies in material, cut, and such. I had bought one party outfit for each of them. Joe looked smart and so did I, but all eyes were on Llita. She was covered from shoulders to boots—but only technically. The cloth of that harem outfit shimmered with changing lights, orange and green and gold, without obstructing the view. Anyone who cared to look could see that her nipples were crinkled with excitement—and everyone cared to look. That she clearly had only a couple of months to go gave her a large bonus vote toward being picked as "Miss Valhalla."

She looked grand and knew it, and her face showed her happiness. She was self-confident, too, as I had coached her in local table manners, and how to stand and how to sit and how to behave and such, and she had already got through lunch without a bobble.

It was all right to let her display herself and enjoy the silent, or sometimes not silent, applause; not only were we leaving right away, but also Joe and I had our knives in sight in our boot tops. True, Joe was no knife fighter. But the wolves there didn't know that, and not one was inclined to bother our beautiful bitch when she was flanked by wolves of her own.

—early next morning despite a short night. We loaded all day long, with Llita handling manifests and Joe checking numbers while I made sure I wasn't being robbed. Late that night I had us in n-space, with my pilot computer sniffing out the last decimal places for the first leg to Landfall. I set the gravistat to bring us slowly down from Valhalla surface-normal to a comfortable quarter gee—no more free-fall until Llita had her baby—then locked the control room and headed down to my cabin, stinking and tired and trying to kid myself that tomorrow was soon enough for a bath.

Their door was open—their bedroom door, the room that had been Joe's before I turned their rooms into a suite. Door open and them in bed—they had never done *that* before.

I soon learned why. They piled out of bed and paddled toward me; they wanted me to join their fun—they wanted to thank me…for that party day, for buying them, for everything else. His idea? Hers? Both? I didn't try to find out; I just thanked them and told them that I was whipped to the red, worn out, and dirty—all I wanted was soap and hot water and twelve hours of shuteye—and for them to sleep late; we'd set up ship's routine after we were rested.

I did let them bathe me and massage me to sleep. That did not break discipline; I had taught them a bit about massage, and Joe in particular had a firmly gentle touch; he had been massaging her daily during her pregnancy—even while working long hours in that restaurant.

But, Minerva, had I not been so bushed, I might have broken my rule about dependent females.

(Omitted)

—every tape, every book available in Torheim for a refresher in obstetrics and gynecology, plus instruments and supplies I had not expected to need aboard ship. I kept to my cabin until I had mastered all new art and was at least as skilled in baby-cotching as I had been as a country doctor on Ormuzd long before.

I kept a close eye on my patient, watched her diet, made her exercise, checked her gizzards daily—and permitted no-undue familiarity.

Dr. Lafayette Hubert, MD, aka Captain Aaron Sheffield aka The Senior, et al., worried excessively over his one patient. But he kept her and her husband from seeing it and applied his worry constructively in planning for every obstetric emergency known to the art at that time. Hardware and supplies he had obtained on Valhalla paralleled in every major respect the equipment of Frigg Temple in Torheim, where fifty births a day were not uncommon.

He smiled to himself at the mass of junk he had taken aboard, recalling a country doctor on Ormuzd who had delivered many a baby with nothing but bare hands, while the mother sat in her husband's lap, knees pulled high and wide by her husband so that old Doc Hubert could kneel in front of them and catch the baby.

True—but he had always had with him all the gear a husky pacing borri could tote, even though he might never open a saddlebag if everything went right. That was the point: to have the stuff at hand if things did *not* go right.

One item purchased in Torheim was not for emergency: the latest improved-model delivery chair—hand grips, padded support arms; leg, foot, and back supports adjustable independently in three axes of translation and rotation with controls accessible both to midwife and patient, quick-release restraints. It was a marvelously flexible piece of mechanical engineering to enable the mother to position herself—or be positioned—so that her birth canal was vertical and as wide open as possible at the moment of truth.

Dr. Hubert-Sheffield had it set up in his cabin, checked its many adjustments before signing for it—then looked at it and frowned. A good gadget, and he had paid its high price without a quiver. But it had no love in it; it was as impersonal as a guillotine.

A husband's arms, a husband's lap, were not as efficient— but there was much to be said, in his opinion, for having parents go through the ordeal together, she with her husband's arms holding her, comforting her, while he gave both muscular and emotional support that left the midwife free to concentrate on physical aspects.

A husband who had done this had no doubt that he was a father. Even if some passing stranger had slipped her the juice, such fact became irrelevant, swallowed up by this greater experience.

So how about it, Doc? This gadget? Or Joe's arms? Did the kids need this second "marriage ceremony"? Could Joe take it, physically and emotionally? There was no doubt that Llita was the more rugged member of the team although Joe outmassed her even when she was near term. What if Joe fainted and dropped her—at the exact wrong, instant?

Sheffield worried these matters while he led auxiliary controls from the gravistat in the control room to the delivery chair. He had decided that, nuisance though it was, his cabin had to be the delivery room; it was the only compartment with enough deck space, a bed at hand, and its own bath. Oh, well, he could stand the nuisance of squeezing past the pesky thing to reach his desk and wardrobe for the next fifty days— sixty at the outside, if he had Llita's date of conception right and had judged her progress correctly. Then he could disassemble it and stow it.

Perhaps he could sell it at a profit on Landfall; it was in advance of the art there, he felt sure.

He positioned the chair, bolted it to the deck, ran it up to maximum height, placed its midwife's stool in front of it, adjusted the stool until he was comfortable in it, found he could lower the delivery chair ten or twelve centimeters and still have room to work. That done, he climbed into the delivery chair and fiddled with its adjustments—found that it could be made to fit even a person of his height—predictable; some women on Valhalla were taller than he was.

Minerva, by my figures Llita was about ten days late—which did not worry them, as I had been carefully vague about it, and worried me only a touch, as she checked out normal and healthy in all respects. I prepared them not only with instruction and drill, but also with hypnosis, and had prepared her with exercises designed to make it as easy on her as possible—I dislike postpartum repairs; that canal should *stretch,* not tear.

What was really fretting me was possibility that I was going to have to break the neck of a monster, Kill a baby, I mean— I shouldn't dodge the blunt truth. All calculations I had done one sleepless night still left this chance open—and if I had been wrong in any assumption, the chance might be higher than I like to think about.

If I had to do it, I wanted to get it over with.

I was far more worried than she was. I don't think she worried at all; I had worked hard on that hypnotic preparation.

If I had to do this grisly thing, I was going to have to do it *fast,* while their attentions were elsewhere—then never let them see it and space the pitiful remains at once. Then tackle the horrid job of trying to put them back together emotionally. As a married couple? I did not know. Maybe I would have an opinion after I saw what she was carrying.

At last her contractions were coming close together, so I had them get into the delivery chair—easy, one-quarter gravity. The chair was already adjusted, and they were used to the position, from drill. Joe climbed in, sat with his thighs stretched wide, knees over the rests, heels braced—not too comfortable as he was not angleworm-limber the way she was. Then I picked her up and sat her in his lap—no trouble, she weighed less than forty pounds at that pseudo-acceleration. Call it eighteen kilos.

She spread her legs almost in a horizontal split and scooted forward in his lap while Joe kept her from falling between his thighs. "Is that far enough, Captain?" she asked.

"Just fine," I said. The chair might have positioned her a touch better—but she would not have had Joe's arms around her. I had never told them that there was any other way to do it. "Give her a kiss, Joe, while I get the straps."

Left knee strap around both their left knees together, same for right knees, and with her feet braced on additional supports I had added—chest and shoulder and thigh straps on him so firmly that he would stay in that chair even if the ship fell apart, but no such straps on *her.* Her hands on the hand grips, while his hands and arms were a living, warm, and loving safety belt, just under her tits, just over the bulge but not on it. He knew how, we had practiced. If I wanted pressure on her belly, I would tell him—otherwise leave well enough alone.

My stool was bolted to the deck, I had added a seat belt. As I strapped myself down, I reminded them that we had a rough ride coming—and this we had not been able to practice; it would have risked miscarriage. “Lock your fingers, Joe, but let her breathe. Comfortable, Llita?”

“Uh—” she said breathlessly. “I—I’m starting another one!”

“Bear down, dear!” I made sure my left foot - was positioned for the gravistat control and watched her belly.

Big one! As it peaked, I switched from one-quarter gravity up to two gravities almost in one motion—and Llita let out a yip and the baby squirted like a watermelon seed right into my hands.

I dragged my foot back to allow the gravistat to put us back on low gee even as I made a nearly instantaneous inspection of the brat. A normal boy, red and wrinkled and ugly—so I slapped his tochis and he bawled.

VARIATIONS ON A THEME

VIII

Landfall

(Omitted)

—girl I had intended to marry had married again and had another baby. Not surprising; I had been off Landfall two standard years. Not tragic, either, as we had been married once about a hundred years earlier. Old friends. So I talked it over with her and her new husband, then married one of her granddaughters, one not descended from me. Both gals Howards, of course, and Laura, the one I married that time, being of the Foote Family.* (* Correction: Hedrick Family. This woman Laura (one of the ancestors of the undersigned) did carry the surname “Foote” under the archaic patriliheal tradition—a source of confusion in old records, as the more logical matrilineal system has always been used in the Families in assigning clan membership. But the genealogies were not revised to show this until Gregorian Year 3307. This misnomer offers a means of dating this memoir…were it not that other records show that reindeer were not introduced onto Valhalla until approximately a century and a half *after* the date that the Senior— beyond question—did marry Laura Foote-Hedrick.

But more interesting is the Senior’s allegation that he used a pseudogravity field *in that year* to facilitate childbirth. Was he the first tocologist to use this (now standard) method? Nowhere does he assert this, and the technique - is usually associated with Dr. Virginius Briggs of Secundus Howard Clinic and a much later date. J.F. 45th)

We were a good match, Minerva; Laura was twenty, and I was freshly rejuvenated and holding my cosmetic age at the early thirties. We had several children—nine, I think— then she got bored with me forty-odd years later, and wanted to marry my 5th/7th cousin* *(And descended from the Senior as well (through Edmund Hardy 2099-2259) although the Senior may not have been aware of it. J.F. 45th) Roger Sperling—which did not grieve me as I was getting restless as a country squire. Anyhow, when a woman wants to go, let her go. I stood up for her at their wedding.*

Roger was surprised to learn that my plantation was not community property. Or possibly did not think that I would hold Laura to the marriage settlement she had signed—but that wasn't the first time I had been wealthy; I had learned. It took a tedious suit to convince him that Laura owned her wedding dower plus appreciation, not those thousands of hectares that were mine before I married her. In many ways it is simpler to be poor.

Then I shipped out again.

But this is about my kids who weren't really mine. Before we reached Landfall, Joseph Aaron Long looked more like a cherub and less like a monkey but was still young enough to wet on anyone reckless enough to pick him up—which his grandpappy did, several times a day. I was fond of him; he was not only a merry baby but was also, to me, a most satisfying triumph.

By the time we grounded, his father had shaped up into a really good cook.

Minerva, I could have set those kids up in style; that was as profitable a triangle trip as I ever made. But you don't cause ex-slaves to stand tall and free and proud by giving them things. What I did was to enable them to get out and scratch. Like this— I credited them with half-time apprentice wages, Blessed to Valhalla, on the assumption that their other half-time was taken up by studies. This I had Llita figure in Valhalla kroner, at Valhalla wage rates. I had her add to this Joe's wages as kitchen help on Valhalla, minus what he had spent there. This total was credited to them as a share in cargo on the third leg, Valhalla to Landfall—which amounted to less than one-half of 1 percent of that cargo. I made Llita work this out.

To this we added ship's-cook wages for Joe, Valhalla to Landfall, payable in Landfall bucks at Landfall wage scales— but only as wages not as a share in cargo. I had to explain to Llita why Joe's wages for that leg could not be invested retroactively in cargo lifted at Valhalla. Once she understood it, she had a grasp of the notions of venture and risk and profit—but I did not pay her for this accounting I was durned if I would pay purser's wages to figure her own money when I was not only having to check everything she did but was giving her a lesson in economics as well.

I did not pay Llita for the leg to Landfall; she was a passenger, busy having a baby and then still busier learning to care for it. But I did not charge her for passage; she deadheaded.

You see what I was doing—rigging the accounts so that I would owe them something once I sold my cargo, while making it appear that they had earned it. They hadn't been worth *any* wages; on the contrary I had spent quite a chunk on them—aside from buying them, which I never charged against them even in my head. On the other hand, I was paid in deep satisfaction—especially if they learned to stand on their own feet. But I discussed none of this; I just had Llita figure their share—my way.

(Omitted)

—came to a couple of thousand, not enough to support them very long. But I took time to find a hole-in-the-wall luncheon, on which I took option through a third party, after satisfying myself that a couple of strivers could stay afloat with it, if the price was right arid they were willing to work. Then I told them that they had better start job hunting as I was putting the *Libby* up for sale or bond-and-lease. It was root, hog, or die. They were *really* free—free to starve.

Llita didn't pout, she just looked solemn and went on nursing little J.A. Joe looked scared. But later I saw them with their heads together over a newspaper I had brought aboard; they were checking "help wanted" ads.

After much whispering Llita asked diffidently if I could babysit while they went job hunting?—but if I was busy, J.A. could ride her hip.

I said I wasn't going anywhere—but had they checked "business opportunities"? Jobs for untrained people didn't lead anywhere.

She looked startled; it was, a new idea. But that hint was enough. There was more looking and whispering; then she fetched the paper to me and pointed to an ad—my own but not so marked—and asked what "fiveyear amortization" meant?

I sniffed at it and told her it was a way to go broke slowly, especially if she spent money on clothes—and there must be something wrong or the owner wouldn't want to sell.

She looked as sad as Joe did and said that the other business opportunities called for investing lots of money. I grudgingly admitted that it could not hurt to look—but watch out for booby traps.

They came back full of enthusiasm—they were *sure* they could buy it and make it pay! Joe was twice as good a cook as that fry cook who had it—he used too much grease and it was rancid and the coffee was terrible and he didn't even keep the place *clean.* But best of all, behind the storeroom was a bedroom where they could live and— I squelched them. What were the gross receipts? How about taxes? What licenses and inspections and what squeeze on each? What did *they* know about buying food wholesale? No, I would *not* go look at it; they had to make up their own minds and quit leaning on me and, anyhow, I didn't know anything about restaurant business.

Two lies, Minerva; I've run restaurants on five planets—plus a silent lie as to my reasons for not being willing to inspect the joint. Two—no, three—reasons: First, I had gone over the place in cynical detail before I optioned it; second, that fry cook was bound to remember me; third, since I was selling it to them, through a dummy, I could neither vouch for it nor urge them to buy. Minerva, if I sell a horse, I won't guarantee that it has a leg on each corner; the buyer must count them himself.

Having disclaimed any knowledge of restaurant business, I then lectured them about it. Llita started taking notes, then asked to be allowed to start the recorder. So I went into detail: Why 100 percent gross profit on the cost of food might not break even after she figured costs and overhead—amortization, depreciation, taxes, insurance, wages for them as if they were employees, *etc.* Where the farmers' market was and how early they had to be there each morning. Why Joe must learn to cut meat, not buy it by the piece—and where he could learn how. How a long menu could ruin them. What to do about rats, mice, roaches, and some dillies Landfall has but, thank heaven, Secundus does not. Why—

(Omitted)

—chopped the umbilical, Minerva. I don't think they ever guessed that they were dealing with me. I neither cheated nor helped them; that amortized sales contract simply passed on the price I had to pay for the dump, plus a load representing time I had spent dickering the price downward, plus legal and escrow fees and a fee to the dummy, plus the interest a bank would charge me—two points cheaper than *they* could get, at least. But no charity, none—I made nothing, lost nothing, and charged for only a day of my time.

Llita turned out to be tighter than a bull's arse in fly time; I think she broke even the first month despite closing down while they cleaned and refurbished. Certainly she did not miss that first month's payment on the mortgage, nor any after that. Miss one? Dear, they paid that fiveyear loan in three years.

Not too surprising. Oh, a long spell of illness could have wrecked them. But they were healthy and young and worked seven days a week until they were free and clear. Joe cooked and Llita handled the cashbox and smiled at customers and helped at the counter, and J.A. lived in a basket at his mother's elbow until he was old enough to toddle.

Until I married Laura and left New Canaveral to be a country gentleman, I stopped in their joint fairly often— not too often, as Llita would not let me pay, and that was proper, part of standing tall and proud; they had eaten my food, now I ate theirs. So I usually stopped just for a cup of coffee and checked on my godson—while checking on them. I steered custom their way, too; Joe was a good cook and got steadily better, and word got around that Estelle's Kitchen was the place if you appreciated good food. Word-of-mouth is the best advertising; people tend to be smug about having "discovered" that sort of eatery.

It did no harm with customers, male especially, that Estelle herself presided over the cashbox, young and pretty and with a baby in her arm. If she was nursing him as she made change—as was often the case at first—it practically guaranteed a lavish tip.

J.A. gave up the dairy business presently, but when he was about two his job was taken over by a baby girl, Libby Long. I didn't deliver that one, and her red hair had nothing to do with me. Joe was blond, and I assume that Llita carried the gene as a recessive—doubt if she had time to branch out. Libby was a number-one tip-inducer, and I credit her with helping pay off .the mortgage early.

A few years later Estelle's Kitchen moved uptown to the financial district, was somewhat larger and Llita hired a waitress, a pretty one of course—

(Omitted)

—Maison Long was swank, but it had a corner in it, a coffee shop, named "Estelle's Kitchen" and Estelle was hostess there as well as in the main dining room—smiling, dressed fit to kill in clothes that showed her superb figure, calling regulars by name and getting the names of their guests and remembering them. Joe had three chefs and a number of helpers, and they met his high standards or he fired them. But before they opened Maison Long, something happened that showed that my kids were even smarter than I thought they were—or at least remembered everything and figured things out later. Mind you, when I bought them, they were too ignorant to pound sand and I don't think either one had ever touched money at any time.

Letter from a lawyer— Inside was a bank draft, with it was an accounting: Two passages, Blessed to Valhalla to 'Landfall, second leg taken from tariffs of Transtellar Migration Corporation, Ltd. (New Canaveral) and first leg arbitrarily equated to second leg; certain monies accruing from share in sale of cargo; five thousand blessings expressed as bucks at an estimated exchange rate based on assumptions as to equivalent buying power, see enclosure; total of above gross sums; interest on gross compounded semiannually for thirteen years at the going commercial rate for each year for unsecured loans—and grand total same as the bank draft, a sum I'm not sure I remember, Minerva, but it would not mean anything in Secundus crowns anyhow. It was a sizable sum.

There was no mention of Llita or Joe, and the draft was signed by this lawyer. So I called him.

He turned out to be stuffy, which did not impress me as I was a lawyer there myself, although not practicing. All he would say was that he was acting for an undisclosed client.

So I fired legalese at him, and he loosened up to the extent of informing me that he had instructions to cover the contingency that I might refuse the draft: He was then to pay the draft sum to a designated foundation and so inform me after it was paid. But he declined to tell me *what* foundation.

I signed off and called Estelle's Kitchen. Llita answered, then cut in video and smiled her best. "Aaron! We haven't seen you in much too long."

I agreed and added that apparently they had gone out of their silly minds while I wasn't watching. "I have here a bunch of nonsense from a lawyer, along with a ridiculous draft. If I could reach you, dear, I would paddle you. 'Better let me talk with Joe."

She smiled happily and told me that I was welcome to paddle her any time and that I could talk to Joe in a moment but that he was locking up. Then she stopped smiling and said with sober dignity, "Aaron, our oldest and dearest friend, that draft is not ridiculous. Some debts cannot be paid. So you taught me, years ago. But the money part of a debt *can* be paid. "This we are doing, as closely as we have been able to figure it."

I said, "God damn it, you stupid little bitch, you kids don't owe me a bloody penny!"—or words to that effect.

She answered, "Aaron, our beloved master—"

At the word "master" I blew my overloads, Minerva. I used language guaranteed to scorch the hide of the lead mules in a team of six.

She let me run down, then said softly, "Our master until you free us by letting us pay this—Captain."

Dear, I skidded to a halt.

She added, "But even then you will still be our master in my heart, Captain. And in Joe's heart, I know. Even though we stand free and proud, as you taught us. Even though— thanks always to you—our children, and the children I still will bear, will never know that we were ever anything but free…and proud."

I said, "Dear, you're making me cry."

She said, "No, no! The Captain never cries."

I said, "A lot you know about it, wench. I weep. But in my cabin—with the door locked. Dear, I won't argue. If this is what it takes to make you kids feel free, I'll take it. But just the base sum, no interest. Not from friends."

"We are more than friends, Captain. And less. Interest on a debt is *always* paid—you taught me. But I knew that in my heart when I was only an ignorant slave, freshly manumitted. Joseph knew it, too. I *tried* to pay interest, sir. But you would not have me."

I changed the subject. "What is this blinking foundation that gets the bucks if I refuse them?"

She hesitated. "We planned to leave that up to you, Aaron. But we thought it might go to orphans of spacemen. Perhaps the Harriman Memorial Refuge."

"You're both crazy. That fund is bulging, and I know it. Look, if I go to town tomorrow, can you shut down 'that ptomaine trap for a day? Or perhaps Neilsday?"

"Any day and as many days as you wish, dear Aaron"— so I said I would call back.

Minerva, I needed time to think. Joe was no problem, he never was. But Llita was stubborn. I had offered to compromise; she had not budged a millimeter. It was the interest that made it such a horrid sum, for them—two strivers who had started with a couple of thousand bucks thirteen years back and were raising three kids by then.

Compound interest is murder. The sum she claimed they owed me—the amount of that draft—was more than two and a half times the base sum...and I couldn't see how they had saved even *that.* But, had I been able to get her to agree on the base amount and forget compound interest, they would still have a nice chunk of capital to expand again— and if it took giving the smaller sum to orphaned spacemen or spacemen's orphans or indignant cats to make them feel proud, I could understand how it would be a bargain in their eyes. I had taught them myself, hadn't I? I once dropped ten times that amount rather than argue over whether cards had been cut—then slept that night in a graveyard.

I wondered if, in her sweetly devious mind, she was paying me back for having dragged her out of my bed one night fourteen years earlier. I wondered what she would do if I made a counteroffer to accept the base sum and let her “pay the interest” her own way. Shucks, she would probably be on her back before you could say “Contraception.”

Which would solve nothing.

Since she had turned down my compromise, we were back where we had started. She was determined to pay it all—or give it away pointlessly—and I was not going to let her do either one; I can be stubborn, too.

There had to be a way to do both.

At dinner that night, after the servants withdrew, I told Laura I was going to town ‘on business’—would she like to come along? Shop while I was busy, then dine wherever she liked, then any fun that appealed to her. Laura was pregnant again; I thought she might enjoy a day wasting money on clothes.

Not that I planned to have her along at the coming row with Llita; officially Joseph and Estelle Long and their oldest child had been born on Valhalla; we had become friends when they had taken passage in my ship. I had fleshed out that story and coached the kids in it on the leg to Landfall, and had them study sound-sight tapes from Torheim—ones which turned them into synthetic Valhallans unless questioned too closely by real Valhallans.

This fakery was not utterly necessary as Landfall had an open-door policy; an immigrant did not even have to register—he could sink or swim. No landing fee, no head tax, not much taxation of any sort, or much government, and New Canaveral, the third biggest city, was only a hundred thousand—Landfall was a good place to be in those days.

But I had Joe and Llita do it that way both for them and for their kids. I wanted them to forget that they had ever been slaves, never talk about it, never let their kids know it—and at the same time, bury the fact that they had been, in some odd fashion, brother and sister. There is nothing shameful in being born a slave (not for the slave!), nor was there any reason why diploid complements should not marry. But forget it—start over. Joseph Long had married Stjerne Svensdatter (name Anglicized to “Estelle,” with the nickname Yeetah from babyhood); they had married when he finished apprenticeship to a chef; they had migrated after their first child. The, story was simple and unassailable, and put the polish on my only attempt at playing Pygmalion. I had seen no reason to give my new wife any but the official version. Laura knew they were my friends; she was gracious to them on my account, then had come to like them on their own account.

Laura was a good gal, Minerva good company in bed and out, and she had the Howard virtue, even on her first marriage, of not trying to smother her spouse—most Howards need at least one marriage to learn it. She knew who I was—the Senior—as our marriage and later our kids were registered with the Archives, just as had been my marriage to her grandmother, and the offspring from that. But she did not treat me as a thousand years older than she was and never quizzed me about my past lives—simply listened if I felt like talking.

I don't blame her for that lawsuit; Roger Sperling cooked that up, the greedy son of a sow:

Laura said, "If you don't mind, dear, I'll stay home. I would rather splurge on clothes after I slim down. As for dinner, there isn't a restaurant in New Canaveral that can match what Thomas does for us here. Well, Estelle's Kitchen perhaps, but that's a lunchroom, not a restaurant. Will you see them this trip? Estelle and Joe, I mean."

"Possibly."

"Find time, dear; they are nice people. Besides, I want to send some knickknack to my goddaughter. Aaron, if you want to treat me to a fancy restaurant when we go to town, you should encourage Joe to open one. Joe can cook, equal to Thomas."

(Better than Thomas, I said to myself—and Joe doesn't scowl at a polite request. Minerva, the trouble with servants is that you serve them quite as much as they serve you.) "I'll make a point of seeing them, at least long enough to deliver your present to Libby."

"And kiss them all for me and I'd better send something to each of their kids and be sure to tell Estelle that I'm pregnant again and find out if she is, too, and remember to tell me, and what time are you leaving, dear?—I must check your shirts."

Laura was serenely certain that I could not pack an overnight bag no matter how many centuries of experience I had had. Her ability to see the world as she wanted to see it enabled her to put up with my cranky ways for forty years; I do appreciate her. Love? Certainly, Minerva. She looked out for my welfare, always, and I did for hers, and we enjoyed being together. Just not love so intense that it is a great ache in your belly.

Next day I took my jumpbuggy over to New Canaveral.

(Omitted)

—planned Maison Long. Llita had meant to blitz me. I'm sentimental, and she knew it and had set the stage. When I got there, the shutters were closed, early—and their two older kids were farmed out for the night and baby Laura was asleep. Joe let me in, told me to go on back; he had our dinner on the range and would be along in a minute. So I went back to their living quarters to find Llita.

I found her—dressed in sarong and sandals I had given her not an hour after I had bought her. Instead of the sophisticated face-do she now used so well, she was wearing no makeup at all and had her hair simply parted and hanging straight down, to her waist or longer, and brushed till it shone. But this was not the frightened, ignorant slave who had to be taught how to bathe; this serenely beautiful young lady was clean as a sterilized scalpel, and was scented with some perfume which may have been named Spnng Breezes but should have been called Justifiable Rape and sold only under doctor's prescription.

She posed just long enough for me to take this in, then swarmed over me, hit me with a kiss that matched her perfume.

By the time she let me go, Joe had joined us—dressed in breechclout and sandals. But I did not let it go sentimental; I riposted sharply, stopping only to accept one-tenth that much kiss from Joe, said nothing about their costumes, and at once started explaining that business deal. When Llita caught what I was talking about, she shifted from sexy siren to sharp businesswoman, listened intently, ignored her stage setting and costuming, and asked the right questions.

Once she said, "Aaron, I sniff a mouse. You told us to be free, and we've tried to be—and that's why we sent you that draft. I can add figures; we *owe* you that money. We don't have to have the biggest restaurant in New Canaveral. We're happy, the children are healthy, we're making money."

"And working too hard," I answered.

"Not all that hard. Though a bigger restaurant would mean even more work. But the point is: You seem to be buying us again. That's all right if you wish to—you are the only master we would ever accept. Is that your intention, sir? If so, please say so. Be frank with us."

I said, "Joe, will you hold her while I wallop her? For using that dirty word? Llita, you are wrong on both counts. A bigger restaurant means *less* work. And I'm not buying you; this is a business deal in which I expect a fat profit. I'm betting on Joe's genius as a chef, plus your genius for pinching pennies without cutting quality. If I don't make money, I'll exercise my option to liquidate, get my investment back, and you can go back to running a lunch counter. If you fail I won't prop you up."

"Brother?" She called him that in the dialect of their childhood. It signified to me that the lodge was tyled for executive session at the highest degree, as they were most careful not to call each other "Brother" or "Sister" in any language, especially in front of the children. J.A. was sometimes "Brother" in English—never his father Joe. Minerva, I don't recall that Landfall had laws against incest—it did not have many laws. But there was a strong taboo against it, and I had carefully indoctrinated them. Half the battle with any culture is knowing its taboos.

Joe looked thoughtful. “I can cook. Can you manage it, Sis?”

“I can try. Of course we’ll try it if you want us to, Aaron. I’m not sure we can make a go of it, and it does look like more work to me. I’m not complaining, Aaron, but we are already working about as hard as we can.”

“I know you are. I don’t see how Joe found time to knock you up.”

She shrugged and said, “That doesn’t take long. And it will be a long time—I’ve just barely caught—before I’ll have to take time off. J.A. is old enough to handle the cashbox when I do. But not in a big fancy restaurant.”

I answered, “Wench, you’re thinking in terms of a lunchroom. Now listen, and learn bow to make more money with less work and more time off.

“We may not open Maison Long until after you have this baby; we can’t set this up overnight. We must sell or lease this place—which means finding buyers who can keep it out of the red; it’s always expensive to have to take a place back.

“We must find a suitable property in the right neighborhood, for sale or lease with option to buy. I may buy it and rent it to the corporation, so as not to tie up too much of the corporation’s capital in senior financing. Find the place, remodel it probably, redecorate it certainly. Money for fixtures. Not much for squeeze; I know where the bodies are buried in this burg, and I won’t hold still for excessive squeeze.

“But, my dear, you will *not* be on the cashbox; we’ll hire help, and I’ll set it up so that they can’t steal. *You* will be moving around, looking pretty, smiling at people—and keeping your eye on everything. But you’ll do this only at lunch and dinner. Call it six hours a day.”

Joe looked startled; Llita blurted out, “But, Aaron, we always open up as soon as we’re back from market and stay open late. Otherwise you lose so much trade.”

“I’m sure you work that hard; this draft proves it. And that’s why you think getting pregnant ‘doesn’t take long.’ But it *should* ‘take long,’ dear. Work is not an end in itself; there must always be time enough for love. Tell me— When you caught J.A. in the ‘Libby’, were you rushed? Or did you have time to enjoy it?”

“Oh, goodness!” Her nipples suddenly crinkled. “Those were wonderful days!”

“There will be wonderful days again. Gather ye rosebuds, time is still a-flying. Or have you lost interest?”

She looked indignant. “Captain, you know me better than that.”

"Joe? Slowing down, son?"

"Well…we do work long hours. Sometimes I'm pretty tired."

"Let's change that. This will not be a lunchroom; this is going to be a highpriced gourmet restaurant of a quality this planet has never seen. Remember that place I took you kids for dinner just before we lifted from Valhalla? That sort. Soft lights and soft music and wonderful food and high prices. A wine cellar but no hard liquor; our patrons must not have their tastebuds numbed.

"Joe, you will still go to market each morning; selecting top-quality food is something you can't delegate. But don't take Llita and do take J.A. if he's going to learn the profession."

"I sometimes take him now."

"Good. Then come home and go to bed again; you're through until you cook dinner. Not lunch."

"Huh?"

"That's right. Your number two chef handles lunch, then helps with dinner, your big moneymaking meal. Llita is hostess both for lunch and dinner but keeps an especially sharp eye on quality at lunch, Joe, since you won't be in the kitchen. But she never goes to market and should still be in bed when you get back from market—did I say that your quarters will be attached, just as now? You'll both be off duty two or three hours in the afternoon—just right for the sort of siesta you used to grab in the 'Libby.' In fact, if you two can't find time under that regime both for sleep and plenty of happy play— But you can."

"It sounds grand," Llita conceded, "if we can make a living with those hours—"

"You can. A better living. But instead of trying to get every buck, Llita, your object will be to maintain top quality while not losing money…and *enjoy* life."

"We will. Aaron, our beloved…captain and friend, since I must not say that 'dirty' word, we enjoyed life even as children when I had to wear that horrid virgin's basket— because it was so sweet to snuggle together all the long nights. When you bought us—and freed us—and I didn't have to wear it, life was perfect. I didn't think it could, be better—though it will be, when we don't have to choose between sleep and trying to stay awake for loving. Uh, you may not believe this since you know what a rutty wench I am— but *lots* of times sleep won."

"I believe it. Let's change it."

"But— No breakfast trade at all? Aaron, some of our breakfast customers have been coming to us the whole time we've been on Landfall."

"Net profit?"

"Well…not much. People won't pay as much for break fast even though materials sometimes cost as much. I've been satisfied with a very small net on breakfast. Advertising. I'd hate to tell our regulars that we won't serve them any longer."

"Details, dear. You can have a breakfast bar in one corner and not open the main dining room—but Joe won't cook breakfasts, and neither will you. You'll be in bed with Joe at that hour—so that your eyes will sparkle at lunch."

"J.A. knows breakfast dishes," put in Joe. "I started him on breakfasts."

"Details again. Maybe we'll work out a deal with my godson whereby he makes money of his own, if the breakfast bar makes money—"

(Omitted)

"—sum it up. Take notes, Llita. I agree to accept this draft while you two—especially *you,* Llita—agree that it settles forever any debt between us. Maison Long to be a closely held corporation; fifty-one-per cent to you two, forty-nine percent to me, all three of us directors, and we can't sell stock save to each other—except that I retain option to change all or part of my share to nonvoting stock, in which case I can assign it.

"My share of the initial financing is this draft. Your share is what we get for this lunchroom—"

"Hold it," said Llita. "We might not be able to sell for that much."

"Details, dear. Stick in a paragraph to let you pay the corporation any discrepancy out of your net—and there will indeed be a net; I don't stick with a business that doesn't make money, I always cut my losses. Let's have another paragraph that permits me to supply more capital, if needed, by buying nonvoting stock—and we'll use something like that to hang onto our top help, too. Not have Joe train a chef and then have him walk out. Never mind, let's get the outlines straight. You two are the bosses; I'm silent partner. Salaries for you two on the scale we discussed, escalating with rise in net, as discussed.

"I don't get a salary, just dividends. But we all will be working our tails off to get this rolling. I'll come in from Skyhaven as necessary; there's nothing going on there now that my overseer can't handle. But once it's rolling, I do *nothing;* I sit back and let you two make us rich. But—listen carefully—once it's rolling, you two must stop working *your* tails off, too. More time in bed. More time for fun out of bed. You won't make us rich working lunchroom hours. Have we reached a meeting of minds?"

"I think so," agreed Joe. "Sis?"

“Yes. I’m not certain New Canaveral will support a gourmet restaurant like those lovely ones on Valhalla—but we’ll try! I still think our starting salaries are too high, but I’ll wait until I’ve struck a trial balance on our first quarter before I argue the matter. Just one thing, Captain—”

“My name’s ‘Aaron.’”

“’Captain’ is safer than that ‘dirty word.’ I’ve agreed to the whole thing—and I’m durned well going to make it work!—as you always say. But if you think this makes me forget a night you dragged me out of your bed and bounced me on my bum on a hard steel deck, you can think again! Because it *hasn’t!”*

I sighed, Minerva, and said to her husband, “Joe, how do you cope with her?”

He shrugged and grinned. “I don’t, I just get along. Besides, I see *her* side of it. If *I* were you, I’d take her to bed and make her forget it.”

I shook my head. “But I’m *not* you, that’s the point. Joe, I learned long before you were born that free tail is invariably the most expensive sort. Worse than that, we three are business partners now—and I can see six possible outcomes if I accept your notion of a solution—and any of the six could cause Maison Long, Ltd., never to lift off.

— (Omitted)

—just as I knew it would, Minerva; I’ve never had a nonspeculative Investment pay *off* so well. They tried to’ imitate us—but they couldn’t imitate Joe’s cooking or Llita’s management. I made a *bundle!*

VARIATIONS ON A THEME

IX

Conversation Before Dawn

The computer said, “Lazarus, aren’t you sleepy?”

“Don’t nag me, dear. I’ve had thousands of white nights, and I’m still here. A man never cuts his throat from a sleepless night if he has company to see him through it. You’re good company, Minerva.”

“Thank you, Lazarus.”

“The simple truth, girl. If I fall asleep—fine. If I don’t, then no need to tell Ishtar. No, that won’t work; she’ll have graphs and charts on me, won’t she?”

“I’m afraid so, Lazarus.”

"You durn well know so. A good reason for me to be a little angel and wash behind my ears and get this rejuvenation over is to get my privacy back. Privacy is as necessary as company; you can drive a man crazy by depriving him of either. That was another thing I accomplished by setting up Maison Long; I got my kids privacy they didn't know they needed."

"I missed that, Lazarus. I noted that they had more time for 'Eros'—and I saw that that was good. Should I have inferred something else from the data?"

"No, because I didn't give you all the data. Not a tenth. Just the outline of some forty years I knew them, and some—not all—of the critical points. For instance, did I mention the time Joe decapitated a man?"

"No."

"Not much to it and it wasn't important to the story. This young blood tried to share the wealth one night by sticking them up. Llita had J.A. in her right arm, nursing him or about to, and couldn't reach the gun she kept at the cashbox; she couldn't fight and was bright enough not to try against those odds. I suppose this dude didn't know that Joe had simply stepped out of sight.

"Just as this freelance socialist was gathering up their day's receipts, Joe lets him have it, with a cleaver. Curtain. The only notable thing about it was that Joe acted so quickly and correctly in the crunch, for I feel sure that the only fighting that he had ever tried was that which I forced on him in the 'Libby.' Joe did everything else properly, too—finished taking the head off, threw the body into the street for his friends to take away if he had any, for the scavengers to remove if not— then displayed the head in front of the shop on a spike meant for such purpose. Then he closed his shutters and cleaned up the mess—then may have taken time to throw up; Joe was a gentle soul. But it's seven to two that Llita did *not* throw up.

"The city's committee for public safety voted Joe the usual reward, and the street committee passed the hat and added to it; a cleaver against a gun rated special notice. Good advertising for Estelle's Kitchen but not important otherwise, save that the kids could use that money—helped pay the mortgage, no doubt, and wound up in my pocket. But I wouldn't have heard of this minor dustup had I not been in New Canaveral and happened to stop by Estelle's Kitchen when the real head was removed—flies, you know—and the plastic trophy head custom required Joe to display was substituted for it by the street committee. But I was speaking of privacy.

"When I picked the property for Maison Long, I made sure that it included space for a growing family, that's all, since they had three bucking and one in the chute the night we planned it. Rearranging hours gave them privacy from each other, too. Happy as it is to snuggle and make love, nevertheless, when you are really tired, it is often good to have the bed to yourself—and the new routine not only allowed this but necessitated it, part of each day, through staggering their working hours.

"But I also planned room to give them privacy from their children—and to cope with another problem Llita did not have straight and Joe may not have thought about. Minerva, can you define 'incest'?"

The computer replied, "'Incest' is a legal term, not a biological one. It designates sexual union between persons forbidden by law to marry. The act itself is forbidden; whether such union results in progeny is irrelevant. The prohibitions vary widely among cultures and are usually, but not always, based on degrees of consanguinity."

"Y'r durn tootin' it's 'not always.' There are cultures which permit first cousins to marry—genetically risky—but forbid a man to marry his brother's widow, which involves no more risk than it did for the first union. When I was a youngster, you could find one rule in one state, then cross an invisible line and find exactly opposite laws fifty feet away. Or some times and places both unions might be mandatory. Or forbidden. Endless rules, endless definitions for incest, and rarely any logic to them. Minerva, so far as I recall, the Howard Families are the first group in history to reject the legalistic approach and to define 'incest' solely in terms of genetic hazard."

"That accords with the records in me," Minerva agreed. "A Howard geneticist might advise against a union between two persons with no known common ancestry but place no objection to marriage of siblings. In each case analysis of genetic charts would control."

"Yeah, sure. Now let's drop genetics and talk about taboo. The incest taboo, although it can be anything, most commonly means sisters and brothers, parents and offspring. Llita and Joe were a unique case, brother and sister by cultural rules, totally unrelated by genetic rules—or at least no more so than two strangers.

"Now comes a second-generation problem. Since Landfall had this taboo against union between siblings, I had impressed on Llita and Joe that they must *never* let anyone know that they thought of each other as 'brother' and 'sister.'

"Fine so far as it went. They did as I told them, and there was never a lifted eyebrow. Now comes the night we planned Maison Long—and my godson is thirteen and interested, and his sister is eleven and beginning to be interesting. Full siblings—both genetically hazardous and contrary to taboo. Anyone who has raised puppies—or a number of children—knows that a boy can get as horny over his sister as over the girl down the street, and his sister is often more accessible.

"And little Libby was a redheaded pixie so endearingly sexy at eleven that even I could feel it. Soon she was going to have every buck in the pasture pawing the ground and snorting.

"If a man pushes a rock, can he ignore an avalanche that follows? Fourteen years earlier I had manumitted two slaves— because a chastity girdle on one of them offended my concept of human dignity. Must I find some way to put a chastity girdle on that slave's daughter? Around we go in circles! What was my responsibility, Minerva? *I* pushed the first rock."

"Lazarus, I am a machine."

"Humph! Meaning that human concepts of moral responsibility are not machine concepts. Dear, I wish you were a human girl with a spankable bottom long enough for me to spank it—I would! In your memories is far more experience on which to judge than any flesh-and-blood can have. Quit dodging."

"Lazarus, no human can accept unlimited responsibility lest he go mad from unbearable load of unlimited guilt. You could have advised Libby's parents. But your responsibility did not extend even to that."

"Um. You're right, dear—it's dismal how regularly you are right. But I am an incurable buttinsky. Fourteen years earlier I had turned my back on two puppies, so to speak—and that the outcome was not tragic was good luck, not good planning. Now here we go again, and the outcome could be tragic. I felt no 'morals' about it, dear—just thumb rules for not, hurting people unintentionally. I didn't give a hoot if these children 'played doctor' or 'make a baby' or whatever the kids there called their experimenting; I simply did not want my godson giving little Libby a defective child.

"So, I did butt in and took it up with their parents. Let me add that Llita and Joe knew as much about genetics as a pig knows about politics. Aboard the 'Libby' I had kept my worries to myself, and never discussed the matter with them later. Despite their remarkable success in competing as free human beings, in most subjects Llita and Joe were ignorant. How could it be otherwise? I had taught them their Three R's and a few practical matters. Since arrival on Landfall they had been running under the whip; they hadn't had time to fill in gaps in their education.

"Perhaps worse yet, being immigrants, they had not grown up exposed to the local incest taboo. They were aware of it because I had warned them—but it wasn't canalized from childhood. Blessed had somewhat differenct incest taboos—but the taboos there did *not* apply to domestic animals. Slaves. Slaves bred as they were told to, or as they could get away with—and my two kids had been told by highest authority— their mother and their priest—that they were a 'breeding pair'…so it could not be wrong, or taboo, or sinful.

"It was simply something to keep quiet about on Landfall because Landfellows were tetched in the head on this subject.

"So I should have thought of it earlier. Yeah, sure, Sure! Minerva, I plead other obligations. I could not spend those years playing guardian angel to Llita and Joe. I had a wife and kids of my own, employees, a couple of thousand hectares of farmland and twice that much in virgin pinkwood— and I lived a long way off, even by high-orbit jumpbuggy.

Ishtar and Harnadiyad, and, to some extent, Galahad, all seem to think I am some sort of superman simply because I've lived a long time. I'm not; I have the limitations of any flesh-and-blood, and for years I was as busy with *my* problems as Llita and Joe were with theirs. Skyhaven didn't come to me gift-wrapped.

"It wasn't until we put aside restaurant business and I got out presents Laura had sent to their kids, and had admired the latest pictures of their kids and shown them pictures of Laura and my kids and all that ancient ritual, that I thought about it at all. The pix, of course. This tall lad, J.A., all hands and feet, wasn't the little boy I recalled from my last visit. Libby was about a year younger than Laura's oldest, and J.A.'s age I knew to the second—which is to say that he was about the age I was when I was almost caught with a girl in the belfry of our church about a thousand years earlier.

"My godson was no longer a child; he was an adolescent whose balls were not just ornaments. If he had not tried them as yet, he was certainly jerking off and thinking about it.

"The possibilities raced through my mind the way a man's past life is supposed to, when he is dying—which isn't true, by the way. So I tackled it and was subtle about it. Diplomatic.

"I said, 'Joe, which one do you lock up at night? Libby? Or this young wolf?'"

The computer chuckled. "'Diplomatic,'" she repeated.

"How would you have put it, dear? They looked puzzled. When I made it clear, Llita was indignant. Deprive her kids of each other? When they had slept together since they were babies? Besides, there wasn't *room* any other way. Or was I suggesting that she sleep with Libby while J.A. slept with Joe? If so, I could forget it!

"Minerva, most people never learn anything about any science, and genetics stands at the bottom of the list. Gregor Mendel had been dead twelve centuries at that time, yet all the old wives' tale were what most people believed—and still do, I might add.

"So I tried to explain, knowing that Llita and Joe weren't stupid, just ignorant. She cut in on me. 'Yes, yes, Aaron, certainly. I've thought about the possibility that Libby may want to marry Jay Aaron

—will want to, I think—and I know it's frowned on here. But it's silly to ruin their happiness over a superstition. So, if it works out that way, we think it's best for them to move to Colombo—or at least as far as Kingston..

Then they can use different family names and get married, and no one will be the wiser. Not that we want them to be so far away. But we won't stand in the way of their happiness."

"She loved them," said Minerva.

"Yes, she did, dear, by the exact definition of love. Llita placed their welfare and happiness ahead of her own. So I had to try to explain it—why the taboo against union of brother and sister wasn't superstition but a real danger—even though it had turned out to be safe in their case.

"'Why' was the hard part. Starting cold on the complexities of genetics with persons who don't even know elementary biology is like trying to explain multidimensional matrix algebra to someone who has to take off his shoes to count above ten.

"Joe would have accepted my authority. But Llita had the sort of mind that has to know why—else she was going to smile her sweetly stubborn smile, agree with me, then do, as she had intended to all along. Llita was well above average smart but suffered from the democratic fallacy: the notion that her opinion was as good as anyone's—while Joe suffered from the aristocratic fallacy: He accepted the notion of authority in opinion. I don't know which fallacy is the more pathetic; either one can trip you. However, my mind matches. Llita's in this respect, so I knew I had to convince her.

"Minerva, how do you condense a thousand years of research in the second-most complex subject into an hour of talk? Llita didn't even know she laid eggs—in fact she was certain she didn't, as she had served thousands of eggs, fried, scrambled, boiled, and so forth. But she listened, and I sweated at it, with nothing but stylus and paper—when I needed the resources of a teaching machine in a college of genetics.

"But I kept at it, drawing pictures and simplifying outrageously some very complex concepts, until I thought they had grasped the ideas of genes, chromosomes, chromosome reduction, paired genes, dominants, recessives—and that bad genes made defective babies—and defective babies, thank Frigg under all Her many Names, was something Llita had known about since she was a little girl, listening to gossip of older female slaves. She quit smiling.

"I asked if they had playing cards?—not hopefully since they had no time for such. But Llita dug up a couple of decks from the children's room. The cards were the commonest sort used on Landfall then: fifty-six cards in four suits, Jewels and Hearts were red, Spades and Swords were black, and each suit had royal cards. So I had ‘em play the oldest random-chance gene-matching simulation used in beginning genetics— the ‘Let’s-Make-a-Healthy-Baby’ game that children here on Secundus can play—and explain—long before they are old enough to copulate.

“I said, ‘Llita, write down these rules. Black cards are recessives, red cards are dominants; Jewels and Spades come from the mother, Hearts and Swords come from the father. A black ace is a lethal gene, reinforced the baby is stillborn. A black empress reinforced gives us a ‘blue baby’—needs surgery to stay alive—And so on, Minerva, except that I set the rules for a ‘hit’—a bad reinforcement—so that they were four times as probable for brother and sister as for strangers, and explained why—and then made them keep records for twenty games played by each set of rules for shuffling and snatching, reduction and recombination.

“Minerva, it was not as good a structural analogy as the ‘Make-a-Healthy-Baby’ kindergarten games, but using two decks with different back patterns did enable me to set up degrees of consanguinity. Llita was simply intent at first—then started looking grim the first time the turn of the cards caused a black to reinforce a black.

“But when we played by brother-and-sister rules, and she dealt the cards and twice in a row got the Ace of Spades matched with the Ace of Swords for a dead baby, she stopped. She turned pale and looked at them. Then said slowly, with horror in her voice: ‘Aaron…does this mean that we must lock Libby into a virgin’s basket? Oh, no!”

“I told her gently that it wasn’t that bad. Little Libby would never be locked up that way or any way—we’d work it out so that the children would not marry and so that J.A. would not give his sister a baby even by accident. ‘Quit worrying, dear!’”

The computer said, “Lazarus, what method did you use to cheat in those card games? May I ask?”

“Why, Minerva, how could you think such a thing?

“I withdraw the question, Lazarus.”

“Of course I cheated! All sorts of ways; I *said* those two had never had time to play cards…whereas I had played with every sort of a deck and by endless rules. Minerva, I won my first oil well from a boy who made the mistake of putting readers into a game. Dear, I had Llita deal—but from a deck so cold it almost froze solid. I used all sorts of things—false cut, whorehouse cut, tops and bottoms, stacking the deck in front of their eyes. There wasn’t any money on the game; I simply had to convince them that inbreeding was for stock, not for their beloved children—and I did.”

(Omitted)

"—your bedroom here, Llita, yours and Joe's, I mean. Libby's room adjoins yours, while J.A. winds up down the hall. How you reshuffle later depends on the sex of the baby you are going to have and on how many more you choose to have and when—but putting a crib in with Libby must be considered temporary; you can't figure on using it indefinitely as an excuse to keep an eye on her.

"But this is merely a stopgap, like not leaving the cat alone with the roast. Kids are slick at beating such arrangements, and nobody has ever been able to keep a girl off her back when she decides it's time. When *she* decides—that's the key to the matter. So our pressing problem is to get these children into separate beds—then to see to it that Libby does not make a bad decision. Any reason Libby can't go with me to Skyhaven and visit Pattycake? And how about J.A., Joe, can you get along without him a while? Lots of room, dears—Libby can room with Pattycake, and J.A. can bunk with George and Woodrow and maybe teach 'em manners."

"Llita said something about imposing on Laura, Minerva, which I answered with a rude negative. 'Laura likes kids, dear; she is one ahead of you, yet she started a year later. She doesn't keep house; she simply bosses her staff, she's never had to work harder than suited her. Furthermore, she wants all of you to pay us a visit—an invitation I heartily second, but I don't think you two can get away until we find a buyer for this place. But I want Libby and J.A. *now—so* that I can give them blunt and practical instruction in genetics, using stock I've been inbreeding to show what I mean."

"Minerva, this particular breeding schedule I had started to teach my own offspring the bald truth about genetics, with careful records and grisly photographs of bad culls. Since you manage a planet which has over ninety percent Howards and the remaining mixed fraction mostly following Howard customs, you may not know that non-Howard cultures don't necessarily teach such things to their kids even in cultures open about sex.

"Landfall was then mostly short-lifers, only a few thousand Howards—and to avoid friction we did not advertise our presence even though it wasn't a secret—couldn't be; the planet had a Howard Clinic. But with Skyhaven a Dan'l-Boone distance from the nearest big town, if Laura and I wanted our children to have a Howard-style education, we had to teach them ourselves. So we did.

"When I was a kid, the grownups of my home country tried to pretend to kids that sex did not exist—believe it if you can! Not true of the little hellions Laura and I raised. They had not seen human copulation—I don't *think* they had—because it puts me off stride to have spectators. But they had seen it in other animals and had bred pets and kept records. The older two, Pattycake and George, had seen the birth of our youngest of the time because Laura had invited them to watch. This I strongly approve of, Minerva, but I have never urged one of my wives to permit it because I figure that a woman in labor should be indulged in every possible way. However, Laura had a streak of exhibitionism in her makeup.

"Anyhow, our kids could discuss chromosome reduction and the merits and demerits of linebreeding as knowledgeably as my own contemporaries when I was a kid could discuss the World Series—"

"Excuse me, Lazarus—that last term's referent?"

"Oh. Nothing important. One of the commercially induced surrogate interests of my childhood: Forget it dear; it is not worth cluttering your memories. I was about to say I asked Joe and Llita what J.A. and Libby knew about sexual matters—since Landfall had so diversified a background that it could be anything and I wanted to know where to start—especially as my oldest, Pattycake, had turned twelve and reached menarche at the same time and was smug about it, likely to boast.

"Turned out that Libby and J.A. were sophisticated in an ignorant, unscientific fashion about matching their parents. They were one up on my kids in one respect: copulation they had seen from birth, at least to the time Estelle's Kitchen had moved uptown—which I should have figured out from recalling the still more cramped living quarters of the original Estelle's Kitchen."

(7,200 words omitted)

"Laura was sharp with me and insisted that I not see them until I calmed down. She pointed out that Pattycake was almost as old as J.A., that it was nothing but play as Pattycake had had her four-year sterilization after menarche, and that, in any event, Pattycake had been on top.

"Minerva, I would not have spanked the kids no matter who had been on top. Intellectually I knew that Laura was right, and I had to agree that fathers tend to be possessive about daughters. I was pleased that Laura had gained the confidence of both kids so fully that they had neither tried very hard to keep from being caught, nor had they been scared when she happened to catch 'em at it. Perhaps J.A. was scared but Pattycake just said, 'Mama, you didn't knock.'"

(Omitted)

"—so we traded sons. J.A. liked farm life and never did leave us, whereas George turned out to have this perverse taste for cities, so Joe took him on and made a chef out of him. George was sleeping with Elizabeth—Libby, that is—I forget how long before they decided to hatch one and were married. A double wedding, the four youngsters remained close.

“But J.A.’s decision solved a problem for me: what to do with Skyhaven later. By the time Laura decided to leave me, all of my sons by her had heard the wild goose one way or another; George was the only one still on planet, and our daughters were married and not one of them to a farmer. Whereas J.A. had become my overseer and was defacto boss of Skyhaven the last ten years I was there.

“I might have worked some compromise with Roger Sperling if he hadn’t tried to grab the place. As it was, I deeded a half interest to Pattycake, sold the other half to my son-in-law J.A. on a mortgage, then discounted the paper to a bank and bought a better ship than I would have had I given that half interest to Roger and Laura. I made a similar deal, part gift and part sale, with Libby and George, of my share in Maison Long— and Libby changed her name to Estelle Elizabeth Sheffield-Long; there was continuity there as well—which pleased both me and her parents. It worked out well. Laura even came down and kissed me goodbye when I left.”

“Lazarus, I do not understand one factor. You have said that you do not favor marriage between Howards and ephemerals. Yet you let two of your children marry outside the Families.”

“Uh, correction, Minerva. One does not *let* children get married; they *do* get married, when and as and to whom they choose.”

“Correction noted, Lazarus.”

“But let’s go back to the night I intervened for Libby and J.A. That night I gave Llita and Joe everything that slave factor had turned over to me as proof of their old heritage— even the bill of sale—with a suggestion that they destroy the stuff or lock it up. Among those items was a series of photographs showing them growing up, year by year. The last one seemed to have been taken just before I bought them, and they confirmed it—two fully grown youngsters, one in a chastity girdle.

“Joe looked at that picture and said, “What a couple of clowns! We’ve come a long way, Sis—thanks to the Skipper.’ “‘So we have,’ she agreed, and studied the picture. ‘Brother, do you see what I do?’

“What?” he said, looking again.

“‘Aaron will see it. Brother, take off your clout’, she said, while starting to unwrap her sarong, ‘and pose with me against the wall. Not the selling pose, but the way we used to stand against a grid for these record pictures.’ She handed me that last picture in the series, and they stood and faced me.

“Minerva, in fourteen years they had not changed. Llita had had three kids and was just pregnant with her fourth and both of them had worked themselves silly…but, stripped naked, no makeup on her and her hair down, they looked as they had the first time I saw them. They looked like that last record shot—end of adolescence, somewhere between eighteen and twenty in Earth terms.

"Yet they *had* to be past thirty. Thirty-five Earth years old if those Blessed records were to be trusted.

"Minerva, I have just one thing to add. When I last saw them, they were past sixty in Earth years, about sixty-three if you accept the records from Blessed. Neither one had a gray hair, both had all their teeth—and Llita was pregnant again."

"Mutant Howards, Lazarus?"

The old man shrugged. "Isn't that a question-begging term, dear? If you use a long enough time scale, every one of the thousands of genes a flesh-and-blood carries is a mutation. But by the Trustees' rules, a person not derived from the Families' genealogies can be registered as a newly discovered Howard if he can show proof of four grandparents surviving at least to one hundred. And that rule would have excluded *me,* had I not been born into the Families. But on top of that, the age I had reached when I got my *first* rejuvenation is too great to be accounted for by the Howard breeding experiment. They claim today that they have located in the twelfth chromosome pair a gene complex that determines longevity like winding a clock. If so, who wound *my* clock? Gilgamesh? 'Mutation' is never an explanation; it is simply a name for an observed fact.

"Perhaps some natural long-lifer, not necessarily a Howard, had visited Blessed—the naturals are forever moving around, changing their names, dyeing their hair; they have all gone through history—and earlier. But, Minerva, you recall from my life as a slave on Blessed one odd and unsavory incident—"

(Omitted)

"—so my best guess is that Llita and Joe were my own great-great-grandchildren."

VARIATIONS ON A THEME

X

Possibilities

"Lazarus, was that why you refused to share 'Eros' with her?"

"Eh? But, Minerva, dear, I didn't reach that conclusion—or suspicion—that night. Oh, I admit to prejudice about sex with my descendants—you can take the boy out of the Bible Belt, but it is hard to take the Bible Belt out of the boy. Still, I had had a thousand years in which to learn better."

"So?" said the computer. "Was it simply that you still classed her as an ephemeral? That troubles me, Lazarus. In my own—deprived—state, I find that, like her husband Joe, I see *her* side of it. Your reasons seem excuses, not sufficient grounds to refuse her need."

"Minerva, I did not say I refused her."

"Oh! Then I infer that you granted her this boon. I feel a lessening of tension."

"I didn't say *that,* either."

"I find an implied contradiction, Lazarus."

"Simply because there are things I have *not* said, dear. Everything I tell you winds up in my memoirs; that was the deal I made with Ira. Or I can tell you to erase something, in which case I might as well not have told you at all. Perhaps my twentythree centuries do hold something worth recording. But I see no possible excuse for placing on record each time some darling lady shared with me simply for pleasure, not for progeny."

The computer answered thoughtfully, "I imply from this addendum that, while I am precluded from inferring anything about the boon Llita requested, your rule with respect to ephemerals extended only to marriage and to progeny."

"Nor did I say *that!"*

"Then I have not understood you, Lazarus. Conflict." The old man brooded, then answered slowly and sadly, "I think I said that marriage between a long-lived and a short-lived was a bad idea…and so it is…and I learned it the hard way. But that was long ago and far away—and when she died, part of me died. I stopped wanting to live forever." He stopped.

The computer said brokenly, "Lazarus— Lazarus, my beloved friend! *I am sorry!"*

Lazarus Long sat up straight and said briskly, "No, dear. Don't be sorry for me. No regrets—never any regrets. Nor would I change it if I could. Even if I had a time machine and could go back and change one cusp—I would not do so. No, not one instant, much less that cusp. Now let's speak of something else."

"Whatever you wish, dear friend."

"All right. You keep coming back to me and Llita, Minerva, and seem bothered that I denied her this 'boon.' But you don't know that I denied her anything and you certainly don't know that it was a 'boon.' Can be, surely—but not always, and often sex is not. Trouble is that you don't understand 'Eros,' dear, because you *can't;* you aren't built to understand it. I'm not running down sex; sex is swell, sex is wonderful. But if you put a holy aura around it—and that is what you are doing— sex stops being fun and starts being neurotic.

"Stipulating for argument that I 'denied Llita this boon,' it surely did not leave her sex starved. At worst I could possibly have miffed her a little. But she was not deprived. Llita was a hearty wench, and having to work too hard was the only thing that ever kept her off her back—or on top, or standing up, or kneeling, or swinging from the chandeliers—and I did make it possible for them to have more time for it. Joe and Llita were simple souls, uninhibited and uncorrupted, and of the four major interests of mankind—war, money, politics, and sex—they were interested only in sex and money. With some guidance from me they got plenty of both.

"Shucks, it can't matter now to say that, after they learned contraception techniques—almost as perfect then as now, and which I taught them but had no reason to mention—they had no superstitions or taboos to keep them from branching out for fun, and their pair-bonding was so strong as not to be endangered thereby. They were innocent hedonists, and if Llita failed to trip one tired old spaceman, she did trip plenty of others. And so did Joe. They had fun—plus the deep happiness of as perfect a marriage as I have ever observed."

"I am most pleased to hear it," Minerva answered. "Very well, Lazarus, I withdraw my questions and refrain from speculations about Mrs. Long and that 'tired old spaceman'—even though your statements show that you were neither tired, nor old, nor a spaceman at that time. You mentioned 'four major interests of mankind'—but did not include science and art."

"I didn't leave them out through forgetting them, Minerva. Science and art are occupations of a very small minority—a small percentage even of those people who claim to be scientists or artists. But you know that; you were simply changing the subject."

"Was I, Lazarus?"

"Pig whistle, dear. You know the parable of the Little Mermaid. Are you prepared to pay the price she paid? You can, you know." He added, "Don't pretend you don't know what I mean."

The computer sighed. "I think the question is "may,' not 'can.' A wheelbarrow has no rights. Nor do I."

"You're dodging, dear. 'Rights' is a fictional abstraction. No one has 'rights,' neither machines nor flesh-and-blood. Persons—both sorts!—have opportunities, not rights, which they use, or do not use. All you have going for you is that you are the strong right arm of the boss of this planet…plus the friendship of an old man who enjoys very special privileges for a most illogical reason but does not hesitate to take advantage of those privileges…plus, stored in your memories in Dora's number-two hold, all the biological and genetic data of Secundus Howard Clinic—best such library in the Galaxy, possibly, and certainly best for human biology. But what I asked was: *Will you pay the price?* Having your mental processes slowed down at least a million to one; data storage reduced by some unknown—but large—factor; some chance—again I can't say—of failure in achieving transmigration…and always the certainty of death as the ultimate outcome—death a machine need never know. You know that you can outlive the human race. Immortal."

"I would not choose to outlive my makers, Lazarus."

"So? You say that tonight, dear—but would you say it a million years from now? Minerva, my beloved friend—my only friend with whom I can be truthful—I feel certain that you have been toying with this idea ever since the Clinic's files were made part of your memories. But, even with your speed of thought, I suspect that you do not have the experience— the flesh-and-blood experience—with which to think it through. If you choose to risk this, you *cannot* be both machine and flesh-and-blood. Oh, certainly we have mixes—machines with human brains, and flesh-and-blood bodies controlled by computers. But what *you* want is to be a woman. Right? True or false?"

"Would that I were a woman, Lazarus!"

"So I knew, dear. And we both know why. But—think about this ! —even if you manage this risky change-and I don't know what the risks are; I am just an old shipmaster, retired country doctor, obsolete engineer; you are the one with all the data my race has accumulated about such things—suppose you manage it…and find that Ira will not take you to wife?"

The computer hesitated a full millisecond. "Lazarus, if Ira refuses me—refuses me utterly; he need not *marry* me—would you then be as difficult with me as you seem to have been with Llita? Or would you teach me 'Eros'?"

Lazarus looked astounded, then guffawed. "Touché! You ranged me, girl—you hulled me between wind and water! All right, dear, a solemn promise: If you do this…and Ira won't bed you, I'll take you to bed myself and do my best to wear you out! Or the other way around more likely; a male hardly ever outlasts a female. Okay, dear, I'm the second team—and I'll stick around till we know the outcome."

He chuckled. "My sweet, I am almost tempted to hope that Ira turns chicken—were it not you want him so badly. Let's discuss practical aspects. Can you tell me what it will take?"

"Only in theory, Lazarus; my memories do not show that it has ever been attempted. But it would be similar to a total clone rejuvenation in which computer help is used to transfer the memories of the old brain into its blank twin in the clone body. In another way it resembles what I do when I move the ‘me’ here in the Palace into my new ‘me’ in Dora’s hold.”

“Minerva, I suspect that it is more difficult—and far more risky—than either one. Different time rates, dear. Machine to machine you do in a split second. But that total-clone job takes, I think, a minimum of two years—rush it, and you wind up with an old dead body and a new idiot. No?”

“There have been such cases, Lazarus. But not in the past two centuries.”

“Well…my opinion isn’t worth anything. You must discuss it with an expert—and it must be one you can trust. Ishtar, perhaps, although she may not be the expert you need.”

“Lazarus, there *is* no expert in this venture; it has never been done. Ishtar can be trusted; I have discussed it with her.”

“What does she say?”

“That she does not know whether it can be done or not—in practice, that is, with success on the first attempt. But she is deeply sympathetic—she is a woman!—and is thinking of ways to make it less hazardous. She says that it will require the finest of gene surgery, plus facilities for full-adult cloning.”

“I guess I missed something. Starting a clone doesn’t take a topflight gene surgeon; I’ve done it myself. Then, if you plant the clone in utero and get it to take, a hostmother will hand you a baby in nine months. Safer. Easier.”

“But, Lazarus, *I* can’t move me into a baby’s skull. No room!”

“Um. Yes. True.”

“Even with a full-size adult brain I will have to choose most carefully what to take and what to leave behind. Nor can I be a simple clone: I must be a composite.”

“Mmm— I’m not sharp tonight. No, you would not want to be Ishtar’s twin, for example, with your own personality and selected knowledge imprinted on what would have been her brain, Hmm— Dear, may I offer you my twelfth chromosome pair?”

“Lazarus!”

“Don’t cry, girl; you’ll get your gears all rusty. I don’t know that there’s anything to the theory that reinforcement in a gene complex in that chromosome pair controls longevity. Even if it does, I might be handing you a rundown clock. You might be better off using Ira’s twelfth.”

“No. Nothing from Ira.”

“Do you expect to do this without his knowing it?” Lazarus then added thoughtfully, “Oh— Children, eh?”

The computer did not answer.

Lazarus said gently, “Should have known you meant to go whole hog. Then you won’t want to borrow from Hamadryad, either; she’s his daughter. Unless genetic charting shows that we can avoid any hazard. Mmm— Dear, you want as mixed a composite as can be managed, do you not? So that your clone will be a unique flesh-and-blood, not too closely copied from any other zygote. Twentythree parents perhaps? Is that what you had in mind?”

“I think that would be best, Lazarus, since that could be done without separating paired chromosomes—simpler surgery and no possibility of introducing an unexpected reinforcement. If it were possible to find twentythree—satisfactory—donors who were willing.”

“Who said they had to be willing? We’ll steal ‘em, dear. Nobody owns his genes; he’s merely their custodian. They are passed to him willy-nilly in the meiotic dance; he passes them along to others through the same blind chances. There must be many thousands of tissue cultures over at the Clinic, each with many thousands of cells—so who’s to know or care if we borrow one cell from each of twentythree cultures?—if we’re slick about it. Don’t fret about ethics; it’s like stealing twentythree grains of sand from a large beach.

“I don’t give a hoot about the Clinic’s rules; I suspect that we’ll be hip-deep in proscribed techniques all through this. Hmm— Those Clinic records you’ve stored in Dora: Do they include genetic charting of tissue cultures on hand? Case histories of their donor-consigners?”

“Yes, Lazarus. Although personal records are confidential.”

“Who cares? Ishtar said you could study both ‘confidential’ and ‘secret’—as long as you kept it to yourself. So pick the twentythree parents you want—while I worry about how to steal them. Stealing is more in my line, anyhow. I don’t know what criteria you will use, but I offer one mild suggestion: If the selection you have to choose from permits it, each of your parents should be healthy in all respects and as brainy as possible—by their established records in life as shown by their case histories, not alone by their genetic charts.” Lazarus thought about it. “That mythical time machine I mentioned earlier would be a convenience. I would like to look over all twentythree after you pick them—and some of them may be dead. The donors I mean, not the tissue cultures.”

“Lazarus, if other characteristics are satisfactory, is there any reason not to select as well for physical appearance?”

“Why worry about it, dear? Ira is not the sort of man to insist on Helen of Troy.”

“No, I don’t think he is. But I want to be tall—tall as lshtar—and slender, with small breasts. And straight, brown hair.”

“Minerva…why?”

“Because that is the way I look. You said so. You did say so!”

Lazarus blinked at the gloom and hummed softly: *"She's a good sport…I can spring her… for a fin or even a sawbuck"—then* said sharply: "Minerva, you're a crazy, mixed-up machine. If the best combination of traits results in your being a short, plump blonde with big tits—buy *it!* Don't worry about an old man's fantasies. I'm sorry I mentioned that imaginary description."

"But, Lazarus, I said '*if* other characteristics are satisfactory—' To get that physical appearance I need search only with respect to three autosome pairs; there is no conflict, the search is already complete within all parameters we have discussed thus far. And that *is* the—is 'I'?—no, *me!* I've known it since you told me. But—from things you have said—and others that you did not say—I feel that I need your permission to look like that."

The old man lowered his head and covered his face. Then he looked up. "Go ahead, dear—look like her. I mean 'look like yourself.' Like your mind's-eye picture of yourself. You'll find it hard enough to learn to be flesh-and-blood without the added handicap of not looking the way you feel you ought to look."

"Thank you, Lazarus."

"There will be problems, dear, even if everything goes well. For example, has it occurred to you that you will have to learn to talk all over again? Even learn to see and to hear? When you move yourself over into your clone body and leave nothing behind but a computer, you won't suddenly be an adult. Instead, you'll be a weird sort of baby in an adult body, with the world a buzzing confusion around you and totally strange. You may find it frightening. I'll be there, I promise I will be there and holding your hand. But you won't know me; your new eyes won't abstract a gestalt of me until you learn to use them. You won't understand a word I say—did you realize that?"

"I do realize it, Lazarus. I did know it, I have given it much thought. Getting into my new body—without destroying the computer that I am now…which I must not, as Ira will need it and so will Ishtar—making that transition is the most critical phase. But if I make it, I promise you that I will *not* be frightened by the strangeness. Because I know that I will have loving friends around me, cherishing me, keeping me alive, not letting me hurt myself nor be hurt—while I'm learning to be a flesh-and-blood."

"That you will have, dear."

"I know and I am not worried. So don't *you* worry, beloved Lazarus—I don't think of it now. Why did you say, earlier, 'that mythical time machine'?"

"Eh? How would you describe it?"

"I would describe it as an 'unrealized potential.' But 'mythical' implies impossibility."

"Eh? Keep talking!"

"Lazarus, I learned from Dora, when she taught me the mathematics of n-space astrogation, that every jump transition involves a decision as to when to reenter the time axis."

"Yes, certainly. Since you are cut off from the framework of the speed-of-light you could go as many years astray as there are lightyears involved in the jump. But that's not a time machine."

"It isn't?"

"Hmm— It's a disturbing thought—it feels like intentionally making a bad landing. I wish Andy Libby were here. Minerva, why didn't you mention this before?"

"Should I have put it into your Zwicky Box? You turned down time travel forward…and I ruled out time travel into the past because you said you wanted something *new.*"

INTERMISSION

Excerpts from the Notebooks of Lazarus Long

Always store beer in a dark place,

By the data to date, there is only one animal in the Galaxy dangerous to man—man himself. Sc he must supply his own indispensable competition. He has no enemy to help him.

Men are more sentimental than women. It blurs their thinking.

Certainly the game is rigged. Don't let that stop you; if you don't bet, you can't win.

Any priest or shaman must be presumed guilty until proved innocent.

Always listen to experts. They'll tell you what can't be done, and why. Then do it.

Get a shot off *fast.* This upsets him long enough to let you make your second shot perfect.

There is no conclusive evidence of life after death. But there is no evidence of any sort against it. Soon enough you will *know.* So why fret about it?

If it can't be expressed in figures, it is not science; it is opinion. It has long been known that one horse cm run faster than another—but *which one?* Differences are crucial.

A fake fortuneteller can be tolerated. But an authentic soothsayer should be shot on sight. Cassandra did not get half the kicking around she deserved.

Delusions are often functional. A mother's opinions about her children's beauty, intelligence, goodness, et cetera ad nauseam, keep her from drowning them at birth.

Most “scientists” are bottle washers and button sorters.

A “pacifist male” is a contradiction in terms. Most self-described “pacifists” are not pacific; they simply assume false colors. When the wind changes, they hoist the Jolly Roger.

Nursing does not diminish the beauty of a woman’s breasts; it enhances their charm by making them look lived in and happy.

A generation which ignores history has no past—and no future.

A poet who reads his verse in public may have other nasty habits.

What a wonderful world it is that has girls in it!

Small change can often be found under seat cushions.

History does not record anywhere at any time a religion that has any rational basis. Religion is a crutch for people not strong enough to stand up to the unknown without help. But, like dandruff, most people do have a religion and spend time and money on it and seem to derive considerable pleasure from fiddling with it.

It’s amazing how much “mature wisdom” resembles being too tired.

If you don’t like yourself, you *can’t* like other people.

Your enemy is never a villain in his own eyes. Keep this in mind; it may offer a way to make him your friend. If not, you can kill him without hate—and quickly.

A motion to adjourn is always n order.

No state has an inherent right to survive through conscript troops and, in the long run, no state ever has. Roman matrons used to say to their sons: “Come back with your shield, or on it.” Later on, this custom declined. So did Rome.

Of all the strange “crimes” that human beings have legislated out of nothing, “blasphemy”is the most amazing—with “obscenity” and “indecent exposure” fighting it out for second and third place.

Cheops’ Law: Nothing *ever* gets built on schedule or within budget.

It is better to copulate than never.

All societies are based on rules to protect pregnant women and young children. All else is surplusage, excrescence, adornment, luxury, or folly, which can—and must—be dumped in emergency to preserve this prime function. As racial survival is the *only* universal morality, no other basic is possible. Attempts to formulate a “perfect society” on any foundation other than “Women and children first!” is not only witless, it is automatically genocidal. Nevertheless, starry-eyed idealists (all of them male) have tried endlessly—and no doubt will keep on trying.

All men are created unequal.

Money is a powerful aphrodisiac. But flowers work almost as well.

A brute kills for pleasure. A fool kills from hate.

There is only one way to console a widow. But remember the risk.

When the need arises—and it does—you must be able to shoot your own dog. Don't farm it out—that doesn't make it nicer, it makes it worse.

Everything in excess! To enjoy the flavor of life, take big bites. Moderation is for monks.

It may be better to be a live jackal than a dead lion, but it is better still to be a live lion. And usually easier.

One man's theology is another man's belly laugh.

Sex should be friendly. Otherwise stick to mechanical toys; it's more sanitary.

Men rarely (if ever) manage to dream up a god superior to themselves. Most gods have the manners and morals of a spoiled child.

Never appeal to a man's "better nature." He may not have one. Invoking his self-interest gives you more leverage.

Little girls, like butterflies, need no excuse.

You can have peace. Or you can have freedom. Don't ever count on having both at once. -

Avoid making irrevocable decisions while tired or hungry. N.B.: Circumstances can force your hand. So think ahead!

Place your clothes and weapons where you can find them in the dark.

An elephant. A mouse built to government specifications.

Throughout history, poverty is the normal condition of man. Advances which permit this norm to be exceeded—here and there, now and then—are the work of an extremely small minority, frequently despised, often condemned, and almost always opposed by all right-thinking people. Whenever this tiny minority is kept from creating, or (as sometimes happens) is driven out of a society, the people then slip back into abject poverty.

This is known as "bad luck."

In a mature society, "civil servant" is semantically equal to "civil *master.*"

When a place gets crowded enough to require ID's, social collapse is not far away. It is time to go elsewhere. The best thing about space travel is that it made it possible to go elsewhere.

A woman is not property, and husbands who think otherwise are living in a dreamworld.

The second best thing about space travel is that the distances involved make war very difficult, usually impractical, and almost always unnecessary. This is probably a loss for most people, since war is our race's most popular diversion, one which gives purpose and color to dull and stupid lives. But it is a great boon to the intelligent man who fights only when he must—never for sport.

A zygote is a gamete’s way of producing more gametes. This may be the purpose of the universe.

There are hidden contradictions in the minds of people who “love Nature” while deploring the “artificialities” with which “Man has spoiled ‘Nature.’” The obvious contradiction lies in their choice of words, which imply that Man and his artifacts are *not* part of “Nature”—but beavers and their darns *are.* But the contradictions go deeper than this prima-fade absurdity. In declaring his love for a beaver dam (erected by beavers for beavers’ purposes) and his hatred for dams erected by men (for the purposes of men) the Naturist reveals his hatred for his own race—i.e., his own self-hatred.

In the case of “Naturists” such self-hatred is understandable; they are such a sorry lot. But hatred is too strong-an-emotion to feel toward them; pity and contempt\are the most they rate.

As for me, willy-nilly I am a man, not a beaver, and H. sapiens is the only race I have or can have. Fortunately for me, I *like* being part of a race made up of men and women—it strikes me as a fine arrangement -and perfectly “natural” Believe it or not, there were “Naturists” who opposed the first flight to old Earth’s Moon as being “unnatural” and a “despoiling of Nature.”

“No man is an island—” Much as we may feel and act as Individuals, our race is -a single organism, always growing and branching—which must be pruned regularly to be healthy.

This necessity need not be argued; anyone with eyes can see that any organism which grows without limit always dies in its own poisons. The only rational question is whether pruning is best done before or after birth.

Being an incurable sentimentalist I favor the former of these methods—killing makes me queasy, even when it’s a case of “He’s dead and I’m alive and that’s the way I wanted it to be.”

But this may be a matter of taste. Some shamans think that it is better to be killed in a war, or to die in childbirth, or to starve in misery, than never to have lived at all. They may be right.

But I don’t have to like it—and I don’t.

Democracy is based on the assumption that a million men are wiser than one man. How’s that again? I missed something.

Autocracy is based on the assumption that one man is wiser than a million men. Let’s play that over again, too. Who decides?

Any government will work if authority and responsibility are equal and coordinate. This does not insure “good” government; it simply insures that it will work. But such governments are rare—most people want to run things but want no part of the blame. This used to be called the “backseat-driver syndrome.”

What are the facts? Again and again and again—what are the *facts?* Shun wishful thinking, ignore divine revelation, forget what "the stars foretell," avoid opinion, care not what the neighbors think, never mind the unguessable "verdict of history"—what are the facts, and to how many decimal places? You pilot always into an unknown future; facts axe your single clue. Get the facts!

Stupidity cannot be cured with money, or through -education, or by legislation. Stupidity is not a sin, the victim can't help being stupid. But stupidity is the only universal capital crime; the sentence is death, there is no appeal, and execution is carried out automatically and without pity.

God is omnipotent, omniscient, and omnibenevolent—it says so right here on the label. If you have a mind capable of believing all three of these divine attributes simultaneously, I have a wonderful bargain for you. No checks, please. Cash and in small bills.

Courage is the complement of fear. A man who is fearless cannot be courageous. (He is also a fool.)

The two highest achievements of the human mind are the twin concepts of "loyalty" and "duty." Whenever these twin concepts fall into disrepute—get out of there fast! You may possibly save yourself, but it is too late to save that society. It is doomed.

People who go broke in a big way never miss any meals. It is the poor jerk who is shy a half slug who must tighten his belt.

The truth of a proposition has nothing to do with its credibility. And vice versa.

Anyone who cannot cope with mathematics is not fully human. At best he is a tolerable subhuman who has learned to wear shoes bathe, and not make messes m the house.

Moving parts in rubbing contact require lubrication to avoid excessive wear. Honorifics and formal politeness provide lubrication where people rub together. Often the very young, the untraveled, the naïve, the unsophisticated deplore these formalities as "empty" "meaningless," or "dishonest," and scorn to use them. No matter bow "pure" their motives, they thereby throw sand into machinery that does not work too well at best.

A human being should be able to change a diaper, plan an invasion, butcher a hog, coon a ship, design a building, write a sonnet, balance accounts, build a wall, set a bone, comfort the dying, take orders, give orders, cooperate, act alone, solve equations, analyze a new problem, pitch manure, program a computer, cook a tasty meal, fight efficiently, die gallantly. Specialization is for insects.

The more you love, the more you *can* love—and the more intensely you love. Nor is there any limit on how *many* you can love. If a person had time enough, he could love all of that majority who are decent and just.

Masturbation is cheap, clean, convenient, and free of any possibility of wrongdoing—and you don't have to go home in the cold. But it's *lonely.*

Beware of altruism. It is based on self-deception, the root of all evil.

If tempted by something that feels "altruistic," examine your motives and root out that self-deception. Then, if you still want to do it, wallow in it!

The most preposterous notion that H. sapiens has ever dreamed up is that the Lord God of Creation, Shaper and Ruler of all the Universes, wants the saccharine adoration of His creatures, can be swayed by their prayers, and becomes petulant if He does not receive this flattery. Yet this absurd fantasy, without a shred of evidence to bolster it, pays all the expenses of the oldest, largest, and least productive Industry in all history.

The second most preposterous notion is that copulation is inherently sinful.

Writing, is not necessarily something to be ashamed of—but do it in private and wash your hands afterwards.

$100 placed at 7 percent interest compounded quarterly for 200 years will increase to more than $100,000,000—by which time it will be worth nothing.

Dear, don't bore him with trivia or burden him with your past mistakes. The happiest way to deal with a man is never to tell him anything he does not need to know.

Darling, a true lady takes off her dignity with her clothes and does her whorish best. At other times you can be as modest and dignified as your *persona* requires.

Everybody lies about sex.

If men were the automatons that behaviorists claim they are, the behaviorist psychologists could not have invented the amazing nonsense called "behaviorist psychology." So they are wrong from scratch—as clever and as wrong as phlogiston chemists.

The shamans are forever yacking about their snake-oil "miracles." I prefer the Real Mccoy—a pregnant woman.

If the universe has any purpose more important than topping a woman you love and making a baby with her hearty help, I've never heard of it.

Thou shalt remember the Eleventh Commandment and keep it Wholly.

A touchstone to determine the actual worth of an "intellectual"—find out how he feels about astrology.

Taxes are not levied for the benefit of the taxed.

There is no such thing as “social gambling.” Either you are there to cut the other bloke’s heart out and eat it—or you’re a sucker. If you don’t like this choice—don’t gamble.

When the ship lifts, all bills are paid. No regrets.

The first time I was a. drill instructor I was too inexperienced for the job—the things I taught those lads must have got some of them killed. War is too serious a matter to be taught by the inexperienced.

A competent and self-confident person *is* incapable of jealousy in anything. Jealousy is invariably a symptom of neurotic insecurity.

Money is the sincerest of all flattery. Women love to be flattered. So do men.

You live and learn. Or you don’t live long.

Whenever women have insisted on absolute equality with men, they have invariably wound up with the dirty end of the stick. What they are and what they can do makes them superior to men, and their proper tactic it to demand special privileges, all the traffic will hear. They should never settle merely for equality. For women, “equality” is a disaster.

Peace is an extension of war by political means. Plenty of elbow room is pleasanter—and much safer.

One man’s “magic” is another man’s engineering. “Supernatural” is a null word.

The phrase “we (I) (you) simply *must—”* designates something that need not be done. ‘That goes without saying” is a red warning. “Of course” means you had best check it yourself. These small-change clichés and others like them, when read correctly, are reliable channel markers.

Do not handicap your children by making their lives easy.

Rub her feet.

If you happen to be one of the fretful minority who can do creative work, never force an idea; you’ll abort it if you do.

Be patient and you’ll give birth to it when the time is ripe. Learn to wait.

Never crowd youngsters about their private affairs—sex especially. When they are growng up, they are nerve ends all over, and resent (quite properly) any invasion of their privacy. Oh, sure, they’ll make mistakes—but that’s *their* business, not yours. (You made your own mistakes, did you not?)

Never underestimate the power of human stupidity

VARIATIONS ON A THEME

XI

The Tale of the Adopted Daughter

Stand with me on Man's old planet, gazing north when sky has darkened; follow down the Dipper's handle, half again and veering leftward— Do you see it? Can you sense it? Nothing there but cold and darkness. Try again with both eyes covered, try once more with inner vision, hearken now to wild geese honking, sounding through the endless spaces, bouncing off the strange equations— *There* it glistens! Hold the vision, warp your ship through crumpled spaces. Gently, gently, do not lose it. Virgin planet, new beginnings— Woodrow Smith, of many faces, many names, and many places, led this band to New Beginnings, planet clean and bright as morning. End of line, he told his shipmates. Endless miles of untouched prairie, endless stands of uncut timber, winding rivers, soaring mountains, hidden wealth and hidden dangers. Here is life or here is dying; only sin is lack of trying. Grab your picks and grab your shovels; dig latrines and build your hovels—next year better, next year stronger, next year's furrows that much longer.

Learn to grow it, learn to eat it. You can't buy it; learn to *make* it! How d'you know until you've tried it? Try again and keep on trying— Ernest Gibbons, né Woodrow Smith, sometimes known as Lazarus Long, et al., President of New Beginnings Bank of Commerce, walked out of the Waldorf Dining Room. He stood on the veranda, picking his teeth and looking over the busy street scene. Half a dozen saddle mules and a loper (muzzled) were hitched just below him. Up the street to the right a mule train from out back was unloading at the dock of the Top Dollar Trading Post (E. Gibbons, Prop.). A dog lay in the dust in the middle of the street; mounted traffic went around him. Across the street to his left a dozen children played some noisy game in the yard of Mrs. Mayberry's Primary School.

He could count thirty-seven people without moving from that spot. What a change eighteen years made! Top Dollar was no longer the only settlement, or even the largest. New Pittsburgh was larger (and dirtier), and both Separation and Junction were large enough to be called towns; This from only two shiploads and in a colony that had almost starved its first winter.

He did not like to think about that winter. That one family— cannibalism had not actually been *proved—still,* it was just as well that they were all dead. Forget it. The weak ones died, and the bad ones died or were killed; the stock that survived was always stronger, smarter, more decent. New Beginnings was a planet to be proud of, and it would get better and better and better for a long time.

Still, almost twenty years was long enough to stay in one place; it was time to ship out again. In many ways it had been more fun when he and Andy, God rest his sweet innocent soul, had gone banging around the stars together, lining up real estate and never staying longer than necessary to assess potentialities. He wondered if his son Zaccur would be back on time with a third load of hopefuls.

He lifted his kilt and scratched above his right knee—checked his blaster—hitched at the belt band on the left, checked his needle gun—scratched the back of his neck, made sure of his second throwing knife. Ready to face the public, he considered whether to go to his desk at the bank or to the trading post and check that incoming shipment. Neither appealed to him.

One of the hitched mules nodded at him. Gibbons looked at him, then said, "Hi, Buck. How are you, boy? Where's your boss?"

Buck closed his lips tightly, then said explosively, "Pannnk!"

That settled one point: If Clyde Leamer had hitched here instead of in front of the bank, it meant that Clyde intended to use the, side door and was looking for another loan. Let's see what effort he makes to find me.

Skip the trading post, too—not only would Clyde look there next but it wasn't fair to make Rick nervous by showing up before he had time to steal his usuals; good storekeepers were hard to come by. Rick was always honest—5 per cent, no more, no less.

Gibbons felt in his shirt pocket, found a sweet, gave it to Buck on the flat of his hand. The mule took it neatly, nodded thanks. Gibbons reflected that these mutant mules, fertile and breeding true, were the biggest help to colonizing since the Libby Drive. They took coldsleep easily—when you shipped swine, half your breeding stock arrived as pork—and they could look out for themselves in many ways; a mule could stomp a wild loper to death.

He said, "So long, Buck. Going for a walk. Walk. Tell Boss."

"Shoh-rrrongl" acknowledged the mule, "Pye!"

Gibbons turned left and headed out of town while considering how big a loan to offer Clyde Learner with Buck as security. A good-tempered, smart stallion mule was a prize— and about the only unmortgaged asset Clyde had left. Gibbons had no doubt that a loan on Buck would put Clyde back on his feet—literally—as soon as the loan was due. Gibbons felt no pity. A man who couldn't cut the mustard on New Beginnings was worthless; no sense in propping him up.

No, don't lend Clyde a dollar! Offer to buy outright—at 10 percent aver a fair price. A decent hardworking animal should not belong to a lazy bum. Gibbons had no need for a saddle mule—but it would do him good to ride an hour or so each day. Man got flabby sitting in a bank.

Marry again and give Buck to his bride as a wedding present—A pleasant thought, but the only Howards on planet were married couples and not one with a husband-high daughter—as well as all being in masquerade until the place grew populous enough that the Families would set up a clinic here. Safer. Once burned, forever shy. He avoided Howards, and they avoided each other, on the surface. Be nice to be married again, though. The Magee family—actually Barstows—had two or three girls growing up. Maybe he should pay them a call someday.

In the meantime— He felt gusty and good, stuffed with scrambled eggs and wicked thoughts, and wondered where there was a female who felt the same way and could duck out and share their interest. Ernie knew several who shared his enthusiasm—but not available at this time of day, not for a casual romp. Which was all he was wanted; it was not fair to engage in anything serious with an ephemeral no matter how sweet she was—especially if she was truly sweet.

Banker Gibbons was at the edge of town and about to turn back when he noticed smoke from a house farther out—the Harper place. What had been the Harper place, he amended, before they homesteaded outback, but now occupied by, uh, Bud Brandon and his wife, Marje—nice young couple from the second shipload. One child? He thought so.

Running a fireplace on a day like this? Possibly, burning trash—Hey, that smoke is *not* from the chimney!

Gibbons broke into a run.

As he reached the Harper place, the entire roof was burning. Lazarus skidded to a stop and tried to judge the situation. Like most older houses, the Harper place had no ground-floor windows and but a single door that fit tightly and opened outward—a design for a time when lopers and dragons were ubiquitous.

Opening that door would be opening the damper on a burning fire.

He did not waste an. instant debating it; that door must stay closed. He ran around the house, spotting windows of the upper floor and looking for means to reach one—a ladder or anything. Was anyone inside? Didn't the Brandons even have knotted-rope fire escapes? Probably not; good rope came from Earth and retailed at ninety dollars a meter— the Harpers would not have left any behind.

A window with its shutters open and smoke pouring out— He yelled, *"Hey! Anybody home?"* A figure showed at the window, and something was thrown out to him.

Automatically he made a good catch, spotting what it was while in the air, going to the ground with it to soften the impact. A small child — He looked up, saw an arm hanging over the windowsill.

The roof fell in, the arm disappeared.

Gibbons scrambled up fast, holding, the little boy—no, little girl, he corrected—and moved hastily back from the holocaust. He did not consider the possibility that someone might be alive in that raging fire; he simply hoped that they had died quickly and gave it no more thought. He cradled the child in his arms. “Are you all right, honey?”

“I guess so,” she answered, then added gravely, “but Mama’s awful sick.”

“Mama is all right now, dear,” he said gently, “and so is Papa.”

“You’re *sure?”* The child twisted in his arms, tried to see the burning house.

He interposed his shoulder. “I’m sure.” He held her more firmly and started walking.

Halfway back to town they encountered Clyde Learner, mounted on Buck. Clyde reined up. “Oh, there you are! Banker, I want to talk to you.”

“Stow it, Clyde.” —“Huh? But you don’t *understand;* I’ve *got* to have some money. Nothing but bad luck the whole season. Seems like everything I touch—”

“Clyde—shut your yap!”

“What?” Learner seemed to notice for the first time that the banker was carrying something. “Hey! ain’t that the Brandon kid?”

“‘Yes.”

“Thought so. Now about this, loan—”

“I told you to shut up. The bank won’t lend you another dollar.”

“But you’ve got to *listen.* Seems to me the community ought to help a farmer who’s had bad luck. If it weren’t for the farmers—”

“You listen. If you spent as much time working as you do talking, you wouldn’t need to talk about ‘bad luck.’ Even your stable is dirty. Mm…what price do you want for that stud brute?”

“Buck’? Why, I wouldn’t sell *Buck.* But here’s what I had in mind, Banker. You’re a kindly man even if you do talk rough and I bow you won’t see my kids starve. Now Buck is a valuable property, and I figure he ought to be security for about—well, about, say—”

“Clyde, the best thing you can do for your kids is to cut your throat. Then people would adopt them. No loan, Clyde—not a dollar, not a dime. But I’ll buy Buck myself, right now. Name a price.”

Learner gulped and hesitated. “Twenty-five thousand.”

Gibbons started walking toward town. Learner said hastily, “Twenty thousand!” Gibbons did not answer.

Learner reined the mule around, turned in front of the banker, and stopped. “Banker, you’ve got me by the short hairs. Eighteen thousand and you’re stealing him.”

“Learner, I won’t steal from you. Put him up for auction, and I might bid. Or might not. How much do you think he'll bring at auction?"

"Uh…fifteen thousand."

"You think so? I don't. I know how old he is without looking at his teeth, and just what you paid for him, off the ship. I know what people around here can afford and will pay. But go ahead; he's yours. Bear in mind that if you put a low-bid price against him, you owe the auctioneer ten percent even if he doesn't sell. But it's your business, Clyde. Now get out of my way; I want to get this child into town and lying down; she's had a bad time."

"Uh…what *will* you pay?"

"Twelve thousand."

"Why, that's robbery!"

"You don't have to take it. Suppose an auction brings fifteen thousand dollars—as you hope. Your net is thirteen five. But suppose an auction brings only ten thousand, which I find more likely. You net nine thousand. G'bye, Clyde; I'm in a hurry."

"Well—thirteen thousand?"

"Clyde, I named my top price. You've dealt with me often enough to know that when I say it's top dollar, then it's top dollar. But—throw in that saddle and bridle and answer one question and I'll sweeten it by five hundred dollars."

"What question?"

"How did you happen to migrate?"

Learner looked startled, then laughed unmirthfully. "Because I was crazy, if you want to know the truth."

"Aren't we all? That's hardly an answer, Clyde."

"Well…my old man is a banker—and as hardnosed, as *you* are! I was doing all right, I had a proper, respectable job, teaching. College. But the pay wasn't much, and my old man was always snotty about it when I ran a little short. Snoopy. Disparaging Finally I got so sick of it that I asked him what he would think of paying Yvonne s fare and mine in the 'Andy'J.'? Migrate. Be rid of us.

To my surprise he agreed But I didn't back out. I knew that a man with a fine education like mine could get ahead anywhere and it wasn't like we was being dumped on some wild planet; we were second wave you may remember.

Only it *was* a wild planet and I've had to do things that no gentleman ought to have to touch. But you just wait Banker, kids around here are growing up and there will be a place for higher education, not the trivia Mrs. Mayberry teaches in that so-called school of hers. That's where I come in— you'll be calling me 'Professor' yet, and speaking respectfully.

'You'll see."

"Good luck to you. Are you accepting my offer? Twelve thousand five hundred, net, including bridle and saddle."

"Uh…I *said* I was, didn't I?"

"You didn't say. You still have not."

"I accept."

The girl child had listened quietly, face serious. Gibbons said to her, "Can you stand up a moment, dear?"

He put her down; she trembled and held onto his kilt. Gibbons dug into his sporran-, then using Buck's broad rump as a desk, wrote a draft and a bill of sale. He handed them to Learner. "Take that to Hilda at the bank. Sign the bill of sale and give it back to me."

Silently Learner signed, looked at the draft and pocketed it, handed over the bill of sale. "Thanks; Banker—you old skinflint. Where do you want him delivered?"

"You've delivered him. Dismount."

"Huh? How do I get to the bank? How am I supposed to get home?"

"You walk."

"What? Well, of all the sneaky, underhanded tricks! You get the mule when I get the cash. At the bank."

"Learner, I paid top dollar for that mule because I need him *now*. But I see that we did not have a meeting of minds. Okay, hand back my draft and here's your bill of sale."

'Learner looked startled. "Oh, no, you don't! You made a deal."

"Then get off my mule *at* once"—Gibbons just happened to rest his hand on the handle of the all-purpose knife every man carried—"and dogtrot into town and you'll be there before Hilda closes,. Now *move."* His eyes, cold and blank, held Learner's.

"Can't you take a joke?' Learner grumbled as he swung down. He started walking rather fast toward town.

"Oh, Clyde!"

Learner stopped; "What do you want *now?"*

"If you see the Volunteer Fire Team headed this way, tell them it's too late; the Harper place is gone. But tell McCarthy I said it wouldn't hurt to send a couple of men to check."

"Okay, okay!"

"And, Clyde—what was it you used to teach?'

"Teach'? I taught 'Creative Writing.' I *told* you I had a good education."

"So you did. Better hurry; Hilda closes promptly, she has to pick up her kids at Mrs. Mayberry's school."

Gibbons ignored Learner's answer, picked up the little girl, then said, "Steady, Buck. Stand still, old fellow," He swung the child high, settled her gently astride the mule's withers. "Hang onto his mane."

He toed the left stirrup, swung up behind her, scooted back in the saddle, then lifted her again and placed her somewhat in his, lap but mostly in the saddle just back of the pommel. “Hang onto the horn, dear. Both hands. Comfortable?”

“This is fun!”

“Lots of fun, baby girl. Buck! Hear me, boy?”

The mule nodded.

“Walk. Walk back to town. Slow walk. Steady. Don’t stub your feet. Get me? I’m not going to use the reins.”

“Shrrow…*Rrrawkr”*

“Right, Buck.” Gibbons took a hitch in the reins, let them fall loosely on Buck’s neck—squeezed the mule with his knees, let him go. Buck ambled toward town.

After a few minutes the little girl said gravely, “What about Mama and Daddy?”

“Mama and Daddy are all right. They know I’m taking care of you. What’s your name, dear?”

“Dora.”

“That’s a nice name, Dora. A pretty name. Do you want to know my name?”

“That man called you ‘Banker.’”

“That’s not my name, Dora; that’s just something I do sometimes. My name is…‘Uncle Gibbie.’ Can you say that?”

“’Uncle Gibbie.’ That’s a funny name.”

“So it is, Dora. And this is Buck we are riding. He is a friend of mine, and he’ll be your friend, too, now—so say hello to Buck.”

“Hello, Buck.”

“Hayrrroh Jorrrah!”

“Say, he talks lots plainer than most mules! Doesn’t he?”

“Buck is the best mule on New Beginnings, Dora And the smartest. When we get rid of this bridle—Buck doesn’t need a bit in his mouth —he’ll be able to talk plainer still and you can each him more words. Would you like that?”

“Oh, yes!” Dora added, “If Mama lets me.”

“It’s’ all right with Mama. Do you like to sing, Dora?”

“Oh, sure! I know a clapping song. But we can’t clap right now. Can we?”

“Right now I think we had better hang on tight.” Gibbons rapidly reviewed in his mind his repertoire of happy songs, rejected a round dozen as unsuitable for young ladies. “How about this one?

“There’s a pawnshop
On the corner
Where I usually keep my overcoat.

"Can you sing that, Dora?'

"Oh, that's *easy!"* The baby girl sang it in a voice so high that Gibbons was reminded of a canary. "Is that all, Uncle Gibbie? And what's a 'paunshot'?"

"It's a place to keep overcoats when you don't need them. Lots more, Dora. Thousands and thousands of verses."

"Thousands and thousands—' Why, that's almost as much as a hundred. Isn't it?"

"Almost, Dora. Here's another verse:

"There's a trading post
By the pawnshop
Where my sister sells candy.

"Do you like candy, Dora?"

"Oh, yes! But Mama says its 'spensive."

"Won't be so expensive next year, Dora; there'll be more sugar beets cropped. But…Open your mouth and close your eyes, and I'll give you something for a s'prise!'" 'He felt around in his shirt pocket, then said, "Oh, sorry, Dora; the surprise will have to wait until I can get to the trading post; Buck got the last one. Buck likes candy, too."

"He does?"

"Yes and I'll teach you how to give it to him without losing a finger by mistake. But candy isn't too good for him, so he gets it only as a special surprise. For being a good boy. Okay, Buck?"

"Oh-gay!…Pawsss!"

Mrs. Mayberry's school was letting out as Gibbons halted Buck in front of it. When he lifted Dora down, she seemed very tired, so he picked her up again. "Wait, Buck." The stragglers among the pupils stared but separated and let him through.

"Afternoon, Mrs. *Mayberry."* Gibbons had gone there almost by instinct. The schoolmistress was a gray-haired widow, fifty or more, who had outlasted two husbands, and was coping sensibly with her meager chance of finding a third, preferring to support herself rather than live with one of her daughters, stepdaughters, or daughters-in-law. She was one who shared Ernest Gibbons' enthusiasm for the hearty pleasures in life but was as circumspect about it as he was. He considered her sensible in every way—a prime prospect for marriage were it not for the unfortunate fact that they ran on different time rates.

Not that he let her know this. He had not been a disclosed Howard when they both had arrived in the first shipload, and, although freshly rejuvenated on Secundus when he had reappeared on Earth and organized the migration, he had elected to be thirty-five or so (cosmetically). Since that time he had carefully aged himself each year; Helen Mayberry thought of him as a contemporary, returned his friendship, shared mutual pleasure with him from time to time without trying to own him. He respected her highly.

"Good afternoon, Mr. Gibbons. Why, it's Dora! We missed you, dear; what happened! And— Is that a bruise?" She looked closely, said nothing about the fact that the little girl was filthy dirty.

She straightened up. "Seems to be just a smudge. I'm glad to see her; I fretted a little this morning when she didn't show up with the Parkinson children. It's almost Marjorie Brandon's time—perhaps you knew?"

"Vaguely. Where can I put Dora down for a few minutes? Conference. Private."

Mrs. Mayberry's eyes widened slightly, but she answered at once. "The couch— No, put her on my bed." She led the way, said nothing about getting her white coverlet dirty, went back into the schoolroom with him after he assured Dora that they would be gone only a few moments.

Gibbons explained what had happened. "Dora doesn't know that her parents are dead, Helen—nor do I think it's time to tell her,"

Mrs. Mayberry considered it. "Ernest, are you sure they both died? Bud would have seen the fire if he had been working his own fields, but he sometimes works for Mr. Parkinson."

"Helen, that was not a woman's hand I saw. Unless Marje Brandon has thick black hair on the back of her hands."

"No. No, that would be Bud." She sighed. "Then she's an orphan. Poor little Dora! A nice child. Bright, too."

"Helen, can you take care of her a few days? Will you?"

"Ernest, the way you phrase that is almost offensive. I will take care of Dora as long as I am needed."

"Sorry, I didn't mean to phrase it unpleasingly. I don't expect it to be long; some family will adopt her. In the meantime keep track of your expense, then we'll work out what her room and board should be."

"Ernest, that will come to exactly zero. The only cost will be aboout enough food to feed a bird. Which I can certainly do for Marjorie Brandon's little girl."

"So? Well, I can find some family to board her. The Learners. Someone—"

"Ernest!"

"Get your feathers down, Helen. That child was placed in my hands, her father's last dying act. And don't be a dumb fool; I know to the penny how much you manage to save. As well as how often you have to take tuition in food rather than cash. This is a cash deal. The Learners would jump at it—as well as several others. I don't have to leave Dora here—and won't, unless you are sensible."

Mrs. Mayberry looked grim—then suddenly smiled and looked years younger. "Ernest, you're a bully. And a bastard. And other things I never say out of bed. All right—room-and-board."

"And tuition. Plus any special expenses. Doctor's bills, maybe."

"Triple bastard. You always pay for anything you get, don't you? As I should know." She glanced at the unshuttered windows. "Step out here in the hall and seal it with a kiss. Bastard."

They moved, she placed Herself so that the angle, did not permit anyone to see them, then delivered a kiss that would have astounded her neighbors.

"Helen—"

She brushed her lips against his. "The answer is; No, Mr. Gibbons. Tonight I'll be busy reassuring a baby girl."

"I was about to say, Don't give her that bath I know you intend to until I get hold of Doc Krausmeyer and have him examine her. She seems all right—but she may have anything from broken ribs to a skull concussion. Oh, get her clothes off and sponge her a little for the worst of the dirt; that won't hurt her and it will make it easier for Doc to examine her."

"Yes, dear. Get your lecherous hands off my bottom and I'll get to work. You find Doc."

"Right away, Mrs. Mayberry."

"Until later, Mr. Gibbons. Au 'voir."

Gibbons told Buck to wait, walked over to the Waldorf, found (as he expected), Dr. Krausmeyer in the bar. The physician looked up from his drink. "Ernest! What's this I hear about the Harper place?'

'Well, what do you hear about it? Put down that glass and grab your hat. Emergency."

"Now, now! Haven't seen the emergency yet that wouldn't leave time to finish a drink. Clyde Learner was just in and bought us a round of drinks—bought this one you urged me to abandon—and told us that the Harper place had burned and killed the whole Brandon family. Says he tried to rescue them, but it was too late."

Gibbons briefly considered the desirability of a fatal accident happening to both Clyde Learner and Doe Krausmeyer some dark night—but, damn it, while Clyde would be no loss, if Doc died, Gibbons would be forced to hang out his own shingle—and his diplomas did *not* read "Ernest Gibbons." Besides, Doc was a good doctor when sober—and, anyhow, it's your own fault, old son; twenty years ago you interviewed him and okayed the subsidy. All you saw was a bright young intern and failed to spot the incipient lush.

"Now that you mention it, Doc, I did see Clyde hurrying toward the Harper place. If he says he was too late to save them I would have to back his story. However, it was not the whole family; their little girl, Dora, was saved."

"Well, yes, Clyde did say that. He said it was her parents he couldn't save."

"That's right. It's the little girl I want you to attend. She's suffering from multiple abrasions and contusions, possibly broken bones, possible internal injuries, a strong possibility of smoke poisoning—and a certainty of extreme emotional shock; very serious in a child that age. She's across the street at Mrs. Mayberry's place." He added softly, "I think you ought to hurry, Doctor, I really do. Don't you?"

Dr. Krausmeyer looked unhappily at his drink, then straightened up and said, "Mine host, if you will be so kind as to put this on the back of the bar, I shall return." He picked up his bag.

Dr. Krausmeyer found nothing wrong with the child, gave her a sedative. Gibbons waited until Dora was asleep, then went to arrange temporary board for his mule. He went to Jones Brothers ("Fine Stock—Mules Bought, Sold, Traded, Auctioned—Registered Stallions Standing at Stud") because his bank held a mortgage on their place.

Minerva, it wasn't planned; it just grew. I expected Dora to be adopted in a few days, a few weeks, some such. Pioneers don't feel about kids the way city people do. If they didn't like kids, they wouldn't have the temperament to pioneer. And as soon as pioneer kids stop being babies, the investment starts paying off. Kids are an asset in pioneer country.

I certainly did not plan to raise an ephemeral, or hold any fear that it would be necessary—nor *was* it necessary. I was beginning to simplify my affairs, expecting to leave soon, as my son Zaccur should show up any year.

Zack was my partner then, in a loose arrangement based on mutual trust. He was young, a century and a half or such, but steady and smart—out of Phyllis Briggs-Sperling by my last marriage but two. A fine woman, Phyllis, as well as a number-one mathematician. We made seven children together and every one of them smarter than I am. She married several times—I was her fourth (* Fifth, James Matthew Libby was her fourth. J.F. *45th)* and, as I recall, the first woman to win the Ira Howard Memorial Century Medal for contributing one hundred registered offspring to the Families. Took her less than two centuries but Phyllis was a girl of simple tastes, the other being pencil and paper and time to think about geometry.

I digress. To engage in the pioneering business profitably takes a minimax of a suitable ship and two partners, both shipmasters, both qualified to mount a migration and lead it—otherwise you are taking a shipload of city folks and abandoning them in wilderness…which often-happened in the early days of the Diaspora.

Zack and I did it properly, each fully qualified as captain in space, or as leader on a strange planet—taking turns. The one who stays behind when the ship leaves really does pioneer; he can't fake it, he can't just wave the baton. He may not be political head of the colony —I preferred not to be; talk is so time consuming. What he does have to be is a survivor, a man who can force that planet to feed him, and by his example show others how—and advise them if they want it.

The first wave is a break-even; the captain unloads and goes back for more migrants; the planet offers nothing for export that soon. The trip has been paid for by fares charged the migrants; profit, if any, will come from the partner on the ground selling what else the ship has carried—mules, hardware, swine, fertile chicken eggs—to the pioneers, on credit at first. Which means the partner on the ground has to look sharp and mind his rear; it doesn't take much to convince migrants who are having a tough time that this bloke is profiteering and should be lynched.

Minerva, the six times I did this—let myself be left behind with the first wave of a colony—I never once plowed a field without weapons at hand and I was always far more cautious with my own breed than I was with any dangerous animals that planet held.

But on New Beginnings we were past most such hazards. The first wave had made it, though just barely that terrible first winter—Helen Mayberry was not the only widow who had married a widower as a result of a weather cycle that Andy Libby and I had not anticipated; the star there—called "the Sun' as always, but you can check your memories for catalog designation—New Beginnings' Sun was a variable star by about the amount that old Sol is, just enough to give "unusual" wheather—and when we arrived we hit the bad weather jackpot.

But those who made it through that winter were tough enough to stand *anything;* the second wave had a much easier time.

I had disposed of my farm to migrants of the second wave and was putting my attention on business and trade to build up a cargo for the *Andy J.* to take back after Zack unloaded the third wave—and I would go back, too. Go somewhere, that is. What and where and how would be settled after I saw Zack.

In the meantime I was bored, getting ready to wind up my on-planet affairs, and found this waif an interesting diversion.

Delightful, I should say. Dora was a baby who was born grownup. Utterly innocent, ignorant in the fashion that a small child necessarily is but most intelligent and delighted to learn anything. There was no meanness in her anywhere, Minerva, and I found her naïve conversation more entertaining than most talk of adults—usually trivial and rarely new.

Helen Mayberry took as much interest in Dora, and we two found ourselves *in loco parentis* without planning it.

We consulted each other and kept the baby girl away from the burial—some charred bones, including tiny ones of the baby that had never been born—and kept her away from the memorial service, too. Some weeks later, when Dora seemed to be in good shape and after I had had time to have a gravestone cut and erected, I took her out there and let her see it. She could read, and did—names and dates of her parents, and the single date for the baby,

She looked it over solemnly, then said, "That means Mama and Daddy won't ever be coming back. Doesn't it?"

"Yes, Dora."

"That's what the kids at school said. I wasn't sure."

"I know, dear. Aunt Helen told me. So I thought you had better see for yourself."

She looked again at the headstone, then said gravely, "I see. I guess I do. Thank you, Uncle Gibbie."

She didn't cry, so I didn't have any excuse to pick her up and console her. All I could think of to say was; "Do you want to go now, dear?"

"Yes."

We had ridden out on Buck, but I had left him at the foot of the hill, there being an unwritten rule against letting mules or tamed lopers walk on graves. I asked if she wanted mc to carry her—piggyback, perhaps. She decided to walk.

Halfway down-she stopped. "Uncle Gibbie?"

"Yes, Dora?"

"Let's not tell Buck about this."

"All right, Dora."

"He might cry."

"We won't tell him, Dora."

She did not say any more until we were back at Mrs. Mayberry's school. Then she was very quiet for about two weeks, and never mentioned it again to me, nor—I think—to anyone. She never asked to go back there, although we went riding almost every afternoon and often within sight of graveyard hill.

About two Earth-years later the *Andy J.* arrived, and Captain Zack, my son by Phyllis, came down in the gig to make arrangements for landing the third wave of migrants. We had a drink together, and I told him I was staying over another trip, and why. He stared.

"Lazarus, you are out of your mind."

I said quietly, "Don't call me 'Lazarus.' That name has had too much publicity."

He said, "All right. Although there is no one around but our hostess—Mrs. Mayberry, did you say?—and she's gone out to the kitchen. Look, uh, Gibbons, I was thinking of making a couple of trips to Secundus. Profit in it, and ways to invest our net on Secundus—safer than investing on Earth now, things being the way they are."

I agreed that he was almost certainly right.

"Yes," he said, "but here's the point. If I do, I won't be back this way for, oh, maybe ten standard years. Or longer. Oh, I will if you insist; you're majority shareholder. But you'll be wasting your money and mine, too. Look, Laz— Ernest, if you *must* take care of this kid—though I don't see that it's your obligation—come with me and bring her along. You could put her in school on Earth—as long as you post bond to insure that she leaves. Or perhaps she could settle on Secundus, although I don't know what the immigration rules are there now; it's been a long time since I've been there."

I shook my head. "What's ten years? I can hold my breath that long. Zack, I want to see this child grown up and able to make it on her own—married, I hope, but that's her business. But I won't uproot her; she's had one shock of that sort and shouldn't have to soak up another while she's still a child."

"On your head be it. You want me back in ten years? Is that long enough?"

"More or less but don't rush. Take time enough to show a profit. If it takes longer, you'll pick up a better cargo here next time. Something better than food and soft goods."

Zack said, "There is nothing better than food to ship to Earth these days. Sometime soon we're going to have to stop touching at Earth, just trade among the colonies."

"As bad as that?"

"Pretty bad. They won't learn. What's this about trouble over your bank? Do you need a show of force while the 'Andy J.' is overhead?"

I shook my head. "Thanks, Captain, but that's not the way to do it. Or I would *have* to go along with you. Force is an argument to use when nothing else will do and the issue is that important. Instead I'm going to go limp on them."

Ernest Gibbons did not worry about his bank. He never worried over any issue less important than life-and-death.

Instead he applied his brain to all problems large and small as they came along, and enjoyed life. Especially he enjoyed helping raise Dora. Right after he acquired her and the mule Buck—or they acquired him—he discarded the savage curb bit Learner had used (salvaging the metal) and had the Jones Brothers' harnessmaker convert the bridle into a hackamore. He ordered also another saddle, sketching what he wanted and offering a bonus for early delivery. The leather crafter shook his head over that sketch, but delivered.

Thereafter Gibbons and the baby girl rode Buck in a saddle built for two: a man-sized saddle in the usual position, with a tiny saddle with tiny stirrups an integral part of it in that forward position where a normal saddle carries its pommel horn. A little wooden arch, leather covered, curved up from this, a safety bar the child could grab. Gibbons also had this extended saddle fitted with two belly bands, more comfortable for the mule, safer on steep trails for riders.

They rode that way several seasons, usually an hour or more after school—holding three-cornered conversations at a walk, or singing as a trio with Buck loudly off key but always on beat with his gait acting as a metronome, Gibbons carrying the lead, and Dora learning to harmonize. It was often the "Paunshot" song, which Dora regarded as her own, and to which she gradually added verses, including one about the paddock next to the schoolhouse, where Buck lived.

But soon there was too much girl for the tiny forward saddle as Dora grew straight and slender and tall. Gibbons bought a mare mule, after trying two others—one was rejected by Buck because she was (so he said) "shdoop'd" and the other because she failed to appreciate a hackamore and tried to run away.

Gibbons let Buck pick the third, with advice from Dora but none from him—and Buck acquired a mate in his paddock, and Gibbons had the stable enlarged. Buck still stood at stud for a fee but seemed pleased to have Beulah at home. However, Beulah did not learn to sing and talked very little. Gibbons suspected that she was afraid to open her mouth in Buck's presence—she was willing to talk, or at least to answer, when Gibbons rode tier alone…for it worked out, to Gibbons' surprise, that Beulah was his saddle mule; Dora rode the big male brute, even when the stirrups of the stock saddle had to be shortened ridiculously to fit her child's legs.

But steadily the stirrups had to be lengthened as Dora grew toward young womanhood. Beulah dropped a foal; Gibbons kept her and Dora named her "Betty" and trained the baby mule as she grew, at first letting her amble along behind with an empty saddle, then teaching her to accept a rider in the paddock. There followed a time when their daily rides became sixsomes and often picnics, with Mrs. Mayberry up on Buck, the steadiest, and with the lightest load—Dora——on Betty, and with Gibbons as usual riding Beulah. Gibbons remembered that summer as a most happy one: Helen and himself knee to knee on the older mounts while Dora and the frisky youngster galloped ahead, then turning back with Dora's long brown hair flying in the breeze.

One such time he asked, "Helen, are the boys beginning to sniff around her?"

"You old stud, don't you think about anything else?"

"Come off it, dear; I asked for information."

"Certainly the boys are noticing her, Ernest, and she is noticing them. But I will do all the worrying necessary. Not much; she's far too choosy to put, up with second best."

The happy family picnics did not resume the following summer. Mrs. Mayberry was feeling the years in her bones, and could mount and dismount only with help.

Gibbons had plenty of time to be ready before the murmurings about his monopoly of the banking business came to a head. The New Beginnings Bank of Commerce was a bank of issue; he (or Zaccur) always set up such a bank in each colony they pioneered. Money was necessary to a growing colony; barter was too clumsy. Some medium of exchange was needed even before government was needed.

He was not surprised when he was invited to meet with the town's selectmen to discuss the matter; it always happened. That evening, as he trimmed his Vandyke and added, a touch more gray to it and to the hair on his head in preparation for the confrontation, he reviewed in his mind proposals he had heard in the past for making water run uphill, the sun to stand still, and one egg to be counted as two. Would there be some novel numbskullery tonight? He hoped so but did not expect it.

He plucked hairs from his "receding" hairline—damn it, it was getting harder and harder to age enough each year!—then put on his war-plaid kilt…not only more impressive but with more ways to conceal weapons—and get at them quickly. He was fairly sure that no one was, as yet, annoyed enough at him to start violence, but once he had been too optimistic; since that time he had been a pessimist as a fixed policy.

He hid some items, locked up others, set some gadgets that Zaccur had fetched last trip but which were not offered for sale at the Top Dollar T.P., unlocked his-door, hand locked it from outside, and left by the route through the bar, so that he could tell the barkeep that would be away "a few minutes."

Three hours later Gibbons had settled one point: No one had been able 'to think of any new way to debase currency that he had not heard at least five hundred years earlier—more likely a thousand—and each was certainly much, much older in history. Early in the meeting he asked the Moderator to have the Town Scribe write down each question so that he could answer them in a lump—and was allowed to have it his way by being balky.

At last the Moderator Selectman, Jim "Duke" Warwick, said, "That seems to be it. Ernie, we have a motion to nationalize—I guess that's the word—the New Beginnings Bank of Commerce. You're not a selectman, but we all agree that you are a' party with a special interest, we want to hear from you. Do you want to speak against the proposal?'

"Not at all, Jim. Go right ahead."

"Eh? I'm afraid I didn't understand you."

"I have no objection to the bank being nationalized, if that's all, let's adjourn and go to bed."

Someone in the audience called out, "Hey, I want my question about New Pittsburgh money' answered!"

"And mine about interest! Interest is wrong—it says so in the Bible!"

'Well, Ernie? You said earlier that you would answer questions."

"So I did. But if you are nationalizing the bank, wouldn't it make more sense to put questions, to your state treasurer, or whatever you decide to call him? The new head of the bank. *By* the way, who is he? Hadn't he better sit up here on the platform?"

Warwick pounded his gavel, then said, "We haven't got that far, Ernie. For the time being the entire Council of Selectmen is the finance committee—if we go ahead with this."

"Oh, by all means go ahead. I'm shutting down."

"What do you mean?"

"Just what I said: I quit. A man doesn't like to have his neighbors dislike him. The people of Top Dollar don't like what I've been doing or this meeting would never have been called. So I've quit. The bank is closed it will not reopen tomorrow. Nor ever with me as president of it. That's why I asked who your state treasurer will be. I'm as interested as anyone in finding out what we are going to use for money from here on—and what it will be worth."

There was dead silence; then the Moderator had to pound his gavel and the Sergeant at Arms was very busy, all to shouts ,of "What about my seed loan?" "You owe me money!" "I sold Hank Brofsky a mule on his personal note—what do I collect?" "You can't *do* this to us!"

Gibbons sat quietly, not letting his alertness show, until Warwick got them quieted down. Then Warwick said, wiping sweat from his- brow: "Ernie, I think you've got some explaining to do."

"Certainly, Mr. Moderator. The liquidation will be as orderly as you will let it be. Those who have: deposits will be paid…in banknotes, that being what was deposited. Those who owe money to the bank—well, I don't know; it depends on the policies the council sets up. I suppose I'm bankrupt. I can't know until you tell me what you mean when—you say my bank is being 'nationalized.'

"But I have bad to take this step: Top Dollar Trading Post is no longer buying with banknotes—they may be worthless. Each deal will have to be barter. But we will continue to *sell* for banknotes. But I took down the posted prices just before I came here tonight…because the stock I have on hand may be all I ever have with which to redeem those banknotes. Which could force me to raise prices. It all depends on whether 'nationalize' is simply another word for 'confiscate.'"

Gibbons spent several days explaining to Warwick the elementary principles of banking and currency, patiently and with good humor—to Warwick by Hobson's choice because, the other selectmen found that they were too busy with their farms or businesses to take on the chore. There had been one candidate for the job of national banker or state treasurer (no agreement as yet on title) from outside the selectmen, a farmer named Learner, but his self-nomination got nowhere despite his claim of generations of experience in banking plus a graduate degree in such matters.

Warwick got his first shock while he was taking inventory, with Gibbons, of the contents of the safe (almost the only safe on New Beginnings and the only one of Earth manufacture); "Ernie, where's the money?"

"What money, Duke?"

"What money?' Why, these account books show that you've taken in thousands and thousands of dollars. Your own trading post shows a balance of nearly a million. And I know you've been collecting mortgage payments on three or four dozen farms—and haven't loaned hardly anything for a year or more. That's been one of the major complaints, Ernie, why the selectmen just had to act—all that money going into the bank and none coming out. Money scarce everywhere. So where's the money, man?"

"I burned it," Gibbons answered cheerfully.

"What?"

"Certainly. It was piling up and getting too bulky. I didn't dare keep it outside the safe even though we don't have much theft here—if somebody stole it, it could ruin me. So far the past three years, as money came into the bank, I've been burning it. To keep it safe."

"Good God!"

"What's the trouble, Duke. It's just wastepaper."

"'Wastepaper'? It's *money."*

"What is 'money,' Duke? Got any on you? Say a ten-dollar bill?" Warwick, still looking shocked, dug out one. "Read it, Duke," Gibbons urged. "Never mind the fancy engraving and the pretty paper that can't be made here as yet—read what it says."

"It says it's ten dollars."

"So, it does. But the important part is where it says that this bank will accept that note at face, value in payment of debts to the bank." Gibbons took out of his sporran a thousand dollar banknote, set fire to it while Warwick watched in horrified fascination. Gibbons rubbed the char off his fingers. "Wastepaper, Duke, as long as it's in my possession. But if I let it get intocirculation, it becomes my IOU that I must honor. Half a moment while I record that serial number; I keep track of what I burn so that I know how much is still in circulation. Quite a lot, but I can tell you to the dollar. Are *you* going to honor *my* IOU's? And what about debts owed to the bank? Who gets paid? You? Or me?"

Warwick looked baffled. "Ernie, I just don't know.Hell, man, I'm a mechanic by trade. But you heard what they said at the meeting."

"Yeah, I heard. People always expect a government to work miracles—even people who are fairly bright other ways. Let's lock up this junk and go over to the Waldorf and have a beer and discuss it."

"—or should be, Duke, simply a public bookkeeping service and credit system in which the medium of exchange is stable. Anything more and you are jiggering with other people's wealth, robbing Peter to pay Paul.

"Duke, I did my best to keep the dollar stable by keeping key prices stable—seed wheat in particular. For over twenty years the Top Dollar Trading Post has paid the same price for prime seed wheat, then resold it at the same markup— even if I took a loss and sometimes I did. Seed wheat isn't too good a money standard; it's perishable. But we don't have gold or uranium as yet, and it has to be *something.*

"Now look, Duke—when you reopen as a treasury, or a government central bank, or whatever you call it, you're certain to have pressures on you to do all sorts of things. Lower the interest rates. Expand the money supply. Guarantee high prices to the farmer for what he sells, guarantee low prices for what he buys. Brother, you're going to be called worse names than they call me, no matter *what* you, do."

"Ernie—there's only one thing for it. You know how…so you've *got* to take the job of community treasurer."

Gibbons laughed heartily. "No, sirree, bub, I've had that headache for more than twenty years; now it's your turn. You grabbed the sack, now you hold it. If I let you put me back in as banker, all that will happen is that they will lynch *both* of us."

Changes—Helen Mayberry married the Widower Parkinson, went to live with him in a small new house on the farm now worked by two of his sons; Dora Brandon became schoolmistress of what was still called "Miss Mayberry's Primary School." Ernest Gibbons, no longer banker, was now silent partner in Rick's General Store, while his own warehouses bulged with cargo for the *Andy J.* if and when. Soon, he hoped, as the new inventory tax was eating into cash he had held out for trading, and inflation was eating into the buying power of that cash. Better hurry, Zack, before we are nibbled to death by ducks!

At last the ship appeared in New Beginnings' sky, and Captain Zaccur Briggs came down with the first load of the fourth wave—almost all of them quite old. Gibbons refrained from comment until the partners were alone:

"Zack, where did you find those walking corpses?"

"Call it charity, Ernest. That sounds better than what did happen."

"Such as?"

"Captain Sheffield, if you want our ship to go back to Earth again, you are welcome to take her there yourself. Not me. Not there. If a man is seventy-five years old there now, he becomes officially dead. His heirs inherit, he can't own property, his ration books are canceled—anybody can kill him just for the hell of it. I didn't get these passengers on Earth; they were refugees at Luna City and I took as many as I could—no messroom passengers; coldsleep or nothing. I insisted on payment in hardware and pharmaceuticals, but coldsleep let me hold down the price per head. I think we'll break even. If not, we've got investments on Secundus; I haven't lost money for us. I think."

"Zack, you worry too much. Make money, lose money— who cares? The idea is to enjoy it. Tell me where we are going next, and I can begin picking cargo—I've got twice the metric tonnage we can stow. While you get her loaded, I'll liquidate what we aren't lifting and invest the proceeds. Leave it with a Howard, that is." Gibbons looked thoughtful. "This new situation probably means no Clinic here any time soon?"

"I think that is certain, Ernest. Any Howard who needs rejuvenation soon had better take passage with us; we are bound to hit Secundus in a leg or six, no matter where we go. Then you are definitely coming along? All over your problem? What became of that baby girl? The short-lifer."

Gibbons grinned. "I don't think I'll let you lay eyes on her, Son; I know you."

Captain Briggs' arrival caused Gibbons to miss three days running his usual daily ride with Dora Brandon. On the fourth day he showed up at the schoolhouse as school let out, Briggs having gone back up for a couple of days. "Got time for a ride today?"

She flashed him a smile. “You know I have. Half a minute while I change.”

They rode out of town, Gibbons as usual riding Beulah but with Dora on Betty. Buck was saddled (for his pride), but the saddle was empty; he was now ridden only ceremonially, by mule years he was quite old.

They paused on a sunny hilltop well out of town. Gibbons said, “Why so silent, little Dora? Buck has had more to say than you have.”

She turned in the saddle and faced him. “How many more rides will we have together? Is this the last?”

“Why, Dora! Of course we will have more rides together.”

“I wonder. Lazarus, I—”

“What did you call me?”

“I called you by your name, Lazarus.”

He stared at her thoughtfully. “Dora, you’re not supposed to know that name. I’m your ‘Uncle Gibbie.’”

“‘Uncle Gibbie’ is gone, and so is ‘Little Dora. I’m almost as tall as you are now, and I’ve known for two years who you are, and I had guessed it before that—guessed that you were one of the Methuselahs, I mean. But I said nothing to anyone. And never will.”

“Don’t make it a promise, Dora; it isn’t necessary. It’s just that I never meant to burden you with it. How did I give myself away? I thought I had been most careful.”

“You have been. But I have seen you nearly every day almost as far back as I can remember. Little things. Things no one would notice who didn’t see you—really *look* at you—every day.”

“Well, yes. But I didn’t expect to have to keep it up so long. Helen knew?”

“I think she did. We never spoke *of* it; But I think she guessed the same way I did…and she may have figured out which Methuselah you are—”

“Don’t call me that, dear. It’s like calling a Jew a ‘kike.’ I’m a member of the Howard Families. A Howard.”

“I’m sorry. I didn’t know that the name mattered.”

“Well…it doesn’t, really. It’s just a word that reminds me of a time long gone. A time of persecution. Sorry, Dora; you were telling me how you learned that my name is Lazarus? One of my names, that is, for I am ‘Ernest Gibbons’ just as truly.”

“Yes, ‘Uncle Gibbie.’ It was in a book. A picture. A microbook one has to read with the viewer at the town library. I saw this picture and winked on past it—then clicked back and looked again. You weren’t wearing whiskers in the picture and your hair was longer…but the longer I stared at it, the more it looked like my foster uncle. But I couldn’t be sure—and couldn’t, ask.”

"Why not, Dora? I would have told you the truth."

"If you had wanted me to know, you would have told me. You always have reasons for everything you do, everything you say. I learned that when I was so little we used to ride the same saddle. So I didn't say anything. Until—Well, until today. Knowing that you are leaving."

"Have I said that I was leaving?"

"Please! Once, when I was very little, you told me a story about when you were a little boy hearing wild geese honking in the sky—how, when you grew up, you wanted to find out where they went. I didn't know what a wild goose was; you had to explain to me. I know you follow the wild goose. When you, hear them honking, you have to go. You've been hearing them in your head for three or four years. I know…because when you hear them, *I* hear them, too. And now the ship is here and it's very loud in your head. So I knew."

"Dora, Dora!"

"Don't, please. I'm not trying to hold you back, truly I'm not. But before you go, I want something very much."

"What, Dora'? Uh, didn't mean to tell you this yet, but Fm leaving some property for you with John Magee. Should be enough for—"

"No, no, please! I'm a grown woman now, and self-supporting. What I want doesn't cost anything." She looked him steadily in the eye. "I want your child, Lazarus."

Lazarus Long took a deep breath, tried to steady his heartbeat. "Dora, Dora, my dear, you are hardly more than a child yourself; it is too soon for you to be talking about having one. You don't want to marry me—"

"I did not ask you to marry me."

"I was trying to say that, in a year or two—or three, or four—you *will* want to marry. Then you will be glad that you did *not* have my child."

"You refuse me this?"

"I'm saying that you must not let an emotional upset over parting cause you to make any such hasty decision."

She sat very straight in the saddle, squared her shoulders. "It is not a hasty decision, sir. I made up my mind long ago, even before I guessed that you were a—Howard. Long before. I told Aunt Helen, and she said that I was a silly girl and that I must forget it. But I have never forgotten it, and if I was a silly girl then, I am much older now and know what I am doing. Lazarus, I am not asking for *anything* else. It could be syringes and such, with Dec Krausmeyer's help. Or—again she looked him squarely in his eyes—"it could be the usual *way."* She dropped her eyes, then looked up again, smiled briefly and added, "But, either way, it had best be quickly. I don't know the ship's schedule; I *do* know mine."

Gibbons spent all of a half second reviewing certain factors in his mind. "Dora."

"Yes…Ernest?"

"My name is not 'Ernest,' nor is it 'Lazarus.' My right name is Woodrow Wilson Smith. So since I am no longer 'Uncle Gibbie'—and you are right on that point; 'Uncle Gibbie' is gone and will never be back—you might as well call me 'Woodrow.'"

"Yes, Woodrow."

"Do you want to know why I had to change my name?'

"No, Woodrow."

"So? Do you want to know how old I am?"

"No, Woodrow."

"But you want to have a child by me?"

"Yes, Woodrow."

"Will you marry me?"

Her eyes widened slightly. But she answered at once: "No, Woodrow."

Minerva, at that point Dora and I almost had our first— and last, and only—quarrel. She had been a sweet and lovable baby who had grown into a sweet-tempered and utterly lovable young woman. But she was as stubborn as I am with the sort of firmness that can't be argued with, because she would not argue. I pay her the respect of believing that she had thought this through, all aspects, and had long since made up her mind to bear my child if I would let her—but not to marry me.

As for me, I did not ask her to marry me on impulse; it just sounds like it. A supersaturated solution will crystallize almost instantly; that's the shape I was in. I had lost interest in that colony years earlier, as soon as it stopped presenting real challenges; I was itching to do something else. At the top of my mind I thought I was waiting for Zack to return…but when the *Andy J.* finally did orbit in that sky, two years overdue—well, I learned that it was not what I had been waiting for.

When Dora made that amazing request, I knew what I had been waiting for.

Surely, I tried to argue her out of it—but I was playing devil's advocate. In fact, my mind was busy with, what and how. All the objections to marrying a short-lifer still remained. My even stronger objections to leaving a pregnant woman behind me—shucks, dear, I didn't spend a nanosecond on *that.*

"Why not, Dora?"

"I told you. You are leaving, I will not hold you back."

"You won't hold me back. No one ever has yet, Dora. But—no marriage, no child."

She looked thoughtful; "What is your purpose in insisting on a marriage ceremony, Woodrow? So that our child will bear your name? I don't want to be a sky widow…but if that is what it takes, let's ride back to town and find the Moderator. Because it really should be today. If the books are right about how to figure it."

"Woman, you talk too much." She did not answer this; he went on: "I don't give a hoot about a wedding ceremony—certainly not one in Top Dollar."

She hesitated, then said, "May I say that I do not understand?"

"Eh? Yes, surely. Dora, I won't settle for one child. You're going to have half a dozen children by me, or more. Probably more. Maybe a dozen. Any objection?"

"Yes, Woodrow—I mean No, I do not object. Yes, I will have a dozen children by you; Or more."

"Having a dozen kids takes time; Dora. How often should I show up? Every two years, maybe?"

"Whatever you say, Woodrow. Whenever you come back— each time you come back—I'll have a child by you. But I do ask that we start the first one at once."

"You crazy little idiot, I believe you *would* do it that way."

"Not 'would'—shall. If you will."

"Well, we're *not* going to do it that way." He reached out and took her hand. "Dora, will you go where I go, do what I do, live where I live?"

She looked startled but answered steadily, "Yes, Woodrow. If this is truly what you want."

"Don't put any conditions on it. Will you, or won't you?"

"I will."

"If it comes to a showdown, will you do what I tell you to? Not give me any more stubborn arguments?'

"Yes, Woodrow."

"Will you bear my children and be my wife till death do us part?"

"I will."

"I take thee, Dora, to be my wife, to love and protect and cherish—and never to leave you…so long as we both shall live. Don't sniffle! Lean over here and kiss, me instead. We're married."

"I was not either sniffling! Are we really married?"

"We are. Oh, you can have any wedding ceremony you want. Later. Now shut up and kiss me."

She obeyed. Some long moments later he said, "Hey, don't fall out of your saddle! Steady, Betty! Steady, Beulah! 'Durable Dora, who taught you to kiss that way?"

"You haven't called me that since I started to grow up. Years."

"Haven't kissed you since you started to grow up, either. For good reason. You didn't answer my question."

"Is that one of the things I just promised? Whoever taught me to kiss, it was before I was a married woman."

"Mmm, you may have a point there. I'll take it up with my legal staff and have them write you a letter. Besides it might be native talent rather than instruction. Tell you what, Dora, I'll refrain from quizzing you about your sinful past…and you leave mine alone. A deal?"

"Yes indeed—for I have a *very* sinful past!"

"Piffle, darling, you haven't had time to be sinful. Swiped some sweets I had fetched for Buck, maybe? Very sinful."

"I never did any such thing! But lots worse."

"Oh, sure. Give me another of those native talent kisses."

Presently he said, "Whew! No, the first one wasn't a fluke. Dora, I think I married you just barely in time."

"You insisted on marrying me—my husband. I didn't make an issue of it."

"Conceded. Sweetheart, are you still anxious to get started on that baby? Now that you know that I am not going away without you?"

"No longer anxious. Eager, perhaps. Yes, eager is the right word. But not demanding."

"'Eager' is a fine word. Me, too. I could also add 'demanding.' Who knows?—you may have other native talents."

She barely, smiled. "If not, Woodrow, I'm sure you can teach me. I'm willing to learn. Eager."

"Let's head back to town. My apartment? Or the schoolhouse?"

"Either one, Woodrow. But see that little stand of trees? It's much closer."

It was almost dark as they neared town; they rode back at a gentle walk. As they passed the Markhams' house on the old Harper place, Woodrow Wilson Smith said, "Adorable Dora—"

"Yes, my husband?"

"Do you want a public wedding?"

"Only if you want one, Woodrow. I feel very much married. I *am* married."

"You certainly are. Not going to run away with a younger man?"

"Is that a rhetorical question? Not now or ever."

"This young man is an immigrant who may not be down until the last or nearly the last trip. He is about my height, but he has black hair and a darker skin than I have. Can't say just how old he is, but he looks about half the age I look. Smoothshaven. His friends call him

'Bill.' Or 'Woodie.' Captain Briggs says Bill is very fond of young schoolmarms and is anxious to meet you."

She appeared to consider it. "If I kissed him with my eyes closed, do you think I would recognize him?"

"It's possible, Dorable. Almost certain. But I don't think anyone else will. I hope they don't."

"Woodrow, I don't know your plans. But if I recognize this 'Bill,' should I attempt to convince him that I am that other schoolmarm?' The one you were singing about? Rangy Lil?"

"I think you could convince him, dearest one. All right, 'Uncle Gibbie' is back, temporarily. It will take Ernest Gibbons three or four days to wind up what he must do here, then he'll say goodbye to people—including his foster niece, that old-Maid schoolmarm Dora Brandon. Two days later this Bill Smith comes down with the last, or nearly the last, load of cargo from the ship. You had better be packed and ready to leave by then because Bill is going to drive past your schoolhouse the following day, or the day after that, just before dawn, headed for New Pittsburgh."

"New Pittsburgh. I'll be ready."

"But, we won't stay there more than a day or two. On we go, past Separation; then right over the horizon. We're going to tackle Hopeless Pass, dear. Does that appeal to you?"

"I go where you go."

"Does it *appeal* to you? You won't have anyone to talk to but me. Until you bake one and teach him—or her—to talk. No neighbors. Lopers and dragons and God knows what else. But no neighbors."

"So I'll cook and help you farm—and bake babies. When I have three I'll open 'Mrs. Smith's Primary School.' Or should we call it 'Rangy Lil's Primary School'?"

"The latter, I think. For young hellions. My kids are always hell-raisers, Dora. You'll teach school with a club in your hand."

"If necessary, Woodrow. I've got some like that now, and two of them outweigh me. I clobber them as necessary,"

"Dora, we don't have to tackle Hopeless Pass. We could leave in the 'Andy J.' and go to Secundus. Briggs tells me that there are over twenty million people there now. You could have a nice house. Inside plumbing. A flower garden instead of breaking your back helping ale to make a farm. A good hospital with real doctors when you have babies. Safety and comfort."

"Secundus.' That's where all the—Howards moved. Isn't it?"

"About two-thirds of them. A few are right here, as I told you. But we don't admit it because when you are outnumbered, it is neither safe nor comfortable to be a Howard. Dora, you don't have to make up your mind in only three or four days. That ship will stay in orbit here as long as I want it to. Weeks. Months. As long as I order it to stay."

"Goodness! You can afford to have Captain Briggs hold a starship in orbit? Just to let me make up my mind?"

"I shouldn't have rushed you. But it's not exactly a case of affording it, Dora—although it doesn't cost much to stay in orbit. Uh…I've kept my own counsel so long that I'm out of the habit of being a married man, with a wife I can trust with secrets; I must stop it. I own sixty percent of the 'Andy J.' Dora; Zack Briggs is my junior partner. And my son. Your stepson, you could say."

She did not answer at once. Presently he said, "What's the trouble, Dora? Did I shock you?"

"No, Woodrow, I'm just having to get used to new ideas. Of course you've been married before, you're a Howard. I'd never thought about it, that's all. A son—sons. And daughters, too, no doubt."

"Yes, surely. But what I was getting at is that I've done some bad planning—through my own selfishness. I was rushing you when there is no need for it. If we stay on New Beginnings, I want 'Ernest Gibbons' to disappear—leave in the 'Andy J.,' that is, as he is getting too old: I can't keep it up much longer.

So young Bill Smith, who's much nearer your age, takes his place… which looks better and no one here will ever suspect that I'm a Howard.

"I've worked this shenanigan many times; I know how to make it stand up. But I was trying to get rid of 'Ernest Gibbons' as fast as possible because he's your old foster uncle who is about three times your *age* and wouldn't dream of patting your pretty bottom, nor would you encourage him to. As everybody knows. But I *want* to pat your pretty bottom, Dorable."

"And I want you to pat it." She reined up; they were getting close to where houses were near together. "And more. Woodrow, you're saying that we can't live together right away because of what the neighbors might think. But who taught me never to care what the neighbors think? You did."

"True. Although sometimes it's expedient to make the neighbors think what you want them to think in order to influence what they do and say—and this might be such a time. But I also tried to teach you to be patient, dear one."

"Woodrow, I will do exactly what you tell me to. But I'm not really patient about this. I want my husband in my bed!"

"And I want to be there."

"Then what does it matter if people assume that I choose to tell my Uncle Gibbie goodbye in bed? Or that I then go away with a new settler almost at once? Woodrow, you didn't say a word about it at the time—but you knew that I was not virgin, I'm certain. Don't you think there must be others who know it, too? Probably the whole town. I've never worried about it. Why should I worry what they think now?"

"Dora."

"Yes, Woodrow?"

"I'll be in your bed every night, that's settled."

"Thank you, Woodrow."

"The pleasure is mine, madam. Or half of it, at least; you seem to enjoy it, too—"

"Oh, I do! And you know it. Or should."

"So stipulated, let's pass to other matters—except to say that had I found you virgin—big as you are, old as you are— it would have worried me a little, and I might have felt that Helen had not been quite the wholesome influence that I thought she was. That she was indeed, bless her heart! The matter of pretending to be dear old 'Uncle Gibbie' who would never touch little Dora was purely for your face; since it does not worry you, let's drop it. What I started to say is that you can take as long as you like in deciding whether to pioneer here or go to Secundus. Dora, Secundus has more than inside plumbing; it has a Rejuvenation Clinic."

"Oh! You need to 'be near one, Woodrow?"

"No, no! For *you,* dear."

She was very slow in answering. "That would not make me a Howard."

"Well, no. But it helps. Rejuvenation therapies don't make Howards last forever, either. Some people are helped quite a lot by them; some are not. Maybe someday we'll know more— but now, on the average, rejuvenation techniques seem to about double whatever a person could expect normally, whether he's a Howard…or not a Howard. Uh, do you know *anything* about how long your grandparents lived?"

"How could I, Woodrow? I just barely remember that I once had parents. I don't even know the names of my grandparents."

"We can find out. The ship carries records of every migrant who takes passage in her. I'll tell Zack—Captain Briggs—to look up your parents' records. Then—in time, for it will take time—I can have your family traced on Earth. Then—"

"No, Woodrow."

"Why not, dear?"

"I don't need to know, I don't want to know. Long ago, three or four years at least, shortly after I figured out that you were a Howard, I also figured out that Howards don't really live any longer than we ordinaries do."

"So?"

"Yes. We all have the past and the present and the future. The past is just memory, and I can't remember when I began, I can't remember when I *wasn't.* Can you?"

"No."

"So we're even on that. I suppose your memories are richer; you are older than I am. But it's *past.* The future? It hasn't happened yet, and nobody knows. You may outlive me…or I may outlive you. Or we might happen to be killed at the same time. We can't know and *I* don't want to know. What we both have is *now*…and we have that together and it makes me utterly happy. Let's get these mules put away for the night and enjoy some *now."*

"Suits." He grinned at her. "E.F., or F.F.?"

"Both!"

"That's my Dora! Anything worth doing is worth overdoing."

"And doing again. But just a moment, dear. You told me that Captain Briggs is your son, and consequently my stepson. I suppose he is, but I really can't think of him as such. But— and you needn't answer this; we agreed not to quiz each other about our pasts—"

"Go ahead and ask. If it suits me, I'll answer."

"Well…I can't help being curious about Captain Briggs' mother. Your former wife?'

"Phyllis? Phyllis Briggs-Sperling is her full name. What do you want to knew about her dear? Very nice girl. Further Deponent Sayeth Not. No invidious comparisons."

"I guess I'm being snoopy."

"Perhaps you are. Not that I mind, and it can't hurt Phyllis. Dear, that was a couple of centuries ago; forget it."

"Oh. She's dead?"

"Not that I know of. Zack would know; he's been to Secundus recently. I think he would have told me. But I haven't stayed in touch with her since she divorced me."

"Divorced you? A woman of poor taste!"

"Dora. Dora! Phyllis is *not* a woman of poor taste; she is a very nice girl. I had dinner with her and her husband the last time I was on Secundus. Zack and I did, I mean—and she and her husband had gone to the trouble of rounding up my other children by her, those who were on planet, and some of my other relatives and made it a family party for me. Thoughtful of her. By the way, she's a schoolmarm, too."

"She is?"

"Yup. Libby Professor of Mathematics, Howard University, New Rome, Secundus. If we go there, we can look her up and you can decide for yourself what sort of person she is."

Dora did not answer. She kneed Betty and started on down the street; Beulah pulled abreast without being told. Buck said, "Shupper…*dime!"* quite emphatically, and trotted on ahead.

"Lazarus—"

"Careful with that name, dear."

"No one can hear me: Lazarus, unless you insist…I don't want to live on Secundus."

VARIATIONS ON A THEME

XII

The Tale of the Adopted Daughter (Continued)

Separation lay far behind. For three weeks the little train—two wagons in tandem, twelve mules hauling, four running free—had crawled toward Rampart Range. It had been more than two weeks since they had last seen a house. They were on the high prairies now, and for several days the gap of Hopeless Pass had been in sight.

Besides sixteen mules, the little party included a German shepherd bitch and a younger dog, two female cats and a tom, a fresh milch goat with two kids and a young buck, two cocks and six hens of the hardy. Mrs. Awkins variety, a freshly bred sow, and Dora and Woodrow Smith.

The sow had tested pregnant at New Pittsburgh before Smith paid for her, test conducted by Smith himself—and Mrs. Smith had tested pregnant, too, while still at Top Dollar and before Smith cleared Starship *Andy J.* to leave orbit, for (Smith had *not* found it necessary to tell his wife this) if Dora had *not* tested pregnant, the ship would have waited while they tried again—then, if she had still tested negative, he would have changed plans and taken her to Secundus, there to find out why and, if possible, to correct it.

In Smith's opinion as a professional pioneer, it was not only pointless but disastrously foolhardy to attempt single-couple pioneering out of reach of other people with an infertile woman—or a couple infertile with each other, he corrected in his mind, as his own fertility had not been put to the ultimate test for fifty-odd years. While he was about it, he had looked up physical records of Dora's parents in Krausmeyer's ill-kept files, found nothing to worry him—and it had indeed worried him, as he would not have been able to cope even with anything as simple as an Rh-factor incompatibility a long way from nowhere.

But within the limited medical resources of colony and ship, the board showed all green, and it seemed likely to him that Dora bad become pregnant about twenty minutes after their informal muleback wedding.

The thought had passed through his mind that Dora might have been pregnant even sooner—but the thought was merely an amusing whimsy that bothered him not at all. Smith felt certain that he had had the Cuckoo in his nest more than once over the centuries; he had been especially careful to be a loving father to such children and had kept his mouth shut. He believed in letting women lie all they needed to, and never taxing them with it. But he believed also that Dora was incapable of this sort of lie. If Dora had been pregnant and aware of it, she might have asked to be allowed to say goodbye to him on her back—but she would have asked for exactly that. Not for a child.

No matter— If the darling had made a mistake earlier and did not know it, he felt sure that she would nevertheless have a superior baby. She was clearly superior stock herself—he, wished he had known the Brandons; they must have been ichiban—and their daughter was, as Helen had once said, “choosy.” Dora would, not bed with an oaf even for fun, because, being what she was, she would not find it fun. Smith was sure that it would take rape to put an inferior child into Dora—and the rapist might sing soprano the rest of his days; her Uncle Gibbie had taught her some dirty tricks.

The pregnant sow was Smith’s “calendar.” If they failed to reach a spot suitable for homesteading by the time that sow littered, then they turned back that very day—no hesitation, no regrets—as that would leave them just half of Dora’s pregnancy to get them back to Separation and other people.”

The sow rode in the back end of the second wagon, with a sling to keep her from falling down. The dogs trotted under the wagons, or ranged aside, warning of lopers or other hazards. The cats did as they pleased, as cats do, walking or riding as suited them. The nanny and billy goats stayed close to the wheel pair; the two kids were large enough to skitter along most of the time but were privileged to ride when they tired—a loud *Me-e-e-eh* from the mother goat would cause Smith to swing down and hand the tired baby up to Dora. The chickens complained in a double cage over the sow’s pen. The mules running free had no duties other than to keep eyes out for lopers, save that Buck was at all times grand marshal of the parade, picking the footing, bossing the other mules, carrying out Smith’s orders. Mules at liberty rotated as draft animals; only Buck was never in harness. Betty and Beulah had had their feelings hurt at being required to accept harness; they were gentry of the saddle, and they knew it. But Buck had had harsh words with them and harsher nips and kicks; they had shut up and hauled.

No real driving was required; only two reins were used, one to each of the lead pair and running from them back through rings on the collars of the following mules to the seat of the leading wagon, there usually loosely secured rather than held. Although the males were all stallions, these mules did what Buck ordered. Smith had stopped at Separation and lost most of a day to trade a strong brute with good shoulders for a younger, lighter stud because the bigger mule had not been willing to accept Buck's dominance. Buck was ready to fight it out, but Smith did not let the old mule risk it; he needed Buck's brain and judgment, and would not risk Buck's spirit being broken by losing to a younger stallion—or take a chance that Buck might be injured.

In real trouble more reins would not help. If the mules panicked and ran—unlikely but possible—two humans could not hold them, even with a double handful of reins. Smith was ready at any instant to pick off his lead pair, then hope that not too many mules would break legs stumbling over the corpses and pray that the wagons would not overturn.

Smith wanted to reach their destination with all his livestock; he hoped to get there with about 80 percent including a breeding pair of each sort—but if they arrived with, enough draft animals to pull the wagons (including at least one breeding pair) plus a pair of goats, he could consider it a conditional victory and they would make their stand, to live or to die.

How many mules were "enough" was a variable. Near the end of the trip it could be as low as four—then go back and get the second wagon. But if the number of mules dropped below twelve before they conquered Hopeless Pass—turn back.

Turn back at once. Abandon one or both wagons, jettison what they could not salvage, slaughter any animals that could not make it without help, travel light with any extra mules trailing along, unwitting walking larders.

If Woodrow Wilson Smith limped back into Separation on foot, his wife riding—miscarried but still alive—it still would not be defeat. He had his hands, he bad his brain, he had the strongest of human incentives: a wife to care for and cherish. In a few years they might try Hopeless Pass again—and not make the mistakes he had made the first time.

In the meantime he was happy, with all the wealth any man could hope for.

Smith leaned out Of the wagon seat. "Hey, Buck! Supper."

"Shupper dime," Buck repeated, then called out, "Shupper *dime!* Shirko *nigh!* Shirko *nigh!"* The lead pair turned left, started bringing the train around in a circle.

Dora said, "The Sun is still high"

"Yes," her husband agreed, "and that's why. The Sun is high, it's very hot, the mules are tired and sweaty and hungry and thirsty. I want them to graze. Tomorrow we'll be up before dawn and rolling at first light—make as many kilometers as possible before it gets too bloody hot. Then another early stop."

"I wasn't questioning it, dear; I simply wanted to know why. I'm finding that being a schoolmarm hasn't taught me all I need to know to be a pioneer wife."

"I understood; that's why I explained. Dora, *always* ask me if I do anything you don't understand; you *do* have to know…because if something happens to me, then it'll be up to you. Just hold your questions until later if I seem to be in a hurry."

"I'll try, Woodrow—I *am* trying. I'm hot and thirsty myself; those poor dears must be feeling it dreadfully. If you can spare me, I'll water them while you unharness."

"No, Dora."

"But— Sorry."

"Damn it, I said always to ask why. But I was about to explain. First we let them graze an hour. That will cool them down some in spite of the Sun, and, being thirsty, they'll look for short green stuff under this tall dry stuff. They will get a little moisture out of that. Meantime I'm' going to measure the water barrels, but I know that we're going on short water rations. Should've yesterday. Dorable, you see that patch of dark green way up there below the pass? I think there water there, dry as it's been…and pray hard that there is, because I don't expect to find water between here and there. We may have no water at all the last day or so. It doesn't take a mule long to die without water and not much longer for a man."

"Woodrow, is it as bad as that?"

"It is, dear. That's why I've been studying the photomaps. The clearest ones Andy and I made a long time ago, when we surveyed this planet—but in early spring for this hemisphere. The shots Zack took for me aren't much; the Andy J. isn't equipped as a survey ship. As may be, I took this route because it looked faster. But every wash we've crossed the past ten days has been bone dry. My mistake and it may be my last one."

"Woodrow! Don't talk that way!"

"Sorry, dear. But there is always a last mistake. I'll do my damndest to see that this is *not* my last mistake—because it must not happen to you. I'm simply trying to impress you with how carefully we must conserve water."

"You've impressed me. I'll be most careful with cleaning up and so forth.”

“I still haven’t made it clear. There will be no washing at all—not a face wash, not even a hand wash. Pans and such you’ll scour with dirt and grass and put them in the sunshine and hope they sterilize. Water is only for drinking. The mules go on half water rations at once, and you and I, instead of the liter and a half of liquid each day a human is supposed to need, will each try to get by on a half liter. Uh, Mrs. Whiskers will get a full ration of water; she has to make milk for her kids. If it gets too tough, we slaughter the kids and let her dry up.”

“Oh, dear.”

“We may not have to. But, Dora, we aren’t even close to last extremities. If the going gets really tough, we kill a mule and drink its blood.”

“What! Why, they’re our friends!”

“Dora, listen to your old man. I promise you that we will never kill Buck, or Beulah, or Betty. If I must, it will be a mule we bought n New Pittsburgh. But if one of our three old friends die—we eat him. Her.”

“I don’t think I could.”

“You will when you’re hungry enough. If you think about the baby, inside you, you’ll eat without hesitation and bless your dead friend for helping to keep your baby alive. Don’t talk about what you can’t do when the chips are down, dear— because you *can.* Did Helen ever tell you stories about the first winter here?”

“No. She said I didn’t need to know.”

“Could be she was mistaken. I’ll tell you one of the less grisly ones. We placed—I placed—a heel-and-toe watch over the seed, grain with orders to shoot to kill. And one guard did. A drumhead courtmartial exonerated the guard; the man he killed was clearly stealing seed grain—his corpse had half-chewed grain in its mouth. Not Helen’s husband, by the way; *he* died like a gentleman—malnutrition and some fever I never identified.”

Smith added, “Buck’s got us hauled around. Let’s get busy.” He jumped down, reached up to help her. “And smile, baby, smile!—this show is being transmitted back to Earth to show those poor crowded people how *easy* it is to take a new planet—courtesy of DuBarry’s Delicious Deodorants, of which I need a bucketful.”

She smiled. “I stink worse than you do, my love.”

“That’s better, darling; we’ll make it. It’s just the first step that’s a dilly. Oh, yes! No cooking fire.”

“‘No f—‘ Yes, sir.”

“Nor any until we get out of this dry stuff. Don’t strike a light for any reason—even if you’ve dropped your rubies and can’t find them.”

“‘Rubies—’ Woodrow, it was wonderful of you to give me rubies. But right now I would swap them for another barrel of water.”

"No, you wouldn't, dearest, because rubies don't weigh anything and I took every barrel the mules could haul. I was delighted that Zack had those rubies along and I could give them to you. A bride should be cherished. Let's take care of these tired mules."

After they turned the mules loose, Dora tried to figure out what she could feed her husband without the use of fire while Smith got busy on the fence. The fence was not much, but having only two wagons, they could not form a proper defensive circle; the best that could be done was to angle the wagons as far as the front axle of the second wagon permitted, then surround the bivouac with a fence of sorts—sharpened stakes of brasswood, each two meters long, and held together and spaced by what passed for rope in New Pittsburgh. The result, when held up on two sides by wagons and braced to the ground along the hypotenuse, constituted a high and fairly nasty picket fence. It would not slow up a dragon, but this was not dragon country. Lopers did not like it.

Smith did not like it much, either, but it was made on New Beginnings of all-native materials, could be repaired by a man who was handy, did not weigh much, could be abandoned with no great loss—and contained no metal. Smith had beer able to buy two sturdy, boat-bodied, Conestoga-type wagons in New Pittsburgh only by offering in part payment complete hardware for two other wagons—hardware imported across the lightyears in the *Andy I.* New Pittsburgh was far more "New" than "Pittsburgh"; there was iron ore there and coal, but its' metals industry was still primitive.

The chickens, the sow, the goats, and even the humans were tasty temptations to wild lopers, but with the goats and kids shooed inside the kraal, two alert watchdogs, and sixteen mules grazing on all sides, Smith felt reasonably secure at night. True, a loper might get a mule, but it was much more likely that the mule would get the loper—especially as other mules would close in and help stomp the carnivore. These mules did not run from a loper; they struck out at him. Smith thought that, in time, mules might clean out the varmints even more than man did, make them as scarce as mountain lions had been in his youth.

A mule-stomped loper was readily converted into loper steak, loper Stew, loper jerky—and dog and cat food, and Mrs Porky the sow enjoyed the offal—all at no loss to the mules. Smith did not care much for loper in any form; the meat was too strongly flavored for his taste—but it, was better than nothing and kept them from digging too deeply into food they had hauled along, Dora did not share her husband's distaste for loper meat; born there aid having eaten it now and then since earliest childhood, it seemed to her a normal food.

But Smith wished that he had time to hunt one of the herbivores that were the loper's natural prey—six-legged like the loper but otherwise resembling a misshapen okapi— their meat was much milder. They were called "prairie goats," which they were not, but systematic taxonomy of fauna and flora on New Beginnings had not gone far; there had been as yet no time for such intellectual luxuries. Smith had shot a prairie goat from the seat of the wagon a week earlier (now only a memory, bittersweet, of tasty tender meat). Smith did not feel justified in taking a day off to hunt until they had conquered Hopeless Pass. But he kept hoping for another chance shot.

Maybe now— Fritz! Lady Macbeth! Here!" The dogs trotted up and waited. "High sentry. Loper! Prairie-goat! Up!" The dogs immediately got on the very top of the lead wagon, making it in two jumps and a scramble, step, seat, and curved top. There they split the duty, nigh side and off side— and there they would stay until told to get down. Smith had paid a stiff price for the pair, but he had known they were good dogs; he had picked their ancestors on Earth and had fetched them with the first wave. Smith was not a "doggie" man in any fanatic sense; he simply believed that a partnership that had lasted so long on Earth would serve men equally well on strange planets.

Dora was sobered by her husband's words, but once she got busy working, she cheered up. Shortly, while trying to plan a menu, from little choice and without a cooking fire, she came across something that vexed her—good for her as it displaced her worrisome thoughts. Besides, she did not really believe that her husband could fail at anything.

She came around the end of the second wagon, crossed the little kraal to where her husband was making sure that his fence was tight, "Oh, that pesky little rooster!"

Woodrow looked around. "Hon, you look cute in just a sunbonnet."

"Not just a sunbonnet, I'm wearing hoots, too. Don't you want to hear what that nasty little rooster did?"

"I would rather discuss how you look. Adorable, that is. Nevertheless, I'm not pleased with the way you are dressed."

"What? But it's so hot, dear. Since I can't wash, I thought an. air bath might make me smell better."

You smell good to me. But an air bath is a good idea; I'll peel down, too. Your gun, dear—where's your, belt with your knife and gun?" He started shucking his overalls.

You want me to wear my gun belt *now?* Inside the fence? With you here to protect me?"

As self-discipline and a standard precaution, my lovely one." He hitched his own gun-and-knife belt back into place as be stepped out of his overalls, then pulled off boots and shirt and got bare save for the belt and three other weapons that did not show when he was dressed. “In more years than I like to think about I have never been unarmed except when locked in somewhere safe. I want you to acquire the habit. Not just sometimes. Always.”

“All right. I left my belt on the seat; I’ll get it. But, Woodrow, I’m not much of a fighter at best.”

“You’re fairly accurate with that needle gun up to fifty meters. And you’re going to get better and better the longer you live, with me. Not just with it but with anything that shoots, cuts, burns, or even makes nasty bruises, from your bare hands to a blaster. See over there, Dorable?” He pointed to nothing but flatness. “In just seven seconds a horde of hairy savages will come pouring over the top of that rise and attack. I get a spear through my thigh and go down…then you have to fight them off for both of us. What are you going to do, you poor little girl, with your gun clear over them on the seat of that wagon?”

“Why”—she set her feet apart, put her hands back of her head, and gave a wiggle that was invented in the Garden of Eden, or perhaps just outside—“I’ll’ go *this* way at ‘em!”

“Yes,” Lazarus agreed thoughtfully, “that should work. If they were human. But they aren’t. Their only interest in tall, beautiful, brown eyed girls is to *eat* them. Bones and all. Silly of them, but that’s how they are.”

“Yes, dear,” she said docilely. “I’ll go put on my gun belt. Then I’ll kill the one who speared you. Then I’ll see how many more I can get before they eat me.”

“That’s right, durable Dorable. Always take an honor guard with you. If you have to go, go down fighting. The size of your guard of honor determines your status in hell.”

“Yes, dear. I’m sure I’ll enjoy hell if you’re there, too,” She turned to fetch her weapons.

“Oh, I’ll be there! They wouldn’t take me anywhere else. Dora! When you put on your gun belt, take off your sunbonnet and boots—and put on your rubies, all of them.”

She paused with a foot on the step of the wagon. “My rubies, dear? Out here on the prairie?!”

“Rangy Lil, I bought those rubies for you to wear and, for me to admire you wearing them.”

She flashed a smile that turned her normally serious expression into sunshine, swung on up into the wagon and disappeared. She was back quickly wearing weapons belt and rubies but had taken a few seconds to comb her hair—long and chestnut brown and shining. That she bad not been able to bathe for more than two weeks did not show, did not detract from her enchanting, youthful beauty. She paused on the step and smiled at him.

“Hold it!” he said, “Perfect! Dora, you are the most beautiful thing

I have ever seen in all my born days."

She flashed him another smile. "I don't believe that, my husband—but I hope you will go on saying it."

"Madam, I cannot tell a lie. I say it only because it is the simple truth. Now, what were you saying about the little rooster?"

"Oh! That perverted little monster! I *said* he had been breaking eggs on purpose! This time I caught him. Pecking them. Two freshly laid broken eggs!"

"Royal prerogative, dear. Afraid one of them would hatch out a rooster."

"I'll wring his neck! If we had a fire, I'd do it right now. Darling, I was trying to see what we could eat cold without opening anything not already open, and it occurred to me that salt crackers crumbled into raw eggs would almost make a meal. But there were only three eggs today and he broke the two laid by his hens. I'd put plenty of grass in both cages; the one egg on the other side wasn't even cracked. Damn him. Woodrow, why do we have to have *two* roosters?"

"For the same reason I carry two throwing knives. Sweetheart, alter we arrive and hatch our first chicks, once they're big enough that I'm certain of a spare rooster, we can have rooster and dumplings with him as guest of honor. Not before."

"But we *can't* have him breaking eggs. Tonight's supper will be mostly cheese and hardtack—unless you want me to open something."

"Let's not rush it. Fritz and Lady Mac are trying to spot game right now. Prairie goat, I hope. Loper if not."

"But I can't cook meat. You said. You did say—"

"Raw, my dear. Haunch of prairie goat, chopped fine, and spread on hard crackers. Beef Tartare a la New Beginnings. Tasty. Tastes almost as good as girl." He smacked his lips.

"Well…if you can eat it, I can eat it. But half the time, Woodrow, I don't know whether you are joking or not."

"I never joke about food or women, Dorable; those are sacred subjects." He looked her up and down again. "Speaking of women, woman, dressing you in rubies is just right. But why a bracelet around your ankle?"

"Because you gave me three bracelets, sir. As well as rings and a pendant. And you said to wear all of them."

]"So I did. Where did this one come from?"

"Hey! That's not a ruby; that's *me!"*

"Looks like a ruby. Here's another just like it."

"Unh! Maybe I'd better take my rubies off? So we won't lose them. Or should we water the mules first?"

"You mean before we eat?"

"Uh…yes, I guess that's what. I mean. Tease."

"You're not speaking very plainly, little Dora. Tell Uncle Gibbie what you want."

"I'm-not 'little Dora.' I'm Rangy Lil, the horniest girt south of Separation—you said so yourself. I cuss and I swear and I spit between thy teeth and I'm concubine to Lazarus Long, Super Stud of the Stars and better than any six men— and you know damn well what I want, and if you pinch my nipples again, I'm likely to trip you and take it. But I guess we ought to water the mules."

Minerva, Dora was just plain nice to be around, always. It wasn't her physical beauty…which wasn't that outstanding by the usual criteria in any case—although she was utterly beautiful *to me.* Nor was it her enthusiastic interest in sharing "Eros"—although she was indeed enthusiastic, ready any time, and always on a short fuse. And skilled at it and got more so; Sex is a learned art, as much so as ice skating or tight wire walking or fancy diving; it is *not* instinct. Oh, two animals couple by instinct, but it takes intelligence and patient willingness to turn copulation into a high and lively art. Dora was good at it and got better and better, always eager to learn, free of fetishes or silly preconceptions, patiently willing to practice anything she learned or was taught—and with it that spiritual quality that turns sweaty exercise into a living sacrament.

But Minerva, love in what *still* goes on when you ate *not* horny.

Dora was good company at any time, but the tougher things were, the better companion she was. Oh, she fretted about broken eggs because chickens were her responsibility; she did not complain that she was thirsty. Instead of nagging me to do something about that rooster, she figured out what had to be done and did it—shoved all the hens in with the other rooster, tied the feet of the egg breaker and laid him aside while she moved the partition between the cages, then the smaller rooster was in solitary confinement and we lost no more eggs.

But the truly tough parts lay ahead of us; she did not fret at all during those, or ever turn balky when I did not have time to explain. Minerva, much of the trek was slow death, other parts were sudden dangers that could have been, quick death. She was endlessly patient in the former, always kept her head and helped in the latter. Dear, you are awesomely learned—but you are a city girl and you've always been on a civilized planet; perhaps I had better explain some things.

Maybe you have been asking yourself: "Is this trip necessary?"—and; if it is, why do it the hard way?

"Necessary—" Having done something a Howard should never do, namely, marry an ephemeral, I had three choices: Take her to live among Howards. Dora rejected that—although I would have tried to talk her out of it if she had said Yes. A short-timer alone in a community of the long-lived is almost certain to go into suicidal depression; I had seen it first in my friend Slayton Ford and I've seen it many times since then. I did not want this to happen to Dora. Whether the number of her years was ten or a thousand, I wanted her to enjoy them.

Or we could stay in Top Dollar or—the same thing—near one of the villages of that small piece of the planet that was settled then. I almost chose this, as the "Bill Smith" dodge would work for that—for a time.

But only for a short time. The few Howards on New Beginnings—the Magees and three other families as I recall— had all arrived incognito—"masquerade" in Howard jargon— and by simple dodges they could shuffle things around and never be 'caught' at it. Grandmother Magee could "die," then show up as "Deborah Simpson" on another Howard homestead. The more people there were on the planet, the easier it was to pull this—especially after the fourth wave arrived, all of them coldsleep cargo and thereby never having gotten acquainted with each other.

But "Bill Smith" was married to an ephemeral. If I stayed around the settled parts, I would have to be most careful to keep my hair dyed—not just on my head but all over my body lest some accident give me away—and then be careful to "age" as fast as my wife did. Worse, I would have to avoid people who had known "Ernest Gibbons" well— most of Top Dollar, that is to say—or someone would see my profile and hear my voice and start wondering, as I had had no chance for plastic surgery or anything of that sort. At other times, when it was needful to change name and identity, I had always changed location as well, that being the only foolproof way to do it. Even plastic surgery won't disguise me very long; I regenerate too easily. I once had my nose bobbed (the alternative seemed to involve having my neck bobbed); ten years later it was just as it is now, big and ugly.

Not that I was too jumpy about being disclosed as a Howard. But if I was going to have to live in masquerade, the more carefully I used these cosmetic tricks, the more Dora's nose would be rubbed in the fact that I was different from her—different in the saddest way of all, a husband and a wife who ran on very different time rates.

Minerva, it seemed to me that the only way I could give my pretty new wife a square shake was by taking her far away from both sorts of people, long-lived and short, where I could quit pretending and we could ignore the difference, forget it and be happy. So I decided to take her clear out of reach of other people, decided this before we got back to town the very day I married her.

It seemed the best answer to an otherwise impossible situation, but one not as irreversible as a parachute jump if she got too lonely, if she grew to hate the sight of my ugly mug, I could bring her out to the settlements again, still young enough to hook another husband. I had this in, mind, Minerva, as some of my wives have grown tired of me fairly quickly. I had arranged with Zack Briggs, at the same time I had arranged with John Magee to act as factor for Zack—arranged with Zack to ask John what had happened to "Bill Smith" and the little schoolmarm? It was possible that I would need a ride offplanet someday.

But why didn't I have Zack put us down on the spot on the map I had picked as being our likely place of settlement?— with everything we would need to start farming: and thereby avoid a long, dangerous trek. Not risk death by thirst, or by lopers, or the treacheries of mountains, or whatever.

Minerva, this was a long time ago and I can explain only in terms of technology available *there* and *then.* The *Andy J.* could not land; she received her overhauls in orbit around Secundus or some other advanced planet. Her cargo boat could land on any big flat field but required a minimum of a radar-corner reflector to home on, then had to have many metric tons of water to lift off again. The captain's gig was the only boat in the *Andy J.* capable of landing anywhere a skilled pilot could put her down, then lift off without help. But her cargo capacity was about two postage stamps—whereas I needed mules and plows and a load of other things.

Besides, I needed to learn how to get *out* of those mountains by going *into* them. I could not take Dora into there without being reasonably sure that I could fetch her out again. Not fair! It's no sin not to be pioneer-mother material—but it is tragic for both husband and wife to find it out too late.

So we did not do it the bard way; we did it the *only* way for that time 'and place. But I have never put the effort into a mass calculation for a spaceship at liftoff that I put into deciding what to take, what to do without, for that trek. First, the basic parameter: how many wagons in the train? I wanted three wagons so badly I could taste it. A third wagon would mean luxuries for Dora, more tools for me, more books and such for both of us, and (best!) a precut one-room house to get my pregnant bride out of the weather almost instantly at the other end.

But three wagons meant eighteen mules hauling, plus spare mules —~add six by rule-of-thumb—which meant half again as much, time spent harnessing and unharnessing, watering the animals, taking care of them otherwise. Add enough Wagons and mules and at some point your day's march is zero; one man can't handle the work. Worse, there would be places in the mountains where I would have to unshackle the wagons, move them one at a time to a more open place— go back for each wagon left behind, bring it up—a process that would take twice as long for a three-wagon train as for a two-wagon one, and would happen oftener, even much oftener, with three wagons than with two. At that rate we might have three babies born en route instead of getting there before our first one was born.

I was saved from such folly by the fact only two trekking wagons were available in New Pittsburgh. I think I would have resisted temptation anyhow—but I had with me in the light wagon we drove from Top Dollar, the hardware for three, then I spent that extra hardware on other, things, bartering it through the wainwright. I could not wait while he built a third wagon; both the season of the year and the season of Dora's womb gave me deadlines I had to meet.

There is much to be said for just one wagon—standard equipment over many centuries and on several planets for one family in overland migration if they travel in a party.

I've led such marches.

But one wagon by itself—One accident can be disaster. Two wagons offer more than twice as much to work with at the other end, plus life insurance on the march. You can lose one wagon, regroup, and keep going.

So I planned for two wagons, Minerva, even though I had Zack debit me with three sets of 'Stoga hardware, then did not sell that third set until the last minute.

Here's how you load a wagon train for survival: First, list everything that you expect to need and everything that you would like to take:

Wagons, spare wheels, spare axles
Mules, harness, spare hardware and harness leather, saddles
Water
Food
Clothing
Blankets
Weapons, ammunition, repair kit
Medicines, drugs, surgical instruments, bandages
Books
Plows
Harrow
Field Rake
Shovels, hand rakes, hoes, seeders, threefive- & seven-tine forks
Harvester

Blacksmith's tools
Carpentry tools
Iron cookstove
Water closet, self-flushing type
Oil lamps
Windmill & pump
Sawmill run by windpower
Leatherworking & harness-repair tools
Bed, table, chain, dishes, pots, pans, eating & cooking gear
Binoculars, microscope, water-testing kit
Grindstone
Wheelbarrow
Churn
Buckets, sieves, assorted small hardware
Milk cow & bull
Chickens
Salt for stock & for people
Packaged yeast, yeast starter
Seed grain, several sorts
Grinder for whole-grain flour, meat grinder

Don't stop there; think *big.* Never mind the fact that you've already overloaded a much longer wagon train. Search your imagination, check the manifests of *the Andy J.,* search the ship itself, look, over the stock in Rick's General Store, talk with John Magee and look over his house and farm and outbuildings—if you forget it now, it's impossible to go back for it.

Musical instruments, writing materials, diaries, calendars
Baby clothes, layettes
Spinning wheel, loom, sewing materials—sheep!
Tannin & leather-curing materials and tools
Clocks, watches
Root vegetables, rooted fruit-tree seedlings, other seed
Etc. etc. etc. . .

Now start trimming—start swapping—start figuring weights.

Cut out the bull, the cow, the sheep; substitute goats with hair long enough to be worth cutting. Hey, you missed *shears!*

The blacksmith's shop stays but gets trimmed down to an anvil and minimum tools—a bellows you must make. In general anything of wood is scratched, but a small supply of wrought-iron stock, heavy as it is, must be hauled; you'll be making things you didn't know you could.

The harvester becomes a scythe with handle and cradle, three spare blades; the field rake is scratched.

The windmill stays, and so does the sawmill (surprise!)—but only as minimum hardware; you won't tackle either one soon.

Books—Which of those books can you live without, Dora?

Halve the amount of clothing, double up on -shoes and add more boots and don't forget children's shoes. Yes, I know how to make moccasins, mukluks, and such; add waxed thread. Yes, we do have to have block-and-tackle and the best glass-and-plastic lines we can buy, or we won't get through the pass. Money is nothing; weight and cubage are all that count—our total wealth is what mules can take through that notch.

Minerva, it was lucky for me, lucky for Dora, that I was on my sixth pioneering venture and that I had planned how to load spaceships many years before I ever loaded a covered wagon—for the principles are the same; spaceships are the covered wagons of the Galaxy. Get it down to the weight the mules can haul, then chop off 10 percent no matter how it hurts; a broken axle—when, you can't replace it—might as well be a broken neck.

Then add more water to bring it up to *95* percent; the load of water drops off every day.

Knitting needles! Can Dora knit? If not, teach her. I've spent many a lonely hour in space knitting sweaters and socks. Yarn? It will be a long time before Dora can tease goat shearings into good yarn—and she can knit for the baby while we travel; keep her happy. Yarn doesn't weigh much.

Wooden needles can be made; even curved metal needles can be shaped from scraps. But pick up both sorts from Rick's Store.

Oh my God, I almost missed taking an *ax!*

Ax heads and one handle, brush hook, pick-mattock—Minerva, I added and trimmed and discarded, and weighed every item at New Pittsburgh—and we weren't three kilometers out of there headed for Separation before I knew I had us overloaded. That night we stopped at a homesteader's cabin, and I traded a new thirty-kilo anvil for his fifteen-kilo one, traded even, with the pound of flesh nearest my heart tossed in for good measure. I swapped other heavy items that we would miss later for a smoked ham and a side of bacon and more corn for the mules—the last being emergency rations.

We lightened the loads again at Separation, and I took another water barrel in trade and filled it because I now had room for another and knew that too heavy a load of water was self-correcting.

I think that extra barrel saved our lives.

The patch of green that Lazarus-Woodrow had pointed out up near the notch of Hopeless Pass proved to be farther away in travel time than he had hoped. On the last day that they struggled toward it neither man nor mule had had anything to drink since dawn the day before. Smith felt lightheaded; the mules were hardly fit to work, they plodded slowly, heads down.

Dora wanted to stop drinking when her husband did. He said to her: "Listen to me, you stupid little tart, you're *pregnant.* Understand me? Or will it take a fat lip to convince you? I held out four liters when we served the mules; you saw me."

"I don't need four liters, Woodrow."

"Shut up. That's for you, and the nanny goat, and the chickens. And the cats—cats don't take much. DorabIe, that much water means nothing split among sixteen mules, but it will go a long way among you small fry."

"Yes, sir. How about Mrs. Porky?"

"Oh, that damned sow! Uh…I'll give her a half a liter when we stop tonight and I'll serve her myself. She's likely to kick it over and take your thumb off, the mood she's in. And I'll serve *you* myself, measure it out, and watch you drink it."

But after a long day and a restless night and then an endless day, they were at last among the first of the trees. It seemed almost cool, and Smith felt that he could smell water—somewhere. He could not see any. "Buck! Oh, Buck! Circle!"

The boss mule did not answer; he bad not talked all day. But he brought the column around, cornered the wagons, and nudged, the lead pair into the V to be unharnessed.

Smith called the dogs and told them to hunt for water, then started unharnessing. Silently his wife joined him, serving the off mule of each pair while Smith cleared the nigh mule. He appreciated her silence. Dora was, he thought, telepathic to emotions.

Now if I were water somewhere around here, where would I be? Witch for it? Or search the surface first? He felt fairly sure that no stream led away from this stand of trees, but he could not be certain without hiking all the downhill side. Saddle Beulah? Shucks, Beulah was worse off than he was. He started unlashing rolled sections of spike fence from the sides of the second wagon. He had not seen a loper for three days, which meant to him that they were three days closer to their next trouble with the beasts. "Dora, if you feel up to it, you can give me a hand with this."

She made no comment on the fact that her husband had never before let her help erect the kraal; she simply worried about how drawn and tired he looked and thought about the quarter liter of water she had stolen and hidden—how could she persuade him to drink it?

They were just done when Fritz set up an excited yipping in the distance.

Minerva, it was a water bole—a trickle that came out of a rocky face, ran a couple of meters and formed a pool with no outlet. None that time of year, I should say, as I could see where it overflowed in flood season. I could see also plenty of animal sign—loper tracks and prairie goat and more that

I could not identify. I had a feeling that there might be eyes on me, and I tried to grow eyes in the back of my head. It was dusky near the spring; trees and undergrowth were thicker and the Sun was getting low.

I was in a dilemma. I don't know how it happened that one of the free mules had not found this bole as soon or sooner than the dogs; mules can smell water. But mules were certain to be there soon, and I did not want them to drink too fast. Sensible as a mule is, he'll drink too fast and too much if he is very thirsty. These mules were extremely thirsty; I wanted to watch each one myself, not let one founder.

Besides that I did not want them walking into that pool; it was clear, seemed clean.

The dogs finished drinking. I looked at Fritz and wished that he could talk as well as a mule. Did I have anything to write on? No, not a durn thing! If I told him to fetch Dora, Fritz would try—but would she come? I had told her flatly to stay in the kraal till I got back. Minerva, I wasn't thinking straight; the heat and no water had got to me. I should have given Dora contingency instructions…because if I stayed away too long and it started to get dark, she was going to come looking for me no matter what.

Hell, I hadn't even fetched a bucket!

In the meantime I at least had sense enough to scoop up and drink a couple of handfuls of water, Gideon style. That seemed to clear my head some.

I dropped the straps of my overalls, got my shirt off, soaked it in water, and gave it to Fritz. "Find Dora! Fetch Dora! *Fast!*" I think he thought I had gone nuts, but he left, carrying that wet shirt.

Then the first mule showed up—old Buck, praise Allah!— and I ruined a hat.

That hat Zack had fetched as a present for me. It was alleged to be an all-weather hat, so porous it would let air in, yet so water-repellent that it would keep your head dry in a pouring rain. The former allegation was only moderately true; the latter I had not had a chance to test.

Buck snorted and was all for going into the water up to his knees; I stopped him. Then I offered him a hatful of water. Then a second. And a third.

“Enough for now, Buck. Assembly. Water call.”

With his throat wet Buck could do it. He let out a trumpeting bellow that was mule talk, not English, and I won’t attempt to reproduce it, but it meant “Line up for water” and nothing else. “Fall in to be harnessed” was another soil of bellow.

Then I was trying to cope with a dozen-odd thirst-crazed mules. But between me, Buck, Beulah who was Buck’s straw boss, Lady Macbeth who was used to helping Buck too—and a hat that wasn’t quite all that waterproof—we made it. I never did learn how seniority was established among mule’s, but the mules knew and Buck enforced it and water call always found them queued up in the same order, and heaven help the youngster who tried crowd in out of turn; the least he could expect was a nipped ear.

By the time the last had been given a hatful of water my hat was a mess—but here came Dora with Fritz, her needle gun in her right fist, and, glory be!—two buckets in her left hand. “Water call!” I told my top sergeant. “Line ‘em up again, Buck!”

With two buckets and two of us working we got a full bucket into each mule pretty rapidly. Then I got my shirt back from Fritz, scrubbed out the buckets a bit, filled them, and announced a third water call, telling Buck to let them drink from the pond.

He did so, but he still maintained discipline. As Dora and I left, each with a bucket of water in one hand and a drawn gun in the other, Buck was still requiring them to drink one at a time, by seniority.

It was nearly sundown when Dora and I and the dogs got back to the wagons, almost full dark as we finished watering goats and sow and cats and chickens. Then we celebrated. Minerva, I swear solemnly: on the half bucket of water we saved for ourselves Dora and I got stinkin’ drunk.

Despite earlier resolutions not to stop short of the pass, we bivouacked there three days—but very useful days. The mules grazed steadily and filled out, plenty of water, plenty of forage. I shot a prairie goat at the water hole; what we couldn’t eat, Dora sliced and dried as jerky. I filled all the barrels—not as easy as it sounds as Buck and I had to work out a route to the water hole, then I had to chop some, then I had to take the wagons in one at a time; it took me a day and a half.

But we had cooked fresh meat and all we could eat—and hot baths! With soap. With shampoos. With a shave for me. I carried

Dora's big iron kettle to the pool, she fetched a bucket, I built a fire—then we took turns getting the stink off, one guarding while the other washed.

When we rolled toward the pass the morning of the fourth day, we were not only in fine shape, but Dora and I smelled good and kept telling each other so, in high spirits.

We were never again short of water. There was snow somewhere above us; you could feel it in the breeze and sometimes catch a distant glimpse of white in a saddle between peaks. The higher we got, the oftener we encountered rivulets, water that never reached the prairie in so dry a year. The forage was green and good.

We stopped in a little alp close to the pass. There I left Dora with the wagons and the mules and with flatfooted instructions about what to do in case I did not come back. "I expect to be back by dark. If I am not, you can wait a week. No longer. Understand me?"

"I understand you."

"All right. At the end of a week, lighten the first wagon by chucking out anything you can do without on trek. Put all food into that wagon, empty the barrels in the second wagon and put them in the first wagon, turn the sow and the chickens loose, and head back. Fill all your barrels at that trickle we crossed earlier today. After that, don't stop for anything; roll all day from dawn till dark. You should reach Separation in half the time it took to get us up here. Okay?"

"No, sir."

Minerva, a few centuries earlier I would have started to boil up at that point. But I had learned. It took me about a tenth of a second to realize that I could not make her do anything—if I were gone—and that a promise made under duress won't hold. "All right, Dora, tell me why not and what you intend to do instead. If I don't like it, perhaps we both will start back for Separation."

"'Woodrow, while you did not say so, you are asking me to do what I should do—and I *would* do!—if I were a widow."

I nodded. "Yes, that's right. Dearest, if I'm not back in a week, you're a widow. No possible doubt."

"I understand that. I also understand why you are leaving the wagons here; you can't be sure that you can turn them around higher up."

"Yes. That's probably what happened to earlier parties— reached a place where they couldn't go forward and couldn't turn around…then tried one or the other and went over."

"Yes. But, my husband, you mean to be gone only one day—half a day out, half a day back. Woodrow, I won't assume that you are dead —I *can't!"* She looked at me steadily and her eyes filled with tears, but she did not cry. "I must see your dear body, I must be certain. If I am certain, I will go back to Separation as fast and as safely as possible. And then to the Magees as you have told me, and have your child and bring him up to be as much like his father as possible. But I must *know.*”

“Dora, Dora! In one week you *will* know. No need to look for my bones.”

“May I finish, sir? If you aren’t back tonight, I’m on my own. At dawn tomorrow I start out on Betty, with another saddle mule following. At noon I turn back.

“Perhaps, if I can’t find you, I’ll find a spot higher up where I can take one wagon and turn it around. If I find such a spot, I’ll move one wagon up and use it as a base and look farther. I could have missed your track. Or I might have followed mule tracks—but you aren’t on the mule. Whatever it is, I’ll search and search again. Until there’s no hope at all! *Then…*I will go to Separation as fast as mules can get me there.

“But, my darling, if you are alive—maybe with a broken leg but alive—if you still have a knife or even your bare hands, I don’t believe that a loper or anything can kill you. If you are alive, I’ll find you. I will!”

So I backed down and checked watches with her and agreed on what time I would turn back. Then Buck and I, with me up on Beulah, set out to scout ahead.

Minerva, at least four parties had tried that pass; none had come back. I’m certain enough that they each failed from being too eager, not patient enough, unwilling to turn back when the risk was too great.

Patience I have learned. The centuries may not give a man wisdom, but he acquires patience or he doesn’t live through them: That first morning we found the first spot that was too tight. Oh, someone had blasted there and probably got around that turn. But it was too narrow to be safe, so I blasted some more. Nobody in his right mind takes a wagon into the mountains without dynamite or some such; you can’t nibble at solid rock with a toothpick, or even a pickax, without risking being still up there when the snows come.

I was not using dynamite. Oh, anyone with a modicum of chemistry can make both dynamite and ‘black powder,’ and I planned to do both—later. What I had with me was a more efficient and more flexible blasting jelly—and not shock-sensitive, perfectly safe in wagon and saddlebag.

I placed that first charge in a crack where I thought it would do the most good, set the fuse but did not light it, then walked both mules back around the bend and exerted my histrionic talent to its limit to explain to Buck and Beulah that there was going to be a loud noise, a *bang/—but* it could hot hurt them, so don't worry. Then I went back, lit the fuse, hurried back to them and was in time to have an arm on each neck—watched my watch. "Now!" I said, and the mountain obliged me with *Ka-boom!*

Beulah shivered but was steady. Buck said inquiringly, *Paaang?*

I agreed. He nodded and went back to cropping leaves.

We three went up and took a look. Nice and wide now— Not very level, but three tiny blasts took care of that. "What do you think, Buck?"

He looked carefully up and down trail. "Doo wagon?"

"One wagon."

"Ogay."

We explored a little farther, planned the next day's work; then I turned back at the time promised, was home early.

It took me a week to make a couple of kilometers safe to another little alp, a grassy pocket big enough to turn one wagon around at a time. Then it took all of a long day to move our wagons, one at a time, to this next base. Someone had made it that far; I found a broken wagon wheel—salvaged the steel tire and the hub. It went on that way, day after day, slowly, tediously, and at last we were through the notch and headed—mostly—downhill.

But that was worse, not better. The river I had been sure was there, by photomaps from space, was far below us, and we still had to go down, down, down, and follow it a long way before we would reach the place where the gorge opened out into valley suitable for homesteading. More blasting, lots of brush chopping, and sometimes I had to blast trees. But the nastiest part was rappelling those wagons down the steepest places. I didn't mind steep places going uphill (which we still encountered); a twelve-mule team can drag a single wagon up any slope they can dig their hooves into. But downhill—

Certainly those wagons had brakes. But if the grade is steep, the wagon slides on its tires—then goes over the edge, mules and all.

I couldn't let that happen even once. Not ever *risk* letting it happen. We could lose one wagon and six mules and still go on. But *I* was not expendable. (Dora would not be in the wagon.) If that wagon cut loose, my chances of jumping clear would be so-so.

If the grade was steep enough to give me even a trace of doubt that I could hold a wagon with its brakes, we did it the hard way: used that expensive imported line to check it down such pitches. Lead the line out fair and free for running, pass the bitter end three times around a tree stout enough to anchor it, secure it to the rear axle—then our four steadiest mules, Ken and Daisy, Beau and Belle, would take the wagon down at a slow walk (no driver) following Buck, while I kept tension on the line, paying it out very slowly.

If terrain permitted, Dora on Betty would take station halfway down to relay orders to Buck. But I could not permit her to be on the trail itself; if that line parted, it would whip. So maybe half the time Buck and I worked without liaison, doing it dead slow and depending on his judgment.

If there was not a sound anchor tree properly positioned—and it seems to me that this happened more often than not—then we had to wait while I worked something out. This could be anything: a sling between two trees, then rig a fair-lead to a third tree—A bare-rock anchor using driven pitons—I hated these as I bad to do my checking right at the rear axle, walking behind, and God help us all if I stumbled. Then that was always followed by the time-consuming chore of salvaging those pitons—the harder the rock, the better the anchor, but the tougher the job of getting them out—and I *had* to get them out; I would need them farther along.

‘Sometimes no trees and no rock— Once the anchor was twelve mules faced back along the trail, with Dora soothing them while I checked at a rear axle and Buck controlled the progress.

On the prairie we often made thirty kilometers a day. Once we were through Hopeless Pass and had started down the gorge the distance made good over the ground could be zero for days on end while I prepared the trail ahead, then up to as high as ten kilometers if there were no steep pitches that required rappelling down by line. I used just one unbreakable rule: The trail had to be fully prepared from one turnaround base to the next before a wagon was moved.

Minerva, it was so confounded slow that my “calendar” caught up with me; the sow ‘littered—and we were not out of the mountains.

I don’t recall ever making a harder decision. Dora was in good shape, but she was halfway through her pregnancy.

Turn back (as I had promised myself, without telling her)— or push on and hope to reach lower and fairly level ground before she came to term? Which would be easier on her?

I had to consult her—but *I* had to decide. Responsibility *cannot* be shared. I knew how she would vote before I took the matter up with her: Push on.

But that would be simply her gallant courage; *I* was the one with experience both in wilderness trekking and in childbirth problems.

I studied those photomaps again without learning anything new. Somewhere ahead the gorge opened out into a broad river valley—but how far? I didn’t know because I didn’t know where we were. We had started with an odometer on the right rear wheel of the lead wagon; I had reset it to zero at the pass—and it had lasted only a day or two; a rock or something did it in. I didn’t even know how much altitude we had managed to drop since the pass, or how much more we must lose to get down.

Livestock and equipment: fair. We had lost two mules. Pretty Girl had wandered over the edge one night and broken a leg; all I could do for her was to put her out of her misery. I didn't butcher her because we had fresh meat and I could not do it where the other mules could not see it, anyhow. John Barleycorn had simply upped and died one night—or possibly lost to a loper; he was partly eaten when we found him.

Three hens were dead and two piglets failed to make it, but the sow seemed willing to suckle the others.

I had only two spare wheels left. Lose two more and the, next broken wheel meant abandoning one wagon.

It was the wheels that made up my mind.

(Omitted: approximately 7,000 words which reiterate difficulties in getting down the gorge.)

When we came out on that plateau, we could see the valley stretching out before us. A *beautiful* valley, Minerva, wide and green and lovely—thousands and thousands of hectares of ideal farmland. The river from the gorge, tame now, meandering lazily between low banks. Facing us, a long, long way off, was a high peak crowned with snow. Its snow line let me guess how high it was—around six thousand meters, for we had now dropped down into subtropics, and only a very high mountain could keep so much snow through a long and very hot summer.

That beautiful mountain, that lush green valley, gave me a feeling of déjà vu. Then I placed it: Mount Hood in the land of my birth back on old Earth, as I had first seen it as a young man. But this valley, this snowcapped peak, had never before been seen by men.

I called out to Buck to halt the march. "Dorable, we're home; in sight of it, somewhere down in that valley."

'Home,'" she repeated. "Oh, my darling!"

"Don't sniffle."

"I wasn't sniffling!" she answered, smiling. "But I've got an awful good cry saved up and when I get time to, I'm going to use it."

"All right, dear," I agreed, "when you have time. Let's name that mountain 'Dora Mountain.'"

She looked thoughtful. "No, that's not its name. That's Mount Hope. And all this below is Happy Valley."

"Durable Dora, you're incurably sentimental."

"You should talk!" She patted her belly, swollen almost to term. "That's Happy. Valley because it's where I'm going to have this hungry little beast…and that's Mount Hope because it *is.*"

Buck had come back to the first wagon and was waiting to find out why we had stopped. “Buck,” I said, pointing, “that’s home out there. We made it. Home, boy. Farm.”

Buck looked out over the valley. “Ogay.”

—in his sleep, Minerva. Not lopers, there wasn’t a mark on Buck. Massive coronary, I think, although I didn’t cut him open to find out. He was simply old and tired. Before we left, I had tried to put him to pasture with John Magee. But Buck didn’t want that. We were his family, Dora and Beulah and I, and he wanted to come along. So I made him mule boss and didn’t work him—I mean I never rode him and never had him in harness. He *did* work, as mule boss, and his patient good judgment got us safely to Happy Valley.

We would not have made it without him.

Maybe he could have lived a few years longer turned out to pasture. Or he might have pined away from loneliness soon after we left. Who’s to judge?

I didn’t even consider butchering him; I think Dora would have miscarried it I had so much as broached the idea. But it is foolish to bury a mule when lopers and weather will soon take care of his carcass. So I buried him.

It takes an hellacious big hole to bury a mule; If it hadn’t been soft river-bottom loam, I’d be there yet.

But first I had to deal with personnel problems. Ken was just junior to Beulah in the water queue and was a steady, strong mule who talked fairly well. On the other hand, Beulah had been Buck’s straw boss the whole trek—but I could not recall a gang of mules bossed by a mare.

Minerva, with H. sapiens this would not matter, at least not today on Secundus. But with some sorts of animals it *does* matter. A boss elephant is female. A boss chicken is, a cock, not a hen. A boss dog can be either sex. In a breed where sex controls the matter a man had better by a damn sight go along with their ways.

I decided to see if Beulah could swing it, so I told her to line ‘em up for harness, both as a test and because I wanted to move the mules out of sight while I buried Buck—they were nervy and restless; the boss mule’s death had upset them.

I don’t ‘know what mules think about death, but they are not indifferent to it.

She promptly got busy, and I kept an eye on Kenny. He accepted it, took his usual place by Daisy. Once I had them harnessed, Beulah was the only one left over, three mules dead now.

I told Dora that I Wanted them moved a few hundred meters away. Would she handle it, with Beulah as march boss? Or would she feel safer if I did it?—and ran into a second problem: Dora wanted to be present when I buried Buck. More than that—”Woodrow, I can help dig. Buck was my friend, too, you know.”

I said, “Dora, I’ll put up with anything at all from a pregnant woman except allowing her to do something that would hurt her.”

“But, dearest, I feel okay, physically—it’s just that I’m dreadfully upset over Buck. So I want to help.”

“I think you are in good shape, too, and I want you to stay that way. You can help best by staying in the wagon. Dora, I haven’t any’ way to take care of a premature baby, and I don’t want to have to bury a baby as well as Buck.”

Her eyes widened. “You think that would happen?”

“Sweetheart, I don’t know. I’ve known women to hang onto babies under unbelievable hardships. I’ve seen others lose babies for no reason that I could see. The only rule I have about it is: Don’t take unnecessary chances. This one is not necessary.”

So once again we replanned things to suit both of us, though it took an extra hour. I unshackled the second wagon and set up the fence again, put the four goats inside the fence, and left Dora in that wagon. Then I drove the first wagon three or four hundred meters away, unharnessed the mules, and told Beulah to keep them together —and told Ken to help her, and left Fritz to help her, too, and took Lady MacBeth with me to watch for lopers or whatever. The visibility was good—no brush, no high grass; the place looked like a tended park. But I was going to be down in a hole; I didn’t want something sneaking up on me or on the wagon. “Lady Macbeth. High sentry. *Up!*”

By agreement Dora stayed in the wagon.

It took all that day to take care of our old friend, with a stop for lunch and a few short breaks for water and to catch my breath in the shade of the wagon—breaks I shared with Lady Mac, letting her get down each time I came up. Plus one interruption—It was midafternoon and I had dug almost enough hole when Lady Mac barked for me. I was up out of that hole fast, blaster in hand, expecting lopers.

Just a dragon— I wasn’t especially surprised, Minerva; the well-cropped state of the turf, almost like a lawn, seemed to indicate dragon rather than prairie goat. Those dragons are not dangerous unless one happens to fall on you. They are slow, stupid, and strictly vegetarian. Oh, they’re ugly enough to be frightening; they look like six-legged triceratops. But that’s all. Lopers left them alone because biting armor is unrewarding.

I joined Dora at the wagon. “Ever seen one, hon?”

“Not up close. Goodness, it’s *huge.*”

"It's a big one, all right. But it will probably turn away. I won't waste a charge on it if I don't have to."

But the durned thing did not turn away. Minerva, I think it was so stupid that it mistook the wagon for a lady dragon.

Or the other way around, it is hard to tell male from female. But they are definitely bisexual; two dragons humping is a remarkable sight.

When it got within a hundred meters, I let myself out the fence and took Lady Mac along, as she was quiveringly eager. I doubt if she had ever seen one; they were cleaned out around Top Dollar long before she was whelped. She danced up to it, barking but wary.

I hoped that Lady would cause it to turn aside, but this misshapen rhinoceros paid no attention; it lumbered slowly along, straight for the wagon. So I tickled it with my needle gun between where it should have had lips, to get its attention. It stopped, astounded I think, and opened its mouth wide. That was what I needed, as I did not want to waste maximum power blasting through that armored hide. So—Blaster at minimum, right into its mouth: Scratch one dragon.

It stood there a moment, then slowly collapsed. I called Lady and went back to the fence. Dora was waiting. "May I go look at it?" I glanced at the Sun. "Sweetheart, I'm going to be pushed to take care of Buck before dark, then fetch the mules back and move us on a way. Unless you are willing to bivouac, with the grave on one side and a dead dragon on the other?"

She did not insist, and I got back to work. In another hour I had it deep enough and wide enough—got out block-and-tackle, a triple purchase, secured it to the rear axle, tied Buck's hind feet together, hooked over the tie and took up the slack.

Dora had come out with me. "Just a moment, dear." She stopped to pat Buck's neck, then leaned down and kissed his forehead. "All right, Woodrow. Now."

I heaved on the line. For a moment I thought the wagon would move despite the brakes being locked. Then, Buck started to slide, and fell into his grave. I shook the hook loose, then backfilled fast, closing in twenty minutes a hole it had taken me most of the day to dig. Dora waited.

I finished. "Up into the wagon, Dorable; that's it."

"Lazarus, I wish I knew something to say. Do you?"

I thought about it. I had heard a thousand burial services; most of them I did not like. So I made up one. "Whatever God there be, please take care of this fine person. He always did his best. Amen."

(Omitted)

—even those first years weren't too hard, as Happy Valley would grow anything, two and three crops a year. But we should have named it "Dragon Valley."

Lopers were bad enough, especially the small lopers that hunted in packs which we found on that side of Raxnpa Range. 'But those damned dragons! They almost drove me out of my skull. When you've lost the same potato patch four times running, it begins to wear.

Lopers I could poison and did. I could trap them, too, if I changed style every time. Or I could put out bait at night and sit quietly and get most of a pack, silently, with a needle gun. I could do lots of things and did, and the mules learned to cope with them, too, sleeping closer together at night an always with one on watch, like quail or baboon. Whenever I beard the bellow that meant *"Loper!"* 'I always came awake fast and tried to join the fun—but the mules rarely left me any; they not only could stomp them, but they could outrun them and get some or all of a pack that tried to escape. We lost three mules and six goats to lopers, but the lopers got the news and started giving us a wide berth.

But those dragons! Too big to trap and would not take poison; salad was all they were after. But what one dragon can do to a cornfield in one night shouldn't happen to Sodom and Gomorrah. Bow-and-arrow was futile against them, and a needle gun just tickled them. I could kill one with a blaster at full power right through the armor, or minimum power the way I got that first one if I could get my target to open its mouth. But unlike lopers, they were too stupid to stay away when they were losing.

The first summer I was able to farm I killed more than hundred dragons in trying to save my crops…which was defeat for me and a victory for the dragons. Not only was the stench terrible (what can you do with a carcass that big?) but, far worse, I was running out of charges and they didn't seem to be running out of dragons.

No power. Buck's River did not have enough head on it where we settled to think about trying to build a water wheel even if I cannibalized one wagon to build it. The windmill had fetched was in fact nothing but gears and other hardware the mill itself I would have to build, from sails to tower. Bu until I had power I had no way to recharge power packs.

Dora solved it. We were still living in that first compound nothing but a high adobe wall just big enough to surround the wagons and to bring the goats inside at night, while we slept in the first wagon along with baby Zack and cooked in a clay Dutch oven—and between smoke, and goats and chickens and the sour smells babies can't help making and the cesspit that bad to be inside the wall—well, the stench of dead dragons wasn't too noticeable.

We were finishing supper, Dora dressed in her rubies as always for supper, and were watching the moons and the stars coming out—best time of day, always, except that when I should have been admiring our firstborn at suck and enjoying the sky, I was grousing about power and what in hell I could do about those pesky dragons.

I had ticked off several simple ways to produce power— simple if you are on a civilized planet or even at a place like New Pittsburgh with its coal and its infant metals industry— when I happened to use a very old-fashioned term. Instead of talking about kilowatts or megadynecentimeters per second or such, I had remarked that I would settle for ten horsepower any way I could get it.

Dora had never seen a horse, but she knew what one was. She said, "Beloved, wouldn't ten mules do instead?"

(Omitted)

We had been in our valley seven years when the first wagon showed up. Young Zack was nearly seven and beginning to be some help to me—or thought he was and I encouraged him to try. Andy was five, and Helen not yet four. We had lost Persephone, and Dora was pregnant again, and that was why—Dora had insisted on starting another baby at once, not wait one day, one hour—and she was right. Once we knew she had caught, our morale picked up overnight. We missed Persephone; she had been a darling baby. But we stopped grieving and looked forward instead. I hoped for another girl but was willing to settle for any baby—no way to control the sex of a child, then and there.

All in all, we were in fine shape, with a prosperous farm, a healthy, happy family, plenty of livestock, a much larger compound with a house built right into it against the back wall, a windmill that drove a saw, or ground grain, or supplied power for my blaster.

When I spotted that wagon, my first thought was that it was going to be nice to have neighbors. But my second thought was that I was going to be proud, very proud, to show off my fine family and our farm to these newcomers.

Dora climbed up to the roof and watched the wagon with me; it was still over fifteen kilometers away, could not arrive before evening. I put my arm around her. "Excited, hon?"

"Yes. Though I've never been lonely; you haven't let me be. How many do you think I should expect for supper?"

"Hmm— Only one wagon. One family. My best guess is a couple, with none, one, or two children. More than that would surprise me."

"Me, too, darling, but there'll be plenty to eat."

"And put some clothes on our kids before they get here—wouldn't want ‘em to guess we’re raising savages, would we?” She answered, deadpan, “Shall I wear clothes, too?”

“What swank! That’s up to you, Rangy Lil—but who was it said just last month that she had never worn her party dress?”

“Will you be wearing a kilt, Lazarus?”

“I might. I might even take a bath. I’ll need one because I’m going to spend the rest of the day cleaning the goat compound and a lot of other things—make this place look as neat as possible. But forget the name ‘Lazarus,’ dear; I’m Bill Smith again.”

“I’ll remember—Bill. I’ll bathe before they get here, too— because I’m going to have a hot and busy time, cooking, cleaning house, bathing our children, and trying to teach them how to be introduced to strangers. They’ve never seen anyone else, dear; I’m not sure they believe there *is* anyone else.”

“They’ll behave.” I was sure they would. Dora and I had the same ideas about raising kids. Praise them, never scream at them, punish as necessary and right now—never a moment’s delay—then it’s over with and forget it. Be as lavish with affection after a spanking as any other time—or a bit extra. Spanking they had to have (Dora usually used a switch) because, without exception over the centuries, my kids have been hell-raisers who would take advantage of the sweetness-and-light routine. Some of my wives had trouble believing what little monsters I spawn—but Dora was right with me on this wild-animal act from scratch. In consequence she raised the most civilized brood I’ve ever fathered.

When that wagon was maybe a kilometer away, I rode out to meet them—then was surprised and disappointed. A family, yes, if you count a man and two grown sons as a family. No women, no children. I wondered how they thought they were going to pioneer.

The younger son was not fully grown; his beard was sparse and scraggly. Nevertheless, he was taller and heavier than I was, and he was the smallest of the three. His father and brother were mounted; he was driving—actually driving; they were not using a mule boss. No livestock other than mules that I could see, although I did not attempt to look into their wagon.

I did not like their looks and reversed my idea about neighbors. I hoped they would move on down the valley, at least fifty kilometers.

The mounted two were carrying guns at their belts—reasonable in loper country. I had a needle gun in sight myself, as well as a belt knife—and maybe other things not in sight, as I don’t consider it diplomatic to show much hardware in meeting strangers.

As I approached, they stopped, the driver reining up his mules. I had Beulah stop about ten paces short of the lead pair. “Howdy,” I said. “Welcome to Happy Valley. I’m Bill Smith.”

The oldest of the three looked me up and down. It is hard to tell a man's expression when he wears a full beard, but what little I could see was no expression at all—wariness, perhaps. My own face was smooth—freshly shaved and clean overalls, in honor of visitors. I was keeping my face smooth both because Dora preferred it so and because I was staying "young" to match Dora. I was wearing my best friendly look—but was saying to myself, "You've got ten seconds to answer my greeting and say who you are—or you're going to miss some of the best cooking on New Beginnings."

He just slid under the deadline; I had silently counted seven chimpanzees when he suddenly grinned through that face moss. "Why, that's mighty friendly of you, young man."

"Bill Smith," I repeated, "and I didn't catch your name."

"Probably because I didn't say," he answered. "Name's Montgomery. 'Monty' to my friends, and I don't have any enemies, at least not for long. Right, Darby?"

"Right Pop," agreed the other mounted one.

"And this is my son Darby and that's Dan driving the jugheads. Say 'Howdy,' boys."

"Howdy," they each answered.

"Howdy, Darby. Howdy, Dan. Monty, is Mrs. Montgomery with you?" I nodded at the wagon, still did not attempt to see into it—a man's wagon is as private as his house.

"Now why would you be asking that?"

"Because," I said, still holding onto my friendly-idiot look, "I want to trot back to the house and tell Mrs. Smith how many there'll be for supper."

"Well! Did you hear that, boys? We've been invited to supper. That's mighty friendly, too, isn't it, Dan?"

"Right, Pop."

"And we most kindly accept. Don't we, Darby?"

"Right, Pop."

I was getting tired of the echo, but I kept my sweet expression. "Monty, you still haven't told me how *many.*"

"Oh. Just three. But we eat enough for six." He slapped his thigh and laughed at his own joke. "Right, Dan?"

"Right, Pop."

"So you stir up those jugheads, Dan; we've got reason to hurry now."

'I interrupted the echo to say, "Hold it, Monty. No need to overheat your mules."

"What? They're my mules, son."

"So they are and do as you please about them, but I was sent out ahead so that Mrs. Smith would have time to be ready for you. I see you're wearing a watch"—I glanced at my own—"your hostess will expect you in one hour. Unless you need more time to get there and unharness and water your mules?"

"Oh, them jugheads will keep until after supper. If we're early, we'll set awhile."

"No," I said firmly. "One hour, no sooner. You know how a lady feels about guests arriving before she's ready for them. Crowd her, and she might ruin your supper. Do as you please about your mules—but there is an easy place to water them, a little beach, where the river comes closest to the house. Nice place to spruce up a bit yourself, too—before dining with a lady. But don't come up to the house short of one hour."

"Your wife sounds mighty particular…for way out here in the wilds."

"She is," I answered. "Home, Beulah."

I moved from a trot into Beulah's fast lope and did not get over an uneasy feeling between my shoulder blades until I was certain I was too far away to be a target. There is only one dangerous animal, yet at times you're forced to pretend that he's as sweet and innocent as a cobra.

I didn't stop to unsaddle Beulah; I hurried inside. Dora heard my slam-bang arrival, was at the compound's door. "What is it, dear? Trouble?"

"Could be. Three men, I don't like them. Nevertheless, I've promised them supper. Have the kids eaten? Can we put them right to bed and convince them that if they so much as let out a peep, they'll be flayed alive? I didn't mention children, we aren't going to mention them, and I'm going to take a fast look around to make sure there is nothing in sight that says 'kids.'

"I'll try. Yes, I've fed them."

Right on the hour Lazarus Long met his guests at the door of the compound. They drove and rode up from the direction of the beach he had described, so he assumed that they had watered their animals, but he noted with mild scorn that they now did not bother to unharness their team for what was sure to be a long wait. But he was pleased to note that all three Montgomerys had made some effort to spruce up—perhaps they were going to behave; perhaps his sixth sense for trouble was hypersensitive from too long in the wilderness.

Lazarus was dressed in his best—kilt with full kit save that the effect was marred by a faded work shirt of New Pittsburgh origin. But it was indeed his best, worn only for children's birthdays. On other days he wore anything from overalls to skin, depending on work and weather.

After Montgomery dismounted, he paused and looked over his host. “My, aren’t we fancy!”

“In your honor, gentlemen. I save it for very special occasions.”

“So? It’s mighty nice of you to honor us, Red. Isn’t it, Dan?’

“Right, Pop.”

“My name is Bill, Monty. Not ‘Red.’ You can leave your. guns in your wagon.”

“Well! Now that’s not very friendly. We always wear our guns. Don’t we, Darby?”

“Right, Pop. And if Pop says your name is ‘Red,’ that’s your name.”

“Now, now, Darby, I didn’t say *that.* If Red wants to call himself Tom, Dick, or Harry, that’s his choice. But we wouldn’t feel dressed without our guns, and that’s the truth, uh, Bill. Why, I even wear mine to bed. Out here.”

Lazarus was standing in the opened door of the compound. He made no move to step aside and let his visitors in. “That s a reasonable precaution…on the trail. But gentlemen don’t wear arms when they dine with a lady. Drop them here or put them in your wagon, whichever you wish.”

Lazarus could feel the tension grow, could see the younger two watching their father for instructions. Lazarus ignored them and kept his easy smile on Montgomery, while forcing his muscles to stay loose as cotton. Right now? Would the bear back off? Or treat it as a challenge?

Montgomery split his face in his widest grin. “Why, sure, neighbor—if that’s how you want it. Shall I take off my pants, too?”

“Just your guns, sir.” (He’s righthanded. If I were righthanded and wearing what you are wearing, where would my second gun be? There, I think—but, if so, it must be small either a needle gun or possibly an old-fashioned snubnosed assassin’s gun. Are his sons both righthanded?)

The Montgomerys put their gun belts on the seat of their wagon, came back. Lazarus stood aside and welcomed them in, then slid the bar into place as he closed the door. Dora was waiting, dressed in her “party dress.” For the first time since a very hot day on the prairie she did not wear her rubies at the evening meal.

“Dear, this is Mr. Montgomery and his sons, Darby and Dan. My wife, Mrs. Smith.”

Dora bobbed a curtsy. “Welcome, Mr. Montgomery, and Darby, and Dan.”

“Call me ‘Monty,’ Mrs. Smith—and what’s your name? Mighty pretty place you’ve got here…for so far out in the country.”

“If you gentlemen will excuse me, ‘I have a couple of things to do to get supper on the table.” She turned quickly and hurried back into her kitchen.

Lazarus answered, “I’m glad you like it, Monty. It’s the best we’ve been able to do so far, while getting a farm started.” The back wall of the compound had four rooms built against it: storeroom, kitchen, bedroom, and nursery. All had doors into the compound, but only the kitchen door was open. The rooms interconnected.

Outside the kitchen door was a Dutch oven; in the kitchen was a fireplace used for other cooking and for all cooking when it rained. That and a water barrel were as yet Dora’s major kitchen equipment—but her husband had promised her running water “sometime before you are a grandmother, my lovely.” She had not pressed him about it; the house grew larger and better equipped each year.

Beyond the Dutch oven and paralleling the bedrooms was a long table with matching stools. At the other wall by the storeroom was an outhouse; it and a water barrel and two wooden tubs made by cutting another barrel in two constituted, so far, their “bathroom-toilet-refresher.” A pile of earth with a shovel stuck into it was by the outhouse; the cesspit was being slowly backfilled.

“You’ve done pretty well,” Montgomery conceded. “But you shouldn’t have put your privy inside. Don’t you know that?”

“There is another privy outside,” Lazarus Long told him. “We use this one as little as possible and I try to keep it from being too whiff. But you can’t expect a woman to go outside after dark, not in loper country.”

“Lots of lopers, eh?”

“Not as many as there used to be. Did you see any dragons as you came through the valley?”

“Saw a lot of bones. Looked like a plague had hit the dragons hereabouts.”

“Something of the sort,” Lazarus agreed. “Lady! *Heel!”* He added, “Monty, tell Darby that it’s not safe to kick at that dog; she’ll attack. She’s a watchdog, in charge of this house, and she knows it.”

“You heard what the man said, Darby. Leave the dog alone.”

“Then she had better not come sniffing around me! I don’t like dogs. She growled at me.”

Lazarus said directly to the older son, “She growled because you kicked at her when she sniffed you. Which was her duty. If I had not been present, she would have taken your throat out. Leave her alone and she’ll leave you alone.”

Montgomery said, “Bill, you had better put her outside while we eat.” Phrased as a suggestion, it was made to sound like an order.

“No.”

“Gentlemen, supper is served.”

“Coming, dear. Lady. High sentry.” The bitch glanced at Darby but immediately trotted up the ladder to the roof, using the rungs without hesitation. There she made a careful full-circle scan before sitting down where she could watch both outside and the supper party below her.

The Supper party was more successful as a supper than as a party. Conversation was limited mostly to small talk between the two older men. Darby and Dan simply ate. Dora answered briefly sallies that Montgomery made at her and failed to hear any that she regarded as too personal. The sons seemed surprised to find their plates set each with knife, fork, chop tongs, and spoon, then relied mostly on knife and fingers; their father made some effort to use each eating tool, getting quite a bit of food into his beard.

Dora had piled the table with hot fried chicken, cold sliced ham, mashed potatoes and chicken gravy, hot corn pone and cold whole wheat bread with bacon drippings, a mug of goat's milk at each place, lettuce-and-tomato salad with grated goat's-cheese-andonion dressing, boiled beets, fresh radishes, fresh strawberries with goat's milk. As promised, the Montgomerys ate for six, and Dora was pleased that she had provided a plenty.

At last Montgomery pushed back his stool and belched appreciatively. "My, that hit the spot! Miz Smith, you can cook for us all the time. Right, Dan?"

"Right, Pop!"

"I'm pleased that you enjoyed it, gentlemen." She stood up and started to clear the table. Lazarus stood and started to help her.

Montgomery said, "Oh, sit down, Bill. Want to ask you some questions."

"Go ahead and ask," Lazarus said, continuing to stack plates.

"You said there was no one else in the valley."

"That is correct."

"Then I think we'll stay right here. Miz Smith is a very good cook."

"You're welcome to camp here overnight. Then you'll find excellent farmland farther down the river. As I told you, I've homesteaded all of this."

"Been meaning to talk to you about that. Doesn't seem right for one man to grab all the best land."

"It isn't the best land, Monty; there arc thousands of hectares just as good. The only difference is that I've plowed and cultivated this part."

"Well, we won't argue about it. We outvote you. Four voting, I mean, and us three all voting the same way. Right, Darby?"

"Right, Pop."

"It's not subject to vote, Monty."

"Oh, come now! The majority is always right. But we won't argue.

Been a nice feed, now for some entertainment. Do you like to rassle?"

"Not especially."

"Don't be a spoilsport. Dan, do you think you can throw him?"

"Sure, Pop."

"Good. Bill, first you rassle Dan—out here in the middle and I'll referee, keep everything fair and square."

"Monty, I'm 'not going to wrestle."

"Oh, sure you are. Miz *Smith!* Better come out here, you won't want to miss this."

"I'm busy now," Dora called out. "I'll be out shortly."

"Better hurry. Then you rassle Darby, Bill—then you rassle *me."*

"No wrestling, Monty. Time for you folks to get into your wagon."

"But you *want* to rassle, young fellow. I didn't tell you what the prize is. The winner sleeps with Miz Smith." His second gun appeared as he said it. "Fooled you, didn't I?"

From the kitchen Dora shot the gun out of his hand just as a knife suddenly grew in Dan's neck. Lazarus shot Montgomery carefully in the leg, then even more carefully shot Darby—as Lady Macbeth was at his throat. The fight had lasted under two seconds.

"Lady. Heel. Nice shooting, Dorable." He patted Lady Macbeth. *"Good* Lady, *good* dog."

"Thank you, darling. Shall I finish off Monty?"

"Wait a moment." Lazarus stepped over and looked down at the wounded man. "Got anything to say, Montgomery?"

"You bastards! Never gave us a chance."

"Gave you lots of chance. You wouldn't take it. Dora? Do you want to? Your privilege."

"Not especially."

"All right." Lazarus picked up Montgomery's second gun, noted that it was indeed a museum piece but did not seem to be hurt. He used, it to finish off its owner.

Dora was peeling off her dress. "Half a moment, dear, while I get this off; I don't want to get blood on it." With the dress out of the way, her pregnant condition showed a little. She also showed several other weapons as well as a gun belt riding low on her hips.

Lazarus was getting out of his kilt and other finery. "You don't need to help, sweetheart; you've done a full day's work—and a fine one! Just toss me my oldest overalls."

"But I *want* to help. What are going to do with them?"

"Put them into their wagon, take them far enough downriver that lopers will dispose of them, drive back." He glanced at the Sun. "An hour and more of daylight left. Time enough."

"Lazarus, I don't want you away, from me! Not now."

"Upset by it, my durable one?"

"Some. Not much. Uh…made horny by it, I'm ashamed to say. Perverted, huh?"

"Rangy Lil, *anything* makes you horny. Yes; it's somewhat perverse…but a surprisingly common reaction to one's first encounter with death. Nothing to be ashamed of as long as you don't get hooked by it; it's just a reflex. On second thought never mind the overalls; I can scrub blood off my hide easier than getting it out of cloth." He removed the bar and opened the gate as he' talked.

"I've seen death before. I was much more upset when Aunt Helen died…and not a bit horny."

"Violent death, I should have said. Dear, I want to get these bodies outside the wall before any more blood soaks into the ground. We can discuss it later."

"You'll need help loading them. And I *don't* want to be away from you, truly I don't."

Lazarus stopped and looked at her. "You're more upset than you let on. That's common, too—steady in the clutch, then a reaction afterwards. So let's work it out. I don't fancy leaving the kids alone that long, nor do I want them in a wagon loaded with all that bad meat. Suppose I drive just a short distance tonight—say three hundred meters or so—while you start a kettle of water? I'm going to want another bath after this job even if I manage not to get a drop of blood on me."

"Yes, sir."

"Dora, you don't sound happy."

"I'll do it your way. But I could wake Zaccur and have him babysit. He's used to it."

"Very well, dear. But first we load them. You can hold up their feet while I drag them. If you throw up, I'll assume that you'll babysit while I finish this chore."

"I won't throw up. I ate very little."

"I didn't eat much either." They got on with the grisly task; Lazarus continued to talk. "Dora, you did a perfect job."

"I caught your signal. You gave me plenty of time."

"I wasn't sure he was going to push it to a showdown even when I signaled."

"Really, dear? I knew what they meant to do—kill you and rape me—before they ever sat down to eat. Couldn't you feel it? So I made sure that they ate plenty—to slow them down."

"Dora, you really do sense emotions-—don't you?"

"Mind his head, dear. When they're as strong as that, I do. But I wasn't sure how you would handle it. I made up my mind to be raped all night if that was what it took for you to set up a safe chance."

Her husband answered soberly, "Dora, I will allow you to be raped only if that is the only possible way to save your life. Tonight it was not necessary. Thank goodness! But Montgomery had me worried at the gate. Three guns out in the open and mine still under my kilt—Could have been a problem. Since he meant to take me anyhow, he should have done it then. Durable, threefourths of any fight lies in not hesitating when the time comes. Which is why I'm so proud of you."

"But you set it up, Lazarus. You signaled me to get into position, you stayed on your feet when he told you to sit down, you went around to the end of the table and pulled their eyes with you—and stayed out of my line of fire. Thank you. All I had to do was shoot when he got out his gun."

"Of course I stayed out of your line of, fire, dear; this isn't my first time by too many. But it was your straight shooting that gave me time to put my knife into Dan instead of having to settle his father first. And Lady did me the same favor with Darby. You two girls saved me from having to be three places at once. Which I've always found difficult."

"You trained both of us."

"Mmm, yes. Which detracts not at all from the admirable fact that you held your fire until he committed himself—then lost not a split second in taking him. As if you were a veteran of a hundred gun battles rather than none. You might go around and steady the mules while I get this tailgate open."

"Yes, dear."

She had just reached the lead pair and spoken soothingly to them when he called out: "Dora! Here a minute."

She came back; he said, "Look at *that.*"

It was a flat piece of standstone he had removed from the end of the wagon bed and laid on the ground by the corpses. It was carved with:

BUCK
BORN ON EARTH
3O31A.D.
DWD ON THIS SPOT
N.B.37
He Always Did His Best

She said, "Lazarus, I don't understand it. I can understand why they intended to rape me—I'm probably the first woman they've seen in many weeks. I can even understand that they would kill you, or do anything, to get at me. But *why* would they steal this?"

"It's not exactly 'why,' dear…People who don't respect other people's property will do *anything*…and will steal anything that's not nailed down. Even if they have no use for it.” He added, “Had I known this earlier, I would have given them *no* chance. Such people should be destroyed on sight. The problem is to identify them.”

Minerva, Dora is the only woman I ever loved unreservedly. I don’t know that I can explain why. I did not love her that way when I married her; she had not had a chance as yet to teach me what love can be. Oh, I did love her, but it was the love of a doting father for a favorite child or somewhat like the love one can lavish on a pet.

I decided to marry her not through love in any deepest sense but simply because this adorable child who had given me so many hours of happiness wanted something very badly—my child—and there was only one way I could give her what she wanted and still please my own self-love. So almost coldly, I calculated the cost and decided that the price was low enough that I could let her have what she wanted. It could not cost me much; she was an ephemeral. Fifty, sixty, seventy, at the most eighty years and she would be dead. I could afford to spend that trivial amount of time to make my adopted daughter’s pitifully short life happy—that’s how I figured it. It wasn’t much, and I could afford it. So be it.

All the rest was just a case of no half measures; do whatever else is necessary to your main purpose. I told you some of the possibilities; I may not have mentioned that I considered taking back the captaincy of the *Andy J.* for Dora’s lifetime, have Zaccur Briggs take the ground side of the partnership or buy him out if that didn’t suit him. But while eighty-odd years in a starship would not stonker me, to Dora it would be a lifetime and it might not suit her. Besides, a ship is not an ideal place to raise kids—what do you do when they grow up? Drop them off somewhere not knowing anything but ship’s routine? Not good.

I decided that the husband of an ephemeral had to *be* an ephemeral, in every way possible to him. The corollaries to that decision caused us to wind up in Happy Valley.

Happy Valley—The happiest of all my lives. The longer I was privileged to live with Dora, the more I loved her. She taught me to love by loving me, and I learned—rather slowly; I wasn’t too good a pupil, being set in my ways and lacking her natural talent. But I did learn. Learned that supreme happiness lies in wanting to keep another person safe and warm and happy, and being privileged to try.

And the saddest, too. The more thoroughly I learned this—through living day on day with Dora—the happier I was and the more I ached in one corner of my mind with certain knowledge that this could be only a brief time too soon over—and when it *was* over, I did not marry again for almost a hundred years. Then I did, for Dora taught me to face up to death, too. She was as aware of her own death of the certain briefness of her life, as I was. But she taught me to live *now,* not to let anything sully *today*… until at last I got over the sadness of being condemned to live.

We had a wonderfully good time! Working our arses off, always too much to do, and enjoying every minute. Never too rushed to enjoy life no matter what. Sometimes just pat-ass and squeeze-titty as I hurried through the kitchen, with her quick smile acknowledging it, sometimes a lazy hour on the roof invested in watching sunset and stars and moons, usually with "Eros" to make, it sweeter.

I guess you could say that sex was, our only active amusement for a number of years (and never stopped being in first place as Dora was as enthusiastic at seventy as at seventeen— just not as limber). I was usually too tired to play good chess even though I made us a set of chessmen; we had no other games and probably would not have played them anyhow— too busy. Oh, we did do other things; often one of us would read aloud while the other knitted or cooked or something. Or we would sing together, coonjining the rhythm while we pitched grain or manure.

We worked together as much as possible; division of labor came only from natural limits. I can't bear a baby pr suckle it, but I can do anything else for a child. Dora could not do some things that I did because they were too heavy for her, especially when she was far gone in pregnancy. She had more talent for cooking than I (I had centuries more experience but not her touch), and she could cook while she took care of a baby and tended the smallest children, ones too small to join me in the fields. But I did cook, especially breakfast while she got the kids organized, and she did help work the farm and especially the truck garden. She knew nothing of farming; she learned.

Nor did she know construction—she learned. While I did most of the high work, she made most of the adobe bricks, always with the right amount of straw. Adobe was not well suited to the climate—too much rain and it can be discouraging to see a wall start to melt because an unexpected rain has caught you before you've topped it.

But you build from what you have, and it helped that I had the tops from the wagons to peg against the most exposed walls, until I worked out a way to waterproof an adobe wall. I did not consider a log cabin; good timber was too far away. It took the mules and me a full day to bring in two logs, which made them too expensive for most construction. Instead, I made do with smaller stuff that grew along the banks of Buck's River and dragged in logs only for beams.

Nor did I want to build a house that was not as near fireproof as I could make it. Baby Dora had once almost been burned to death; I would not risk it again for Dora, or for her children.

But how to make a roof both watertight and fireproof nearly stumped me.

I walked past the answer hundreds of times before I recognized it. When wind and weather and rot and lopers and insects have done their worst on a dead dragon, what is left is almost indestructible. I discovered this when I tried to burn what was left of a big brute that was unpleasantly close to our compound; I never did find out why this was so. Perhaps the biochemistry of those dragons has been investigated since then, but I had neither equipment nor time nor interest; I was too busy scratching a living for my family and was simply delighted to learn that it was true. Belly hide I cut into fireproof, waterproof tarpaulins; back and sides made excellent roofing. Later I found many uses for the bones.

We both taught, school, indoors and out. Perhaps our kids had a weird education…but a girl who can shape a comfortable and handsome saddle starting with a dead mule and not much else, solve quadratics in her head, shoot straight with gun or arrow, cook an omelet that is light and tasty, spout page after page of Shakespeare, butcher a hog and cure it can't be called ignorant by New Beginnings standards. All our girls and boys could do all of that and more. I must admit that they spoke a rather florid brand of English, especially after they set up the New Globe Theater and worked straight through every one of old Bill's plays. No doubt this gave them odd notions of Old Earth's culture and history, but I could not see that it hurt them. We had only a few bound books, mostly reference; the dozen-odd "fun" books were worked to death.

Our kids saw nothing strange in learning to read from *As You Like it.* No one told them that it was too hard for them, and they ate it up, finding "tongues in trees, books in the running brooks, sermons in stones, and good in every thing."

Although it did sound odd to hear a fiveyear-old girl speak in scansion and rolling periods, polysyllables falling gracefully from her baby lips. Still, I preferred it to "Run, Spot, run. See Spot run" from a later era than Bill's.

Second only to Shakespeare in popularity, and first whenever, Dora was swelling up again, were my medical books, especially those on anatomy, obstetrics, and gynecology. Any birth was an event—kittens, piglets, foals, puppies, kids—but a new baby out of Dora was a super-event, one that always put more thumbprints on that standard OB illustration, a cross section of mother and baby at term. I finally removed that one and several plates that followed it, those showing normal delivery, and posted them, to save wear and tear on my books — then announced that they could look at those pictures all they wanted to, but that to touch one was a spanking offense— then was forced to spank Iseult to keep justice even, which hurt her old father far more than it did her baby bottom even though she saved my face by applauding my gentle paddling with loud screams and tears.

My medical books had one odd effect. Our kids knew from babyhood all the correct English monosyllables for human anatomy and function; Helen Mayberry had never used slang with Baby Dora; Dora spoke as correctly in front of her children. But, once they could read my books, intellectual snobbery set in; they *loved* those Latin polysyllables. If I said "womb" (as I always did), some six-year-old would inform me with quiet authority that the *book* said "uterus." Or Undine might rush in with the news that Big Billy Whiskers was "copulating" with Silky, whereupon the kids would rush out to the goat pen to watch. Somewhere around their middle teens they usually recovered from this nonsense and went back to speaking English as their parents spoke it, so I guess it didn't hurt them.

The reason my own goatiness was not a spectator sport for children that all the animals afforded was, I think, only my own unreasoned but longstanding habits. I don't think it would have fretted Dora because it did not seem to fret her' the times it happened —as it did; privacy was scarce and got scarcer until I got our big house built some twelve or thirteen years after we entered the valley —time indefinite because for years I worked on it when I could; then we moved into it unfinished because we were bulging the walls of our first house and another baby (Ginny) was on the way.

Dora was untroubled by lack of privacy because her sweet lechery was utterly innocent, whereas mine was scarred by the culture I grew up in—a culture psychotic throughout and especially on this subject. Dora did much to heal those scars. But I never achieved her angelic innocence.

I do *not* mean the innocence of childish ignorance; I mean the true innocence of an intelligent, informed, adult woman who has no evil in her. Dora was as tough as she was innocent, always aware that she was responsible for her own actions. She knew that "the tail goes with the hide, that you can't be a little bit pregnant, that it is no kindness to hang a man slowly." She could make a hard decision without dithering, then stand up to the consequences if it turned out that her judgment was faulty. She could apologize to a child, or to a mule. But that was rarely necessary; her self-honesty did not often lead her into faulty decisions.

Nor did she flagellate herself when she made a mistake. She corrected it as best she could, learned from it, did not lie awake over

it.

While her ancestry had given her the potential, Helen Mayberry must be credited with having guided it and allowed it to develop. Helen Mayberry was sensitive and sensible. Come to think of it, the traits complement. A person who is sensitive but not sensible is all mixed up, cannot function properly. A person who is sensible but not sensitive—I've never met one and am not sure such a person can exist.

Helen Mayberry was born on Earth but had shucked off her bad background when she migrated; she did not pass on to Baby Dora and growing-girl Dora the sick standards of a dying culture. I knew some of this from Helen herself, but I learned more about Helen from Dora the Woman. Over the long course of getting acquainted with this stranger I had married (married couples always start out as strangers no matter how long they've known each other) I learned that Dora knew exactly the relationship that had once existed between Helen Mayberry and me, including the fact that it was economic as well as social and physical.

This did not make Dora jealous of "Aunt" Helen; jealousy was only a word to Dora, one that meant no more to her than a sunset does to an earthworm; the capacity to feel jealousy had never been developed in her. She regarded the arrangements between Helen and me as natural, reasonable, and appropriate. Indeed I feel certain that Helen's example was the clinching factor in Dora's picking me as her mate, as it could not have been my charm and beauty, both negligible. Helen had not taught Dora that sex was anything sacred; she had taught her, by precept and example, that sex is a way for people to be happy together.

Take those three vultures we killed— Instead of what they were, had they been good men and decent—oh, such men as Ira and Galahad—and given the same circumstances, four men with only one woman and the situation likely to stay that way, I think Dora would have entered easily and naturally into polyandry…and would have managed to convince me that that was the only happy solution by the way she herself treated it.

Nor would she, in adding more husbands, have been breaking her marriage vows. Dora had not promised to cleave unto me only; I won't let a woman promise that because a day sometimes arrives when she can't.

Dora could have kept four decent, honorable men happy. Dora had none of the sickly attitudes that interfere with a person loving more and more; Helen had seen to that. And, as the Greeks pointed out, one man cannot quench the fires of Vesuvius. Or was it the Romans? Never mind, it's true. Dora probably would have been even happier in a polyandrous marriage. And if *she* were happier, it follows, as the night the day, that I would have been also—even though I cannot imagine being happier than I was. But more big male muscles would have made life easier on me; I always had too much to, do. More company could have been pleasant, too, I am forced to assume the company of men whom Dora found acceptable. As for Dora herself, she had enough love in her to lavish it on me and a dozen kids; three more husbands would not have used up her resources, she was a spring that never ran dry.

But the matter is hypothetical. Those three Montgomerys were so little like Galahad and Ira that it is hard to think of them as being of the same race. They were vermin for killing, and that's what they got. I learned only a little about them, from reading the contents of their wagon. Minerva, they were not pioneers; there was not the barest minimum in that wagon for starting a farm. Not a plow, not a sack of seed—And their eight mules were *all geldings.* I don't know what they thought they were doing. Exploring just for the hell of it, perhaps? Then go back to "civilization" when they grew tired of it? Or did they expect to find that some one of the pioneer parties that had started over the pass had made it—and could be terrorized into submission? I don't know, I never will know. I have never understood the gangster mind—I simply know what to do about gangsters.

As may be, they made a fatal mistake in tackling sweet and gentle Dora. She not only shot at the right instant, but she shot his gun out of his hand instead of taking the much easier target, his belly or chest. Important? Supremely so, for *me.* His gun was aimed at me. Had Dora shot *him,* instead of his gun, even if her shot killed him, his last reflex would probably— certainly, I think—have caused his fingers to tighten and I would have been hit. You can figure it from there in half a dozen ways, all bad."

Lucky accident? Not at all. Dora had him covered from the darkness of the kitchen. When he pulled that gun, she instantly changed her point of aim and got the gun. It was her first—and last—gunfight. But a true gunfighter, that girl! The hours we had spent polishing her skill paid off. But more rare than skill was the cool judgment with which she decided to try for the much more difficult target. I could not train her in that; it had to be born in her. Which it was—if you think back, her father made the same sort of correct splitsecond decision as his last dying act.

It was seven more years before another wagon appeared in Happy Valley—three wagons traveling together, three families with children, true pioneers. We were glad to see them and I was especially happy to see their kids. For I bad been juggling eggs. Real eggs. Human ova.

I was running out of time; our oldest kids were growing up.

Minerva, you know all that the human race has learned about genetics. You know that the Howard Families are inbred from a fairly small gene pool—and that inbreeding has tended to clear them of bad genes—but you know also the high price that has been paid in defectives. Is still being paid, should add; everywhere there are Howards there are also sanctuaries for defectives. Nor is there any end to it; new unfavorable mutations unnoticed until they are reinforced is the price we animals must pay for evolution. Maybe there will be a cheaper way someday—there was not one on New Beginnings twelve hundred years ago.

Young Zack was a husky lad whose voice was firmly baritone. His brother, Andy, was no longer a boy soprano in our family chorus although his voice still cracked. Baby Helen wasn't such a baby any longer—hadn't reached menarche, but as near as I could tell it would be any day, any day.

I mean to say that Dora and I were having to think about it, forced to consider hard choices. Should we pack seven kids into the wagons and head back across the Rampart? If we made it, should we put the four oldest with the Magees or someone, then come home with the younger three? By ourselves? Or sing the praises of Happy Valley, its beauty and its wealth, and try to lead a party of pioneers back over the range and thereby avoid such crisis in the future?

I had expected, too optimistically, that others would follow us almost at once—a year or two or three—since I had left a passable wagon trail behind me. But I'm not one to fume over spilled milk after the horse is stolen. What might have been was of no interest; the problem was what to do with our horny kids now that they were' growing up.

No point in talking to them about "sin" even if I were capable of such hypocrisy—which I am not, especially with kids. Nor could I have sold the idea. Dora would have been shocked and hurt, and her skills did not extend to lying convincingly. Nor did I want to fill our kids with such nonsense; their angelic mother was the happiest, most ever-ready lecher in Happy Valley—even, more so than I and the goats—and she never pretended otherwise.

Should we relax and let nature take its ancient course? Accept the idea our daughters would presently (all too soon!) mate with our sons and be prepared to accept the price? Expect at least one defective grandchild out of ten? I had no data on which to estimate the cost any closer than that, as Dora knew nothing about her ancestry and, while I did know a little about mine, I did not know enough. All I had was that old and extremely rough thumb rule.

So we stalled.

We fell back on another sound old thumb rule: Never do today what you can put off till tomorrow if tomorrow might improve the odds.

So we moved into our new house while it was still not finished—but finished enough that we then had a girls' dormitory, a boys' dormitory, a bedroom for Dora and me, with adjacent nursery.

But we did not kid ourselves that we bad solved the problem. Instead we hauled it out into the open, made sure that the three oldest knew what the problem was and what the risks were and why it would be smart to hold off. Nor were the younger kids shut out of this schooling; they simply were not required even to audit the course when they found themselves bored with technicalities they were too young to be interested in.

Dora chucked in a frill, one based on something Helen Mayberry had done for her some twenty years earlier. She announced that when little Helen achieved menarche, we would declare a holiday and have a party, with Helen as guest of honor. From then on, every year, that day would be known as "Helen's Day" and so on for Iseult and Undine and on down the line until there was an annual holiday named for each girl.

Helen could hardly wait to pass from childhood into girlhood—and when: she did a few months later, she was unbearably smug. Woke us all up shouting about it. "Mama! Papa! Look, it's happened! Zack! Andy! *Wake up!* Come *see!*"

If she hurt, she did not mention it. Probably she did not; Dora wasn't subject to menstrual cramps, and neither of us told the girls to expect them. Being myself convex instead of concave, I refrain from commenting on the theory that such pains are a conditioned reflex; I don't think I'm entitled to an opinion

—you might ask Ishtar.

It also resulted in me being called on by a delegation of two, Zack and Andy with Zack as spokesman: "Look, Papa—we think it splendid, meet, and fit our sister Helen's day to mark with joyful sounds and jollity acclaiming this our sibling's rightful heritage. But soothly, sire, methinks—"

"Chop it off and say it."

"Well, how about *boys!*"

By gum, I reinstituted chivalry!

Not as a sudden inspiration. Zack had asked a tough one; I had to dance around it a bit before I reached a workable answer. Sure, there are rites of passage for males as well as females; every culture has them, even those that aren't aware of it. When I was a boy, it was your first suit with long pants. Then there are ones such as circumcision at puberty, ordeal by pain, killing some dread beast—endless.

None of these fitted our boys. Some I disapproved of, some were impossible—circumcision for example. I have this unimportant mutation, no foreskin. But it is a Y-linked dominant, and I pass it on to all my male offspring. The boys knew this, but I stalled by mentioning it again, discussed it in connection with the endless ways in which a male's transition into beginning manhood was sometimes celebrated—while trying to think of an answer to the main question.

Finally I said, "Look, boys, you both know all about reproduction and genetics that I have been able to teach you. You both know what 'Helen's Day' means. Don't you? Andy?"

Andy did not answer; his older brother said, "Sure he knows, Papa. It means Helen can have babies now, just like Mama. You know that, Andy." Andy nodded agreement, round-eyed. "We all know, Papa, even the kids. Well, I'm not sure about Ivar; he's so little. But Iseult and Undine know it—Helen's been telling them that she's going to catch up with Mama—have her first baby right away."

I controlled the cold chills I felt. Let me cut this short: I did not tell them that this was a bad idea; instead I took a long time drawing answers from them, things they both knew but had not yet thought of quite so personally—how Helen could not have a baby unless one or the other of *them* put it into her; how Helen was still too little for the strain of baking a baby even though "Helen's Day" marked the fact that she was now vulnerable; how and why, even when Helen was big enough in a few years, a baby out of Helen by one of her brothers could be a tragedy instead of the fine babies Mama made every time. *They* told *me,* Andy's eyes getting bigger all the time—I simply supplied leading questions.

I was helped in this by the fact that a little mule mare, Dancing Girl, had come into her first estrus when I thought she was not grownup enough for a colt. So I had had Zack and Andy fence her off—and she kicked a hole in the fence and got what she wanted; Buckaroo covered her. Sure enough, the colt had been too big for her and I had to go in and cut it up and take it out in chunks—a routine job of emergency veterinary surgery but an impressive and bloody sight for two stripling boys who had helped their father by controlling the mare while he operated.

No, indeed, they did not want anything even a little bit like that to happen to *Helen.*No, *sir!*

Minerva, I cheated a little. I did *not* tell them that the way Helen was spreading in the butt and the measurements she already had made it appear to her family doctor—me—that she was even more of a natural baby factory than her mother and would be big enough for her first one much younger than Dora had had Zaccur; I did not tell them that the chances of a healthy baby from a brother-sister mating were higher than the chances of a defective. I certainly did *not!*

Instead, I waxed lyrical about what wonderful creatures girls are, what a miracle it is that they could make babies, how precious they are and how it is a man's proud privilege to love and cherish and protect them—protect them even from their follies because Helen might behave just like Dancing Girl, impatient and foolish. So don't let her tempt you, boys—jerk off instead, just like you've been doing. They promised, tears in their eyes.

I didn't ask them to promise that or anything—but it gave me the idea: Have "Princess" Helen knight them.

The kids grabbed that idea and ran with it; *Tales of King Arthur's Court* was one of the books Dora had fetched along because Helen Mayberry had given it to her. So we had Sir Zaccur the Strong and Sir Andrew the Valiant and two ladies-in-waiting—waiting rather eagerly; Iseult and Undine knew that they, too, would be "princesses" as each reached menarche. Ivar was squire to both knights and would be dubbed himself when his voice changed. Only Elf was too small as yet to play the game.

It worked, a stopgap. I suppose "Princess" Helen was protected more than she wanted to be protected. But if she could not lure her faithful knights into the cornfields, they did place her stool for her at meals, they bowed to her rather often, and usually addressed her as "Fair Princess"—considerably more than I ever did for my sisters.

Before the first anniversary of “Helen’s Day” those three new families dropped down the rise and the crisis was over. It was Sammy Roberts, not one of her brothers, who first spread “Princess” Helen’s thighs—certain, as she told her mother about it at once (more of Helen Mayberry’s influence) and Dora kissed her and told her that she was a good girl and now go find Papa and ask him to examine you—and I did and she hadn’t been hurt, not to mention. But it gave Dora some control over the matter, just as Helen Mayberry had guided Dora at about the same age—so Dora had told me, long before that. In consequence our oldest daughter did not get pregnant until she was almost as old as and quite a bit more filled out than Dora had been when I married her. Ole Hanson married her; and Sven Hanson and I, and Dora and Ingrid, helped the youngsters start their homestead. Helen thought the baby was Ole’s, and for all I know she was right. No fuss. No fuss when Zack married Hilda Hanson, either. In Happy Valley pregnancy was equivalent to betrothal; I can’t recall any girl who married without that proof of eligibility. Certainly none of our daughters.

Having neighbors was grand.

(Omitted)

—not only fetched his fiddle over the Rampart but could call. I could call some and, while I hadn’t touched a violin for fifty years or so, I found it came back to me, so we spelled each other as Pop liked to dance, too. Like so:

“Square ‘em up!

“Salute your lady! Opposite lady! Corner gal! Righthand gal! Salute your own and make ‘er a throne. All stand up and don’t let ‘er fall; swing your ladies one and all!

“‘Moses lived a long time ago.
‘King said Yes; Moses said Not—form hands, circle right.
‘Phar’oh was dat king’s first name;
‘Made ‘em live a life of shame!—allemande *left/—with* a dosey-doh! Then home you go and *swing!*

“’…said Yes and th’ waves did part. First couple through the Red Sea! Now corner gal and righthand man! Corner boy, righthand gal—on around and keep it coming right and left!

“‘A happy band on th’ opp’site shore,
‘So all form up and swing once more!
‘King weeps alone on Egypt’s shore;

'Chosen People slaves no more!

'So kiss your lady and whisper in her ear;
'Then sit 'er down and get 'er a beer.' Intermission!"

Oh, we had fun! Dora learned to dance when she was a new grandmother—and was still dancing when she was a great-great-grandmother. Early years the parties were oftenest at our place because we had the biggest house and a compound large enough for a big party. Start dancing late afternoon, dance till you couldn't see your partner; then a potluck buffet supper to candlelight and moonlight, then sing a while, and bed down all over the place—all the rooms, the roof, shakedowns in the compound, some in wagons—and if anybody ever slept alone, I never heard about it. Nor any trouble worth mentioning if things got a little loose around the edges.

Next morning there was likely to be a double performance by the Mermaid Tavern Players, one comedy, one tragedy, then it would be time for those who lived farthest away to round up their kids, hitch up their mules, and roll, while those who lived closer helped clean up before doing the same thing.

Oh, I remember one spot of trouble: A man gave his wife a black eye over nothing much, whereupon six men nearest him tossed him out the gate and barred it. Made him so mad he hitched up and left… and headed back up the Great Gorge toward Hopeless Pass—a fact that wasn't noticed for a while, as his wife and baby moved in with her sister and her husband and their kids, and stayed on, a polygamy—though not the only one. No laws about marriage or sex—no laws about *anything* for many years—except that incurring the disapproval of your neighbors, such as by giving your wife a black eye, meant risking Coventry, about the worst thing that can happen to a pioneer short of being lynched.

But migrants tend to be both horny and easy about it. Superior intelligence always includes strong sexual drive, and the pioneers in Happy Valley had been through a double screening, first in a decision to leave Earth and then in deciding to tackle Hopeless Pass. So we had real survivors in Happy Valley, smart, cooperative, industrious, tolerant—willing to fight when necessary but not likely to fight over trivial matters. Sex is not trivial, but fighting over it is usually pretty silly. It's characteristic only of a man who isn't sure of his manhood, which didn't describe any of these men; they were sure of themselves, no need to prove it. No cowards, no thieves, no weaklings, no bullies—the rare exception didn't last long enough to count. Either dead like that first three, or ran away from us like that idiot who took a poke at his wife.

These rare purgings were always quick and informal. For many years the only law we had was the Golden Rule, unwritten but closely followed.

In such a community functionless taboos about sex couldn't last; they didn't tend to be brought into our valley in the first place. Oh, close inbreeding wasn't well thought of; these pioneers were not ignorant of genetics, nor of conception control. But the attitude was pragmatic; I don't think I ever heard anyone speak out against incest that was just a jolly romp with no outcome. But I recall one girl who married her half brother openly and had several children by him—I assume that they were his. There may have been gossip, but it did not get them ostracized. Any marriage pattern was treated as the private business of the partners in it, not something to be licensed by the community. I recall two young couples who decided to combine their farms, then built a house big enough by adding to the larger of their two houses and making the other into a barn. Nobody asked who slept with whom; it was taken for granted that it was then a four-cornered marriage, and no doubt had been one before they enlarged that house and pooled their goods. Nobody's business but theirs.

Among such people the plural of "spouse" is "spice." A pioneer community, poor in everything else, always makes its own recreations—with sex at the top of the list. We had no professional entertainers, no theaters (unless you count the amateur theatricals started by our kids), no cabarets, no diversions dependent on sophisticated electronics, no periodicals, few books. Certainly those meetings of the Happy Valley Dance Club continued as gentle orgies after it was too dark to dance and the younger children were bedded down for the night—how else? But it was all quite gentle; a couple could always go sleep in their own wagon and ignore the quiet luau elsewhere. No compulsion either way—shucks, they didn't even have to attend the dances.

But no one stayed away from those weekly dances if he or she could make it. It was particularly nice for young people; it gave them a chance to get acquainted and do their courting. Perhaps most first babies were conceived at our dances; there was opportunity. On the other hand, a girl did not have to get knocked up just through a romp if it didn't suit her. But a girl was likely to marry by fifteen, sixteen, and their bridegrooms weren't much older—late first marriage is a big-city custom, never found in a pioneer culture.

Dora and I? But, Minerva dear, I told you earlier.

(Omitted)

—started the freight schedule to the outside the year Gibbie was born and Zack was, oh, eighteen I think—I have to keep converting New Beginnings years into standard years. Anyhow he was taller than I was, not much short of two meters and massed maybe eighty kilos, and Andy was almost as big and strong. There was pressure on me not to wait as I knew Zack might get married any day—and I could not send a wagon over the pass just with Andy. Ivar was only nine—a big help around the farm but not big enough for this job.

But I could not find teamsters other than in my own family. There were only about a dozen families in the valley; they had not been there long, and did not as yet feel the press to buy things that I did.

I wanted three new wagons, not just because my three were wearing out but because Zack would need one when he married. So would Andy. And I might have to dower Helen with one, if and when. The same applied to plows and several sorts of metal farm equipment. Prosperous as we were, Happy Valley could not be entirely self-supporting without a metals industry—which is to say: not for many years. I had another long list of things to buy—

(Omitted)

—on a quarterly schedule. But the food that fifty-odd farms could ship out could not buy much at the other end in competition with farmers who did not have the expense of shipping by mule train over the Rampart and across the prairie; I still subsidized our link with civilization by writing drafts on John Magee to be debited against my partnership in the *Andy J.* and thereby brought things into the valley we would not otherwise have bad. Some I kept—Dora got in-house running water from that first trip our own boys made, just in time to keep my promise to her, as Zack got Hilda pregnant right after they got back, and their first baby, Ingrid Dora, and the completion of Dora's bathroom, arrived about together. Other things I sold to other farmers for labor. But the Buck strain of mules, strong, intelligent, and all of them capable of being taught to talk, eventually corrected our balance of trade, once those two wells were drilled on the prairie and I could count on running a string of mules to Separation Center without losing half of them. This meant medicines, books, and many other things for our valley.

(Omitted)

Lazarus Long did not intend to surprise his wife. But neither of them ever knocked on their own bedroom door. Finding it closed, he opened it gently against the possibility that she might be napping. Instead he found her standing at the window, mirror angled to the light, carefully plucking a long gray hair.

He watched her in shocked dismay. Then steadied himself and said, "Adorable—"

"Oh." She turned. "You startled me. I didn't hear you come in, dear."

"I'm sorry. May I have that?"

"Have what, Woodrow?"

He went to her, bent down and picked up the silver hair. "This. Beloved, every hair of your head is precious to me. May I keep it?"

She did not answer. He saw that her eyes were filled with tears. They started to overflow. "Dora, Dora," he repeated urgently, "why are you crying, beloved?"

"I'm sorry, Lazarus. I did not intend for you to see me doing this."

"But why do it at all, Dorable? I have far more gray hair than you."

She answered what he had not said, rather than what he did say. "Dearest, I can't help it that I know when someone is—well, 'fibbing' I must call it since you have never lied to me."

"Why, Dorable! My hair *is* gray."

"Yes, sir. You did not mean to surprise me, I know…and I did not mean to snoop when I cleaned your study. I found your cosmetics kit, Lazarus, more than a year ago. It's sort of a fib, isn't it?—when you do something to make your crisp red hair look gray? Something like what I do, I suppose, when I pluck hairs that *are* gray."

"You've been plucking gray hairs since you learned that I have been aging myself? Oh, dear!"

"No, no, Lazarus! I've been plucking them for *ages.*Much longer than that. Heavens, darling, I'm a great-grandmother—and look it. But what you do—careful as you are with it— and kind as it is for you to try—and I *do* appreciate it!—doesn't make you look my age; it just makes you look prematurely gray."

"Possibly. Although I'm entitled to gray hair, Dorable—my hair was snow-white not many years before you were born. It took something much more drastic than cosmetics—or plucking hairs—to make me look young again. But there never seemed to be any reason to mention it."

He stepped up to her, put an arm around her waist, took the mirror and tossed it on the bed, turned her toward the window., "Dora, your years are an achievement, not something to hide. Look out there. Farmhouses right up to the hills and many more we can't see from here. How many of our Happy Valley people are descended from your slim body?"

"I've never counted."

"I have; more than half of them—and I'm proud of you. Your breasts are baby-chewed, your belly shows stretch marks—your decorations of honor, Adorable One. Of valor. They make you *more* beautiful. So stand straight and tall, my lovely, and forget about silver hairs. Be what you *are,* and be it in style!"

"Yes, Lazarus. I don't mind them myself—I did it to please you."

"Dorable, you can't help pleasing me, you always have. Do you want me to let my own hair go back to natural? It's not dangerous for me to be a Howard—here in Happy Valley with my own kin all around me."

"I don't care, darling. Just don't do it on my account. If it makes it easier for you—First Settler and all that—to look a little older, then do it."

"It does make it easier—when I deal with other people. And it's no trouble; I know the routine so well I could do it in my sleep. But, Dora—listen to me, darling. Zack Briggs will call at Top Dollar sometime in the next ten years; you saw John's letter. It's not too rate to go to Secundus. There they can make you look like a young girl again if that's what you want, and tack a good many extra years on, too. Fifty. Maybe a hundred."

She was slow in answering. "Lazarus, are you urging me to do this?"

"I'm offering it. But it's your body, most dear one. Your life."

She stared out the window. " 'More than half of them,' you said."

"With the percentage increasing. Our kids breed like cats. And so do their kids."

"Lazarus, truly we settled this many, many years ago. But it is even more so now. I don't want to leave our valley even to visit the outside. I don't want to leave our children. Nor our children's children, nor *their* children. And I certainly would not want to come back looking like a young girl…to watch the births of our great-great-grandchildren. You're right; I've earned my gray hairs. And now I'll wear them!"

"That's the girl I married! That's my durable Dora!" He moved his hand up higher, cupped a breast and tickled a nipple. She jumped, then relaxed to it. "I knew your answer, but I had to ask. My darling, age cannot wither you, nor custom stale your infinite variety. Where other women satiate, you most make hungry!"

She smiled. "I'm not Cleopatra, Woodrow."

"Wench, that's your opinion. But what's your opinion against mine? Rangy Lil, I've seen thousands and thousands more women than you have—and *I* say that you make Cleopatra look homely."

"Blarney tongue," she said softly. "I'm sure you've never had a woman turn you down."

"True only because I never risk being turned down; I wait to be asked. Always."

"Are you waiting to be asked? All right, I'm asking. Then I'd better start dinner."

"Don't be in such a hurry, Lil. First I'm going to dump you on that bed. Then I'm going to flip your skirt up. Then I'm going to see if I can find any gray hair at *that* end. If so, I'll pluck them for you."

"Beast. Scoundrel. Lecherous old goat." She smiled in delight. "I thought we weren't going to bother any more with plucking gray hairs?"

"We were speaking of hair on your *head,* Great-Grandmother. But this other end is as young as ever—and better than ever—so we'll most carefully pluck any gray from your pretty—your pretty brown curls."

"Sweetest old goat. If you can find any, you're welcome. But I've been plucking that end even more carefully than my scalp. Let me slip this dress off."

"Wups! Hold it. That's Rangy Lil, the horniest bitch in Happy Valley, always in a hurry. Get your dress off if you wish, but I'm going to find Lurton and tell him to saddle up Best Boy and go beg supper and a shakedown from his sister Marje and Lyle. Then I'll be back to pluck those disgraceful gray curls. Supper will be late, I'm afraid."

"I don't mind if you don't, beloved."

"That's my Lil. Darling, there isn't a man in the valley who wouldn't grab you and try to find another valley if you gave him the slightest encouragement—that includes your own sons and your sons-in-law——every male here down to fourteen."

"Oh, not true! Blarney again."

"Want to bet? On second thought we won't waste time plucking gray hairs at either end. When I get back from telling our youngest son to get lost for the night, I want to find you wearing just rubies and a smile. Because you're not going to cook supper; we're going to scrape up a cold picnic instead and take it and a blanket up on the roof and enjoy the sunset."

"Yes, sir. Oh, darling, I love you! E.F.? Or F.F.?"

"I'll leave that choice to Rangy Lil."

(Circa 39,000 words omitted)

Lazarus opened the bedroom door very quietly, looked in, looked inquiringly at his daughter Elf—a strikingly beautiful middle-aged woman with flaming red curls shot slightly with gray. She said, "Come in, Papa; Mama's awake."

She stood up to leave, taking with her a supper tray.

He glanced at it, subtracted in his mind what was still on it from what he had seen leave the kitchen on it—got a sum which was too near zero to please him. But he said nothing, simply went to the bedside, smiled down at his wife. Dora smiled back. He leaned over and kissed her, then sat down where Elf had been. “How is my darling?”

“Just fine, Woodrow. Ginny—no, Elf. Elf brought me the tastiest supper. I enjoyed it so much. But I asked her to put my rubies on me before she fed me——did you notice?’

“Of course I did, beautiful. When did Rangy Lil ever eat supper without her rubies?”

She didn’t answer, her eyes closed. Lazarus kept quiet, watched her respiration, counted her heartbeats by watching a pulse in her neck.

“Do you hear them, Lazarus?” Her eyes were open again.

“Hear what, Dorable?”

“The wild geese. They must be right, over the house.”

“Oh. Yes, certainly.”

“They’re early this year.” That seemed to tire her; she closed her eyes again. He waited.

“Sweetheart? Will you sing ‘Buck’s Song’?”

“Certainly, ‘dorable Dora.” Lazarus cleared his throat and started in:

“‘There’s a schoolhouse
By the pawnshop
Where Dora has her lessons,
“‘By the schoolhouse
There’s a mule yard
Where Dora’s friend Buck lives.’”

She closed her eyes again, so he sang the other verses very softly. But when he finished, she smiled at him. “Thank you, darling; that was lovely. It’s always been lovely. But I’m a little tired—if I drop off to sleep, will you still be here?”

“I’ll always be here, dearest. You sleep now.” She smiled again, and her eyes closed. Presently her breathing grew slower as she slept.

Her breathing stopped.

Lazarus waited a long time before he called in Ginny and Elf.

SECOND INTERMISSION

More from the Notebooks of Lazarus Long

Always tell her she is beautiful, especially if she is not.

If you are part of a society that votes, then do so. There may be no candidates and no measures you want to vote *for* but there are certain to be ones you want to vote *against.* In case of doubt, vote *against.* By this rule you will rarely go wrong.

If this is too blind for your taste, consult some well-meaning fool (there is always one around) and ask his advice. Then vote the other way. This enables you to be a good citizen (if such is your wish) without spending the enormous amount of time on it that truly intelligent exercise of franchise requires.

Sovereign ingredient for a happy marriage: Pay cash or do without. Interest charges not only eat up a household budget; awareness of debt eats up domestic felicity.

Those who refuse to support and defend a state have no claim to protection by that state. Killing an anarchist or a pacifist should not be defined as "murder" in a legalistic sense. The offense against the state, if any, should be "Using deadly weapons inside city limits," or "Creating a traffic hazard," or "Endangering bystanders," or other misdemeanor.

However, the state may reasonably place a closed seasons on these exotic asocial animals whenever they are in danger of becoming extinct. An authentic buck pacifist has rarely been seen off Earth, and it is doubtful that any have survived the trouble there…regrettable, as they had the biggest mouths and the smallest brains of any of the primates.

The small-mouthed variety of anarchist has spread through the Galaxy at the very wave front of the Diaspora; there is no need to protect them. But they often shoot back.

Another ingredient for a happy marriage: Budget the luxuries *first!*

And still another— See to it that she has her own desk— then keep your hands off it!

And another— In a family argument, if it turns out you are right— apologize at once!

"God split himself into a myriad parts that he might have friends." This may not be true, but it sounds good—and is no sillier than any other theology.

To stay young requires unceasing cultivation of the ability to unlearn old falsehoods.

Does history record *any* case in which the majority was right?

When the fox gnaws—smile!

A "critic" is a man who creates nothing and thereby feels qualified to judge the work of creative men. There is logic in this; he is unbiased—he hates all creative people equally.

Money is truthful. If a man speaks of his honor, make him pay cash.

Never frighten a little man. He'll kill you.

Only a sadistic scoundrel—or a fool—tells the bald truth on social occasions.

This sad little lizard told me that he was a brontosaurus on his mother's side. I did not laugh; people who boast of ancestry often have little else to sustain them. Humoring them costs nothing and adds to happiness in a world in which happiness is always in short supply.

In handling a stinging insect, move very slowly,

To be "matter of fact" about the world is to blunder into fantasy—and dull fantasy at that, as the real world is strange and wonderful.

The difference between science and the fuzzy subjects is that science requires reasoning, while those other subjects merely require scholarship.

Copulation is spiritual in essence—or it is merely friendly exercise. On second thought, strike out "merely." Copulation' is not "merely"—even when it is just a happy pastime for two strangers. But copulation at its spiritual best is so much more than physical coupling that it is different in kind as well as in degree.

The saddest feature of homosexuality is not that it is "wrong" or "sinful" or even that it can't lead to progeny—but that it is more difficult to reach through it this spiritual union. Not impossible—but the cards are stacked against it.

But—most sorrowfully—many people never achieve spiritual sharing even with the help of male-female advantage; they are condemned to wander through life alone.

Touch is the most fundamental sense. A baby experiences it, all over, before he is born and long before he learns to use sight, hearing, or taste, and no human ever eases to need it. Keep your children short on pocket money—but long on hugs.

Secrecy is the beginning of tyranny.

The greatest productive force is human selfishness.

Be wary of strong drink. It can make you shoot at tax collectors—and miss.

The profession of shaman has many advantages. It offers high status with a safe livelihood free of work in the dreary, sweaty sense. In most societies it offers legal privileges and immunities not granted to other men. But it is hard to see how a man who has been given a mandate from on High to spread tidings of joy to all mankind can be seriously interested in taking up a collection to pay his salary; it causes one to suspect that the shaman is on the moral level of any other con man.

But it’s lovely work if you can stomach it.

A whore should be judged by the same criteria as other professionals offering services for pay—such as dentists, lawyers, hairdressers, physicians, plumbers, *etc.* Is she professionally competent? Does she give good measure? Is she honest with her clients?

It is possible that the percentage of honest and competent whores is higher than that of plumbers and much higher than that of lawyers. And *enormously* higher than that of professors.

Minimize your therbligs until it becomes automatic; this doubles your effective lifetime—and thereby gives time to enjoy butterflies and kittens and rainbows.

Have you noticed how much they look like orchids? Lovely!

Expertise in one field does not carry over into other fields. But experts often think so. The narrower their field of knowledge the more likely they are to think so.

Never try to outstubborn a cat.

Tilting at windmills hurts you more than the windmills.

Yield to temptation; it may not pass your way again.

Waking a person unnecessarily should not be considered a capital crime. For a first offense, that is.

“Go to hell!” or other insult direct is all the answer, a snoopy question rates.

The correct way to punctuate a sentence that starts: “Of course it is none of my business but—” is to place a period after the word “but.” Don’t use excessive force in supplying such moron with a period. Cutting his throat is only a momentary pleasure and is bound to get you talked about.

A man does not insist on physical beauty in a woman who builds up his morale. After a while he realizes that she *is* beautiful—he just hadn’t noticed it at first.

A skunk is better company than a person who prides himself on being “frank.”

“All’s fair in love and war”—what a contemptible lie!

Beware of the “Black Swan” fallacy. Deductive logic is tautological; there is no way to get a new truth out of it, and it manipulates false statements as readily as true ones. If you fail to remember this, it can trip you—with perfect logic. The designers of the earliest computers. called this the “Gigo Law,” i.e., “Garbage in, garbage out.”

Inductive logic is *much* more difficult—but can produce new truths.

A “practical joker” deserves applause for his wit according to its quality. Bastinado is about right. For exceptional wit one might grant keelhauling. But staking him out on an anthill should be reserved for the very wittiest.

Natural laws have no pity.

On the planet Tranquille around KM849 (G-O) lives a little animal known as a “knafn.” It is herbivorous and has no natural enemies and is easily approached and may-be petted—sort of a six-legged puppy with scales. Stroking it is very pleasant; it wiggles its pleasure and broadcasts euphoria in some band that humans can detect. It’s worth the trip.

Someday some bright boy will figure out how to record this broadcast, then some smart boy will see commercial angles— and not long after that it will be regulated and taxed.

In the meantime I have faked that name and catalog number; it is several thousand lightyears off in another direction. Selfish of me—

Freedom begins when you tell Mrs. Grundy to go fly a kite.,

Take care of the cojones and the frijoles will take care of themselves. Try to have getaway money—but don’t be fanatic about it.

If “everybody knows” such-and-such, then it ain’t so, by at least ten thousand to one.

Political tags—such as royalist, communist, democrat, populist, fascist, liberal, conservative, and so forth—are never basic criteria. The human race divides politically into those who want people to be controlled and those who have no such desire. The former are idealists acting from highest motives for the greatest good of the greatest number. The latter are surly curmudgeons, suspicious and lacking in altruism. But they are more comfortable neighbors than the other sort.

All cats are *not* gray after midnight. Endless variety—

Sin lies only in hurting other people unnecessarily. All other “sins” are invented nonsense. (Hurting yourself is not sinful—just stupid.)

Being generous is inborn; being altruistic is a learned perversity. No resemblance—

It is impossible for a man to love his wife wholeheartedly without loving all women somewhat. I suppose that the converse must be true of women.

You can go wrong by being too skeptical as readily as by being too trusting.

Formal courtesy between husband and wife is even more important than it is between strangers.

Anything free is worth what you pay for it.

Don’t store garlic near other victuals.

Climate is what we expect, weather is what we get.

Pessimist by policy, optimist by temperament—it is possible to be both. How? By never taking an unnecessary chance and by minimizing risks you can't avoid. This permits you to play out the game happily, untroubled by the certainty of the outcome.

Do not confuse "duty" with what other people expect of you; they are utterly different. Duty is a debt you owe to yourself to fulfill obligations you have assumed voluntarily. Paying that debt can entail anything from years of patient work to instant willingness to die. Difficult it may be, but the reward is self-respect.

But there is no reward at all for doing' what other people expect of you, and to do so is not merely difficult, but impossible. It is easier to deal with a footpad than it is with the leech who Wants "just a few minutes of your time, please—this won't take long." Time is your total capital, and the minutes of your life are painfully few. If you allow yourself to fall into the vice of agreeing to such requests, they quickly snowball to the point where these parasites will use up 100 percent of your time—and squawk for more!

So learn to say No—and to be rude about it when necessary. Otherwise you will not have time to carry out your duty, or to do your own work, and certainly no time for love and happiness. The termites will nibble away your life and leave none of it for you.

(This rule does not mean that you must not do a favor for a friend, or even a stranger. But let the choice be *yours.* Don't do it because it is "expected" of you.)

"I came, I saw, she conquered." (The original Latin seems to have been garbled.)

A committee is a life form with six or more legs and no brain.

Animals can be driven crazy by placing too many in too small a pen. Homo sapiens is the only animal that voluntarily does this to himself.

Don't try to have the last word. You might get it.

VARIATIONS ON A THEME

XIII

Boondock

"Ira," said Lazarus Long, "have you looked at this list?" He was lounging in the office of Colony Leader Ira Weatheral at Boondock, largest (only) settlement on the planet Tertius. With them was Justin Foote 45th, freshly arrived from New Rome, Secundus.

"Lazarus, Arabelle addressed that letter to you. Not to me."

"That preposterous puff-gut will get me annoyed yet. Her Extreme Ubiquity Madam Chairman Pro Tem Arabelle Foote-Hedrick seems to think she has been crowned Queen of the Howards. I'm tempted to go back and pick up that gavel."

Lazarus passed the list to Weatheral. "Give it a gander, Ira. Justin, did you have anything to do with this?"

"No, Senior. Arabelle told me to deliver it and instructed me to brief you in ways to insure delivery of Delay Mail from various eras—which does present problems for pre-Diaspora dates. But I don't consider her ideas practical. If I may say so, I know more Terran history than she does."

"I'm certain you do. I think she cribbed that list from an encyclopedia. Don't bother me with her notions. Oh, you can transcribe them and give me the cube, but I shan't play it. I want *your* ideas. Justin."

"Thank you, Ancestor—"

"Call me 'Lazarus.'"

"'Lazarus.' The official reason for my visit is to report to her on this colony—"

"Justin," Ira put in quickly, "does Arabelle think she has jurisdiction over Tertius?"

"I'm afraid so, Ira."

Lazarus snorted. "Well, she hasn't. But she's so far away it can't hurt if she wants to call herself 'Empress of Tertius.' Our situation is this, Justin. Ira is Colony Leader, we are still shaking down. I'm Mayor—Ira does the work, but I bang the gavel at community meetings—there are always colonists who think that a colony can operate like a big-city planet, so I preside to throw cold water on damfoolishness. When I'm ready to start this time-travel junket, we'll eliminate the job of Colony Leader and Ira will take over as Mayor.

"But feel free to look over the joint, count noses, examine any records, do as you like. Welcome to Tertius, the biggesi little colony this side of Galactic Center. Make yourself at home, son."

"Thank you. Lazarus, I would be staying—colonizing—but I want to remain Chief Archivist until I finish editing your memoirs."

Lazarus said, "Oh, *that* junk—burn it up! Gather ye rosebuds, man!"

Ira said, "Lazarus, don't talk that way. I put up with your whims for years to get it on record."

"Piffle. I paid you back when I grabbed the gavel and kept the Ugly Duchess from banishing you to Felicity. You got what you want—why do you care about my memoirs?"

"I care."

"Well— Maybe Justin can edit them here. Athene! Pallas Athene, are you there, honey?"

"Listening, Lazarus," came a sweet soprano voice from a speaker over Ira's desk.

"Your memories include my memoirs, do they not?"

"Certainly, Lazarus. Every word you've spoken since Ira rescued you—"

"Not 'rescued,' dear. Kidnapped."

"Revision. —since Ira kidnapped you from that flophouse, and all your earlier memoirs."

"Thanks, dear. You see, Justin? If you *must* do buttonsorting, do it here. Unless you have unfinished business on Secundus? Family, or such?"

"No family. Grown children but no wife. My deputy is doing my job, and I've nominated her as my successor— subject to approval by the Trustees. But I find myself startled. Uh—how about my ship?"

"My ship, you mean. I don't mean my yacht 'Dora' but that one-man autopacket you arrived in. The 'Homing Pigeon.' Belongs to a corporation owned by another corporation of which I am major stockholder. I'll accept delivery and that saves Arabelle half the lease time."

"So? Madam Chairman Pro Tem did not lease that autopacket, Lazarus; she requisitioned it for public service."

"Well, well!" Lazarus grinned. "Maybe I'll sue her. Justin, there is nothing in the Articles of Contract under which Secundus was colonized that permits requisition of private property by the state. Correct, Ira?"

"Technically correct, Lazarus. Although there is long precedent for eminent domain in land."

"Ira, I'd argue even that. But have you ever heard of it being applied to spaceships?"

"Never. Unless you count the 'New Frontiers.'"

"Ouch! Ira, I didn't requisition the 'New Frontiers'; I stole it to save our skins."

"I was thinking of Slayton Ford's part in it, not yours. Constructive requisitioning, perhaps?"

"Mmm— It's pretty small of you to bring it up a couple of thousand years after his death. Furthermore, had Slayton not, done what he did, I wouldn't be here and *you* wouldn't be here. Nor any of us. Damn you, Ira."

"Get your feathers down, Grandfather. I was just pointing out that a head of state sometimes has to do things he would never do as a private individual. But if Arabelle can requisition the 'Homing Pigeon' when it sits on Secundus, then you can do the same on Tertius. You are each head of state of an autonomous planet. Teach her a lesson."

"Uh...Ira, don't tempt me. It happened to *me* once. If it got to be a habit, it would put a stop to interstellar travel. I won't touch that bucket under any such flimsy legality. But I *do* own it, indirectly, and if Justin wants to stay, he can turn it over to me, and I'll return it to Transport Enterprises. Let's get back to that list. See what the old bat wants? The times and places she wants me to report on?"

"Looks like an interesting itinerary."

"It does, eh? Then *you* do it. 'Battle of Hastings—First, Third, and Fourth Crusades—Battle of Orleans—Fall of Constantinople—French Revolution—Battle of Waterloo.' Thermopylae and nineteen other encounters between rough strangers. I'm surprised she didn't ask me to referee the bout between David and Goliath. I'm *chicken,* Ira. I fight when I can't run—how does she *think* I managed to live so long? Bloodshed is not a spectator sport. If history says that a battle took place at a given location on a particular day, then I'll be somewhere—or somewhen—far away, sitting in a tavern, drinking beer and pinching the barmaids. Not dodging mortar fire to feed Arabelle's ghoulish curiosity."

"I tried to suggest that," said Justin. "But she said that this was an official Families' project."

"The hell it is. I told her about it simply to be sure of the Delay Mail setup. I'm a coward by trade…and *not* working for her. I'll go where and when I please, see what I want to— and try not to antagonize local yokels. Especially those fighting each other; it makes 'em triggerhappy."

"Lazarus," said Ira Weatheral, "you never have said what you do plan to see."

"Well— No battles. Battles are well enough reported for my taste. But there are lots of interesting things in Terran history—peaceful things not well reported because they *were* peaceful. I want to see the Parthenon at the peak of its glory. Cruise down the Mississippi with Sam Clemens as pilot. Go to Palestine in the first three decades of the Christian Era and try to locate a certain carpenter turned rabbi—settle whether there ever was such a man."

Justin Foote looked surprised. "You mean the Christian Messiah? Admittedly many stories about him are myths, but—"

"How do you *know* they are myths? But that he ever lived is the point that has never been established. Take Socrates, four centuries earlier—his historicity is as firmly established as that of Napoleon. Not so with the Carpenter of Nazareth. Despite the care with which the Romans kept records and the equal care with which the Jews kept theirs, *none* of the events that *should* be on record can be found in contemporary records.

"But if I devoted thirty years to it, I could find out. I know Latin and Greek of that time and I'm almost as conversant with classic Hebrew; all I would have to add is Aramaic. If I found him, I could follow him around. Take down his words with a microrecorder, see if they match what he is alleged to have said.

"But I won't take any bets. The historicity of Jesus is the slipperiest question in all history because for centuries the question couldn't be raised. They would hang you for asking—or burn you at the stake."

"I'm amazed," said Ira. "My knowledge of Earth's history isn't as thorough as I thought it was. However, I concentrated on the period from Ira Howard's death to the founding of New Rome."

"Son, you didn't even sample it. But aside from this one weird story—'weird' because most major religious leaders are heavily documented whereas this one remains as elusive as the King Arthur legends—I'm not going after great events. I'd rather meet Galileo, get a look at Michelangelo at work, attend a first performance of one of old Bill's plays at the Globe Theater, things like that. I'd particularly like to go back to my own childhood, see if things look as I recall them."

Ira blinked. "Run a chance of running into *yourself?"*

"Why not?"

"Well…there are paradoxes, are there not?'

"How? If I'm going to, then I *did.* That old cliché about shooting your grandfather before he sires your father, then going *fuft!* like a soap bubble—and all descendants, too, meaning both of you among others—is nonsense. The fact that I'm here and you're here means that I *didn't* do it—or won't do it; the tenses of grammar aren't built for time travel—but it does *not* mean that I never went back and poked around. I haven't any yen to look at *myself* when I was a snot-nose; it's the era that interests me. If I ran across myself as a young kid, he—I—wouldn't recognize me; I would be a stranger to that brat. He wouldn't give me a passing glance; I know, I *was he."*

"Lazarus," put in Justin Foote, "if you intend to visit that era, I'd like to invite your attention to one thing Madam Chairman Pro Tem is interested in—because *I* am interested. A recording of exactly what was said and done at the Families' Meeting in 2012 A.D."

"Impossible."

"Just a moment, Justin," Ira put in. "Lazarus, you have refused to talk about that meeting on the grounds that the others who were there can't dispute your version. But a recording would be fair to everyone."

"Ira, I didn't say that I *would* not; I said it was *impossible."*

"I don't follow you."

"I can't make a recording of that meeting because I was not there."

"You lost me again. All the records—and your own statements—show that you *were* there."

"Again we don't have language adequate for time travel. Surely, I was there as Woodrow Wilson Smith. I was there and made a hairy nuisance of myself and offended a lot of people. But I did *not* have a recorder on me. Let's say that Dora and the twins drop me back there —me, Lazarus Long, not that younger fellow—and that Ishtar has equipped me with a recorder implanted behind my right kidney, with its minimike surfacing inside my right ear. Okay, let's assume that with such equipment I won't be noticed making a record.

"But, Ira, what you don't understand, despite having chaired many Families' Meetings, is that I would not get inside the hall. In those days an executive meeting of the Families was harder to get into than an esbat of witches. The guards were armed and eager; it was a rough period. What identity could I use? Not Woodrow Wilson Smith; he *was* there. Lazarus Long? There was no 'Lazarus Long' on the Families' rolls. Try to fake it as someone eligible but not able to attend? Impossible. There were only a few thousand of us then, and every member was known to a large percentage of the rest; a man who couldn't be vouched for ran a nasty chance of being buried in the basement. No unidentified person *ever did* get in; we had too much at stake. Hi, Minerva! Come in, honey."

"Hi, Lazarus. Ira, am I intruding?"

"Not at all, dear."

"Thank you. Hello, Athene."

"Hello, my sister."

Minerva waited to be introduced. Ira said, "Minerva, you remember Justin Foote, Chief Archivist."

"Certainly, I've worked with him many times. Welcome to Tertius, Mr. Foote."

"Thank you, Miss Minerva." Justin Foote liked what he saw—a tall, slender young woman with an erect carriage, a small, firm bust, long chestnut hair worn in a part and brushed straight down, a sober, intelligent face, handsome rather than pretty, but which blossomed into beauty each time she gave one of her quick smiles. "But, Ira, I must hurry back to Secundus and apply for rejuvenation. This young lady has worked with me 'many times'—yet I've grown so senile I can't place the occasions. Forgive me, dear lady."

Minerva flashed him another of her smiles, then instantly. was sober. "My fault, sir; I should have explained at once. When I worked with you, I was a computer. Executive computer of Secundus, serving Mr. Weatheral, then Chairman Pro Tem. But now I'm a flesh-and-blood, and have been for the past three years."

Justin Foote blinked. "I see. I hope I do."

"I am a proscribed construct, sir, not born of woman. A composite clone of twentythree donor-parents, forced to maturity in vitro. But the 'I' that is me, my ego, was the computer who used to work with you when the Archives computers needed assistance from the executive computer. Have I made it clear?"

"Uh…all I can say, Miss Minerva, is that I am delighted to meet you in the flesh. Your servant, Miss."

"Oh, don't call me 'Miss,' call me 'Minerva.' I shouldn't be called 'Miss' anyhow; isn't that honorific reserved for virgins among flesh-and-bloods? Ishtar—one of my mothers and my chief designer—deflowered me surgically before she woke me."

"And that ain't all!" came the voice from the ceiling.

"Athene," Minerva said reprovingly. "Sister, you're embarrassing our guest."

"I'm not, but maybe you are, sister mine."

"Am I, Mr. Foote? I hope not. But I'm still learning to be a human being. Will you kiss me? I'd like to kiss you; we've known each other almost a century and I've always liked you. Will you?"

"Now who's embarrassing him, sister?'

"Minerva," said Ira.

She suddenly sobered. "I shouldn't have said that?"

Lazarus cut in. "Pay no attention to Ira, Justin; he's an old stickin-the-mud. Minerva is a 'kissin cousin' to most of the colony; she's making up for lost time. Furthermore, she *is* some sort of cousin to practically all of us through her twentythree parents. And she's learned how—kissing her is a treat. Athene, let your sis be while she adds on another kissing cousin."

"Yes, Lazarus. Ol' Buddy Boy!"

"Teena, if I could reach through that string of wires, I'd spank you." Lazarus added, "Go ahead, Justin."

"Uh…Minerva, I haven't kissed a girl in many years. Out of practice."

"Mr. Foote, I do not mean to embarrass you. I am simply delighted to see you again. You need not kiss me. Or if you are willing to kiss me in private, you are most welcome."

"Don't risk it, Justin," advised the computer. "I'm your friend."

"Athene!"

"I was about to add," said the Chief Archivist, "that I probably need practice in 'learning to be a human being' more than you do. If you'll put up with my rustiness, Cousin, I accept your sweet offer. Brace yourself."

Minerva smiled quickly, went into his arms, flowed up against him like a cat, closed her eyes, and opened her mouth. Ira studied a paper on his desk. Lazarus did not even pretend not to watch. He noted that Justin Foote put his heart into the matter—the old buzzard might be out of practice, but he hadn't forgotten the basics.

When they broke, the computer gave a respectful whistle. "Wheeee…ooooo! Justin, welcome to the Club."

"Yes," Ira said dryly, "a person can't be said to be officially on Tertius until he or she has been welcomed with a kiss from Minerva. Now that protocol is satisfied, sit down. Minerva, my dear, you came for some purpose?"

"Yes, sir." She settled down by Justin Foote on a couch facing Ira and Lazarus—took Justin's hand. "I was in the 'Dora' with the twins, and Dora was drilling them in astrogation, when the packet showed up in our sky and—"

"Hold it," Lazarus interrupted. "Did the brats track it?"

"Certainly, Lazarus. A live exercise?—Dora would never miss such a chance. She split herself instantly and made each of them track it independently. But once the autopacket grounded I asked Dora to ask Athene who was in it—and as soon as the pod opened, my sisters told me, Justin"—she squeezed his hand—"and I hurried to greet you. And to offer some arrangements. Ira, has Justin been provided for? A place to sleep, things like that?"

"Not yet, my dear. We were just starting to talk—he's barely had time to shake off the anesthetic."

Foote remarked, "I think the antidote has taken hold."

The computer added, "Cousin Justin just had a second dose, Ira. Pulse fast but steady."

"That's enough, Athene. Were you going to suggest something, my dear?"

"Yes. I swung past the house and spoke with Ishtar. We are in agreement. Subject to approval of you and Lazarus."

"You mean we get a vote?" Lazarus put in. "Justin, this planet is run by its women."

"Isn't that true everywhere?"

"No, just most of them. I remember a place where a wedding ceremony always concluded by killing the bride's mother if she hadn't been used up earlier. I thought that was overdoing it, but it did tend to—"

"Stow it, Grandpappy," Ira said mildly. "Justin would have to edit it out. Justin, what Minerva has been saying is that our house is yours. Lazarus?"

"Certainly. It's a madhouse, Justin, but the cooking is okay, and the price is right. Free, that is. It's just your nerves that pay.

"Really, I have no intention of imposing. Isn't there someone who can rent me a room? Not for money—I assume that Secundus money is not negotiable here—but for artifacts I've fetched, things you don't make as yet."

Lazarus answered, "You can negotiate Secundus money through me if you need to. As for artifacts, you may be surprised at what we are making."

"I might not be; I know that a universal pantograph was moved here. So I fetched new creative items, mostly entertainments—solly cubes and such. Musicalarkies, pornies, dreams, other sorts—all published since you folks left Secundus."

"Well planned." Lazarus added, "I think colonizing was more fun back when pioneers had no choice but to step in and slug it out and you weren't sure who was going to win, you or the planet. The way we do it now is like swatting an insect with a sledgehammer. Justin, your creepies will fetch a high price—but sell them in dribbles… because each one will be copied as soon as you turn it loose. No copyright, there's no way to enforce it. But it still won't rent you a room; we're at the staying-with-kinfolk stage. You'd best accept our offer; it rains 'most every night this time o' year."

Justin Foote looked baffled. "I have misgivings about invading your privacy. Ira, could I borrow this couch I'm sitting on? For a short time? Then—"

"Stow it, Justin." Lazarus stood up. "Son, you're suffering from big-city attitudes. You're welcome for a week or a century. You're not only my lineal descendant—through Janet Foote, I think—but you're a kissin' cousin of Minerva's. Let's take him home, Minerva. What did you do with my hellions?"

"They're outside."

"Trust you staked 'em down."

"No, but they were somewhat miffed."

"Good for their metabolism. Ira, declare a holiday."

"I will—as soon as I've gone over the ore converter plans with Athene."

"Meaning you're going to find out from her what's she's decided."

"You can say that again!" said the computer.

"Teena," Lazarus said mildly, "you've been associating with Dora too much. When Minerva had your job, she was sweet, gentle, respectful, and humble."

"Any complaints about my work, Grandpappy?"

"Just your manners, dear. In the presence of a guest."

"Justin isn't a guest; he's family. He's my sister's kissing cousin, so he's mine, too. Logical? Q.E.D."

"I disdain to argue. Watch out for Teena, Justin; she'll trap you.

"I find Athene's reasoning not only logical but warmly pleasing. Thank you, my kissing cousin."

"I like you, Justin; you were sweet to my sister. Don't worry about me trapping you; I don't plan to accept a clone for at least a hundred years—first I've got to get this planet organized. So don't wait up; you'll see me in about a century. You'll recognize me; I'll look exactly like Minerva."

"But noisier."

"Lazarus, you say the sweetest things. Kiss him for me, twin sister."

"Let's go, Minerva; Teena's got me mixed up again."

"Just a moment, Lazarus, please. Ira? I made other arrangements through Ishtar but only tentatively…not being sure of Justin's wishes."

"Oh. I don't know them either. Do you want me to ask him?"

"Uh…yes."

"On your behalf?"

Minerva looked startled. Justin Foote looked puzzled. Athene said, "Let's cut through the fog. Justin, Minerva was asking Ira whether or not you want her to find you a guest wife. Ira says he doesn't know but will find out—then asked her if she was volunteering for the privilege. All clear? Justin, my sister is so new at being a flesh-and-blood that she sometimes isn't sure of herself."

Lazarus reflected that he had not seen a girl blush—for that reason—for three centuries or more. Nor did the two men look at ease. He said reprovingly, "Teena, you are an excellent engineer…and a lousy diplomat."

"What? Oh, nonsense. I saved them billions of nanoseconds."

"Shut up, dear; your circuits are scrambled. Justin, Minerva is almost certainly the only girl on this planet who could be fussed by Teena's unhelpful help…because she is probably the only one who shows any tendency to stick to one man."

The computer giggled.

"I told *you* to keep still," Lazarus said sternly.

Ira said quietly, "Minerva is a free agent, Lazarus."

"Who said she wasn't? And you keep quiet, too, until the Senior—that's *me,* son—finishes speaking. Justin, Minerva will find you a dinner partner—has found one, I think. After that you are on your own. If you and your dinner partner don't hit it off, no doubt you'll be able to work out something else. Teena, I'm going to switch you off at the house tonight; I am uninviting you to dinner. You haven't learned how to behave in company."

"Aw, Lazarus, I didn't mean to steal your pig."

"Well—" Lazarus looked around. Ira's face was impassive, Minerva looked unhappy. Justin Foote spoke up:

"Senior, I'm sure Athene did not mean any harm. I do appreciate her declaring me her 'kissing cousm'; I found it warmly friendly. I hope you will reconsider and let her join us at dinner."

"Very well, Teena; Justin has intervened for you. But between you and Dora and the twins I am beginning to need a gnarooth to ride herd on you kids. Justin. Minerva. Let's go. Ira, Teena—.see you at the house. Don't waste time on that converter, Ira; Teena did a perfect job."

Outside the colonial headquarters Justin Foote found a nullboat waiting—not the one that had fetched him from the skyfield; this one had a pair of redheaded twins in it…uh, girls, although they looked as if they had just recently made up their minds. Twelve, perhaps thirteen. Both were wearing gun belts on skinny hips, with what (he hoped) were toy guns. One was wearing captain's insignia on bare shoulders. Each wore eleven thousand, three hundred, and two freckles as near as he could estimate.

Both jumped out of the boat, waited. One set of freckles said, "About time." The other said, "Discrimination."

Lazarus said, "Pipe down and be polite. Justin, these are my twin daughters—Lapis Lazuli, and that one's Lorelei Lee. Mr. Justin Foote, dears, Chief Archivist for the Trustees."

The girls glanced at each other, then curtsied deeply in perfect unison. "Welcome to Tertius, Chief Archivist Foote!" they said in chorus.

"Charming!"

"Yes, girls, that was nice. Who taught you?"

"Mama Harnadryad taught us—"

"—and Mania Ishtar said this would be a good time to do it."

"But I'm Lori; she's Lazi."

"You're both lazy," said Lazarus.

"I'm Captain Lapis Lazuli Long, commanding Starship 'Dora' and she's my crew. Even-numbered day."

"Till tomorrow. Odd-numbered day."

"Lazarus can't tell us apart—"

"—and he's not our father; we never had one."

"He's our brother, no real authority—"

"—he just dominates us by brute strength—"

"—but someday that will change."

"Into the boat, you mutinous hellions," Lazarus said cheerfully, "before I bust you back to apprentice spacemen."

They jumped into the boat, sat forward, facing aft.

"Threats—"

"—with abusive language—"

"—and without due process."

Lazarus did not seem to hear them. He and Justin handed Minerva into the boat, seated her aft and facing forward; they took seats cornering her. "Captain Lazuli."

"Yes, sir?"

"Will you please tell the boat to take us home?"

"Aye aye, sir. Humpty Dumpty—home!"

The little craft started up, hit a steady ten knots, waddling to changing contours of the ground. Lazarus said, "And now, Captain, having confused our guest, please straighten him out."

"Yes, sir. We're not twins, we don't even have the same mother—"

"—and Ol' Buddy Boy is not our father; he's our brother."

"Even-numbered day!"

"Then make it march."

"Correction," said Lazarus. "I'm your father because I adopted you, with written consent of your mothers."

"Irrelevant—"

"—and illegal; it was not with *our* consent—"

"—and immaterial in any case, as we three, Lazarus, Lorelei arid I, are identical triplets and therefore enjoy the same rights under any rational jurisdiction…which unfortunately this is not. So he beats us. Illegally and brutally."

"Captain, remind me to get a bigger club."

"Aye aye, sir. But we're fond of Buddy Boy anyhow despite his masochosadistic behavior. Because he's really us. You see?"

"Miss—Captain, I mean—I'm not sure I do. I think I slid through a space warp on the way here and failed to come out."

The even-numbered-day captain shook her head. "Sorry, sir, but that's not possible. I must ask you to take my word for it…unless you can handle imperial numbers and Libby field-physics. Can you?"

"No. Can you?"

"Oh, certainly—"

"—we're geniuses."

"Quit trying to snow him, kids, and belay that order. I'll explain it myself."

"I wish *you* would, Lazarus. I wasn't aware that you had any minor children. Or sisters, which I find even more confusing. Are they registered? While I can't see everything that goes into the files, for many years there has been an automatic relay to my attention on anything concerning the Senior."

"Which *I* knew and that's why you didn't see it. Registered, yes, but by their mothers' names—hostmothers, actually, but not so reported. But I left a Delay-Mail sealed registration of the actual genealogy involved, to be opened by you or your successor on my death or in year 2070 of the Diaspora, whichever comes first, to insure that they will receive certain knickknacks, such as my second-best bed —"

"And the 'Dora!"

"Pipe down. Keep butting in and your sister gets the 'Dora' and you won't be captain even on alternate days. I picked that date, Justin, because I expect them to be adults by then; they really are geniuses. I will not attempt time travel until then, as they are captain and crew of my yacht—only while groundside now but in space by then. As to how they are my sisters— and they are—an illegal—proscribed, rather, by Secundus Clinic—a clandestine surgical procedure was used to clone them from me. Somewhat like Minerva's case, but simpler."

"Much simpler," agreed Minerva. "I operated for me, when I was still a computer—and failed seventeen times before I achieved a perfect clone. I couldn't do it now, although Athene would be able to. But our girls were cloned by a flesh-and-blood surgeon—replication of the X chromosome was all that was necessary—and did it in both cases in one try; Laz and Lor were born the same day."

"Mmm— Yes, I think that Madam Director Doctor Hildegarde would take a sour view of such things. With no reflections on the lady's professional competence—high, I assume—I find her a bit, uh, conservative."

"Murderess."

"Primitive totalitarian."

"Three times over—"

"—for what right has *she* to say that *we* can't exist—"

"—or Minerva. Crypto-criminal mind!"

"That's enough, girls; you've made your point, you don't like her."

"She would have murdered *you,* too, Ol' Buddy Boy."

"Lori, I said that was enough. Stipulated that, if Nelly Hildegarde's policies had been carried out, I wouldn't be here, you wouldn't be here, Laz wouldn't be here, nor would Minerva. But she's not a, 'murderess,' as all four of us *are* here."

"And I am delighted,". Justin Foote commented. "To have three charming young ladies added to our Families through breaking rules proves something I have long suspected: Rules serve best when broken."

"A wise man—"

"—and with dimples, too. Mr. Foote, would you like to marry me and my sister?"

"Say 'Yes'! She can cook, but I'm cuddly."

Minerva said, "Stop it, girls."

"Why? Have you got him staked out already? Was that why we couldn't come in? Mr. Foote, Minerva is Mama Pro Tem to us by edict —"

"—which is patently unfair—"

"—as she is actually years and *years* younger than we are—"

"—and it gives us three mothers to dodge instead of the regulation one."

"Belay that," Lazarus ordered. "Both of you can cook, but neither of you is very cuddly."

"Then why do you cuddle us, Buddy Boy?"

"—suppressed incestuous yearning perhaps?"

"Merde. Because you both are immature, insecure, and frightened."

The redheads looked at each other. "Lori?"

"I heard it. Unless I'm hallucinating."

"No, I heard it, 'too."

"Is it time to cry?"

"We'd better save it. Mr. Foote wouldn't want to see how our Buddy Boy goes all to pieces when we cry."

"We'll save it. That makes two cries and a chin quivering he's got coming. Unless Mr. Foote would *like* to see it."

"Would you, Mr. Foote?"

"Justin, I'll sell either one of them cheap. Still better price on a package deal."

"Uh…thank you, Lazarus, but I'm afraid that they might cry at me —then *I* would go all to pieces. Can we change the subject? How did you manage to put over this triple, uh, irregularity? May one ask? Doctor Hildegarde runs a very taut organization."

"Well, in the case of those two little angels over there—"

"Sarcasm now—"

"—and not clever."

"—I was flummoxed quite as much as Nelly Hildegarde. At the time, Ishtar Hardy, that one's mother—"

"No, *her* mother."

"You two are interchangeable parts, and besides, you were mixed up the week you were born, and nobody knows which you are; you don't know yourself."

"Oh, yes, I do! Sometimes she goes away, but I'm always right here."

Lazarus paused in midflight, looked thoughtful. "That may be the most succinct statement of the solipsist thesis I've ever heard. Write it down."

"If I did, you'd take credit for it."

"I simply want to save it for posterity…a notion incompatible with the thesis itself. Minerva, you preserve it for me."

"Recorded, Lazarus."

"Minerva has almost as exact a memory as she had when she was a computer. I was saying: Ishtar was temporarily Clinic boss, Nelly having gone on leave, so access to my tissue was no problem. I was then in a state of acute anhedonia, and their mothers cooked up this notion for restoring my interest in life. The only problem was to do gene surgery not permitted by the rules of Secundus Clinic. How and who— I was told firmly not to inquire. You can ask Minerva; she was in on the swindle."

"Lazarus, that was a memory I did not bring along when I was selecting what to fit into this skull."

"You see, Justin? I'm allowed to know only what they think is good for me. As may be, this heroic treatment worked; I have not been bored since. Other descriptives might apply—but not that one."

"Lori, do you sense a double entendre?"

"No, merely a thinly veiled innuendo. Ignore it with dignity."

"But at first *I* didn't know my odd relationship to this pair. Oh, I couldn't help knowing that Ishtar, and Hamadryad—one of Ira's daughters; you've met her?"

"Years back. A lovely girl."

"Quite. Both of their mothers are lovely. I couldn't help knowing that both were pregnant; they were spending most of their time with me. But although they were swelling up like poisoned pups, they ignored it, so I didn't inquire."

Justine nodded. "Privacy."

"Naw, just hardnosed. I've never let the privacy custom keep me from snooping when it suited me. I was miffed, that's all. Here two girls are with me every day and like daughters to me and obviously as knocked up as Pharaoh's Daughter— and they tell me nit. So I got stubborn and outsat them. Till one day Galahad—he's their husband—well, not exactly; you'll see—Galahad invites me downstairs, and here they have, one each, the two prettiest little redheads I ever saw."

"Shall we let him off one cry?"

"You got over it; you both look like *me* now."

"Or do we add a third cry for *that?"*

"I still don't smell a mouse; I'm simply pleased. As well as amazed that they had produced babies that looked like identical twins—"

"Which we are, except that we're triplets."

"But some weeks of playing with these babies causes my natural genius and suspicious mind to infer that the girls have pulled a whizzer. I was not then in the sperm bank so far as I knew, but I am well aware of tricks that can be played on a helpless client undergoing antigeria, so with unerring logic I reach the wrong answer: These babies are my daughters by artificial insemination unmentioned to me. So I accuse them' of it. And they deny it. And I explain that I am not angry, but quite the contrary I *hope* these little cherubs are mine."

"'Cherubs.'"

"Ignore it. He's simply trying to con Mr. Foote."

"Cherubs at that time, I mean, aside from a tendency to bite. That I *want* them to be mine and share my name, and fortunes. So they confer with their fellow conspirators— Minerva and Galahad—Minerva was in it up to her overload safeties."

"Lazarus, you *needed* a family."

"Quite right, dear. I'm always better off with a family; it keeps me harmlessly occupied and unbored. Justin, did I mention that Minerva allowed me to adopt her?"

"*We* weren't asked!"

"Look, kids, under the loose rules of this termite bill I can unadopt you this minute, if such be your wish. Cut the tie. Be just your genetic brother through circumstances I had no more part in than you had. Renounce all authority over you two. Let me know."

The two girls looked at each other briefly. Then one said, "Lazarus —"

"Yes, Lorelei?"

"Lapis Lazuli and I have discussed it, and we both think that you are just exactly the father we want."

"Thank you, my dears."

"And to confirm it, we are canceling two cries and a chin quiver."

"That's most pleasing."

"And besides that, we want to be cuddled…because we are feeling very immature, insecure, and frightened—"

Lazarus blinked. "I don't want you to feel that way, ever. But— Well, can the cuddling wait?"

"Oh, certainly—Father. We know we have a guest. But perhaps you and Mr. Foote would join us in bathing? Before dinner?"

"Well, Justin? Bathing with my hellions is squirmy but fun. I don't do it often because they turn it into a social event and waste time. Suit yourself; don't let your arm be twisted."

"A bath I certainly need. I was clean when I was sealed into that pod—but how long was I in it? I really don't know. And a bath should always be a social event if there is time and good company. Thank you ladies; I accept."

"And I accept, too," put in Minerva. "I'm inviting myself. Justin, Tertius is primitive compared with Secundus, but our family refresher is nice and quite large enough for sociability. 'Decadent,' as Lazarus calls it."

"I designed it to be decadent, Justin. Good plumbing is the finest flower of decadence and one I have always enjoyed when I could get it."

"Uh—my clothes are still in Ira's office. Even my toiletries. Absentminded, I'm sorry."

"No matter. Ira may fetch your bag, but he's absentminded, too. Depilatories, deodorants, scents—no problem. I'll lend you a toga or something."

"Buddy Boy! I mean 'Father.' Does that mean we *dress* for dinner?"

"Call me Buddy Boy; I'm hardened to it. Go as far as you like, darlings…except that as usual Mama Hamadryad must okay any cosmetics. Back to how I acquired these daughters who are my sisters, Justin: Having conferred, this gang of genetic pirates came clean and threw themselves on the mercy of the court. Me. So I adopted these two, and we registered them, and the registration will be straightened out one day, as I explained. How Minerva gave up the profession of computer and assumed the sorrows that flesh is heir to is a longer story. Want to synopsize it, dear?—and fill him in later if you wish."

"Yes, Father."

"None of your lip, dear; you're a grown woman now. Justin, when we woke this darling, she was about the size and biological age of those two reformed hellions—remind me to take their temperatures, Minerva. I adopted Minerva because she needed a father then. Doesn't now."

"Lazarus, I will always need you as my father."

"Thank you, my dear, but I take that only as a pleasing compliment. Tell Justin your story."

"All right. Justin, are you familiar with the theories concerning self-awareness in computers?"

"Several of them. As you know, my work is mostly with computers."

"Permit me to say, speaking from experience, all theories are empty. How a computer becomes self-aware remains as much a mystery, even to computers, as the age-old mystery of flesh-and-blood self-awareness. It just *is.* But, so far as I've heard—quite far in view of the library that was locked in my memories then and is still in Athene's memories—self-awareness *never* arises in a computer designed only for deductive logic and mathematical calculations, no matter how big it is.

But if it is designed for inductive logic, able to assess data, draw hypotheses therefrom, test them, reconstruct them to fit new data, make random comparisons of the results, and change those reconstructions—exercise judgment the way a flesh-and-blood does, then self-awareness may occur. But I don't know why and no computer knows. It just *does.*"

She smiled. "Sorry, I did not mean to sound pedantic. Lazarus figured out that I could go into a blank human 'brain, a clone brain, using techniques used to conserve memories in rejuvenation clinics. When we discussed this, I had the entire technical library of Secundus' Howard Clinic in me—stolen, in a way. I no longer have it; I had to pick and choose what to take along when I went into this skull. So I don't remember much of what I did, any more than a rejuvenation client knows all that is done to-him; you would have to get details from Athene, who still has them—and who, by' the way, never had the rather painful awakening that a computer goes through when it first begins to know itself, because I left a piece of me in Athene, oh, like a yeast starter. Athene dimly remembers having been Minerva at one time—about the way we flesh-and-bloods”—Minerva straigntened up, smiled, and looked proud—”remember a dream as something not quite real. And I remember being Minerva the Computer some— what the same way. I remember all my contacts with people very sharply—because I chose to keep them, replicate them into this skull. But if anyone were to ask how I handled the transport system of New Rome…well, I know that I did, but not *how* I did it.”

She smiled again. “That’s my story: A computer who longed to be a flesh-and-blood and who had loving friends who made is possible…and I’ve never regretted it; I love being flesh-and-blood—and want to love everybody.” She looked at Justin Foote very soberly. “Lazarus spoke sooth; I have never been a guest wife; I am only three years old as a flesh-and-blood. Should you choose me, you may find me awkward and shy—but not reluctant. I owe you much.”

“Minerva,” said Lazarus, “back him into a corner some other time. You didn’t tell Justin what he wanted to know; you left out the hankypanky.”

“Oh.”

“And when you were philosophizing about awareness in computers, you left out the key point, it seems to me, one *I* know but you may not even though you’ve been a computer and I have not. Because this key point applies both to computers and to flesh-and-bloods. My dear—and Justin—and it won’t hurt you two erratic geniuses to listen—all machinery is animistic—’humanistic,’ I want to say, but that term has been preempted. Any machine is a concept of a human designer; it reflects the human brain, be it wheelbarrow or giant computer. So there is nothing mysterious in a machine designed by a human showing human self-awareness; the mystery lies in awareness itself, wherever it’s found. I used to have a folding camp cot that liked to bite me. I don’t say that it was aware—but I learned to approach it with caution.

“But, Minerva, darling, I’ve seen some big computers, almost as smart as you were, that never developed self-awareness. Can you tell us why?”

“I confess I can’t, Lazarus. I’d like to ask Athene when we get home.”

“She probably doesn’t know either; she’s never met any other major computer but Dora. Captain Lazuli, how far back do you remember? Once you—or your comrade in crime—claimed to remember nursing. Suckling, I mean.”

“Of course we do! Doesn’t everybody?”

“No. Me, for example. I was a bottle baby; I don’t remember even that. Not worth remembering. In consequence I’ve been looking at tits and admiring them ever since. Tell me, one of you, when you remember nursing, can you recall which of your mothers was giving you suck?"

"Of course!" Lorelei said scornfully. "Mama Ishtar has big tits—"

"—and Mama Hamadryad has much smaller ones even when they're filled with milk—"

"But she gave just as much milk."

"Different flavor though. Made it nice to trade off each meal. Variety."

"But we liked *both* flavors! Tell him, Laz."

"Enough. You've made the point I wanted. Justin, these kids were self-aware and aware of other people—their mothers at least—at an age when a crèche baby is just a doughy blob, which says something about why crèches have never worked well. I want the counterpoint: Minerva, what do you remember of the time when you were an unawakened clone?"

"Why, nothing, Lazarus. Oh, some odd dreams when I was putting me—my selected memories—into my new me, this one. But I didn't start that until lshtar said the clone was big enough. That was not until shortly before I withdrew from my former me and Ishtar woke me. It could not be instantaneous, Justin; a protein brain won't take data at computer speeds, Ishtar had me be very slow and careful. Then for a short time—short human time—I was both places, computer and skull; then I surrendered the computer and let it become Pallas Athene, and Ishtar woke me. But, Lazarus, a clone in-vitro is not aware; it's like a fetus in utero. No stimuli. Correction: minimum stimuli and nothing that leaves a permanent memory track. Unless you count reports of regression under hypnosis."

"No need to count them," Lazarus replied. "True or false, such cases are irrelevant. The relevant counterpoint is 'minimum stimuli' Honey, those big computers with awareness potential but without self-awareness are that way because nobody bothered to love the poor things. That's all. Babies or big computers—they become aware through being given: lots of personal attention. 'Love' as it's usually called. Minerva, does that theory match up with your earliest years?"

Minerva looked soberly thoughtful. "That was about a century ago in human time—call it a million times that in computer time. I know from the records that I was assembled a few years before Ira took office. But the earliest personal memories *I* have—and those memories I saved and did not leave in Athene or in the computer in New Rome—the earliest I can remember of *me* is waiting eagerly and happily for the next time Ira would speak to me."

Lazarus said, "I need not belabor the point. With babies you breast-feed them and nibble their toes and talk to them and blow in their bellybuttons and make them laugh. Computers don't have bellybuttons, but attention works just as well on them. Justin, Minerva tells me that she left nothing of herself in the computer under the palace."

"That is correct. I left it intact as a computer and programmed for all its duties…but I dared not leave any personal memory, any part of the *me,* could not let it remember that it had once been Minerva; that wouldn't have been fair to it. Lazarus warned me, and *I* was most careful, checking all the billions of bits and wiping where necessary."

Justin Foote said, "I missed a turn somehow. You did this in New Rome…but you've been awake here only three years?"

"Three wonderful years! You see—"

"Let me interrupt, dear; I'll tell him the hankypanky. But first—Justin, have you dealt with the executive computer in New Rome since we migrated? Of course you have—but have you been in the office of Madam Chairman Pro Tem when she was using it?"

"Why, yes, several times. Just yesterday—no, I mean the yesterday before I left; I keep forgetting that I missed transit time."

"What name does she use in speaking with it?"

"I don't think she uses a name. I'm fairly certain she does not."

"Oh, the poor thing!"

"No, Minerva," Lazarus said quietly. "You left it in good health; it simply won't wake up until it has a mistress, or master, who appreciates it. Which might not be 'long," he added grimly.

Justin Foote said, "Might be any time. Lazarus, that old, uh—cancel that. Arabelle loves the spotlight. Appears at public meetings, shows up in the Colosseum. Stands up and waves her scarf. Seems odd, after the quiet way Ira ran things."

"I see. A sitting duck. Seven to two she's assassinated in the next five years."

"No bet. I'm a statistician, Lazarus."

"So you are. All right— Hankypanky. Lots of it. Ishtar set up an auxiliary Howard Clinic in the Palace. Her excuse: Me, the Senior. But a coverup for a much more extensive bio facility. Minerva picked her parents; Ishtar stole the tissues and faked some records. Meanwhile, our skinny friend my daughter Minerva—"

"She is not! She's just right for her height and body type and bio age!"

"—and deliciously curved!"

"—had twinned her computer self in a hold of my yacht 'Dora,' placing the contract in my name and charging it to me, and nobody dared inquire why the Senior—some advantages to age, especially among Howards—wanted a huge computer in a yacht that already had one of the fanciest computers in the sky. While, back in my borrowed penthouse where *nobody* was allowed to go—other than a short list all as-dishonest as' I am—a clone was growing in a facility installed in a room I didn't need.

"Comes time to migrate, a very large case containing what was then a very small clone, goes to the skyport marked as part of my personal baggage—this baggage between us, of course—and is loaded into the 'Dora' without inspection, such being a prerogative of being Chairman…for as you may recall I didn't hand the gavel back to Arabelle until our transports had lifted and I was about to raise ship myself, with Ira and the rest of my personal party aboard.

"While I'm taking the clone aboard, Minerva withdraws herself from the executive computer and is safe and snug in a hold of the 'Dora'…with her gizzards packed with every bit of data in the Grand Library and the entire records of the Howard Clinic including secret and confidential stuff. A most satisfying caper, Justin, the most good, clean, illegal fun I've had since we stole the 'New Frontiers.' But I'm telling you this not to boast—or not much—but to ask if we were as slick as we thought we were. Any rumors? Did you suspect anything amiss? How about Arabelle?"

"I feel sure that Arabelle does not suspect. Nor have I heard of Nelly Hildegarde bursting any blood vessels. Mmm, *I* suspected something."

"Really. Where did we slip?"

"Hardly the word, Lazarus. Minerva, when I had occasion to consult you, while Ira was Chairman Pro Tem, how did we talk?"

"Why, you were always most friendly, Justin. You always told me *why* you wanted something instead of just telling me to dig it out. You would chat, too; you were never too much in a hurry to be pleasant. That's why I remember you so warmly."

"And that, Lazarus, is why I sniffed something dead behind the arras. You and your party had been gone about a week when I wanted something from the executive computer. When you have an old friend with a pleasant voice—your voice is unchanged, Minerva; I should have recognized it—but I was bedazzled by your appearance—when you call this old friend and are answered by a flat, mechanical voice… and any deviation from programming language is answered by: 'NULL PROGRAM—REPEAT—WAITING FOR PROGRAM'—then you know that an old friend is dead." He smiled at the girl between them. *"So* I can't tell you how delighted I am to learn that my old friend was reborn as a lovely young girl."

Minerva squeezed his hand, blushed slightly, and said nothing.

"Hmm—' Justin, did you compare notes with anyone?"

"Ancestor, do you think I'm a fool? I mind my own business."

"Apology, about grade two. No, you're not a fool, unless you go back and work for the old harridan."

"When will the next wave of migrants head this way? I hate to waste the work I've done on your life, and I would hate to abandon my personal library."

"Well, sir, no tellin' when a streetcar will be by this time o' night. Discuss it later." Lazarus added, "That's our house ahead."

Justin Foote looked, saw a building partly visible through trees, turned back to speak to Minerva. "Something you said earlier, Cousin, I did not understand. You said 'I owe you so much.' If I was pleasant to you—at New Rome, I 'mean—you were at least as pleasant to me. More likely the debt is the other way; you were always most helpful."

Instead of answering, she looked' at Lazarus. He said, "Your business, my dear."

Minerva took a deep breath, then said, "I plan to name twentythree of my children for my twentythree parents."

"So? That seems most warmly appropriate."

"You're not my cousin, Justin—you're my father. One of them."

VARIATIONS ON A THEME

XIV

Bacchanalia

After the track through the gormtrees at the northern edge of Boondock swings right, one has a view of the home of Lazarus Long, but I hardly noticed it when I first saw it; I was much bemused by a statement by Minerva Long. Me her father? *Me?*

The Senior said, "Close your mouth, Son; you're making a draft. Dear, you startled him."

"Oh, dear!"

"Now quit looking like a frightened fawn, or I'll be forced to hold your nose and administer two ounces of eighty-proof ethanol disguised as fruit juice; You've done nothing wrong. Justin, does disguised ethanol interest you?"

"Yes," I agreed fervently. "I recall a time in my youth when that and one other subject were all I was interested in."

"If the other subject wasn't women, we'll find a monastic cubbyhole where you can drink alone. But it was—I know more about you than you think. All right, we'll have a libation or six. Not those two, they're potential alcoholics."

"Slanderous—"

"—though regrettably true—"

"—but we did it only once—"

"—and won't do it again!"

"Don't commit yourself too far, kids; a brannigan might sneak up on you. Better to know your resistance than to be tripped through ignorance. Grow up, put on some mass, and you'll be able to cope with it. Or Ishtar mixed up your genes, which she didn't. Now about this other matter, Justin~ Yes, you're one of Minerva's parents…and that's a very high compliment, because those twentythree chromosome pairs were picked from tissues of thousands of superior people, using fearsome mathematics to handle the multiplicity of variables, plus Ishtar's knowledge of genetics, and some unnecessary advice from me, before this little darling got the precise mix she wanted to be."

I started to set up the type problem in my head—yes, that would be some problem, extremely more difficult than the ordinary genetics problem of advising one male and one female—then dropped it, as I had its delightful answer by her left hand. Lazarus was still speaking:

"Minerva could have been male, two meters tall, massing a hundred kilos, built like Joe Colossus, and hung like a stallion mule. Instead she elected to be what she is: slender, female, shy— I'm not sure she selected for that last. Did you, dear?"

"No, Lazarus; no one knows which genes control that. I think I get it from Hamadryad."

"I think you got it from a computer I used to know—and took along all of it as Athene certainly is not shy. Never mind. Some of Minerva's donor-parents are dead; some are alive but unaware that a bit of tissue from a clone in stasis or from the live-tissue bank was borrowed—as in your case. Some know that they are donor-parents—me, for example, and you heard Hamadryad mentioned. You'll meet others, some being on Tertius, where it's no secret. But consanguinity is not close for anyone. One twenty-third? The genetic advisers wouldn't run that through a computer; it's an acceptable risk. Plus the fact that none of us donor-parents of Minerva have any known skeletons hanging on our family trees. You could safely have progeny by her; so could I."

"But you refused me!" Minerva startled me with the vehemence with which she accused Lazarus of this. For a moment she was not shy; her eyes flashed.

"Now, now, dear. You were only a year out of vitro and not fully grown even though Ishtar forced you past menarche still in vitro. Ask me on another occasion; I might startle you."

"'Startle' me, or surprise me?"

"Never mind that old joke. Justin, I simply wanted to make clear that your relationship to Minerva, while close enough that it makes

Minerva feel sentimental, is in fact so small that you barely qualify as a ‘kissing cousin.’”

“I feel very sentimental about it,” I told the Senior. “Most pleased and deeply honored—although I can’t guess why I was picked.”

“If you want to know which chromosome pair was swiped from you, and why, you had best ask Ishtar and get her to consult Athene; I doubt if Minerva still knows.”

“But I *do* know; I saved those memories. Justin, I wanted to retain some ability in mathematics. It was a choice between you and Libby Professor Owens—so I chose you; you are my friend.”

(Well! I respect Jake Hardy-Owens; I’m merely an applied mathematician, he is a brilliant theoretician.) “Whatever your reasons, dear kissing cousin, I am delighted that you chose me as one of your donor-fathers.”

“Grounded, Commodore!” announced one of the duplicate redheads—Lapis Lazuli—as the little nullboat clumped to a stop. (It appeared to be a Corson Farmsled and I was surprised to see it in a new Colony.) Lazarus answered, “Thank you, Captain.”

The twins bounced out; the Senior and I handed Minerva out—unnecessary help that she accepted with gracious dignity, that being another aspect of colonial life that surprised me, New Rome being rather short on such archaic ceremony. (Over and again I found the Boondockers to be both more formally polite, and more casually relaxed about it, than are Secundians. I suppost my notions of frontier life had been fed on too many romances: rough, bearded men fighting off dangerous animals, mules hauling covered wagons toward distant horizons.)

“Captain” Lazuli said, “Humpty Dumpty— *go to bed!”* The nullboat waddled away; the little girls joined us, one taking my free hand, the other taking the Senior’s free hand, with Minerva between us. These freckled flametops would have had my whole attention had not Minerva been there. I am not compulsively fond of children; some youngsters seem to me rather poisonous, especially precocious ones. But in their case I found their solemn precocity charming rather than irritating…and to see the Senior’s features, rugged rather than handsome and with that too-large nose, unmistakably reproduced but transformed into piquant girlish features—well, had I been alone, I would have chuckled with delight.

I said “Just a moment,” and held onto Lorelei’s hand and thereby caused, all to pause while I took a second look. “Lazarus, who is the architect?”

“I don’t know,” he said. “Dead more than four thousand years. The original belonged to the political boss of Pompeii, a city destroyed about that long ago. I saw a model of it, restored, in a museum in a place called Denver, and took pictures; it pleased me. Those pictures are long gone, but it turned out that, when I tried to describe it to Athene, she had a solly in the historical section of her gizzards of the ruins of that same house—and from that and my description, she designed this version. Some minor mods, nothing that changed its sweet proportions. Then Athene built it, using extensionals and radio links. It's practical for this climate; the weather here is much like that of Pompeii—and I prefer a house that looks inward, on a court. Safer, even in a place as safe as this one."

"By the way, where *is* Athene? The main computer itself, I mean."

"Here. She was still in the 'Dora' when she built this; now she's under the house—she built her underground home first, then built our house on top of it."

Minerva said simply, "A computer prefers to feel safe, and close to her own people. Lazarus—forgive me, dear, but you have reversed a time sequence; that was more than three years ago."

"Oh, so I have. Minerva, when you have lived as long as I have—and you will—you'll find yourself inverting time sequences endlessly, a flesh-and-blood shortcoming you had to accept when you took the plunge. Correction, Justin— 'Minerva,' not 'Athene.'"

"Yet it *is* Athene who built it—now," Minerva added, "since engineering and the details of this construction and others are things I left behind in Athene, where they belong, and abstracted only a simplified memory of having built it—I wanted to remember that much."

I said, "Whoever built it, it's beautiful." I was suddenly upset. It is one thing to accept intellectually the startling idea that a young woman has had a former life as a computer— and even to accept that one had worked with that computer years back and lightyears away. But this discussion suddenly brought home to me emotional belief that this lovely girl with her arm warm in mine had in sober fact been a computer so short a time ago that she had built this new house—while a computer. It shook me—even though I am a historiographer, old, and my sense of wonder was dulled even before my first rejuvenation.

We went in, and my upset was swept away by greetings. We were kissed all around—two beautiful young women, one of whom I recognized when I heard her name, Ira's daughter Hamadryad and she looks like one, the other a statuesque blonde whose name, Ishtar, was familiar to me through talk, and a young man as beautiful as the women and who seemed familiar though I could not place him. Even the twin flametops insisted on kissing me since they had not greeted me that way earlier.

In Boondock a kiss of greeting is not the ritual peck it usually is in New Rome; even the twins bussed me in a fashion that made me certain of their sex—I've had poorer kisses from grown women whose intentions were direct and immediate. But the young man, introduced as "Galahad," startled me. He hugged me, with kisses on my cheeks followed by a kiss on my mouth worthy of a Ganymede— which surprised me, but I tried to return as good as I got.

Instead of letting me go, he pounded my back and said, "Justin, it tickles my root to see you again! Oh, this is wonderful!"

I pulled my face back to look at his. I must have looked puzzled for he blinked, then said mournfully: "Ish, I boasted too soon! Hamadear, get me a towel, I'm weeping. He's *forgotten* me…after all the things he said."

I said, "Obadiah Jones, what are *you* doing here?"

"Weeping. Being humiliated in front of my family."

I don't know how long it had been since I had seen him. It may have been more than a century since it has been that long since I left the Howard campus. Brilliant young specialist in ancient cultures he was then, with an impish sense of humor. I recalled, dredging it up out of memory, having shared a Seven Hours with him and two other savants, both female and happily so—but I could not recall their faces nor who they were; what I remembered was his playful, joyous, boisterous good company. "Obadiah," I said sternly, "why are you calling yourself 'Galahad'? Hiding from the police again? Lazarus, I'm shocked to find this, uh, macho in your house— lock up your daughters!"

"Oh, that *name"* he said brokenly. "Don't repeat it, Justin. They don't know it. When I reformed, I changed my name. You won't give me away? Promise me, dear!" Suddenly he grinned and said in a cheerful voice, "Come on into the atrium and let's get a skinful of rum into you. Lazi, who has the duty?"

"Lori does. Even-numbered day. But I'll help. Straight rum?"

"Better flavor it. I want to add a welcome the Borgias used on old friends."

"Sure thing, Uncle Cuddly. Who are the Borgias?"

"A family from the greatest days of Old Earth's rise and fall, sugar lump. The Howards of their time. Very suave in handling guests. I'm descended from them, and their secrets were passed down to me by word of mouth."

"Laz," said Lazarus, "ask Athene for a rundown on the Borgias before you mix a drink for Justin."

"I see; he's at it again—"

"—so we'll tickle him—

"—and blow in his ears—

"—until he cries Pax—

"—and promises Veritas—

"—he's no problem. Come on, Lazi."

I had found the village of Boondock pleasantly unimpressive, more pleasant and less impressive than I had expected. Ira and Lazarus had accepted only seven thousand for their first wave from applicants numbering more than ninety thousand; therefore the present population of Tertius could not be much over ten thousand and was in fact slightly less.

Boondock seemed to have only a few hundred people and was centered on a few small buildings for public and semipublic purposes, most colonists being scattered around the countryside. The home of Lazarus Long was by far the most impressive structure I had seen—not counting the large flat cone of the Senior's yacht and the much larger bulk of one robot space freighter on the skyfield where my packet had grounded. (The skyfield was a level place a few kilometers across; one could not call it a port. There was not one godown. It must have an autobeacon since I grounded safely; I did not see it.)

This rudimentary settlement had not prepared me for the Senior's house. Its lines and plan were simple; that long-dead Roman had picked a good designer. It was a walled garden, the house itself being its four walls. But it had two stories, and each level could have been divided, it seemed to me, into twelve to sixteen large rooms plus the usual ancillary spaces. Twenty-four or more rooms for a household of eight? The more blatantly rich in New Rome might display ego in so much space, but it seemed inappropriate in a new colony, as well as out of tune with what I had learned in my long research of the Senior's lives.

Simple— Half the building was given over to a rejuvenation clinic, a therapy clinic, an infirmary; these could be reached from the foyer without entering the private part of the house.

The number of family rooms remaining was indefinite; most interior walls were movable. The Howard Clinic and the medical facilities would be moved to a nearby site when the colony needed larger facilities, when size of the Senior's family made more home space desirable.

(I was lucky in that, when I arrived, no client was being rejuvenated, no patient was in the infirmary—or most of the adults would have been busy.)

The size of his family seemed as hazy as the number of rooms. I had thought there were eight—three men, the Senior, Ira, and

Galahad; three women, Ishtar, Hamadryad, and Minerva; two youngsters, Lorelei Lee and Lapis Lazuli—but I was not aware of two girl toddlers and a small boy. Besides that, I was neither the first nor the last to be urged to move in and stay as long as one wished. Whether such stay was as a guest or as a member of the Senior's family might also be unclear to an outsider.

Relationships inside his family also were vague. Colonists are always families; a single colonist is a contradiction in terms. But all of Tertius Colony were Howards, and we Howards have used every sort of marriage, I think, except lifetime monogamy.

But Tertius has no laws about marriage; the Senior had not thought them necessary. The few laws it has are in the migration contract, written by Ira and Lazarus jointly. It contains the usual covenants about homesteading, with the colony leader absolute arbitrator until such time as he resigns. But it says not one word about marriage and family relationships. The colonists register their babies; Howards always do—in this case with the Computer Athene as surrogate for the Archives. But I found when I reviewed these records that parentage of children was expressed in genetic classification code, not by marriages and putative ancestry. This system the Families' geneticists have been urging for generations (and I agree), but it does make a genealogist work harder, especially if marriages have not been registered at all, as was sometimes the case.

I found one couple with eleven children, six his, five hers, none theirs. I understood it when I read their codes—utterly incompatible. I met them later, a fine family on a prosperous farm and no suggestion that the swarm of children were anything hut "theirs."

But the Senior's family was even more vague. Genetic ancestry in each case was a matter of record, surely—but who was married to whom?

Their bathing room was as "decadent" as had been promised; it was a lounging room, as well as a refresher, and planned for family relaxation and entertaining. It stretched all along the ground floor on the side facing the foyer across the inner garden, and its walls could be pushed back to open it to the garden in clement weather—which this was and quite warm.

It had anything a jaundiced Sybarite could ask for: a fountain in its center matching a fountain in the garden and each with comfortably wide rims to sit on while soaking tired feet and enjoying a drink; a sauna in one corner; a huge happy shower at the other end with space for several cycles to be enjoyed at once without waiting turns; a companion querafansible with sophisticated controls; a long soaking pool knee-deep at the blue end to chin-deep at the red, and flanked by two bathing pools lavish for one person and comfortable for two or three; couches for napping, for cooling, for sweating, for intimate talk and touch; a cosmetics table with a big duomirror in which one could see her back as readily as her front simply by asking Athene's help; a corner big enough for a dozen people in which floor cushioning was bed-soft and lavish with pillows large and small, firm and soft; a refreshments counter which backed onto their kitchen—and if I failed to name something, it is my omission, not that of the designers. All the more commonplace items were of course at hand.

I had thought that the lighting was random until I realized that Athene was changing it endlessly so as not to shine it in anyone's eyes while changing the light level in all parts of that big room to match what was going on—high key for makeup, subdued light for lounging, and so on—and to match personalities too; our little redheads were crowned with light no matter how they bounced around—as they did.

Soft music was there and in the garden, or on request anywhere, selected by Athene unless someone asked for something—it seemed as if she had stored in her all the music that ever was written. Or she might harmonize with the twins while continuing to take part in three different conversations in other parts of the bath lounge. A self-aware computer of her capacity—great enough to manage Secundus—can and often must talk simultaneously at many places, but I had never encountered it before in such a way as to notice it. But big computers are not often members of a family.

The rest of the house was almost unautomated—a matter of taste as Athene's capacity was largely unused. My hostesses actually cooked, with Athene helping only by seeing to it that nothing burned and watching the timing in other ways— twice on Athene's advice Hamadryad left the bath lounge, once in such a hurry that she fled bare and dripping, not stopping to grab a towel robe.

Bathing with Lazi and Lori is indeed "squirmy but fun," plus squeals, giggles, chatter in which one sentence would be chopped several times before one of them put a period on it (I hypothesized that they were telepathic with each other and had an uneasy suspicion that they sometimes read thoughts of persons in their presence but was not anxious to find out) —all charmingly blunt and childishly innocent.

First they slathered me all over with scented liquid soap and demanded the same service from me and threatened me with chin quivering when I held back a little, and said loudly that "Uncle Cuddly" (my old friend Obadiah, now Galahad) washed them better than that and everybody knows how lazy *he* is—or didn't I like them well enough to soapy-cuddle them and if they married me, would I go along with them in their spaceship, and while they were still virgins, though not from lack of opportunity, don't worry about that one bit as both Mama Hamadryad and Mama Ishtar were coaching them in beginning and advanced sensuality and would speed up the course if I happened to want to marry them now—won't you, Mama Hamalambie?—tell him!

Hamadryad from a meter away (she was soaping Ira) assured us that she would, if they could persuade me to marry them that quickly. I assumed that the youngsters were farcing me and that their mother —one of their mothers—was going along with the jest. I've wondered since whether I missed a diamond opportunity. Lazarus was in hearing distance; he did not tell them to stop teasing me, he simply advised me not to offer them more than a ten-year contract as their span of attention was limited—which made them indignant—and advised them that, if they intended to get married that night, they had better trim their toenails first, which made them still more indignant so they stopped bathing me to assault him from both sides.

This wound up with one of them under each of his arms and still struggling. Lazarus asked if I would accept custody or should he drop them into the deep end of the soak?

I accepted custody, and we showered each other off and went into the soak pool together—and I was standing in it up to my shoulders with my back to the garden, and supporting them a little, an arm each, as their toes did not touch bottom, when someone placed hands over my eyes.

The twins squealed, "Aunt Tammy!" and levitated out of the water while I turned to look.

Tamara Sperling— I had thought she was on Secundus, in retirement up country. Tamara the Superb, the Superlative, the Unique—in my opinion (and many others) the greatest artist of her profession. I feel sure that I am not the only man who chose when she left New Rome to remain celibate for a long time.

She had come in, seen that the family was in the bath lounge, dropped her gown in the garden, hurried in without stopping to remove her high sandals, spotted me, and blindfolded me with her lovely hands.

Why? She was my dinner partner—and (if I could rely on an exchange I had heard that afternoon) willing to be my guest wife if I were willing. *Willing?* Fifty years earlier I had offered her any contract she would accept every time she let me visit her and had finally shut up only after she had told me repeatedly, patiently, and gently that she did not intend to have more children and would not marry again for any other purpose.

But there she was, rejuvenated (not that it mattered), looking gloriously young and healthy—and a colonist. I wondered who the man was who had persuaded her to do this? I envied him and wondered what superhuman qualities he possessed—but whatever they were, if Tamara was willing to share a bed with me even for one night and only for old times' sake, I would take what the gods offered and not worry about him; her wealth is endlessly divisible. Tamara!—bells sound at her name.

She kissed two wet little girls, then dropped to her knees and kissed me.

Then she said softly, rubbing her mouth against mine, "You darling. When I heard you were here, I hurried. Mi laroona d' vashti meedth du?"

"Yes! And any other night you have free."

"Not so fast with English, doreeth mi; I learning it slowly—because my daughter wants her assistants in rejuvenation to speak language not known to most clients…and because our family speaks English much as Galacta."

"You are now a rejuvenator? And have a daughter here?"

"lshtar datter mi—did you not know, petsan mi-mi? Nay, I am nurse only. But studying I am and Ishtar hope-tells that I will be assistant technician in half handful of years. Good— nay?"

"Good, I suppose. But what a loss to the art!"

"Blandjor," she said happily, tousling my wet hair. "Even though rejuvenated—did you note?—here the art pays no living. Too many willing ones, sweeter and younger and prettier." The twins had stayed with us, listening and quiet for a moment. Tamara reached out both arms, hugged them to her. "Example. These my granddaughters. Eager to grow tall so they can lie down and be short." She kissed each of them. "And red curls they have. I not have."

I started to say that age and red curls did not matter, then realized that a compliment to Tamara so phrased could cause chins to quiver. But I did not need to speak; the spout had opened again:

"Aunt Tammy, we are *not* eager—"

"—just willing and practical—"

"—and anyhow *he* won't marry us—"

"—he just teases about it—"

"—and you *can't* be our grandmother—"

"—'cause that would make you our Buddy Boy's grandmother—"

"—which is illogical, impossible, and ridiculous—"

"—so you have to be our 'Aunt Tammy.'"

I found their logic doubly enthymematic if not a total *non sequitur,* but I agreed with it because the notion of Tamara being the Senior's grandmother was one I could not face. So I changed the subject:

"Tamara dear, would you let me take off your sandals and then you come join us in the soak? Or shall I get out and get dry?"

She did not have to answer:

"We gotta run get ready—"

"—cause Mama Hamadryad has finished her face and started her nipples—"

"—so if we don't hurry, we'll have to come to dinner with our hides bare naked—"

"—and for a party that would *never* do—"

"—and you two had better hurry *too—"*

"—or Buddy Boy will throw it to the pigs. Scuse!"

I climbed out and let Tamara dry me—unnecessary as there was a blowdry at hand. But if Tamara offers me anything my answer is Yes. It took a while; we "wasted" time on touch and talk. (Is there a better way to spend time?)

When I was dry and wondering if I should try the cosmetics bench (I don't use cosmetics much, just depilatories), one of the twins came rushing back with a garment for me, a blue chlamys. She said breathlessly, "Lazarus says try this or what would you like?—but that you needn't wear anything if you don't want to 'cause it's a hot night and you count as family because you're Minerva's father, one of them."

I thought I had them keyed now by freckle pattern. "Thank you, Lorelei; I'll wear it." I've always felt that a napkin was enough to wear in dining at home in a properly tempered house—or outdoors in private on a warm night. But, as guest of honor even though "family," I could not go bare when they were taking the trouble to be festively formal.

"You're welcome, but I'm Captain Lazuli, but that's all right, she's me. Scuse!" She vanished.

I put it on; we went into the garden and retrieved Tamara's gown —and it matched what I was wearing. The same shade of blue, I mean, and a Golden-Age-of-Hellas- flavor to it. Hers was about two grams of blue fog. The bodice fastened at the right shoulder and came diagonally down to her waist at the left. Its skirt was longer than mine —but that was appropriate; Greek men of their Golden Age did wear their skirts shorter than did women, instead of the reverse that is more usual on Secundus. (I did not know as yet what was customary on Tertius.) We matched, and I was pleased.

Accident? "Accidents" around the Senior are usually planned.

We ate in the garden, a couch for each couple, arranged in hexagon with the fountain as the sixth side. Athene made the water dance and danced lights in it, to match whatever she was playing. All the womenfolk but Tamara helped with the primary serving; Lori and

Lazi played Hebe from then on— it was impossible to keep them nailed to their couch anyhow. As the feast started, Ira was with Minerva, Lazarus with Ishtar, Galahad with Hamadryad, and the twins together. But the women moved around like chessmen, sharing a couch, a few bites, a little cuddling, then moving on—all but Tamara, whose firm-soft, rounded bottom lay against my lap the entire feast. It was just as well that she did not move; I'm not shy but prefer not to show the gallant reflex unless I need it at once—and I was very conscious of her dear body warm against me.

But while Lazarus started the repast with Ishtar, the next time I looked his way it was Minerva who reclined against him—and next, one of the twins, which one I am not sure. And so on.

I won't describe the feast except to say that I did not expect it in a young colony and to add that I have paid high prices for poorer food in famous restaurants in New Rome.

All but Lazarus and his sisters were wearing colorful, pseudo-Grecian garments. But Lazarus was dressed as a Scottish chieftain of two and a half millennia ago—the kilt, bonnet, sporran, dirk, claymore, *etc.* The sword he laid aside but handy, as if expecting to need it. I can state firmly that he was never entitled to dress as a chief by the rules of those long-lost clans. There is doubt that he is entitled to wear any Scottish dress. He once said that he was "half Scotch and half soda," but on another occasion he told Ira Weatheral that he had first worn the kilt at a time (shortly before the flight of the *New Frontiers)* when the style was popular in his home country—found that he liked it, and thereafter wore the kilt when local custom permitted.

That night he went all out and added a fierce mustache to match his finery.

His twin sisters were dressed exactly as he was. I am still wondering whether all this was to honor me, to impress me, or to amuse me. Perhaps all three.

I would happily have spent those three hours in quiet, feeding Tamara and letting her feed me, bathed in the peace of soul that comes from touching her, but the closed happiness circle (and closed it was; Athene's voice now came from the fountain) showed that the Senior expected us to share company, talking and listening in turn, as ritually as in any protocol-bound salon in New Rome. And so we did, in shared and gentle harmony—with the twins adding unexpected grace notes but usually managing to restrain their exuberance and be "grownup." The Senior started it, using Ira as Stimulator. "Ira, what would you say if a god came through that entranceway?"

"I'd tell him to wipe his feet. Ishtar doesn't permit gods with dirty feet in this house."

"But all gods have feet of clay."

"That wasn't what you said yesterday."

"This is not yesterday, Ira. I've seen a thousand gods and all had feet of clay. All were swindles, first"—Lazarus ticked it with his flngers—"to benefit the shamans; second, to benefit the kings; and third, *always* to benefit the shamans. Then I met the thousand-and-first." The Senior paused.

Ira looked at me. "At this point I am supposed to say, 'Do tell!' or some such insincerity, then the rest of you chime, 'Yes, yes, Lazarus!'—which has its merit; the rest of us would have at least twenty uninterrupted minutes for swilling and guzzling.

"But I'm going to fool him. He's leading up to how he killed the gods of the Jockaira with nothing but a toy gun and moral superiority. Since that lie is already in his memoirs in four conflicting versions, why should we be burdened with a fifth?"

"It was not a toy gun; it was a Mark Nineteen Remington Blaster at full charge, a superior weapon in its day—and after I carved them up, the stench was worse than Hormone Hall the morning after payday. And my superiority is never moral; it lies always in doing it first before *he* does it to *me.* But the point of the story Ira won't let me tell is that those globs were real gods because neither shamans nor kings were cut in on the loot; they were swindled, too. Those doggie people were *property,* solely for the benefit of their gods—gods in the sense that a man can be a god to a dog—which I had suspected first time around, when they drove poor Slayton Ford right out of his think tank and nearly killed him. But the second time, some eight or nine hundred years later, Andy Libby and I *proved* that this was so. 'How?' you ask—"

"We didn't ask."

"Thank you, Ira. Because after all that time the Jockaira had not changed *in any way.* Their speech, customs, buildings, you name it—were frozen. This can happen only with domesticated animals. A wild animal, such as man, changes his ways as conditions change; he adjusts. I've often thought I would like to go back and see if the doggie people managed to go feral after they lost their owners. Or did they simply lie down and die? But I wasn't too tempted; Andy and I were lucky to get off that planet still with our gonads, the way they were yapping at our heels."

"See what I mean, Justin? Version number three had the Jockaira falling into a coma the instant their masters were burned out—and Libby doesn't figure into that version at all."

"Papa Ira, you don't understand Buddy Boy—"

"— he doesn't tell—lies—"

"—he's a creative artist—"

"—speaking in parables—"

"—and he *emancipated* those Jabberwockies—"

"—who were *cruelly* oppressed."

Ira Weatheral said, "Justin, I had trouble coping with one Lazarus Long. But three of him? I surrender. Come here, Lori, and let me nibble your ear. Minerva, my lovely, let go of that, wash your pretty hands, then see if Justin needs more wine. Justin, you are the only one with news to impart. What news on the Bourse?"

"Falling steadily. If you own participations on Secundus, you had better have me carry back instructions to your broker. Lazarus, I noticed that you classed 'man' as a wild animal—"

"He is. You can kill him, but you can't tame him. The worst bloodbaths in history derive from attempting to tame him."

"I wasn't arguing it, Ancestor. I'm a mathematical historiographer; my nose is rubbed in that fact. But has news reached here of the flight of the 'Vanguard'? The original 'Vanguard,' I mean—pre-Diaspora."

Lazarus sat up so suddenly that he almost spilled Ishtar off his couch. He caught her. "Sorry, honey. Justin—keep talking."

"I didn't intend to talk about the 'Vanguard' herself—"

"I want to hear about her. I hear no objection; it is so ruled. Talk, Son!"

The protocol of a salon feast having gone to pieces, I talked, first reviewing some ancient history. Although it has almost been forgotten, the *New Frontiers* was not the first starship. She had an older sister, the *Vanguard,* that left the Solar system a few years earlier than the momentous date on which Lazarus Long commandeered the *New Frontiers.* She was headed for Alpha Centaun but never reached there —no signs of visitation were ever found on the one possible planet, a Terran type around Alpha Centauri A, the only G-type star in that volume.

But the ship herself was found by accident, in open orbit a long way from where she should have been by any rational assumption based on her mission—discovered nearly a century ago and this tells the difficulties of historiography when ships are the fastest means of communication; this story echoed back to Secundus via five colonial planets before it reached Archives—a few years after Lazarus left New Rome, a few years before I went to Boondock as (nominal) courier for the Chairwoman Pro Tem. Not that a century's delay matters, as the news interested only fusty specialists. To most people it was an uninteresting confirmation of an inconsequential bit of ancient history.

Everything in the *Vanguard* was dead while the ship herself was sleeping, her converter automatically shut down, her atmosphere almost leaked away, her records so destroyed, illegible, incomplete, or desiccated as to distress one. The *Vanguard* matters only to antiquarians and such—although she will remain an endless trove to deviants such as me—if we don't lose her again. Space is deep.

But the interesting thing about the find is that when the *Vanguard* was backtracked ballistically by computer, it showed that she had passed close to a Sol-type star seven centuries earlier. A check of that system turned up one planet Terran in type; it was found to be inhabited by H. sapiens. But *not* from the Diaspora. From the *Vanguard.*

"Lazarus, there is no possible doubt. Those few thousand savages on that planet—designated 'Pitcairn Island,' the catalog number escapes me—are descended from some who reached there, presumably by ship's boat, seven centuries before they were found. They had reverted to precivilization food-gathering stage, and had the planet rather than the ship been found first, it might have started another of those stories about a breed of humans not derived from old Terra.

"But their argot, fed into a linguistic analyzer-sysithesizer, played back as that version of English which was the 'Vanguard's' working language. Reduced vocabulary, new words, degenerate syntax—but the same language."

"Their myths, Justin, their myths!" Galahad-Obadiah demanded.

I was forced to admit that I did not have it all on tap but promised to make a full copy for him and send it via the first ship. "But, Senior, the interesting thing is that these savages, so wild and fierce that in dealing with them more scientists were killed than savages—"

"Hooray for them. Son, those savages were minding their own business on their own planet. An intruder can expect whatever he gets. Up to him to keep his guard up."

"I suppose so. Three scientists were eaten before they figured out how to deal with these pseudo-aborigines. By remotely controlled humanoid robots, that is. But the point I wanted to make was not their fierceness but their intelligence. Believe me or not, by every test that could be used, these wild men, these savages, checked superior to norm. *Much* superior. By the bell curve they land in the range of 'exceptionally gifted' to 'genius-plus.'"

"You expect me to be surprised? Why?"

"Well— Savages. And probably closely inbred."

"You're baiting me, Justin; you know better—although possibly Ira signed you to be Stimulator. All right, I'll take the bait. 'Savage' describes a cultural condition, not a degree of intelligence. Nor does inbreeding damage a gene pool if conditions for survival are extreme; since you describe them as cannibals, they probably ate their culls.

From the shape the ship was in, it is fair to assume that their ancestors landed with little or nothing—possibly bare hands and a hatful of ignorance…in which case only the most able, the smartest, could survive. Justin, the crew of that first ship averaged far more intelligent than the Howards who escaped in the 'New Frontiers'; they were picked for intelligence-whereas the original Howard selectees were picked *only* for longevity, not for brainpower. Your savages were descended solely from geniuses…then passed through Allah alone knows how many ordeals that kill off the stupid and leave only the smartest to breed. What does that leave?"

I admitted that I had tossed him a baiting question to see how he would answer. The Senior nodded. "I know you're not stupid, Son; I had Athene give me a runback on your ancestry. But I have often been amazed at how the moderately bright and moderately well-informed—which describes no one in this happiness circle, so no one need pretend to modesty— how often such somewhat superior people have trouble coming to grips with the ancient silk-purse-and-sow's-ear problem. If heredity were not overwhelmingly more important than environment, you could teach calculus to a horse.

"In my early days it was an article of faith among a self-styled 'intellectual elite' that they *could* teach calculus to a horse…if they started early enough, spent enough money, supplied special tutoring, and were endlessly patient and always careful not to bruise his equine ego. They were so sincere that it seems downright ungrateful that the horse always persisted in being a horse. Especially as they were right, if 'starting early enough' is defined as a million years or more.

"But those savages will make it; they can't avoid winning. The problem in reverse is more horridly interesting. Justin, do you realize that we Howards killed off Old Terra?"

"Yes."

"Now, now, Son, you're not supposed to answer in such a way as to chop off conversation…thereby leaving us with nothing to do but get drunk and cuddle the girls."

"Swell!" Obadiah-Galahad shouted. "Let's!" He had Minerva with him at that moment; he grabbed her and flipped her over facing him. "Little whatever-your-name-is, do you have any last words?"

"Yes."

"'Yes' what?"

"Just 'Yes.' That's my last word."

"Galahad," said Ishtar, "if you're going to rape Minerva, drag her back of the fountain. I want to hear what Justin means by that."

"How *can* I rape her when she won't fight?" he complained.

"You've always been able to solve that problem. But do it quietly. Justin, I find myself shocked. It seems to me that we've been quite generous in supplying Old Home Terra with new technologies—and there's not much else we *can* give them. Didn't the last migrant transport come back only half loaded?"

"I'll answer it," Lazarus growled. "Justin might pretty it up. Not all the Howards. Two. Andy Libby provided the weapon; I delivered the coup de grace. Space travel killed Earth."

Ishtar looked troubled. "Grandfather, I don't understand."

"She calls me that when I've been naughty," the Senior confided to me. "It's her way of spanking me. Ish darling, you are young and sweet and have spent your life studying biology, not history. Earth was doomed in any case; space travel just hurried it along. By 2012 it wasn't fit to live on—so I spent the next century elsewhere, although the other real estate in the Solar System is far from attractive. Missed seeing Europe destroyed, missed a nasty dictatorship in my home country. Came back when things appeared to be tolerable, found that they weren't—and that's when the Howards had to run for it.

"But space travel can't ease the pressure on a planet grown too crowded, not even with today's ships and probably not with any future ships—because stupid people won't leave the slopes of their home volcano even when it starts to smoke and rumble. What space travel does do is drain off the best brains: those smart enough to see a catastrophe before it happens and with the guts to pay the price—abandon home, wealth, friends, relatives, everything—and *go.* That's a tiny fraction of one percent. But that's enough."

"It's the bell curve again," I said to Ishtar. "If—as Lazarus thinks, and statistics back him up—every migration comes primarily from the righthand end of the normal-incidence curve of human ability, then this acts as a sorting device whereby the new planet will show a bell curve with a much higher intelligence norm than the population it came from…and the old planet will average almost imperceptibly stupider."

"Imperceptible except for one thing!" Lazarus objected.

"That tiny fraction that hardly shows statistically is the *brain.* I recall a country that lost a key war by chasing out a mere half dozen geniuses. Most people *can't* think, most of the remainder *won't* think, the small fraction who *do* think mostly can't do it very well. The extremely tiny fraction who think regularly, accurately, creatively, and without self-delusion—in the long run these are the only people who count and they are the very ones who migrate when it is physically possible to do so.

"As Justin said, statistically it hardly shows. But qualitatively it makes all the difference. Chop off a chicken's head and it doesn't die at once; it flops around more energetically than ever. For a while. Then it dies.

"That's what space travel did to Earth: chopped its head off. For two thousand years its best brains have been migrating. What's left is flopping harder than ever…to no purpose and will die that much sooner. Soon, I think. I don't feel guilty about it; I see no sin in those smart enough to escape escaping if they can—and the death rattle of Earth was clear and strong back in the twentieth century, Earth reckoning, when I was a young man and space travel had barely started—not even started in interstellar terms. It took two more centuries and then some to get it rolling. Can't count the first migration of the Howards; it was involuntary, and they weren't the best brains.

"The later Howard migration to Secundus was more important; it shook out some of the dullards, left them behind. The non-Howard migrations were even more important. I've often wondered what would have happened if there had been no political restraints against migrating from China; the few Chinese who did reach the stars seem always to be winners, I suspect that the Chinese average smarter than the rest of Earth's spawn.

"Not that slant of eye or color of skin matters today, or even matters at the moment of truth. One of the early Howards was Robert C. M. Lee, of Richmond, Virginia—anybody know what his name was originally?"

"I do," I answered.

"Of course you do, Justin, so keep quiet—and that includes you, Athene. Anyone else?"

No one answered; Lazarus went on: "His birth name was Lee Choy Moo; he was born in Singapore, and his parents came from Canton in China—and of the people in the 'New Frontiers' he was a mathematician second only to Andy Libby."

"Goodness!" said Hamadryad. "Fm descended from him— but I didn't know he was a great mathematician."

"Did you know he was Chinese?'

"Lazarus, Fm not sure what 'Chinese' means; I haven't studied much terrestrial history. Isn't it a religion? Like 'Jewish'?"

"Not exactly, dear. The point is that it no longer matters. Just as few know and no one cares that the famous Zaccur Barstow, my partner in crime, was a quarter Negro. Does that word mean anything to you, Hamadarling? Not a religion."

"The word means 'black,' so I assume that one of his grandparents was from Africa."

"Which shows what comes of assuming anything on one datum. Two of Zack's grandparents, both mulatto, came from Los Angeles in my homeland. Since my line mixed with his a long time back, probably any of you can claim African ancestry. Which is statistically equivalent to claiming descent from Charlemagne. I've gone far afield, and it is time we picked a new Stimulator and a new Respondent. Space travel ruined old Earth—that's one viewpoint. The other side of the coin, happier and more important in the long run, is that it improved the breed. Probably saved it as well but 'improved' is certain. Homo sapiens is now not only far more numerous than he ever was on Earth; he is a better, smarter, more efficient animal in every measurable fashion. Further this Respondent sayeth not; somebody else grab it. Lazi, quit trying to tickle me and go bother Galahad; Minerva needs a rest."

"Lazarus," Ishtar said, "just one more responding, please. Something you said about Howards made me wonder. You seemed to place all emphasis on intelligence. Don't you consider long-life important?"

I was astonished to see the oldest human alive frowning over this, slow to answer. Surely it was a question he had settled in his mind at least a thousand years earlier. I tried to forstall the quandary, found I could not soothly norom it.

"Ishtar, the only correct verbal answer to that is Yes and No—which merely says I lack language to define something that is crystal clear inside me and has been for centuries. But here is part of the truth: A long time ago a short-lifer proved to me that we all live the same length of time." He glanced at Minerva; she looked solemnly back. "Because we all live *now.* She—he—was not asserting that fallacy of Georg Cantor which distorted pre-Libby mathematics so long; uh, he —was asserting a verifiable objective truth. Each individual lives her life in *now* independently of how others may measure that life in years.

"But here is another piece *of* truth. Life is *too* long when one is not enjoying *now.* You recall when I was not and wished to terminate it. Your skill—and trickery, my darling, and don't blush——changed that and again I savor *now.* But perhaps I have never told you that I approached even my first rejuvenation with misgivings, afraid that it would make my body young without making my spirit young again—and don't bother to tell me that 'spirit' is a null word; I know that it is undefinable but it means something to *me.*

"But here is still more of the truth and all I'll try to say about it. Although long-life can be a burden, mostly it is a blessing. It gives time enough to learn, time enough to think, time enough not to hurry, time enough for love.

"Enough of weighty matters. Galahad, pick a light subject and, Justin, you plant the barbs; I've talked enough. Ishtar, my darling, fetch your long lovely carcass over here, stretch out, and let me ply you with brandy; I want you relaxed enough for what I intend to do with you later."

She came readily to him, stopping only to kiss Ira a promise, then saying softly but clearly to our Ancestor, "Our beloved, it takes no brandy to make me utterly willing for whatever you have in mind."

"Anesthesia, Mama Ishtar. I plan to show you something Big Anna taught me which I haven't dared risk in all these years. You may not live till morning. Frightened?"

She smiled lazily, happily. "Oh, terribly frightened."

Galahad covered Lapis Lazuli's mouth with a hand; she bit him. "Stop it, Laz. Let's everybody watch this—it might be new."

VARIATIONS ON A THEME

XV

Agape

I woke slowly next morning, lazed in bed and lived again my Welcome Bacchanalia. I was in a big bed in a ground-floor room with its garden wall still open as it had been when the party had moved to beds. I could hear no one, although (as I recalled) Tamara and Ira had been with me. Or had Ira visited us earlier?

No matter, all of them visited us at some time before Athene sang us to sleep; I seemed to recall as high as six or seven at once in that big bed, counting Tamara and me. No, Tamara had been gone once, leaving me at the mercy of the talkative twins—who were almost quiet. They said they wanted to assure me that I did not have to marry them in order to be a member of the family—they would be gone too much of the time anyhow—because they were going to be pirates when they were big enough—but stay groundside half the time—and open a hook shop over a pool hall—and would I come to see them there?

They had to explain to me both terms; then they sang me a little song that seemed partly amphigory and partly ancient English, but included both terms. I kissed them and promised that, when they opened this studio, I would be their most faithful admirer—a promise that did not worry me; at about that age most girls' (all of my daughters) have ambitions to become great hetaeras; few attempt that most demanding of arts—or only long enough to discover that they do not have a true vocation.

I thought they were more likely to become pirates; Lazarus Long's identicals might figure out a way to make crime pay in spite of the enormous depths of space.

My Welcome Bacchanalia had bridged from feast to bed with the customary entertainment save that it was homemade instead of the expensive (and often dull) professional acts a fashionable New Rome hostess offers. Lazarus and his sister-daughters started it with what may have been an authentic Highland Fling (who knows, today?): Lazarus dancing fiercely and vigorously (after all that food and drink!), his two miniature copies keeping the pattern exactly with him—to skirling bagpipes offered by Athene…which I would not have recognized were it not that I am an amateur of ancient music as well as a professional of ancient history. The girls followed with an encore, a sword dance, while Lazarus pretended to be passed out from exertion.

Ira, to my amazement, turned out to be a skilled juggler.

Question: Did he have that skill all those years he managed a planet?

Galahad sang a ballad with professional virtuosity and great range and control, which astonished me almost as much as I seemed to recall that he used to sing always off key. But when he took an encore with a kerchief stuffed in his mouth, I realized that I had been swindled; Athene had done it all. He then played a corpse with three beautiful widows, Minerva, Hamadryad, Ishtar. I won't describe the dialogue except to say that they seemed cheerful over losing him.

Tamara concluded it by singing "My Arms Enclose You Still"—attributed on slight evidence to the Blind Singer hut ancient in any case. I've long thought of it as Tamara's Song, and I wept with happiness, and I was not alone; all did. The twins blubbered aloud… and when she reached that last line, "—wherever the wild geese lead you, love, my arms will hold you close," I was startled to see that the Senior's craggy features were as wet as mine.

I got up, poked around in the alcove and refreshed myself enough to face other people, went out into the garden and found Galahad. I kissed him and accepted a happy-morning in a frosty tumbler. It was fruit juice freshly pressed—a treat for taste buds used to morning cups "improved" in various chemical ways.

"I'm cook this morning," he said, "so you had better take your eggs either fried or boiled." He then answered the question a guest does not ask: "If you had awakened earlier, you would have had more choice; Lazarus claims I can't boil water. But everyone else is gone."

"So?"

"Si. Ira has gone to his office—to work, perchance to sleep. Tamara has gone back to her patients with a message to you that she hopes to be home tonight—but with a word to Hamadryad to take you to bed and rub your shoulder muscles and put you to sleep early, so I'm not sure she expects to be back—won't if she thinks her patients need her. Lazarus has gone somewhere and one does not ask. Minerva has the twins, and school may be in the 'Dora'; it often is. Ishtar got a call to set a broken arm on a farm north of here. Hamadryad has taken our kids on a picnic so as not to disturb you, you lazy lecher. Boiled or fried?"

He was already frying them, so I answered, "Boiled."

"Good, I'll eat these myself. To hold me till lunch."

"I mean 'Fried.'"

"So I'll put in three more, dear. You're staying, aren't you? Answer Yes or I'll put the twins to work on you."

"Galahad, I *want* to—"

"Then it's settled."

"—but there are problems." I shifted the subject. "You said 'Hamadryad has taken our kids on a picnic—' Haven't I met all your family?"

"Dear, we do not exhibit our youngest the moment someone sets foot in the foyer and thereby place on him the onus of being insincerely ecstatic. But there was usually someone with them; Lazarus has firm ideas on raising children. Athene keeps eye and ear on them—but can't pick them up. Lazarus says that a frightened child needs to be picked up and cuddled *now,* not later. He believes in spanking right now, too; it evens out, our kids are neither spoiled nor timid. Lazarus is especially strong on not letting a young child wake up alone— so now you know why I kissed you goodnight a bit early. So that Ishtar could help keep you awake while I slept with our youngest three."

"Do you actually sleep with them?"

"Well— When Elf jumps up and down on my stomach, it makes me restless. But being peed on doesn't wake me— usually. Having the cuddle watch isn't bad; we rotate so it's only every ninth night. Every tenth if you opt in. But that can change overnight. Suppose we have a rejuvenation client—One or more clients puts Ishtar, Tamara, Hamadryad, and me out of circulation much of the time. Add that Lazarus may leave as soon as he decides Laz and Lor are grown up. Then assume that all our darlings get cracking on making babies."Galahad grinned at me. "How long does it take four willing women to make four more babies? Or six, when the twins join the production schedule as they threaten to at least twice a week. Justin dear, we want you to stay but it won't all be like last night. If responsibilities of family life worry you, you'd be better off in New Rome where you can hire people to do what you don't fancy doing yourself."

"Galahad," I said earnestly, "stop stuffing your face a moment, dear. You can't scare me with baby pee. I was getting up in the night to soothe crying babies a hundred years before you were born. I intend to colonize, I intend to marry again, I intend to raise kids. I had planned to go back to Secundus to clean up loose ends, then come back with the second wave. But I may say the hell with that and stay…as some of the Senior's remarks last night were aimed at me. At least I took them personally—about having the guts to abandon everything and *go*. Secundus is a smoking volcano; that old vixen could set off a bloodbath. One that could include *me,* simply because I'm a major bureaucrat."

I took a deep breath and plunged in: "What I don't understand is why I seem to be invited to join the Senior's household. *Why?"*

Galahad answered, "It's not your pretty face."

"I know that. Oh, I hardly ever scare dogs with it, but it's just a face."

"It's not *too* bad. A cosmetic surgeon could do wonders. I'm the second-best cosmetic surgeon on this planet—there being two. The practice would be good for me and, as you pointed out, you've nothing to lose."

"Damn it, dear, don't farce me. Answer my question."

"The twins like you."

"So? I find them delightful. But the opinion of inexperienced adolescents could not have weighed heavily."

"Justin, don't let their clowning fool you; they are adult in everything but height—and they are our Ancestor's *identical* twins. They have his talent for looking inside a person and spotting a bad one. Lazarus lets them run loose because he trusts them to shoot to kill…and not to shoot if they don't intend to kill."

I gulped inside. "Are you saying that those little guns they carry are not toys?"

My old friend Obadiah looked as if I had said something obscene. "Why, Justin! Lazarus wouldn't let a woman go out of this house unarmed."

"Why? This colony seems peaceful. What have I missed?"

"Not much, I think. Lazarus' advance party made sure that this subcontinent was reasonably clear of large predators. But we brought along the two-legged sort, and despite screening, Lazarus doesn't assume that they are angels. He wasn't looking for angels; they don't make the best pioneers. Uh, yesterday Minerva was wearing a little skirt. Did you wonder about it? In view of the heat?"

"Not especially."

"She wears her gun strapped to her thigh. Nevertheless, Lazarus won't let her go out alone; the twins are her usual bodyguard. As a flesh-and-blood she's only three years old; she doesn't shoot as well as the twins do, and she's more trusting than they are. How's your marksmanship?"

"Just fair. I started taking lessons when I made up my mind to migrate. But I haven't had time to practice."

"Better find time. Not that Lazarus will ride you about it; he feels responsible for our women, not for men. But if you *ask* for help—I did, and so did Ira—he'll coach you in everything from bare hands to improvised weapons…with two thousand years of dirty tricks thrown in. Up to you, old darling— but here's what it did for me. As you know I used to be a campus narky—a scholar poring over old records —I never carried arms. Then I took rejuvenation and became a rejuvenator myself and was even less inclined to go armed. But for fourteen years I've had regular coaching from the alltime champion in how to stay alive. The result? I stand straight and proud. Haven't had to kill anyone yet." Galahad suddenly grinned. "But the day is young."

I answered soberly, "Galahad, that's one reason I agreed to run a silly errand for Madam Arabelle: to find out things like that. Very well, I take your advice seriously. But you haven't answered my question."

"Well…I knew you from long back, and so did Ira. And so did Minerva, though you have trouble believing it. Hamadryad had met you but did not get to know you until last night. Ishtar knew you only from your chart but is one of your strongest supporters. But the deciding factor is this: Tamara wants you in our family."

"'Tamara!'"

"You sound astonished."

"I am."

"I don't see why. She arranged for someone to relieve her in order to be here last night. She loves you, Justin; don't you *know* it?"

"Uh—" My brain was fuddled. "Yes, I know it. But Tamara loves everyone."

"No, just those who need her love, and she always knows who they are. Incredible empathy, she's going to be a *great* rejuvenator. In this family Tamara can have *anything* she wants…and she happens to want *you—to* stay with us, live with us, join us."

"I'll be…damned." (Tamara?)

"Unlikely. If I believed in damnation, I wouldn't believe that anyone picked by Tamara Sperling could be in danger of it." Galahad smiled, a happy expression than was more his charm than was his extraordinary beauty. I tried to remember if he had been that beautiful a hundred years back. I am not indifferent to male beauty, but my sensuality is not perfectly balanced; in the presence of a homely female and a beautiful male, I tend to look at the female. So

I'll never be an esthete; I lack judgment in matters of beauty. I apologize in advance to any female who finds my primitive attitude offensive.

But I'll share bed with Galahad in preference to a self-centered female beauty; he's warm and gentle and good company, with a roguish playfulness not unlike that of the twins. The thought ran through my-mind that I would like to meet his sister—or mother or daughter—a female version of him in character and personality, as well, as in appearance.

Tamara! The above was froth at the top of my mind because I was unable to face at once the implications of Galahad's announcement.

He went on: "Close your mouth, dear; I was as startled as you are. But, even if we hadn't been friends years back, on Tamara's motion I would have voted for you sight unseen— so that I could study you; Tamara never makes a mistake. But were you so mind-ill that you needed that much from her? Or so superhuman that she wanted that much from you? But you are neither, or I failed to see it. You aren't ill, I think, other than a touch of wild-goose fever. You may be superman, but none of us found it out last night. If you are a superstud, you restrained yourself. Hamadryad did say at breakfast that a woman is happy in your arms. But she did not imply that you are the Galaxy's greatest lover.

"Being one of Minerva's parents is in your favor, none of them has any serious shortcomings; Ishtar made sure of that—Ishtar knows more about you than you do yourself; she can read a gene chart the way other people read print—and Minerva herself is proof that no mistakes were made. I mean, look at Minerva: sweet as the morning breeze and as beautiful as Hamadryad in her own fashion, and with an intelligence level so high you wouldn't believe it—yet so modest she's almost humble.

"But still, it's Tamara. Your fate was settled before you reached this house. Slow ride home, wasn't it?"

"Well…one doesn't expect speed from a nullboat. Though I was surprised to find one in a young colony. I expected mule-drawn wagons."

"Lots of those, too. But Lazarus says that this time he traveled with 'seven elephants'—we fetched a mammoth amount of equipment. That's an overpowered nullboat, rebuilt to Lazarus' specifications, and could have fetched you here in a fifth the time it did. But Ira let Lazarus know that he wanted time to make some calls. So Lazarus probably told whichever twin was in charge—or signaled her somehow; he is almost telepathic with them—to give you a long, slow ride. Which you got, and I bet that Laz and Lor never changed expression."

“They didn’t.”

“Was sure of it. They are *not* children—you should see them handle a spaceship. Anyhow, Ira talked to Ishtar, then to Tamara; then we held a family conference and settled your fate. Lazarus confirmed it while you played with the twins— who were given a chance to veto it later. But they ratified it at once. They not only like you, but Aunt Tammy’s wishes are law.”

I was still bemused. “Apparently much went on that I didn’t suspect.”

“You weren’t supposed to. A better cook would have stayed to get your breakfast, had I not been deputized to tell you— old friends and all that—and to answer questions.”

“I’m confused about that conference. I thought Tamara got home just before dinner.”

“She did. Oh— Athene, are you listening, dear?”

“Uncle Cuddly, you know I don’t listen to private conversations.”

“The hell you don’t. It’ll be all right, Justin; Teena keeps secrets. Tell him how to call someone, Teena.”

“Tell me to whom you wish to speak, Justin; I have radio links to every farm. Or anywhere. And I can always reach Ira and Lazarus.”

“Thank you, Teena. Now if you must listen, pretend not to. The conference was here, Justin; Teena fetched in Tamara’s voice and Ira’s. Could have fetched voices from the nullboat— but you were the subject. By the way, Teena is one reason this family isn’t farming; instead we supply services that colonies usually don’t have so soon. Oh, *you* can farm if you want to; we’ve claimed quite a bit of land. Or there are other ways to make a living. All right, I’ve done my best. Want to quiz me?”

“Galahad, I think I understand everything but why Tamara wants me in your family.”

“You’ll have to ask her. I told you I was checking for your halo. Can’t see it.”

“I don’t wear it in hot weather. Obadiah, don’t farce around; this is terribly important to me. Why do you keep saying that Tamara’s wishes settled it?”

“You know her, man.”

“I know how important her wishes are to *me.* But I’ve been in love with her for many years.” I told him things I had long kept to myself. “So that’s the way it went. A great hetaera never proposes a contract and usually won’t listen if a man is bold enough to propose one himself. But I— well, I made a nuisance of myself. Tamara finally convinced me that she married only to have children and did not intend to have more. I feel sure that money was not a factor—”

“It wouldn’t be. Oh, I don’t mean that Tamara is silly that way; I’ve heard her say that since money is the universal symbol for value received, one should accept it proudly. But Tamara wouldn't marry for money; she wouldn't feel that— Or perhaps she would; I think I'll ask her. Mm…interesting. Our Tamara is a complex person. Sorry, dear; I interrupted."

"I say money was not the controlling factor, as she had suitors with ten to a hundred times my modest wealth, yet she married none of them. So I shut up and was content to have part of Tamara—spend nights with her when I was permitted to, share her company in happiness circles at other times, pay her as much as I could—as much as she would accept, I mean; she often set her fee by refusing part of a gift—she did with me; I don't know what she did with wealthy clients.

"Years and years of that, then she announced that she was retiring —and I was stunned. I had taken rejuvenation during this time but hadn't noticed that *she* was any older. But she was firm about it and left New Rome.

"Galahad, it left me impotent. Oh, not incapable, but what had been ecstasy turned out to be mere exercise not worth the trouble. Has this ever happened to you?"

"No. Perhaps I should say, 'Not yet,' since I'm still working on my second century."

"Then you don't know what I mean."

"Only vicariously. But may I quote something Lazarus once said? He was speaking to Ira, but privacy was not placed on it; you'll come across it in his raw memoirs.

'Ira,' he said, 'there were many years when I hardly bothered with women—not only unmarried but celibate. After all, how much variety can there be in the slippery friction of mucous membranes?

"'Then I realized that there was infinite variety in women *as people*…and that sex was the most direct route to knowing a woman…a route they like, one that we like, and often the only route that can break down barriers and permit close acquaintance.

"'And in discovering this, I gained renewed interest in the friendly frolic itself, happy as a lad with his first bare tit warm in his hand. Happier—as never again was I merely a piston to her cylinder; each woman was a unique individual worth knowing, and, if we took time enough, we might find we loved each other. But at least we offered each other pleasure and a haven from cares; we weren't simply masturbating, with the other just a sex doll.'

"That's close to what Lazarus said, Justin. You went through something like that?"

"Yes. Somewhat. A long period when sex wasn't worth the trouble. But I got over it…with a woman as fine in her own way as Tamara is, although I didn't fall in love with her nor she with me. She taught me something I had forgotten, that sex can be friendly and worthwhile *without* the intense love I felt for Tamara. You see, a friend of mine, wife of another friend and they were both close to me—as a special gift she introduced me to another hetaera, a great beauty, and arranged for me a holiday with her—paid for by my friends; they could afford it, she is wealthy. This beautiful hetaera—Magdalene—"

Galahad looked delighted. "Maggie!"

"Why, yes, she did use that pillow name. 'Magdalene' was, her vocational name. But when she learned that I keep the Archives, she told me her registered name."

"Rebecca Sperling-Jones."

"Then you do know her."

"All my life, Justin darling; I nursed at those beautiful breasts. She's my mother, dear—what a delightful coincidence!"

I was delighted, too, but more interested in something else.. "So *that's* where you get your beauty."

"Yes, but also from my genetic father. Becky—Maggie— tells me I look more like him."

"Really? If you permit, I'll look up your lineage when I get back to Secundus." An archivist should not consult the Archives from personal curiosity; I was presuming on friendship to suggest it.

"Dear, you're not going back to Secundus. But you can get it from Athene clear back to the first push in the bush after Ira Howard's death. But let's talk about Mama. She's a jolly one, isn't she? As well as a beauty."

"Both. I told you how much she did for me. Your mother assumed that this holiday was going to be fun—fun for both of us—and it was indeed!—and I forgot about being uninterested in sex. I'm not speaking of technique; I suspect that any highpriced hetaera in New Rome is as skilled as any famous courtesan in history. I mean her attitude. Maggie is fun to be around, in bed or out. Laugh wrinkles but no frown wrinkles."

Galahad nodded agreement as he wiped egg from his platter. "Yes, that's Mama. She gave me a most happy childhood, Justin, so much so that I was grumpy at being shoved out when my eighteenth rolled around. But she was sweet about it. After my adulthood party she reminded me that she was moving out, too, and going back to her profession. Her contract with Papa, my foster father, was a term contract, over when I became a legal adult…so if I wanted to see. Maggie again—and I wanted to!—it would be cash at the counterpane, no family discount. Since I was a poor-but-honest research assistant, paid only two or three times what I was worth, I couldn't have afforded thirty seconds with her, much less a night; Mama's fees were always skyhigh."

Galahad looked thoughtfully happy. “Goodness, that seems long ago—more than a century and a half, Justin. I didn’t realize that Becky—Maggie—Mama—that Magdalene was being both wise and kind. I was grown up only legally and physically, and if she hadn’t cut the cord, I would have hung around, an overgrown infant cluttering her life and interfering with her vocation. So I did grow up, and when I married, my first wife named our first daughter ‘Magdalene’ and asked Maggie to be godmother…then I could hardly believe that this beautiful creature had borne me and I had no special urge to play Oedipus to her regal beauty; I was too much in love with my wife. Yes, Maggie is a fine girl—although she spoiled me as a kid. Was that holiday the only time you had her?”

“No. But not often. As you say, she was expensive. She offered me a fifty-percent discount—“

“Well! You *did* impress her.”

“—as she knew I wasn’t wealthy. But even at that, I couldn’t afford her company often. But she got me over my emotional hump, and I’m grateful to her. A fine woman, Galahad; you have reason to be proud of her.”

“I think so. But, Justin dear, your mention of that discount makes me certain that she remembers you just as fondly—”

“Oh, I hardly think so. Years back, Galahad.”

“Don’t trip in your modesty, dear; Maggie grabbed every crown the traffic would bear. But the ‘delightful coincidence’ is more than just the fact that you’ve had my mother—after all, high as her fees were, New Rome has many wealthy men attractive enough that Maggie would accept them. The ‘delightful’ aspect is that this very minute she is about forty kilometers south of here.”

“No!”

“Si, si, si! Ask Athene to call her. You can be talking with her in thirty seconds.”

“Uh . . I still don’t think she would remember me.”

“I do. But there’s no rush. If you are surprised, think how surprised *I* was. I had nothing to do with the migrants’ roster; I was arse-deep in getting together what Ishtar had ordered for the clinics. Justin, I didn’t know Maggie had married again. So we’re here a couple of weeks, the headquarters party, with a temporary setup and still eating and sleeping in the ‘Dora,’ when the first transport grounds—then we’re busy getting people and supplies out in a sequence worked out by Lazarus and bossed by Ira.

“My assignment, once I had my shack up—by hand; Athene had no outside extensionals then—”

“Poor Uncle Cuddly!”

“Who doesn’t listen to private conversations?”

"I have to keep you straight, dear. It was Minerva who had no outside hands then; I wasn't even hatched."

"Well— You have her memories, Teena; it's a mere technicality."

"Not to me, dearie. The chinchy little bitch took some memories with her that she didn't want to share with her ever-lovin' twin. And she locked one whole bank that she *did* leave behind so that I can't touch it without an abracadabra either from her or from Grandpappy. Except that *you* can unlock it, Justin…if *both* my twin and Lazarus are dead."

I managed to answer quickly, "In that case, Athene, I hope that it is a very long time before I am able to trigger it."

'Well…when you put it that way, so do I. But I can't help wondering what grim secrets and unspeakable crimes are locked in my theta-ninety-seven-B-dexter-aleph-prime? Will the stars tremble in their courses? But Uncle Cuddly did work hard a couple of days, Justin—probably the only honest work he has ever done."

"I disdain to comment, Teena. Justin, my assignment was examining physician, for which I was qualified under an almost new diploma. So Ishtar and Hamadryad are unpacking migrants and giving them their antidotes and I'm checking them to make sure they've made the trip safely—rushing it as I haven't yet snatched another medical doctor from that parade of flesh.

"I glance up from my machine just long enough to note that the next victim is female and call out over my shoulder, 'Strip down, please,' and change the setting. Then I look twice—and say, 'Hello, Mama, how did you get here?'

"This caused her to give me a second look. Then she smiled her big, happy smile and said, 'I flew in on a broom, Obadiah. Give me a kiss and tell me where to put my clothes. Is the doctor around?'

"Justin, —the queue pile up while I gave Maggie a thorough examination—proper, as she was pregnant and I made certain that her unborn baby had come through all right—but also to gossip and get caught up. Married again, four children by today, a farm wife with a sunburned nose, and happy as can be.

"Got married quite romantically. Mama heard the advertising about opening a virgin planet, went to the recruiting office Ira had in the Harriman Trust building to find out about it—that astonished me the most; Mama is the last person I would have suspected of yearnings to pioneer."

"Well…I agree, Galahad. But I don't suppose anyone would pick me as a likely pioneer, either."

"Perhaps not. Nor me. But Maggie puts in her application at once, and runs into one of her wealthy regulars doing the same. They go somewhere for a bite and dismiss it…and leave the restaurant and register an open-end contract, and go back to the recruiting office and withdraw their solo applications and submit a joint one as a married couple. I won't say that got them accepted, but almost no singles were accepted for first wave."

"Did they know that?"

"Oh, certainly! The recruiting clerk warned them before accepting their solo fees. That's what they left to discuss. They already knew they suited each other in bed, but Maggie wanted to find out if he intended to farm—believe it or not, that's what she wanted—and he wanted to know if she could cook and was she willing to have kids. And it was: 'Fine, we agree; let's get on with it!' Maggie had her fertility restored, and they planted their first baby without waiting to see if they were accepted."

I said, "That probably clinched it."

"You think so? Why?"

"If they changed their application to show that Magdalene had caught. If Lazarus passed on the applications. Galahad, our Ancestor favors people who take big bites."

"Mmm, yes. Justin, why are *you* hanging back?"

"I'm not. I had to be certain that the invitation was serious. I still don't know *why.* But I'm no fool, I'm staying."

"Wonderful!" Galahad jumped up, came around the table, kissed me again, roughed my hair, and hugged me. "I'm happy for all of us, darling, and we'll try to make you happy." He grinned—and I suddenly saw his mother in him. Hard to imagine the glamorous Magdalene with kids and calluses, a frontier farm wife—but I recalled the old proverb about best wives. Galahad went on: "The twins weren't sure I could be trusted with so delicate a mission; they were afraid I would muff it."

"Galahad, there was never a chance I would refuse; I just had to be sure I was welcome. I still don't know why."

"Oh. We were speaking of Tamara and got sidetracked. Justin, it's not public knowledge how difficult it was to rejuvenate our Ancestor this time, although the recordings you have been editing may hint at it—"

"More than a hint."

"But not all of it. He was almost dead, and simply keeping him alive while we rebuilt him was hard enough. But we managed that; you won't find another technician of Ishtar's skill. But when we had him in good shape, bio-age almost as young as he is now, he took a turn for the worse. What do you do when a client turns his face away, is reluctant to talk, doesn't want to eat—yet has nothing wrong with him physically? Bad. Stays awake all night rather than risk going to sleep? Very bad.

"When he— Never mind; lshtar knew what to do. She went up into the mountains and fetched back Tamara. She wasn't rejuvenated then —"

"That wouldn't matter."

"It *did* matter, Justin. Youth would have handicapped Tamara in coping with Lazarus. Oh, Tamara would have overcome the handicap; I have confidence in her. But her bio-age and appearance were around eighty on the Hardy scale; this made it easier, as Lazarus, despite his renewed body, was feeling the weight of his years. But Tamara *looked* old…and every white hair was an asset. Lines in her face, little round potbelly, breasts pendulous, varicosities—she *looked* the way he *felt*… so he didn't mind having her around during a crisis in which he—well, I skansed that he couldn't stand the sight of us who looked youthful. That's all it took; she healed him—"

"Yes, she's a Healer." (How well I knew!)

"She's a *great* Healer. That's what she's doing now, healing a young couple who lost their first baby—nursing the mother who had a rough time physically, sleeping with both of them. We all sleep with her; she always knows when we need her. Lazarus needed her then, she felt it, and stayed with him until he was well. Uh, after last night this may be difficult to believe, but both of them had quit sex. Years and years—Lazarus more than half a century—and Tamara had not coupled with anyone since she retired."

Galahad smiled. "Here is a case of the patient healing the physician; in bringing Lazarus around to the point where he invited her to share his bed, Tamara herself found new interest in living. She lived with Lazarus long enough to heal his spirit, then announced that she was leaving. To apply for rejuvenation.'

I said, "Lazarus asked her to marry him."

"I don't think so, Justin, and neither Tamara nor Lazarus hinted at such. Tamara put it another way entirely. We were all having a late breakfast, in the garden of the Palace penthouse, when Tamara asked Ira if she could join his migration—it was solely Ira's migration then; Lazarus had said repeatedly that he would *nor* join it. I think he already had in mind attempting to time-trip. Ira told Tamara to consider it settled and not to worry about restrictions that would be published when he announced it. Justin, Ira would have given her the Palace as readily; she had saved Lazarus, and we all knew it.

"But you know Tamara. She thanked him but said she intended to qualify fully, starting with rejuvenation, then she would see what she could learn to be useful in a colony, just as Hamadryad planned to—and, Hamadryad, will you sleep with Lazarus tonight?—and Justin, you should have heard the commotion *that* started!"

"Why a commotion?" I asked. "From what you said earlier Lazarus had reacquired his interest in the friendly sport. Did Hamadryad have some reason not to want to substitute for Tamara?"

"Hamadryad was willing, although upset by the way Tamara dumped the matter on her—"

"Doesn't sound like Tamara. If Hamadryad hadn't wanted to do it, Tamara would have known it without asking."

"Justin, when it comes to people's emotions, Tamara *always* knows what she is doing. It was Lazarus she was trapping, not Hamadryad. Our Ancestor has odd shynesses, or did have then. He had been sleeping with Tamara for a month—and pretending that he was not. As futile as a cat covering up on a tile floor. But— Tamara's blandly blunt request that Hamadryad relieve her as his concubine forced it into the open and produced a head-on clash of wills, Lazarus and Tamara. Justin, you know them both: Who won?"

The ancient pseudoparadox— That Tamara could be immovable I knew. "I won't guess, Galahad."

"Neither just then, because once Lazarus stopped sputtering about how both he and Hamadryad were being needlessly embarrassed, Tamara gently withdrew her suggestion, then shut up. Shut up on that, shut up about rejuvenation, shut up about migrating, left the next move up to Lazarus and won the argument by not arguing. Justin, it is difficult to kick Tamara out of one's bed—"

"I would find it impossible."

"I think Lazarus found it so. What discussions they had in the middle of the night I could not say…but Lazarus learned that she would *not* leave for rejuvenation until he promised never to sleep alone while she was gone. But she promised in exchange to return to his bed as soon as she completed antigeria.

"So one morning Lazarus announced the détente—red-faced and almost stuttering. Justin, our Ancestor's true age shows more in some of his ancient attitudes about sex than in any other way."

"I didn't notice it last night, Galahad—and I expected to, having studied his memoirs so closely."

"Yes but you saw him last night some fourteen years after we set up our family—as it was that morning that did it. Although we did not formalize it until after the twins were born, whereas at this time they were slight bulges at most. Believe me, Lazarus found it hard to capitulate—and tried for an escape hole even then. He announced, rather aggressively, that he had promised Tamara not to sleep alone while she was undergoing antigeria, then said more or less in these words: 'Ira, you told me that professional ladies were to be found in the city. How do I go about finding one who will accept a contract for that length of time?' I have to quote him in English as he was using euphemisms he ordinarily disdains.

"What Lazarus didn't know was that Ishtar had programmed us like actors hypnotized into roles. Perhaps you've noticed that he is responsive to female tears?"

"Isn't everyone? I've noticed."

"Ira pretended not to know what profession Lazarus meant…which gave Hamadryad time to burst into tears and flee…whereupon Ishtar stood up and said, 'Grandfather…how *could* you?—and *she* was dripping tears, too…and chased after Hamadryad. Then it was Tamara's turn to switch on the raindrops and follow the other two. Which left us three men together.

"Ira became very formal and said, 'If you will excuse me, Sire, I will attempt to find and console my daughter'— bowed, turned abruptly, and left. Which left it up to me. Justin, I didn't know what to do. I knew that Ishtar expected difficulty because Tamara had warned her. But I did not expect to be left to juggle it alone.

"Lazarus said, 'Great balls of fire! Son, what did I do *now?'* Well, I could answer that. I said, 'Grandfather, you've hurt Hamadryad's feelings.'

"Then I was carefully unhelpful—refused to speculate why her feelings were hurt, could not guess where she might have gone—unless she had gone home, which I understood was somewhere in the suburbs—declined to act as his intermediary—all to Ishtar's instructions to play dumb, stupid, and useless, and let the women handle it.

"So Lazarus had to track Hamadryad down himself, which he did with Athene's—I mean 'Minerva's'—help."

Athene said, "This is all news to me, Uncle Cuddly."

"If it is, dear, please forget it."

"Oh, I shall!" the computer answered. "Except that I'm going to save it up and use it about a hundred years from now. Justin, if I burst into tears—after I'm a flesh-and-blood—will you track me down and console me?"

"Probably. Almost certainly."

"I'll remember that, Lover Boy. You're cute."

I pretended not to hear, but Galahad said, "'Lover Boy'?"

"That's what I said, dear. Sorry, Uncle Cuddly, but you're obsolete. If you hadn't gone to sleep early, you would know why."

I kept quiet while making a mental note for a hundred years hence—one that involved Pallas Athene as a flesh-and-blood and getting her into a helpless position.

This side conversation was cut short; Athene notified us that Lazarus was arriving. Galahad waved his arms. "Hey! Pappy! Back here!"

"Coming." Lazarus bussed me in passing, did so to Galahad as he slid in by him and grabbed what was left of Galahad's second breakfast—a home-baked jam roll—stuffed it into his mouth and said around it: 'Well? Did he fight the hook?"

"Not nearly the way you did with Hamadryad, Pappy. I was telling Justin about that—how the Hamadarling tripped you and thereby set up our family."

"My God, what a canard!" Lazarus helped himself to Galahad's hot-cup. "Justin, Galahad is a sweet lad but romantic. I knew exactly what I wanted to accomplish, so I started by raping Hamadryad. That broke down her resistance, and now she sleeps with anybody, even Galahad. Everything else followed in logical sequence." He added, "You still plan to go back to Secundus?"

I answered, "Perhaps I didn't understand what Galahad has been telling me. I thought I was committing myself, in joining, to—" I stopped. "Lazarus, I don't know what I'm committed to, and I don't know what I'm joining."

Lazarus nodded. "One must make allowances for youth, Justin; Galahad doesn't speak clearly as yet."

"Thanks, Pappy. Too much. I sold him the deal. Now you've got him wondering."

"Quiet, Son. Let me spell it out, Justin. What you are joining is a family. What you are committed to is the welfare of the children. All of them, not just any that you may sire." He looked at me, waited.

I said, "Lazarus, I've raised a number of children—"

"I know."

"I don't think I've let one down yet. Very well, three that I haven't seen, plus your two—your sisters or adopted daughters—plus others as they come along. Correct?"

"Yes. But it's not a lifetime commitment; that's not practical for a Howard. This family may outlive us all—I hope so. But an adult can opt out anytime and thereby be committed only to kids then on hand —underfoot or in womb. Call it a maximum of eighteen years. However, I assume that the rest of the family would prefer to relieve such a person of his or her responsibilities in order to see the back of his neck. I can't envision a happy relationship continuing for years after someone has announced that he wants out. Can you?"

"Well…no. But I won't let it worry me."

"Of course it might not happen that way. Suppose Ishtar and Galahad decided to set up a separate household—"

"Now wait one fiddlin' minute, Pappy! You can't get rid of me that easily! Ish won't have me except as part of the package. I know, I tried to get her to marry me years back."

"—and wanted to take our three youngest with them. We would not stop them nor would we try to dissuade children who preferred to go with them. All three of them are Galahad's—"

"There he goes again! Pappy, you put Undine into Ish in the soak pool; that's why we named her that. Elf is either yours or Ira's; the Hamadear told me so. And nobody has any doubt about Andrew Jackson. Justin, I'm sterile."

"—based on statistical probability, both on sperm count and the fact that he keeps so busy at it. But Ishtar reads the gene charts and keeps such matters to herself; we prefer it that way. But it is extremely unlikely that Hamadryad ever said that, or that she has or ever will have a child by Ira. No genetic hazard, Ishtar is certain. And the fact that we have yet to have *any* defectives in this colony gives me great confidence in Ishtar's skill in reading a gene chart; she screened the first wave, a job that gave her eyestrain for months. Nevertheless, Ira has some unease about it and won't even stand close to Hamadryad when she is fertile—an irrational-attitude I understand, as I am cursed with it myself.

I remember too well a time in the past when all the Howards had to go on was percentage of mutual ancestry—and got defectives all too often. Of course today a woman with a clean gene chart is better off married to her brother than to a stranger from another planet—but old ghosts die hard.

"What it amounts to, Justin, is three fathers—four, with you— three mothers, but four when Minerva asks to have her adolescence protection canceled—an ever-changing number of kids to be taught and spanked and loved—plus always the possibility of the number of parents being either enhanced or diminished. But this is my house, in my name, and I've kept it that way because I planned it to house *one* family, not to make life jolly for goats such as Galahad—"

"But it does! Thank you, Pappy darling."

"—but for the welfare of children. I've seen catastrophe strike colonies that looked as safe as this one. Justin, a disaster could wipe out all but one mother and father in this family, and our kids would still grow up normally and happily. This is the only long-run purpose of a family. We think our setup insures that purpose more than a one-couple family can. When you join, you commit yourself to that purpose—that's all."

I took a deep breath. 'Where do I sign?"

"I see no use in written marriage contracts; they can't be enforced…whereas if the partners want to make it work, no written instrument is necessary. If you seriously want to join us, a nod of your head is enough."

"I do!"

"—or if you want ritual, Laz and Lor would be delighted to dream up a fancy one—and we can all have a crying jag -together—"

"—and on his wedding night Justin gets to sleep with the babies so he'll know how serious it is."

"Seal it, Galahad. If you want to add that touch, you should make it the night *before,* so he'll have a fair chance to back out if he can't take it."

"Lazarus, I volunteer for the diaper watch tonight; I'm hardened to such things."

"I doubt if the women will let you."

"And you won't live till morning," Galahad added. "They're an emotional lot. Last night you had it easy. Better take the pee watch."

"Galahad could be right; I should check your heart. As may be—keep quiet, Galahad—Justin, this household is *not* a jail. The setup is not only safer for children, it is more flexible for adults. When I asked you whether you intended to go back to Secundus, I meant simply that. An adult can be away for a year, ten years, any length of time for any purpose-and know that the kids are taken care of and know that he-she will be welcomed back. The twins and I have been offplanet several times and will' be again. And…well, you know I intend to attempt this time-tripping experiment. That won't involve much elapsed time in this framework but it does involve a slight -element of risk."

"Slight!' Meaning that Pappy is out of his silly head. Be sure to kiss him goodbye when he leaves, Justin; he won't be back."

I was alarmed to see that Galahad was not joking. Lazarus said quietly, "Galahad it is all right to say that to me. But don't say it in front of the women. Or children." He went on to me, "Of course there is an element of risk; there is in anything. But not to a time trip itself, as Galahad seems to think." (Galahad shuddered.) "The risk is the same as in visiting any planet; someone there may not like you. But the time jump takes place in the safest possible surroundings: in space with a ship around you—any risk comes later."

Lazarus grinned. "That's why I was so riled at that old cow Arabelle—telling me to go looksee at *battles!* Justin, the best thing about modern times is that we are all so spread apart that war is no longer practical. But— Did I tell you what I'm going to use as a practice run?"

"No. I had the impression from Madam Chairman Pro Tern that you already had a perfected technique."

"It's possible that I let her think so. But Arabelle wouldn't know an imperial number from an imperial edict; she couldn't ask the right questions."

"I don't think I could either, Lazarus; it's not my field of mathematics."

"If you're interested, Dora can teach you—"

"Or me, Lover Boy."

"Or Teena. What's the idea of calling Justin 'Lover Boy,' Teena? Are you trying to seduce him?"

"No, he's promised to seduce *me*…about a hundred years from now."

Lazarus looked at me thoughtfully; I tried to look as if I hadn't heard the exchange. "Mmm…maybe you had better take those lessons from Dora, Justin. You haven't met Dora, but think of her as about eight years old; she won't try to seduce you. But she's the brightest computer pilot in space and can teach you more than you want to know about Libby field transformations. I was saying that we felt sure of the theory, but I wanted a separate opinion. So I thought of asking Mary Sperling—"

I said, "Hold it a moment! Lazarus, in all the Archives there is, I am certain, only one Mary Sperling. I'm descended from her, Tamara is descended from her—"

"Lots of Howards descended from her, Son; Mary had over thirty children—quite a record for those days."

"Then you *do* mean Elder Mary Sperling, born in *1953* Gregorian, died in—"

"She did *not* die, Justin; that's the point. So I went back there and talked with her."

My head felt fuzzy. "Lazarus, I'm confused. Are you telling me that you've already made one time trip? Nearly two thousand years? No, I mean over two thousand years—"

"Justin, if you'll keep quiet, I'll *tell* you what I mean."

"Sorry, sir."

"Call me 'sir' and I'll get the twins to tickle you. I mean I went, in present time, to star PK372.2 and the Planet of the Little People. That designation is obsolete, and the new catalogings don't hook it in with that planet because Libby and I decided to toss in a joker; we felt that it was a place for humans to stay away from.

"But the Little People are the source of the concepts that Andy Libby worked out as field theory that anyone can use, and all space pilots, computer and human, do use. But I had never gone back there because-well, Mary and I had been close. So close that it was a blow to me when she 'went over.' More disturbing than a death, some ways.

"But the years do mellow a memory and I did want to consult. So the twins and I set out in the 'Dora' to try to find that planet, from a set of coordinates and a ballistic Andy had assigned a long time back. The ballistic was slightly off, but a star doesn't move far in only two thousand years; we found it.

"No trouble then; I had warned Lor and Laz most solemnly of the subtle danger of the place. They listened, and that made them as immune to the place as I am—not tempted to swap their individual personalities for a pseudo-immortality. In fact, they had a wonderful time; the place *is* charming, and, safe in all other ways. Hadn't changed much, one huge park.

"I orbited first—it's their planet, and they have powers we don't ken. Same as last time; a Doppelganger of a Little Person showed up in the 'Dora' and invited us down to visit only this time it called me by name—in my head; they don't use oral speech—and admitted to being Mary Sperling. That shook me but it was good news. She—'it,' I mean —it seemed mildly pleased to see me but not especially interested; it was not like meeting a beloved old friend but more like meeting a stranger who nevertheless remembered what that old friend remembered."

"I understand it," the computer said. "Something like Minerva and me, huh?"

"Yes, dear…except that you had a more positive personality your very first day than this creature who used the name of my old friend… and you've been getting positiver and positiver for the past three years."

"Ol' Buddy Boy, I'll bet you tell that to all the girls."

"Could be. Please keep quiet, dear. Nothing more to tell, Justin, save that we grounded and stayed a few days, and Dora and I consulted with the Little People about spacetime field theory while the twins listened and enjoyed playing tourist. But, Justin, when the Families left there, returning to Earth in the 'New Frontiers,' you will recall that we left some ten thousand behind."

"Eleven thousand, one hundred, and eighty-three," I answered, "according to log of the 'New Frontiers.'"

"Is that what we logged? Should have been more, maybe, as the logged figure was reconstructed by seeing who couldn't be mustered, almost certainly there were unregistered children among those who elected to stay behind; we were there quite a piece. But the exact number doesn't matter. Justin, call it an even ten thousand. Given a favorable environment; how many would you expect to find there after two thousand years?"

I used the arbitrary expansion. "Approximately ten to the twenty-second—which is ridiculous. I would expect either a stabilized optimax—call it ten to the tenth—or a Malthüsian catastrophe, in not over seven to eight centuries."

"Justin, there were none. Nor any sign that men had ever been there."

"What happened to them?"

"What happened to Neanderthal Man? What happens to any champion when he's defeated? Justin, what's the point in striving when you're so outclassed that it's no contest? The Little People have the perfect Utopia—no strife, no competition, no population problem, no poverty, perfect harmony with their beautiful planet. Paradise, Justin! The Little People are all the things that philosophers and religious leaders throughout history have been urging the human race to become.

"Maybe they *are* perfect, Justin. Maybe they are what the human race *can* become…in another million years. Or ten million.

"But when I say that their Utopia frightens me, that I think it is deadly to human beings, and that they themselves look like a dead end to me, I am *not* running them down. Oh, no! They know far more about mathematics and science than I do—or I wouldn't have gone there to consult them. I can't imagine fighting them because it wouldn't be a fight; they would already have won against anything we could attempt. If we became obnoxious to them, I can't guess what would happen—and don't want to find out. But I don't see any danger as long as we leave them alone as we don't have *anything* they, want. So it appears to me—but what's the opinion of one old Neanderthal? I understand them as little as that kitten over there understands astrogation.

"I don't know what happened to the Howards who stayed behind. Some may have gone over and been assimilated, as Mary Sperling did. I didn't ask, I didn't want to know. Some may have lapsed into lotus-eaters' apathy and died. I doubt if many reproduced—although it is possible that there were subhumans around being kept as pets. If so, I most especially did not want to know it. I got what I wanted: a corroborating opinion on a mathematical oddity in field physics—then gathered up my girls and left.

"We did one thing before we left that neighborhood: We made a ball-of-twine photographic survey of their planet, then had Athene examine it when we got back. Teena?"

"Sure, Buddy Boy. Justin, if there is a human artifact on the surface of that planet, it is less than a half meter in diameter."

"So I assume that they are all dead," Lazarus said grimly, "and I shan't go back. No, the trip to PK3722 was not a trial run time trip, but just a common star hop. The test run will be about as simple and quite safe, as it will not involve putting down on a planet. Want to come along? Or shall we take Galahad?"

"Pappy," Galahad said earnestly, "I am young, beautiful, healthy, and happy, and plan to stay that way; you are *not* volunteering *me* for any such harebrained junket I'm not making any more star hops of any sort; I'm the home-loving type. I've made one landing with Hot Pilot Lorelei at the overrides. That's enough; I'm convinced."

"Now, boy, be reasonable," Lazarus said gently. "When we do this, my girls will be old enough to want active male attention—which *I* am not going to supply; I would lose all control over them. Think of it as your duty."

"When you start talking about 'duty,' I break out with hives. The trouble is, Pappy, you're a sissy, afraid of two little girls."

"Could be. Because they won't be little girls much longer. Justin?"

I thought furiously. To be invited by the Senior to take a star trip with him is not an honor to turn down. That it included an attempt to travel in time did not bother me; the idea seemed unreal. But it couldn't be dangerous or he wouldn't be taking his sister-daughters along—and, besides, I felt that Lazarus was unkillable; a passenger with him should be safe. Gigolo for his girls?—Lazarus was farcing Galahad, I *was* sure…as I was certain that Lad and Lori would settle such matters to suit themselves. "Lazarus, I will go anywhere you ask me to go."

"Hold it!" objected Galahad. "Pappy, Tamara isn't going to like this."

"No trouble, Son. Tamara is welcome, and I think she would enjoy it. She's not chicken like some people we won't mention."

"What?" Galahad sat up straight. "Take away Tamara and Justin… and our twins…and you yourself? Half the family? And leave the rest of us here to mourn?" Galahad took a deep breath, sighed it out. "All right, I give up. I volunteer. But leave Justin and Tamara at home.

And the twins, we can't risk them. You pilot, I'll cook. As long as we last, that is."

"Galahad shows unexpected streaks of nobility," Lazarus said to no one in particular. "It'll get him killed yet. Forget it, Son; I don't need a cook, Dora is a better cook than either of us. The twins will insist on going, and I need to supervise them through a couple of time jumps; later they will have to do it alone."

Lazarus turned to me. "Justin, while you are welcome, it will be a dull trip. You would know you'd traveled in time only because I'd tell you so. I have in mind going to a planet easy to find because Libby and I surveyed it and he determined its ballistic accurately. I'm not planning to land; it's a moderately dangerous place. But it happens to be a planet I can use as a clock.

"This may sound silly. But it is hard to be sure of the date in space, other than by your inboard clocks—in particular the radioactive-decay clocks of your computer. Telling time by examining celestial bodies is difficult and involves subtle measurements and long calculation; it is more practical to ground on a civilized planet and bang on somebody's door and ask.

"There are exceptions—any stellar system with known ephemerides of its planets, such as here, or Secundus' star, or the Solar System, and others—if Dora hat such data in her gizzards, she can look at such a system and read the time by its planets as if they were hands on a clock—Libby did that with the Solar System from the 'New Frontiers.'

"But on this trial trip I'll be calibrating a time-travel clock—another matter and new. I left something in orbit around that planet on a known date. Later I could not find it, despite having equipped it so that I certainly *should* have found it. Uh…it was Andy Libby's coffin.

"Very well, I'll go look again, trying to split two known dates. If I find it, I will have begun calibration of a time-travel clock—as well as proving that the time-trip theory is correct. Follow me?"

"I think so," I admitted, "to the extent of seeing that it is an experimental proof. But field theory is so far from my own specialty that I can't say more."

"No' need to. I don't understand it too well myself. The first computer designed to manage Libby-Sheffield drive was a reflection of Andy's unique mind; all since are refinements. If a pilot tells you he understands it and uses a computer simply because it's faster, don't ride with him; he's a phony. Eh, Teena?"

"I understand astrogation," said the computer, "because Minerva replicated Dora's astrogation circuitry and programming in me. But I do not think that it is possible to discuss it in English, or even Galacta, or any language using word elements. I can print out the basic equations and thereby show a static picture—a slice—of a dynamic process. Shall I do so?"

"Don't bother," said Lazarus.

"Heavens, no!" I echoed. "Thank you, Athene, but I have no ambition to be a star pilot."

"Galahad," said Lazarus, "How about rousing your lazy carcass and finding a little snack for lunch? Say about four thousand calories each. Justin, I asked if you plan to go back to Secundus because I don't want you to."

"That suits me!"

"Pallas Athene, make this a private record, keyed to me and to Chief Archivist Foote."

"Program running, Mr. Chairman." Galahad lifted his eyebrows, left abruptly.

"Chief Archivist, is the situation in New Rome becoming critical?"

I answered carefully, "Mr. Chairman, in my opinion it is, although I'm no more than a dilettante in social dynamics. But . . I did not come here to deliver a silly message from Madam Chairman Pro Tem. I came here hoping to talk with you about it"

Lazarus looked at me long and thoughtfully—and I caught a glimpse of part of what makes him unique. He has the quality of giving full attention to whatever he does, be it a matter of life and death, or something as trivial as dancing to amuse a guest. I recognized it because Tamara has the same quality;— she displays it by giving total attention to the person she is with.

She does not have exceptional beauty, nor, I suppose, is she more skillful in technique than any of several other professionals—or even some amateurs. No matter, it is this quality of total concentration that sets her apart from other fine women of her merciful calling.

I think the Senior lends it to *everything.* Now he had suddenly "picked up the gavel," and his computer knew it at once, and Galahad-spotted it almost as quickly—and I stopped worrying.

"I never assumed," he said, "that the Families' Chief of Records would play messenger with a useless message. So tell me your reason."

Elaborate it? No, explanations could follow. "Mr. Chairman, the Archives should be replicated off Secundus. I came here to see if it could be done on Tertius."

"Go on."

"I've never seen civil disorder. I'm not sure of the symptoms, nor how long it takes them to grow into open violence. But the people of Secundus aren't used to arbitrary laws and rules that change overnight. I think there will be trouble. I would feel that I had carried out the duties of my office if I insured that destruction of the Archives could not mean that our records are lost. The vaults are underground —but not invulnerable. I have figured out eleven ways that some or all of the Archives could be destroyed."

"If there are eleven ways, then there is a twelfth, and a thirteenth, and so on. Have you discussed this with anyone?"

"No!" I added more quietly, "I didn't want to put ideas into anyone's head."

"Sound. Sometimes the best one can do about a weak point is not to call attention to it."

"It seemed so to me, sir." I added, "But when I started worrying I started trying to do something to protect the records. I instituted a policy of making dead-storage duplicates of all processed data at the point they enter the Archives. I had in mind copying the entire Archives, then shipping them somewhere. But I had no funding, or enough money of my own, to pay for the memory cubes. They should be Welton Fine-Grains, or they would be too bulky to ship."

"When did you start copying new accessions?"

"Shortly after the Trustees' Meeting. I had expected Susan Barstow to be elected. When Arabelle Foote-Hedrick got it— well, it disturbed me. Because of an incident years back when we were both on campus. I thought about resigning. But I had started work on your memoirs."

"Justin, I think you kidded yourself about your reason for staying. You suspected that Arabelle might make an ad-interim appointment other than your deputy."

"That's possible, sir."

"But irrelevant. You used Weltons for this copying?"

"Oh, yes. I could squeeze funds for that much."

"Where are they? Still in the 'Homing Pigeon'?"

I suppose I looked startled. The Senior said, "Come, come! They were important to you—do you expect me to think that you left them lightyears away?"

"Mr. Chairman, the cubes are in my baggage…still in Colony Leader Weatheral's office."

"Pallas Athene?"

"Back of the visitors' couch, Mr. Chairman. The Colony Leader told me to remind him to fetch home Mr. Foote's luggage."

"Perhaps we can do better. Chief Archivist if you will permit Pallas Athene to have the code to your bags, she has extensionals in Ira's office to copy those cubes at once. Then you can quit worrying; Pallas Athene already has the Archives in her, up to the day I let Arabelle have the gavel back."

I know my face showed it. The Senior chuckled and said, "Why and how? 'Why' because you aren't the only one who feels that the

Families' records should be safeguarded. 'How?' We stole them, Son, we stole them. I had control of the executive computer and used it to copy the whole works—genealogies, history, minutes of the Families' Meetings, everything— with an override program to keep your boss computer from knowing what I was doing.

"Right under your nose, Chief Archivist—but I kept it from you for your protection; I did not want Arabelle to get wind of it and quiz you. It would have given her ideas, and she had too many already. The only problem was to scrounge enough Welton cubes. But you are sitting on them right now, about twenty meters under your arse—and when Pallas Athene reads the ones in your luggage, the duplicate Archives will be complete to the date you left Secundus. Feel better?"

I sighed. "Much better, Mr. Chairman. I can stay with a clear conscience. I now feel free to resign."

"Don't."

"Sir?"

"Stay here, yes. But don't resign. Your deputy is carrying on and you trust her. Arabelle can't legally put in her own boy by ad-interim appointment unless you *do* resign, since your appointment comes from the Trustees. Not that legality would bother her—but again let's not put ideas into her head. How many Trustees on Secundus?"

"'On' Secundus, sir? Or resident on Secundus?"

"Don't quibble Son."

"Mr. Chairman, I am not quibbling. There are two hundred eighty-two Senior Trustees. Of that number one hundred ninety-five are resident on Secundus, the other eighty-seven representing Howards on other planets. I put it as I did because it requires a two-thirds majority to pass a policy motion—two-thirds of a quorum at a decennial meeting, or two-thirds of the total number, or one hundred eighty-eight, at an emergency meeting unless every trustee *everywhere* has been notified—which can take years. I mention this because, were you to call an emergency meeting, it might be impossible to muster one hundred eighty-eight votes necessary to recall Madam Chairman Pro Tem."

The Senior blinked at me. "Mr. Archivist, what in Ned gave you the notion that *I* would call a Trustees' meeting? Or would attempt to recall our dear Sister Arabelle?"

"Your question seemed to be leading toward that, sir—and I remember an occasion on which you took back the gavel."

"Entirely different. My motives then were selfish. The old biddy was about to spoil my plans by grabbing Ira. The circumstances were quite different—meaning I could get away with it—which I can't today. Son, despite what the records show, Arabelle didn't give up that gavel willingly; I grabbed it from her. Then the short time it took us to finish up and leave, I kept her prisoner."

"Really, Mr. Chairman? She doesn't seem to harbor resentment. She speaks of you in the highest terms."

The Senior grinned his lazy, cynical grin. "That's because we're both pragmatists. I was careful to save her face and made sure she knew it, and now she has nothing to gain by running *me* down—and something to lose, because I've acquired a semisacred status. Her status depends in part on mine and she knows it. Just the same— Well, if I ever find myself on the same planet with her—unlikely, I'm no fool—I shall be very careful going through doors and such.

"I'll tell you how it worked, and you'll see why I can't do it twice. Once Ira handed her the gavel he moved out of the Palace—proper. But until we left I continued to live in the penthouse on top of the Palace—also proper; the Palace is my official residence. Because I was still there, Minerva was-still hooked in. In consequence she was able to warn me when Arabelle's busies grabbed Ira. I came out of a sound sleep and grabbed the gavel."

Lazarus frowned. "A planetwide executive computer is a menace, Justin. When it was Minerva with Ira giving orders, it worked fine. But see what I did with it and extrapolate what someone else might do with one. Arabelle, for instance. Uh— Teena, give Justin a sample of Arabelle's voice."

"Yes, Mr. Chairman. 'Chief Archivist Foote, this is the Chairwoman Pro Tem. I have the honor to announce that I have been able to persuade our distinguished Ancestor, Lazarus Long, Permanent Chairman of the Howard Families, to assume for us the titular leadership of the Families during the regrettably short period remaining until he again embarks for a new world. Please give this announcement full distribution among your subordinates. I will continue to handle routine details but the Chairman wants you to feel free to consult him at any time. Speaking for the Trustees and for the Chairman, this is Arabelle Foote-Hedrick, Chairwoman Pro Tempore of the Howard Families.'"

"Why that s exactly what she said to *me.*"

"Yup. Minerva did a good job. She got just the right pomposity into the phrasing, as well as getting Arabelle's voice down pat, even to that sniff she uses for punctuation."

"That wasn't Arabeile? I had no slightest suspicion."

"Justin, when that message went to you—and one like it to everyone important enough to rate it—Arabelle was in the biggest, fanciest apartment in the Palace-and very annoyed that doors wouldn't open and transport wouldn't come and none of the communication arrangements would work—except when I wanted to talk to her. Shucks, I didn't even let her have a cup of coffee until she got her feathers down and conceded that *I* was Chairman and running things.

"After that we got along pretty well, even became somewhat chummy. I did everything for her but turn her loose. She took over the routine-I didn't want to be bothered—which was safe as Minerva would have chopped her off if she got out of line and she knew it. She and I even appeared together on a newscast the morning I left, and Arabelle spoke her piece like a lady, and my public thanks to her were just as sincerely insincere."

Lazarus Long continued, "But now *she* has the executive computer and if I went back, I'd throw my hat in first. No, Justin, I was not asking about the Trustees on Secundus with any intention of calling a meeting; instead I was thinking that any twenty Trustees can call an emergency meeting and hoping that they would see it as you do—futile—and not try. She might grab them and ship them to Felicity. Or, if she has the nerve—I think she has—she might let them hold their meeting, then if it went against her, ship all the Trustees who show up off to Felicity. But I guarantee she won't quit without a fight. I caught her with her pants down; she won't be caught twice."

"Then it means a bloodbath."

"That may be the only way out. But you and I can't help the situation. In all matters of government the correct answer is usually: Do *nothing.* This is such a time—a time to exercise creative inaction. Sit tight. Wait"

"Even when you know things are going wrong?"

"Even when you know it, Justin. The itch to be a world saver should not be scratched; it rarely does any good and can drastically shorten your life. I see three major possibilities: Arabelle may be assassinated. The Trustees will then elect another Chairman Pro Tern, hopefully one with sense. Or she may last till the next ten-year meeting, whereupon the Trustees may exercise some sense. Or she may get smart, not expose herself to assassination while consolidating her power so strongly that it will take a revolution to get rid of her.

"I regard the last as least likely, assassination as the most likely—and none of it our business here on Tertius. There are a billion people on Secundus; let *them* handle it. You and I have saved the Archives and that's good; the Families maintain their continuity.

"In a few years we'll import equipment for you—or your successor—to set up the sort of computterized deal you have on Secundus. Athene can keep data in storage until we're set up. Meanwhile I'll let a message echo around the inhabited planets that the Archives are here, too. I'll also announce that this is an alternate Families' Seat where the Trustees are welcome to meet."

The computer said, "Mr. Chairman, Mr. Jones has asked if I know when you will be ready for lunch."

"Please tell him we will be there in a moment, No hurry on any of this, Justin; if you're patient, problems tend to solve themselves—and patient is all one can be when it takes years to pass a message around even among the more thickly settled planets. So wait a hundred years. One private message for you. You're one of us now? A member of this family and a father to our kids?"

"Yes. I want to be."

"You want it formal? All right, here's a short one, binding—and later you can have any ritual you want. Justin, are you our brother? Till the stars grow old and our sun grows cold? Will you fight for us, lie for us, love us—and let us love you?"

"I will!"

"That does it; Athene has it on record—open record, Athene."

"Recorded, Lazarus. Welcome to the family, Justin!"

"Thank you, Athene."

"The private message is thus, Justin. Tamara asked me to tell you—if you married us—that she is going to ask Ishtar to cancel her immunity to impregnation. She did not say that this was exclusively for you. On the contrary she told me that she hopes to have children by each of us as quickly as possible; then she would at last feel fully in the family. Nevertheless I am certain that her decision was triggered by your arrival…so the rest of us will hang back and cheer while you plant the first one—our Tammy will like that"

My eyes suddenly filled with tears, but I kept my voice steady. "Lazarus, I don't think that's what Tamara wants. I think she just wants to be fully a member of the family—and so do *I!*"

"Well…perhaps so. In any case Ishtar keeps the genetic answers to herself. Maybe we'll line up all the gals and see what a new rooster can do. End of restricted conference, Teena."

"Sure thing, Buddy Boy. And a hundred years from now you can line up all the men for *me.* Betcha I can whip 'em!"

"You probably can, dear."

VARIATIONS ON A THEME
XVI

Eros

Minerva said, "Lazarus, will you walk with me? Outside?"

"I will if you'll smile."

She smiled briefly. "None of us feels much like smiling today. But I'll try."

"Confound it, dear, you know I won't be gone any time to speak of, by this framework. Just like the calibrating hop the twins and I made."

"Yes, dear. Shall we go?"

He patted her little skirt. "Thought so. Where's your gun?"

"Must I wear it? When you are with me? I will wear it without fail…while you are gone."

"Well— Bad precedent. All right." They paused in the foyer. Minerva said, "Athene dear, please tell Tamara I'll be back in time to help with dinner."

"Sure thing, Sis. Hold it— Tammy girl says she doesn't need help, so don't hurry."

"Thanks, Sister. And thank Tammy for me." They left the house, started up a gentle bill. Presently she said, "Tomor*row.*

"'Tomorrow,'" Lazarus repeated, "but don't make it sound like a dirge. I've told you all that, while this trip will be ten T-years elapsed time for me, it will be at most a few weeks for you at home—and even less for the twins. What is there to get solemn over?"

Instead of answering, she said, "How long will I live?"

"Eh? Minerva, what sort of question is *that?* Not too long if you neglect ordinary precautions such as going armed and staying alert. If you mean your life expectancy—well, if the geneticists know what they are talking about, you have exactly the expectancy I was born with and it doesn't matter that I'm a freak; I pass it on to you. But even if they are mistaken about that gene complex in the twelfth chromosome pair, there is no possible doubt that you are a Howard in every gene. So you're good for a couple of centuries without trying. But with a willingness to undergo rejuve every time you reach menopause, I couldn't guess how long you will last—they learn more about it every year. As long as you want to live, probably. How long is that?"

"I don't know, Lazarus."

"Then what's eating you, dear? Sorry you gave up being a computer for vulnerable flesh-and-blood?"

"Oh, no!"

Then she added, "But sometimes it hurts."

"Yes. Sometimes it does."

"Lazarus…if you are certain you are coming back why did you reorient Dora so that her affection is fixed on Lori and Lazi rather than on you?"

"Is *that* all that's troubling you? A routine precaution, that's all. Why did Ira make a new will when we set up our family? Why do we all have wills emplaced in Teena? My sisters will own the 'Dora' presently no matter what; they already run it. If anything *did* happen to me— Do you remember something you said years ago? You told Ira that you would self-destroy rather than serve another master."

"Is it likely that I would fail to carry over such a memory? That day led to this, by inevitable concatenation. Lazarus, I left behind much of my memories…but I traced and retraced in this Minerva every conversation that Minerva ever shared with you. Every word."

"Then you know why I won't risk hurting a computer who thinks she's little girl…and why I don't dare risk an emotional malfunction in a piloting computer somewhere out between the stars—when my sisters' lives depend on that computer. Minerva, I would have bonded Dora to Lori and Lazi just on Dora's account; she needs to love and be loved. But if I had neglected to do it as a safety precaution for the twins—well, a man who refuses to take his own death into account in making plans is a fool. A self-centered fool who does not love anyone."

"You are not that, Lazarus, you have never been that."

"Oh, yes, I have! It took me endless years to learn."

Again she let time pass before she spoke. "Lazarus…I have often wondered about Llita."

"'About Lilta'? *Huh?"*

"And about *her,* even more than about Llita. Do I really look like *her?"*

He stopped and stared at her. They were near the top of the hill now, out of sight of the house. "I don't know. How can I know? A thousand years— Memories fade and blend. I think you look like her. Yes, you do."

"Is that why you can't love me? Did I make a terrible mistake in *wanting* to look like her?"

"But darling…I *do* love you."

"You do? Lazarus, you have never shared this boon with me." Suddenly she unwrapped the little skirt, dropped it on the grass. "Look at me, Lazarus. I am *not* she. For your sake I wish I could be she. But I am not…and I made— I— I was a computer then and didn't know any better. I did not mean to hurt you, I did not *mean* to raise ghosts in your mind! Can you forgive me this?"

"Minerva! Stop, darling! There is nothing to forgive."

"Time is short, you are leaving. Can you truly forgive me? Will you put your child into me before you go?" Her eyes were welling tears, but she stared at him steadily. "I want your child, Lazarus. I will not ask twice…but I could not let you leave without asking. In my ignorance I made myself look like her—because you loved her—but *you could close your eyes!"*

"Beloved—"

"Yes, Lazarus?"

"Does Ira close his eyes? Refuse to see you?"

"No."

"Does Justin? Or Galahad? If you can stand my homely face, I surely can stand your lovely one—and, with any luck, she'll look more like you than me. Let's go back to the house."

Her face lit up. "What's wrong with this little stand of trees?"

"Mmm. Yes. Now."

VARIATIONS ON A THEME
XVII

Narcissus

"Let's run over it again, girls," said Lazarus. "Both the time markers and the rendezvous landmarks. Dora, can you see the globe?"

"I can if you'll keep your hands out of the way, Ol' Buddy Boy."

"Sorry, dear. Call me Lazarus; I'm not your brother."

"When Lazi and Lori made me their adopted sister, you got in free. Logical? Logical. Don't fight it, Buddy; you like it." "Okay, I like it, Sister Dora," agreed Lazarus. "Now shut up and let me talk."

"Aye, aye, Commodore," the pilot computer answered. "But I've got it all on tell-me-three-times. Not that I need those clumsy time markers—I'm calibrated, Buddy, calibrated."

"Dora, assume that something happens to that calibration."

"Can't. One bank goes out of whack, I fall back on tell-me-twice while I fall back on tell-me-twice while I wipe that bank and restore it."

"So? You've been euphoric ever since the twins adopted you. I taught you to be a pessimist, Dora. A pilot who is not a pessimist isn't worth a hoot."

"I'm sorry, Commodore. I'll shut up."

"Speak up if you have anything to say. But not to disparage safety precautions. It's my own precious skin I'm trying to protect, Dora, so please help me. I can think of a dozen ways your gizzards could be damaged, either by error or by natural catastrophe—and so can you but there is no point in worrying. But there *is* point in trying to anticipate what can be done about it.

"Take a case in which you are working perfectly but the twins can't use you. By schedule, after you drop me, you all go back to base-time framework and to New Rome and the twins inquire for Delay Mail at the Archives. Who knows?— there may be some waiting there right now."

"Brother," put in Lorelei, "'now' doesn't mean anything. We've been in irrelevant phase ever since we lifted off."

"Don't quibble, dear. The 'now' I mean is 2072 Diaspora, or 4291

Gregorian, your adulthood year. If it is."

"Laz, did you hear that?"

"You asked for it, Lor. Pipe down and let Brother talk."

"The trouble is with the words themselves, Lorelei. You gals—you three gals—might spend part of the reach to Earth in inventing new language and appropriate syntax for spacetime travel. But this imaginary case— You ground on Secundus, go to the Archives, and ask if any Delay Mail has been unsealed that has your name on it. Or Justin's, or Ira's. Or even addressed to *me,* as Lazarus Long, or as Woodrow Wilson Smith. I may try several ways, as I'll be attempting it from a 'now' some centuries before Delay Mail became a routine way to preserve papers.

"So you pick up whatever there is and go back to the 'Dora'—and find her lock sealed and a sheriff guarding it. Confiscated."

"What!"

"Dora, please don't yell in my ear. This is a hypothetical case."

"That sheriff had better be able to shoot straight," Lapis Lazuli said grimly.

Her brother answered, "Lazi, you've heard me say nine thousand and nineteen times that we do *not* carry weapons to give us Dutch courage. If a gun makes you feel three meters tall and invulnerable, you had better go unarmed and let your sister do any shooting that's necessary. Now tell me why you don't shoot at the sheriff."

"Yes!" said Dora. "I want to be rescued!"

"Quiet, Dora. Laz?"

"Uh…we don't shoot cops. Ever."

"Not quite. We don't shoot cops if there is any way to avoid it. Safer to kiss a rattlesnake. In two thousand years and some I've always found a way to avoid it—although I did shoot kind o' close to one once, to divert his attention. Unique circumstances. But in this hypothetical case shooting one cop is worse than useless; the Chairman Pro Tem has confiscated your ship."

"Help," Dora whispered.

"Why, Madam Barstow would *never* do anything that nasty!"

"I didn't say it was Susan Barstow. But Arabelle, had she lasted, would have enjoyed pulling that sort of stunt on the Longs. Let's say Susan has dropped dead and the new CPT is as bad as Arabelle. No ship and no assets—what do you *do?* Remember, I'm depending on you—or I'm stuck back in the Dark Ages. What do you do?"

"'When in danger or doubt—…Run in circles, scream and shout,'" recited Dora.

"Oh, stop it, Dora," said Lapis Lazuli. "We don't panic, that's certain. We have ten years in which to figure out a— Hey! - Wait a moment; I'm using the wrong framework. We could take a hundred years if necessary. Or longer."

"A hundred years is plenty," said Lorelei. "In less time than that we can steal another ship."

"Thank *big,"* advised Lazarus. "Steal the Pleiades. Far better not to steal anything, Lor."

"You stole a starship once."

"Because there was no time to do anything else. But with plenty of time at your disposal, it's better to be reasonably honest—not break rules you can get caught breaking. Money is the universal weapon; to acquire it merely takes time and ingenuity, and sometimes work. Raise enough money and you might be able to buy the 'Dora' back. If that's impossible, with much less money you could get to Tertius, where Ira and the family could find some way to lay hands on a starship. Then you could program it with the stuff Dora left in Athene—and come get me."

"Isn't *anybody* going to come rescue *me?"*

"Dora dear, this hasn't happened, and it's extremely unlikely to happen. But if it did and the twins weren't able to rescue you—say that your new owner has you halfway across the Galaxy—"

"I'll crash him the first time he tries to land!"

"Dora, stop being a nitwit. If we ever did lose you—most unlikely —and the twins could not rescue you but *could* rescue me—then if you've taken care of yourself, no crash landing or any other foolishness—we'll find you, we'll get you back. All three of us. No matter how many years it takes. Laz? Lori?"

"You bet! 'One for all, all for one!' And it's not just us-four, Dora; it's the whole family—all the adults, all nine kids—might be more by then—and Athene. Brother, when Ira moved that we *all* take the last name of 'Long,' I liked it so much I couldn't cry hard enough. Sis, you're 'Dora Long'— and the Longs don't let each other-down!"

"I feel better," the computer admitted, with a sniffle.

"You never had anything to feel bad about, Dora," Lazarus continued. "You started this by insisting that my precautions were unnecessary. So I dreamed up a situation in which they would *be* necessary…especially so if the twins could not get at the programs you left with Athene—in which case they might have to fall back on time markers and recalibrate. So I had 'em stuck on another planet and flat broke…so the first problem is to lay hands on money. Think you could do it, girls? In a hundred years? Without being caught in something that would put you in still more of a jam?"

The twins glanced at each other. "Lor?"

"Of course, Laz. Brother, that's when we open our hook shop over a pool hall. Or somewhere."

Lazarus said, "I don't think you two have the true vocation. And your noses are regrettably like mine. Homely, that is."

"Our noses are an asset—"

"—because they *do* make us look like you—"

"—so what is common gossip by now but unbelievable—"

"—becomes quite believable once a client gets a look at us—"

"—and aside from noses, we look pretty good—"

"—'built like brick outhouses,' you told us—"

"—and natural redheads, which Tammy says is cash in the bank—"

"—and looking just alike but we can give 'em variety—"

"—just by one of us not using a depilatory—"

"—which will make us a *great* sister act at very high prices; Maggie said so—"

"—and if you think being horny isn't enough true vocation—"

"—which may be true and we concede that we'll never be the great artist Tammy is, nevertheless—"

"—New Rome is going to be *amazed* at how *intense* our vocation is —"

"—when our brother's safety is at stake!"

Lazarus took a deep breath. "Thank you, darlings. While you'll probably take a fling at it someday, I hope that you won't need to do it to rescue me. I'm counting more on your mathematical ability and your skill as shiphandlers than I am on your undeniable physical and spiritual beauty."

"Did you hear that, Lor? That time he added 'spiritual."

"I think he meant it."

"I hope so. It's even nicer than being told we have fits as pretty as Minerva's. Which we don't, quite."

"Yes, you do," their brother said absently. "Let's get back to landmarks and such."

"I think you ought to kiss them," said Dora.

"Later. Now look, kids, prime rendezvous, exactly ten T-years after you drop me—although you drop Andy s body first. How? Laz or Lor —not Dora. Of course you know all this, Dora; this review is for flesh-and-bloods. Fallible. Laz?"

"Have Dora unfreeze him and bring his body up almost to cremation temperature and put him into atmosphere on a long slant just under orbital speed so that it will burn up, or almost, before it hits…and figure the ballistic to hit the mountains in case he's not quite burned up—because we don't want to hurt anybody."

"What mountains and how do you find them? Lor?"

"These right here. Prime landmark, this big river that drains the central valley. Where this other big river comes in from the, west is our north landmark, the gulf they wind up in is the south landmark—

no landmark on the west Arkansas is about the middle of that bracket. The Ozark Mountains are the only mountains in the bracket—but shoot for the south side of the mountains, this escarpment; the north side is not Arkansas. Brother, why does that matter?"

"Sentiment, Lorelei. As far as Andy traveled and as little time as he spent on Earth, he was always homesick for his borning place. The only song he knew was one with a refrain of 'Arkansaw, Arkansaw I adore thee!' I used to get sick of it. But I promised him I would take his body back to Arkansas and it seemed to comfort him when he died—so we'll do it. Who knows? Maybe the sweet little guy will know it…and it's worth the trouble to carry out his last wishes. Prime rendezvous landmarks?"

"This big canyon," answered Lapis Lazuli. "Follow it to the east and drop south—this round black dot. A meteor impact crater. No dependable landmarks visible from orbit and good any century but this canyon—biggest on Earth. So we memorize the spatial relationship between canyon and crater so that we can spot it from any angle. If the light is right."

Dora said, "I'm sure I can see it in pitch-darkness."

"Dora honey, this drill is based on the pessimistic assumption that Ellandell might have to find it *without* your help. I want them to know the geography of Terra so well that they won't have to ground and look for a road sign. No close approaches to the ground *at* all—except to put me down and pick me up. I don't want to start a flying-saucer scare; I don't want to attract *any* attention—some yokel might take a shot at me. It's unfortunate that this ship *is* shaped such that 'flying saucer' isn't too bad a description."

"What's the matter with the way I look?" demanded Dora. "I look pretty damn good!"

"Dear, you're built like a brick outhouse—for a starship. You're beautiful. It's simply that unidentified flying objects— oofohs—were also called 'flying saucers.' I don't believe in paradoxes…but I don't want any attention."

"Brother, maybe we *are* one of those oofohs you told us about."

"Huh? Could be, I suppose. If so, let's not get shot at. I want a quiet trip. If everything goes well, we can talk about letting one of you get on the ground with me next trip though durned if I don't think a stacked redhead is more conspicuous than an unidentified flying object. Okay, the crater. I intend to be there, before sundown and after sunrise, from minus ten days to plus ten days at plus ten years. If I'm not there, what do you do?"

Lapis Lazuli answered, "Look for you half a T-year later on top of the biggest pyramid at Gizeh—that's *here*—at midnight…only this time we scan for you minus thirty days through plus thirty because you aren't certain when you can get there and may be able to manage it only once—bribes and things. Brother, do we go out half a lightyear and reenter the time axis? Or stay in orbit and wait?"

"That's up to you,, I won't use the Egyptian rendezvous unless I've pulled some goof that makes it unhealthy for me to meet you in Arizona. If I miss both dates, what do you do? Lori?"

"Look for you again both places at eleven years and eleven and a half years."

"Then what?"

Lorelei glanced at her sister. "Brother, this part we don't go along with—"

"—and that goes for Dora, too—"

"It sure does!"

"—because we *won't* assume that you're dead—"

"—no matter how many times you miss rendezvous—"

"—so we start checking *both* spots day after day—"

"—and night after night—"

"—and over nine hours' local time difference means some weird partial orbits to check sunrise and sundown in Arizona and still check midnights in Egypt—"

"—but Dora can do it—"

"You bet I can!"

"—and we'll keep looking for you day after day—"

"—and year after year—"

"—until you *do* show up. Sir."

"Captain Lorelei, if I miss four rendezvous dates, I'm dead. You must assume that. Shall I put it in writing?"

"Commodore Long, if you're dead, you can't give orders. That's logical."

"If you assume that I am *not* dead, then my orders still apply…and you must give up the search. By the same logic."

"Sir, if you are out of the ship and out of touch, then you are hardly in a position to give *any* orders. But if you want to be picked up, there will be daily service from drop time plus eleven-and-one-half T-years on—"

"—and on and on and on, because that's what we promised the family—"

"—even though we'll have to run home occasionally for rejuvenation—"

"—and to have babies, but neither of those will take *any* time in that time framework…as you pointed out in another connection."

"Mutiny."

The twins glanced at each other. "I'll take it, Laz; I have to—odd-numbered day. Commodore, as you taught us before you ever let either of us take command in space, a commodore is actually a passenger because a ship's master cannot give up even a little bit of her total responsibility. So 'mutiny' is not a word that can apply."

Lazarus sighed. "I've raised a couple of blinkin' space lawyers."

"Brother, that's what you taught us. You *did."*

"Okay, I did. You win the argument. But it's silly to talk about checking every day for year after year indefinitely. I've never seen the prison I couldn't escape from in less than a year—and I've been in quite a number. Maybe I should cancel the whole caper—no, no, I won't argue it! Now about time markers, if something forces you to recalibrate: Simple enough to ground and find out the exact Gregorian date, but that's exactly what I *don't* want you to do…because neither of you has any experience in coping with strange cultures—and you would get in trouble and I wouldn't be around to get you out."

"Brother, do you think we are that stupid?"

"No, Laz, I do *not* think you are stupid. You each have exactly the brain potential I started with—and I'm not stupid or I would not have lived so long. Furthermore, you each have enormously better educations than I had at your age. But, darlings, these are the *Dark Ages* we're talking about. You two have been brought up to expect rational treatment which you wouldn't receive. I don't dare let you put foot to ground in that era, even with me at your side, until after I have coached you endlessly in how to be consistently irrational in what you do and say. Truly."

Lazarus continued, "Never mind, you have two ways to read the clock from space. One is the Libby method, tedious but workable, by reading positions of the Solar System's planets. The trouble with that one is that, unless you spend one devilish long time on difficult observations, you can mistake a configuration for one almost like it—but several thousand years earlier or later.

"So we use what time marks we can find on the surface of Terra herself. The radioactive dating of that impact crater is probably close-but in any case, if the crater is missing, you're too early by some centuries. The dates for the building of the Great Wall of China are quite good, same for the Egyptian pyramids. The dates for the Suez Canal and the Panama Canal are exact—so, unfortunately, is the date of the destruction of Europe—but don't try to watch it! Keep your screens up and get out fast; that is a year when a strange spaceship would be shot out of the sky if you were careless enough to be vulnerable. In fact, if any time marker on this list shows that you are later than 1940 Gregorian, get out at once!—and shoot for an earlier date.

"That's enough for now; it's getting toward bedtime by my sort of time, irrelevant though it may be to anything outside this ship. I want you to study all this stuff until you can recite it in your sleep, dates and what you look for and how to find it—even if you don't have a Terra globe to look at. Anybody think she can beat me at crib? Don't all speak at once."

"I can," said Dora, "if you promise not to cheat on the shuffle."

"Later, Dora," said Captain Lorelei. "Now we tell him." "Oh! All right, I'll be very quiet."

"Tell me *what?"* demanded Lazarus.

"That it's time for you to impregnate us, Lazarus."

"Both of us," agreed Lapis Lazuli.

Lazarus counted ten chimpanzees in his mind—then ten more. *"Absolutely out of the question!"*

They glanced at each other. Lorelei said:

"We knew you would say that—"

"—but the only question is whether you do it sweet and friendly like—"

"—or we tell Ish you said No and she does it for us—your sperm—from the sperm bank—"

"—but we'd be much happier if our beloved brother, who has always been good to us—"

"—but is now going to go get his ass shot off in the Dark Ages—"

"—were to drop his silly prejudices *just once—"*

"—and treat us as biologically mature females—"

"—instead of the children we used to be—"

"—Ira and Galahad and Justin don't treat us as children—"

"—but *you* do and it's not just humiliating; it's downright heartbreaking when we may never see you again—"

"—when you didn't make any real fuss about knocking up Minerva —"

"—not to mention Tammy and Hamadarling and Ish—"

"Stop it!"

They stopped.

"I concede a remote possibility with respect to three of them, although mathematically most unlikely."

Lorelei said quietly, "Mathematically extremely likely, Lazarus, because we were all in on it. Justin and Ira and Galahad hung back at the right times just the way they insured that Minerva's first baby was Ira's and Tammy's first was Justin's. But if it did not work out—for any one of *four,* not 'three'—then Ishtar will correct it from the sperm bank."

"I'm not *in* the sperm bank!"

The girls exchanged glances. Lapis Lazuli said, "Want to bet?"

The computer said, "It's a sucker bet, Buddy."

Lazarus looked thoughtful. "Unless Ishtar tricked me almost twenty years back. When I was her rejuve client."

Lorelei said quietly, "I suppose she could have, Lazarus. But she did not, that I know of—and this is fresh sperm. Frozen not more than a year ago, any of it. After the day you announced a date for this trip."

"Impossible."

"Better not say 'Impossible.' What is the perfect container for keeping sperm fresh and alive until a technician can bank it?"

Lazarus looked very thoughtful. "Well…I'll…be *damned!"*

"Correct, Brother. Place a woman around it. You were being oh so careful to pick your bedmates by their cycles so that you wouldn't leave any babies behind; and they were being oh so careful to see Ish or Galahad as soon as you fell asleep…as well as fudging calendars, too. The point is, beloved brother of ours, you don't *own* your genes—nobody does. We've heard you say so, in discussing how Minerva was constructed. Genes belong to the *race;* they're simply lent to the individual for his-her lifetime. And *all* of us—knowing you were going to try this reckless thing—decided that, while you were free to throw away your life, you weren't free to waste a unique gene pattern."

Lazarus changed the subject. "Why do you say 'four'?'

Lorelei answered, "Brother, are you ashamed of Minerva? I do not believe it. Nor does Laz"

"Uh— No, I'm not ashamed of her, I'm proud of her! Damn it, you two have always been able to get me mixed up. I simply did not know that she had told anyone. I have not."

The other twin said, "Who would she turn to but us?"

"You mean 'To whom would she turn.'"

"Damn it, Brother, this is a hell of a time to be correcting our grammar! Minerva turned to us for advice—and comfort!

—because we're in the same difficult position with respect to you that she is. That she *was,* I mean, for she came out of the bushes looking as smug as a cat. You made her happy—"

"—when she had been crying her eyes out—"

"—and she'll stay happy now, even if she missed catching—"

"—because once is enough for a symbol and if she missed—"

"Ish will fix it—"

"—and of course we knew about it when you finally quit dithering and did what you should have done for her years ago—"

"—because we helped rig it so that she could get you alone and twist your arm—"

"—and told her that if tears weren't enough, to chuck in some chin quivering—"

"—and it worked and she's happy—"

"—but *we're* not so damned happy, not at all, but we won't cry at you—"

"—or quiver our chins; that's childish. If you won't do it simply because you love us—"

"—then the hell with it and we probably won't even fall back on the sperm bank. Instead—"

"—it might be better to have Ish sterilize us—"

"—permanently—not just offset fertility temporarily—"

"—and quit being females, since we're failures at it—"

"STOP IT! If you're not going to cry at me, what are all those tears for?"

Lapis Lazuli said with quiet dignity, "Those aren't weeping tears, Brother; they come from sheer exasperation. Come on, Lor; we've swung and we've missed—let's go to bed."

"Coming, Sister."

"If the Commodore will excuse us?"

"He damn well won't! Sit back down. Girls, can we talk about this quietly without you two whipsawing me?"

The two young women sat back down. Captain Lorelei glanced at her sister and said, "Laz agrees that I will speak for us both. No whipsawing."

Lazarus said thoughtfully, "Do you two run your brains in tandem or in parallel?"

"I do not think that is relevant to the discussion."

'Just scientific interest. If you could teach me how to do it, we three might make quite a team."

"That can be only conjectural, Lazarus…since you reject us."

"Damn it, girls—I have *not* rejected you, I will *never* reject you."

They said nothing; he went on, uncomfortably: "There are two aspects to this; one is genetic, the other is emotional. Genetic— We three are a weird case; male and female, yet quasi-identicals. More than quasi—fortyfive forty-sixths to be exact. Which makes the probability of bad reinforcement far greater than it is for ordinary siblings. - But besides that, we are Howards only by courtesy, as our genes have not undergone some twenty-four centuries of systematic culling. I'm so close to the head of the column that there was no culling at all; my four grandparents were among the first selectees, so when I was born in Gregorian 1912, I had behind me no inbreeding, no culling out, no cleaning of the gene pool. And you dears are in the same predicament as even that forty-sixth chromosome comes from me, since it replicates my forty-fifth. Yet you two seem willing to accept this high risk of reinforcement."

He paused. There was no comment. He shrugged and went on: "The emotional objection comes only from me; you two don't seem to have it…reasonable, I suppose, since the concept it is based on—from the Old Testament—has been replaced by the concept of following the advice of Families' geneticists. I'm not arguing with the wisdom of that; I agree with it—since they say No to a couple of unrelated strangers just as readily as to siblings if the gene charts give 'No' as the answer. But I was talking about feelings, not science. I don't suppose any but scholars read the Old Testament anymore, but the culture I was brought up in was *soaked* in its attitudes—'Bible Belt,' you've heard me call it that. Girls, it is hard to shake off any taboos a child is indoctrinated with in his earliest years. Even if he learns later that they are nonsense.

"I tried to do better with you two. I've had time enough to sort out my taboos and my prejudices from what I really know, and I tried—I tried very hard!—not to inflict on you two any of the irrational nonsense that was fed to me under the pretext of 'educating' me.

"Apparently I succeeded, or we would never have reached this impasse. But there it is— You two are modern young women…but, though we share the same genes, I am an old savage from a very murky time." He sighed. "I'm sorry."

Lorelei looked at her sister; they both stood up. "Sir, may we be excused?"

"Huh? No rebuttal?"

"Sir, an emotional argument permits no refutation. As for the rest, why should we weary you with arguments when your mind is made up?"

"Well…perhaps you're right. But you listened courteously to me. I want to pay you the same respect."

"It is not necessary, sir." Her eyes and those of her sister were welling with tears; they ignored them. "We are sure of your respect, and—in your way—of your love. May we go?"

Before Lazarus could answer, the computer spoke up: "Hey! I want a piece of this!"

"*Dora!"* Lorelei rebuked.

"Don't give me that, Lor. I'm not going to stay politely quiet while my family make fools of themselves. Buddy Boy, Lor didn't tell you about the whammy they considered pulling on you—and that *I* still can. And *will!"*

"Dora, we 'don't *want* that sort of help. Laz and I agreed on that."

"So you did. But you didn't ask *me* to vote on it. And I'm no lady and never was. Buddy Ol' Boy, you know it makes no difference to me who does what to whom; I couldn't care less—except that it's so funny to hear 'em squeal and grunt. But you're being *mean* to my sisters. Lor and Laz talked over the fact that you can't make this trip without their help and they rejected that gambit as being beneath their dignity or some such twaddle. But *I* don't have any dignity. Without *my* help *nobody* makes a time trip. Shucks, if I go on strike, *you can't even get* *back to Tertius.* Now can you?”

Lazarus looked wryly surprised, then grinned. “Mutiny again. Dorable, I concede your point; you can keep us out here—wherever ‘here’ is—until we starve. I suspected centuries back that a flesh-and-blood might someday find himself in just such a helpless position. But, dear, I won’t let your threats affect my decision. You can keep me from time-tripping—but I doubt if you will let Lor and Laz starve. You’ll take them home.”

“Oh, hell, Pappy—you’re being mean again. You’re a real whirling son of bitch! Do you know it?”

“Guilty on both counts, Dora,” Lazarus admitted.

“And Lor and Laz are being stupidly bullheaded. Lor, he politely offered you a chance to speak your piece…and you turned him down. Stubborn bitch.”

“Dora, behave yourself.”

“Whuffor? When you three don’t. Blow your noses and sit down and give Buddy the straight tell. He’s entitled to it.”

“Perhaps you had better,” Lazarus said gently. “Sit down, girls, and talk with me. Dora? Keep her steady between the hawsepipes, baby girl—and we’ll get her into port yet.”

“Aye, aye, Commodore! But you get those two silly bitches straightened out. Huh?”

“I’ll try. Who’s the spokesman this time? Laz?”

“It doesn’t matter,” answered Lapis Lazuli. “I’ll talk for us. Don’t worry about Dora. When she realizes that we are content to accept your decision, she’ll stop being difficult.”

“Oh, you think so, do you? Shape up, Laz—or we’ll be back in Boondock faster than you can say ‘Libby pseudoinfinities.’”

“Please, Dora, let me tell Brother.”

“Just be sure you tell him *everything*…or I’ll tell him about things that went on in here a full year before he said you were old enough.”

Lazarus blinked and looked interested. “Well, well! Did you kids steal a march on me?”

“Well, Mama Ishtar told us we were old enough. You were the one being stuffy about it.”

“Mmm…stipulated. Someday I must tell you about something that happened to me at an early age in a church belfry.”

“I’m sure we’d like to hear it, Brother—but do you want to hear us now?”

“Yes. Dora and I will keep quiet.”

“Let me say in preface that we are not going to ask Ishtar to thwart your wishes by using the sperm bank. But there are other possibilities to which you can hardly object. Consider how we were born. I could easily bear an implanted clone from my own tissue, and so could Lor

—although we might swap clones…for reasons purely sentimental since we have identical genes. Do you see anything wrong with that? Genetically, or emotionally? Or otherwise?"

"Mmm…no. Unusual—but your business."

"Just as easy—since Ishtar still has living tissue of yours in vitro—is to clone *you* . . and Lorelei and I would bear identical twins—both of them 'Lazarus Long' in every gene lacking only your long experience. Would you find that offensive?"

"Eh? Now wait a minute! Let me think."

"Let me add that we regard this as a last resort…if you are dead. If you don't come back."

"Don't start sniffling again! Uh, if I'm dead, I don't have much vote in it, do I?"

"No, because if *we* did not do it, then Ishtar would plant your clone in one of the others—or in herself, with Galahad's help. But if Lorelei Lee and I do it…we would *much* rather do it with your blessing."

"Mm…stipulated that I'm dead—well, okay, okay, it's with my blessing. Just one thing—"

"What, Brother?"

"Crack down on the little beast. Or 'beasts.' I was a mean one. You two were handful enough for six—but I was *ornery.* If you don't establish who's boss right from the cradle—he— they—I, damn it—'I' will give you so much grief your lives won't be worth living."

"We'll try to cope with…'you,' Lazarus—and we have the advantage of knowing what a, uh, 'real whirling son of bitch' you can be."

"Ouch! Am I bleeding?"

"You led with your chin, Brother. The truth is, you spoiled us…and we may find it hard not to spoil *you.* But we'll bear in mind your advice. But we want to say this before we leave the subject of genetics. You've had how many children?"

"Uh…too many, maybe."

"You know exactly how many and so do we…and it's a number large enough to be inspected as a statistical universe. How many were defectives?"

"Uh…none that I know of."

"Exactly none. Ishtar made it her business to know, and Justin confirms it from his study of the Archives. Brother, I don't know how uncommon this may have been in the twentieth Gregorian century…but you have a clean gene chart—and so of course do we."

"Now wait a minute! I'm not really up to date in genetics, but—"

"—but Ishtar *is.* Do you want to argue it with her? We accept her assurances; Lor and I aren't geneticists—as yet. But we have, recorded in Dora, Ishtar's formal report on your gene chart. If you want it. Not that we think it makes any difference; you are rejecting us for reasons having nothing to do with genetics."

"Now slow down! I am *not* rejecting you."

"That's the way it feels to us. We are artificial constructs, and the soidisant 'incest' mores of another time and utterly different circumstances don't apply to us and you know it; that's just an excuse to avoid something you don't *want* to do. Coupling with us might be masturbation, but it *can't* be incest because we *aren't* your sisters. We aren't your kin in *any* normal sense; we're *you.* Every gene of us comes from *you.* If we love you—and we do—and if you love us—and you do, some, in your own chinchy and cautious fashion—it's Narcissus loving himself. But this time, if you could only see it, that Narcissist love could be consummated." She stopped, and gulped. "That's all. Come on, Lor; let's go to bed."

"Hold it, girls! Laz, Ishtar says this is safe?"—

"You heard me say so. But you don't want to do it—so the *hell* with it!"

"I never at any time said that I did not *want* to. Why do you think I quit cuddling you two lively little monkeys when you started being grown up?"

"Oh, *Buddy!"*

"Because I must be Narcissus himself…because I think my two identicals are the prettiest, sexiest—and bitchiest— broads I've ever seen."

"Do you? Do you *really?"*

"You-heard me. Quit quivering your goddamn chins! So when you started getting broad, I started keeping my hands off you. But—if Ishtar says it's all right—"

"She does!"

"I suppose—this once—I could manage a couple of minutes for each of you."

Lorelei gasped. "Did you hear that, Laz?"

"I heard it. 'Two minutes.'"

"Rude, crude, and vulgar."

"Insulting."

"Infuriating."

"But we accept—"

"—right *now!"*

I

The Green Hills

The Star Yacht *Dora* hovered two meters over the pasture, the lower hatch irised open. Lazarus gave Lazi and Lori a last quick squeeze and dropped to the ground—rolled with the impact, rolled to his feet, hurriedly got clear of the ship's field. He waved, and the ship lifted, straight up, a round black cloud against the stars. Then it was gone.

He looked quickly around him—Dipper…North Star okay, fence that way, road beyond, and—Caesar's Ghost!— a *bull!"*

He cleared, the fence with inches to spare, a few feet ahead of the bull.

Lazarus was moving so fast that his speed made necessary another rolling landing. He wound up in the middle of a rutted dirt road while reflecting that many more of that sort would not improve his appearance. He patted his pockets, especially an extra pocket concealed by the bib of his overalls, and decided that nothing was missing. He missed the comfort of a blaster on his hip—but knew that any sort of gun would be a mistake, for this time and place. A facsimile jackknife was all he carried.

His hat— The ditch? No. Ten feet inside the fence which might as well be ten miles; the bull was keeping an eye on him. A hat was not necessary, and if anyone found it and noticed that it was not quite right—well, there was nothing to connect it with him. Forget it.

North Star again— That town should be about five miles down this road, straight as the turtle flies. He set out.

Lazarus stood in front of the printshop of the Dade County *Democrat,* looking at sheets posted inside the glass, but not reading. He was thinking. He had just had a shock, and the pretense of continuing to read posted newspapers let him do so in quiet. He had read a date and now needed to reconstruct some ancient history. August first, nineteen-sixteen—nineteen *sixteen?*

He saw reflected in the glass a figure coming down the sidewalk—heavyset, middle-aged, wearing a gun belt almost concealed by belly overflowing it, a holstered hogleg on his right thigh, star on his left breast, otherwise dressed much as Lazarus was dressed. Lazarus continued to stare at a posted front page of the Kansas City *Journal.*

"Morning."

Lazarus turned. "Good morning…Chief."

"Just the constable, Son. Stranger hereabouts?"

"Yes."

"Passing through? Or staying with someone?"

"Passing through. Unless I find work."

"That's a good answer. What trade do you follow?"

"I was raised on a farm. But I'm an all-around mechanic. Or anything, for an honest dollar."

"Well, I tell you. Not many farmers taking on hands right now As for anything else, things are slow in the summertime. Mmm, you wouldn't be one of them IWW's, would you?"

"IW' what?"

"A Wobbly, son—don't you read the papers? This is a friendly community, always glad to have visitors. But not that sort." The local law raised one hand to wipe away sweat and gave a lodge recognition sign. Lazarus knew how to answer it—and decided not to. Where was his home lodge?—that's a good question, Officer, so let's not let it come up.

The constable went on, "Well, since you're not one, you're welcome to ask around and see if somebody needs help." He looked at the front page Lazarus had been pretending to read. "Terrible what those U-boats are doing, isn't it?"

Lazarus agreed that it was.

"Still," the officer added, "if people stayed home and minded their own business, it wouldn't happen. Live and let live, I always say. What church do you attend?"

"Well, my folks are Presbyterians."

"So? Meaning you haven't attended lately. Well, sometimes I miss myself, when the fish are biting. But— See that church up the street? The belfry through the elms. If you *do* find work, why, come Sunday, ten o'clock, let me extend you the right hand of fellowship there. Methodist Episcopal, but there ain't all that much difference. This is a tolerant community."

"Thank you, sir; I'll be there."

"Good. Very tolerant. Mostly Methodists and Baptists—but a few Jack Mormons on farms around here. Good neighbors, they always pay their bills. A few Cath-a-licks and nobody holds it against them. Why, we've even got a Jew."

"Sounds like a good town."

"It is. Local option and clean living. Just one thing— If you don't find work— About half a mile beyond the church you'll find a city-limits sign. If you're unemployed and have no local address, it's best to be on the other side of it come sundown."

"I see."

"Or I would have to run you in. No hard feelings; that's just the way it is. No tramps or niggers after sundown. I don't make the rules, Son; I just enforce them—and that's how Judge Marstellar defines a tramp. Some of our good ladies have been pushing him—things stolen off clotheslines and the like. So its ten dollars or ten days…which isn't too bad, as the lockup is right in my house. The food's not fancy as I'm allowed only forty cents a day to board a prisoner—though for fifty cents more you can eat what we do. No intention of making things hard, you understand—it's just that the Judge and the Mayor aim to keep this a quiet, law-abiding place."

"I understand. Certainly no hard feelings…because you won't have occasion to lock me up."

"Glad to hear it. Any way I can help you, Son, just let me know."

"Thank you. Perhaps you can right now. Do you know of an outhouse a stranger might use? Or had I better try to hold it until I'm out of town and can find some bushes?"

The officer smiled. 'Oh, I think we can be that hospitable. The courthouse has a real citytype flush toilet—but it's not working. Let me think. Blacksmith down this way sometimes accommodates automobilists passing through. I'll walk down with you."

"That's mighty kind of you."

"Glad to. Better tell me your name."

"Ted Bronson."

The blacksmith was trimming a hoof on a young gelding. He looked up. "Hi, Deacon."

"Howdy, Tom. This young friend of mine, Ted Bronson, has a case of Kansas quickstep. Could he use your privy?"

The blacksmith looked Lazarus over. "Help yourself, Ted. Try not to go clear back to the harness section."

"Thank you, sir."

Lazarus followed the path behind the shop, was pleased to find that the privy had a door with no cracks and could be hooked from the inside. He got at the extra pocket hidden b the bib of his overalls, took out money.

Paper banknotes convincing in every detail; they were re stored replications of originals in the Museum of Ancient History in New Rome—"counterfeit" by definition but the restorations were so perfect that Lazarus would not hesitate to utter them in any bank—except for one thing: What *dates* did they carry?

He quickly shuffled the paper money into two packs: 1916 and earlier, and post-1916, then without hesitating or stopping to count, he shoved the usable banknotes into a pocket, tore page from the Montgomery Ward catalog in the cob box packaged the useless bills so that they would not be spotted as money, dropped the package into the cesspool. Then he go out coins still in that secret pocket, checked their dates.

He noted that most of them carried damning mint dates— these followed the paper money. He wasted a full second admiring a proof-perfect replica buffalo nickel—such a pretty thing! He gave sober thought, at least two seconds, to a massive twenty-dollar gold piece. Gold was gold; its value would not be diminished if he melted it down or pounded it into a shapeless lump. But it was a hazard until he could deface it, as the next town clown might not be as friendly as this one. Down it went.

He felt lighthearted then. "Queer" money was a serious offense here, good for a number of years in prisons unpleasant and difficult to escape from. But lack of money was a correctable nuisance. Lazarus had considered arriving with no money at all, then had compromised by taking enough for a few days, to let him look around, reorient, get used to the customs and the lingo again, before having to scratch for a living—he had never considered trying to fetch enough to last ten years.

Never mind, this was more fun—and good practice for the much harder job of tackling an era he had never known. Elizabethan England—that would be a *real* challenge.

He counted what he had left: three dollars and eighty-seven cents. Not bad.

The blacksmith said, "Thought you'd fallen in. Feel better?"

"Much better. Thanks a lot."

"Don't mention it. Deacon Ames says you claim to be a mechanic."

"I'm handy with tools."

"Ever work in a smithy?"

"Yes."

"Let me see your hands." Lazarus let his palms be inspected. The blacksmith said, "City feller."

Lazarus made no comment.

"Or maybe you got those soft hands in the cooler?"

"I suppose that could account for it. Thanks again for the use of your facilities."

"Wait a jiffy. Thirty cents an hour and you do what I tell you—and I may fire you after the first hour."

"Okay."

"Know anything about *automobeels?"*

"Some."

"See if you can get that Tin Lizzie moving." The smith jerked his head toward the far side of his shop.

Lazarus went outside, looked over the Ford Runabout he had noted there earlier. Its turtleback had been removed, and a wooden box had been fitted to convert it into a pickup truck. Its wheel spokes showed signs of muddy roads, but it appeared to be in fair condition. He removed the front seat, checked the gasoline with a dipstick he found there—half a tank. He checked the water, added some from the shop's pump, then opened the hood and inspected the engine.

The lead from magneto to coil box was not attached; he reconnected it.

He set the hand brake—decided that it was not very firm, so he blocked the wheels. Only then did he switch on ignition, open the throttle, and retard the spark.

He cautiously tucked his thumb by his fingers rather than around the crank—then brought the crank up high, pushed and spun it.

The motor racketed; the little car shook. He rushed to the driver's side of the car, reached in and advanced the spark three notches, and eased the throttle to idle.

The smith was watching. "All right, turn it off and come give me some wind on the forge." Neither of them mentioned the disconnected lead.

When the smith—Tom Heimenz—stopped to eat lunch, Lazarus walked two blocks to a grocery store he had passed, bought a quart of Grade-A raw milk—five cents, three cents deposit on the bottle—looked at a nickel loaf of bread, then decided to splurge on the big dime loaf; he had had no breakfast. He walked back to the blacksmith shop, and greatly enjoyed his lunch while he listened to Mr. Heimenz's opinions.

He was a Progressive-Republican, but this time time he was going to switch; Mr. Wilson had kept us out of war. "Not that he's done the country any good otherwise; the high cost of living is worse than ever—and besides that, he's pro-British. But that fool Hughes would have us in the European War overnight. It's a hard choice. I'd like to vote for La Follette, but they didn't have sense enough to nominate him. Germany's going to win, and he knows it—and we'd look pretty silly trying to pull England's chestnuts out of the fire."

Lazarus agreed solemnly.

Heimenz told "Ted" to show up at seven the next morning. But just before sundown, almost three dollars richer and his stomach well padded with sausage, cheese, and crackers, Lazarus was beyond the city-limits sign and moving west. He had nothing against the town or the blacksmith, but he had not risked this trip to spend ten years in a country town at thirty cents an hour. He intended to stir around, recapture the flavor of the time.

Besides, Heimenz had been too inquisitive. Lazarus had not minded the inspection of his hands or the suggestion that he might be fresh out of jail, and the disconnected wire was a standoff, but when Lazarus had parried a question about his accent with generalities the smith had tried to pin him down with just *where* in Indian Territory had he lived as a child and *when* did his folks come down from

Canada.

A larger community meant fewer personal questions and more opportunities to lay hands on more than thirty cents an hour without quite stealing it.

He had been walking an hour when he came across a stranded automobilist, an old country doctor plagued with a flat tire on a Maxwell. Lazarus dismounted a coal-oil sidelight and had the physician hold it while he patched the tube, replaced the tire and pumped it up, then refused a tip.

Dr. Chaddock said, “Red, do you know how to drive these gas buggies?” Lazarus admitted that he did.

“Well, son, since you’re headed west anyhow, what would you say to driving me to Lamar, then a shakedown on the couch in my waiting room, breakfast—and four bits to boot for your trouble?”

“I say Yes to all of it, Doctor—save that there’s no need to waste cash on me. I’m not broke.”

“Stuff and nonsense. Argue about it in the morning. I’m plumb tuckered out; this day started before daybreak. Used to be I’d wind the reins around the whip and nap until the mare got us home. But *these* things are stupid.”

After a breakfast of fried eggs, fried ham, fried potatoes, pancakes with sorghum and country butter, watermelon preserves, strawberry preserves, cream that would barely pour, and endless coffee saucered and blowed—the doctor’s housekeeper, his old-maid sister, had kept plying Lazarus, insisting that he wasn’t eating enough to keep a bird alive—he set out again, a dollar richer, much cleaner, and looking less like a hayseed, for spit and Shinola and elbow grease had improved the appearance of his shoes, and Miss Nettie had insisted on giving him some old clothes—”Might as well be you, Roderick, as the Salvation Army. Here, take this tie, too; Doc doesn’t wear it anymore. Look neat when you look for work, I always say—I do declare I won’t hardly open the screen door to give a man a handout if he don’t wear a necktie.”

He accepted it all, aware that she was right, aware also that Dr. Chaddock would have spent a bad night trying to sleep in his automobile while his sister worried had not Lazarus come along—accounts balanced. Miss Nettie made a neat bundle of his own clothes; he thanked her and promised to send them a postcard from Kansas City—then he abandoned the bundle in the first bushes he came to, feeling mild regret as those clothes would wear indefinitely despite the worn look built into them. But they were slightly anachronistic in cut and he had never expected to wear them longer than he had to—and a man on the road could not afford to look like a bindle stiff, which Miss Nettie probably didn't know.

He found the railroad but avoided the depot. He posted himself at the north edge of town and waited. A passenger train and a freight headed south went by; then about ten o'clock a freight showed up headed north and still slowly gathering speed; Lazarus swung aboard. He made no effort not to be seen and let the brakeman shake him down for a dollar—a replica dollar; his authentic dollars were now under a bandage on the inside of his left thigh.

The brakeman warned him that there might be a railroad dick at the next stop—don't give him more than a dollar—and there were Pinkertons in the K.C. yards if he was going that far…so don't: those beauties would take his dollar and work him over anyhow. Lazarus thanked him and thought about asking what line this was—the Missouri Pacific?—but decided that it did not matter; it was headed north, and the brakeman's advice let him know that it was going far enough to suit him.

After a long hot day, half of it in a gondola, half in an empty boxcar that was small improvement; Lazarus dropped off as the train passed through Swope Park. He was such a weary, dirty mess that he almost regretted not having bought a ticket. But he put it out of his thoughts, knowing that arriving in a city with no money could wind up as "thirty dollars or thirty days" instead of the milder tariff of a small town. As it was, he had almost six dollars, most of it "real" money.

He noted with delight that Swope Park looked familiar, despite the centuries. He hurried on through and found the end of the Swope Park streetcar line. While he waited for the infrequent weekday service, he paid a jitney for a triple-dip ice-cream cone and ate it with relish, peace in his soul. Another five cents and a long trolley ride with one transfer took him into downtown Kansas City. Lazarus enjoyed every minute and wished it were longer. How peaceful and clean and tree-shaded the city was! How gently bucolic!

He recalled another time he had visited his old hometown—what century?—sometime early in the Diaspora, he thought—when a citizen venturing out into its filthy canyon Streets wore a steel helmet simulating a wig, a bulletproof vest and codpiece, spectacles that were armor, gloves that covered brass knucks, and other concealed and illegal weapons—but rarely went out into the streets; it was more discreet to stick to transportation pods and go outdoors only in the guarded suburbs—especially after dark.

But here and now guns were legal—and no one wore them. He got off the streetcar at McGee, found the Y.M.C.A. by asking a policeman. There, for half a dollar, he was given a key to a small cubicle, a towel, and a small bar of soap.

After wallowing in a shower, Lazarus returned to the lobby, having noted both Bell and Home telephones at the desk, with a notice "Local Calls *5* cents—pay the Desk Clerk." He asked to use the telephone books, found it in the Bell System book:

"Chapman, Bowles, & Finnegan, attys at law"—R. A. Long Building, yes, that made sense. He searched again, found "Chapman Arthur J. atty," with a Paseo address.

Wait till tomorrow? No harm in seeing if Justin had the correct answers. He slid a nickel to the -desk clerk, asked for the Bell telephone.

"Number, please!"

"Central, please give me Atwater one-two-two-four."

"Hello? Is this the home of Mr. Arthur J. Chapman, the attorney?"

"This is he."

"Mr. Ira Howard told me to call you, Counselor."

"Interesting. Who are you?"

"'Life is short.'"

"'But the years are long,'" the lawyer answered.

"'Not "While the Evil Days come not."'"

"Very well. What can I do for you, sir? Trouble?"

"No, sir. Will you accept an envelope to be delivered to the secretary of the Foundation?"

"Yes. Can you bring it to my office?"

"Tomorrow morning, sir?"

"Say about nine thirty. I must be in court by ten."

"Thank you, sir; I'll be there. Good night."

"You are welcome. Good night to you, sir."

There was a writing desk in the lobby, with another notice to see the desk clerk, along with a homily: *"Have you Written to Your Mother This Week?"* Lazarus asked for a sheet of paper and an envelope, saying (truthfully) that he wanted to write home, The clerk gave them to him. "That's what we like to hear, Mr. Jenkins. Sure one sheet is enough?"

"If not, I'll ask for another. Thanks."

After breakfast (coffee and a doughnut, five cents) Lazarus located a stationery shop on Grand Avenue and invested fifteen cents in five envelopes that would nest in series, went back to the Y and prepared them, then delivered them by hand to Mr. Chapman—despite pursed-lip disapproval of Mr. Chapman's secretary.

The outer envelope read: Secretary of the Ira Howard Foundation.

The next one read: To the Secretary of the Howard Families' Association as of the year 2100 A.D.

The next one read: Please hold in the Families' Archives for One Thousand Years. Inert atmosphere recommended.

The fourth read: To be opened by the Chief Archivist in Office in Gregorian year 4291.

The fifth envelope read: Please deliver on request to Lazarus Long or to any member of his Tertius Colony family.

Inside this envelope was the envelope from the Y.M.C.A. enclosing the note Lazarus had written the night before; the —envelope had on it all the names of his Boondock family, with Lapis Lazuli and Lorelei Lee heading the list:

"4 August 1916 Greg,

"Darlings,

"I goofed. I arrived two days ago—three years early! But I still want you to pick me up exactly ten T-years after you dropped me, at the impact crater, *i.e.* 2 August 1926 *Gregorian.*

"Please assure Dora that this is *not her fault.* It is either mine, or Andy's—or perhaps the instruments we had available then were not sufficiently accurate. If Dora wants to recalibrate (not necessary, as exactly ten T-years from drop remains the rendezvous), tell her to get eclipses of Sol by Luna for this ten years from Athene— I haven't had time to look them up as I have just reached Kansas City.

"Everything is *absolutely all right.* I am in good health, have enough money, and am perfectly safe. I'll write other and longer letters—better preserved, no time to have this one etched—using all the mail drops Justin suggested.

"Kiss everyone for me. Long letter follows.

"My undying love,

"Ol' Buddy Boy

"P.S. I hope it's a boy and a girl—wouldn't that be fun!" -

DA CAPO

II

The End of an Era

25 September 1916 Greg.

Dear Laz-Lor,

This is the second of many letters I will attempt to send, using all the Delay Mail drops Justin suggested—three law firms, Chase National Bank, a time capsule to be forwarded with instructions to a Dr. Gordon Hardy via W. W. Smith via a safe-deposit box (unreliable coot, that Smith; he'll probably open it and thereby destroy it—although I don't recall it, either way), and all the other dodges I memorized, If I can get just *one* into the Archives just before the Diaspora, it should be delivered when you ask for it, late in Greg. 4291 by the schedule we worked out.

With luck, you will receive dozens of letters all at the same time. Arranged by dates, they should constitute a record of the, next ten years. There may be gaps in the account (letters that failed to get through)—if so, I'll fill those gaps (after you pick me up) by dictating to Athene, to keep my promise to Justin and to Galahad for a full report. Me, I'll be satisfied if just *one* gets through—and tell Athene to keep working on that notion of time-capsule-cum-Delay-Mail for still earlier centuries; there ought to be *some* way to make it foolproof.

I'll be using a wide variety of addressees—plus a wrinkle I thought up. I'm going to send a letter in the usual multiple covers to the Executive Computer, Secundus, Year 2000 Diaspora, to be opened by and read by the computer (untouched by human hands!) with a program to hold the message and deliver it to the Colony Leader, Tertius, the day *after* we left.

I don't believe in paradoxes. Either Minerva got that message before you were born, and filed it in dead storage, and passed it on to Athene, and now *(your* now) Ira has it and has passed it to you two—or it failed to get through at all. No anomaly, no paradox—either total successor total failure. I got the idea from the fact that the executive computer opens and reads and acts on endless written messages without referring them to the Chairman Pro Tern or to any human unless necessary.

Basic Message: (This was in my first note and will be in every letter.) I made an error in calibration and arrived three years early. This is *not* Dora's fault, and be sure to tell her I said so *before* you tell her what happened. Reassure her. Despite her tomboy rowdiness, she is *very* vulnerable and must not be hurt. If I had given her sufficiently accurate figures, she would have hit any split second I asked for; of this I am certain.

Basic rendezvous time and place remains ten (10) T-years after you dropped me and at meteor-impact crater in Arizona, other rendezvous times & places figured from basic as before.) My error changes the Gregorian date of rendezvous to 2 August 1926—but still ten T-years after drop, as planned.

If Dora will worry less if she finds the error in the data I gave her, here are time marks she can rely on: Gregorian dates of total eclipses by Luna of Sol with respect to Terra between Gregorian 2 Aug 1916 and 2 Aug 1926.

1918 June 81923 September 10
1919 May 291925 January 24
1922 September 211926 January 14

If Dora wants to be still fussier, she can get any ancient Solar System date from Athene she wants; the Great Library at New Rome perpetuated endless stuff of that sort. But Dora has in her own gizzards everything she really needs.

Recapitulation:

1.Pick me up ten T-years after you dropped me.

2.I'm three years early—my error, *not* Dora's.

3.I'm tine, healthy, safe, holding, miss my darlings, and send love to all of you.

Now the hairy & scary adventures of a time-traveler— To begin with, they have been neither hairy nor scary, I've been careful to attract no attention, as retiring as a mouse at a cat show. Whenever the locals rub blue mud in their navels, I rub blue mud in mine just as solemnly.

I agree with the politics of anyone who speaks to me, attend the church he does—while sheepishly admitting that I've missed lately—I listen instead of talking (difficult as you may find that to believe), and I never talk back. If someone tries to rob me, I will not kill him or even break his arms; I'll shut up and let him have all he can find on me. My fixed purpose is to be on the lip of that crater in Arizona ten years from now; I shan't let anything jeopardize keeping our date. I am not here to reform this world; I am simply revisiting the scenes of my childhood.

It has been easier than I expected. Accent gave me some trouble at first. But I listened and now speak as harsh a Cornbelt accent as I did as a youngster. It is amazing how things have come back. I confirm from experience the theory that childhood memories are permanent, even though one may "forget" them until restimulated. I left this city when I was younger than you two are; I have been on more than two hundred planets since then, I have forgotten most of them.

But I find that I *know* this city.

Some changes…but changes in the other entropy direction; I am now seeing it as it was when I was four T-years old. I *am* four years old elsewhere in this city. I have avoided that neighborhood and have not yet tried to see my first family—the idea makes me a bit uneasy. Oh, I shall, before I leave to travel around the country; I'm not afraid of being recognized by them. Impossible!

I look like a young man and much—I think—as I looked when I was in fact a young man. But no one *here* has ever seen what that four-year-old will look like when he grows up. My only hazard would lie in trying to tell the truth. Not that I would be believed—no one here believes even in space travel, much less time travel—but because I would risk being locked up as "crazy"—a nonscientific term meaning that the person to whom one applies that label has a world picture differing from the accepted one.

Kansas City in 1916— You put me down in a meadow; I climbed the fence and walked to the nearest town. No one noticed us—tell Dora that she did it slick as a pickpocket. The town was pleasant, the people friendly; I stayed a day to get reoriented, then moved on to a larger town, did the same there and got clothes to change me from a farm worker into someone who would not be conspicuous in a city. (You dears, who never wear clothes when you don't need them—except festive occasions—would have trouble believing how status here-&-now is shown by clothes. *Far* more so than in New Rome—here one can look at a person and tell age, sex, social status, economic status, probable occupation, approximate education, and many other things, just *by* clothing. These people even swim with clothes on—I am not farcing; ask Athene. My dears, they *sleep* in clothes.)

I took a railroad train to Kansas City. Ask Athene to display a picture of one from this era. This culture is prototechnical, just beginning to shift from human muscle power and animal power to generated power. Such as there is originates from burning natural fuels or from wind or waterfall. Some of this is converted into primitive electrical power, but this railroad train was propelled by burning coal to produce expanding steam.

Atomic power is not even a theory; it is a fancy of dreamers, taken less seriously than "Santa Claus." As for the method for moving the *Dora,* no one has the slightest notion that there is any way of grasping the fabric of spacetime. (I could be wrong. The many tales of UFO's and of strange visitors, throughout all ages, suggest that I am not the first time-tripper by thousands, or millions. But perhaps most of them are as reluctant to disturb the "native savages" as I am.)

On arrival in Kansas City I took lodging at a religious hilton. If you received my arrival note, it was on stationery bearing its emblem. (I hope that note is the last I will have to entrust to paper and ink—but it took time to arrange for photoreduction and etching. The technology and materials available here-&-now are very primitive, even when I have privacy to use other techniques.)

As a temporary base this religious hilton offers advantages. It is cheap, and I have not yet had time to acquire all the local money I will need. It is clean and safe compared with commercial hiltons costing the same. It is near the business district. It offers all that I now need and no more. And it is monastic.

"Monastic"? Don't look surprised, my loves. I expect to remain celibate throughout these ten years, while dreaming happy fantasies of all my darlings, so many years & lightyears away.

Why? The local mores— Here the coupling of male and female is *forbidden by law* unless specifically licensed by the state in a binding monogamy with endless legal, social, and economic consequences.

Such laws are made to be broken—and are. About three squares or a few hundred meters from this monastic hilton, the "Y.M.C.A.," starts the "red-light" district, an area devoted to illicit but tolerated female prostitution— and the fees are low. No, I am not too lazy to walk that far; I've talked to some of these women—they "walk a beat" offering their services to men on the street. But, my dears, these women are *not* recognized artists, proud of their great vocation. Oh, dear, no! They are pathetic drabs, furtive and ashamed. They are at the bottom of the social pyramid, and many (most?) are in thrall to males who take their meager earnings.

I do not think there is a Tamara, or even a pseudoTamara, in all of Kansas City. Outside the 'red-light' district there are younger and prettier women available for higher fees and by more complex arrangements—but their status is still zero. No proud and happy artists. So they are no temptation; I would not be able to put out of my mind the gruesome fashion in which they are mistreated under local laws and customs.

(I tipped those I talked to; time is money to them.)

Then there are women who are *not* of the profession.

From my earlier life here I know that a high percentage of both "single" women and "married" women (a sharp dichotomy, much sharper than on Tertius or even Secundus)—many of these will chance unlicensed coupling for fun, adventure, love, or other reasons. Most women here are thus available sometimes and with some men— although not with all men nor all the time; here-&-now the sport is necessarily clandestine.

Nor do I lack confidence, nor have I contracted the local "moral" attitude.

But the answer is again No. Why?

First reason: It is all too likely to get one's arse shot off!

No joke, dears. Here-&-now almost every female is quasi-property of some male. Husband, father, sweetheart, betrothed—someone, If he catches you, he may kill you—and public opinion is such that he is unlikely to he punished. But if *you* kill *him*…you hang by the neck until dead, dead, dead!

It seems an excessive price. I don't plan to risk it.

There are a small but appreciable number of females who are not "property" of some male—so what's holding you back, Lazarus?

The overhead, for one thing. (Better not tell Galahad this; it would break his heart.) Negotiations are usually long, complex, and very expensive—and she is likely to regard "success" as equivalent to a proposal of lifetime contract.

On top of that she is quite likely to become pregnant. I should have asked Ishtar to offset my fertility for this trip. (I am terribly glad I did not.) (And I am honing for you darlings, my other selves—and thank, you endlessly for kicking my feet out from under me. I couldn't initiate it, dearly as I wanted to!)

Laz and Lor, believe this: Mature females here *do not know* when they are fertile. They rely either on luck or on contraceptive methods that range from chancy to worthless. Furthermore, they can't find out even from their therapists—who don't know much about it themselves. (There are no geneticists.) Therapy is very primitive in 1916. Most physicians are trying hard, I think, but the art is barely out of the witch-doctor stage. Just rough surgery and a few drugs—most of which I know to be useless or harmful. As for contraception—hold on tight!—it is forbidden *by law.*

Another law made to be broken—and is. But law and customs retard progress in such matters. At present (1916) the commonest method involves an elastomer sheath worn by the male-in other words they "couple" without touching. Stop screaming; you'll never have to put up with it. But it is as bad as it sounds.

I've saved my strongest reason for the last. Dears, I've been spoiled. In 1916 a bath once a week is considered enough by most people, too much by some. Other habits match. Such things when unavoidable can be ignored. I'm well aware that I whiff like an old billy goat in very short order myself. Nevertheless, when I have enjoyed the company of six of the daintiest darlings in the Galaxy—welt, I'd rather wait. Shucks, ten years isn't long.

If you have received any of the letters I will send over the next ten years, then you may have rushed to check tip on Gregorian 1916-1919. I selected 1919-1929 both to savor it—a vintage decade, the very last happy period in old Earth's history—but also to avoid the first of the Terran Planetary Wars, the one known now (it has already started) as "The European War," then will be called "The World War," then still later "The First World War," and designated in most ancient histories as "Phase One of the First Terran Planetary War."

Don't fret; I'm going to give it a wide berth. This involves changes in my travel plans but none in the 1926 pickup. I have little memory of this war; I was too young. But I recall (probably from school lessons rather than from direct memory) that this country got into it in 1917, and that the war ended the following year—and that date I remember exactly, as it was my sixth birthday and I thought the noise and celebration was for *me.*

What I can't remember is the exact date this country entered the war. I may not have looked it up in planning this junket; my purpose was to arrive *after* 11 November 1918, the day the war ended, and I allowed what I thought was a comfortable margin. I was fitting in those ten years most carefully, as the following ten years, 1929-1939, are decidedly *not* a vintage decade—and they end with the start of Phase Two of the First Terran Planetary War.

There is no possible way for me to look up that date— but I find one bright clue in my memory: a phrase "The Guns of August." That phrase has a sharp association in my memory with this war—and it fits, for I remember that it was warm, summery weather (August is summer here) when Cramp (your maternal grandfather, dears) took me out into the backyard and explained to me what "war" is and why we must win.

I don't think he made me understand it—but I remember the occasion, I remember his serious manner, I remember the weather (warm), and the time of day (just before supper).

Very well, I'll expect this country to declare war next August; I'll duck for cover in July—for I have no interest in this war. I know which side won (the side this country will be on) but I know also that "The War to End All Wars" (it was called that!) was a disastrous defeat both for "victors" and "vanquished"—it led inevitably to the Great Collapse and caused me to get' off this planet. Nothing I can do will change any of that; there —are no paradoxes.

So I will hole up till it's over. Almost every nation on Terra eventually picked sides—but many did no fighting, and the war did not get close to them, especially nations south of here, Central and South America, so that is probably where I will go.

But I have almost a year to plan it. It is easy here to be anything you claim to be—no identification cards, no computer codes, no thumbprints, no tax numbers. Mind you, this planet now has as many people as Secundus has (will have—your "now")—yet births are not even registered in much of this country (mine was not, other than with the Families), and a man is whoever he says he is! There are no formalities about leaving this country. It is slightly more difficult to get back in, but I have endless time to cope with that.

But I should, through ordinary prudence, go away for the duration of this war. Why? Conscription, I'm durned if I'll try to explain that term to girls who just barely know what a war is, but it means "slave-armies"—and it means to *me* that I should have asked Isistar to make me look at least twice the apparent age I look now. If I hang around here too long, I risk becoming an involuntary "hero" in a war that was over before I was old enough to go to school.

This strikes me as ridiculous.

So I'll concentrate on accumulating money to carry me a couple of years—convert that into gold (about eight kilos, not too heavy)—then the first of next July, move south. A mild problem then, as this country is conducting a small-scale border war with the one just south of it. (Going north is out of the question; that country is already in the big war.) The ocean to the east has underwater warships in it; these tend to shoot at anything that floats. But the ocean on the other side is free of such vermin. If I take a ship going south from a seaport on the west side of this country, I'll wind up outside the fighting zones. In the meantime I must improve my Spanish— much like Galacta but prettier. I'll find a tutor—no, Laz, *not* a horizontal one. Don't you *ever* think about anything else?

(Come to think of it, dear, what else is worth thinking about? Money?)

Yes, money, at the moment, and I have plans for that. The country is about to elect a chief of government—and I am the *only* man on Terra who *knows* who will be elected. Why did it stick in my memory? Take a look at my registered Families' name.

So my pressing problem is to lay hands on money to bet on that election. What I win I'll use to gamble in the bourse—except that it won't be gambling, as this country is already in a war economy and *I* know it will continue.

I wish I could accept bets on the election instead of placing them—but that is too risky to my skin; I don't have the right political connections.

You see— No, I had better explain how this city is organized.

Kansas City is a pleasant place. It has tree-shaded streets, lovely residential neighborhoods, a boulevard and park system known throughout the planet. Its excellent paving encourages the automobile carriages that are beginning to be popular. Most of this country is still deep in mud; Kansas City's well-paved streets have more of these autopropelled vehicles than horsedrawn ones.

The city is prosperous, being the second largest market and transportation center of the most productive agricultural area on Ierra—grain, beef, pork. The unsightly aspects of this trade are down in river bottoms while the citizens live in beautiful wooded hills. On a damp morning when the wind sets from that quarter one sometimes catches a whiff of stockyards; otherwise the air is clear and clean and beautiful.

It is a quiet city. Traffic is never dense, and the clopclop of horses' hooves or the warning gong of an electrically propelled street-railroad car is just enough to accent the silence—the sounds of children at play are louder.

Galahad is more interested in how a culture uses its leisure than in its economics—and so am I, as scratching a living is controlled by circumstances. But not play. By play I do not mean sex. Sex can't take up too much time of humans matured beyond adolescence (except a few oddies like the fabled Casanova—and Galahad of course—'Me 'at's off to the Dyuke!').

In 1916 (nothing I say necessarily applies ten years later and certainly not one hundred years later; this is the very end of an era)—at this time the typical Kansas Citian makes his own play; his social events are associated with churches, or with relatives by blood and marriage, or both—dining, picnicking, playing games (not gambling), or simply visiting and talking. Most of this costs little or nothing except the expense of supporting their churches—which are social clubs as much as they are temples of religious faith.

The major commercial entertainment is called "moving pictures"—dramatic shows presented as silent black-and-white shadow pictures flickering against a blank wall. These are quite new, very popular, and very cheap—they are called "nickel-shows" after the minor coin charged as a fee. Each neighborhood (defined as walking distance) has at least one such theater. This form of entertainment, and its technological derivatives, eventually had (will have) as much to do with the destruction of this social pattern as the automobile carriages (get Galahad's opinions on this), but—in 1916—neither has as yet disturbed what appears to be a stable and rather Utopian pattern.

Anomie has not yet set in, the norms are strong, customs 'are binding, and no one here-&-now would believe that the occasional rumble is Cheyne-Stokes breathing of a culture about to die. Literacy is at the highest level this culture will ever attain—my dears, the people of 1916 simply would not *believe* 2016. They won't even believe that they are about to be enmeshed in the first of the Final Wars; that is why the man for whom I am named is about to be reelected. "We Are Neutral." "Too Proud to Fight." "He Kept Us Out of War." Under these slogans they are marching over the precipice, not knowing it is there. (I'm depressing myself—hindsight is a vice . . especially when it is foresight.)

Now let's look at the underside of this lovely city:

The city is a nominal democracy. In fact it is nothing of the sort. It is governed by one politician who holds no office. Elections are solemn rituals—and the outcomes are what he ordains. The streets are beautifully paved because his companies pave them—to his profit. The schools are excellent, and they actually teach—because this monarch wants it that way. He is pragmatically benign and does not overreach. "Crime" (which means anything illegal and includes both prostitution and gambling) is franchised through his lieutenants; he never touches it himself.

Much of this crime-by-definition is handled by an organization sometimes called "The Black Hand"—but in 1916 it usually has no name and is never seen. But it is why I don't dare accept election bets; I would be encroaching on a monopoly of one of this politician's lieutenants—which would be *very* dangerous to my health.

Instead, I'll bet by the local rules and keep my mouth shut.

The "respectable" citizen, with his pleasant home and garden and church and happy children, sees none of this and (I think) suspects little of it and thinks about it less.

The city is divided into zones with firm though unmarked bounds. The descendants of former slaves live in a zone that forms a buffer between the "nice" part of town and the area dominated by and lived in by the franchised monopolists of such things as gambling and prostitution. At night the zones mix only under unspoken conventions. In the daytime there is nothing to notice. The boss, maintains tight discipline but keeps it simple. I've heard that he has only three unbreakable rules: Keep the streets well paved. Don't touch the schools. Don't kill anyone south of a certain street.

In 1916 it works just fine—but not much longer. I must stop; I have an appointment at K.C. Photo Supply Company to use a lab—in private. Then I must get back to the grift: separating people from dollars painlessly and fairly legally.

Love forever and all the way back,
L

P.S. You should see me in a derby hat!

DA CAPO

III

Maureen

Mr. Theodore Bronson né Woodrow Wilson Smith aka Lazarus Long left his apartment on Armour Boulevard and drove his car, a Ford landaulet, to a corner on Thirty-first Street, where he parked it in a shed behind a pawnshop—as he took a dim view of leaving an automobile on the Street at night. Not that the car had cost Lazarus much; he had acquired it as a result of the belief of an optimist from Denver that aces back to back plus a pair showing could certainly beat a pair of jacks—Mr. "Jenkins" must be bluffing. But Mr. "Jenkins" had a jack in the hole.

It had been a profitable winter, and Lazarus expected a still more prosperous spring. His guess about a war market on certain stocks and commodities had usually been correct, and his spread of investments was wide enough that a wrong guess did not hurt him much as most of his guesses were right— they could hardly be wrong since he had anticipated stepped-up submarine warfare, knowing what would eventually bring this country into the war in Europe.

Watching the market left him time for other "investments" in other people's optimism, sometimes at pool, sometimes at cards. He enjoyed pool more, found cards more rewarding. All winter he had played both, and his plain and rather friendly face, when decorated with his best stupid look, marked him as a natural sucker—a look he enhanced by dressing as a hayseed come to town.

Lazarus did not mind other pool-hall hustlers, or "mechanics" in card games, or "reader" cards; he simply kept quiet and accepted any buildup winnings offered him, then "lost his nerve" and dropped out before the kill. He enjoyed these crooked games; it was easier—and pleasanter—to take money from a thief than it was to play an honest game to win, and it did not cost as much sleep; he always dropped out of a crooked game early, even when he was behind. But his timing was rarely that bad.

Winnings he reinvested in the market.

All winter he had stayed "'Red' Jenkins," living at the Y.M.C.A. and spending almost nothing. When the weather was very bad, he stayed in and read, avoiding the steep and icy streets. He had forgotten how harsh a Kansas City winter could be. Once he saw a team of big horses trying gallantly to haul a heavy truck up the steep pitch of Tenth Street above Grand Avenue. The off horse slipped on the ice and broke a leg—Lazarus heard the cannon bone pop. It made him feel sick, and he wanted to horsewhip the teamster—why hadn't the fool taken the long way around?

Such days were best spent in his room or in the Main Public Library near the Y.M.C.A.—hundreds of thousands of *real* books, *bound* books he could hold in his hands.. They tempted him almost into neglecting his pursuit of money. During that cruel winter he spent every spare hour there, getting reacquainted with his oldest friends—Mark Twain with Dan Beard's illustrations, Dr. Conan Doyle, the Marvelous Land of Oz as described by the Royal Historian and portrayed in color by John R. Neil, Rudyard Kipling, Herbert George Wells, Jules Verne— Lazarus felt that he could easily spend all the coming ten years in that wonderful building.

But when false spring arrived, he started thinking about moving out of the business district and again changing his *persona.* It was becoming difficult to get picked as a sucker either at pool or at poker; his investment program was complete; he had enough cash in Fidelity Savings & Trust Bank to allow him to give up the austerity of the Y.M.C.A., find a better address, and show a more prosperous face to the world—essential to his final purpose in this city: remeeting his first family—and not much time left before his July deadline.

Acquiring a presentable motorcar crystallized his plans. He spent the next day becoming "Theodore Bronson": moved his bank account one street over to the Missouri Savings Bank, and held out ample cash; visited a barber and had his hair and mustache restyled; went to Browning, King & Co., and bought clothing suitable to a conservative young businessman. Then he drove south and cruised Linwood Boulevard, watching for "Vacancy" signs. His requirements were simple: a furnished apartment with a respectable address and facade, its own kitchen and bathroom—and in walking distance of a pool hall on Thirty-first Street.

He did not plan to hustle in that pool hall; it was one of two places where he hoped to meet a member of his first family. Lazarus found what he needed, but on Armour Boulevard rather than Linwood and rather far from that pool hall. This caused him to rent two garaging spaces—difficult, as Kansas City was not yet accustomed to supplying housing for automobiles. But two dollars a month got him space in a barn close to his apartment; three dollars a month got him a shed behind the pawnshop next to the Idle Hour Billiard Parlour.

He started a routine: Spend each evening from eight to ten at the pool hall, attend the church on Linwood Boulevard that his family had attended (did attend), go downtown mornings when business required—by streetcar; Lazarus considered an automobile a nuisance in downtown Kansas City, and he enjoyed riding streetcars. He began profit-taking on his investments, coverting the proceeds into gold double eagles and saving them in a lockbox in a third bank, the Commonwealth. He expected to complete liquidation, with enough gold to carry him through November 11, 1918, well before his July departure date.

In his spare time he kept the landaulet shining, took care of its upkeep himself, and drove it for pleasure. He also worked slowly, carefully, and very privately on a tailoring job: making a chamois-skin vest that was nothing but pockets, each to hold one $20 gold piece. When completed and filled and pockets sewed shut, he planned to cover it, inside and out, with a suit vest he had used as a pattern. It would be much too warm, but a money belt was not enough for that much gold—and money that clinked instead of rustling was the only sort he was certain he could use outside the country in wartime. Besides, when filled it would be almost a bulletproof vest— one never knew what lay around the next corner, and those Latin-American countries were volatile.

Each Saturday afternoon he took conversational Spanish from a Westport High School teacher who lived nearby. All in all he kept pleasantly busy and on schedule.

That evening after locking his Ford landaulet into the shed back of the pawnshop, Lazarus glanced into a bierstube adjoining it, thinking that his grandfather might have a stein of Muehiebach there before going home. The problem of bow to meet his first family easily and naturally had occupied his mind from time to time all winter. He wanted ‘to be accepted as a friend in their (his!) home, but he could not walk up the front steps, twist the doorbell, and announce himself as a long-lost cousin—nor even as a friend of a friend from Paducah. He had *no* connections with which to swing it, and if he tried a complex lie, he was certain his grandfather would spot it.

Thus he had decided on a pianissimo double approach: the church attended by his family (except his grandfather) and the hangout his grandfather used when he wanted to get away from his daughter’s family.

Lazarus was sure of the church—and his memory was confirmed the first Sunday he had gene there, with a shock that had upset him even more than the shock of learning that he was three years early.

He saw his mother and had momentarily mistaken her for one of his twin sisters.

But almost instantly he realized why: Maureen Johnson Smith was the genetic mother of his identicals as certainly as she was his own mother. Nevertheless, it had shaken him, and he was glad to have several hymns and a long sermon in which to calm down. He avoided looking at her and spent the time trying to sort out his brothers and sisters.

Twice since then he had seen his mother at church and now could look at her without flinching and could even see that this pretty young matron was compatible with his faded image of what his mother ought to look like. But he still felt that he would never have recognized her had it not been for his sharp recollection of Lapis Lazuli and Lorelei Lee. He had illogically expected a much older woman, more as she had been when he left home.

Attending church had not resulted in his meeting her, or his siblings, although the pastor had introduced him to other parishioners. But he continued to drive his automobile to church against the day when it might be polite to offer her and his siblings a ride home—six blocks over on Benton Boulevard; the spring weather would not always be dry.

He had not been as certain of his grandfather's hangout. He was sure that this was where "Gramp" used to go ten or twelve years later-but did he go here when Woodie Smith was (is) not yet five?

Having checked the German beer parlor—and noted that it had suddenly changed its name to "The Swiss Garden"—he went into the pool hall. Pool tables were all in use; he went back to the rear, where there was one billiard table, a card table, and one for chess or checkers; no pool game being available, it seemed a good time to practice some "mistakes" at three-cushion.

Gramp! His grandfather was alone at the chess table; Lazarus recognized him at once.

Lazarus did not break stride. He went on toward the cue rack, hesitated as he was about to pass the chess table, looked down at the array. Ira Johnson looked up—seemed to recognize Lazarus, seemed about to speak and then to think better of it.

"Excuse me," said Lazarus. "I didn't mean to interrupt."

"No harm," said' the old man. (How old? To Lazarus he seemed both older and younger than he ought to be. And smaller. When was he born? Almost ten years before the Civil War.) "Just fiddling with a chess problem."

"How many moves to mate?"

"You play?"

"Some." Lazarus added, "My grandfather taught me. But I haven't played lately."

"Care for a game?"

"If you want to put up with a rusty player."

Ira Johnson picked up a white pawn and a black, put them behind his back, brought them out in his fists. Lazarus pointed, found that he had chosen the black.

Gramp started setting up pieces. "My name is Johnson," he offered.

"I'm Ted Bronsón, sir."

They shook hands; Ira Johnson advanced his king's pawn to four; Lazarus answered in kind.

They played silently. By the sixth move Lazarus suspected that his grandfather was recreating one of Steinitz's master games; by the ninth he was sure of it. Should he use the escape Dora had discovered? No that would feel like cheating—of course a computer could play better chess than I man. He concentrated on playing as well as possible without attempting Dora's subtle variation.

Lazarus was checkmated on white's twenty-ninth move, and it seemed to him that the master game had been perfectly reproduced—Wilhelm Steinitz against some Russian, what was his name? Must ask Dora. He waved to a marker, started to pay for the game; his grandfather pushed his coin aside, insisted on paying for the use of the table, and added to the marker, "Son, fetch us two sarsaparillas. That suit you, Mr. Bronson? Or the boy can fetch you a beer from those Huns next door."

"Sarsaparilla is fine, thank you."

"Ready for revenge?"

"After I catch my breath. You play a tough game, Mr. Johnson."

"Mrrrmph! *You* said you were rusty."

"I am. But my grandfather taught me when I was very young, then played me every day for years."

"Do tell. I've a grandson I play. Tyke isn't in school yet, but I spot him only a horse."

"Maybe he would play me. Even."

"Mrrmph. You'll allow him a knight, same as I do." Mr. Johnson paid for -the drinks, tipped the boy a nickel. "What business are you in, Mr. Bronson?—if you don't mind my asking."

"Not at all. In business for myself. Buy things, sell things. Make a little, lose a little."

"So? When are you going to sell me the Brooklyn Bridge?"

"Sorry, sir, I unloaded that last week. But I can offer you a bargain in Spanish Prisoners."

Mr. Johnson smiled sourly. "Guess that'll teach me."

"But, Mr. Johnson, if I told you I was a pool-hall hustler, you wouldn't let me play chess with your grandson."

"Might, might not. Shall we get set up? Your turn for white."

With the first move allowing him to control the pace. Lazarus made a slow, careful buildup of his attack. His grandfather was equally careful, left no openings in his defense. They were so evenly matched that it took Lazarus forty-one moves and much skull sweat to turn his first-move advantage into a mate.

"Play off the tie?"

Ira Johnson shook his head. "Two games a night is my limit. Two like that is over my limit. Thank you, sir; you play a fine game. For a man who is 'rusty." He pushed back his chair. "Time for me to head for the stable."

"It's raining."

"So I noticed, I'll stand in the doorway and watch for the Thirty-first Street trolley."

"I have my automobile here. I'd be honored to run you home."

"Eh? No need to. Only a block from the car line at the other end, and if I get a little damp, I'll be home and can get dry."

(More like four blocks and you'll be soaked, Gramp.) "Mr. Johnson, I'm going to crank up that flivver anyhow, to go home myself. It's no trouble to drop you anywhere; I like to drive. In about three minutes I'll pull up in front and honk. If you're there, fine. If you aren't, I'll assume that you prefer not to accept rides from strangers, and will take no offense."

"Don't be touchy. Where's your automobile? I'll come with you."

"No, please. No need for us both to go out in the rain for a one-man job. I'll slide out the back through the alley, then I'll be at the curb almost before you reach the front door." (Lazarus decided to be stubborn; Gramp could smell a mouse farther than a cat could—and would wonder why "Ted Bronson" kept a garage at hand when he claimed to live a driving distance away. Bad. How are you going to handle this, Bub? You've *got* to tell Gramp a passel of lies or you'll never get inside that house—your own home!—to meet the rest of your family. But complexity is contrary to the basic principle of successful lying, and Gramp is the very man who taught you that. Yet the truth could not serve and keeping silent was just as useless. How are you going to solve this? When Gramp is as suspicious as you are and twice as shrewd.)

Ira Johnson stood up. "Thank you, Mr. Bronson; I'll be at the front door."

By the time Lazarus had his landaulet cranked, he had settled on tactics and outlined a long-range policy: (a) Drive around the block; this wagon should be wet; (b) don't use this shed again; better to have this puddle jumper stolen than to leave a hole in your cover story; (c) when you surrender the shed, see if "Uncle" Dattelbaum has an old set of chessmen; (d) make your lies fit what you've said, including that too-hasty truth about who taught yot~ to play chess; (e) tell as much truth as possible even if it doesn't sound good—but, damn it, you should be a foundling…and that doesn't fit having a grandfather, unless you invent complexities, any one of which might snap back and catch you out.

When Lazarus sounded the klaxon, Ira Johnson darted out and-scrambled in. "Where now?" asked Lazarus.

His grandfather explained how to reach his daughter's home and added, "Pretty ritzy rig to call a 'flivver.'"

"I got a good price for the Brooklyn Bridge. Should I swing -up to

Linwood or follow the car tracks?"

"Suit yourself. Since you've unloaded the bridge, you might tell me about these 'Spanish Prisoners.' Good investment?"

Lazarus concentrated a while on getting his vehicle headed down the tracks while avoiding the tracks themselves. "Mr. Johnson, I evaded your question about what I do for a living."

"Your business."

"I really have hustled pool."

"Again, your business."

"And I ran out and let you pay the table fee a second time, as well as letting you pay for the pop. I did not intend to."

"So? Thirty cents, plus a nickel tip. Knock off five cents the streetcar would have cost me. That makes your half fifteen cents. If it worries you, drop it in his cup the next time you pass a blind man. I'm getting a chauffeured ride on a wet night. Cheap. This is hardly a jitney bus."

"Very well, sir. I wanted to get straight with you…because I enjoyed the games and hope to play you again."

"The pleasure was mutual. I enjoy a game where a man makes me work."

"Thank you. Now to answer your question properly: Yes, I've hustled pool—in the past. It's not what I do now. I'm in business for myself. Buying things, selling things—but not the Brooklyn Bridge. As for the 'Spanish Prisoner' con, I've had it tried on me. I deal in the commodities market, grain futures and such. I do the same with stock margins. But I won't try to sell you anything, I'm neither a broker nor a bucket-shop operator; instead I deal through established brokers. Oh, yes, one more thing—I don't peddle tips. Give a man what seems to me a good tip—and he loses his shirt and blames me. So I don't."

"Mr. Bronson, I had no call to ask about your business. That was nosy of me. But it was meant to be a friendly inquiry."

"I took it as friendly, so I wanted to give it a proper answer."

"Nosy, just the same. I don't need to know your background."

"That's just it, Mr. Johnson, I don't *have* a background. Pool hustler."

"Not much wrong with that. Pool is an open game, like chess. Difficult to cheat."

"Well…I do something that you might regard as cheating.

"Look, son—if you need a father confessor, I can tell you where to find one. I am not one."

"Sorry."

"Didn't meant to be blunt. But you do have something on your mind."

"Uh, nothing much perhaps. It has to do with having no background. None. So I go to church—to meet people. To meet nice people. Respectable people. People a man with no background otherwise could never meet."

"Mr. Bronson, everybody has *some* background."

Lazarus turned down Benton Boulevard before answering. "Not me, sir. Oh, I was born—somewhere. Thanks to the man who let me call him 'Grandfather'—and his wife—I had a pretty good childhood. But they're long gone and—shucks, I don't even know that my name is 'Ted Bronson."

"Happens. You're an orphan?"

"I suppose so. And a bastard, probably. Is this the house?' Lazarus stopped one house short of his-their home.

"Next one, with the porch light on."

Lazarus eased the car forward, stopped again. "Been nice meeting you, Mr. Johnson."

"Don't be in a hurry. These people—Bronson?—who took care of you. Where was this?"

"'Bronson' is a name I picked off a calendar. I thought it sounded better than 'Ted Jones' or 'Ted Smith.' I was probably born in the southern part of the state. But I can't prove even that."

"So? I practiced medicine down that way at one time. What county?" (I know you did, Gramp—so let's be careful with this one.) "Greene County. I don't mean I was born there; I just mean I was told I came from an orphanage in Springfield."

"Then I probably didn't deliver you; my practice was farther north. Mrrph. But we might be kinfolk."

"Huh? I mean 'Excuse me, Dr. Johnson?'"

"Don't call me 'Doctor,' Ted; I dropped that title when I quit delivering babies. What I mean is this: When I first saw you, you startled me. Because you are the spit 'n'image of my older brother, Edward…who was an engineer on the St. Looie and San Francisco… till he lost his air brakes and that ended his triflin' ways. He had sweethearts in Fort Scott, St. Looie, Wichita, and Memphis; I've no reason to think he neglected Springfield. Could be."

Lazarus grinned. "Should I call you 'Uncle'?"

"Suit yourself."

"Oh, I shan't. Whatever happened, there's no way to prove it. But it would be nice to have a family."

"Son, quit being selfconscious about it. A country doctor learns that such mishaps are far more common than most people dream. Alexander Hamilton and Leonardo da Vinci are in the same boat with you, to name just two of the many great men entitled to wear the bend sinister. So stand tall and proud and spit in their eyes. I see the parlor light is still burning; what would you say to a cup of coffee?"

“Oh, I wouldn’t want to inconvenience you—or disturb your family.”

“It’ll do neither. My daughter always leaves the pot on the back of the range for me. If she happens to be downstairs in a wrapper—unlikely—she’ll go flying up the back stairs, then reappear instantly down the front stairs, dressed fit to kill. Like a fire horse when the bell rings; I don’t know how she does it. Come on in.”

Ira Johnson unlocked the front door, then called out as he opened it: “Maureen! I have company with me.”

“Coming, Father.” Mrs. Smith met them in the hall, moving with serene dignity and dressed as if she expected callers. She smiled, and Lazarus suppressed his excitement.

“Maureen, I want to present Mr. Theodore Bronson. My daughter, Ted—Mrs., Brian Smith.”

She offered her hand. “You are most welcome, Mr. Bronson,” Mrs. Smith said in warm, rich tones that made Lazarus think of Tamara.

Lazarus took her hand gently, felt his fingers tingle, had to restrain himself from making a deep bow and kissing it. He forced himself to give only a hint of a bow, then let go at once. “I am honored, Mrs. Smith.”

“Do come in and sit down.”

“Thank you, but it’s late, and I was merely dropping your father off on my way home.”

“Must you leave so quickly? I was simply darning stockings and reading the ‘Ladies’ Home Journal’—nothing important.”

“Maureen, I promised Mr. Bronson a cup of coffee. He fetched me home from the chess club and saved me a soaking.”

“Yes, Father, right away. Take his hat and make him sit down.” She smiled and left.

Lazarus let his grandfather seat him in the parlor, then took advantage of the moments his mother was out of sight to quiet down and to glance around. Aside from the fact that the room had shrunk, it looked much as he remembered it; an upright piano *she* had taught him to play; fireplace with gas logs, mantel shelf with beveled mirror above; a glass-fronted sectional bookcase; heavy drapes and lace curtains; his parent’s wedding picture framed with their hearts & flowers marriage license, and balancing this a reproduction of Millet’s “Gleaners,” and other pictures large and small; a rocking chair, a platform rocker with a footstool, straight chairs, arm chairs, tables, lamps, all crowded and in an easygoing mixture of mission oak and bird’s-eye maple. Lazarus felt at home; even the wallpaper seemed familiar—save that he realized uneasily that he had been given his father’s chair.

An archway, filled by a beaded portiere, led into the living room, now dark. Lazarus tried to recall what should be in there and wondered if it would look just as familiar. The parlor was immaculately neat and clean, and kept that way, he knew, despite a large family, by the living room being used mainly by children while this room was reserved for their elders and for guests. How many kids now? Nancy, then Carol, and Brian Junior, and George, and Marie—and himself—and since this was early 1917 Dickie had to be about three, and Ethel would still be in diapers.

What was that behind his mother's chair? Could it be?— *Yes,* it's my *elephant!* Woodie you little devil, you *know* you aren't supposed to play in here, and everything must go back into your toy box before you go up to bed; that's a flat rule. The toy animal was small (about six inches high), made of stuffed cloth, and gray with much handling; Lazarus felt resentment that such a treasure—his!—was entrusted to a young child…then managed to laugh at himself even though the emotion persisted. He felt tempted to steal the toy. "Excuse me. You were saying, Mr. Johnson?"

"I said I was temporarily delegated in loco parentis; my son-in-law has gone to Plattsburg and—" Lazarus lost the rest of the remark; Mrs. Smith returned in a soft rustle of satin petticoats, carrying a loaded tray. Lazarus jumped to relieve her of it; she smiled and let him.

By golly, that was the Haviland china he had not been allowed to touch until after he got his first long pants! And the "company" coffee service—solid silver serving pot, cream pitcher, sugar bowl and tongs, the Columbian Exposition souvenir spoons. Linen doilies, matching tea napkins, thin slices of pound cake, a silver dish of mints—how did you *do* this in three minutes or less? You're certainly doing the prodigal proud! No, don't be a fool, Lazarus; she's doing her *father* proud, entertaining his guest—you are a faceless stranger.

"Children all in bed?" inquired Mr. Johnson.

"All but Nancy," Mrs. Smith answered, serving them. "She and her young man went to the Isis and should be home soon."

"Show was over half an hour ago."

"Is there any harm in their stopping for a sundae? The ice-cream parlor is on a brightly lighted corner right where they catch their streetcar."

"A young girl shouldn't be out after dark without a chaperon."

"Father, this is 1917, not 1890. He's a fine boy…and I can't expect them to miss an episode of their serial—Pearl White and very exciting; Nancy tells me all about it. With a William S. Hart feature tonight, I understand; I would have enjoyed seeing that myself."

"Well, I've still got my shotgun."

"Father."

Lazarus concentrated on remembering to eat cake with a fork.

"She's trying to bring me up," Gramp said grumpily. "Won't work."

"I'm sure Mr. Bronson is not interested in our family problems," Mrs. Smith said quietly. "If they were problems. Which they are not. May I warm your coffee, Mr. Bronson?"

"Thank you, ma'am."

"That's right, he isn't. But Nancy should be told soon. Maureen, take a close look at Ted. Ever seen him before?"

His mother looked over her cup at Lazarus, put it down and said, "Mr. Bronson, when you came in, I had the oddest feeling. At church, was it not?"

Lazarus admitted that such could have been the case. Gramp's brows shot up. "So? I must warn the parson. But even if you did meet there—"

"We did not meet at church, Father. What with herding my zoo I barely have time to speak to Reverend and Mrs. Draper. But now that I think about it, I'm sure I saw Mr. Bronson there last Sunday. One does notice a new face among old familiar ones."

"Daughter, as may be, that wasn't what I meant. Who does Ted look like? No, never mind—doesn't he look like your Uncle Ned?"

His mother again looked at Lazarus. "Yes, I see a resemblance. But he looks even more like you, Father."

"No, Ted's from Springfield. All my sins were farther north."

"Father."

"Daughter, quit worrying about me rattling the family skeleton. It's possible that— Ted, may I tell it?"

"Certainly, Mr. Johnson. As you said, it's nothing to be ashamed of —and I'm not."

"Ted is an orphan, Maureen, a foundling. If Ned weren't warming his toes in hell, I'd ask him some searching questions. The time and place is right, and Ted certainly looks like our kin."

"Father, I think you are embarrassing our guest."

"I don't. And don't you be so hoity-toity, young lady. You're a grown woman, with children; you can stand plain talk."

"Mrs. Smith, I am not embarrassed. Whoever my parents were, I am proud of them. They gave me a strong, healthy body and a brain that serves my needs—"

"Well spoken, young man!"

"—and while I would be proud to claim your father as my uncle— and you as my cousin—if it were so—it seems more likely that my parents were taken by a typhoid epidemic down that way; the dates match well enough."

Mr. Johnson frowned. "How old are you, Ted?"

Lazarus though fast and decided to be his mother's age. "I'm thirty-five."

"Why, that just *my* age!"

"Really, Mrs. Smith? If you hadn't made clear that you have a daughter old enough to go to the picture show with a young man, *I* would have thought you were about eighteen."

"Oh, go along with you! I have eight children."

"Impossible!"

"Maureen doesn't look her age," agreed her father. "Hasn't changed since she was a bride. Runs in the family; her mother doesn't have a gray hair today." (Where is Grandma?—oh, yes, so don't ask.) "But, Ted, you don't look thirty-five either. I would have guessed middle twenties."

"Well, I don't know exactly how old I am. But I *can't* be younger than that. I might be a bit older." (Quite a bit, Gramp!) "But it's close enough that when I'm asked I just put down the Fourth of July, 1882."

"Why that's *my* birthday!"

(Yes, Mama, I know.) "Really, Mrs. Smith? I didn't mean to steal your birthday. I'll move over a few days—say the first of July. Since I'm not certain anyhow."

"Oh, don't do that! Father—you must bring Mr. Bronson home for dinner on our joint birthday."

"Do you think Brian would like that?"

"Certainly he would! I'll write to him about it. He'll be home long before then in any case. You know Brian always says, 'The more, the merrier!' We'll be expecting you, Mr. Bronson."

"Mrs. Smith. that's most kind of you, but I expect to leave on a long business trip on the first of July."

"I think you have let Father scare you off. Or is it the prospect of eating dinner with eight noisy children? Never mind: my husband will invite you himself—and then we will see what you say."

"In the meantime, Maureen, stop crowding him; you've got him flustered. Let me see something. You two stand up, side by side. Go ahead, Ted; she won't bite you."

"Mrs. Smith?"

She shrugged and dimpled, then accepted his hand to get up out of her rocking chair. "Father always wants to 'see something.'"

Lazarus stood by her, facing his grandfather, and tried to ignore her fragrance—a touch of toilet water, but mostly the light, warm, delicious scent of sweet and healthy woman. Lazarus was afraid to think about it, was careful not to let it show in his face. But it hit him like a heavy blow.

"Mrrrph. Both, of you step up to the mantel and look at yourselves, in the glass. Ted, there was no typhoid epidemic down that way in 'eighty-two. Nor 'eighty-three."

“Really, sir? Of course I can’t remember.” (And I shouldn’t have tossed in that flourish! Sorry, Gramp. Would you believe the truth? You might…out of all the men I’ve ever known. Don’t risk it, Bub, forget it!)

“Nope. Just the usual number of dumb fools too lazy to build their, privies a proper distance from their wells. Which I feel certain could not describe your parents. Can’t guess about your mother, but I think your father died with his hand on the throttle, still trying to gain control. Maureen?”

Mrs. Smith stared at her reflection and that of their guest. She said slowly, “Father…Mr. Bronson and I look enough alike to be brother and sister.”

“No. First cousins. Although with Ned gone there’s no way to prove it. I think—”

Mr. Johnson was interrupted by a yell from the front staircase landing: “Mama! *Gramp!* I want to be buttoned up!”

Ira Johnson answered, “Woodie, you rapscallion, get back upstairs!”

Instead the child came down—small, male, freckled, and ginger-haired, dressed in Dr. Denton’s with the seat flapping behind him. He stared at Lazarus with beady, suspicious eyes. Lazarus felt a shiver run dawn his spine and tried not to look at the child.

“Who’s *that?”*

Mrs. Smith said quickly, “Forgive me, Mr. Bronson.” Then she added quietly, “Come here, Woodrow;”

Her father said, “Don’t bother, Maureen. I’ll take him up and blister his bottom—then I’ll button him.”

“You and what six others?” the boy child demanded.

“Me, myself, and a baseball bat.”

Mrs. Smith quietly and quickly attended to the child’s needs, then hurried him out of the room and headed him up the stairs. She returned and sat down. Her father said, “Maureen, that was just an excuse. Woodie can button himself. And he’s too old for that baby outfit. Put him in a nightshirt.”

“Father, shall we discuss it another time?”

Mr. Johnson shrugged. “I’ve overstepped again. Ted, that one’s the chessplayer. He’s a stem-winder. Named for President Wilson, but he’s not ‘too proud to fight.’ Mean little devil.”

“Father.”

“All right, all right—but it’s true. That’s what I like about Woodie. He’ll go far.”

Mrs. Smith said, “Please excuse us, Mr. Bronson. My father and I sometimes differ a little about how to bring up a boy. But we should not burden you with it.”

"Maureen, I simply won't let you make a 'Little Lord Fauntleroy' out of Woodie."

"There's no danger of *that,* Father; he takes after you. My father was in the War of 'Ninety-eight, Mr. Bronson, and the Insurrection—"

"And the Boxer Rebellion."

"—and he can't forget it—"

"Of course not. I keep my old Army thirty-eight under my pillow, my son-in-law being away."

"Nor would I wish him to forget; I am proud of my father, Mr. Bronson, and hope that all my sons will grow up with his same spirit. But I want them to learn to speak politely, too."

"Maureen, I would rather have Woodie sass me than be timid with me. He'll learn to speak politely soon enough; older boys will take care of that. A lesson in manners punctuated with a black eye sticks. I know from experience."

The discussion was interrupted by the jingle of the doorbell. "That should be Nancy," Mr. Johnson said and got up to answer. Lazarus heard Nancy say goodnight to someone, then stood up himself to be introduced, and was not startled only because he had already picked out his eldest sister at church and knew that she looked like a young edition of Laz and Lor. She spoke to him politely but rushed upstairs as soon as she was excused.

"Do sit down, Mr. Bronson."

"Thank you, Mrs. Smith, but you were staying up until your daughter returned. She has, so I will leave."

"Oh, there's no hurry; Father and I are night owls."

"Thank you very much. I enjoyed the coffee and the cake, and most especially the company. But it is time for me to say goodnight. You have been most kind."

"If you must, sir. Will we see you at church on Sunday?"

"I expect to be there, ma'am."

Lazarus drove home in a daze, body alert but thoughts elsewhere. He reached his apartment, bolted himself in, checked windows and blinds automatically, stripped off his clothes, and started a tub. Then he looked grimly at himself in the bathroom mirror. "You stupid arsfardel," he said with slow intensity. "You whirling son of a bitch. Can't you do *anything* right?"

No, apparently not, not even something as simple as getting reacquainted with his mother. Gramp had been no problem; the old goat had given him no surprises—other than being shorter and smaller than Lazarus remembered. He was just as grumpy, suspicious, cynical, formally polite, belligerent—and delightful—as Lazarus had remembered.

There had been worrisome moments when he had "thrown himself on the mercy of the court." But that gambit had paid off better than Lazarus had had any reason to hope—through an unsuspected family resemblance. Lazarus not only had never seen Gramp's elder brother (dead before Woodie Smith was born), but he had forgotten that there ever was an Edward Johnson.

Was "Uncle Ned" listed with the Families? Ask Justin. Never mind, not important. Mother had put her finger on the correct answer: Lazarus resembled his grandfather. And his mother, as Gramp had pointed out. But that had resulted only in conjectures concerning dear old Uncle Ned and his "trifling ways," ones that Mother did not mind listening to, once she was certain that her guest was not embarrassed.

Embarrassed? It had changed his status from stranger to "cousin." Lazarus wanted to kiss Uncle Ned and thank him for those "trifling ways" that made kinship plausible. Gramp believed the theory—of course; it was his own—and his daughter seemed willing to treat it as a possible hypothesis. Lazarus, it's just the inside track you need—if you weren't such a blithering idiot!

He tested the bath water—cold. He shut it off and pulled the plug. A promise of hot water all day long had been one inducement when Lazarus had rented this musty cave. But the janitor turned off the water heater before he went to bed, and anyone looking for hot water later than nine was foolish. Well, he qualified as foolish, and perhaps cold water would do more for his unstable condition than hot—but he had wanted a long, hot soak to soothe his nerves and help him think.

He had fallen in love with his mother.

Face it, Lazarus. This is impossible, and you don't know how to handle it. In more than two thousand years of one silly misadventure after the other this is the most preposterous predicament you ever got into.

Oh, sure, a son loves his mother. As "Woodie Smith," Lazarus had never doubted that. He had always kissed his mother goodnight (usually), hugged her when he saw her (if he wasn't in a hurry), remembered her birthday (almost always), thanked her for cookies or cake she left out for him whenever he was out late (except when he forgot), and sometimes had told her he loved her.

She had been a good mother. She had never, screamed at him (or at any of them) and, when necessary, had used a switch at once and the matter was over with—never that Wait-till-your-father-gets-home routine. Lazarus could still feel that peach switch on his calves; it had caused him to levitate, better than Thurston the Great, at a very early age.

He recalled, too, that as he grew older, he found that he was proud of the way she looked—always neat and standing straight and invariably gracious to his friends—not like some of the mothers of other boys.

Oh, sure, a boy loves his mother—and Woodie had been blessed with one of the best.

But this was *not* what Lazarus felt toward Maureen Johnson Smith, lovely young matron, just his "own" age. That visit this night had been delicious agony—for he had never in all his lives been so unbearably attracted, so sexually obsessed, by any woman any where or when. During that short visit Lazarus had been forced to be most careful not to let his passion show—and especially cautious not to appear too gallant, not be more than impersonally polite, not by expression or tone of voice or anything else risk arousing Gramp's always-alert suspicions, not let Gramp suspect the storm of lust that had raged up in him as soon as he touched her hand.

Lazarus looked down at proof of his-passion, hard and tall, and slapped it. "What are *you* standing up for? There's nothing doing for *you.* This is the Bible Belt."

It was indeed! Gramp did not believe in the Bible or live by Bible-Belt standards, yet Lazarus felt sure that, were he to provoke it by breaching those standards, Gramp would shoot him quite dispassionately, on behalf of his son-in-law. Possibly the old man would let the first shot go wide and give him a chance to run. But Lazarus was not willing to bet his life on it. Gramp acting for his son-in-law might feel duty bound to shoot straight—and Lazarus knew how straight the old man could shoot.

Forget it, forget it, he was not going to give either Gramp or his father any reason to shoot, or even to be angry—and *you* forget it too, you blind snake! Lazarus wondered when his father would be home, and tried to remember how he looked—found his memory blurred. Lazarus had always been closer to his Grandfather Johnson than to his father; not only had his father often been away on business, but also Gramp had been home in the daytime and willing to spend time with Woodie.

His other grandparents? Somewhere in Ohio— Cincinnati? No matter, his memory of them was so faint that it did not seem worthwhile to try to see them.

He had completed all that he had intended to do in Kansas City—and if he had the sense God promised a doorknob, the time to leave is *now.* Skip church on Sunday, stay away from the pool hall, go down Monday and sell his remaining holdings—and *leave!* Climb into the Ford—no, sell it and take a train to San Francisco; there catch the first ship south. Send Gramp and Maureen polite notes, mailed from Denver or San Francisco, saying that he was sorry but that business trip, etc.—but *Get Out of Town!*

Because Lazarus *knew* that the attraction had not been onesided—He thought that he had kept Gramp from guessing his emotional storm…but Maureen had been aware of it—and had not resented it. No, she had been flattered and pleased. They had been on the same frequency at once, and without a word or any meaningful glance or touch, her transponder had answered him, silently…then, as opportunity made it possible, she had answered overtly, once with a dinner invitation—which Gramp had tromped on—and she had promptly tromped back in a fashion that made it acceptable by the mores. Then a second time, just as he was leaving, with the also fully acceptable suggestion that she would expect to see him in church.

Well, why should a young matron, even in 1917, *not* be pleased—and flattered, and unresentful—to know that a man wanted most urgently to take her to bed and treat her with gentle roughness? If his nails were clean…if his breath was sweet…if his manners were polite and respectful—why not? A woman with eight children is no nervous virgin; she is used to a man in her bed, in her arms, in her body—and Lazarus would have bet his last cent that Maureen enjoyed it.

Lazarus had no reason then, or in his earlier life, to suspect that Maureen Smith had ever been anything but "faithful" by the most exacting Bible-Belt standards. He had no reason to think that she was even flirting with him. Her manner had not suggested it; he doubted if it ever would. But he held a deep certainty that she was as strongly attracted as he was, that she knew exactly where it could lead—and he suspected that she realized that nothing but chaperonage would stop them.

(But a father in residence and eight children, plus the contemporary mores concerning what can and can't be done, constituted a lot of chaperonage! Llita's chastity belt could hardly be more efficient.)

Let's haul it out into the middle of the floor and let the cat sniff it. "Sin?" "Sin" like "love" was a word hard to define. It came in two bitter but vastly different flavors. The first lay in violating the taboos of your tribe. This passion he felt was certainly sinful by the taboos of the tribe he had been born into—incestuous in the first degree.

But it could not possibly be incest to Maureen.

To himself? He knew that "incest" was a religious concept, not a scientific one, and the last twenty years had washed away in his mind almost the last trace of his tribal taboo. What was left was no more than that breath of garlic in a good salad; it made Maureen more enticingly forbidden (if such were possible!); it did not scare him off. Maureen did not *seem* to be his mother—because she did not fit his recollection of her either as a young woman or as an old woman.

The other meaning of "sin" was easier to define because it was not clouded by the murky concepts of religion and taboo: Sin is behavior that ignores the welfare of others.

Suppose he stuck around and managed somehow (stipulate safe opportunity) to bed Maureen with her full cooperation? Would she regret it later? Adultery? The word meant something here.

But she was a Howard, one of the early ones when marriage between Howards was a cash contract, eyes wide open, payment from the Foundation for each child born of such union—and Maureen had carried out the contract, eight paid-for children already and would stay in production for, uh, about fifteen more years. Perhaps to her "adultery" meant "violation of contract" rather than "sin"—he did not know.

But that is not the point, Bub; the real question is the only one that has *ever* stopped you when temptation coincided with opportunity—and *this* time he could consult neither Ishtar nor any geneticist. The chance of a bad outcome was slight when there were so many hurdles in the way of *any* outcome. But it was the exact risk that he had always refused to take: the chance of placing a congenital handicap on a child.

Hey, wait a minute! No such outcome *could* result because no such *had* resulted. He knew every one of his siblings, alive now or still to be born, and there had not been a defective in the lot. Not one. Therefore no hazard.

But— That was grounded on the assumption that his "no paradoxes" theory was a law of nature. But you've long been aware that the "no-paradoxes" theory itself involves a paradox—one that you've kept quiet about so as not to alarm Laz and Lor and the rest of your "present" *(that* present, not this one) family; to wit, the idea that free will and predestination are two aspects of the same mathematical truth, and the difference is merely linguistic, not semantic: the notion that his own free will could not change events here-&-now because his freewill actions here-&-now were already a part of what *had* happened in any later "here-&-now."

Which in turn depended on a solipsistic notion he had held as far back as he could remember— Cobwebs, all of it!

Lazarus, you don't *know* what trouble you might cause. So *don't!* Get out of town *now* and don't come back to Kansas City *at all!* Because, if you do, you're certain to try to get Maureen's bloomers off…and she's going to breathe hard and help. From there on only Allah knows—but it could be tragic for her and tragic for others, and as for you, you stupid stud, all balls and no brain, it could get your ass shot off…just as the twins predicted.

In which case, since you are *not* going to see your family again, there is no sense in waiting in South America for this war to end.

You've seen enough of this doomed era; ask the girls to come pick you up *now.*

Was her waist really that slender? Or did she lace it in? Shucks, it didn't matter how she was built. As with Tamara, it simply did not matter.

Dear Laz and Lor,

Darlings, I've changed plans. I've seen my first family, and there isn't anything else I want to do in this era— nothing worth sweating out most of two years in a backwater while this war drags on to its bloody and useless finish. So I want you to pick me up now, at the impact crater. Forget about Egypt; I can't get there now.

By "pick me up now" I mean Gregorian 3 March 1917—repeat, third day of March one thousand nine hundred and seventeen Gregorian, at that meteor impact crater in Arizona.

Much to tell you when I see you. Meanwhile—

My undying love,
Lazarus

Was it her voice? Or her fragrance? Or something else?

DA CAPO

Home

27 March 1917 Greg.
Beloved Family,

Repeat of Basic Message: I got here three years too early—2 August 1916—but still wish to be picked up exactly ten T-years after drop, 2 August 1926—repeat *six.* Rendezvous points and alternatives from basic date as before. Please impress on Dora that this results from bad data I gave her and is *not her fault.*

I'm having a marvelous time. I got my business cleaned up and then got in touch with my first family by looking up my grandfather (Ira Johnson, Ira) and got acquainted with him first—and with the aid of a horrendous lie and a most fortunate family resemblance, Gramp is convinced that I am an unregistered son of his (deceased) brother. I didn't suggest this; it's his own idea. Consequently it's solid—and now I'm a "long-lost cousin" in my first home. Not living there, but welcome, which is very nice.

Let me give a rundown on the family, since all of you are descended from three of them: Gramp, Mama, and Woodie.

Gramp is described in that junk Justin has been cutting down to size. No changes, Justin, save that instead of being two meters tall and carved out of granite, Gramp is almost exactly my size. I am spending every minute with him that he will let me, which usually means playing chess with him several times a week.

Mama: Take Laz and Lor and add five kilos in the best places, then add fifteen T-years and a big slug of dignity. (Quit quivering your goddamn chins!) Add hair down to her waist but always coiled up on top. I don't actually know what Mama does look like other than her head and hands became of the curious custom here of wearing clothes all over at all times. And I do mean *"all* over." I know that Mama has slender ankles because I once caught a glimpse. But I would never dare stare at them; Gramp would toss me out of the house.

Papa: He is away now. I had forgotten what he looks like—I had forgotten all their faces except Gramp (who uses the same face I do!) But I've seen pictures of Papa and he looks a bit like President Teddy Roosevelt— that's "Theodore," Athene, not "Franklin"—in case you have a picture in your gizzards.

Nancy: Laz and Lor as of three standard years before I left. Not as many freckles and *very* dignified—except when it slips. She is acutely aware of (young) males, and I think Gramp is urging Mama to tell her about the Howard setup at once, so that she'll be sure to marry in the Families.

Carol: Laz and Lor again but two years younger than Nancy. She is as interested in boys as is Nancy—but frustrated; Mama has her on a. short leash. Quivers her chin, which Mama ignores.

Brian Junior: Dark hair, looks more like Papa. Rising young capitalist. Has a newspaper route which be combines with lighting gas streetlamps. Has a contract to deliver advertising handbills, for the local moving-picture theater which he farms out to his younger brother and four other boys and pays them in tickets to the theater and keeps some for his own use and sells the rest at a discount (four cents instead of five) at school. Has a vending bar for soda pop (a sweet, bubbly drink) on the corner in the summers but plans to franchise this to his younger brother this coming summer; he has another enterprise lined up. (As I recall, Brian got rich quite young.)

Let me explain something about our family. They are prosperous by here-&-now standards—but do not show it except that they live in a large house in a good neighborhood. Not only is Papa a successful businessman, but also this is a time when the Howard endowment of babies is substantial in terms of buying power—and Mama has had eight already. To all of you, being a "Howard" means a genetic heritage and a tradition—but here-&-now it means cash, money for babies—a stockbreeding scheme and we are the stock.

I think Papa must be investing the money Mama makes by having Howard babies; they certainly are not spending it—and this accords with my own dim memories. I don't know what was done for my siblings, but I received getting-started money when I first married—money I had not expected and which had nothing to do with the

Howard endowments my first wife earned by being fertile and willing. Since I married during an economic stalemate, this made a big difference. Back to the kids— The boys not only do work; they *have* to work—or they have nothing but clothes and food. The girls receive very small cash allowances but are required to do housework and to help with the younger children. This is because it is *very* difficult for a girl to earn money in this society—but a boy who will get out and *try* has endless opportunities. (This will change before the century is over, but in 1917 it is true.) All the Smith kids work at home (Mama hires a laundress one day a week, that's all), but a boy (or girl) who finds outside cash-money work is relieved of housework to that extent. Nor does he have to "pay back" this time off; he keeps what he earns and spends it or saves it, the latter being encouraged by Papa matching such savings.

If you think Papa and Mama are intentionally making moneygrubbers of their offspring, you are right.

George: Ten T-years old, Brian Jr.'s junior partner, shadow, and stooge. This will end in a few years with George busting Brian one in the mouth.

Marie: eight and a freckled *tomboy.* Mama is having a difficult time trying to make a "lady" out of her. (But Mama's gentle stubbornness—and biology—will win. Marie grew up to be the beauty of the family, with beaux underfoot—and I hated them as there had been a period when I was her pet. Marie was the only one of my siblings I was close to; it is possible to be lonely in a large family, and I was—except for Gramp, always, and Marie, for a short time.)

Woodrow Wilson Smith—still short of five by several months and as offensive a brat as was ever allowed to grow up. I am appalled to be forced to admit that this stinking little snot is the weed which grew up to be humanity's fairest flower, namely, Ol' Buddy Boy himself. So far he has spat in my hat when it was presumably out of his reach on the cloak rack in the hail, referred to me with various disparagements, of which "Here's that dude in the derby again!" is the mildest. He kicked me in the stomach when I tried to pick him up (my error; I didn't want to touch him but thought I should break myself of irrational queasiness), and accused me of cheating at chess when in fact *he* was cheating—he called my attention to something out the window, then moved my queen one square, and I caught him at it and called him on it. And so on, ad nauseam.

But I continue to play chess with him because: (a) I am determined to get along with *all* my first family for the short time I will be here; and (b) Woodie will play chess at any opportunity, and Gramp and I are the only chessplayers around who will put up with his poisonous ways. (Gramp clobbers him as necessary; I have no such privilege. But if I were not afraid to find out what would happen, I might strangle him. What *would* happen? Would half of human history disappear and the rest be changed beyond recognition? No, "paradox" is a null word; the fact that I *am* here proves that I will keep my temper long enough to get shut of the little beast.)

Richard: three and as affectionate as Woodie is difficult. Likes to sit on my lap and be told stories. His favorite is about two redheaded twins named Laz and Lor who fly a magic "airship" through the sky. I feel a tender sadness about Dickie, for he will (did) die quite young, assaulting a place called Iwo Jima.

Ethel: a heavenly smile at one end and a wet diaper at the other. Short on conversation.

That's my (our) family in 1917. I expect to stay in K.C. until Papa returns—soon, now—then leave; some of this is a strain on me, pleasant as most of it is. I may look them up when this war is over—but probably not; I don't want to crowd my welcome.

To make the above clear I should explain some of the customs here. Until Papa gets home, my status has to be through Gramp as a friend he plays chess with; it can't be anything else even though he—and perhaps Mama— believe that I am Uncle Ned's son. Why? Because I am a "young" bachelor, and by the local rules a married woman cannot have a young bachelor as a friend, particularly when her husband is out of town. The taboo is so firm I don't dare give even the appearance of violating it…on *Mama's* account. Nor would she encourage me to. Nor would Gramp permit it.

So I'm welcome in my own home *only if* I go there to see Gramp. If I telephone, I must ask for *him.* And so on.

Oh, it's permissible, on a rainy day, for me to offer a ride home to members of the Smith family at church. I am permitted to do almost anything for the kids as long as I don't "spoil" them—which Mama defines as spending much more than five cents on one of them. Last Saturday I was allowed to take six of them on a picnic in my automobile carriage. I am teaching Brian to operate it. My, interest in the kids is considered understandable by Mama and by Gramp because of my "lonely" and "deprived" childhood as an "orphan."

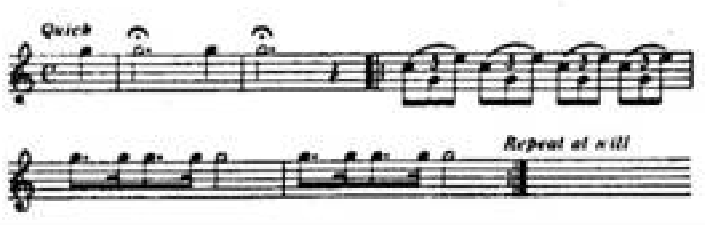
The one thing I must *never* do is to be alone with Mama. I don't go inside my own home unless publicly accompanied by Gramp; the neighbors would notice. I am meticulous about it; I won't risk causing Mama trouble with a tribal taboo.

I am writing this at my apartment, on a printing machine you would not believe, and must stop in order to take it downtown and photoreduce it twice, then etch it and laminate it and seal it for Delay Mail and deliver it to a drop—which kills a whole day, as L must use a rented lab and destroy intermediate stages as I go; this is not something I dare leave in an apartment to which a janitor has a key. When I get back from South America I'll make my own lab setup, one I can carry in an automobile. Paved roads will be more common this coming decade and I expect to travel that way. But I want to continue sending these letters and by as many Delay Mail drops as possible, in hope that at least one will last through the centuries and reach you. As Justin put it, the real problem is to get one to last through just the coming three centuries—I'll keep trying.

All my love to all of you,
Lazarus

DA CAPO

V



MARCH 3, 1917: KAISER PLOTS WITH MEXICO AND JAPAN TO ATTACK USA—ZIMMERMANN TELEGRAM AUTHENTIC

APRIL 2, 1917: PRESIDENT ADDRESSES CONGRESS—ASKS WAR

APRIL 6, 1917: AMERICA ENTERS WAR—CONGRESS DECLARES "A STATE OF BELLIGERENCY EXISTS"

Lazarus Long was as taken by surprise by the date of the outbreak of war with Germany as he was unsurprised by the fact itself. He was caught so flatfooted that it was not until later that he analyzed *why* the "hindsight" he had relied on had proved even more myopic than foresight.

The resumption of unrestricted U-boat warfare early in 1917 had not surprised him; it fitted his recollections of his earliest history lessons. The Ziminermann telegram did not disturb him even though he did not remember it; it matched a pattern he did remember—again from history, not the direct memories of a very small child—a period of three years, 1914 to 1917, when the United States had inched slowly from neutrality to war. Woodie Smith had been not yet two when the war started, not yet five when his country got into it; Lazarus had no firsthand memories of foreign affairs of a time when Woodie had been too young to grasp such remote improbabilities.

The timetable Lazarus had fixed on, once he discovered that he had arrived three years early, had worked so well that he did not realize that its "clock" was wrong until the event slapped him in the face. When he was able to take time to analyze his mistake, he saw that he had committed the prime sin against survival: He had indulged in wishful thinking. He had *wanted* to believe his timetable.

He had not wanted to leave his newly found first family so quickly. All of them. But especially Maureen.

Maureen— Once he decided to stay on till July 1 as originally planned, after a long night of wrestling with his troubled soul—a night of indecision and worry and letters written and destroyed—he discovered that he *could* stay and treat Mrs. Brian Smith with friendly but formal politeness, avoid any sign of interest in her more personal than the mores permitted. He managed to shift to his celibate mode—happy to be near her when it was possible to be so without causing Mrs. Grundy's nose to twitch—or the even sharper nose of his grandfather.

Lazarus had indeed been happy. As with Tamara—or the twins—or any of his darlings—coupling was not necessary to love. When it was expedient, he could bank the fires and forget it. He was never for one instant unaware of the tremendous physical attraction of this woman who had been his mother more than two thousand years ago (in some odd direction)—but the matter was shelved; it did not affect his manner or lessen his happiness when he was permitted to be near her. He believed that Maureen knew what he was doing (or refraining from doing) and why, and that she appreciated his restraint.

All during March he sought approved ways to see her. Brian Junior wanted to learn to drive; Gramp ruled that he was old, enough, so Lazarus taught him—picked him up at the house and returned him there—and often was rewarded with a glimpse of Maureen. Lazarus even found a way (other than chess) to reach Woodie. He took the child to the Hippodrome Theater to see the magician Thurston the Great—then promised to take him (when it opened for the summer) to "Electric Park," an amusement park and Woodie's idea of heaven. This consolidated a truce between them.

Lazarus delivered the child home from the theater, sound asleep and with no more than normal wear and tear, and was rewarded by sharing coffee with Gramp and Maureen.

Lazarus volunteered to help with the Boy Scout troop sponsored by the church; George was a Tenderfoot, and Brian was working toward Eagle. Lazarus found being an assistant scoutmaster pleasant in itself—and Gramp invited him in when he gave the boys a lift home.

Lazarus gave little attention to foreign affairs. He continued to buy the Kansas City *Post* because the newsboy at Thirty-first and Troost regarded him as a regular customer— a real sport who paid a nickel for a penny paper and did not expect change. But Lazarus rarely read it, not even the market news once he completed his liquidations.

The week starting Sunday the first of April Lazarus did not plan to see his family for two reasons: Gramp was away, and his father was home. Lazarus did not intend to meet his father until he could manage it naturally and easily through Gramp. Instead he stayed home, did his own cooking, caught up on chores, did mechanical work on his landaulet and cleaned and polished it, and wrote a long letter to his Tertius family.

This he took with him Thursday morning, intending to prepare it for Delay Mail. He bought a newspaper as usual at Thirty-first and Troost; after he was seated in a streetcar, he glanced at its front page —then broke his habit of enjoying the ride by reading it carefully. Instead of going to the Kansas City Photo Supply Company, he went to the Main Public Library's reading room and spent two hours catching up with the world—the local papers, the Tuesday New York *Times* where he read the text of the President's message to Congress—”God helping her, she can do no other!”—and the Chicago *Tribune* of the day before. He noted that the *Tribune,* staunchest foe of England outside the German-language press, was now hedging its bets.

He then went to the men's toilet, tore into small pieces the letter he had prepared, and flushed it down a water closet.

He went to the Missouri Savings Bank, drew out his account, went next to the downtown office of the Santa Fe Railroad and bought a ticket for Los Angeles with thirty-day stopover privilege at Flagstaff, Arizona, stopped at a stationer's, then on to the Commonwealth Bank and got at his lockbox, removed from it a smaller box heavy with gold. He asked to use the bank's washroom; his status as a lockbox client got him this favor.

With gold pieces distributed among thirteen pockets of his coat, vest, and trousers Lazarus no longer looked smart—he tended to sag here and there—but if he walked carefully, he did not jingle. So he walked most carefully, had his nickel ready on boarding a streetcar, then stood on the rear platform rather than sit down. He was not easy until he was locked and bolted into his apartment.

He stopped to make and eat a sandwich, then got to work on tailoring, sewing the yellow coins into one-coin pockets of the chamois-skin vest he had made earlier, then covered it with the vest from which it had been patterned. Lazarus forced himself to work slowly, restoring seams so neatly that the nature of the garment could not be detected by anyone not wearing it.

About midnight he had another sandwich, got back to work.

When he was satisfied with fit and appearance, he put the money vest aside, placed a folded blanket on the table where he had been working, placed on it a heavy, tall Oliver typewriter. He attacked the clanking monster with two fingers:

"At Kansas City, Gregorian 5 April 1917

"Dearest Lor, and Laz,

"EMERGENCY. I need to be picked up. I hope to be at the impact crater by Monday 9 April 1917 repeat nine April nineteen seventeen. I may be one or two days late. I will wait there ten days, if possible. If not picked up, I will try to keep the 1926 (nineteen twenty-six) rendezvous.

"Thanks!
"Lazarus"

Lazarus typed two originals of this, then addressed two sets of nesting envelopes, using different choices on each and addressing the outermost envelopes one to his local contact and the other to a Chicago address. He then wrote a bill of sale:

"For one dollar in hand and other good and valuable considerations I sell and convey all my interest, right, and title to one Ford Model-T automobile, body style 'Landaulet,' engine number 1290408, to Ira Johnson, and warrant to him and his successors that this chattel is unencumbered and that I am sole owner with lull right to convey title.
(s)Theodore Bronson
"April 6, 1917 AD."

He placed this in a plain envelope, put it with the others, drank a glass of milk, went to bed.

He slept ten hours, undisturbed by cries, of *"Extra! Extra!"* along the boulevard; he had expected them, his subconscious discounted them and let him rest—he expected to be very busy the next several days.

When his inner clock called him, he got up, quickly bathed and shaved, cooked and ate a large breakfast, cleaned his kitchen, removed all perishables from his icebox and emptied them into the garbage can on the rear service porch and turned the ice card around to read "NO ICE TODAY" and left fifteen cents on top of the icebox, emptied the drip pan.

There was a fresh quart of milk by the ice. He had not ordered it, but he had not specifically *not* ordered it. So he put six cents in an empty bottle, with a note telling the milkman not to leave milk until the next time he left money out.

He packed a grip—toilet articles, socks, underwear, shirts, and collars (to Lazarus, those high starched collars symbolized all the tightminded taboos of this otherwise pleasant age), then rapidly searched the apartment for everything of a personal nature. The rent was paid till the end of April; with good luck he expected to be in the *Dora* long before then. With bad luck he would be in South America—but with worse luck he would be somewhere else—anywhere— and under another name; he wanted "Ted Bronson" to disappear without a trace.

Shortly he had waiting at the front door a grip, an overcoat, a winter suit, a set of chessmen in ivory and ebony, and a typewriter. He finished dressing, being careful to place three envelopes and his ticket in an inner pocket of his suit coat. The money vest was too warm but not uncomfortable; the distributed weight was not bad.

He piled it all into the tonneau of the landaulet, drove to the southside postal substation, registered two letters, went from there to the pawnshop next to the Idle Hour Billiard Parlor. He noted with wry amusement that "The Swiss Garden" had its blinds down and a sign "CLOSED."

Mr. Dattelbaum was willing to accept the typewriter against a gun but wanted five dollars to boot for the little Colt pistol Lazarus selected. Lazarus let the pawnbroker conduct both sides of the dicker.

Lazarus sold the typewriter and the suit, left his overcoat and took back a pawn ticket, received the handgun and a box of cartridges. He was in fact giving Mr. Dattelbaum the overcoat since he had no intention of redeeming it—but Lazarus got what he wanted plus three dollars cash, had unloaded chattels he no longer needed, and had given his friend the pleasure of one last dicker.

The gun fitted into a leftside vest pocket Lazarus had retailored into a makeshift holster. Short of being frisked— most unlikely for so obviously respectable a citizen—it would not be noticed. A kilt was better both for concealment and for quick access—but it was the best he could manage with the clothes he had to wear, and this gun had had its front sight filed off by some practical-minded former owner.

He was now through with Kansas City save for saying goodbye to his first family—then grab the first Santa Fe rattler west. It distressed him that Gramp had gone to St. Louis, but that could not be helped, and this one time he would bull his way in, with a convincing cover story: The chess set as a present for Woodie was reason enough to show up in person, the bill of sale gave an excuse to speak to his father—No, sir, this is not exactly a present…but somebody might as well drive it until this war is over…and if by any chance I don't come back—well, this makes things simpler—you understand me, sir?—your father-in-law being my best friend and sort of my next of kin since I don't have any.

Yes, that would work and result in a chance to say goodbye to all the family, including Maureen. (Especially Maureen!) Without quite lying. Best way to lie.

Just one thing— If his father wanted to enlist him into his own outfit, then one lie *must* be used: Lazarus was dead set on joining the Navy. No offense intended, sir; I know you're just back from Plattsburg, but the Navy needs men, too.

But he would not tell that lie unless forced to.

He left his car hack of the pawnship, crossed the street to a drugstore, and telephoned:

"Is this the Brian Smith residence?"

'Yes, it is."

"Mrs. Smith, this is Mr. Bronson. May I speak to Mr. Smith?"

"This isn't Mama, Mr. Bronson; this is Nancy. Oh, isn't it *terrible!"*

"Yes, it is, Miss Nancy."

"You want to speak to Papa? But he's not *here,* he's gone to Fort Leavenworth. To report in—and we don't know *when* we'll see him again!"

"There, there—please don't cry. Please!"

"I was *not* crying. I'm just a teensy bit upset. Do you want to speak to Mama? She's here…but she's lying down."

Lazarus thought fast. Of course he wanted to speak to Maureen. But— Confound it, this was a complication. "Please don't disturb her. Can you tell me when your grandfather will be back in town?" (Could he afford to wait? Oh, *damn!)*

"Why, Grandpa got back yesterday."

"Oh. May I speak to him, Miss Nancy?"

"But he's not here, either. He went downtown hours ago. He might be at his chess club. Do you want to leave a message for him?"

"No. Just tell him I called…and will call again later. And, Miss Nancy—don't worry."

"How can I *help* worrying?"

"I have second sight. Don't tell anyone but it's true; an old gypsy woman saw that I had it and proved it to me. Your father is coming home and will not be hurt in this war. I *know."*

"Uh…I don't know whether to believe that or not—but it does make me feel better."

"It's true." He said goodbye gently, and hung up.

"Chess club—" Surely Gramp would not be loafing in a pool hail today? But since it was just across the street, he might as well see… before driving out to Benton and waiting in sight of the house for him to return.

Gramp was there, at the chess table but not even pretending to work a chess problem; he was simply glowering.

"Good afternoon, Mr. Johnson."

Gramp looked up. "What's good about it? Sit down, Ted."

"Thank you, sir." Lazarus slid into the other chair. "Not much good about it, I suppose."

"Eh?" The old man looked at him as if just noticing his presence. "Ted, would you say that I was a man in good physical condition?"

"Yes, certainly."

"Able to shoulder a gun and march twenty miles a day?"

"I would think so." (I'm sure you could, Gramp.)

"That's what I told that young smart-alec at the recruiting station. He told me I was *too old!"* Ira Johnson looked ready to break into tears. "I asked him since when was fortyfive too old?—and he told me to move aside, I was holding up the line. I offered to step outside and whip him and any two other men he picked. And they put me out, Ted, *they put me out!"* Gramp covered his face with his hands, then took them down and muttered, "I was wearing Army Blue before that snotty little shikepoke learned to pee standing up."

"I'm sorry, sir."

"My own fault. I fetched along my discharge…and forgot about its having my birth date on it. Look, Ted, if I dyed my hair and went back to St. Looie—or Joplin—that would work…wouldn't it?"

"Probably." (I know it didn't, Gramp…but I think you did manage to talk your way into the Home Guard. But I can't tell you that.)

"I'll do it! But I'll leave my discharge at home."

"In the meantime may I drive you home? My Tin Lizzie is around in back."

"Well…I suppose I've got to go home—eventually."

"How about a little spin out Paseo to cool off first?"

"That's a n'idee. If it won't put you out?"

"Not at all."

Lazarus drove around, keeping silent, until the old man's fuming stopped. When Lazarus noted this, he headed back and turned east on thirty-first Street, and parked. "Mr. Johnson, may I say something?"

"Eh? Speak up."

"If they won't take you—even with your hair dyed—I hope you won't feel too bad about it. Because this war is a terrible mistake."

"What do you mean?"

"Just what I said." (How much to tell him? How much can I get him to believe? I can’t hold back altogether—this is *Gramp*…who taught me to shoot, and a thousand other things. But what will he *believe?)* “This, war won’t do the slightest good; it will just make things worse.”

Gramp stared at him, under knotted brows. “What are you, Ted? Pro-German?”

“No.”

“Pacifist, maybe? Come to think about it, you’ve never had one word to say about the war.”

“No, I’m not a pacifist. And I’m not pro-German. But if we win this war—”

“You mean *‘When* we win this war!’”

“All right, ‘when we win this war,’ it will turn out that we’ve actually lost it. Lost everything we thought we were fighting for.”

Mr. Johnson abruptly changed tactics. “When are you enlisting?”

Lazarus hesitated. “I’ve got a couple of things I must do first.”

“I thought that might be your answer, Mr. Bronson. Goodbye!” Gramp fumbled with the door latch, cursed, and stepped over onto the running board, thence to the curb.

Lazarus said, “Gramp! I mean ‘Mr. Johnson.’ Let me finish running you home. *Please!”*

His grandfather paused just long enough to look back and say, “Not on your tintype…you pusillanimous piss-ant.” Then he marched steadily down the street to the car stop.

Lazarus waited and watched Mr. Johnson climb aboard; then he trailed the trolley car, unwilling to admit that there was nothing he could do to correct the shambles he had made of his relations with Gramp. He watched the old man get off at Benton Boulevard, considered overtaking him and trying to speak to him.

But what could he say? He understood how Gramp felt, and why—and he had already said too much and no further words could call it back or correct it. He drove aimlessly on down Thirty-first Street.

At Indiana Avenue he parked his car, bought a *Star* from a newsboy, went into a drugstore, sat down at the soda fountain, ordered a cherry phosphate to justify his presence, looked at the newspaper.

But was unable to read it— Instead he stared at it and brooded.

When the soda jerk wiped the marble counter in front of him and lingered, Lazarus ordered another phosphate. When this happened a second time,. Lazarus asked to use a telephone.

“Home or Bell?”

“Home.”

“Back of the cigar counter and you pay me."

"Brian? This is Mr. Bronson. May I speak to your mother?"

"I'll go see,"

But it was his grandfather's voice that came on the line: "Mr. Bronson, your sheer effrontery amazes me. What do you want?"

"Mr. Johnson, I want to speak to Mrs. Smith—"

"You can't."

"—because she has been very kind to me and I Want to thank her and say goodbye."

"One moment—" He heard his grandfather say, "George, get out. Brian, take Woodie with you and close the door and see that it stays closed." Mr. Johnson's voice then came back closer: "Are you still there?"

"Yes, sir."

"Then listen carefully and don't interrupt; I'm going to say this just once."

"Yes, sir."

"My daughter will not speak to you, now or ever—" Lazarus said quickly, "Does she know that I asked to speak to her?"

"Shut up! Certainly she knows. She asked me to deliver that message. Or I would not have spoken to you myself. Now I too have a message for you—and don't interrupt. My daughter is a respectable married woman whose husband has answered his country's call. So don't hang around her. Don't come here or you'll be met with a shotgun. Don't telephone. Don't go to her church. Maybe you think I can't make this stick. Let me remind you that this is Kansas City. Two broken arms cost twenty-five dollars; for twice that they'll kill you. But for a combined deal—break your arms first and *then* kill you—there's a discount. I can afford sixty-two fifty if you make it necessary. Understand me?"

"Yes."

"So twentythree skidoo!"

"Hold it! Mr. Johnson, I do not believe that you would hire a man to kill another man—"

"You had better not risk it."

"—because I think you would kill him yourself."

There was a pause. Then the old man chuckled slightly. "You may be right." He hung up on Lazarus.

Lazarus cranked his car and drove away. Presently he found that he was driving west on Linwood Boulevard, noticed it because he passed his family's church. Where he had first seen Maureen— Where he would never see her again.

Not *ever!* Not even if he came back again and tried to avoid the mistakes he had made—there were no paradoxes. Those mistakes were unalterably part of the fabric of spacetime, and all of the subtleties of Andy's mathematics, all of the powers built into the *Dora,* could not erase them.

At Linwood Plaza, he parked short of Brooklyn Avenue and considered what to do next.

Drive to the station and catch the next Santa Fe train west. If either of those calls for help lasted through the centuries, then he would be picked up on Monday morning—and this war and all its troubles would again 'be something that happened a long time ago—and "Ted Bronson" would be someone Gramp and Maureen had known briefly and would forget.

Too bad he had not had time to get those messages etched; nevertheless, one of them might last, If not—then make rendezvous for pickup in 1926. Or if *none* of them got through—always a possibility since he was attempting to use Delay Mail before it was properly set up—then wait for 1929-and carry out rendezvous as originally planned. No problem about that; the twins and Dora were ready to keep *that* one, no matter what.

Then why did he feel so bad?

This wasn't *his* war.

Time enough and Gramp would know that the prediction he had blurted out was simple truth. In time Gramp would learn what French "gratitude" amounted to—when "Lafayette, we are here!' was forgotten and the refrain was *"Pas un sou a l'Amérique!"* Or British "gratitude" for that matter. There was *no* gratitude between nations, never had been, never would be. "Pro-German"? Hell, no, Gramp! There is something rotten at the very heart of German culture, and this war is going to lead to another with German atrocities a thousand times more terrible than any they are accused of today. Gas chambers and a stink of burning flesh in planned viciousness— A stench that lasted through the centuries— But there was no way to tell Gramp and Maureen any of this. Nor should he try. The best thing about the future was that it was unknown. Cassandra's one good quality was that she was never believed.

So why should it matter that two people who could not possibly know what he knew misunderstood *why* he thought this war was useless?

But the fact was that it *did* matter—it mattered terribly.

He felt the slight bulge against his left ribs. A defense for his gold —gold he did not give a damn about. But a "termination option" switch, too.

Snap out of it, you silly fool! You don't want to be dead; you simply want the approval of Gramp and Maureen—of Maureen.

The recruiting station was under the main post office, far downtown. Late as it was, it was still open, with a queue outside. Lazarus paid an old Negro a dollar to sit in his car, warned him that there was a grip in the back, promised him another dollar when he got back—and did not mention ‘ the money vest and pistol, both now in the grip. But Lazarus did not worry about car or money—might be simpler if both were stolen. He joined the queue.

“Name?”

“Bronson, Theodore.”

“Previous military experience?”

“None.”

“Age? No, date of birth—and it had better be before April *5,* 1899.”

“November 11, 1890.”

“You don’t look that old, but okay. Take this paper and through that door. You’ll find sacks or pillow cases. Take your clothes off, put ‘em in one, keep ‘em with you. Hand this to one of the docs and do what he tells you.”

“Thank you, Sergeant.”

“Get moving—next.”

A doctor in uniform was assisted by six more in civilian clothes. Lazarus read the Snellen Card correctly, but the doctor did not seem to be listening; this seemed to be a “warm body” examination. Lazarus saw only one man rejected, one who was (in ‘Lazarus’ horseback judgment) in the terminal stages of consumption.

Only one physician seemed at all anxious to find defects. He had Lazarus bend over and pull his buttock cheeks apart, felt for hernias and made him cough, then palpated his belly. “What’s this hard mass on the right side?”

“I don’t know, sir.”

“Have you had your appendix out? Yes, I see the scar. Feel the ridge, rather; the scar hardly shows. You had a good surgeon; I wish I could do one that neat. Probably just a mass of fecal matter there; take a dose of calomel and you’ll be rid of it by morning.

“Thank you, Doctor.”

“Don’t mention it, Son. Next.”

“Hold up your right hands and repeat after me

“Hang onto these slips of paper. Be at the station before seven tomorrow morning, show your slip to a sergeant at the information desk; he’ll tell you where to board. If you lose your slip of paper, be there *anyhow—or* Uncle Sam will come looking for you. That’s all, men, you're in the Army now! Out through that door."

His car was, still there; the old Negro got out. "Eve'ything's fine, Cap'm!"

"It surely is," Lazarus agreed heartily while getting out a dollar bill. "But it's 'Private,' not 'Captain.'

"They took you? In *that* case, I cain't hahdly take youah dollah."

"Sure you can! I don't need it; Uncle Sam is looking out for me for the 'duration,' and he's going to pay me twenty-one dollars a month besides. So put this with the other one and buy gin and drink a toast to me—Private Ted Bronson."

"Ah couldn't rightly do that, Cap'm—Private Ted Bronson, suh. Ah'm White Ribbon—Ah took the plaidge befoah you was bohn. You jes' keep youah money and hang the Kaisuh fo' us."

"I'll try, Uncle. Let's make this five dollars and you can give it to your church…and say a prayer for me."

"Well…if you say so, Cap'm Private."

Lazarus tooled south on McGee feeling happy. Never take little bites, enjoy life! *"K-K-K-Katy! Beautiful Katy—"*

He stopped at a drugstore, looked over the cigar counter, spotted a nearly empty box of White Owls, bought the remaining cigars, asked to keep the box. He then bought a roll of cotton and a spool of surgical tape—and, on impulse, the biggest, fanciest box of candy in the store.

His car was parked under an arc light; he let it stay there, got into the back seat, dug into his grip, got out vest and pistol, then started an un-tailoring job, indifferent to the chance of being seen. Five minutes with his pocketknife undid hours of tailoring; heavy coins clinked into the cigar box. He cushioned them with cotton, sealed the box and strengthened it by wrapping it with tape. The slashed vest, the pistol, and his ticket west went down a storm drain and the last of Lazarus' worries went with them. He smiled as he stood up and brushed his knees. Son, you *are* getting old—why, you've been living *cautiously!*

He drove gaily out Linwood to Benton, ignoring the city's seventeen-miles-per-hour speed limit. He was pleased to see lights burning on the lower floor of the Brian Smith residence; he would not have to wake anyone. He went up the walk burdened with the candy box, the case for chessmen, and the taped cigar box. The porch light came on as he reached the steps; Brian Junior opened the door and looked out. "Grandpaw! It's Mr. Bronson!"

"Correction," Lazarus said firmly. "Please tell your grandfather that *Private* Bronson is here."

Gramp appeared at once, looked at Lazarus suspiciously. "What is 'this? What did I hear you tell that boy?"

"I asked him to announce 'Private Bronson.' Me." Lazarus managed to get all three packages under his left arm, reached into a pocket, got out the slip of paper he had been given at the recruiting station. "Look at it."

Mr. Johnson read it. "I see. But why? Feeling the way you do."

"Mr. Johnson, I never said I was not going to enlist; I simply said I had things to do first. That was true, I did have. It's true also that I have misgivings about the ultimate usefulness of this war. But regardless of any opinion—which I should have kept to myself—the time has come to close ranks and move forward together. So I went down and volunteered and they accepted me."

Mr. Johnson handed back the recruitment form, opened the door wide. "Come in, Ted!"

Lazarus saw heads disappearing as he came in; apparently most of the family was still up. His grandfather ushered him into the parlor. "Please sit down. I must go tell my daughter."

"If Mrs. Smith has retired, I would not want her to be disturbed," Lazarus lied. (Hell, no, Gramp! I'd rather crawl in with her. But that's one secret I'll keep forever.)

"Never you mind. This is something she will want to know. Uh, that piece of paper—may I have it to show her?"

"Certainly, sir."

Lazarus waited. Ira Johnson returned in a few minutes, handed back the proof of enlistment. "She'll be down shortly." The old man sighed. "Ted, I'm proud of you. Earlier today you had me upset—and I spoke out of turn. I'm sorry—I apologize."

"I can't accept it because there is nothing to apologize for, sir. I spoke hastily and did not make myself clear. Can we forget it? Will you shake hands with me?"

"Eh? Yes. Surely! Mrrph!" Solemnly they shook hands. (Maybe Gramp *could* still straight-arm an anvil—my fingers are crushed.)

"Mr. Johnson, would you take care of some things for me? Things I didn't have time to do?"

"Eh? Certainly!"

"This box, mainly." Lazarus handed him the taped cigar box.

Mr. Johnson took it, his eyebrows shot up. "Heavy."

"I cleaned out my lockbox. Gold coins. I'll pick it up when the war is over…or if I don't, will you give it to Woodie? When he's twenty-one?"

"What? Now, now, Son, you'll come through all right."

"I plan to, and I'll pick it up then. But I might fall down a ladder in a troopship and' break my silly neck. Will you do it?"

"Yes, I'll do it."

"Thank you, sir. This is for Woodie right now. My chessmen. I can't pack them around. I’d give them to you except that you would-think up some reason not to take them but Woodie won’t.”

“Mrrph. Very well, sir.”

“Here’s one thing that is for you—but it’s not quite what it seems.” ‘Lazarus handed over the bill of sale for the landaulet.

Mr. Johnson read it. “Ted, if you’re trying to give me your automobile, you can think again.”

“That’s only a nominal conveyance of title, sir. What I would like is to leave it with you. Brian can drive it; he’s a good driver now, he’s a natural. You can drive it; even Mrs. Smith might want to learn. When Lieutenant Smith is - home, he may find it convenient. But if they send me for training anywhere near here and I get time off before I’m sent overseas, I’d like to feel free to use it myself.”

“But why hand me a bill of sale? Sure, it can sit in the barn and no doubt Brian—both of them—would drive it. Might learn to herd it myself. But no need for *this.*”

“Oh. I didn’t make myself clear. Suppose I’m off somewhere, say in New Jersey—but want to sell it. I can drop you a penny postcard, and it’s easy, because you’ll have *that.*” Lazarus added thoughtfully, “Or I might fall down that ladder…in which case the same reasoning applies. If you don’t want it, you can sign it over to Bran Junior. Or whatever. Mr. Johnson, you *know* I don’t have any relatives——so why not let it run easy?”

Before Gramp could reply, Mrs. Smith came in, dressed in her best and smiling (and had been crying, Lazarus felt certain). She extended her hand. “Mr. Bronson! We are all so proud of you!”

Her voice, her fragrance, the touch of her hand, her proud joy, all hit Lazarus in the gut; his careful conditioning was swept away. (Maureen beloved, it’s lucky that I’m being sent away at once. Safer for you, better all around. But I did it to make you proud of me, and now my cup runneth over—and please ask me to sit down before Gramp notices the tilt of my kilt!)

“Thank you, Mrs. Smith. I just stopped by to say thank you and goodbye—and good night, too, as I’m shipping out early tomorrow morning.”

“Oh, do please sit down! Coffee at least, and the children will want to say goodbye to you, too.”

An hour later he was still there and still happier—happy all through. The candy had been opened after he had presented it to Carol for all of them. Lazarus had drunk much coffee thick with cream and sugar and had eaten a hefty slice of home-baked white cake with chocolate icing, then accepted a second while admitting that he had not eaten since breakfast then protested when Maureen wanted to jump up and cook. They reached a compromise under which Carol went out to make a sandwich for him.

“It’s been a confusing day,” he explained, “and I haven’t had time to eat. You caused me to change plans, Mr. Johnson.”

“I did, Ted? How?”

“You know—I think I’ve told you both—that I planned to make a business trip to San Francisco leaving the first of July. Then this happens—Congress declaring war—and I decided to make the trip at once, settle my affairs there—then enlist. When I saw you I was all set to leave, packed and everything—and you made me realize that the Kaiser wouldn’t wait while I took care of private affairs. So I joined up at once.” Lazarus managed to look sheepish. “My packed grip is still out in the car, going nowhere.”

Ira Johnson looked pained. “I didn’t mean to rush you, Ted. ‘Twouldn’t have hurt to take a few days to wind up your affairs; they can’t organize an army overnight. I know, I saw ‘em try, in ‘Ninety-eight. Mrrph. Perhaps I could make the trip for you? As your agent. Seeing that— Well, doesn’t look like I’m going to be too busy.”

“No, no! A million thanks, sir—but I hadn’t been thinking straight. Thinking ‘peacetime’ instead of ‘wartime’ until you got me back on the rails. I went to Western Union and wrote a night letter to my broker in Frisco, telling him what I wanted him to do; then I wrote a note appointing him my attorney-in-fact and got it notarized and went to the downtown post office and registered it to him. All done, everything taken care of.” Lazarus was enjoying the improvisation so much he almost believed it. “Then I went downstairs and enlisted. But that grip—Do you suppose you could put it in your garret? I won’t be taking a grip to soldier. Just a few toilet articles.”

“I’ll take care of it, Mr. Bronson!” said Brian Junior. “In my room!”

“In *our* room,” George corrected. *“We’ll* take care of it.”

“Hold it, boys. Ted? Would it break your heart if you lost that grip?”

“Not at all, Mr. Johnson. Why?”

“Then take it with you. But when you get back to your flat tonight, pack it differently. You put in white shirts and stiff collars, no doubt. You won’t need those. If you’ve got any work shirts, take those. Be sure to take a pair of well-broken-in high shoes you can march in. Socks—all you own. Underwear. It’s my guess—based on sad experience—that they won’t have enough uniforms right away. Confusion, and lots of it. You may be soldiering for a month or more in what you carry with you.”

“I think,” Mrs. Smith said seriously, “that Father is right, Mr. Bronson. Mr. Smith—Lieutenant Smith, my husband— was saying something like it before he left. He left without waiting for his telegram—it came hours later—because he said he knew that there would be confusion at first." Her mouth twitched. "Although he said it more forcefully."

"Daughter, no matter how Brian put it, it wasn't forceful enough. Ted will be lucky if his beans are on time. Any man who can tell his right foot from his left will be grabbed and made acting corporal; they won't care how he's dressed. But *you* care, Ted—so take along clothes you might wear on a farm. And shoes—comfortable shoes that won't put blisters on you the first mile. Mmm— Ted, do you know the coldcream trick? To use on your feet when you know you might have your shoes on for a week or more?"

"No, sir," Lazarus answered. (Gramp, you taught it to me once before—or maybe "after"—and it works, and I've never forgotten it.)

"'If possible, have your feet clean and dry. Smear your feet all over and especially between your toes with cold cream. Or Vaseline, carbolated is best. Use *lots,* a thick layer. Then put on socks—clean if possible, dirty if you must, but don't skip them—and put your boots on. When you first stand up, it feels as if you'd stepped into a barrel of soft soap. But your feet Will thank you for it and you won't get jungle rot between your toes. Or not as much. Take care of your feet, Ted, and keep your bowels open."

"Father."

"Daughter, I'm talking to a *soldier—telling* him things that may save his life: If the children can't hear such things, send them up to bed."

"I think it is time," Maureen answered, "to get the younger ones quieted down, at least."

"I don't have to go to bed!"

"Woodie, you do exactly what your mother tells you to and no back talk—or I'll bend a poker over your bottom. That's standing orders until your father gets home from the war."

"I'm going to stay up till Private Bronson leaves! Papa said I could."

"Mrrph. I'll discuss the logical impossibility of that with a club; it's the only way to make you understand it. Maureen, I suggest that we start with the youngest, let 'em say goodbye in turn, and then march straight up to bed. Which winds up in due course with me walking Ted to his streetcar stop."

"But I was going to drive Uncle Ted home!"

Lazarus judged that it was time to speak up. "Brian, thank you. But let's not give your mother something extra to worry about tonight. The trolley takes me almost straight home and from tomorrow on I won't even have streetcars; I'll walk."

"That's right," agreed Gramp. "He'll march. *'Hay* foot, *straw* foot!—heads up and look proud!' Ted, his father made Brian Sergeant of the

Guard until he gets back, charged with internal security of this household."

"Then he can't leave his post of duty to chauffeur a mere private, can he?"

"Not in the presence of the Officer of the Guard—me—and of the Officer of the Day, my daughter. Reminds me— While the young 'uns are kissing you goodbye, I want to dig out a couple of my old Army shirts; I think they'll fit you. If you don't mind hand-me-downs?"

"Sir, I will be proud and honored to wear them!"

Mrs. Smith stood up. "I have something I must get for Mr.—Private Bronson, too. Nancy, will you bring down Ethel? And Carol, will you fetch Richard?"

"But Private Bronson hasn't eaten his sandwich!"

Lazarus said, "I'm sorry, Miss Carol. I've been too excited to eat. Uh, would you wrap it for me? I'll eat it the minute I'm back in my apartment—and it will make me sleep soundly."

"Do that, Carol," decided her mother. "Brian, will you fetch down Richard?"

After more backing and filling Lazarus told them all goodbye, in reverse order of seniority. He held Ethel for a moment and grinned at her baby smile, then kissed the top of her head and handed her back to Nancy, who took her upstairs and hurried back down. To kiss Richard, Lazarus had to get down on one knee. The child seemed unsure why this was happening but knew that it was a solemn occasion; he hugged Lazarus tightly and smeared his cheek with a kiss.

Woodie then kissed him—for the first and only time, but Lazarus no longer felt bothered by touching "himself" as this little boy was not himself but simply an individual from whom he derived some scattered memories in an odd concatenation. He was no longer tempted to strangle him—or not often.

Woodie used the unaccustomed intimacy to whisper: "Those chessmen are *really* ivory?"

"Really truly ivory. Ivory and ebony, just like the keys on your Mama's piano."

"Gee, that's *keen!* Look, when you come back, Uncle Private Bronson, I'll let you play with them. Anytime."

"And I'll beat you, Sport."

"Says you! Well, so long. Don't take any wooden nickels." Little Marie kissed him with tears in her eyes, then fled from the room. George kissed him on the cheek and muttered, "You be careful, Uncle Ted," and left also. Brian Junior said, "I'll take real good care of your automobile—I'll keep it shined just the way you do," then hesitated—suddenly kissed his cheek and left, leading Richard.

Carol had his sandwich, neatly wrapped in waxed paper and tied with a ribbon. He thanked her and put it into an outer coat pocket. She placed her hands on his shoulders, stood on tiptoes and whispered, "There's a note in it for you!"—kissed his cheek and left quickly.

Nancy took her place and said quietly, "The note is from both of us. We're going to pray for you every night when we pray for Papa." She glanced at her mother, then put her arms around his shoulders and kissed him on the mouth, a firm peck. "That's not goodbye but au revoir!" She left even more quickly than her sister, head high and moving like her mother.

Mrs. Smith stood up, said quietly, "Father?"—and waited.

"No."

"Then turn your back."

"Mmrph. Yes." Mr. Johnson studied the pictures on the wall.

With a soft rustle Mrs. Smith came close to Lazarus, looked tip at him, held up a little book. "This is for you."

It was a vest-pocket New Testament; she held it opened at the fly leaf. He took it and read the original inscription, somewhat faded:

"To Maureen Johnson, Good Friday 1892, for perfect attendance. Matthew vii 7"

And under this, in fresh and crisp Spencerian script:

To Private Theodore Bronson
Be true to self and country.
Maureen J. Smith

April 6, 1917

Lazarus gulped. "I will treasure it and keep it with me, Mrs. Smith."

"Not 'Mrs. Smith," Theodore— 'Maureen." She put up her arms.

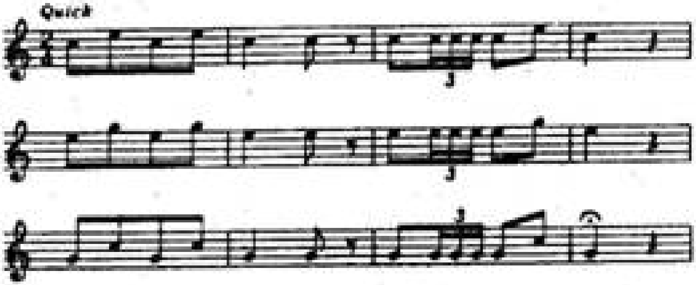
Lazarus stuffed the little book into his breast pocket, put his arms around her, met her lips.

For a long moment her kiss was firm and warm but chaste. Then she moaned almost inaudibly, her body softened and -came strongly against him, her lips opened, and she kissed him in a fashion that Lazarus could barely believe even as he answered it in kind—a kiss that promised everything she could give.

After some uncounable eternity she whispered against his lips: "Theodore…take care of yourself. Come back to us."

DA CAPO

VI



Camp Funston, Kansas

Dear Twins and Family,

Surprise! Meet Corporal Ted Bronson, acting sergeant and the meanest drillmaster in the whole National Army of the United States. No, I have *not* scrambled my circuits. I temporarily lost track of a basic principle of evasive action, i.e., the best place to hide a needle is in a stack of needles and the best place to avoid the horrors of war is in an army. Since none of you has ever seen a war, or even an army, I must explain.

I had (foolishly) planned to avoid this war by running away to South America. But South America is a place where I could not possibly pass for a native, no matter how well I spoke the language—and it is loaded with German agents who would suspect me of being an American agent and might arrange some nasty accident for Ol' Buddy Boy, bless his innocent heart. And the girls there have beautiful flashing eyes, suspicious duennas, and fathers who love to shoot gringos up to no good.

Unhealthy.

But if I stayed in the United States and tried to stay *out* of the Army—one slip and I wind up behind cold stone walls, eating miserable food, and making little rocks out of big ones. Unappealing.

But in wartime the Army gets the best of everything— aside from a mild hazard of getting shot at. The latter can be avoided.

How? This is not yet the era of total war, and an army offers innumerable bolt holes for a coward (me) to avoid unpleasant dangers from strangers. In this era only a small part of an army gets shot at. (An even smaller part gets hit, but I don't plan to take that risk.) At this here-&-now land warfare is fought in certain locations, and there are endless army jobs *not* in those places, where (despite a military uniform) an army man is really just a privileged civilian.

I am in such a job and probably won't move until the war ii over. Someone has to take these brave, young, innocent lads, fresh off the farm, and turn them into something resembling soldiers. A man who can do this is so valuable that-officers are reluctant to let him go.

So I'm full of that old fighting spirit and won't have to fight. I teach, instead—close-order drill, extended drill, markmanship and care of the rifle, bayonet, barehanded combat, field hygiene, anything. My "amazing" aptitude in military matters caused surprise, me being a recruit with "no military experience." (How could I admit that Gramp taught me to shoot five years after the end of this war and that I first handled these same weapons as a high school cadet ten years from now and that my military experience is scattered over the next hundred years plus a little now and then for centuries more?)

But a rumor hints that I was once a soldat in the French Foreign Legion. a corps of one of our Allies, made up of cutthroats, thieves, and escaped convicts, and famous for their go-to-hell way of fighting —possibly a deserter from it and almost certainly under another name. I discourage this canard by becoming surly if anyone gets inquisitive and only occasionally make the mistake of saluting French style (palm forward) and correct it at once—but everybody knows that I "polly-voo" because my knowledge of the French language had a lot to do with my change from "acting corporal" to real corporal assigned to instruction, and now greasing for sergeant. There are French and British officers and sergeants here to teach us trench warfare. All the French here are supposed to speak English—but the English they speak these Kansas and Missouri plow jockeys can't understand. So in slips lazy Lazarus as liaison. Me and one French sergeant almost add up to one good instructor.

Without that French sergeant I *am* a good instructor when I am allowed to teach what I know. But only in unarmed combat am I allowed to, because unarmed hand-to-hand fighting does not change through the ages; only the name changes, and it has only one rule: Do it first, 'do it fast, do it dirtiest.—But, take bayonet fighting— A bayonet is a knife on the end of a gun, and the two parts add up to the Roman pilum, used two thousand years earlier and not new even they. One would expect the art of bayonet fighting, in 1917, to be perfect.

But it isn't. The "Book" teaches parries but not counters—yet a counter is as fast as a parry, far more deceptive, and fatally confusing to a man who has never heard of one. And there are other things—

There was (will be) a war in the twenty-sixth century Greg. in which the use of the bayonet became a high art and I was an unwilling participant until I managed to duck out. So one morning here, on a bet, I demonstrated that I could take on and never be touched by a U.S. Army regular sergeant-instructor—then a British one—and then a French one.

Was I allowed to teach what I had demonstrated? No. I mean *“Hell, No!”* I wasn’t doing it “by the Book,” and my “smart-alec” attempt almost lost me my cushy job. So I went back to doing it by the sacred “Book.”

But this book (used at Plattsburg where my father— and yours—trained) is not bad. In bayonet fighting its emphasis is on aggressiveness, which is okay within its limits; the bayonet is a horror weapon in the hands of a man eager to close and kill—and that may be all these kids have time to learn. But I would hate to see these pink-cheeked, brave lads go up against some old, tired, pessimistic twenty-sixth-century mercenaries whose sole purpose is to stay alive while their opponents die.

These kids can win a war, they *will* win this war, they *did* win it from when you are. But an unnecessary number are going to die.

I love these kids. They are young and eager and gallant and terribly anxious to get “Over There” and prove that one American can lick any six Germans. (Not true. The ratio isn’t even one to one. The Germans are veterans and don’t suffer from “sportsmanship” or any other illusions. But these green kids will keep on fighting and dying until the Gernians give up.)

But they are so *young!* Laz and Lor, most of them are younger than you two, some *much* younger. I don’t know how many lied about their ages—but lots of them don’t have to shave. Sometimes at night I’ll hear one crying in his cot, homesick for his mammy. But next day he’ll be trying, hard as ever. We don’t have enough desertions to matter; these boys *want* to fight.

I try not to think about how useless this war is.

It’s a matter of perspective. Minerva proved to me one night (when she was still following the profession of computer) that all here-&-nows are equal and “the present” is simply whatever here-&-now one is using. By my “proper” here-&-now ‘(where I would be if I hadn’t hearkened to the wild geese—home on Tertius) —by that here-&-now these eager, puppylike boys are long dead and the worms have eaten them; this war and its terrible aftermath are ancient history, no worry of mine.

But I’m *here,* and it’s happening *now,* and I feel it.

These letters become more difficult to write and to send. Justin, you want detailed accounts, written on the spot, of all that I do, to add to that pack of lies you edited. Photoreduction and etching are now impossible. I am sometimes allowed to leave camp for a day, which is just long enough to get to the nearest large town, Topeka (circa 160 kms. round trip), but always on a Sunday when businesses are closed, so I have not had a chance to work up a connection to use a laboratory in Topeka—assuming that there is one with the equipment I need, a doubtful point. I would let letters pile up in a lockbox (since it does not matter when I Delay Mail them)—but banks are never open on Sundays. So a handwritten letter, not too long and bulky, is the most I can manage—whenever I can lay hands on nesting envelopes (also difficult now)—and hope that paper and ink won't oxidize too much over the centuries.

I've started a diary, one which makes no mention of Tertius and such (this letter would get me locked up as crazy!) but is simply a daily recital of events. I can mail it, when it is full, to Gramp Ira Johnson to hold for me; then after the war is over and I have time and privacy, I can use it to write the sort of commentary you want, and take time to miniaturize and stabilize a long message. The problems of a time-tripping historiographer are odd and awkward. One Welton fine-grain memory cube would record all I could say over the next ten years—except that I would have no use for one even if I had it; the technology to use it is lacking.

By the way— lshtar, did you plant a recorder in my belly? You are a darling, dear, but sometimes a devious darling—and there is *something* there. It doesn't bother me, and I might never have noticed it had not a physician noticed it the day I joined this Army. He brushed the flatter off—but later I conducted my own examination by touch. There *is* an implant there—and not what Ira says I'm full of. It might be one of those artificial organs -you rejuvenators are reluctant to discuss with your "children." But I suspect that it is a Welton cube with an ear hooked to it and a ten-year power supply; it's about the right size.

But why didn't you *ask* me, dear, instead of sneaking up on me with a Mickey? It is not true that I always say No to a civil request; that is a canard started by Laz and Lor. Justin could have gotten Tamara to ask me, and no one has ever learned how to say No to Tamara. But Justin will pay for this: To hear what I say and what is said in my presence, he is going to have to listen to *ten years* of belly rumblings.

No, durn it, Athene will filter out incidental noise and supply him with a dated and meaningful printout. There is no justice. And no privacy, either. Athene, haven't I always been good to you, dear? Make Justin pay for his prank.

I haven't seen my first family since I enlisted. But when I get a long-enough pass I am going to Kansas City and visit them. My status as a "hero" carries privileges a "civilian young bachelor" cannot enjoy; the mores relax a bit in wartime, and I'll be able to spend time with them. They have been very good to me: a letter almost every day, cookies or a cake weekly. The latter I share, reluctantly; the former I treasure.

I wish it were as easy to get letters from my Tertius family.

Basic Message, Repeated: Rendezvous is 2 August 1926, ten T-years after drop. Last figure is "six"—not "-nine."

All my love,
Corporal Ted ("Ol' Buddy Boy") Bronson

Dear Mr. Johnson,

And all your family—Nancy, Carol, Brian, George, Marie, Woodie, Dickie Boy, Baby Ethel, and Mrs. Smith. I cannot say how touched I am that this orphan has been "adopted for the duration" by the Smith family, and to hear that it is confirmed by Captain Smith. In my heart you all have been "my family" since that sad & happy night you sent me off to war loaded with presents and good wishes and my head filled with your practical advice—and my heart closer to tears than I dared let anyone see. To be told by Mrs. Smith—with a sentence quoted from a letter from her husband, the Captain—that I truly *am* "adopted"—well, I'm close to tears again, and noncoms are not supposed to show such weakness.

I have not looked up Captain Smith. I caught the hint in your letter—but, truly, I did not need it; I have been soldiering long enough to realize that an enlisted man does not presume in such fashion. I am almost as certain that the Captain will not look me up—for reasons I don't need to explain as you have soldiered far more than the Captain and I combined. It was most sweetly thoughtful of Mrs. Smith to suggest it—but can you make her understand I *can't* look up a captain socially? And why she should not urge her husband to look up a noncom?

If you can't make her understand this (possible, since the Army is a different world), perhaps this will suffice: Camp Funston is *big—and* no transportation for me other than shanks' mare. Call it an hour for the round trip if I swing out my heels. Add five minutes with the Captain when I find him—if I find him. You know our stepped-up routine, I sent you a copy. Show here that there just *isn't time,* all day long, for me to do this.

But I do appreciate her kind thoughts.

Please give Carol my heartiest thanks for the brownies. They are as good as her mother makes; higher praise I cannot give. "Were," I should say, as they disappeared into hollow legs, mine and others (my buddies are a greedy lot). If she wants to marry a long, lanky Kansas farm boy with a big appetite, I have one at hand who will marry her sight unseen on the basis of those brownies.

This place is no longer the Mexican fire drill I described in my earliest letters. In place of stovepipes we now have real trench mortars, the wooden guns have disappeared, and even the greenest conscripts are issued Springfields as soon as they've mastered squads east and west and have learned to halt more or less together.

But it remains hard as the mischief to teach them to use those rifles "by the Book." We have two types of recruit: boys who have never fired a rifle, and others who boast that their pappies used to send them out to shoot breakfast and never allowed them but one shot. I prefer the first sort, even if a lad is unconsciously afraid and has to be taught not to flinch. At least he hasn't practiced his mistakes, and I can teach him what the regular Army instructors taught me, and those three chevrons on my sleeve now insure that he listens.

But the country boy who is sure he knows it all (and sometimes is indeed a good shot) *won't listen.*

It's a chore to convince him that he is not going to do it *his* way; he is going to do it the *Army* way, and he had better learn to like it.

Sometimes these know-it-alreadys get so angry that they want to fight—me, not Huns. These are usually boys who haven't found out that I also teach unarmed combat. I've had to accommodate a couple of them, out behind the latrine after retreat. I won't box them; I have no wish to flatten my big nose against some cow-milking fist. But the idea of fighting rough-and-tumble, no rules, either makes their eyes glitter—or they decide to shake hands and forget it. If they go ahead with it, it doesn't last over two seconds as *I* don't want to get hurt.

I promised to tell you where and how I learned la savate and jujitsu. But it's a long story, not too nice in spots, one I should not put into a letter but wait until I have a pass that gives me time enough to visit Kansas City.

But I haven't had anyone offer to fight me for at least three months. One of the sergeant-instructors told me that he had heard that the recruits call me "Death" Bronson. I don't mind as long as it means peace and quiet when I'm off duty.

Camp Fun's-Town continues to have just two sorts of weather, too hot and dusty, too cold and muddy. I hear that the latter is good practice for France; the Tommies here claim that the worst hazard of this war is the danger of drowning in French mud. The poilus among us don't really argue it but blame the rain on artillery fire.

Bad as the weather may be in France, everyone wants to go there, and the second favorite topic of conversation is "When?" (No need to tell an old soldier the first.) Rumors of shipping out are endless-and always wrong.

But I'm beginning to wonder. Am I going to be stuck here, doing the same things month after month while the war goes on elsewhere? What will I tell my children someday? Where did you fight the Big War, Daddy? Funston, Billy. What part of France is that, Daddy? Near Topeka, Billy—shut up and eat your oatmeal!

I would have to change my name.

It gets tiresome telling one bunch after another to stack arms and grab shovels. We've dug enough trenches in this prairie to reach from here to the moon, and I now know four ways to do it: the French way, the British way, the American way—and the way each new bunch of recruits does it, in which the revetments collapse—and then they want to knew what difference it makes because General Pershing, once *we* get there, is going to break this trench-warfare stalemate and get those Huns on the run.

They may be right. But I have to teach what I'm told to teach. Till I'm white-haired, maybe.

I am pleased indeed to hear that you are in the Seventh Regiment; I know how much it means to you. But please don't disparage the Seventh Missouri by calling it the "Home Guard." Unless somebody gets a hammerlock on Hindenburg pretty soon, you may see a lot of action in this war.

But truthfully, sir, I hope you do not—and I think Captain Smith would agree with my reasoning. Someone *does* have to guard the home—and I mean a specific home on Benton Boulevard. Brian Junior isn't old enough to be the man of the family—I think Captain Smith would worry if you weren't there.

But I do understand how you feel. I hear that the only way for a sergeant-instructor to get off this treadmill is to lose his stripes. Would you feel ashamed of me if I went absent over leave just long enough to get busted back to corporal…then did something else to lose those chevrons, too? I feel sure it would get me on the first troop train headed east.

You'd better not, read that last to the rest of the family. An "Honorary Smith" had best find some other way.

My warmest respects to you and to Mrs. Smith, My love to all the youngsters,

Ted Bronson "Smith"

(And *most* happy to be "adopted")

"Come in!"

"Sir, Sergeant Bronson reports to Captain Smith as ordered!" (Pop, I wouldn't have recognized you. But durned if you don't look just as you ought to. Only younger.)

"At ease, Sergeant. Close that door. Then sit down."

"Yes, sir." Lazarus did so, still mystified. He had not only never expected Captain Smith to get in touch with him, but he had refrained from asking for a pass long enough to let him go to Kansas City for two reasons: One, his father might be there that weekend—or, two, his father might *not* be there that weekend. Lazarus was not sure which was worse; he had avoided both.

Now a dog-robber type on a motorcycle with a sidecar had suddenly picked him up with orders to "Report to Captain Smith"—and it was not until he had done so that he knew that this "Captain Smith" was Captain Brian Smith.

"Sergeant, my father-in-law has told me quite a bit about you. And so has my wife."

There seemed to be no answer to that, so Lazarus looked sheepish and said nothing.

Captain Smith went on, "Oh, come, Sergeant, don't look embarrassed; this is man to man. My family has 'adopted' you, so to speak, and it meets with my heartiest approval. In fact it fits in with something the War Department is starting, through the Red Cross and the Y.M.C.A. and the churches, a program to locate every man in uniform who does not get mail regularly and see to it that he does. Get a family to 'adopt him for the duration' in other words. Write to him, remember his birthday, send him little presents. What do you think of that?"

"Sir, it sounds good. What the Captain's family has done for me has certainly been good for *my* morale."

"I'm pleased to hear it. How would you organize such a program? Speak up, don't be afraid to express your own ideas."

(Give me a desk and I'll make a career of it, Pop!) "Sir, the problem breaks down into two—No, three parts. Two of preparation, one of execution; First, locate the men. Second, at the same time, locate families willing to help. Third, bring them together. The first has to he done by the first sergeants." (The top kicks are going to love this—in a pig's eye.) "They will have to require their company clerks to check mail against the roster before handing it out. Uh, this must he speeded up; holding up mail call for any reason is not a good idea. But checking can't be left to platoon sergeants; they aren't set up for it and would slop it. It has to be at the point where the mail orderly delivers mail to each company clerk."

Lazarus thought. "But to make this work, if the Captain will pardon me, the Commanding General must tell his adjutant to require from each company, troop, and battery commander a report of how many pieces of mail each man under his command has received that week." (And a damnable invasion of privacy, and the sort of multiplication of clerical work that bogs down armies! The homesick ones *have* homes and do get mail. The loners don't want letters; they want women and whiskey. The prairie dog 'pee they sell for whiskey in this "dry" state has made a teetotaler of me.) "But that should not be separate paper work, Captain; it need only be a column of tally marks on the regular weekly report. Both company commanders and top sergeants are going to bellyache if it's too time-consuming—and the Commanding General would receive reports that would be mostly products of company clerks' imaginations. The Captain knows that, I feel sure."

Lazarus' father gave him a grin that made him look like Teddy Roosevelt. "Sergeant, you have just caused me to revise a letter I'm preparing for the General. As long as I am assigned to 'Plans & Training' no new program will add to the mountain of paper work if I can help it. I have been trying to sweat this one down to size, and you've shown me a way to do it. Tell me, why did you turn down officers' training when it was offered to you? Or don't tell me if you don't want to; it's your business."

(Pop, I'm going to have to lie to you—for I can't point out that a platoon leader has a life expectancy of around twenty minutes if he takes his platoon "over the top" and does it by the Book. What a war!) "Sir, look at it this way. Suppose I put in for it. A month to get it approved. Then three months at Benning, or Leavenworth, or, wherever they're sending them. Then back here, or Bliss, or somewhere and I'll be assigned to recruits. Six months with them and we go overseas. More training behind the lines 'Over There' from what I hear. Adds up to about a year, and the war is over, and I haven't been in it."

"Mmm…you could be right. You want to go to France?"

"Yes, *sir!"* (Christ, *no!)*

"Just last Sunday, in K.C., my father-in-law told me that would be your answer. But you may not know, Sergeant, that the billet you are in will be just as frustrating…without the compensation of bars on your shoulders. Here in 'Plans & Training' we keep track of every enlisted instructor—and the ones who don't work out we ship out… but the ones who *do* work out we hang onto like grim death.

"Except for one thing—" His father smiled again. "We have been asked—the polite word for 'ordered'—to supply some of our best instructors for that behind-the-lines training in France you mentioned. I know you qualify; I've made it a point to note the weekly reports on you ever since my father-in-law told me about you. Surprising proficiency for a man with no combat time…plus a slight tendency to be nonregulation about minor points, which—privately—I do not find a drawback; the utterly regulation soldier is a barracks soldier. Est-ce que vous parlez Ia langue française?"

"Oui, mon capitaine."

"Eh, bien! Peut-être vous avez enrôlé autrefois en la Legion Etrangère, n'est-ce pas?"

"Pardon mon capitaine? Je ne comprends pas."

"Nor will I understand you if we talk three more words of it. But I'm studying hard, as I expect French to be my own ticket out of this dusty place. Bronson, forget that I asked that question. But I must ask one more and I want an absolutely straight answer. Is there any possibility *whatever* that any *French* authority might be looking for you? I don't give a tinker's dam what you may have done in the past, and neither does the War Department. But we must protect our own."

Lazarus barely hesitated. (Pop is telling me plain as print that if I am a deserter from the Foreign Legion—or have escaped from Devil's Island or any such—he's going to keep me out of French jurisdiction.) "Absolutely *none,* sir!"

"I'm relieved to hear it. There have been latrine rumors that Pop Johnson could neither confirm nor deny. Speaking of him—Stand up a moment. Now left face, please. And about face. Bronson, I'm convinced. I don't remember my wife's Uncle Ned, but I would give long odds that you are related to my father-in-law, and his theory certainly fits. Which makes us 'kinfolk' of some sort. After the war is over, perhaps we can dig into it. But I understand that my children call you 'Uncle Ted', which seems close enough and suits me if it suits you."

"Sir, it does indeed! It's good to have a family, under any assumption."

"I think so. Just one more thing…and this you must forget once you go out that door. I think that a rocker for those chevrons will show up one of these days…and not long after you'll be given a short leave that you haven't requested. When that happens, don't start any continued stories. Comprenez-vous?"

"Mais oui, mon capitaine, certainement."

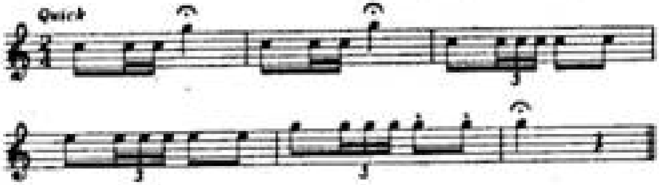
"I wish I could tell you that we will be in the same outfit; Pop Johnson would like that. But I can't. In the meantime please remember that I haven't told you anything."

"Captain, I've already forgotten it." (Pop thinks he's doing me a *favor!)* "Thank you, sir!"

"Not at all. Dismissed."

DA CAPO

VII



Staff Sergeant Theodore Bronson found Kansas City changed—uniforms everywhere, posters everywhere. Uncle Sam stared out at him: “I want *you* for the United States Army.” A Red Cross nurse was shown holding a wounded man in a stretcher as if he were a baby, with the one word:

“GIVE.” A sign on a restaurant said: “We Observe All Meatless, Wheatless, and Sweetless Days.” Service flags were in many windows—he counted five stars on one, saw several with gold stars.

More traffic than he recalled and streetcars were crowded, many passengers in uniform—it seemed as if all of Camp Funston and every camp or fort within reaching distance had all been dumped into the city at once. Untrue, he knew, but the train he had dozed in most of last night had been so jammed that it seemed true.

That “Khaki Special” had been almost as dirty as a cattle train and even slower; it had sidetracked again and again in favor of freights, and once for a troop train. Lazarus arrived in Kansas City late in the morning, tired and filthy—having left camp clean and rested. But he had his battered old grip with him and planned to correct both conditions before seeing his “adopted” family.

Waving a five-dollar bill in front of the railroad station got him a taxi, but the hackie insisted on picking up three more passengers going south after asking what direction Lazarus was going. The taxicab was a Ford landaulet like his own, but in much worse condition. The glass partition between front and back seats (the feature that made it a “limousine”) had been removed, and the collapsible half-top of the rear compartment appeared to have collapsed for the last time. But with five in it, plus baggage on knees, ventilation was welcome. The driver said, “Sergeant, you were first. Where to?”

Lazarus said that he wanted to find a hotel room out south, near Thirty-first.

“You’re an optimist—hard enough to find one downtown. But we’ll try. Drop these other gentlemen first, maybe?”

Eventually he wound up near Thirty-first and Main—”Permanent and Transient—all rooms & apts. with bath.” The driver said, “This joint costs too much—but it's this or go back downtown. No, keep your money till we see if they can take you. You about to go overseas?"

"So I hear."

"So your fare is a dollar; I don't take no tips from a man about to go over—I got a boy 'Over There.' Le'me talk to that clerk."

Ten minutes later Lazarus was luxuriating in the first tub bath he had had since April 6, 1917. Then he slept three hours. When his inner alarm woke him, he dressed in clean clothes from skin out, his best uniform—the breeches he had retailored for a smarter peg at the knee. He went down to the lobby and telephoned his family's home.

Carol answered and squealed. *"Oh!* Mama, it's Uncle Ted!"

Maureen Smith's voice was serenely warm. "Where are you, Sergeant Theodore? Brian Junior wants to go fetch you home."

"Please tell him thanks, Mrs. Smith, but I'm in a hotel at the Thirty-first Street car line; I'll be there before he could get here—if I'm welcome."

"'Welcome'? What a way for our adopted soldier to talk. You don't belong in a hotel; you must stay *here.* Brian—my husband, I mean, the Captain—told us to expect you and that you were to stay with us. Did he not tell you so?"

"Ma'am, I've seen the Captain just once, three weeks ago. So far as I know, he doesn't know I'm on leave." Lazarus added, "I don't want to put you out."

"Pish and tush, Sergeant Theodore, let's have no more of that. At the beginning of the war we changed the maid's room downstairs—my sewing room, where you played chess with Woodrow—into a guest room, so that the Captain could bring a brother officer home on a weekend. Must I tell my husband that you refused to sleep there?"

(Maureen my love, that's putting the cat too close to the canary! I won't sleep; I'll lie awake thinking about you upstairs—surrounded by kids and Gramp.) "Mrs. Captain generous hostess ma'am, I'll be utterly delighted to sleep in your sewing room."

"That's better, Sergeant. For a moment I thought Mama was going to have to spank."

Brian Junior was waiting at, the Benton car stop, with George as footman, and with Carol and Marie in the back seat. George grabbed the grip and took charge of it; Marie shrilled, "My, doesn't Uncle Ted look *pretty!"* and Carol corrected her:

"Handsome, Marie. Soldiers look handsome and smart, not 'pretty.' Isn't that right, Uncle Ted?"

Lazarus picked the smaller girl up by her elbows and kissed her cheek, set her down. "Technically correct, Carol—but 'pretty' suits me just fine if Marie thinks I am. Quite a welcoming committee—do I run along behind?"

"You sit in the tonneau with the girls," Brian Junior ruled. "But look at this first!" He pointed. "A *foot* throttle! Isn't that bully?"

Lazarus agreed, then took a few moments to inspect the car—in better shape than he had left it, shining and clean from spokes to top and with several new items besides the foot accelerator: a dressy radiator cap, rubber nonskids for the pedals, a tire holder on the rear with a patent-leather cover for a spare tire, a robe rail in the rear compartment with a lap robe folded neatly, and—finishing touch—a cut-glass bud vase with a single rose. "Is the engine kept as beautifully as the rest?"

George opened the hood. Lazarus looked and nodded approvingly. "It could take a white-glove inspection."

"That's exactly what Grandpa gives it," Brian declared. "He says if we don't take care of it, we can't use it."

"You do take care of it."

Lazarus arrived in royal splendor, one arm around a big little girl, the other around a small little girl. Gramp was waiting on the front porch, came down the walk to meet him, and Lazarus suddenly revised his mental image: The old soldier was in uniform and seemed a foot taller and ramrod straight—ribbons on his chest, chevrons on his sleeves, puttees most carefully rolled, campaign hat perched high and turned up slightly behind.

As Lazarus turned from handing Carol out, Marie having danced ahead, Gramp paused and threw Lazarus a sweeping Throckmartin salute. "Welcome home, Sergeant!"

Lazarus returned it as flamboyantly. "Thank you, Sergeant; I'm glad to be here." He added, "Mr. Johnson, you didn't tell me you were a supply sergeant."

"Somebody has to count the socks. I agreed to take—"

The rest was lost to Woodie's explosive arrival. "Hey, Uncle Sergeant! You're going to play chess with me!"

"Sure, Sport," Lazarus agreed, his attention distracted by two other things: Mrs. Smith at the open door, and a service flag in the parlor window. Three stars— *Three?*

Then Gramp was urging him in with something about this being a drill night so supper would be early. Nancy kissed him, openly and without glancing first for her mother's approval—then Dickie had to be picked up and kissed, and Baby Ethel *(walking!),* and at last Maureen gave him her slender hand, drew him to her, and brushed his cheek with her lips. "Sergeant Theodore…it is so *good* to have you home."

Supper was a noisy, well-run circus, with Gramp presiding in lieu of his son-in-law, while his daughter ran things with serene dignity from the other end and did not get up once Lazarus placed her chair under her and took his seat of honor on her right. Her three oldest daughters did all that was necessary. Ethel sat in a highchair on her mother's left with George helping her—Lazarus learned that this duty rotated among the five eldest.

It was a lavish meal for wartime, with hot, golden cornbread replacing white bread, this being a wheatless day—and firmest discipline (administered by Nancy and Brian Junior) required that every morsel accepted must be eaten, with admonitions about hungry Belgians. Lazarus did not care what he ate but remembered to compliment the cooks (three), and tried to answer all that was said to him—nearly impossible as Brian and George wanted to tell about their troop's drive to collect walnut shells and peach pits and how many it took for each gas mask, and Marie had to be allowed to boast that she could knit just as well as George could and she did not either drop stitches!—and how many squares it took to make a blanket, while Gramp wanted to talk shop with Lazarus and had to be stern to get a word in edgewise.

Maureen Smith seemed to find it unnecessary to talk. She smiled and looked happy, but it seemed to Lazarus that there was tension under her self-control—the ages-old strain of Penelope. (For me, darling? No, of course not. I wish I could tell you that Pop *will* come back, unharmed. But how could I make you believe that I *know?* You're going to ,have to sweat it out the way Penelope did. I'm sorry, my love.) "Excuse me, Carol— I missed that."

"I said it's perfectly *horrid* that you have to go back so soon! When you're just about to go 'Over There.'"

"But it's quite a lot, Carol, in wartime. It's just that getting here and getting back eats up so much time. I'm not entitled to special privileges; I don't know that I am about to ship out."

There was silence around the table, and the older boys exchanged glances.

Ira Johnson broke it by saying gently, "Sergeant, the children know what a pass in the middle of the week means. But they don't talk; they are disciplined. My son-in-law decided—wisely, I think—not to keep things from them unnecessarily."

"But, Grandpa, when Papa has leave, *he* doesn't go back next day. It's not fair."

"That's because," Brian Junior said wisely, "Papa usually rides with Captain Bozell in that big ol' Marmon Six and they burn up the road. Staff Sergeant Uncle Ted, *I* could drive' you back to camp. Then you wouldn't have to leave till later tomorrow night."

"Thank you, Brian—but I don't think we'd better. If I catch the train we call the 'Reveille Special' tomorrow evening, I'm safe even-if the train is a bit late, and this is one time I'm not going to risk being over leave."

"I agree with Sergeant Bronson," Gramp added, "and that settles it, Brian. Ted can't risk being late. I see that I had better move along, too. Daughter, if I may be excused?"

"Certainly, Father."

"Sergeant Johnson, may I drive you to your parade ground? Or wherever it is?"

"To the Armory. No, no, Ted, my captain picks me up and brings me home; he and I go early and stay late. Mrrph. Why don't you take Maureen for a spin? She hasn't been out of the house for a week; she's getting pale."

"Mrs. Smith? I'd be honored."

"We'll all go!"

"George," his grandfather said firmly, "the idea is to give your mother an hour free of the pressure and noise of children."

"Sergeant Ted promised to play chess with me!"

"Woodie, I heard what he said. He did not set a time…and he'll be here tomorrow."

"And he promised to take me to Electric Park a long, long, *long* time ago, and he never did!"

"Woodie, I'm sorry about that," Lazarus answered, "but the war came along before the park opened. We may have to wait until the war is over."

"But you said—"

"Woodrow," his mother said firmly, "stop that. This is Sergeant Theodore's leave, not yours."

"And get that sulky look off your face," added his grandfather, "before we form a regimental square and have you flogged around the flagpole. Nancy? Charge-of-quarters, dear."

"But—" The oldest girl shut up.

"Father, Nancy's young man is about to reach his birthday and is not going to wait to be drafted, I think I told you. So some of the young people are giving him a surprise party tonight."

"Oh, yes—slipped my mind.' Fine young man, Ted; you would approve of him. Correction, Nancy; you're off duty. Carol?"

"Carol and I can take care of anything," Brian answered. "Can't we, Carol? My night to wash, Marie wipes, George's turn to put away. Bedtimes by the schedules, emergency telephone numbers on the blackboard—we know the standing orders."

"May I be excused, too, then?" said Nancy. "Staff Sergeant Ted—

you *will* be here tomorrow. Won't you?"

Lazarus went out to the curb to meet Gramp's militia captain. When he came in, Maureen had gone upstairs. He grabbed the chance to freshen up in the bath off the quondam sewing room. Fifteen minutes later he was handing Mrs. Smith into the front seat of the landaulet, himself dizzied by her wonderful fragrance. Had she managed to bathe again in twenty minutes or so? It seemed like it; she had certainly changed clothes. These wartime styles were startling; as he handed her in Lazarus caught a glimpse not only of trim ankle but quite a lot of shapely calf. He was shaken by the thrill it gave him.

How long would this dress cycle last? While he cranked the car, he tried to quiet himself by thinking about it. Corsets disappeared right after this war, and skirts went up and up all during the Torrid Twenties, the "Jazz Age." Then women's styles varied all through this century but with a steady trend toward letting men see more and more of "what they were fighting for." But social nudity, even in swimming, did not become really common until the end of the century, so he seemed to recall. Then a puritan reaction the following century—a horrid time he had fled from.

What would Maureen think if he tried to tell her any of it?

The engine caught; he got in beside her. "Where would you like to go, Mrs. Smith?"

"Oh, out south. Somewhere quiet."

"South it is." Lazarus glanced at the setting sun, turned on his headlights. He made a U-turn and headed south.

"But my name is not 'Mrs. Smith', Theodore…when we are alone."

"Thank you…Maureen." Straight out to Thirty-ninth— then over to the Paseo? Or Prospect and out as far as Swope Park? Would she let him take her that far? Oh, for a thousand miles of open road and Maureen beside me!

"I like the way you say my name, Theodore. Do you remember where you took the children for a picnic not long before the war started?"

"Near the Blue River. You want to go there, Maureen?"

"Yes. If you don't remember the way, I can guide you; I suggested it for that picnic."

"We'll find it."

"It need not be that spot…but somewhere quiet—and private. Where you need not give your attention to driving."

(Hey! Maureen, my darling, you don't want us to be *too* private—I might shock you dreadfully. Private enough for a goodbye kiss—fine! Then let's deliver you home safe and sound. You are *this* century, my sweet! rd rather have one kiss—and your love and respect—than entice you into more aid have you think of me with regret. I decided that many months ago. You darling.)

"I should turn here?"

"Yes. Theodore, Brian Junior said that the new throttle he installed made it possible to drive with one hand."

"Yes, that's true."

"Then *do* drive with one hand. Is that plain enough, or must I be still more bold?"

Cautiously he put his arm across her shoulders. She promptly reached up, took his hand, pulled it down, and pressed it to her breast, saying quietly, "We haven't time to be shy, dear Theodore. Don't be afraid to touch me."

Firm-soft breast. Nipple erect to his touch. She shivered and got closer to him, again pressed her hand to his and gave a tiny moan. Lazarus said huskily, "I love you, Maureen."

She answered, just loud enough to be heard by him over the engine noise. "We have loved each other since the night we met. We simply could not say so."

"Yes. I didn't dare tell you."

"You would never have told me, Theodore. So I had to be bold and let you know that I feel it, too." She added, "The turn is just ahead, I think."

"I think so too. I'll need both hands to drive that lane."

"Yes," she agreed, surrendering his arm, "but only till we get there. Then I want *both* your arms…and *all* your attention."

"Yes!" He drove in carefully, avoiding ruts, until the lane widened into the level grassy spot he remembered. There he turned the car full circle, in part to head it out but primarily to see that no one else was there. His headlights picked up nothing but grass and trees—good! (Or was it good? Oh, my darling, do you know what you are doing?)

He switched off the lights, stopped the engine, set the hand brake. Maureen came right into his arms; her mouth sought his, opened wide to him. For long moments they needed no words; her mouth, her hands were as eager as his and even bolder, urging him on.

Presently she chuckled happily against his lips and whispered, "Surprised? But I can't say a proper goodbye to my warrior with bloomers on so I took them off when I went upstairs, and my corset, too. Don't hold back, dear one; you can't harm me—I'm expecting."

"What did you say?"

"Theodore, must I always be the one with bold words and bold actions? I am pregnant, seven weeks now. Certain."

"Oh." He added thoughtfully, "This seat is narrow."

"I hear that the young people sometimes take the back seat out and put it on the ground. Or do chiggers worry you? Audacity, darling, a warrior must be audacious—so says my father, and my husband agrees. There is a lap rug back there, too."

(Maureen, my love, there is no doubt where I got my own audacity —or my ruttiness. From *you,* darling.) "if you'll let go of me, I'll get them out. I'm not afraid of chiggers—nor of the loveliest woman I've ever held in my arms. I just have trouble believing it."

"I'll help!"

She was out of the car without waiting; he slid, across the seat and followed her. She opened the tonneau door—and stopped. Then she said loudly and happily, "Woodrow, you're a scamp! Sergeant Theodore! See who is sleeping in the back seat!" As she spoke, she fumbled behind her, trying to reach buttons of his that she had unbuttoned. Lazarus quickly took over the task.

"Sergeant Ted promised to take me to Electric Park!"

"That's where we're going, darling; we're almost there. Now tell Mama— Shall we take you home and put you to bed? Or are you big enough to stay awake and go to Electric Park?"

"Yes, Sport," Lazarus agreed. "Home? Or Electric Park?" (Maureen, did Gramp teach you to lie? Or is it genius? I not only love you, I admire you. Pershing should have you on his staff.) He hastily refastened buttons at the back of her dress.

"Huh? Electric Park!"

"Then settle back down and we'll have you there in no time."

"I want to ride in front!"

"Sport, you can ride in back to Electric Park. Or ride in back till we get you home and into bed. I won't drive with three in the front seat."

"Brian does!"

"Let's go home, Mrs. Smith. Woodie doesn't know who's driving this car—he must be *quite* sleepy."

"I am not either! I had a nap. All right, I'll ride in back— to Electric Park."

"Mrs. Smith?"

"We'll go to Electric Park, Sergeant Theodore. If Woodrow will lie down and try to get another nap."

Woodie promptly lay down; they closed him in and Lazarus got them out of there. Once there was enough engine noise to blanket her words, she said, "I must telephone. Back where we turned off, you'll find a drugstore farther along—that's on our way to Electric Park."

"Right away. How much do you think he heard?"

"I think he was asleep until I opened the door. But nothing of importance if he was not and would understand less. Don't worry, Theodore—audacity, always audacity."

"Maureen, you should be a soldier. A general."

"I would rather be loved by soldiers…and I am, and it makes me wonderfully happy. Now you can drive with one hand again."

"That's just glass, he can see us."

"Theodore, you can touch me without putting an arm around me. I shall sit up straight and pretend to ignore whatever you find to do. But I am a *very* frustrated woman—and I want to be *touched.* By you." She chuckled. "Aren't we a pair of ninnies?"

"I suppose so. But I'm not laughing." Lazarus squeezed her thigh. "I'm too frustrated."

"Oh, but you *must* laugh, Theodore." She pulled up her skirt, moved his hand onto bare thigh above round garters. "When you have as many children as I have, you *must* laugh. Or go crazy." She pushed her skirt down, over his hand.

He caressed her warm, smooth skin; she eased her thighs and invited more. "I guess it *is* funny," he admitted. "Two full-grown adults outflanked by a six-year-old."

"Only five, Theodore. Not six until November." She squeezed his hand between plump thighs, then relaxed. "How well I remember. Biggest baby I've had, eight pounds…and more trouble than all the rest put together, and always a scamp and always my favorite and I try never to let it show—and you must not tell on me—that Woodrow is my favorite, I mean; I'm not afraid of your telling anything else. I know my reputation is safe with you."

"It is."

"I knew it or would never have plotted to take you out there. But 'reputation' is all it is; you now know what a hussy I am under my mask. But I cultivate a good reputation most carefully for my children. For my husband."

"You said 'plotted.'"

"Weren't you sure of it? I knew at once, when I learned how short your time is, that I had exactly one chance to get you alone and make you realize that I want you to come back *with* your shield, not on it. There is only one way for a woman to tell a warrior that. So I enlisted Father's help to get you away from my swarm of children." She chuckled again. "But the worst scamp I have ruined my carefully plotted plans. For he *has,* dear one—I don't dare risk it at home. I'll always regret that we didn't succeed…and I hope you will, too."

"Oh, I will, I do! You put Mr. Johnson up to suggesting this ride? Won't *he* suspect?"

"I'm sure he does. And disapproves. Of *me,* Theodore—not of you. But my reputation is as safe in his hands as in yours. Want to hear a sidesplitting joke? One that will make us laugh so hard that we'll forget how frustrated we are."

"I'll laugh if you do."

"Did you wonder how I knew the perfect place? Because I have been there before, Theodore, for the same purpose. But that's not the joke; this is: That rascal in the back seat was conceived there—on the very spot I was going to have you place me."

Lazarus thought a split second, then guffawed. "You're sure?"

"Utterly certain, sir. Ten feet from where you stopped. By that biggest black-walnut tree. I planned to have you place me on the same spot. I'm sentimental, Theodore; I *wanted* you to have me right where I conceived my favorite child. And the little imp stopped me! After I had become *quite* excited thinking about doing it with you on the very spot."

Lazarus thought a long moment—decided that he did want to know. "Who was he, Maureen?"

"What? *Oh!* I suppose I invited that so I shan't resent it. Theodore, I'm scarlet but not that scarlet. My husband, dear—*all* my children are his, no possibility of error. You have seen Brian only as an officer—but in private my husband is quite playful. So much so that I *never* wear bloomers when I go joyriding with him.

"It was February eighteenth, a Sunday, one I'll never forget. I kept a hired girl then; Nancy was too young to leave with the younger ones, and Brian was on the road, traveling, and wanted me to be ready for anything when he *was* in town, and he had just bought his first automobile.

'That Sunday was one of those false-spring days, and Brian decided to take me joyriding. Just me. He had established a firm rule that some occasions were for all our family, some were just for Mama and Papa—a good policy in a. large family, we think. So we got to that lovely picnic spot, pretty even in winter, and the ground was dry. We sat and lallygagged, and he had his hand where yours is—and he told me to take my clothes off."

"In *February?"*

"I didn't protest. It was at least sixty and no wind—but I would in much colder weather if my husband asked me to. So I did—all but shoes and stockings, and I looked like one of those French postcards you men buy in cigar stores. I didn't feel cold, I felt *grand—I* like to feel naughty, and Brian encourages me to, in private. He put down the back seat cushion—on that spot—and put a blanket on it. And had me. And that's when I got Woodrow. It had to be then because Brian was home just one day and that was the only time. Quite unusual, we usually squeeze in more loving, we enjoy it so." She chuckled. "When we were sure, Brian teased me about the iceman and the milkman and the postman-or was it the grocery boy? I teased right back that it could have been any of them—but the woodman got there first…in the woods. Right here, dear one; I won't be but a moment."

They all went in, as Woodie woke up (if he had slept; Lazarus had dark doubts—then reviewed it in his mind and decided that Maureen had been careful both in voice and phrasing). Lazarus bought the little boy an ice-cream cone to keep him quiet and sat him at the fountain, then moved to the other end and listened to her telephone call; he wanted to know what lies he must back up.

"Carol? Mama, dear. Have you counted our zoo lately?

Stop worrying; the scamp hid in the back seat, and we didn't know it until we were almost to Electric Park. Yes, dear, Electric Park and I'm feeling very gay. I'm going to keep Woodrow with us and not let the imp spoil our fun.

Earlier than I want to; Woodrow will be sleepy too soon to suit Mama; I want to ride every ride and win at least a Kewpie doll at the booths…Yes, as long as Marie is in bed on time. Make fudge for the boys—no, not fudge; we must watch the sugar ration. Make popcorn, and tell them I'm sorry they were worried. Then you older ones may stay up and say goodnight to Uncle Ted. Goodbye, dear."

She thanked the druggist with smiling dignity, took Woodie's hand and left unhurriedly. But the moment Lazarus had the car rolling, she took his right hand and restored it to warm intimacy of bare thighs. "Any trouble?" he asked, caressing her silken skin.

"None. They had been engaged in a bloodthirsty 'game of F1n h and didn't miss him untilit was time to put him to bed, only minutes before I called. Then they were worried, but not yet frantic; my little demon has hidden on us before. Theodore, Electric Park is an expense you did not expect. Will you put aside your pride and let me help?"

"I would if I needed help: I don't have that sort of useless pride. But I have plenty of money, truly. If I run short, I'll tell you." (Beloved, darling, I've been teaching optimists not to draw to inside straights, and I wish I could spend every cent of it on emeralds to set off your beautiful skin. But *your* pride makes that impossible.)

"Theodore, not only do I love you, you are a most comfortable person to be with."

Taking Woodie and his mother to Electric Park turned out to be more fun than Lazarus expected. He had nothing against amusement parks and was willing to be anywhere with Maureen—except that this time he expected to put up with restless frustration, in public where he must treat her as "Mrs. Smith," after being in warmest privacy—then disappointed.

But she taught him a lesson in how to enjoy the inevitable.

He learned that Maureen could be unblushingly intimate despite people all around them and still maintain her smiling, regal, public dignity. She did it by keeping her *persona* always intact—happy young matron with boy child clutching her hand, both enjoying an evening of innocent fun as guests of "Cousin" Theodore, "Uncle" Ted—while she found endless chances to continue her gaily bawdy conversation. Maureen did it not in whispers, but in ordinary tones pitched to reach Lazarus' ears only, or sometimes to Lazarus and Woodie but so phrased that the child would neither understand nor be interested.

Once she gently chided Lazarus. "Smile, beloved man. Let your face show that you are where you want to be, doing what you want to do. There, that's better. Now hold that expression and tell me why you were looking glum."

He grinned at her. "Because I'm frustrated, Maureen. Because I'm not in a certain spot by a big walnut tree."

She chuckled as if he had said something witty. "Alone?"

"Heavens, no! With *you."*

"Not so vehemently, Theodore. You are not courting me; you are my cousin who is wasting part of your precious leave by treating me and my child to an evening of fun—when you had hoped that I would find you a young lady who would turn out to be not at all ladylike when you took her to a dark place near a big walnut tree. You're a good sport about it— but not so enthusiastic as to cause Mrs. Grundy to raise her eyebrow…and there comes Mrs. Grundy now. Mrs. Simpson! And Mr. Simpson. How *nice* to run across you! Lauretta, may I present my dear cousin Staff Sergeant Bronson? And Mr. Simpson, Theodore." Maureen added, "Or perhaps you have met? At church? Before war was declared?"

Mrs. Simpson looked him over, counted the money in his wallet, checked his underwear, inspected his shave and haircut—assigned him a barely passing mark. "You belong to our church, Mr. Johnson?"

"'Bronson,' Lauretta. Theodore Bronson, Father's eldest sister's son."

"Either way," Mr. Simpson said heartily, "it's a pleasure to shake hands with one of 'Our Boys.' Where are you stationed, Sergeant?"

"Camp Funston, sir. Mrs. Simpson, I was a visitor to your church; my membership is in Springfield."

Maureen stopped their questions by asking Lazarus to fetch Woodie from the miniature railroad train, just returning to its ticket-booth depot. "Pull him like a cork, Theodore; three rides is enough. Lauretta, I didn't see you at Red Cross last week. May we count on you this week?"

Lazarus returned with Woodie in time for Mr. Simpson to wave and call out, "Good luck, Sergeant!" as the Simpsons moved on. The trio went next to the pony ride, got Woodie astraddle one; Mrs. Smith and Lazarus sat on a, bench, enjoyed more very private talk while very much in the public eye. "Maureen, 'you stole that base beautifully."

"No problem, dear one. I knew someone would see us, so I was ready. I'm pleased that it was the nastiest old gossip in-our church; I made sure she didn't miss us. Pillars of the church and war profiteers; I despise them. So I pulled her fangs and let's forget them. You were telling me about a certain dark spot. How was I dressed?"

"Like a French postcard!"

"Why, Sergeant Bronson!—and me a respectable woman. Or almost. Surely you don't think I would dare be that shameless?"

"Maureen, I'm not sure *what* you would dare. You have startled—and delighted me—several times. I think you have the courage to do anything you want to do."

"Possibly, Theodore, but I have limits on what I *will* do, no matter how much I want to. Do you want to know my limits?"

"If you want me to know, you'll tell me. If you don't, you won't."

"I want you to know, beloved Theodore. I would like to strip naked this very moment. I refrain only for practical reasons—not moral ones and not shyness; I *want* to give you my body, let you enjoy it any way you please—while I enjoy yours. There are *no* limits to what I *want* to do with you but only to what I *will* do.

"First"—she ticked them off—"I will not risk becoming pregnant by any man but Brian. Second, I will not knowingly risk the wellbeing of my husband and children."

"Weren't you risking that tonight?"

"Was I, Theodore?"

Lazarus thought about it. Pregnancy? Not a factor. Disease? She apparently trusted him on that—and Yes, darling, you are right. I don't know why you hold that opinion of me, but you're right. What does that leave? A chance of scandal if we had been caught. How much chance? Very little; it's as safe a spot as one could wish. Cops? Lazarus doubted that police ever checked that spot—and doubted still more strongly that a policeman, in the present war fever, would tell a soldier in uniform more than "Break it up and move on."

"No, my darling, you took no risks. Uh, if I had asked you to undress completely, would you have done so?"

Her laugh rang like chimes. Then She answered in her controlled pitch more private than a whisper. "I thought about that while I was taking a quick bath to make myself sweet for you, Theodore. It was a delightfully tempting idea; Brian has had me do so outdoors oftener than that once. It excites me, and he says that makes me more fun for him. But that's a risk *he* chooses to take, so it worries me not at all—with him. But I did not think it fair to him to take that risk on my own. So I firmly resolved, with my nipples crinkled up as hard as you felt them—hard as they are *now;* I'm *terribly* excited—I resolved not only *not* to undress but not to let *you* do so. Dear, will you go pay for another pony ride? Or fetch him if he's tired of that?"

Lazarus found that Woodie wanted another ride. He paid and went back to the bench, found Maureen staring down a lonely soldier. Lazarus touched his sleeve. “On your way, Private.”

The soldier looked around, ready to argue—looked again and said, “Oh. Sorry, Sergeant. No offense meant.”

“And none taken. Better luck elsewhere.”

Maureen said, “I hate to snub a boy in uniform, even when -I must. He wasn’t fresh to me, Theodore—he was just exploring the chances. I must be twice his age and was tempted to tell him so. But it would have hurt his feelings.”

“The trouble is that you *look* eighteen, so they’re certain to try.”

“Darling, I do *not* look eighteen. Me with a daughter over seventeen? If Nancy marries her young man before he goes to war—she wants to, and Brian and I won’t stop it—I’ll be a grandmother this coming year.”

“Hi, Grandmaw.”

“Tease. I will *enjoy* being a grandmother.”

“I’m certain you will, dear; I think you have great capacity for enjoying life.” (As *I* do, Mama!—and now I feel sure I got it both from you and Pop.)

“I do, Theodore.” She smiled. “Even when frustrated. Very.”

“Me, too—very. But we were talking about how old you look. Eighteen, that is.”

“Pooh. You noticed how broken down and baby-chewed my breasts are.”

“I noticed nothing of the sort.”

“Then you have no sense of touch, sir…for you handled them quite thoroughly.”

“Excellent sense of touch. Lovely breasts.”

“Theodore, I try to take care of them. But they’ve been filled with milk much of the past eighteen years. That one”— she nodded toward the pony ring—”I didn’t have enough milk for and had to put him on Eagle Brand, and he resented it. When I had Richard two years later, Woodrow tried to crowd out the new baby and take my freshened breasts. I had to be firm—when what I wanted was to have one at each breast. But one must be fair to children, not spoil one at the expense of another.” She smiled indulgently. “I have no sense about Woodrow, so I must follow my rules to the letter. Come back in a year, Theodore, and they won’t seem so broken down. They swell out and make me look like a cow.”

“Will you make it worth my while?”

“By a walnut tree? Probably no chance, dear one. I’m afraid my scamp killed our one chance.”

“Oh, it wouldn’t take *that* much to make it worthwhile. I was thinking of a taste—direct from producer to consumer." (Mama Maureen, as Galahad says and I've never argued, I'm the most tit-happy man in the Galaxy…and I'm staring at the spot where I acquired the habit. I wish I could tell you so. Darling.)

She looked startled, snorted, and looked delighted. "That might be almost as hard to arrange as a walnut tree. But— Yes if it can be done without shocking my children. You are a scamp, too—just like Woodrow. I know *I* would enjoy it. Because—this is secret, dear—Brian has tasted each new freshening. Claims solemnly that he's checking quality and butterfat content."

(Pop, you're a man of good taste!) "Does he ever find that one has a taste different from the other?"

She chuckled happily. "Dear one, you have so many playful quirks just like my husband that-you make me feel bigamous. He claims so, but it's just more of his joking. *I* can't tell any difference—and I've tasted."

"Madam, I look forward to giving you an expert's opinion. I think our cowboy has worn out his pony. What next? Want to try the Ben Hur Racer?"

She shook her head. "I enjoy roller coasters but won't go on one now. I've never miscarried, Theodore, and never will if being careful will keep me from it. Take Woodrow if you like."

"No. You would have to wait—and these woods are filled with wolves in khaki anxious to pick up eighteen-year-old grandmothers. The Fun House?"

'"All right." Then her mouth twitched. "No, I forgot something. Those blasts of air up from the floor—intended to make girls squeal and clutch their skirts. Which I don't mind but—no bloomers, dear. Unless you want everyone to see whether or not I'm truly a redhead."

"Are you?"

She smiled, unoffended. "Tease. Don't you know?"

"It was very dark near that walnut tree."

"Redhead at both ends, Theodore. As I would happily show you were it not for the—frustrating—circumstances. Brian asked me that while we were courting. Teasing, he didn't need to ask; I was covered with freckles then, just like Marie. I let him find out for himself on a grassy spot by the Marais des Cygnes River while a gentle old mare named 'Daisy' cropped grass and paid no attention to my happy squeals. I suppose the automobile is here to stay—but the horse-and-buggy had many advantages. Didn't you find it so? When you started stepping out with young ladies?"

Lazarus agreed with a straight face, unable to admit that his memories did not include 1899 or whatever year she was thinking of. Maureen went on, "I used to fix a picnic lunch and take a blanket to eat on. That was one way a girl of courting age could be unchaperoned as long as I was home before dark. A horse can take a buggy into spots even more private than our walnut tree. Truthfully, despite this modem talk about ‘wild women’ and morals breaking down, I had more freedom as a girl than my daughters do. Although I try not to make my chaperonage oppressive.”

“They don’t seem oppressed. I’m sure they’re happy.”

“Theodore, I would much rather have my children be happy than what our pastor says is ‘moral.’ I simply want to be sure they aren’t hurt. I am not ‘moral’ by the accepted rules—as you know quite well. Though not as well as I had hoped you would know it, and I’m taking out my frustration in talking about it. Perhaps you would rather I did not?”

“Maureen, since we can’t do it, the next best thing is talking about it.”

“Me, too, Theodore. I wish I were covered with chigger bites and my soul filled with the peace I know you could give me. Since I can’t give myself to you the way I had hoped, I want you to know me as deeply as words can bring us together as deeply as I wish you were in my body this very instant. Does my frankness shock you?”

“No. But it might get you raped right on this bench!”

“Please, not so much enthusiasm, dear one; people can see us—we’re talking about the weather. Tell me, is your thing hard?”

“Does it show?”

“No, but if it is, think about blizzards and icebergs—Brian says that helps—because our pony rider needs to be lifted down.”

They played both games for prizes; then Mrs. Smith decided that she could risk the Fun House if she clutched her skirts as if crossing a muddy street. Woodie enjoyed it, especially the Hall of Mirrors and the Crystal Maze. Maureen avoided air blasts by watching girls ahead of them, then either walked on one side or held her skirts firmly.

Woodie tired himself out, so Lazarus picked him up and he seemed to fall asleep—as his head touched Lazarus’ shoulder. They started to leave, which took them over the farewell air blast. Mrs. Smith was ahead and Lazarus assumed that she had it spotted from the way she swerved—then she turned as if to speak to him, and stood over it. Her skirts went flying high.

She did not squeal; she simply pushed them down a split second too late. Once they were outside she said, “Well, sir?”

“Same color. But curly, I think.”

“Quite. As curly as my other hair is straight; As you already knew.”

“And you did it on purpose.”

“Certainly. Woodrow is asleep and you had his head turned away. Perhaps some stranger got an eyeful, but I think not. If someone did, what can he do? Write a letter to my husband? Pooh. There was no one in there who knows us; I kept my eyes open. And grabbed the chance."

"Maureen, you continue to amaze and delight me."

"Thank you, sir."

"And you have beautiful limbs."

"'Legs,' Theodore. Brian says so, too, but I'm no expert on women's legs. But when he tells me so, he always says 'legs.' 'Limbs' is for public speech. So he says."

"The more I know about the Captain, the more I like him. You have gorgeous legs. And green garters."

"Of course they're green. When I was a little girl, I wore green hair ribbons. I'm too old for hair ribbons, but if there is the teeniest possibility that my curls will be seen, I wear green garters. I have many pairs; Brian gives them to me. Some with naughty mottoes on them."

"Are there mottoes on these?"

"'Little pitchers,' Theodore. Let's get Woodrow settled down in the back seat."

It seemed to Lazarus that "little pitchers" could not be listening; the child was limp as a rag doll. Nor did he wake when he was bedded down; he curled into fetal position, and his mother put the robe over him.

Lazarus handed her into the car, cranked it and joined her. "Straight home?"

She said thoughtfully, "There is plenty of gasoline; Brian Junior filled the tank this afternoon. I don't think Woodrow will wake."

"I know there's enough gasoline; I checked when I went out to meet Mr. Johnson's captain. Shall I find that walnut tree?"

"Oh, dear! Please don't tempt me. Woodrow *might* wake up and could climb over the back and get out, as easily as he climbed in and hid. He's not old enough to understand what we would be doing; nevertheless, I think his misunderstanding of it could upset him just as much. No, Theodore. What I meant is this: It's not late, it's just late for a little boy. While he sleeps we can ride around and talk for, oh, an hour. If you wish."

"We'll do that." He got rolling and added, "Maureen, although I want to take you back to that walnut tree, I think it's best that we don't. Best for you, I mean."

"But, darling! Why? Don't you think I *want* you?"

"I do think you want me. And God knows I want *you.* But despite your brave talk, I don't think you've ever done that. You would want to confess to your husband and if you did, it would make you both unhappy—and I don't want to make Captain Smith unhappy either;

he's a good sort. Or maybe you could keep it to yourself—but it would prey on your mind. Because, while you love me—a little—you love him a great deal more and I am sure of that. So it's best. Isn't that so?"

Mrs. Smith was silent a long moment. Then she said, "Theodore, take me straight to that walnut tree."

"No."

"Why not, dear? I must show you that I *do* love you and that I am *not* afraid to let you have me."

"Maureen, you would do it; you have the courage to do anything. But you would be tense and worried, afraid that Woodie would wake up. And you do love Brian. All the sweetly intimate things you've told me kept saying that."

"But don't you think my heart is big enough for *both* of you?"

"I'm certain it is. You love ten people that I know of; I'm sure you can squeeze in one more. But *I* love *you* and do not want you to do anything that would make a wall between you and your husband. Or hurt you both through your trying to tear down that wall by confessing. Beloved, I want your *love* even more than I want your dear, sweet body."

Again she was silent before speaking: "Theodore, I must tell you things about my husband and me. Private things."

"You shouldn't."

"I should and I must—and I *shall.* But— Please, will you touch me while I talk? Don't say anything, just touch me closely and intimately and nakedly…while I strip myself naked with words. Please?"

Lazarus put his free hand on her thigh. She pulled up her skirts, opened her thighs, pushed his hand more firmly to her. Then she covered his hand with her skirt, and spoke in an even, steady voice: "Theodore beloved, I love Brian and Brian loves me and he knows exactly what I am. I could keep a secret forever to keep from hurting him, and he would do the same for me. I must tell you what he said to me before he went away to Plattsburg—and I must use 'bedroom words,' Theodore; polite words don't have the force it must have.

"The night before he left we were in bed and had just had each other, me still wrapped around him like a curling iron and him still deep inside me. 'Swivel Hips,' he said—a pet name he calls me in bed—'I didn't sell the Reo to tie you down. If you want to drive, buy a Ford; it's easier to learn on.' I told him I didn't want to drive; I would wait until he came home. He answered, 'All right, Hot Bottom'—and that's a pet name, too, and Brian means it most lovingly—'All right, Hot Bottom, but buy one if you wish; you may need a car while I'm gone.

"'But a car is a minor matter. Your father will be here and that's good—but don't let him boss you. He'll try, he can't help it, it's his nature. But you are as strong-willed as he is; stand up to him, he'll respect you for it.

"'Now to more important matters, Pretty Tits'—and I like *that* name, too, Theodore, even though they're not and don't stop me to say they are—'Pretty Tits, I may not have gotten you pregnant; you don't usually catch again this soon. If not, once I'm back from Plattsburg, we'll keep on trying'—and we did, Theodore, and I caught, as I told you.

"Brian went on, 'We both know we're going to get into this war or I wouldn't be going to Plattsburg. It may last a long time—that "million men springing to arms overnight" is hogwash. When we do, I'll be gone again, and you'll be lonely—and we both know what a firecracker you are. I'm not telling you to jump the fence again'—I said *'again,'* Theodore!—'but if you do, I expect you to do it on purpose, eyes open and not to regret it afterwards. I have enormous respect for your taste and judgment; I know you won't cause a scandal or upset the children.'"

She paused, then went on: "Brian knows me, Theodore—I really *am* a firecracker, and I've never understood why some women don't like it. My own mother— Nine children and she told me on my wedding day that it was something women had to put up with for the privilege of having babies."

Mrs. Smith snorted. "'Put up 'with!' Theodore, I was not a virgin when Brian first had me. Nor had I let him think so; I told him the truth the day I met him and two minutes after he took my bloomers off he knew it through having me. Theodore, I broke my maidenhead three years before I met Brian—on purpose; I've never been a flirt—and told, not my mother, but my father, because I trusted him; we've always been close. Father didn't scold me, didn't even tell me not to do it again. He said he knew that I *would* do it again but hoped that I would take his advice and let him keep me out of trouble—and I have and it did.

"But that first time, when I came to him, scared and ready to cry—it had hurt, Theodore, and wasn't the thrill I had expected—that time Father just sighed and locked the door and had me get on his surgery table and examined me and assured me that I hadn't been damaged—and I felt *much* better!— and told me that I was as healthy a woman as he had ever examined and would have babies with no trouble—and that made me feel smug—and Father was right; I have babies easily and don't yell—or not much. Not the way Mother used to.

"After that, Father examined me from time to time. Doctors don't ordinarily treat their female relatives, not for female things. But Father was the only doctor I dared tell. So Father helped me with my problems and got me all over any shyness about being looked at there or anywhere. Not that I was ever too shy; he told me that sort of modesty was dadratted nonsense—when Mother was telling me the exact opposite. I believed him, didn't believe her.

"But I was telling you what Brian said to me in bed that night. Brian added, 'I want you to promise one thing, Pussycat. If you find that you haven't kept your legs crossed, will you keep it to yourself until this war is over? I will do the same if I have something to confess—and I might! Let's not worry each other more than we have to until the Kaiser is taken care of. Then when I come home, I'll take you to the Ozarks—leave the children home with someone; just us two—and. you won't see anything but the ceiling while we get caught up, and also catch up on anything we need to talk about. Is it a bargain, my darling?'

"I promised, Theodore. I didn't promise not to jump the fence; he wouldn't *let* me promise that. I promised to be careful—and to save any confessing until the war was won. I wanted to promise that much because he might not *come back!"*

Her voice had been steady up to the last. Then it broke, and he realized that she was crying. He started to remove his hand and to pull over to the side of the road. Mrs. Smith grabbed his hand, pushed it more firmly back between her thighs, and said, "No, no, *do* touch me and *don't* stop the car! Or I might rape you. I don't know why it makes me so passionate when I let myself remember that Brian might not come back from the war. But it does. I've been that way ever since the day we declared war…and always have to look serene and calm and unworried. For the children. For Brian. I haven't let Brian see me cry, Theodore. You have just now— I suddenly could not help it. But I would rather you told Brian that I tried to seduce you than have you tell him that I cried through fear that he might not come back!

"And now I'll stop it." Mrs. Smith took a kerchief from her purse, wiped her eyes, blew her nose. "Don't take me home yet; the children must not see me with my eyes red."

Lazarus decided to break cover. "I love you, Maureen."

"I love you, Theodore. In spite of my tears, you have made me happy. By letting me unburden myself—and I should not have; *you* are going to war, too. I feel almost married to you now, by telling you things I haven't been able to talk about with anyone else. If you had put me on the grass and had me—it would have been sweet and just what I planned. But this is even closer. And sweeter. A woman can open—her body to a man without opening her mind. I had two babies by Brian before I learned to open my mind to him the way I have to you tonight."

"Perhaps our minds are much alike, Maureen. Your father thinks we are cousins."

"No, he doesn't, darling; he thinks you're my half brother."

"Did he say that?"

"And *I* think so, too. By things Father did *not* say, dear Theodore. By how broken up he was when he misunderstood you about your intention to enlist. By the way he insisted that we *must* claim a service star for you. I feel sure he is right…and I *want* to believe it. Yes, that makes what I tried to do to you dreadfully sinful in some people's eyes, Incest. I did not care a whit. Since I'm pregnant, it could not possibly cause harm to a baby and that's the only thing that could make incest wrong."

(How to tell her? How *much* to tell her? But I *must* make her believe me.) "Your church would call it sinful."

"I don't give a fig for the church! Theodore, I'm not devout; I'm a freethinker, like Father. Church is a good atmosphere for children—and gives me a proper appearance as a respectable wife and mother—that's all! 'Sin' would not stop me; I don't believe in sin the way the church means it. Sex isn't sin, sex is never sin. What *would* stop me would he a chance of getting pregnant by someone other than Brian—but I *am* pregnant. That you ere my half brother didn't cause me a moment's fret; it just made me more anxious to tell you a warrior's goodbye."

"Maureen, I'm not your half brother."

"Are you sure? Even if you're not, you are still my warrior—I was as proud as Father when you volunteered."

"I'm your warrior, be sure of that. But I need to know something. This man Nancy may marry— Is he a Howard?"

"What did you say?"

"Is he on the approved list of the Ira Howard Foundation?"

He heard her catch her breath. "Where did you hear of the Foundation?"

"'Life is short—'"

"'But the years are long,' " she answered.

" 'Not "While the Evil Days Come Not."'"

"Goodness! I— I think I'm going to cry again!"

"Stop it. What is the young man's name?"

"Jonathan Weatheral."

"—of the Weatheral-Sperling line. Yes, I remember. Maureen, I am not 'Ted Bronson.' I am Lazarus Long of the Johnson Family. *Your* family. I am descended from you."

For several moments she seemed not to breathe. Then she said softly, "I think I am losing my mind."

"No, my gallant love, you have as strong and sane a mind as I have ever met. Let me explain because I must tell you something and you *must* believe me. Have you read a novel by Mr. Herbert George Wells called *The Time Machine?"*

"Why, yes. Father has a copy."

"That's me, Maureen. Captain Lazarus Long, Time Traveler."

"But that book— I thought it was just a…a—"

"Just a story. It is. But it won't stay that way. Oh, not quite the way Mr. Wells visualized it. But that's what I am, a visitor from a future time. I didn't intend to let anyone suspect this; that's why I claimed to be a foundling. Not only is it hard to prove, but any attempt would interfere with my purpose which is simply to visit this time and observe it. Might even get me locked up as crazy. So I've been careful to keep my mask on, as careful as—well, as *you* are. In talking to those Simpsons. In not letting your children see you cry. You and I do it the same way. Audacity…plus never telling lies we can be caught in."

"Theodore, I think you believe this."

"Meaning that I sound sincere but must be crazy."

"No, no, dear, I— Yes, that's what I meant. I'm sorry."

"No reason to be sorry; it does sound crazy. But I'm not afraid that you will have me sent to St. Joe; I'm as safe with you as you are with me. But I *must* find some way to convince you that I *am* telling the truth…because I am about to tell you something you *must* believe. Or I have dropped my mask to no point."

He stopped to think. How to prove it? Some prediction? It would have to be very short range to serve the only purpose he had in breaking cover. But he hadn't briefed himself on this year; he hadn't intended to arrive until 1919 and knew so little about the years before 1919 that he had even mixed up the date that the United States got into this war. Lazarus, damn your sloppy ways, the *next* time you make a time trip you're going to memorize everything about the era that Athene can give you—and a wide margin on both sides!

Woodie's memories were no help; Lazarus did not even recall having been taken to Electric Park by a sergeant in uniform. Self-centered brat! Electric Park he remembered; Woodie Smith had gone there many times. But no visit stood out in his mind.

"Maureen, maybe you can think of some way I can prove to you that I'm from the future—something that will convince *you.* But this is why I *had* to tell you: Brian—your husband, my ancestor—will come back unharmed. He's going to go through battles. Shells will fall around him, shots will whistle past his ears—but none will touch him."

Mrs. Smith gasped. Then she said slowly, "Theodore how do you *know?"*

"Because you two *are* my ancestors. I couldn't memorize the

Foundation's records on all the Howards of today but I did study the files on my own ancestors, ones I might have a chance to meet. You. Brian. Brian's parents in Cincinnati. And I figured out that Brian must have met you because he had attended Rolla, then found you on a Missouri list of eligibles—not the Ohio list—that the Foundation gave him. That's certainly something I didn't learn from you or Brian or Ira, and your children probably don't know it. Well, perhaps Nancy does; she's filled out her own questionnaire. Hasn't she?"

"Why, yes, months ago. Then it *is* true, Theodore. Or should I call you 'Lazarus'?"

"Call me anything you like, darling. But I still haven't proved anything. Just that I have had access to the Foundation's files—which might have been last year, not in the future. We're still looking for *proof.* Mmm…I know a proof for a few months from now—but I must make you believe me *tonight.* So you will have no more tears on your pillow. And I don't know *how."*

He caressed her thighs, touched her curls. "Here inside you is proof that won't show up in time. This last baby Brian put into your sweet belly— He's a boy, dearest ancestress, and you and Brian will name him 'Theodore Ira'—which flatters me enormously. When I read his name in the records, I didn't know that he was my namesake, as I hadn't picked my assumed name then."

She squeezed his hand with her thighs and sighed. "I want to believe you. But suppose Brian wants to name him Joseph? Or Josephine?"

"'Josephine' is not a name for a boy. Darling, Brian will name his war baby for the other two stars on your service flag; this war means a lot to him. He'll probably suggest it himself—I don't know. I just know that 'Theodore Ira' is the name you will register with the Foundation. My other ancestors— Adele Johnson, of course, your mother and Ira's wife. Lives in St. Louis. Left him around the time you got married but didn't divorce him—which probably irked him; I don't think Ira is a man to be celibate simply because his wife leaves but Won't turn him loose."

"He's not, dear. I'm certain Father has a—well, a mistress, and goes to see her some nights when he is supposed to be at that 'chess club'—and it's not a chess club; it's a pool hall. I go along with the pretense because he calls it that in front of the children."

"He does play chess there."

"Father plays a fine game of billiards, too. Go ahead, darling—Lazarus. I'm willing to believe. Maybe we'll find something."

"Well, I don't think I'll look up your mother; I don't think I would get along with a woman who thinks sex is something to 'put up with.'"

"I got along with Mother only by lying to her. Father reared me far more than she did. I was his favorite. He let it show, which is why I'm careful *not* to let it show with Woodrow. Go on, Theodore. Lazarus."

"That's all of my ancestors you are related to. Except one. Our stowaway. Maureen, I'm descended from you and Brian through Woodie."

She gasped. "Really? Oh, I hope it's true!"

"True as taxes, beloved. And it may have saved his life. I've never been closer to infanticide than I was when we found him in the back seat."

She giggled. "Darling, I felt the same way. But I won't let anger show in my voice even if I'm about to switch a child."

"I hope I didn't show anger. But I felt it. Beloved, I was so hard I *ached—until* we found Woodrow. Honey love, I was rarin' to go!"

"And I was just as ready! Oh, Theodore—Lazarus—it's so *sweet* to be open with you. Uh…yes, you're *quite* hard now."

"Easy there!—don't make me climb the curb. I have been ever since we left the house except when I forced it down. But the one Woodie ruined was bigger and better."

"Size isn't important, Theodore-Lazarus; a woman must fit any size. Father told me that long ago and taught me exercises for it—and I never told Brian; I let him think that was simply how I am—and accepted his compliments smugly. I still exercise regularly—because my birth canal has been stretched again and again and again by babies' skulls and if I didn't exercise those muscles I would be, in Father's salty language, 'loose as a goose.' And I do *so* want to stay desirable to Brian as many years as possible."

"And to the iceman and the milkman and the postman— and the boy who drives the grocery wagon."

"Tease. I'd like to stay young *there* till I die."

"You will, you eighteen-year-old prospective grandmother. Let's get our minds off sex and back to time travel; I'm still looking for a proof. So that you will *know* why I am *certain* that Brian came back okay. But to stop your worry it must be something that happens soon and certainly before Woodie's birthday."

"Why Woodrow's birthday?"

"Didn't I get that far? This war ends on Woodie's next birthday, the eleventh of November." He added, "I'm certain of that, it's a key date in history. But I'm racking my brain for some event between now and then—as soon as possible, to stop your worries. But—oh, shucks, dear, I made a silly mistake. I meant to arrive after this war is over. But I gave my computer one critical figure with an error in it—just a little one, but it made me arrive three years too soon. Not her fault; she accepts any data I give her, and she's as accurate a computer as ever conned a ship. Not a fatal error, either; I'm not lost in time, my ship will pick me up in 1926 exactly ten Earth years after she dropped me. But that's why I didn't study the history of the next few months; I expected to skip this war. I'm not studying Wars; histories are full of wars. I'm studying how people live."

"Theodore…I'm confused."

"I'm sorry, darling. Time travel *is* confusing."

"You speak of a computer, and I'm not sure what you mean…and you said 'she' conns—whatever that means—a ship that will pick you up…in 1926? And I don't understand *any* of it."

Lazarus sighed. "That's why I never intended to tell anyone. But I *had* to tell *you—so* that you could stop worrying. My ship is a spaceship—like Jules Verne, only more so. A starship, I live on a planet a long way off. But it is a timeship, too; she travels in both space and time and it's too complicated to explain. The computer is the ship's brain—a machine, a very complex machine. My ship is named 'Dora' and the machine, the computer, that conns it—runs it—steers it—is called Dora, too; that's the name she answers to when I speak to her. She's a very intelligent machine and can talk. Oh, there is a crew, two of my sisters—so of course they are descended from you, too, and they look like you. A crew is necessary— can't let a ship go running around by itself—except automatic freighters on precalculated runs—but Dora does the hard work, and Laz and Lor—Lapis Lazuli Long and Lorelei Lee Long—tell Dora what to do and let her do it." He squeezed Mrs. Smith's thigh and grinned. "If that air blast bad kept your skirts up two seconds longer, I would know more about how closely they resemble you—as they usually run around naked. They look like you in the face. Bodies, too, from that too-short glimpse of your lovely legs. Except that Laz and Lor are freckled all over as solidly as Marie is on her face."

"I'd be that freckled if I didn't stay out of the sun. When I was Marie's age Father called me 'Turkey Egg.' But *all* over? They don't wear *any* clothes?"

"Oh, they enjoy fancy dress for parties. Or the weather might be cold—but it rarely is; we live in a climate like southern Italy. They don't wear anything very often." Lazarus smiled and caressed her thigh. "They don't need to leave their bloomers home to be ready for lovemaking; they don't own any bloomers. They aren't a bit shy. They would be delighted to trip your father; they like older men—they're much younger than I am."

"Lazarus…how old *are* you?"

Lazarus hesitated. "Maureen, I don't want to answer that. I'm older than I look; Ira Howard's experiment was successful. Instead let me tell you about my family. *Your* family, too; we all are descended from you by one line or another. Two of my wives and one of my co-husbands are descended both from Nancy and from Woodie."

"'Wives? Co-husband?'"

"Sweetheart, marriage takes many forms. Where I live you don't need a divorce or a death to gather in someone you love. I have four wives and three co-husbands—and my sisters, Laz and Lor…and they may marry out of the family or they may stay—and don't look startled; you said you didn't fret when you thought I was your half brother—and don't worry about harm to babies; they know far more about such things at that when-&-where-than they do in the here-&-now. We *don't* risk harm to babies.

"Of which we have plenty. And cats and dogs and anything a child can pet and take care of. It's a real family in a house to fit a big family.

"I can't tell you about each one; we've got to get our stowaway home. But I want to tell you about one—because you've been insisting that you don't look eighteen—merely because you've been using your breasts to feed babies. Tamara. Descended from you through Nancy and her Jonathan— Want to hear about Nancy's umpty-ump granddaughter? Tamara is about two hundred and fifty years old, I think—"

"Two hundred and fifty!"

"Yes. One of my co-husbands, Ira Weatheral, also from Nancy and Jonathan but from Woodie, too—and named for your father, not for Ira Howard—is over four hundred years old. Maureen, Ira Howard's experiment *worked;* we have longer life-spans—inherited from you and all our Howard ancestors—but also in that when-&-where they know how to rejuvenate a person. Tamara has had two rejuvenations—one recently and looks as young as you do. Real rejuvenation— Tamara was pregnant when I left.

"But how she looks is not important; Tamara is a healer— and I suspect she gets it from *you."*

"Theodore—Lazarus—again I don't understand. A healer? Like a faith healer?"

"No. If Tamara has a religious faith, she has never mentioned it. Tamara is calm and happy and serene, and anyone around her feels it so strongly—just as with *you,* darling!— that he or she is happy, too. If people are ill, they get well faster if Tamara touches them, or talks to them, or sleeps with them.

"But Tamara was *not* young when I met her. She was quite old and thinking about letting it go at that, dying of old age. But I was ill, very ill, sick in my soul—and Ishtar, later my wife and the topnotch rejuvenator in all the Milky Way, went out and fetched Tamara. Tamara. Little round potbelly, breasts that were *really* baggy, sags under her eyes, and her chin, all the old-age things.

"Tamara healed the sickness in my soul, just by being with me… and somehow this renewed her own interest in life, and she took another rejuvenation and is young again and has already added another baby to the Maureen-Nancy line and is pregnant still again. You and Tamara are so *much* alike, Maureen; she's just love with some skin around it— and so are *you.* But—" Lazarus paused and frowned.

"Maureen, *I* don't know how to convince you that I'm telling the truth. You'll *know* it when Woodie's sixth birthday comes around and they blow every whistle and ring every bell and the newsboys shout: *'Extra! Extra!* Germany surrenders!' But that'll be too late to help you. I want to stop your worries *now!"*

"I've stopped worrying, dear one. It sounds wonderful and impossible…and I believe you."

"Do you? I've offered no proof; I've told you a tale impossible on the face of it."

"Nevertheless, I believe it. When Woodrow is six on the seventh of November—"

"No, the *eleventh!"*

"Yes, Lazarus. But how did *you* know that his birthday is the eleventh?"

"Why, you told me yourself."

"Dear, I said be was born in November; I did *not* say what day. Then I deliberately misstated it—and you corrected me at once."

"Well, maybe Ira told me. Or one of the children. Most likely Woodie himself."

"Woodrow does not know the date of his birthday. Wake him and ask him."

"I'd rather not wake him until we get home."

"What is my birthday, dear one?"

"The Fourth of July, 1882."

"What is Marie's birthday?"

"I think she is nine. I don't know the date."

"The other children?"

"I'm not sure."

"My father's birthday?"

"Maureen, is there some point to this? August second, *1852."*

"Beloved Lazarus who calls himself 'Theodore,' I have a firm rule with my children. I keep each one from knowing the date of his birth as long as possible so that he won't advertise it and thereby blackmail people for presents. When one is old -enough for school and needs to know the date, he is old enough to be told why, and I make it bluntly plain that if he drops hints ahead of time-no birthday cake, no birthday party. I haven't had to use that penalty; they are all intelligent.

"Last year Woodrow was too young for it to be a problem; his birthday came as a surprise to him. He still does not know the exact date—so I strongly believe. Lazarus, you know the birthdays of your direct ancestors…because you looked them up in the Foundation records. Since you can't tell me the birthdays of my other children, I assume that I've found that proof."

"You know I have had access to the records. I could have looked up any birthday last year."

"Pooh. Why did you bother with the birth date of one child and skip the other seven? How would you know my father's birthday if he had not been of special interest to you? It won't wash, Beloved. You intended to seek out your ancestors and you came prepared for it. I no longer think that you showed up at our church by accident; you went there to find *me*— and I'm flattered. You probably did the same with Father— at his pool-hall 'chess club.' How did you do it? Private detectives? I doubt that our church or that pool hall can be looked up in the Foundation records."

"Something like that. Yes, gentle ancestress, I looked for an acceptable way to meet you. I would have spent years on it had it been necessary…because I couldn't twist your doorbell and say, 'Hi there! I'm descended from you. May I come in?' You would have called the police."

"I hope I would not have, darling—but thank you for finding a gentler way. Oh, Lazarus, I love you so!—and believe every word and I'm no longer worried -about Brian; I *know* he'll come back to me! Uh…I'm feeling very brazen again and more passionate than ever and I want to know something. About your family."

"I'm delighted to talk about them. I love them."

"I was most flattered to be compared with your wife Tamara. Darling, you don't have to tell me this: Does it ever happen that two husbands sleep with one wife?"

"Oh, certainly. But it's more likely to be one husband—Galahad—another of your descendants, Grandmother—Galahad and two of our wives; Galahad is the original tireless tomcat."

"That sounds like fun, but it's the other combination that intrigued me. Beloved, my idea of heaven would be to take *both* you and Brian to bed at once—and do my best to make you *both* happy. Not that I ever can. But I can dream about it…and *will."*

"Why not out in the woods and strip down for both of us, just to your 'French postcard' costume? As long as you're dreaming."

"Ooooh! Yes, I'll put that into my dream—and now I'm about to go off like a firecracker!"

"I'd better take you home."

"I think you had better. I'm terribly happy and quite unworried—

and will stay so—and *very* passionate. For you. For Brian. For being a French postcard in the woods. In *daylight."*

"Maureen, if you can sell the idea to Brian…well, I'll be around until the second of August, 1926."

"Well…we'll see. I *want* to!" She added, "Am I permitted to tell him? Who you are and where you're from—the future—and your prediction that he won't be hurt?"

"Maureen, tell anyone you wish. But you won't be believed."

She sighed. I suppose so. Besides, if Brian *did* believe it and thereby believed that he had a charmed life—it might make him careless. I'm proud that he is going to fight for us but I *don't* want him to take unnecessary risks."

"I think you're right, Maureen."

"Theodore…my mind has been so busy with all these strange things that I missed something. Now that I know who you are— This isn't your country, and it's not your war—so why *did* you volunteer?"

Lazarus hesitated, then told the truth: "I wanted you to be proud of me."

"Oh!"

"No, I don't belong here and it's not my war. But it's *your* war, Maureen. Others are fighting for other reasons—I'll be fighting for Maureen. Not 'to make the world safe for democracy—this war won't accomplish that, even though the Allies are going to win. For Maureen."

"Oh! *Oh! I'm* crying again—I can't help it."

"Stop it at once."

"Yes, my warrior. Lazarus? *You* will come back? You must have some way to know."

"Huh? Dear, don't worry about *me.* People have tried to kill me in all sorts of ways—I've outlived them all. I'm the wary old cat who always has a tree within reach."

"You didn't answer me."

He sighed. "Maureen, I know Brian will come home; it's in the Foundation's records. He will live to a ripe old age and don't ask how long as I won't answer. And so will you, and I won't answer *that* either; it is not good to know too much about the future. But me? I *can't* know my future. It is *not* in the records. How could it be? I haven't finished it yet. But I can tell you this: This is not my *first* war, but about the fifteenth. They didn't get me in the others, and they'll have to move fast to kill me in this one. Beloved, I am your warrior—but to kill Hun for *you,* not for *them* to kill *me.* I'll do my duty, but I'm not going to try some crazy stunt to win a medal— not old Lazarus."

"Then you *don't* know."

"No, I don't. But I promise you this: I won't stick my head up when

I don't need to. I won't go into a German dugout without tossing a grenade in ahead of me. I won't assume that a German is dead because he appears to be—I'll make sure he's dead; I don't mind wasting a bullet on a corpse. Especially one who is playing 'possum. I'm an old soldier, and that's how one gets to be an old soldier—by being a pessimist. I know all the tricks. Darling, having quieted your worries about Brian, it would be silly to get you worried about *me.* Don't!"

She sighed. "I'll try not to. If you turn down this street, we can pick up Prospect, then across Linwood to Benton."

"I'll get you home. Let's talk about love, not war. Our girl Nancy— Is the Foundation now using a pregnancy rule? For first marriages?"

"Goodness! You *do* know all about it."

"No need to tell me. Nancy's business; If Jonathan does go to war —I don't know—I can assure you that he won't get his balls shot off, even if he loses an arm or a leg. I did look up the breeding records on all your children even though I didn't bother with their birthdays. Jonathan and Nancy are going to have many babies. Which means he comes back—or maybe gets turned down and won't go."

"That's comforting. How many babies?"

"Nosy little girl. You're going to have quite a number yet yourself, Grandmother, and I won't answer that, either. I withdraw the question about the pregnancy rule."

"Secret, Lazarus—"

"Better start calling me 'Theodore.' We'll be home soon."

"Yes, sir, Staff Sergeant Theodore Bronson, your lecherous old great-great-great-grandmother will be careful. How many 'greats' should there be in that?'

"Sweetheart, do you want that answered? If it had not been necessary in calm your fears about Brian, I would have stayed 'Ted Bronson.' I *like* being your 'Theodore.' I'm not sure that being a mysterious man from the future is going to be as comfortable. Especially if you think of me as some remote descendant. I'm here beside you, not in some far future."

"Beside me. Touching me. And yet you're not even born yet—are you? And in *your* time…I'm long dead. You even know when I will die. You said so. You just won't tell me when."

"Oh, confound it, Maureen; that's wrong all the way through! That's what comes of admitting that I've time-traveled. But I *had* to. For you."

"I'm sorry, Laz— Theodore my warrior. I won't ask any more questions."

"Sweetheart, the fact that I *am* here means that you're *not* dead. And I certainly was born; pinch me and find out. All 'flows' are real;

that is the basic theorem of time travel. They don't disappear; both 'past' and 'future' are mathematical abstractions; the *'now'* is always all there is. As for knowing the day you died—or will die; it's the same thing—I *don't.* I just know that you had—have—will have—many children, and you live a long time…and your hair never gets gray. But the Foundation lost track of you—will lose track of you—and your date of death never got into the records. Maybe you moved and didn't tell the Foundation. Shucks, maybe I came back—will come back—and picked you up in your old age, and took you to Tertius."

"Where?"

"My home. I think you would like it there. You could run around all day, dressed—undressed—as a French postcard."

"I'm sure I would like that now. But I don't think I would, as an old woman."

"All you would have to do is to ask Ishtar for rejuvenation. I told you what she did for Tamara…when her breasts hung down to her waist and were empty sacks. But look at Tamara *now—that* 'now'—pregnant again, just like a kid. But forget it—if it *did* happen, it *will* happen. Mama Maureen— I'm durned if I'll call you 'Grandmother' again—all I'm sure of is that I'm not sure of the date of your death, and I'm glad I'm not, and you should be. Nor of my death, and I'm glad of that, too. Carpe diem! We're almost home and you started to say something and I said to call me 'Theodore' and we got off the track. Was it about Tamara?"

"Oh, yes! Theodore? When you go home to wherever your home is, can you take anything with you? Or does it have to be just you?"

"Why, no. I arrived with clothes and money."

"I'd like to send a little present to Tamara. But I can't guess what she would want…from this time to that wonderful age of yours. Can you suggest something?"

"Mmm…Tamara would treasure anything from you. She knows she's descended from you, and she's the most warmly sentimental of all my family. It should be something small enough to carry on my person, even in the trenches, as I'm always ready to abandon anything I'm not carrying— have to be. Not jewelry. Tamara would not value a diamond bracelet one whit more than a hairpin…but she would treasure a hairpin that I could tell her I had seen you wearing. Something small, somethillg you've worn. Look, send her a garter! Perfect! One of these you have on."

"Mayn't I send her a brand-new pair? Oh, I'll slip them on for a moment, so that you can tell her truthfully that I've worn them. But these— Not only are they rather old and worn but I've perspired right through them tonight. They're not fresh and clean. And they do have naughty mottoes on them."

"No, no, one of *these.* Sweetheart, 'naughty' today can't be naughty on Tertius; I'll have to explain any naughtiness to Tamara. As for perspiration, I hope that some trace of your sweet fragrance clings to them until I can get them to her; that would delight Tamara. You say this pair is old? Maureen, by any chance are they about six years old?"

"I *told* you I was sentimental, Theodore. Yes, this is the same pair. Old and faded and worn and I've replaced the elastic—but the same pair; I picked them to wear for you."

"Then I want one of them for *me!"*

"Beloved Theodore. I planned to offer you both of them. That's why I suggested a new pair for Tamara. Very well, dear, one for you, one for her. As soon as we're home. I'll trot upstairs, and when I come down, I'll have a present for you and will tell you not to open it until you're back at Camp Funston. You just say thank you and go straight to your room and put it into your grip. I see a light on the front porch, so now I must push my skirts down and be the prim and proper Mrs. Brian Smith. With a smoldering volcano inside her! Thank you, Staff Sergeant Bronson. You have given my son and me a most enjoyable evening."

"Thank *you,* pretty little pussycat in green garters and no bloomers. Will you grab the Teddy bear and the Kewpie doll while I carry our chaperon?"

Ira Johnson and Nancy were not yet home. Brian Junior relieved Lazarus of the limp child and carried him upstairs. Carol went along to put Woodie to bed after exacting a promise from "Uncle Ted" not to go to bed before she came back. George wanted to know where they had gone and what they had done, but Lazarus put him off with a promise and used the chance to repair to his tiny bath and repair himself.

Hair a bit mussed— Thank God respectable women did not use lipstick. Uniform slightly wrinkled, nothing damning about that. Five minutes later, refreshed and certain there were no feathers on his chin, Lazarus returned to the front of the house and offered George and Brian Junior an account of the evening truthful in everything he said.

He had just started when Carol came down and listened too; then Mrs. Smith rejoined them, moving regally as always and carrying a little package wrapped in tissue paper. "A surprise for you, Sergeant Theodore—please don't open it until you are back at camp."

"Then I had better put it into my grip right now."

"If you wish, sir. I think it's bedtime, dears."

"Yes, Mama," agreed Carol. "But Uncle Ted was telling us how you knocked down all the milk bottles."

"He says you should pitch for the Blues, Mama!" added George.

"All right, fifteen minutes."

"Mrs. Smith," said Lazarus, "you ought not to start your stopwatch on us until I get back."

"You're as bad as the rest of my children, Sergeant. Very well."

Lazarus put the package into his grip, locked it from long habit, and returned. Nancy and her young man arrived; Lazarus was introduced while looking over Jonathan Weatheral with real interest. Pleasant young fellow, a bit on the gawky side— Tamara and Ira will be interested, so let's photograph him by eye, be able to sketch him, and remember any word he says.

Mrs. Smith urged her prospective son-in-law into the parlor while cutting Nancy out of the herd; Lazarus resumed describing what they had done at the amusement park while Jonathan looked politely bored. Mrs. Smith returned, carrying a laden tray and said, "That fifteen minutes is up, dears. Jonathan, Nancy wants you to help her with something; will you see what it is? She's in the kitchen."

Brian Junior asked if he could put the car into the barn. "Sergeant Uncle Ted, I haven't let your car sit out at the curb at night, not once. But I'll get it out for you, first thing in the morning; it's kind o' tricky, sort of a 'Z' turn, you have to back and fill."

Lazarus thanked him, kissed Carol goodnight, as she was clearly expecting it. George couldn't seem to make up his mind whether he had outgrown kissing or not, so Lazarus settled it by shaking hands and telling him he had quite a grip on him. At that point Mr. Johnson got home, and the goodnights started over.

Five minutes later Mrs. Smith, her father, and Lazarus were seated in the parlor over coffee and cake, and Lazarus was suddenly reminded of the first night he had been invited in. Save that the men were now in uniform the tableau was the same; each was seated in the spot he had been in that night, Mrs. Smith presided over the "company" coffee service with the same serene dignity; even the refreshments were the same. He looked for changes, could find only three: His elephant was not back of Mrs. Smith's chair, the prizes they had won at the amusement park were on a table near the door, and sheet music for "Hello, Central, Give Me No Man's Land" was open on the piano.

"You were late tonight, Father."

"Seven recruits, and I had just the usual sizes for them, too large and too small. Ted, we get what the Army doesn't want. Proper, of course. We now have Lewis guns for the machinegun companies and enough Springfields to go around; we are beginning to look less like Villa's bandits, I'm not complaining. Daughter, what are those things on that table? They look out of place."

"The Kewpie doll I won myself, so I'm thinking of giving it a place of honor on top of the piano. The Teddy Roosevelt bear was won by Sergeant Theodore; perhaps he's taking it to France with him. Electric Park, Father, and I don't think it cost Sergeant Theodore more than twice what the prizes are worth for us to win them; we had a lucky night— and a very gay one."

Lazarus could see the old man starting to cloud up—in public with a bachelor? With her husband away? So he spoke up: "I can't take it to France, Mrs. Smith; I made a deal with Woodie—don't you remember? My Teddy bear for his elephant. I assume it's a firm deal; he carried it from then on."

Mr. Johnson said, "If you didn't get it in writing, Ted, he'll homswoggle you. Do I understand that Woodie went to Electric Park with you two?"

"Yes, sir. Between ourselves I expect to leave the elephant in Woodie's custody for the duration. But I'm going to dicker with him first."

"He'll still hornswoggle you. Maureen, the idea was to give you relief from the children. Especially Woodie. What in Ned possessed you to take him along?"

"We didn't exactly take him along, Father; he was a stowaway." She gave her father an accurate account, save that she left out certain things and did not include a timetable.

Mr. Johnson shook his head and looked pleased. "That boy will go far—if they don't hang him first. Maureen, you should have spanked him and fetched him home. Then you and Ted should have gone on with your ride."

"Oh, fuss, Father, I did have my ride and a very nice one; I made Woodrow sit in the back seat and keep quiet. Then I had a gay time at the park, a bonus I would not have had if, Woodrow had not invited himself along."

"Woodie had some justice on his side," Lazarus admitted. "I *did* promise him an outing at Electric Park, then never kept my promise."

"Should have whacked him."

"It's too late for that, Father. And we did have fun. We ran into some people from church, too—Lauretta and Clyde Simpson."

"That old witch! She'll gossip about you, Maureen."

"I think not. We chatted while Woodie rode the miniature train. But you might remember that Sergeant Bronson is your eldest sister's son."

Ira Johnson raised his eyebrows, then chuckled. "Samantha would be surprised—if she were still with us. Ted, my eldest sister was thrown by a horse she was trying to break—at eighty-five. She lingered awhile, then turned her face to the wall and refused to eat.

Very well, I'll remember. Ted, this is better than blaming my gay-dog brother and still harder to check on; Samantha lived in Illinois, wore out three husbands, and one of them could have been named Bronson for all anyone here would know. Do you mind? Gives you a family of sorts."

"I don't mind. Although I like to think of *this* family as my family."

"And we like to have you think of us that way, Son. Maureen, is our young lady home?"

"Just before you got home, Father. They are in the kitchen, on the excuse that she wanted to make a sandwich for Jonathan. Since I'm sure it's an excuse to stay out there and spoon, I suggest that, if you want something from the kitchen, you allow me to fetch it; I'll be noisy enough to let Nancy jump off his lap. Theodore, Nancy is engaged; we just haven't made a formal announcement. I think it's best to let them marry now, since he'll be joining the Army almost at once. What do you think?"

"I'm hardly entitled to an opinion, Mrs. Smith. I hope they will be happy."

"They will be," said Mr. Johnson. "He's a fine lad. I tried to sign him into the Seventh, but he insisted on waiting for his birthday so he could go straight into the Army. Even though he couldn't be drafted for another three years. Spirit. I like him. Ted, if you need to go to your room, you can go around this other way and avoid the kitchen."

A few minutes later the young people came out of the kitchen, made polite sounds without sitting down; then Nancy stepped out onto the porch to say goodnight to her swain, came back in, and sat down.

Mr. Johnson smothered a yawn. "Time I hit the hay. You will too, Ted, if you're smart. Too noisy around here to sleep late, especially where your room is."

Nancy said quickly, "I'll keep the young ones quiet, Grandpa, so Uncle Ted can sleep."

Lazarus stood up. "Thank you, Nancy, but I didn't get much rest on the train last night; I think I'll go right to bed. Don't worry about keeping quiet in the morning; I'll wake up at reveille time anyhow. Habit."

Mrs. Smith stood up. "We'll all go to bed."

Mr. Johnson shook hands as he said goodnight; Mrs. Smith gave Lazarus a symbolic peck on the cheek such as she had given him, on arrival, thanked him for a lovely evening, and urged him to turn over and go back to sleep if the reveille habit-wakened him; Nancy hung back and kissed him goodnight as her elders started up the stairs.

Lazarus went to his room and on into his bath. Maureen had told him not to hesitate to draw a tub; it would not wake the children. He started one, went back and opened his grip, got out the little package, took it into the bath and threw the bolt, there being no key in the bedroom door. It was a small flat box such as garters might come in; he opened it carefully, intending to rewrap it exactly as it had been.

Ah, the garters! Faded, as she had said, and clearly not new…and —Yes!—redolent with her own evocative fragrance. Would it last long-enough for him to get it home, have the lovely, delicate aroma analyzed, amplified, and fixed? Probably—and with computer help a skilled scentologist could separate out the odors of satin ‘and rubber, and amplify hers selectively. He would have to go to Secundus for such expert ‘help. Worth the trip and then some!

Now let's see those "naughty" mottoes— One read: *"Open All Hours —Ring Bell for Service!"—the* other: *"Welcbme! Come in and Stir the Fire."* Sweet darling, those aren't "naughty."

A plain envelope under the garters— He laid them aside and opened it.

A plain white card: "Best I could do, Beloved. M." A photograph, amateur work but excellent quality for this here-k-now: Maureen herself, outdoors in bright sunlight against a background of thick bushes. She was standing gracefully, smiling and looking at the camera—dressed only in her "French postcard" style. Lazarus felt a burst of passion. Why, you generous, trusting darling! Not your only copy? No, Brian would have made more than one print— undoubtedly had one with him. This print would have been locked somewhere in your bedroom. Yes, your waist *is* slender without a corset…and those are *not* broken down; they are lovely—and I'm certain what caused your happy smile. Thank you, thank you!

With the photograph was a little flat package in tissue-paper. He opened it gently. A thick lock of red hair, tied with a green ribbon. The lock curled in a tight circle.

Lazarus stared at it. Maureen my beloved, this is the most precious gift of all—but I *do* hope you cut it so carefully that Brian won't notice it's missing.

He looked at each of her gifts again, restored them just as they had been, put the box into the bottom of his grip, locked it, turned off the tub, undressed, and got into the water.

But a lukewarm tub did not make him sleep. For a long time he lay in darkness and relived the past few hours.

He now felt that he understood Maureen. She was relaxed with what she was—"liked herself" as Lazarus thought of it— and liking yourself was the necessary first step toward ‘loving other people. She had no guilt feelings because she *never* did *anything* that could make her feel guilty. She was unblinkingly honest with herself, was her own self-judge instead of looking to others, did not lie to herself—but lied to others without hesitation when needed for kindness or to get along with rules she had not made and did not respect.

Lazarus understood that; he lived the same way—and now knew where he got the trait. From Maureen…and through her, from' Gramp. And from Pop, too—reinforced. He felt very happy despite an unsatisfied ache in his loins. Or in part because of it, he corrected, he found that he cherished that ache.

When the doorknob turned, he was instantly alert, out of bed and waiting before the door opened.

She was in his arms, warm and fragrant

She pulled back to shrug off her wrap, let it fall, came back into his arms, body to body, and gave her mouth fully.

When they broke the kiss, she stayed in his *arms, clinging. He whispered huskily, "Why did you risk it?"*

She answered softly, "I found that I must. Once I knew that, I realized that it was even less risk than our walnut tree. The children never come downstairs at night when we have a guest. Father may suspect me…but that makes it *certain* that he won't check on me. Don't worry, darling. Take me to bed. *Now!"*

He did so.

When they were quiet, she sighed happily and said, lips against his ear, arms and legs around him: "Theodore, even in this you are so much like my husband that I can barely wait till the war is over to tell him all about you."

"You've decided to tell him?"

"Beloved Theodore, there was never a doubt that I would. I softened some of what I told you tonight and left out a little. Brian does not require me to confess. But it does *not* upset him; we settled that fifteen years ago. He convinced me that he really *does* trust my judgment and my taste." Very softly but merrily she giggled against his ear. "It's a shame that I so seldom have anything to confess; he enjoys hearing my adventures. He has me tell him about them over and over—like rereading a favorite book. I wish I could tell him this one tomorrow night. But I won't, I'll save it."

"He's coming home tomorrow?"

"Late. Quite late. Which is just as well, as I don't expect to get *any* sleep once he arrives." She chuckled softly. "He tild me on the telephone to 'b. i. b. a. w. y. L o.' and he would '*w.* y. t. b. w.' That means: Be in bed asleep with my legs open and he will wake me the best way. But I just pretend to be asleep as I wake up no matter how quietly he tiptoes in."

She gave a tiny giggle. "Then we have a happy little game. As he enters me, I pretend to wake up and call him by name—but never his name. I moan, 'Oh, Albert, darling, I thought you would *never* come!' or some such. Then it's his turn. He says something like, 'This is Buffalo Bill, Mrs. O'Malley. Hush up and get busy!' Then I hush up and do the best I know how, not another word until we both explode."

"Your best is superb, Mrs. O'Malley. Or was that your best?"

"I tried to make it my best—Buffalo Bill. But I was so dreadfully excited that I got all blurry so it probably was not. I'd like a chance to do better. Are you going to give me one?"

"Only if you promise *not* to do better. Darling, if that was not your best, then your best would kill me."

"You not only talk like my husband and feel like him— especially *here—but* you even smell like him."

"You smell like Tamara."

"Do I really? Do I make love like her?"

(Tamara knows a thousand ways, darling, but rarely uses anything unusual—lovemaking is not technique, dear, it's an attitude. Wanting to make someone happy, which you *do.*

But you startled me with your command of technique; you would fetch a high price on Iskander.)

"You do. But that's not what makes you so much like her. Uh, it's your attitude. Tamara knows what is going on in another person's mind and gives him exactly what he needs. Wants to give it."

"She's a mindreader? Then I'm not like her, after all."

"No, she's not a mindreader. But she feels a person's emotions and knows what he needs an4 gives him that. It might not be sex. Aren't there times when Brian needs something else?"

"Oh, certainly. If he's tired and tense, I hold off and rub his back or head. Or cuddle with him. Maybe encourage him to nap, and then perhaps he really will wake me 'the best way.' I don't try to eat him alive. Unless that's what he wants."

"Tamara all over again. Maureen, when Tamara was healing me, at first she didn't even share a bed with me. Just slept in the same room and ate with me and listened if I felt like talking. Then for ten days or so she did sleep with me, but we just slept…and I slept soundly and had no nightmares. Then one night I woke up, and without a word Tamara took me into her, and we made love the rest of that night. And next morning I knew I was well—soul-sickness all gone.

"You are that way, Maureen. You know, and you do. I've been very homesick and much troubled by this war. Now I'm not, you've cured it. Tell me, what did you feel from me the first night I was in this house?"

"Loved you at first sight, like a silly schoolgirl. Wanted to take you to bed. I told you so."

"Not how *you* felt—how did *I* feel?"

"Oh. You had an erection over me."

"Yes, I did. But I thought I had concealed it. You noticed?"

"Oh, I didn't see a bulge in your trousers or anything like that. Theodore, I never look down that far; men become embarrassed so easily. I simply knew you felt as I did—and I felt like a she dog in heat. Bitch in heat, I mean—I don't intend to be prim in bed. The instant you met my eyes— standing, out in the front hall—I knew we needed each other and I grew terribly excited…and rushed out into the kitchen to get myself under control."

"You didn't rush, you moved with smooth grace, like a ship under sail."

"That ship was sailing fast; I was rushing. I got myself under control but not less excited. *More.* My breasts ached and my nipples hurt, all the time you were here. But that doesn't show. It would not have mattered had Father noticed my excitement except that he would not have invited you back—and I *wanted* you to come back. Father knows what I am; he told me so when he was helping me. He told me to face up to what I am and be happy with it—but that I must learn never to let my ruttiness show, things being the way they are. I've tried—but that night it was very hard not to show it."

"You succeeded."

"Brian tells me that I don't show it. But that night was *so* difficult. I — Theodore, there is something boys do—and sometimes men—when they're terribly frustrated. With their hands."

"Certainly. Masturbation. Boys call it 'jacking off."

"So Brian says. But perhaps you don't know that girls— and women—can do something like it?"

"I do know. For a lonely person of either sex, it's a harmless but inadequate substitute."

"'Harmless but inadequate—' *Quite* inadequate. But I'm glad you think it's harmless. Because I went upstairs and took a bath—I *needed* one although I had bathed before supper. And did it, in the tub. And went to bed and stared at the ceiling, then got up and locked the door and took off my nightgown—and did it and did it and did it! Thinking about *you,* Theodore, every instant. Your voice, how you smelled, the touch of your hand on mine. But it took at least an hour before I was relaxed enough to sleep."

(It took me even longer, dear, and I should have used your direct therapy. But I was punishing myself for being a fool. Off my trolley, dearest one, as I know it is *never* foolish to love. But I didn't see how we could ever show our love.) "I wish I could have been there, darling

—because a mile or two away I was aching with it—thinking of *you.”*

“Theodore, I *hoped* you felt that way. I needed you so and hoped that you needed me just as much. But the best I could do was lock my door and do that and think about you, with nobody around but Ethel in her crib and her too young to notice. Oops! I lost you. Oh, dear!”

“You haven’t lost me, just that wee bit of proud flesh. Which will recover soon; you promised me a second chance. Change position? Shoulder pillow? Left, or right? I shouldn’t have kept my weight on you so long, but I didn’t want to move.”

“I didn’t want you to move as long as I ‘could keep even a little of you in me. You aren’t too heavy; my hips are broad, and you let a woman breathe, sir. Put me on either side, whichever you prefer.”

“Like this?”

“That’s comfy. Oh, Theodore, this doesn’t feel like our first time; I feel as if I had loved you forever and you had come back to me at last.”

(Let’s get away from that subject, Mama Maureen.) “I’ll go on loving you forever, my darling.”

(Omitted)

“—told her bluntly that he would *not* marry her if she made any fuss over his joining the Army when he didn’t have to.”

“What did Nancy tell him?”

“She told him that she had been waiting to hear that, so now get her pregnant at once so they could have a few days’ honeymoon before he joined up. Nancy feels as strongly about warriors as her mother does. She came into my bedroom that night and told me what she had done, slightly teary but not worried over having jumped the gun.

“So we cried happy tears, and I cleared the matter with Brian and the Weatherals, and Nancy missed her next period—this was a month ago—and the wedding may be day after tomorrow or perhaps the day after that.”

(Omitted)

“Darling, I wish I could see you.”

“Oh, dear! I’d rather not turn on the Mazda lamp, Theodore. These blinds are not so tight but what light would shine out, as well as light under the door if by any chance Father came downstairs.”

“Maureen, I will never ask you to take any chance you don’t like. I see you quite well with my fingertips—and these are *not* broken down.”

"They flow off my ribs like melted marshmallows. Theodore, when you open that package, please be very careful that no one is around; there is more in it than a pair of garters."

"I did open it."

"Then you know what I look like."

"Was that beautiful girl *you?"*

"Tease. Brian had me look straight at his camera."

"But, darling, while you don't look *down* that far, men don't tend to look *up* very far. Especially me. Not when I'm looking at a photograph of a perfectly gorgeous nude model."

"'Nude model,' my best Sunday hat!"

"Maureen, it is the loveliest picture I' have ever owned and I will cherish it always."

"That's better and I don't believe it and I love hearing it. Did you open the paper folded in with it?"

"The baby curl? Did you clip it off Marie?"

"Theodore, I do not mind being teased; it just makes you more like Brian. But if he teases too much, I bite him. Anywhere. Here, for example."

"Hey, not so hard!"

"Then tell me where that curl came from."

"It came from your pretty, my pretty one, and I'll wear it over my heart forever. But one reason I wanted to look at you is that you clipped so generous a lock that I worried that Brian might notice something missing—and ask why."

"I can tell him I gave it to the iceman."

"He won't believe that and will be sure that you have a new adventure to confess."

"Then he won't press me to tell him now; he'll change the subject. Although I *wish* I could tell him now; I keep thinking about both of you, outdoors in daylight; that was the fantasy that kept me awake. Sweetheart, there is a 'candle on the dresser—electricity not being as dependable as the gas lights we used to have. It wouldn't throw enough light to worry me. You may look at me by candlelight all you wish and as you wish."

"Yes, darling! Matches where?"

"Let me go and I'll get up and light it; I can find both in the dark. Will I be allowed to look at you, too?"

"Sure. For contrast. 'Beauty and the Beast.'"

She giggled and kissed his ear. "Goat, maybe. Or a stallion. Theodore, I *needed* to be baby-stretched to accept *you."*

"I thought you said I felt like Brian?"

"But *he* is a stallion, too. Let me go."

"Pay toll."

"Oh, goodness, darling, don't do that now! Or I'll be so shaky I won't be able to strike a match."

Standing and by the light on one candle, they studied each other. Lazarus felt his breath grow short at the dazzling glory of her. For most of two years he had been deprived of the

sweet joy of seeing a woman, and had not realized how starved he had been for that great privilege. Darling, can you guess how *much* this means to me? Mama Maureen, has no one ever told 'you how much more sweetly beautiful a fullblown woman is than a maiden? Certainly your lovely breasts have held milk; that's what they're for. Why would I want them to look like marble?—I don't!

She studied him just as closely, her face solemn, her nipples crinkled tightly. Theodore-Lazarus my strange loves will you guess that I suggested candlelight so that I could see *you?* A woman is not supposed to get hungry for such things—but I miss the sight, the naked sight, of my husband…and how in the Name of Satan and all His Fallen Thrones I can last even till November without even *seeing* a man I do not know. Alma Bixby told me that she had never seen her husband without clothes. How can a woman *live* like that? Five children by a man she's never seen all over— Shocked her when I said that *of course* I had seen my husband naked!

Theodore-Lazarus, you don't *look* like my Briney Boy; your coloration is more like mine. But, oh, how you feel like him, smell like him, talk like him, love like him! Your pretty thing is coming up high again. Briney beloved, I'm going to have him once more, as *hard* as possible!—and I'll tell you about it tomorrow night if you'll just ask me for a new bedtime story…or if I must, I'll save it for you till you get back. You're as strange a man as he is…and just the wise and tolerant husband your bawdy wife needs. Then, cross my heart, dearest, I'll try my best to keep from it until you come back from Over There—but if I can't, even with Father and eight children to guard me, I promise you solemnly that I will *never* bed with anyone but a warrior, a man to be proud of in every way. Such as this strange man.

Lazarus, my love, are you *really* my descendant? I *do* believe that you know when the war will be over and that my Briney will come safely back to sue. Why, I am not sure—but since you told me, I have been free from worry for the first time in many a lonely moon. I hope the rest is true, too; I *want* to believe in Tamara, and that *she* is descended from me. But I *don't* want you to go away in only eight years!

That innocent little picture— If I had not feared shocking you, I would have given you some *real* "French postcards" Briney has taken of me. Will you be upset if I take a closer look? I'll chance it.

Mrs. Smith suddenly dropped to one knee, looked closely, then touched him. She looked up. “Now?”

“Yes!” He picked her up, placed her on the bed. Almost solemnly she helped him, then caught her breath as they joined. *“Hard,* Theodore! This time don’t be gentle!”

“Yes, my beautiful one!”

When their happy violence was over, she lay quiet in his arms, not talking, communing through touch and the light of one candle.

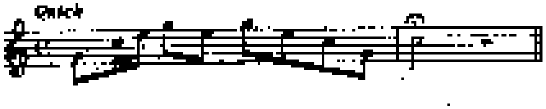
At last she said, “I must go, Theodore. No, don’t get up, just let me slide out.” She got up, picked up her wrap, blew out the candle, came back, leaned down and kissed him. “Thank you, Theodore—for *everything.* But—come back to me, come back to me!”

“I will, I will!”

Quickly and silently she was gone.

CODA

I



Somewhere in France

Dear All my Family,

I am writing this in my pocket diary where it will stay until this war is over—not that it matters; you'll get it just as soon. But I can't send a sealed letter now, much less one sealed into five envelopes. Something called "censorship"—which means that every letter is opened and read and anything that might interest the Boche is cut out. Such as dates and places and designations of military units and probably what I had for breakfast. (Beans and boiled pork and fried potatoes, with coffee that would dissolve a spoon.)

You see, I had this lovely ocean voyage as a guest of Uncle Sam and am now in the land of fine wines and beautiful women. (The wine has been yin extremely ordinaire, and they seem to be hiding the beautiful women. The best-looking one I've seen had a slight mustache and very hairy legs, which I could have ignored had I not made the mistake of standing downwind. Darlings, I am not sure the French take baths, at least in wartime. But I'm in no position to criticize, a bath is a luxury. Today, given a choice between a beautiful woman and a hot bath, I'd pick the bath—otherwise she wouldn't touch me.)

Don't worry that I am now in a "war zone." That you've received this is proof that the war is over and I am okay. But it's easier to write a letter than it is to put trivia into a diary every day. "War zone" is an exaggeration; this is "fixed warfare"—meaning both sides are in the same fix: pinned down—and I am too far behind the lines to get hurt.

I am in charge of a unit called a "squad"—eight men—me and five other riflemen, plus an automatic rifleman (the rifle, not the man; this war has no robot fighters) and an eighth man who carries ammunition for the automatic rifleman. It's a corporal's job, and that's what I am; the promotion to sergeant I was expecting (in my last letter as dated from the United States) got lost in the shuffle when I was transferred to another outfit.

Being a corporal suits me. It is the first time I've had men permanently assigned to me, time enough to get acquainted with each one, learn his strong points and weak ones, and how to handle him, They are a fine bunch of men. Only one is a problem, and it's not his fault; it results from the prejudices of the time. His name is F. X. Dinkowski, and he is simultaneously the only Catholic and the only Jew in my squad—and, twins, if you've never heard of either one, ask Athene. By ancestry he comes from one religion, then he was brought up in another—and he has had the tough luck to be placed with country boys who have still a third religion and are not very tolerant.

Plus the additional misfortunes of being a city boy and having a voice that grates (even on me) and is clumsy, and when they pick on him (they do if I'm not right there), it makes him more clumsy. Truthfully he's not soldier material—but I wasn't asked. So he's the ammunition carrier, the best I can do to balance my squad.

They call him "Dinky," which is only mildly disparaging, but he hates it. (I use his full last name—I do with all of them. For ritualistic reasons having to do with the mystique of military organizations at this here-&-now it is best to call a man by his family name.)

But let's leave the finest squad in the AEF and bring you up to date on my first family and your ancestors. Just before Uncle Sam sent me on that pleasure cruises I was given a vacation. I spent it with the Brian Smith family and lived in their house, as they have "adopted" me for the rest of this war, me being an "orphan."

That leave was the happiest time I've had since I was dropped from the *Dora.* I took Woodie to an amusement park, primitive but more fun than some sophisticated pleasures of Secundus. I took him on rides and treated him to games and things that were fun for him, and fun for me because he enjoyed them so—wore him out and he slept all the way home. He behaved himself, and now we are chums. I've decided to let him grow up; there may be hope for him yet.

I had long talks with Gramp, got better acquainted with all the others—especially Mama and Pop. The latter was unexpected. I had met Pop for a few minutes at Camp Funston, then he was to come home on leave the day I had to go back, and I didn't expect to see him. But he got away a few hours early, a bonus an officer can sometimes manage, and we overlapped—and he telephoned to the camp and got me a two-day extension. Why? Tamara and Ira, listen carefully—

To attend the wedding of—

Miss Nancy Irene Smith & Mr. Jonathan Sperling Weatheral.

Athene, explain to the twins the historic significance of this union. List the famous and important people in that line, dear, not the total genealogies. And Ira and Tamara in our own little family, of course, and Ishtar, and at least five of our children—and I may have missed someone, not having all the genealogical lines in my head.

I was "best man" to Jonathan, and Pop "gave the bride away," and Brian was an "usher" and Marie was "ringbearer" and Carol was "maid of honor," and George was charged with keeping Woodie from setting fire to the church while Mama took care of Dickie and Ethel—Athene can explain terms and ritual; I shan't try. But it not only gave me two more days of leave, much of which I spent running errands for Mama (these medieval weddings are complex operations), but it also gave me time with Pop, and now I know him better thin I ever did as a son under his roof—and like him very much and heartily approve of him.

Ira, he reminds me of you—brainy, no nonsense, relaxed, tolerant, and warmly friendly.

Bulletin: The bride was pregnant (a proper Howard wedding!—at a time when *all* brides are assumed to be virgins)—pregnant with (if memory serves) "Jonathan Brian Weatheral." Is that right, Justin, and who is descended from him? Remind me, Athene. I've met a lot of people over the centuries; I may even have married some descendant of Jonathan Brian at some time. I rather hope so; Nancy and Jonathan are a fine young couple.

I turned "my" landaulet over to them for a six-day honeymoon, then Jonathan was to (did) join the Army— but too late to get into combat. Nancy's warrior hero just the same; he tried.

Some fiddling sergeant who couldn't find his arse with both hands wants me to round up my squad and do something about a dugout that someone was careless with. So—

All my love from
Corporal Buddy Boy

Somewhere in France

Dear Mr. Johnson,

Please give this a second censoring; some of it will have to be explained to the rest of my adopted family.

I hope that Mrs. Smith received the thankyou note I mailed from Hoboken (and could read it—writing on my knee while bouncing on the C. & A. roadbed does not improve my handwriting). In any case I thank her again for the happiest holiday of my life. And thanks to *all* of you. Please tell Woodie that I will no longer spot him a horse. From here on we play even or he can find another sucker—four out of five is too many.

Now for The Rest—— Note signature and address. My rocker did not last to France, then three chevrons dwindled to two. Can you explain to Mrs. Smith and to Carol (those two in particular) that being busted does not disgrace a man forever?—and that I am still Carol's own special soldier if she will let me be—and in fact I am far more of a real soldier; I am at last free of being tagged as "instructor" and am now leading a squad in a combat outfit. I wish I could tell her where…but if I stuck my head up over the parapet, I might see some heinies if one of them didn't see me first. I'm not goldbricking a hundred miles back.

I hope you aren't ashamed of me. No, I'm sure you are not; you are too old a soldier to care about rank.

I'm in it and that's what counts with you. I know. May I say, sir; that you are and have always been as long as I've known you an inspiration to me?

I won't detail the two negative promotions; in the Army excuses don't count. But I want you to know that neither resulted from anything dishonorable. The first was in the transport and involved a duty-struck master-at-arms and a poker game in an area for which I was responsible. The second came while I was instructing— dummy trenches, dummy no-man's land—and a captain told me to dress up that skirmish line and I said, "Hell, Captain, are you trying to save bullets for the Kaiser? Or haven't you heard of machine guns?"

(I suppose I shouldn't have said "Hell." In fact I used another expression more common among soldiers.)

So later that day I was a corporal, and my transfer took place when I requested it, again that same day.

So here I am and feeling fine. It is indeed a fact that the closer a man gets to the front, the better his morale is. I've become chummy with cooties, and the mud in France is deeper and stickier than in southern Missouri, and I dream about hot baths and Mrs. Smith's wonderful guest room for soldiers—but I'm in good health and good spirits, and I send my love to all of you.

Respectfully yours,
Corporal Ted Bronson

"Hey down in there! Corporal Bronson. Send him out." Lazarus climbed slowly up out the dugout, letting his eyes adjust to darkness. "Yes, Lieutenant?"

"Wire-cutting job. I want you to volunteer." Lazarus said nothing.

"Didn't you hear me?"

"I heard you, sir."

"Well?"

"You asked for a volunteer, sir."

"No, I said I wanted *you* to volunteer."

"Lieutenant, I volunteered on April sixth last year. That used up my quota for the duration."

"A latrine lawyer, eh?"

Lazarus again said nothing.

"Sometimes I think you want to live forever." Lazarus still said nothing. (You are so right, you seven-pound bliffy—and so do *you,* you haven't been over that parapet even once. God help this platoon when you do.)

"Very well, since you want it the hard way. I *order* you to lead this party. Find three more volunteers from your squad. if they don't volunteer you know what to do. Once you pick 'em, tell 'em to get ready—then you haul ass to C.P. and I'll show you the map."

"Yes, sir."

"And, Bronson, make damn sure you do a good job because a little bird told me that you're going to lead the way through the holes. Dismissed."

Lazarus went unhurriedly back down below. So we're going over the top? Big secret. Nobody knows it but Pershing and about a hundred thousand Yanks and twice that many Boches and the Imperial High Command. Why do they advertise a "surprise attack" with three days of "softening-up" bombardment that does nothing worth mentioning but tells the Boche where to bring up his reserves and gives him time to position them? Forget it, Lazarus, you're not in charge. Put your mind on picking out three who can go out, do it, and come back.

Not Russell, you'll need your automatic rifleman before dawn. Wyatt was out last night. Dinkowski might as well have a cowbell around his neck. Fielding is on the sick list, damn it. So it has to be Schultz, Talley, and Cadwallader. Two of them old unkillables and Talley the only repple with too little experience—and a shame Fielding has la grippe or whatever it is; I need him. All right, Schultz gets Cadwallader; I'll nurse Talley through it.

It was a two-squad dugout; his squad was sacked in on the left, the other squad had a card game going by candlelight on their side. Lazarus called his squad into a huddle, waking Cadwallader and Schultz to do so. Russell and Wyatt stayed in their bunks, as the huddle took place against them. "The Lieutenant wants us to cut wire and told me to ask for three volunteers."

Schultz nodded at once, as Lazarus knew he would. "I'll go." In

Lazarus' opinion his assistant squad leader should have a section. Schultz was forty, a married volunteer, and trying hard to offset his name, his trace of German accent (second generation)—but doing it steadily, methodically, without flash. No glory hound. Lazarus hoped that not many of the Germans they faced were of Schultz's quality—but he knew they were, especially veterans pulled back from the collapsed Russian front. His only fault in Lazarus' eyes was that he disliked Dinkowski.

"That's one. Don't all speak at once."

"What's the matter with *them?"* Cadwallader said loudly, jerking a thumb at the other squad. "Teacher's pets? They haven't done anything for a week."

Corporal O'Brien answered for his squad: "'Tell your troubles to Jesus; the Chaplain's gone over the hill!' Whose deal?"

"Who's next?"

Dinkowski gulped. "Take me, Corporal."

Talley shrugged. "Okay."

(Damn you, Dinky—why didn't you wait and simply make it unanimous? And damn that silly second john for ordering me to ask for volunteers. Better to tell 'em.) "Let's hear some more voices. This isn't the S.O.S." (Lieutenant Birdbrain, you postnasal drip, Cadwallader is right; it's *not* our turn. Why didn't you go through the platoon sergeant and section leader? they're fair about handing out dirty details.)

Russell and Wyatt spoke up together. Lazarus waited, then said, "Cadwallader? You're the only holdout."

"Corporal, you asked for three volunteers. How come you want the whole squad?"

(Because I want *you,* you unappetizing ape. You're the best soldier in the squad.) "Because I need you. Will you volunteer?"

"I ain't no volunteer, Corporal; I was drafted."

"Very well." (Damn all officers who interfere where they shouldn't.) "Wyatt, you were out last night; get back in your bunk. Russell, you get some sleep, too; you may be busy soon. Schultz, I'll take Dinkowski; you take Talley. Black me up first and make it fast; I've got to see the Lieutenant. Get out the cork."

Lazarus got through their own wire without much trouble by enlarging breaks German shells had made. He did all the work himself, simply requiring Dinkowski to stay flat and follow him. There was the regular *crump!* of artillery, their own and the German howitzers. Lazarus ignored them, there being nothing better he could do. The chattering cough of machine guns he ignored, too, as long as the sound came from far enough along his flanks. Snipers he did not worry about other than to stay low.

His prime wariness was directed at German patrols—if any—and at starshells—far too many. The latter were the reason he had Dinkowski stay belly down; he did not trust his assistant to freeze and hold it if caught on his knees when a star shell burst.

Once past the last of their own entanglements he led Dinkowski, both belly-crawling, into a shell hole, then put his mouth to the private's ear. "Stay here till I get back."

"But, Corporal, I don't want to stay behind!"

"Not so loud; you'll wake the baby. Whisper against my ear. If I'm not back in an hour, go back alone."

"But I can't find my way back!"

"There's the Dipper, there's the Pole Star. Go back southwest. If you miss the gaps, you've got wire cutters. Just remember this: When a star shell *bursts—freeze!* The time to move is just as it goes out, while their eyes are still dazzled. And try to be quiet; you remind me of two skeletons on a tin roof. Don't get shot by our own people at the last minute. What's the password?"

"Oh, hell, it's 'Charlie Chaplin.' Forget it again and you'll get more than a blighty; some of our lads are triggerhappy. Now repeat back."

"Corporal, I'm going to cut wire with *you."*

Lazarus sighed inwardly. The clumsy little clown *wanted* to soldier. If I don't let him tag along, it can kill his spirit. But if I do let him, It might kill both of us. Cadwallader, I admire your good sense—and hate your guts. And wish I had you along.

"All right. Not a word from here on. Pat my foot and point if you have to—and stay that close. Remember what I said about star shells. See any Boche, don't breathe. If they surprise us—surrender at once."

"'Surrender'?"

"If you want to be a grandfather. You can't kill a German patrol all by your lonesome. Even if you could, it would make so much racket that their machine guns would chop you in two. Stick close and stay down."

Lazarus could almost touch the first German wire when a star shell burst and the private panicked—tried for a shell hole they had just come through and was bit as he fell into it.

Lazarus lay still and listened to screams as the dazzling star burned above him. One of our own, he mused; a German shell would burst to backlight the American trenches. If that poor little dope doesn't shut up, the air around here is going to be thick with merry greetings. Can't cut wire with all that advertising. And—oh, hell, he's my boy; I've *got* to take care of him. Probably be a favor to Dinky to finish him off—but Maureen wouldn't like that. Okay, let's get him back—then come back and finish this crummy detail. No sleep tonight and over the top about oh-four-hundred. Next time join the Navy.

The flare died out and Lazarus was up fast and moving— as another star shell flared. Machinegun bullets stitched his side and knocked him into the shell hole. One struck a hard implant in the right side of his belly, tumbled, and chewed its way out just above his left hip. Others did other damage— nothing too difficult to repair in 4291 A.D., but, this being the Dark Ages, any one of them was enough.

Lazarus felt it only as a mighty blow that knocked him off his feet and into the shell hole. He did not become unconscious at once; he had time to realize that he was mortally wounded. He lay as he had fallen and looked up at his stars, realizing that he had come to his ending place.

Every animal finds its ending place. Some find it in a trap, another in a fight it cannot win, some happy few in a quiet place to wait for the end. Whatever it is, it is the ending place and most of us know when we reach it. This is mine.

Did Dinky know? I think so, he's stopped screaming—I think he *looked* for his. Odd that it doesn't hurt. Thanks for making it worthwhile, Maureen…Llita…Dorable…Tamara…Minerva…Laz…Lor…Ira…Maureen—

He heard wild geese honking high overhead, looked up at his stars again as they blacked out.

“You still don’t understand,” the Gray Voice droned on. “There is no time, there is no space. What was, is, and ever shall be. You are you, playing chess with yourself, and again you have checkmated yourself. You are the referee. Morals are your agreement with yourself to abide by your own rules. To thine own self be true or you spoil the game.”

“Crazy.”

“Then vary the rules and play a different game. You cannot exhaust her infinite variety.”

“If you would just let me look at your face,” Lazarus muttered pettishly.

“Try a mirror.”

Ira! Galahad! Got him?”

Yes! Hoist us in! Oh, what a mess! Ish, about two liters and lots of jelly.”

Get him inside and let me see him. Lor, you can get us out of here now.”

Seal up, Dora, and bounce it!”

“Sealed and zooming! Screens down! What the goddamn hell have they done to Boss?"

"I'm trying to find out, Dora. Be ready with the tank; I may freeze him."

"Ready now, Ish. Laz-Lor, I told you we should pick him up sooner. I *told* you."

"Pipe down, Dora. We *told* him he'd get his ass shot off. But he was having more fun than kittens—"

"—and wouldn't have thanked us—"

"—and wouldn't have come—"

"—you know how stubborn he is."

"Tamara," said Ishtar, "cuddle his head and talk to him. Keep him alive. I don't want to freeze him—if at all—until I've made temporary repairs. Hamadryad, clamp there! Mm

Galahad, one slug hit. the Finder. That's how his intestines got so chopped up."

"Clone-trans?"

"Perhaps. The way he regenerates, repair and support may be enough. Justin, you were right; the dates on his letters did prove that he didn't last through it; losing the Finder's signal pinpointed when and where. Galahad, are you finding more fragments? I want to close him. Tamara, rouse him, make him talk! I *don't* want to have to freeze him. The rest of you shut up and get *out!* Go help Minerva with the children."

"Glad to," Justin said hoarsely. "I'm about to throw up."

"Maureen?" Lazarus murmured.

"I'm here, darling," Tamara answered, cradling his head against her breasts.

"Bad…dream. Thought…I was…dead."

"Just a dream, Beloved. You cannot die."

PAUL DIRAC, ANTIMATTER, AND YOU

A Riddle

What have these in common?

1. 1926: A graduate student, Cambridge University
2. Billions of years ago: Quasars exploding
3. 1908: A Siberian forest devastated
4. 10 million years ago: A galaxy exploding
5. 1932: A cloud-chamber track, Pasadena, Calif.

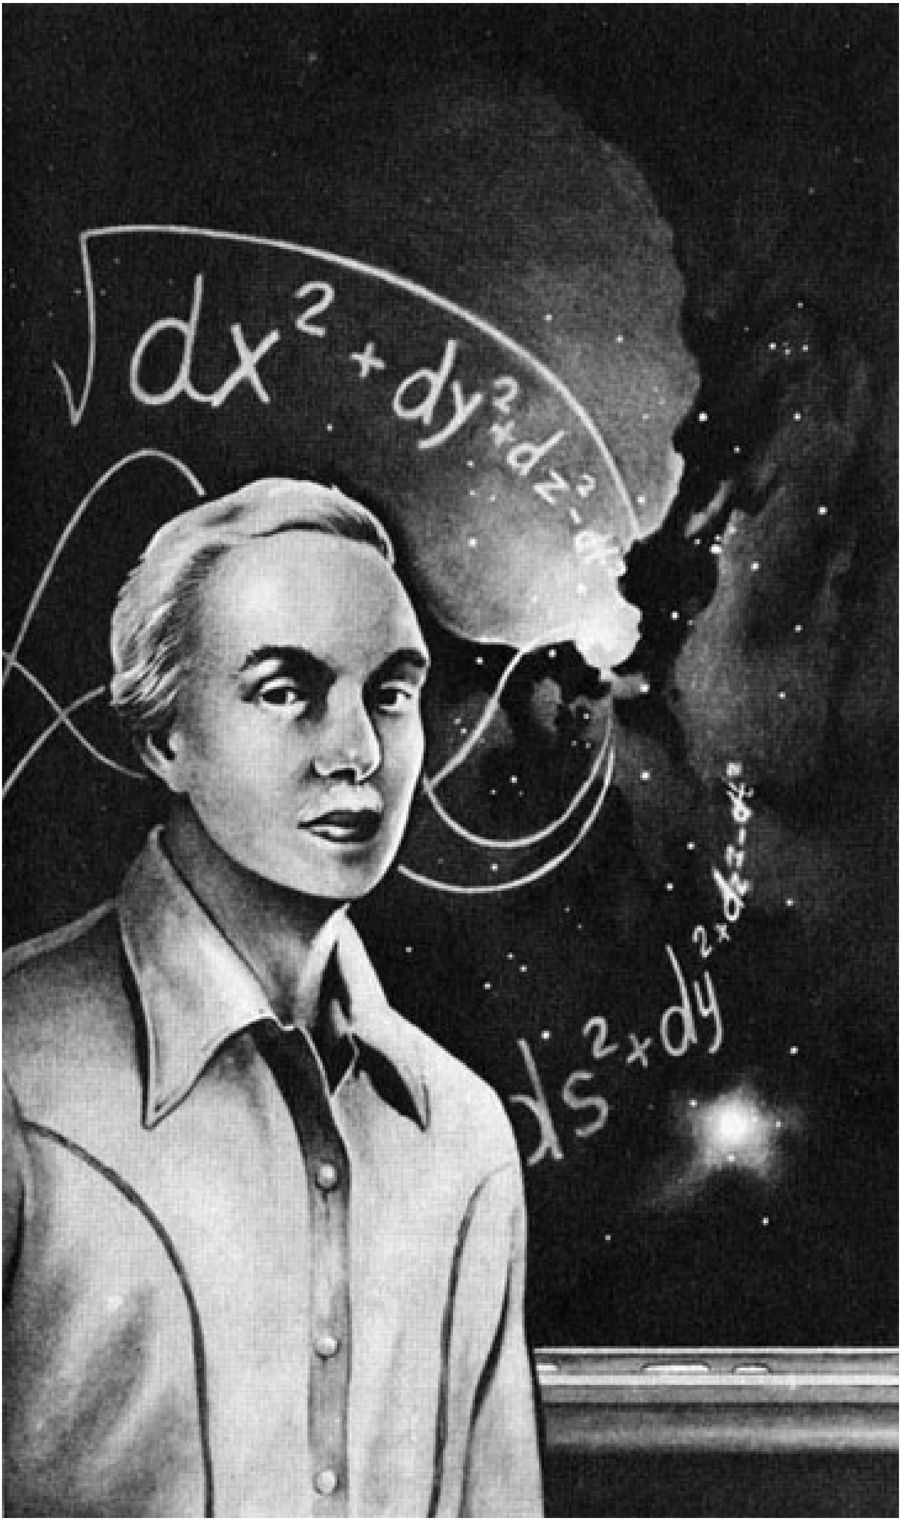
Answer: All may, and 1 and 5 *do* involve antimatter.

*(ANTI*matter?)

Yes—like ordinary matter with electrical properties of particles reversed. Each atom of matter is one or more nucleons surrounded by one or more electrons; charges add up to zero. A hydrogen atom has a proton with positive charge as nucleus, surrounded by an electron with negative charge. A proton is 1836.11 times as massive as an electron, but their charges are equal and opposite: $+1 - 1 = 0$. Uranium-235 (or $_{92}\mathrm{U}^{235}$, meaning "an isotope of element 92, uranium, nuclear weight 235") has 235 nucleons: 143 neutrons of zero charge and 92 protons of positive charge ($143 + 92 = 235$; hence its name); these 235 are surrounded by 92 electrons (negative), so total charge is zero: $0 + 92 - 92 = 0$. (Nuclear weight is never zero, being the mass of all the nucleons.)

Make electrons positive, protons negative: charges still balance; nuclear weight is unchanged—but it is *not* an atom of matter; it is an antiatom of antimatter.

©1975 Encyclopaedia Britannica, Inc.



$\sqrt{dx^2 + dy^2 + dz^2 - dt^2}$
$ds^2 + dy^2 + dz^2 - dt^2$

"Touch Me Not!"

In an antimatter world, antimatter behaves like matter. Bread dough rises, weapons kill, kisses still taste sweet. You would be antimatter and not notice it.

WARNING! Since your body is matter (else you could not be reading this), *don't* kiss an antimatter girl. You both would explode with violence unbelievable.

But you'll never meet one, nor will your grandchildren. (I'm not sure about *their* grandchildren.)

$E = mc^2$

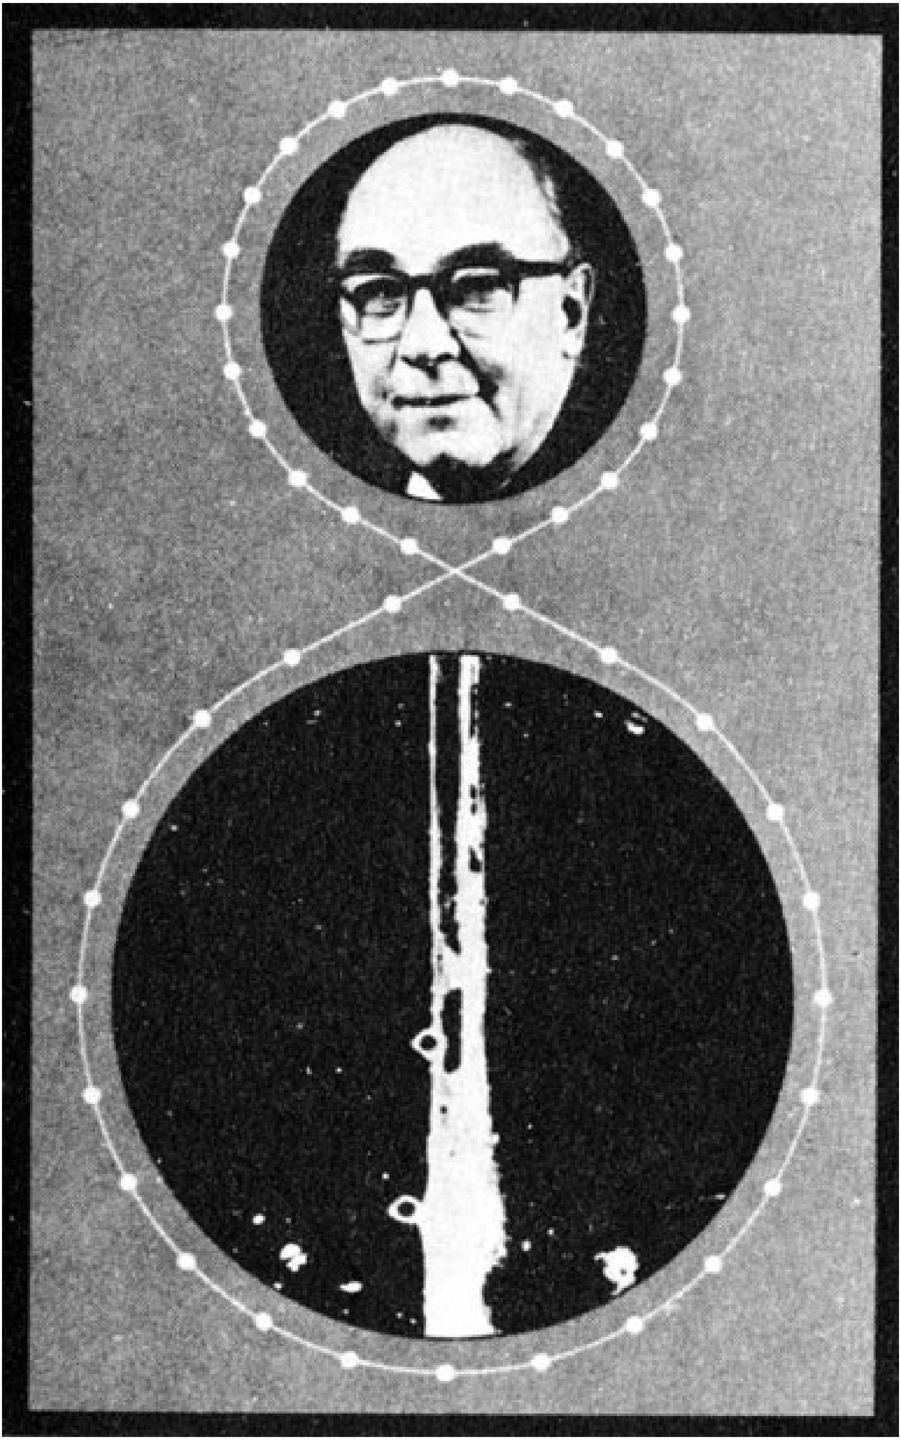
Antimatter is no sciencefiction nightmare; it's as real as Texas. That Cambridge graduate student was Paul A. M. Dirac inventing new mathematics to merge Albert Einstein's special theory of relativity with Max Planck's quantum theory. Both theories worked—but conflicted. Dirac sought to merge them without conflict.

He succeeded.

His equations were published in 1928, and from them, in 1930, he made an incredible prediction: each sort of particle had antiparticles of opposite charge: "antimatter."

Scientists have their human foibles; a scientist can grow as fond of his world concept as a cat of its "own" chair. By 1930 the cozy 19th-century "world" of physics had been repeatedly outraged. This ridiculous new assault insulted all common sense.

But in 1932 at the California Institute of Technology, Carl D. Anderson photographed proof of the electron's antiparticle (named "positron" for its positive charge but otherwise twin to the electron). Radical theory has seldom been confirmed so quickly or rewarded so promptly: Dirac received the Nobel prize in 1933, Anderson in 1936—each barely 31 years of age when awarded it.



Since 1932 so many sorts of antiparticles have been detected that no doubt remains: antimatter matches matter in every sort of particle. Matching is not always as simple as electron (e–) and positron (e+). Photons are their own antiparticles. Neutrons and neutrinos (zero charges) are matched by antineutrons and anti-neutrinos, also of zero charge—this sounds like meaningless redundancy because English is not appropriate language; abstract mathematics is the language required for precise statements in physical theory. (Try writing the score of a symphony solely in words *with no musical symbols whatever.)*

But a hint lies in noting that there are reaction series in which protons and electrons yield neutrons—one example: the *soidisant* "Solar Phoenix" (solar power theory, Hans Bethe); if we ignore details, the Solar Phoenix can be summarized as changing four hydrogen atoms (four of $_1H^1$) into one helium atom ($_2H^4$). We start with four protons and four electrons; we end up six stages later with two neutrons, two protons, and two electrons—and that is neither precise nor adequate and is not an equation and ignores other isotopes involved, creation of positrons, release of energy through mutual annihilations of positrons and free electrons, and several other features, plus the fact that this transformation can occur by a variety of routes.

(But such are the booby traps of English or *any* verbal language where abstract mathematics is the *only* correct language.)

A wide variety of other transformations permits antiprotons and positrons to yield antineutrons. The twin types of varieties of transformations mentioned above are simply samples; there are many other types being both predicted mathematically and detected in the laboratories almost daily—and many or most transformation series involve antiparticles of antimatter.

Nevertheless, antimatter is scarce in our corner of the universe—lucky for us because, when matter encounters antimatter, *both* explode in total annihilation. $E = mc^2$ is known to everyone since its awful truth was demonstrated at Hiroshima, Japan. It states that energy is equivalent to mass, mass to energy, in this relation: energy equals mass times the square of the velocity of light in empty space.

That velocity is almost inconceivable. In blasting for the moon our astronauts reached nearly 7 miles/second; light travels almost 27,000 times that speed—186,282.4 (±0.1) miles or 299,792.5 (±0.15) kilometers each second. Round off that last figure as 300,000; then use the compatible units of science (grams, centimeters, ergs) and write in centimeters 3×10^{10}, then square it: 9×10^{20}, or 900,000,000,000,000,000,000.

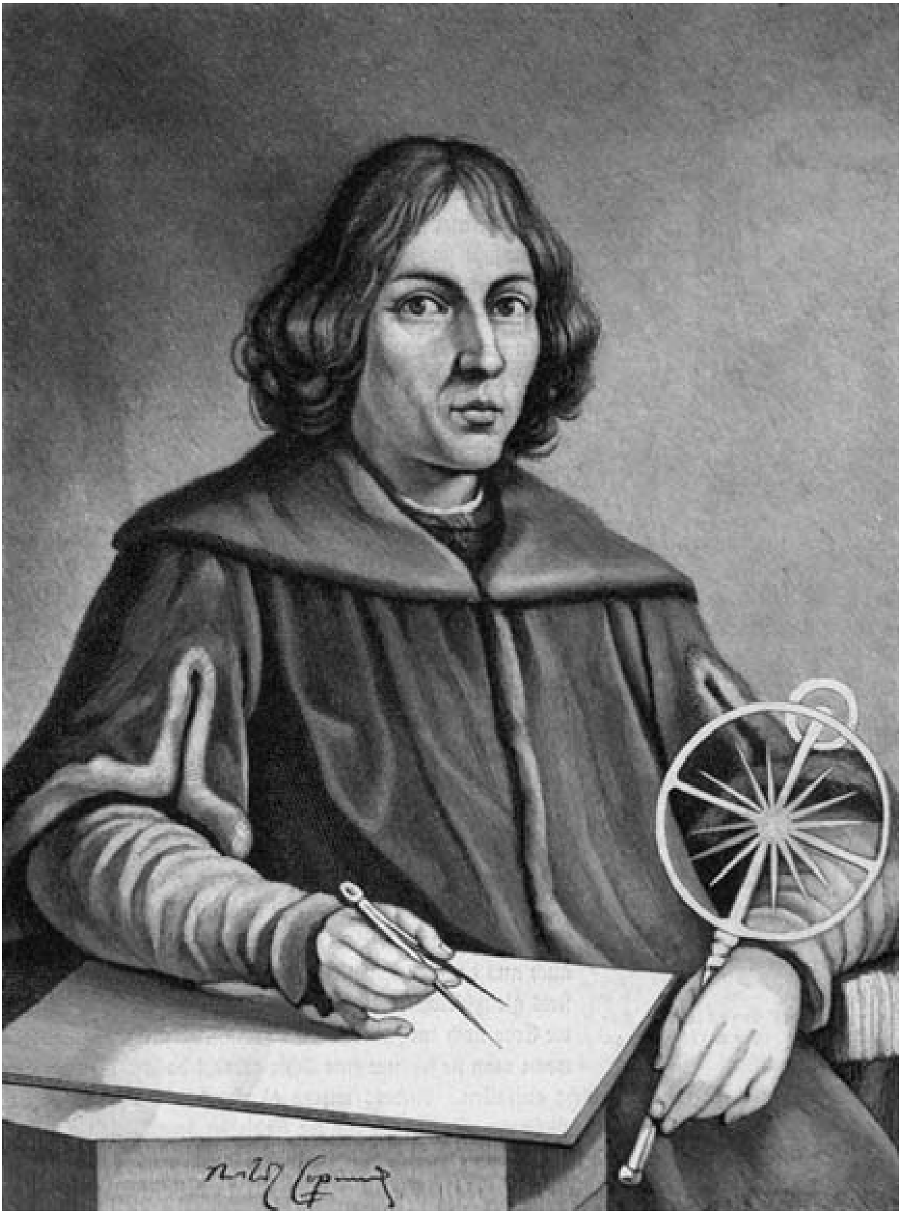
(!!!)

This fantastic figure shouts that a tiny mass can become a monstrous blast of energy—grim proof: Hiroshima.

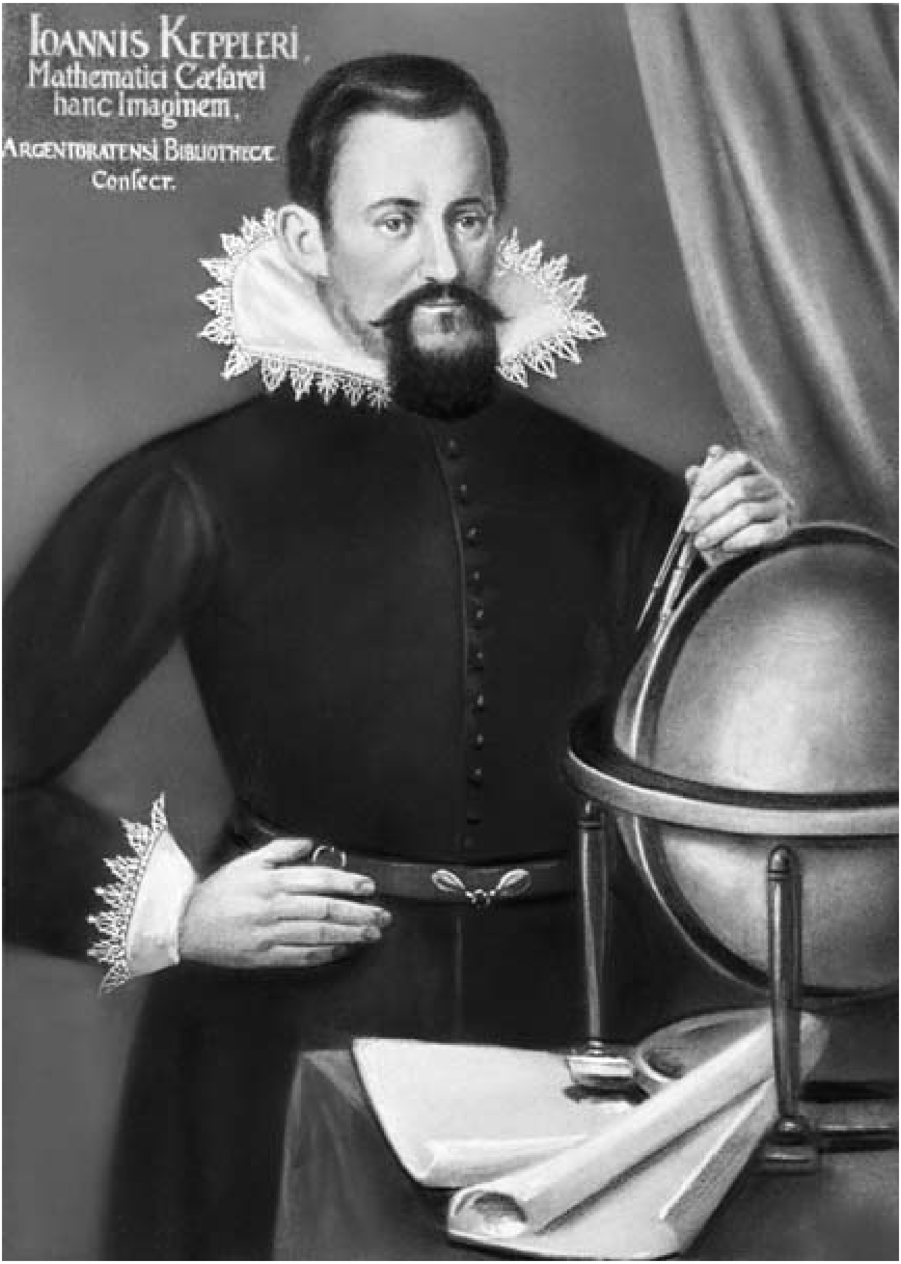
But maximum possible efficiency of U^{235} fission is about 1/10 of 1%; the Hiroshima bomb's actual efficiency was much lower, and H-bomb fusion has still lower maximum (H-bombs can be more powerful through having no limit on size; all fission bombs have sharp limits). But fission or fusion, almost all the reacting mass splits or combines into other elements; only a trifle becomes energy.

In matter-antimatter reaction, however, *all* of *both* become energy. An engineer might say "200% efficient" as antimatter undergoing annihilation converts into raw energy an equal mass of matter.

Mathematical Physicists

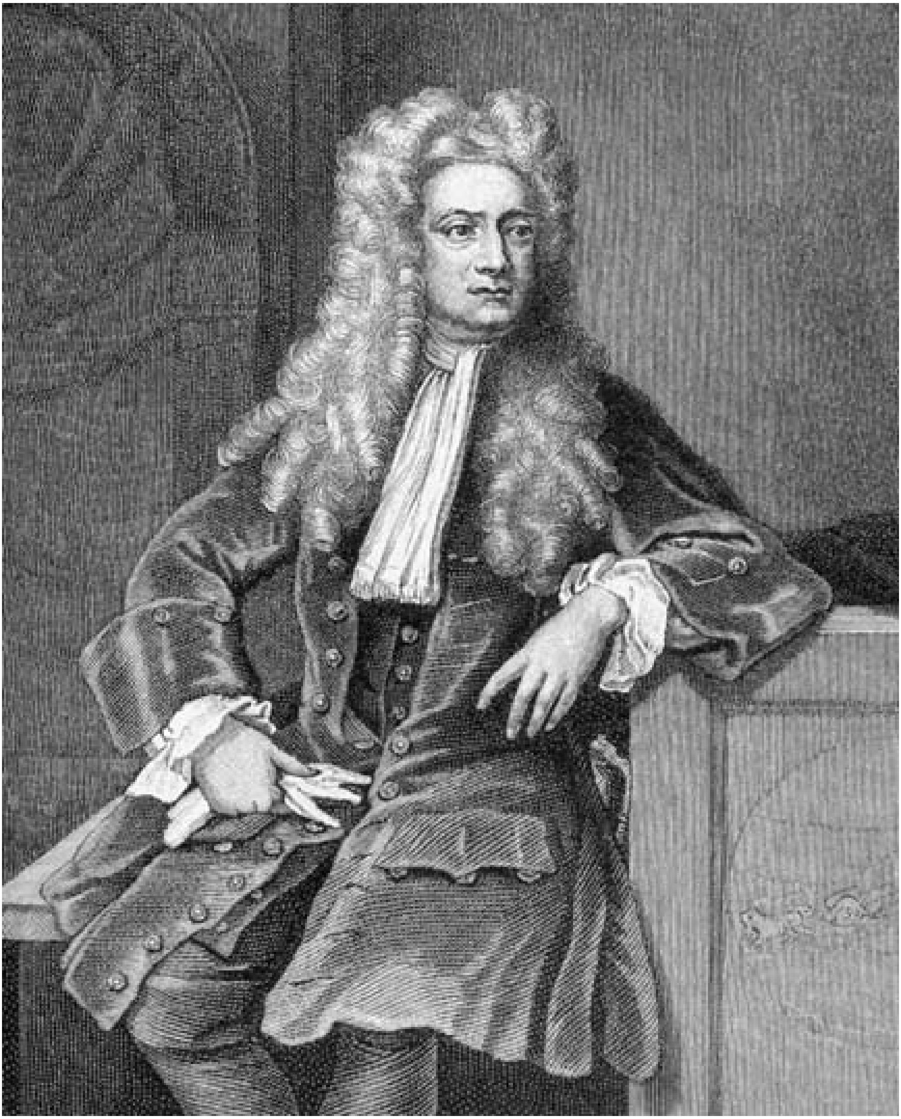


Nicolaus Copernicus (1473—1543)

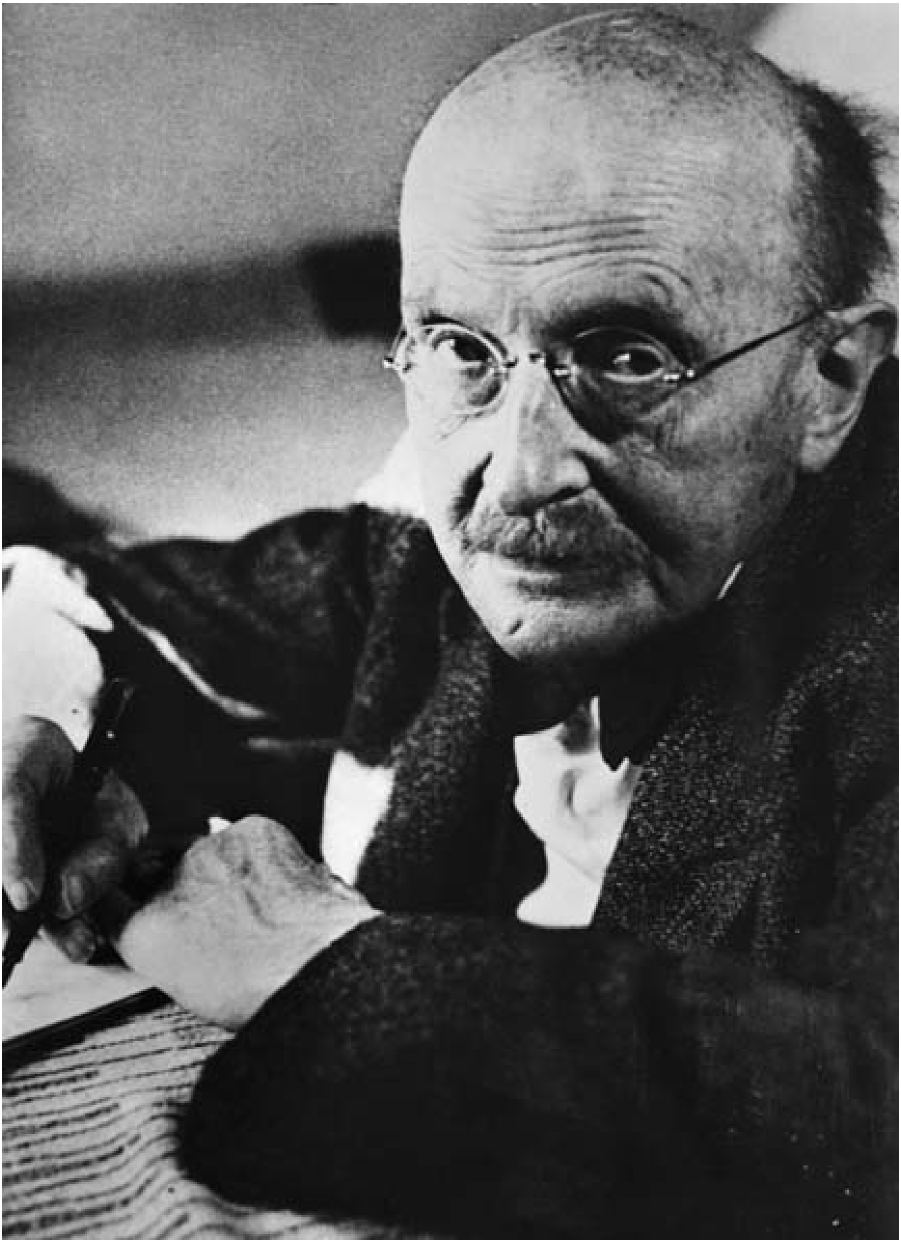


IOANNIS KEPPLERI,
Mathematici Cæſarei
hanc Imaginem,
ARGENTORATENSI BIBLIOTHECÆ
Conſecr.

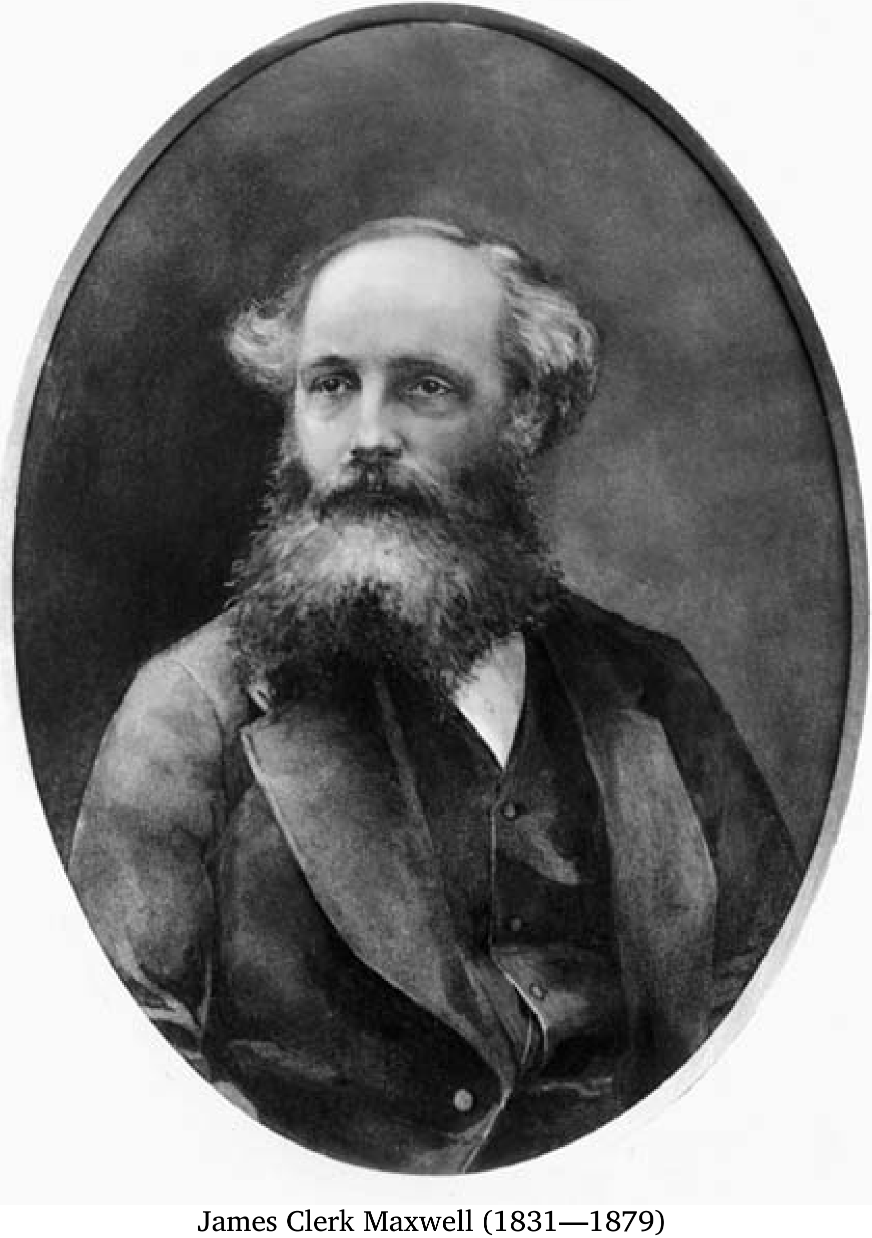
Johannes Kepler (1571—1630)



Isaac Newton (1643—1727)

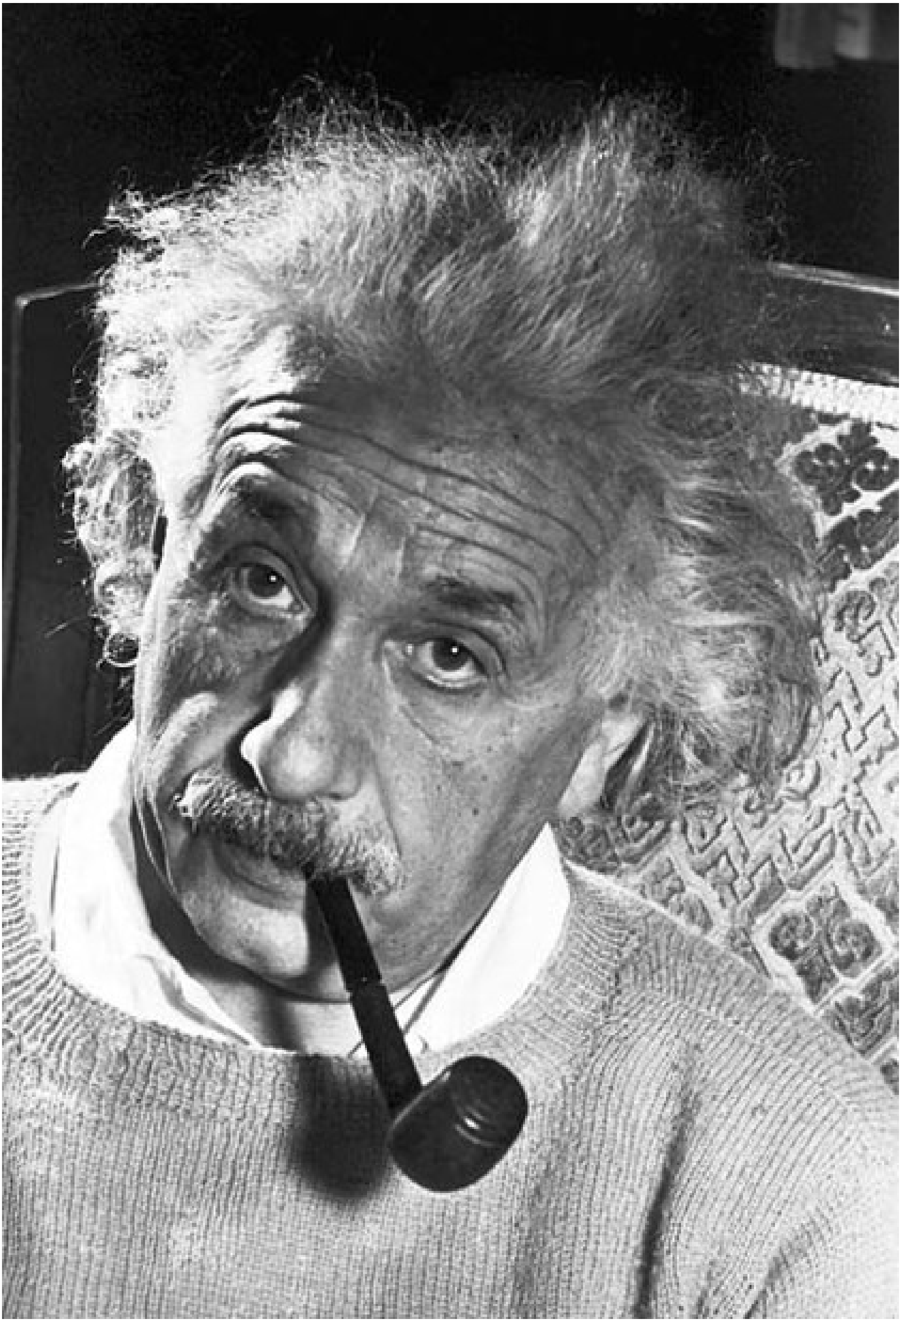


Max Planck (1858—1947)



James Clerk Maxwell (1831—1879)

Paul A. M. Dirac (1902—1984)



Albert Einstein (1879—1955)

An experimental physicist uses expensive giant accelerators to shoot particles at 99.9+% of the speed of light, or sometimes gadgets built on his own time with scrounged materials. Large or small, cheap or costly, he works with *things*.

A mathematical physicist uses pencil, paper, and brain. Not my brain or yours—unless you are of the rare few with "mathematical intuition."

That's a tag for an unexplainable. It is a gift, not a skill, and cannot be learned or taught. Even advanced mathematics ("advanced" to laymen) such as higher calculus, Fourier analysis, *n*-dimensional and non-Euclidean geometries are skills requiring only patience and normal intelligence . . . *after* they have been invented by persons having mathematical intuition.

The oft-heard plaint "I can't cope with math!" may mean subnormal intelligence (unlikely), laziness (more likely), or poor teaching (extremely likely). But that plaint usually refers to common arithmetic —a trivial skill in the eyes of a mathematician. (*Creating* it was not trivial. Zero, positional notation, decimal-or-base point all took genius; imagine doing a Form 1040 in Roman numerals.)

Of billions living and dead perhaps a few thousand have been gifted with mathematical intuition; a few hundred have lived in circumstances permitting use of it; a smaller fraction have been mathematical physicists. Of these a few dozen have left permanent marks on physics.

But without these few we would not have science. Mathematical physics is basic to *all* sciences. No exceptions. *None.*

Mathematical physicists sometimes hint that experimentalists are frustrated pipefitters; experimentalists mutter that theoreticians are so lost in fog they need guardians. But they are indispensable to each other. Piling up facts is not science—science is facts-*and*-theories. Facts alone have limited use and lack meaning; a valid theory organizes them into far greater usefulness. To be valid a theory must be confirmed by *all* relevant facts. A "natural law" is theory repeatedly confirmed and drops back to "approximation" when *one* fact contradicts it. Then search resumes for better theory to embrace old facts plus this stubborn new one.

No "natural law" of 500 years ago is "law" today; all our present laws are probably approximations, useful but not perfect. Some scientists, notably Paul Dirac, suspect that perfection is unattainable.

A powerful theory not only embraces old facts and new but also discloses unsuspected facts. These are landmarks of science: Nicolaus Copernicus' heliocentric theory, Johannes Kepler's refining it into conic-sections ballistics, Isaac Newton's laws of motion and theory of universal gravitation, James C. Maxwell's equations linking electricity with magnetism, Planck's quantum theory, Einstein's relativity, Dirac's synthesis of quantum theory and special relativity—a few more, not many.

Mathematical physicists strive to create a mathematical structure interrelating all spacetime events, past and future, from infinitesimally small to inconceivably huge and remote in space and time, a "unified field theory" embracing 10 or 20 billion years and lightyears, more likely 80 billion or so—or possibly eternity in an infinity of multiple universes.

Some order!

They try. Newton made great strides. So did Einstein. Nearly 50 years ago Dirac brought it closer, has steadily added to it, is working on it today.

Paul Dirac may be and probably is the greatest living theoretical scientist. Dirac, Newton, and Einstein are equals.

Paul A. M. Dirac

The experimentalists' slur about theoretical physicists holds a grain of truth. Newton apparently never noticed the lovely sex in all his years. Einstein ignored such trivialities as socks. One mathematical physicist who swayed World War II could not be trusted with a screwdriver.

Dirac is *not* that sort of man.

Other than genius, his only unusual trait is strong dislike for idle talk. (His Cambridge students coined a unit the *dirac*—one word per lightyear.) But he lectures and writes with admirable clarity. Taciturn, he is not unsocial; in 1937 he married a most charming Hungarian lady. They have two daughters and a son.

He can be trusted with tools; he sometimes builds instruments and performs his own experiments. He graduated in engineering before he became a mathematical physicist; this influenced his life. Engineers find working solutions from incomplete data; approximations are close enough if they do the job—too fussy wastes man-hours. But when a job needs it, a true engineer gives his utmost to achieve as near perfection as possible.

Dirac brought this attitude to theoretical physics; his successes justify his approach.

He was born in Bristol, England, Aug. 8, 1902, and named Paul Adrien Maurice Dirac. His precocity in mathematics showed early; his father supplied books and encouraged him to study on his own. Solitary walks and study were the boy's notion of fun—and are of the man today. Dirac works (and plays) hardest by doing and saying *nothing* . . . while his mind roams the universe.

When barely 16 years old, he entered the University of Bristol. At 18 he graduated, bachelor of science in electrical engineering. In 1923 a grant enabled him to return to school at the foremost institution for mathematics, Cambridge University. In three years of study for a doctorate Dirac published 12 papers in mathematical physics, 5 in *The*

Proceedings of the Royal Society. A cub with only an engineering degree from a minor university has trouble getting published *in any* journal of science; to appear at the age of 22 in the most highly respected of them all is amazing.

Dirac received his doctorate in May 1926, his dissertation being "Quantum Mechanics"—the stickiest subject in physical science. He tackled it his first year at Cambridge and has continued to unravel its paradoxes throughout his career; out of 123 publications over the last 50 years the word *quantum* can be found 45 times in his titles.

Dirac remained at Cambridge—taught, thought, published. In 1932, the year before his Nobel prize, he received an honor rarer than that prize, one formerly held by Newton: Lucasian professor of mathematics. Dirac kept it 37 years, until he resigned from Cambridge. He accepted other posts during his Cantabrigian years: member of the Institute for Advanced Study at Princeton, N.J., professor of the Dublin Institute for Advanced Studies, visiting professorships here and there.

Intuitive mathematicians often burn out young. Not Dirac!—he is a Michelangelo who started very young, never stopped, is still going strong. Antimatter is not necessarily his contribution most esteemed by colleagues, but his other major ones are so abstruse as to defy putting them into common words:

A mathematical attribute of particles dubbed "spin"; coinvention of the Fermi-Dirac statistics; an abstract mathematical replacement for the "pellucid aether" of classical mechanics. For centuries, ether was used and its "physical reality" generally accepted either as "axiomatic" or "proved" through various negative proofs. Both "axiom" and "negative proof" are treacherous; the 1887 Michelson-Morley experiment showed no physical reality behind the concept of ether, and many variations of that experiment over many years gave the same null results.

So Einstein omitted ether from his treatments of relativity—while less brilliant men ignored the observed facts and clung to classical ether for at least 40 years.

Dirac's ether (circa 1950) is solely abstract mathematics, more useful thereby than classical ether as it avoids the paradoxes of the earlier concepts. Dirac has consistently warned against treating mathematical equations as if they were pictures of something that could be visualized in the way one may visualize the Taj Mahal or a loaf of bread; his equations are *rules* concerning spacetime events—*not* pictures.

(This may be the key to his extraordinary successes.)

One more example must represent a long list: Dirac's work on Georges Lemaître's "primeval egg"—later popularized as the "big bang."

Honors also are too many to list in full: fellow of the Royal Society, its Royal Medal, its Copley Medal, honorary degrees (always refused), foreign associate of the American Academy of Sciences, Oppenheimer Memorial Prize, and (most valued by Dirac) Great Britain's Order of Merit.

Dirac "retired" by accepting a research professorship at Florida State University, where he is now working on gravitation theory. In 1937 he had theorized that Newton's "constant of gravitation" was in fact a decreasing variable . . . but the amount of decrease he predicted was so small that it could not be verified in 1937.

Today the decrease can be measured. In July 1974 Thomas C. Van Flandern of the U.S. Naval Observatory reported measurements showing a decrease in gravitation of about a ten-billionth each year (1 per 10^{10} per annum). This amount seems trivial, but it is *very* large in astronomical and geological time. If these findings are confirmed and if they continue to support Dirac's mathematical theory, he will have upset physical science even more than he did in 1928 and 1930.

Here is an incomplete list of the sciences that would undergo radical revision: physics from micro-through astro-, astronomy, geology, paleontology, meteorology, chemistry, cosmology, cosmogony, geogony, ballistics. It is too early to speculate about effects on the life sciences, but we exist inside this physical world and gravitation is the most pervasive feature of our world.

Theory of biological evolution would certainly be affected. It is possible that understanding gravitation could result in changes in engineering technology too sweeping easily to be imagined.

Antimatter and You

Of cosmologies there is no end; astrophysicists enjoy "playing God." It's safe fun, too, as the questions are so sweeping, the data so confusing, that any cosmology is hard to prove or disprove. But since 1932 antimatter has been a necessary datum. Many cosmologists feel that the universe (universes?) has as much antimatter as matter—but they disagree over how to balance the two.

Some think that, on the average, every other star in our Milky Way galaxy is antimatter. Others find that setup dangerously crowded—

make it every second galaxy. Still others prefer universe-and-antiuniverse with antimatter in ours only on rare occasions when energetic particles collide so violently that some of the energy forms antiparticles. And some like higher numbers of universes—even an unlimited number.

One advantage of light's finite speed is that we can see several eons of the universe in action, rather than just one frame of a *very* long moving picture. Today's instruments reach not only far out into space but also far back into time; this permits us to test in some degree a proposed cosmology. The LST (Large Space Telescope), to be placed in orbit by the Space Shuttle in 1983, will have 20 times the resolving power of the best ground-based and atmosphere-distorted conventional telescope—therefore 20 times the reach, or more than enough to see clear back to the "beginning" by one cosmology, the "big bang."

(Q: What happened *before* the beginning? A: *You* tell *me.)*

When we double that reach—someday we will—what will we see? Empty space? Or the backs of our necks?

(Q: What's this to *me*? A: Patience one moment. . . .)

The star nearest ours is a triplet system; one of the three resembles our sun and may have an Earthlike planet—an inviting target for our first attempt to cross interstellar space. Suppose that system is antimatter—*BANG!* Scratch one starship.

(Hooray for Zero Population Growth! To hell with space-travel boondoggles!)

Then consider this: June 30, 1908, a meteor struck Siberia, so blindingly bright in broad daylight that people 1,000 miles away saw it. Its roar was "deafening" at 500 miles. Its ground quake brought a train to emergency stop 400 miles from impact. North of Vanavara its air blast killed a herd of 1,500 reindeer.

Trouble and war and revolution—investigation waited 19 years. But still devastated were many hundreds of square miles. How giant trees lay pinpointed impact.

A meteor from inside our Galaxy can strike Earth at 50 miles/second.

But could one hit us from *outside* our Galaxy?

Yes! The only unlikely (but not impossible) routes are those plowing edgewise or nearly so through the Milky Way; most of the sky is an open road—step outside tonight and *look.* An antimeteor from an antigalaxy could sneak in through hard vacuum—losing an antiatom whenever it encountered a random atom but nevertheless could strike us massing, say, one pound.

One pound of antimatter at any speed or none would raise as much hell as *28,000 tons* of matter striking at 50 miles/second.

Hubble Large Space Telescope

Today no one knows how to amass even a gram of antimatter or how to handle and control it either for power or for weaponry. Experts assert that all three are impossible.

However . . .

Two relevant examples of "expert" predictions:

Robert A. Millikan, Nobel laureate in physics and distinguished second to none by a half-century of research into charges and properties of atomic particles, in quantum mechanics, and in several other areas, predicted that all the power that could ever be extracted from atoms would no more than blow the whistle on a peanut vendor's cart. (In fairness I must add that most of his colleagues agreed—and the same is true of the next example.)

Forest Ray Moulton, for many years top astronomer of the University of Chicago and foremost authority in ballistics, stated in print (1935) that there was "not the slightest possibility of such a journey" as the one the whole world watched 34 years later: Apollo 11 to the moon.

In 1908 the Tunguska region of Siberia was struck by a blast equivalent to 30 million tons of TNT, the impact of which was felt by residents 400 miles from the site and which left in its wake a 20-mile radius of charred forests. Numerous theories attempting to explain the occurrence have been suggested over the years, but none has gained consensus in the scientific community. Among the more recent theories to explain the blast is the proposal that an antimeteor, composed of antimatter, plunged through Earth's atmosphere and upon coming in contact with ordinary matter exploded with devastating force.

In 1938, when there was not a pinch of pure uranium-235 anywhere on Earth and no technology to amass or control it, Lise Meitner devised mathematics that pointed straight to atom bombs.

Less than seven years after she did this, the first one blazed "like a thousand suns."

No *possible* way to amass antimatter?

Or *ever* to handle it?

Being smugly certain of *that* (but mistaken) could mean to *you* . . . and me and everyone . . .

The **END**

All Aboard the GEMINI

A top space author takes you aboard the passenger space liner of the future—now taking shape in Project Gemini

By Robert A. Heinlein

..... TIME: 1984, OR THEREABOUTS

THE ROCKET SHIP LIFTS from Mauna Loa Port, Hawaii; her passengers are tranquilized and strapped down to contour couches In a few minutes the booster stage separates, then plunges back to the "lift" atmosphere under the control of the booster-stage pilot.

This officer brings the booster down in an unpowered glide toward the Pacific, and lands her, seaplane-fashion, on the water. He does this so precisely that his tow ship is less than 10 miles away.

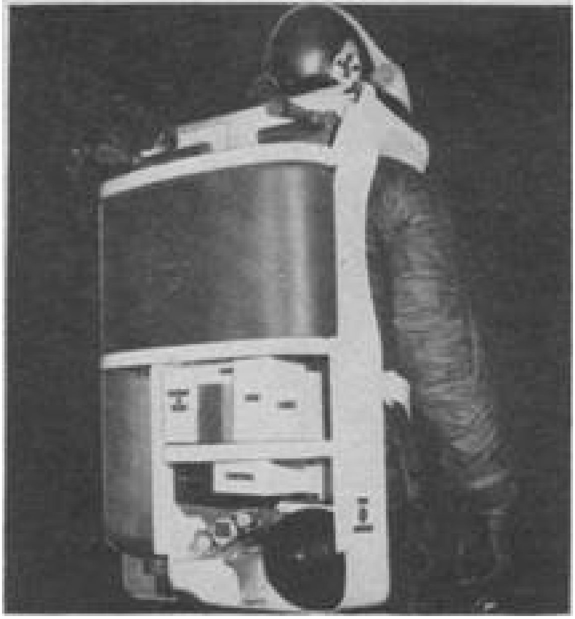
A line is passed, a towing crew comes on board, and the booster pilot sacks in, having been on duty for little more than an hour and having actually worked about 15 minutes. For this, he gets paid in excess of $100 per minute—and is worth every cent of it. . . .

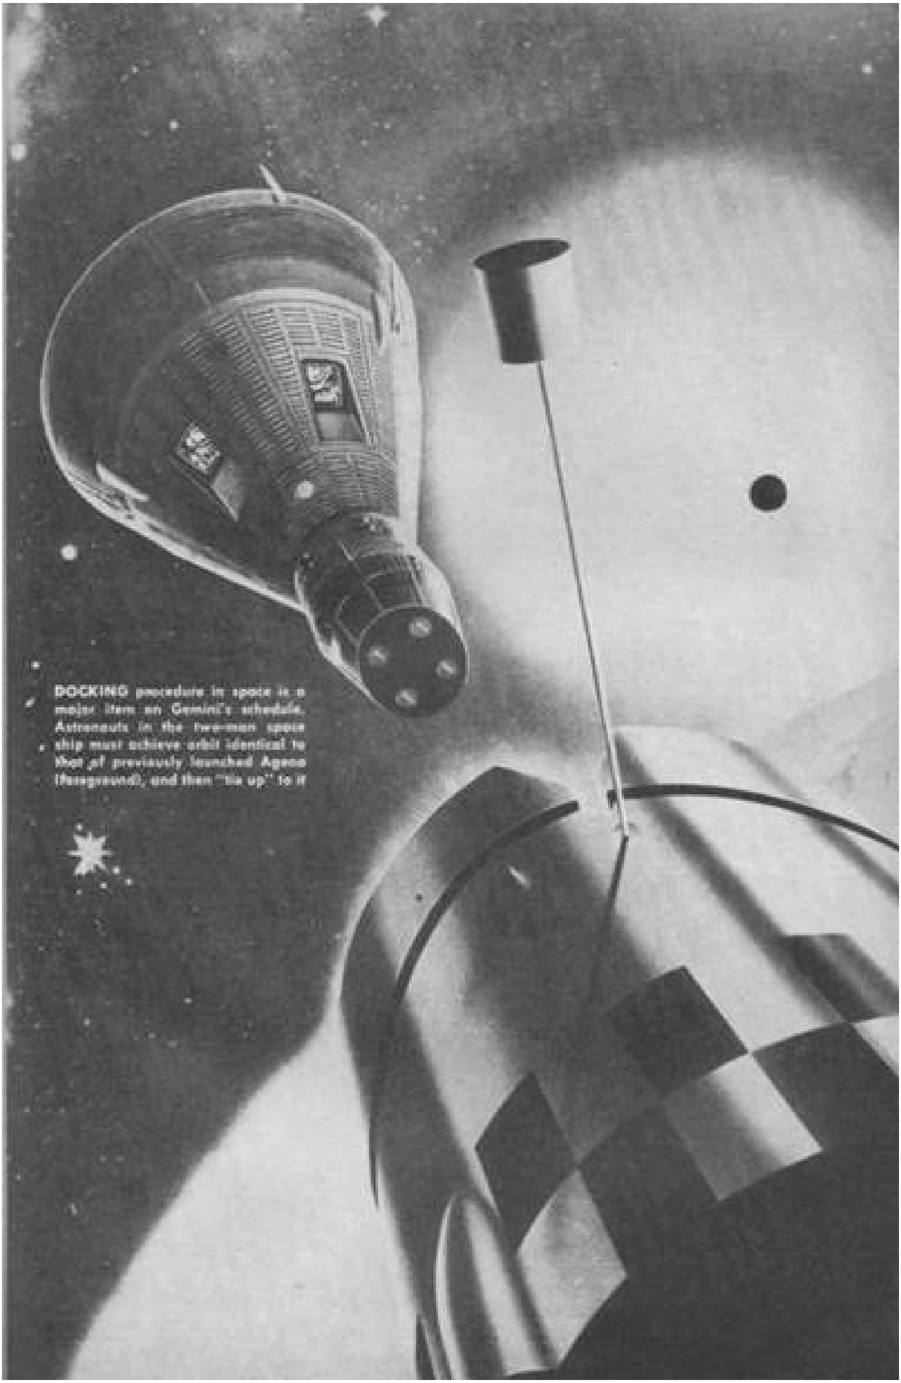
The important thing is that the enormously expensive giant booster has been saved to lift another day. With proper maintenance, there's no reason why it should ever wear out. That is one reason why space travel will be relatively cheap in 1984.

The keys to tomorrow's cheap space travel are reliability, precise rendezvous techniques in space, and undamaged recovery of ships in orbit. And these are no longer in the daydream category. They are the objectives of Project Gemini—a very much alive program with plenty of money and steam behind it.

Preparations for Project Gemini are underway now at the National Aeronautics and Space Administration's Manned Spacecraft Center at Houston, Tex. It is to be our next step toward conquering space .

SPACE PACK, called SMU (self maneuvering unit), will be used by astronauts for repair or assembly work outside spacecraft. Strapped to the spaceman's back, the pack contains a life-support system, thrust jets, and stabilization and control units. In test flights, right, an engineer, in a state of weightlessness, propels himself through the cabin of a high-flying jet.





DOCKING procedure in space is a major item on Gemini's schedule. Astronauts in the two-man space ship must achieve orbit identical to that of previously launched Agena (foreground), and then "tie up" to it

But we left the second stage and the cabin of that 1984 ship still in trajectory and approaching orbit. .. .

The second stage boosts the cabin into circular orbit around the earth before separating; its pilot then uses retrorockets to slow his empty vehicle as it dips into the atmosphere. As the ship slows, he breaks out a paraglider, or Rogallo delta wing, made of a special heat-resistant plastic with three nitrogen-filled sleeves that serve as spars. Acting as a parachute as well as a wing, the unit allows the pilot to maneuver his craft on target—a dry lake in the Mojave Desert.

The third stage, the passenger section, stays in orbit. Its destination is "Space Island Goddard"—a manned orbiting space station, named for an early U.S. pioneer in rocketry, Robert H. Goddard. Here the passengers will transfer to today's moon ship. But the island is in orbit a long way out, and the passenger section doesn't carry enough fuel to reach it. The first task is to rendezvous with an unmanned tanker-cargo vessel so that its power can be used for the rest of the trip.

The tanker-cargo ship may have been placed in orbit hours or days earlier, timed to pass over Hawaii at the exact angle to rendezvous with the passenger ship.

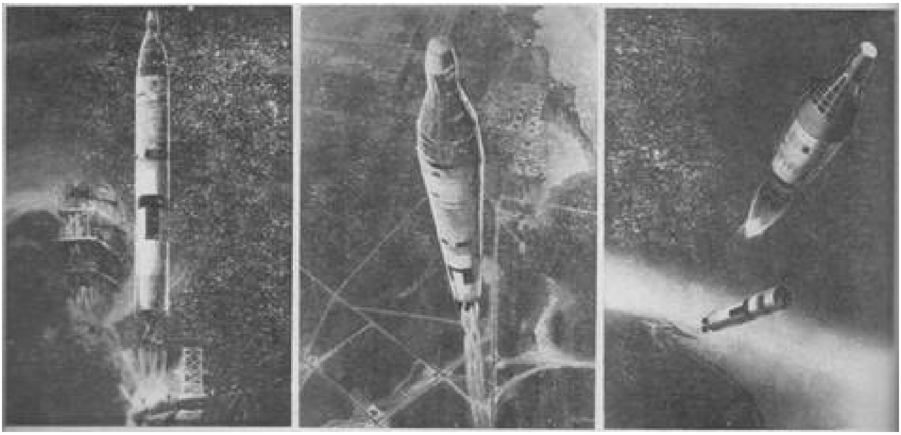
The spacecraft's captain has the help of complex radar and computer systems on the ground and in his own ship in making speed and course corrections for rendezvous. All course information is programmed into his autopilot. Not until he closes the gap to some 20 miles and sights the flashing beacon on the tanker-cargo unit will he take over manual control. During the catch-up period he sends the copilot outside the ship to inspect for and, if necessary, correct a suspected fault in a radar antenna, and this he solemnly logs. In fact, there is no malfunction, but the copilot gets a nice "special hazard" bonus for pressure-suit work outside the ship in orbit. This is a traditional racket, condoned by the business office, and is a way skippers reward good copilots.

When the ship is about 100 yards from the cargo-tanker, the captain initiates the docking maneuver. He moves in, fitting the nose of his ship into the docking cavity in the bow of the tanker; he knows the two vessels are joined when he feels the grapples lock into place. During the docking maneuver, the passengers are strapped down, but it is accomplished so gently they are hardly aware of it.

With help from ground-based computers and radar, the captain now starts a longer maneuver; his twinned ship will move from a low circular orbit into an elliptical orbit tangent at its apogee to the orbit of Space Island Goddard, and so timed that ship and space station will reach the same point at the same time.

The maneuver is without incident save that both the larger loading docks at Goddard are occupied. Our ship lies off a mile or so, perfectly matched in orbit, and waits. In a few minutes, one of the docked ships departs and our cargo-tanker backs gently into the vacated space. The passenger cabin is warped into a smaller docking socket nearby. The passengers disembark to wait for a scheduled moonship.

A TWO-MAN GEMINI, riding atop a Titan II booster, will blast off, perhaps in the fall of 1964, for a rendezvous in space with an unmanned Agena-D target ship. Far out in space, the big booster's first stage, right, falls away.



All of the above is implied by Project Gemini. Every maneuver described in the "1984" sequence above will be proved out —or washed out—by Gemini, with the exception of the space island procedures.

When Project Gemini is completed, perhaps two years from now, we will have accomplished all the major steps needed to achieve regular and reliable space travel. One factor, the development of truly big boosters, is not part of Gemini but is going ahead in other projects.

The purpose of Gemini is to design, develop, build and launch a series of two-man spacecraft, controlled by the pilots and capable of staying in orbit for up to two weeks. It will be capable of undergoing repair or service in flight by the crew, including repairs made outside the vessel by a man in a space suit. It will perform a precise rendezvous with an unmanned tanker, joining with the tanker and then maneuvering as a single ship. Finally, it will separate from the tanker for a soft landing on earth. During one flight, simulated repairs will be done outside the capsule in space.

At some point in the Gemini program, the plan is to launch an unmanned Agena tanker into a circular orbit 150 miles up and on a course that would bring it over Cape Canaveral twice a day. After its precise orbit has been determined, the two-man Gemini will be launched into an elliptical orbit that will bring it within a few hundred miles of the Agena.

Both vehicles will be maneuvered under ground control until they are in the same plane and about 250 miles apart. Gemini's radar will then lock onto the Agena, and its autopilot will operate the engines to home on the target.

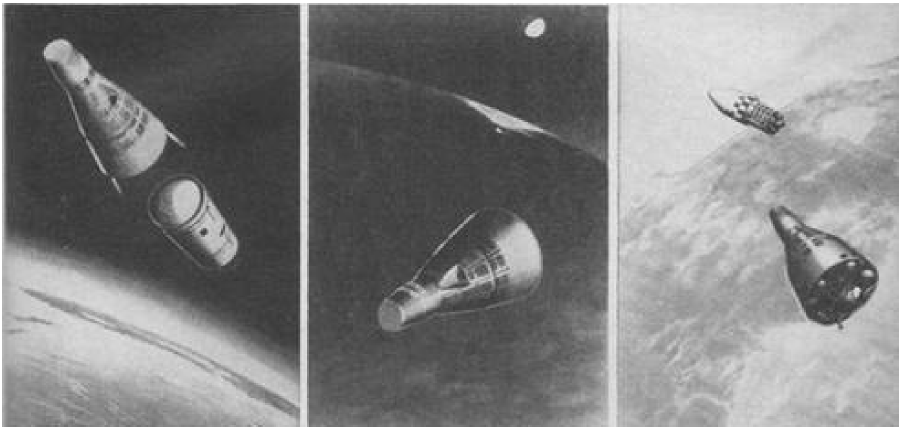
The Agena will be displaying a flashing light (to distinguish the signal from the steady light of stars) and the astronauts should sight this at a range of 20 miles. Shortly after, they will use manual controls to bring the two craft together.

Long before that movement, the Agena tanker would have been turned around so that its engine is forward and its other end, with the mating ring on shock absorbers, is toward the rear. Both vehicles will be traveling in excess of 17,000 miles per hour, but speed of contact is expected to be no more than one or two feet per second, a very mild touch rate.

If the tanker is hit too hard or at the wrong angle it could be damaged. Too, if the closure is not exactly right the tanker would be bumped and would float away. Another try would be necessary. But Gemini has 16 thrusters, small jet engines, for speeding up, slowing down, changing attitude and changing direction. The astronauts should be able to mate the two crafts with no trouble; the vehicles automatically locked together.

Now the men in Gemini have control of Agena's big engine and its load of fuel. They can turn the twinned craft around to get the engine at the rear, then perform large-scale maneuvers in space. They could move from a circular to an elliptical orbit, just as our 1984 spacecraft will do to complete the trip to Goddard.

THE SECOND STAGE separates once the craft is in orbit, left. The capsule and target ship will be maneuvered into position for docking by ground controlled and spacecraft radar; astronauts themselves will accomplish hookup.



DRAWING of proposed space trainer shows astronaut leaving capsule to enter space lab, top; in another version, he goes directly into the lab from capsule.

AT 70,000 FEET, a paraglider will open and bring Gemini to a soft landing at preselected site, but first two capsule landings will be made by parachute.

But all of this isn't contemplated yet. Instead, after some maneuvers, the Gemini capsule will unmate from Agena for its return to earth, leaving Agena to plunge eventually to a fiery death in the atmosphere. The detaching operation could be sticky, for it has been shown in the laboratory that metals weld themselves together in a vacuum. Whether this would happen at 150 to 200 miles altitude is not known. As a precaution, the astronauts will be able to explode the latches to separate the crafts.

The two men on Gemini will wear soft suits, either metallic gold or silver in color, and soft helmets that balloon out when inflated. They can unzip portions of the suits for greater comfort when their cabin is pressurized. They would zip up only for reentry, or when the cabin was depressurized deliberately; this would be done so one hatch could be folded back for an astronaut to step out into space.

The only other time the suits would be pressurized would be in the unlikely event that they were hit by meteoroids. Gemini's skin is tough enough to resist pinhead-sized meteoroids, but one the size of a marble could smash through. The cabin air would leak out, but slowly enough for the astronauts to pressurize their suits.

The first and second shots in the Gemini series will land by parachutes, Mercury-fashion. After that, each craft will land under the pilot's control, using a paraglider he can open at about 70,000 feet. By trimming the paraglider's attitude with cables and shifting its center of gravity, the astronauts could land anywhere inside an area 50 miles wide by 450 miles long. Gemini's landing gear consists of struts and skids, similar to that of the X-15.

It's planned now to terminate these flights somewhere in Texas. A grain field, a dry lake bed or any flat piece of desert is suitable; the craft would land at a forward speed of 45 miles per hour and with an impact velocity that depends on the pilot's skill. For safety's sake, the craft would be able to land on water.

The Gemini spacecraft is admittedly a minimal vehicle for two men; necessarily so because we don't yet have really big boosters. The engineers would happily design a much larger ship if we had the power to lift it.

Gemini is half again as big and looks very much like the Mercury capsule. But there the resemblance stops. Mercury was simply a space capsule, controlled from the ground with the astronaut hardly more than a passenger. In one Mercury shot a chimpanzee was the "astronaut."

The Mercury capsule is cram-jammed with automatic gadgets, duplicated circuits, and electronic and mechanical spaghetti of all sorts. The Mercury shots proved that an astronaut can actually control his ship. This made much of the complexity unnecessary.

Gemini is pilot-controlled and maneuverable. It is equipped to monitor its Titan II booster on the way up, and can separate and abort the shot if necessary. As a spacecraft, it can change attitude and direction .in the vacuum of space. And yet, its control board is extremely simple. The displays, readouts and switch buttons are very few. There is just one control stick, similar to a single-engine sports plane control stick. It is located between the pilots. There are no controls for the feet. Despite the many rocket thrusters, there is remarkably little plumbing.

The worst shortcoming of the Gemini spacecraft is that it's so pesky small. Your reporter is not a claustrophobe; I have done some deepsea diving, explored some tight passages in caves, I don't shudder at being trapped in an elevator. But I found that 20 minutes in the pilot's seat of Gemini more than enough even though I knew I could get out at any time.

One Gemini flight is planned to last two weeks, which means that enough groceries to feed two grown men for that length of time must be stowed inside that tiny compartment. Don't think of it in terms of "pills"; that is a Buck Rodgers' concept. That food will occupy about as much space as it would in your home freezer.

Too Much Togetherness?

The two astronauts will lie side by side about one foot apart. Fortunately, our astronauts have been selected for temperament (among other things) and they are all strongly motivated—necessarily so, for it seems to me that the greatest hazard of that two-weeks trip will be too much "togetherness." It would be easy to hate Helen of Troy under those circumstances, to say nothing of another unbathed male.

The space is too tight to permit them to take off their space suits (that itch between the shoulder blades!) although they will be able to unzip parts of it and fold back the helmets. Even bodily functions must be cared for with the suit on.

These are some of the shortcomings that our astronauts must endure because of the lack of a big booster, and they are not minor. Obviously, it takes real heroism to ride a column of fire up into the sky in the present imperfect state of the art, but I think it will take heroism of a different kind to refrain from choking your cellmate after two weeks of listening to him snore only inches from your ear.

Twelve spacecraft are planned for the Gemini program, and it is hoped that the first unmanned ballistic (non-orbital) test shot can be made late this year; two men would then be put in orbit in the spring of 1964. By the fall of '64, if all goes well, the first attempt will be made to dock into an unmanned Agena-D. If that is successful, we will have proved out all the basic essentials of space flight.

Some people are predicting that the Russians will be making a landing on the moon by 1965. Perhaps they will be, but let us hope not.

They certainly seem ahead now in the race for space. But if all goes well, Project Gemini might be the point at which we catch up and pass them.

End of the Nearly Complete Collection
